Roubailo épouse Koudolo, Svetlana (Département d'Anthropologie, FLESH, Université de Lomé, B.P. 15.15 Lomé, Togo [tel: (228) 221 98 02; e-mail: sroubailo@tg.refer.org]), **La dynamique de la formation citoyenne sur la côte de la Baie du Bénin: le cas du Togo** (The Dynamics of Civic Education on the Coast of the Bay of Benin: The Case of Togo), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ La formation de l'enfant à la citoyenneté se trouve actuellement au carrefour de la tradition et de la modernité. Elle révèle les notions citoyennes authentiques et exprime également les changements contextuels produits au cours du XXe siecle, surtout sous l'influence des concepts de Droits de l'Homme et de Droits de l'Enfant. Des nombreuses actions publiques en faveur de la formation citoyenne, engagées de nos jours par la société civile, accélèrent les mutations socioculturelles et conduisent les jeunes à l'elaboration des specificités identitaires et citoyennes novatrices. l'étude analyse la formation citoyenne qui s'expriment à partir des différents groupes d'âge, des genres, des niveaux d'instruction et des milieux ruraux et urbains du sud du Togo. S'apuyant sur l'appproche socio-anthropologique, l'investigation se base sur l'observation participante, les entretiens individuels et collectifs. Les données sont analysées de manière taxinomique et systématique de même que l'interprétation des résultats. l'objectif de l'étude vise à documenter la dynamique de formation citoyenne et de proposer des suggestions susceptibles de constituer les nouvelles articulations favorisant la construction de la citoyenneté harmonieuse inspirée, à la fois, des valeurs culturelles locales et de celles du contexte universel.

Routier, Guillaume & Soulé, Bastien (Université Rennes 2 / UFR APS, Rennes, France, 35000 [e-mail: routier.guillaume@hotmail.fr]), **Physical engagement: attempt of conceptualization around dangerous sports,** *International Sociological Association, Gothenburg, Sweden,*

¶ Nowadays the notion of "risky sports" & "extreme sports" is commonly used although there is no consensus about this definitions. In fact, both terms are problematical notions. In addition, participants in these sports usually disagree with these definitions. Therefore it seems important to approach these behaviors not as a pathological or transgressor demonstration, but as an ordinary reality inserted in the logical sequence of a practice (Raveneau, 2006). In this way, it seems necessary to avoid more an excessive psychological or sensationalistic approach and also avoid to study this topic from a reductionist or too rationalist approach. The purpose of this study is to propose an "alternative" definition that explains these behaviors that Soulé & Corneloup (2007) have called "physical engagement"; a term that has not been developed in depth yet. Therefore, "engagement" can be understood in the sense of "behavior" and "act of decision". In other words, there are two dimensions: the first one focuses on the "action" & the second one focuses on the "being". That is the reason why it is possible to conceptualize this notion around its pragmatic & identity dimensions.

Rovai, Mauro L. (UNIFESP - Universidade Federal de São Paulo, São Paulo - Brazil [e-mail: maurovai@terra.com.br]), **An Essay on Michelangelo Antonioni's Red Desert (Il Deserto Rosso),** *International Sociological Association, Gothenburg, Sweden,*

¶ The objective of this text is to join sociological & aesthetic analysis in order to identify the correlation between body, affection & violence in Michelangelo Antonioni's movie Deserto Rosso (Red Desert - 1964). We aim to define a meaning for Giuliana's (Monica Vitti) statement to her lover Corrado (Richard Harris): "c'è qualcosa di terribile nella realtà, e io non so cosa sia. E nessuno me lo dice" ("There is something terrible about the world; I don't know what it is & nobody has explained it to me") through the close analysis of cinematographic elements such as perspective, angle, close-up, dialogue, sound, etc. Although the film does not engage directly with historical or political aspects, some of these can be encountered within Antonioni's aesthetic choices that offer a reflection on the relationship between sociology & aesthetics. Violence is equally not an obvious feature in Red Desert, yet the film indicates the price that people normally pay in order to adjust themselves to society's routine. In this sense, we are offered a specific interpretation of violence. This proposal is part of my ongoing research called Studies on Sociology & Cinema.

Roy Chowdhury, Arnab (Department of Sociology, National University of Singapore, Singapore, 117570 [tel: 6590840321; e-mail: arULnabULroy2006@yahoo.com]), **The State on a 'Hydraulic Mission': The Political Ecology of Large Dams in Maharashtra (India),** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper will discuss the cause & genesis of these mega hydraulic structures in the state of Maharashtra from the year 1921. Its political ambition of control & distribution of water resources and river basin development for a large scale cash crop production and industrial development, has consistently created a separate propertied class of "water-elites" on the one hand & a "drought affected" & a "dam affected" population on the other & a seemingly unbridgeable political fault line between the two. There are varieties of movements centered on large dams in Maharashtra, which focus on questions of "rehabilitation" as well as "equal distribution of dammed water", who are striving to develop solidarity between the "dam affected" & the "drought affected" population & mobilizing them as a political force against the state. They have achieved success in many of the cases. In this paper, I will discuss the above details from the perspective of "political Ecology", which will contextualize the metaphorical category of "large Dams" & "water" to the "local/regional histories, environment & social relations" & address the issue of "equity" & "justice" in distribution of ecological resources.

Roy, Olivier (Department of Sociology, University of Montréal [e-mail: olivier.roy.6@umontreal.ca]), **Secular Homonationalism: Sexuality at the Intersection of Nation and Religion,** *International Sociological Association, Gothenburg, Sweden,*

¶ The place of religious symbols in the public space elicited a debate in Québec society since 2007. With laicism presented as a central value of Québec's national identity, as well as the equality between men & women, religious symbols & beliefs, and their sometimes heteronormative & sexist content, have been castigated as threats to Québec's "modern" national identity. Through a critical discourse analysis, my presentation analyzes the coverage of this issue in Québec's three main French gay monthly magazines (for the years 2007 to 2009) as well as two briefs submitted by gay organizations. What are the representations of new immigrants' religious practices? How these medias are conceiving the possible interaction between such practices and homosexuality? My analysis shows the construction of a normative homosexuality based on a particular conception of the nation & of religion: the legitimate "gay subject" in Québec must endorse fundamental national values, a separatist laicism being one of the most important of these values. Through such a homonationalist process, abject & unintelligible beings are relegated outside the symbolic frontiers of homosexuality, especially religious queers, be they natives or new immigrants.

Rozanova, Julia & Lawton, Paul (University of Calgary, Department of Sociology, Calgary, AB, T3A 5N4 [tel: + 1 403 220 6501; fax: + 1 403 282 9298; e-mail: jrozanov@ucalgary.ca]), **The Use of Information and Communication Technology in Healthy-Aging Work of Older Americans and Their Family Caregivers: Potential and Risks,** *International Sociological Association, Gothenburg, Sweden,*

¶ Individuals age in complex environments comprising people, policies, material objects, & technologies. In practical terms, while a lot of medical & social service agencies have comprehensive web-based gateways, clinicians & practitioners working with older adults express concern over not reaching older clients - & their family caregivers - who need services but cannot access them because of unawareness & lack of information. This paper will be based on an exploratory pilot study of computer-mediated healthy-aging work that involves older Americans & their family and friend caregivers. Healthy-aging work is defined as day-to-day activities whereby older adults maintain their social connections with their caregivers & other individuals & organizations, and look after their health needs. The paper will explore the impact of the use of information & communication technology (ICT) on older persons' ability to age in a healthy state, & on their caregivers' ability to support them. Most specifically, it will consider whether emerging expectations for older adults' & their family & friend caregivers use of ICT for managing their health and social engagement create the risk of Digital Divide mediated by structural inequalities such as gender, class, & race/ethnicity. The data will come from 15 qualitative in-depth interviews with key informants (older adults, their family caregivers, representatives of organizations that provide services to older adults, & website developers that target older users such as CVS Pharmacy website). Key informants are selected through theoretical purposive sampling process & recruited in Providence, RI, & Boston, MA, areas. Findings of thematic analyses of interview transcripts will be conceptualized from the perspective of critical gerontology that addresses intra-generational inequalities including unequal access to various resources such as ICT, & Actor-network-theory (ANT) that considers actors (e.g. older adults & their caregivers) as embedded in networks comprising human & non-human elements (e.g. computers, internet sites) to explore the work of non-human objects such as computers as relays enabling relationships between individuals (i.e. seniors & their families & friends, or seniors & service providers). Particular attention will be paid to benefits & challenges arising from both use & non-use of ICT for persons who differ in terms of their education, income and wealth, occupational background, health status, & other characteristics. Recommendations to inform policies that promote inclusive & age-friendly social environments through making information & communication technology available, accessible, and affordable to older adults & their caregivers on both local and national levels will be presented.

2010S02255

Rozanova, Julia, Miller, Edward A., Wetle, Terrie & Mor, Vincent (Brown University, Center for Gerontology and Healthcare Research, Providence, RI, USA 02912 [tel: +1 401 863 7345; fax: +1 401 863 3489; e-mail: JuliaULRozanova@brown.edu]), **Portrayals of Nursing Home Residents in American National Newspapers, 1999-2008: (Un-) successful Aging and Disposable Lives,** *International Sociological Association, Gothenburg, Sweden,*

¶ As governments strive to reduce the costs of eldercare, in part, by maximizing functioning within the aging population, there has been growing interest in the notion of successful aging, which refers to simultaneous

reduction of disease & disability, maintenance of cognitive & physical functioning, & active social engagement. Despite abundant research regarding the preconditions & outcomes of successful aging, little attention has been paid to media representations of successful & unsuccessful aging, & their meanings. This paper explores portrayals of nursing home residents and the polarized discourse of (un-)successful aging in the context of nursing homes in four national American newspapers over the past 10 years. The study uses quantitative content analyses of 1,399 articles focusing on nursing homes & their residents & issues, published from 1999-2008 in The New York Times, The Chicago Tribune, The Washington Post, & The Los Angeles Times and retrieved from the LexisNexis database, & qualitative thematic analyses of 157 articles published on the front page of these newspapers. The analysis explores stereotypes of value -- whether individual, market, or societal -- permeating the representation of the frailest and/or oldest, & ways in which their portrayals are split into further dichotomies of failure versus relative success. Particular attention is paid to explicit & implicit portrayals of successfully aging bodies & bodily decline & expiration in the context of nursing home market functions. While the metaphors of successful aging reflect prevailing political agendas in the society, we reveal that while the articles may blame profiteering on failures to age successfully, market values underlie representations of triage when scarce resources need to be allocated between those still fit to continue living & those who are left behind, for example during natural disasters. The paper reflects on political preconditions, economic foundations, and socio-cultural outcomes of the media portraying nursing homes as potential sites of aspects of successful aging among residents, and sheds light on the dark side of this discourse that devalues and excludes from the public space the most underprivileged older or disabled persons whose lives become virtually disposable.

Rückert-John, Jana, John, René & Niessen, Jan (University of Hohenheim, Stuttgart, Germany, 70599 [tel: 49 711 459-22655 ; fax: 49 711 459-22652; e-mail: rueckert@uni-hohenheim.de]), **Rivalry or Synergy between Attributes of Sustainable Foods: The Case of Eating Out in Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ Food consumption in western industrial countries seems problematic in the context of sustainable development. Irritated by nutritional debates, e.g. sustainable food consumption, & the demands of the clientèle organizations of eating out, the so called large-scale consumers also come under pressure. Specific expectations seem to be options for solutions in organizations of eating out, for example the use of organic, local, seasonal and otherwise specified foodstuffs. The implementation process of these kinds of products has not only manifold consequences for organizational routines, but as well for the communication between the organization & its clientèle. Hereby it comes to tensions between different food attributes, e.g. the origin (global versus local) & the product quality (conventional versus organic). The paper will present these tensions, which are relevant by the use of sustainable food products in organizations of eating out, & will discuss how organizations of eating out manage & communicate these conflicts. The empirical proof is given by a recent research by the authors about the use of organic food products in catering facilities as promoted by the Federal Ministry of Food, Agriculture and Consumer Protection in Germany.

Rudrappan, D. (Professor of Economics, Covenant University, Ota, Ogun State, Nigeria [tel: +234 8080563744; e-mail: rudrappanULd@rediffmail.com]), **Tourism Promotion: A Passport to Peace and Development in Nigeria,** *International Sociological Association, Gothenburg, Sweden,*

¶ Nigeria is the largest black nation in the world & is endowed with huge potentials of resources, excellent tourist locations and traditional heritage which are essential for rapid tourism and economic development. Benefits of tourism are manifold: as an industry, it is labour intensive but noncyclical & less vulnerable than traditional sectors; with less entry barriers and no trade tariff controls, it has a catalytic effect on other sectors of the economy generating jobs. Further, tourism as a form of leisure & as a harbinger of peace enables people to live amicably. Tourism is built on natural & cultural assets & it is consumed on tourism sites; as such it can reach the poor easily in rural areas where poverty is harsher. Moreover, tourism has the potential to ameliorate poverty & inequality by accelerating propoor growth in Nigeria. It has the capacity, if well developed, to reduce the soaring crime rate in Nigeria, as a peace building and conflict mitigating measure to promote cross cultural understanding among 50 ethnic, 250 linguistic & Niger delta militant groups. Tourism facilitates people to realize the importance of contribution & achievements of other ethnic groups that would generate in turn mutual respect, good understanding and fellow feeling. The world Travel & Tourism Council has estimated that revenue related to tourism & travel in Nigeria has exceeded 11 billion US dollars accounting for approximately 6% of GDP in 2008. In the context of country's poor agricultural & industrial progress, Nigeria needs tourism revenue essentially. However, the number of international tourists to Nigeria has remained static on account of barriers such as unfavorable visa regime, negligence, poor accommodation & catering facilities. The paper points out various measures to tap tourism in Nigeria that remains as a goldmine to be tapped & as a passport for peace & development.

2010S02258

Rueckert, Yvonne (University of Kassel/Oviedo, Kassel [tel: 004915111270270; e-mail: yvonne.rueckert@gmx.de]), **The International Trade Union Movement in the System of Global Governance - The Dialogue with the IFIs,** *International Sociological Association, Gothenburg, Sweden,*

¶ Both IFIs, the World Bank & the IMF, are powerful international organizations which have a great impact on economic development in developing & transition countries. Since 2002, the international trade union organizations have maintained a formalized dialogue with them & have tried to influence their political orientation. The aim of the following paper consists in throwing light on the importance of this dialogue with particular regard to the possibilities for the international trade union movement to increase their influence on the system of Global Governance. On the basis of the dialogue, the Global Unions try to promote the Core Labour Standards (CLS) in the field of procurement & in the context of labour market reforms (conditionality) in general. The dialogue is considered as a dependent variable. In this context it is assumed that its quality, defined by the criteria of continuity, differentiated communication & the application of an evaluation mechanism, is deeply influenced by external & internal factors. The first one refers to environmental determinants & the second one to organizational characteristics. The results are based on a qualitative research design, which combines different research strategies including expert interviews, participant observation and the analysis of documents. In summary, it can be stated that the Global Unions reached extensive results with regard to the CLS. However, there is a lack of continuity on the lower levels of the dialogue which causes a decreasing motivation among trade unionists and difficulties to further motivate supporting actors.

Rueff, Maria do Ceu (Centro de Direito Biomedico, University of Coimbra, Faculty of Law, Coimbra, Portugal, 3004-545 [tel: +351 239 821043; fax: +351 239 821043; e-mail: ceurueff@yahoo.com]), **E-health and the Doctor-Patient Relationship,** *International Sociological Association, Gothenburg, Sweden,*

¶ The extension of the doctor-patient relationship to a medical team, including new actors of different kinds in the context of the interdependent & interdisciplinary health-care system, the socialization of medicine, the institutionalization of insurance companies, & also the scientific & technological advances have profoundly changed the contours of information & its protection in medical practice. We are witnessing the construction of concepts of privacy, which, with the advent of new information technologies, also includes information privacy and, more recently, the concepts of informational self-determination, protection of personal data and of very personal or very sensitive data. Beyond explaining some topics of electronic health record in Portugal, my paper deals with particular problems raised by the e-health, such as those relating to privacy & security. Above all, however, I would like to discuss the question of "personalization", & remember the earliest, Hippocratic postulate of medicine, according to which there are no diseases but patients - that is to say, every disease cannot be isolated from the holistic, self-referential system that every person constitutes. How to assure a productive, structural connection between the e-health system & the holistic doctor-patient relationship, which should be always present as a health care pattern?

2010S02260

Ruggero, Colin (New School University [e-mail: ecolinr@gmail.com]), **Radical Green Populism: Modeling Green Counter-Hegemony,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores contemporary radical environmentalism & its normative & material influence outside of radical communities. Further, it is a response to recent calls for rehabilitation of social movement literature's relationship with contemporary radicalism, particularly with the so-called

'movement of movements.' In order to appropriately approach radical communities for analysis, I develop a theoretical framework that relies on activists' own words & behavior for guidance rather than attempting to fit their lives into preexisting models. The work of Antonio Gramsci stands out as particularly useful in this process and a distilled Gramscian perspective offers a flexible theoretical vocabulary for engaging with contemporary radical environmentalism. With the Gramscian perspective as a foundation, I develop a relational & network-based methodology, focusing on DIY (Do-it-Yourself)/Punk networks as one element of the larger network-mass of the 'movement of movements.' Surveys, interviews and the communities' own literature come together to reveal a particular form of environmentalism that I term Radical Green Populism. It is a decentralized, human-scaled approach to environmental change that builds on the educative power of ideas articulated through day-to-day practices, reaching beyond the confines of radical communities. Radical Green Populism combines theory with praxis in a way that remains grounded in the needs and desires of individuals' daily lives while also offering visions for alternative ways of living.

2010S02261

Rughinis, Cosima (Department of Sociology and Social Work, University of Bucharest, Schitu Magureanu 9, Bucharest 010181, Romania [tel: 40722953341; e-mail: cosima.rughinis@gmail.com]), **Quantitative Tales of Ethnic Differentiation. Measuring and Using Roma / Gypsy Ethnicity in Statistical Analyses,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper analyses the use of ethnicity in quantitative models, focusing on Roma / Gypsy ethnic affiliation. Three research models are identified, together with characteristic measurement & model specification issues. A path model is estimated as a methodological example in order to explore influences of Roma / Gypsy ethnic affiliation on church attendance in Romania, using data from the Roma Inclusion Barometer 2006 & the Work Attitudes Survey 2008, which include national samples & also Roma samples designed with a similar sampling methodology. The path analysis indicates that Roma ethnicity & church attendance in Romania are connected by several circuits, with mixed positive & negative influences. Roma ethnicity increases the probability of Neo-Protestant affiliation which in turn increases church attendance. On the other hand, its mediated influence through private religious practice (prayer) is negative, & the residual association of Roma ethnicity is also negative. The direct, mediated & moderated relationships involving ethnic affiliation are evidenced & discussed in relation to processes of ethnic differentiation.

2010S02262

Ruiner, Caroline (University of Augsburg [e-mail: caroline.ruiner@phil.uni-augsburg.de]), **Researching Couples. A Relational View on Intimate Relationships and Their Development,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the proposed paper, couples will be focused as they are preceding the family formation. Especially in times of individualisation the biographies of individuals are subject to decision & have to be coordinated with the partner to provide a common life & to arrange events like getting married or having a child. Against the background of the changing structural, cultural & social conditions, this paper attempts to illuminate how the processes between the partners can be focused to understand the development of couples over the course of time. The underlying empirical findings stem from a qualitative panel of dual-earner couples collected in Germany between 1999 & 2008. In total eleven couples were interviewed in extensive narrative manner. Each couple was interviewed at three points in time in joint interviews with both partners together & in interviews with each partner separately. Only by looking at the couple as a dynamic-interactive connection of two "significant others" (re-)constructing their own reality and by interviewing them throughout a period of time, the processes within couples can be understood. The processes are analysed from a microsociological perspective by using a relational approach - with respect to intimate relationships as "realities sui generis", the couple is more than the sum of its parts - focusing on the partners' perspectives on their development. For analysing the development of couples & its relational construction, "objective" biographical events are focused & compared to "subjective" events which were made a subject of discussion by one or both partners. By relating (missing) "objective" biographical events to the "subjective" perceived development & the meanings the partners attribute, the dynamics in intimate relationships can be figured out, what is - especially in times of social transformation processes - the key to understand the (in)stability of couples as well as the constitution of family life.

2010S02263

Rulofs, Bettina, Hartmann-Tews, Ilse, Combrink, Claudia & Brixius, Klara (German Sport University, Cologne, Germany, 50858 [tel: +49 221 4982 7230; e-mail: rulofs@dshs-koeln.de]), **Gender Bias in Sports Medicine and Sport-Related Research?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Studies in health sciences identified various forms of gender bias which have a negative impact on the application & transfer of results into real life (e.g. pharmaceutics) (cp. Eichler, Gustafson & Pomepetzki, 1999). Gender bias in sports medicine and sport-related health research have so far received little attention. Our interdisciplinary project focuses on the question: Is there a gender bias in sport-related health research & if so, what kind of social structures foster, stabilize or impede gender bias in the research designs? Our study is based on three pillars: 1. Identification of gender bias in publications with sports medical or health related content. 2. Analysis of reasons for gender bias in sports medicine taking into account the role of the socio-structural arrangements of the scientific community. 3. Development of recommendations for a gender sensitive research based on the obtained knowledge. In our paper we will present results from a quantitative content analysis including 3.288 abstracts that focus on sports medicine or sport-related health research. This database comprises all papers that are registered in SPOLIT & MEDLINE from German research groups in the years 2005 - 2008. First results show that almost all of the topics covered deal with health issues that are relevant to men & women, but only 37% of the papers base their research sample on both sexes. Four-fifth of the research that potentially concerns both sexes & includes both sexes in the sample does not differentiate between sex and/or gender issues in the description of results or in the discussion. On the basis of our empirical research the key dimensions of gender bias in sport-related health studies will be pointed out and criteria for gender-sensitive research will be outlined (cp. Combrink, Rulofs & Hartmann-Tews, 2008). References: Combrink, Claudia, Rulofs, Bettina & Hartmann-Tews, Ilse (2008). Geschlechtersensible Forschung im Kontext von Gesundheit und Bewegung a Anforderungen an den Forschungsprozess. In I. Hartmann-Tews & C. Combrink (Hrsg.), Gesundheit, Bewegung und Geschlecht. Brennpunkte der Sportwissenschaft 30 (S. 13-28). St. Augustin: Academia Verlag. Eichler, M., Gutstafson, D. & Pomepetzki, M. (1999): Moving Toward Equality: Recognizing and Eliminating Gender Bias in Health. Toronto: Health Canada.

2010S02264

Ruokonen Engler, Minna & Siouti, Irini (Department of Social Sciences, Goethe University Frankfurt, Robert-Mayer-Strasse 1, Postbox 101 [e-mail: ruokonen-engler@soz.uni-frankfurt.de]), **Looking Back, Looking Forth - Reflections on the Meanings of Migration Experience of the Researcher in a Transnational Research Setting,** *International Sociological Association, Gothenburg, Sweden,*

¶ The globalization & the transnationalization of societies & social relations pose an immense challenge to the sociological research. Therefore, the criticism of Andreas Wimmer & Nina Glick Schiller about the methodological nationalism in social sciences needs to be taken seriously. Even though the construction of transnational social space, social relations & identities have been discussed in the field of biographical migration studies, the role of the researcher in transnational knowledge production, however, has not been questioned so far. In our paper, we argue that the researchers, their networks & their mobility & migration experiences play a crucial role in creating a transnational research setting. Subsequently, we ask what consequences should be drawn from this for biographical analysis, especially in the field of transnational migration studies & what kind of new ways of writing & presenting biographical research are followed from this.

Ruschenburg, Tina (University of Hamburg, Germany [e-mail: tina.ruschenburg@uni-hamburg.de]), **Network Involvement of Female and Male Scientists. A Social Network Analysis of Cutting-Edge Research Institutions in Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ Much has been written about the low presence of women in science, especially with regard to leading positions. One common explanation is that female scientists do not have access to networks to the same extent as their male colleagues. As a consequence, they are considered excluded from informal information flows & having less influence on the strategic decisions of their universities, departments or research institutes. However, empirical studies on the gendered involvement of scientists in formal & informal networks are scarce. Some of them are limited to the question

of perceived network involvement without contrasting this perception with other more objective indicators. This paper makes a contribution to fill this gap. Our sample covers several leading German research institutions from different research fields which are all participating in the German excellence initiative. In this paper, we investigate the involvement of male & female senior scientists in intra-institutional networks. The results presented in this paper originate from the research project "women in cutting-edge research", directed by Prof. Anita Engels, Hamburg University, & funded by the German Ministry for Education and Research & the European Social Fund.

2010S02266

Rusconi, Alessandra (Social Science Research Center Berlin (WZB), Berlin, Germany, 10785 [tel: +493025491174; e-mail: rusconi@wzb.eu]), **Gender Differences in the Timing of Career Steps in German Academia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Even among the highly educated strong gender differences persist as regard to women & men's professional development. The literature mainly attributes such gender inequality to multidimensional occupational segregation processes. However, research so far has seldom acknowledged that the majority of individuals is committed to a partner & thus his–& particularly her–career development is closely entwined to the partner's professional development. Along with gender-specific challenges in the labor market, women in a committed relationship might experience their partners' career opportunities & demands as an additional hindrance to their own careers. The focus of this paper will be on professional careers in German Academia. Up to now, gender differences in this particular labor market are very pronounced: overall women hold only 16% of professorships, & strong gender differences exist in typically female disciplines, too. The empirical analyses will be carried out utilizing a new (and unique) life histories database of 750 female & male scholars currently employed in three different disciplines at 18 German universities, who are since at least 2 years in a committed relationship with a partner who holds an academic degree himself/herself. Additionally, the database comprises life histories of 500 partners of these scholars. The respondents reported in standardized telephone interviews a month-by-month retrospective account of their educational, occupational, family, & residential histories since their first academic degree. The focus of the analyses will be on vertical segregation in terms of the timing of career steps and type of positions achieved, & on contractual segregation. In order to account for horizontal segregation in terms of fields of studies, we will analyze (and compare) women & men's professional development in three broadly defined fields: technical, natural, and social sciences disciplines. Central research questions are: is there only one way toward & within Academia or do these different disciplines provide for alternative paths? Are there discipline-specific "rules of the game" that are especially favorable to female careers? In addition, we will take into account the private life situation of academics, i.e. the timing of partnership formation, homo- vs. heterogeneity between partners as regard to field of studies & professional fields (e.g., both partners pursue a career in Academia vs. one partner pursues a non-academic profession). Central research questions are: Do only "individual" & "fields" characteristics bring about vertical and contractual gender segregation, or rather do private life commitments & arrangements amplify (or diminish) gender differences in career steps? Are there specific couple's constellations particularly favorable to the pursuit of female careers in Academia?

2010S02267

Ryen, Anne (University of Agder, Postbox 422, 4604 Kristiansand S, Norway [tel: +47 38141000; fax: +47 3814 1028; e-mail: Anne.Ryen@uia.no]), **Teaching Qualitative Methods online in cross-cultural settings: Diversity - How Does it Matter?,** *International Sociological Association, Gothenburg, Sweden,*

¶ This is a paper on teaching qualitative methods online in cross-cultural contexts. It draws on experiences from a Development Management Programme (M.Sc.Development Management) with five universities in Norway, Sri Lanka, Tanzania, Ethiopia, & Ghana. My focus is on the question how does diversity come into teaching qualitative methods? This includes reflections such as when does diversity matter, when is it being invoked & spaces of irrelevance. I claim these questions are embedded in a larger superstructure of western hegemonic dominance where commodification of higher education last decade has resulted in a mushrooming of online studies. The ultimate goal is to accentuate the potential for social change rather than perpetuating neo-colonialism in qualitative research. I argue one way is to explore also alternative frames and epistemologies to better capture the contextual of non-western communities based on regional studies. This means allocating a central place for diversity, but without being trapped in classic pre-fixed, (non-) romantic categories.

2010S02268

Ryu, SeoungHo & Jang, YeBeet (Kangwon National University, 192-1 Hyoja-dong, Chuncheon-si, Gangwon-do 200-701 Republic of Korea [tel: 82-33-250-8750; fax: 82-33-255-8751; e-mail: shryu@kangwon.ac.kr]), **Emerging Characteristics of Social Interaction in Converged Media Environment: 'Loose Surveillance' and 'Familiar Stranger',** *International Sociological Association, Gothenburg, Sweden,*

¶ The advance of a variety of media platforms based on information technology & media convergence has transformed users' behaviors and lifestyles. This change redirects the future map of technology and vice versa. This paper investigated the how media convergence has been reshaping our structure of contemporary society and altering a new dimension of IT living conditions. In order to define new phases occurred by IT revolution, we firstly collected several notable cases of social technology in ubiquitous environment such as converged mobile devices, online MMORPGs and SNS (social network services) in South Korea, which possibly changes our lifestyle, culture & society. In the process of analysis we found interesting phenomena such as "loose surveillance," "familiar strangers" & etc. These findings suggest that 'interactions among strangers with surveillance & familiarity' can be the essence of postmodern life & media convergence era.

Sa'ad, Abdul-Mumin & Iganus, Ruth Bulus (Department of Sociology and Anthropology, Univ. of Maiduguri, Maiduguri, Borno State, Nigeria [tel: +234 8033231752; e-mail: amsaad89@hotmail.com]), **Work-Family Conflict, Work-Family Policies and Work-Family Balance in Nigeria: The Case of Maiduguri, Borno State of Nigeria,** *International Sociological Association, Gothenburg, Sweden,*

¶ In traditional Africa, sex roles were the order of the day. Women managed the home fronts & were traditionally assigned the tasks of bearing children & nurturing them in their early years to maturity, while men ensured protection & provision of the daily needs of their families. In the modern World of Work however, things have changed & are changing rapidly. Technological changes have reduced the number of traditional jobs that relied on sheer physical strength & made many, if not most jobs "unisex". In addition, positive educational policy initiatives in Nigeria, such as Universal Basic Education (U B E) & advocacy projects for "girl-child" education have afforded women the opportunity of acquiring skills needed in the world of modern work. The situation has resulted in an influx of women into the workforce outside the family & brought about a gradual but steady shift in the make-up of the labor force in Nigeria. It appears that as women had gradually incorporated nondomestic tasks into their already existing mounting domestic responsibilities, men had gradually adjusted their time, resources, & work roles in order to alleviate the stress women encounter in the work & family domains. This resulted in changes in the traditional sex-role ideology that used to prevail in African societies. This appeared to have introduced the problem of work- family conflict with its attendant negative consequences on both sexes, but most especially on the women. Work-family scholars from the West have become aware of people's need to balance their work & family lives. There is a corresponding effort by organizations to acknowledge this need and adopt measures (work-family policies) to satisfy it to some extent. It seems however that African countries are lagging behind in this respect. Yet it is an observable fact that African families in today's urban labour market are facing serious work-family conflicts. It has thus become important to study the extent and nature of work-family conflict in Nigeria & how employed Nigerian parents cope with such conflicts & what Nigerian work-family policies, if any, are available for employed parents to achieve work-family balance. Maiduguri, the capital city of Borno State of Nigeria will be the focus of this study.

Saarikoski, Heli, V, Åkerman, Maria & Primmer, Eeva (The Finnish Environment Institute, P.O. Box 140, 00251 Helsinki, Finland [tel: +358 400 148 658; fax: +358-9 549 02391; e-mail: heli.saarikoski@ymparisto.fi]), **The Potential of Governance in Forest Policy: Institutional Capacity in Preparing Regional Forest Programs in Finland,** *International Sociological Association, Gothenburg, Sweden,*

¶ The opening up of Finnish forest policy making to new interest groups, and a change to more flexible forms of partnerships at multiple levels sig-

nals a transition to new governance relations. Drawing on the concept of institutional capacity (Healey et al 1999, Rydin & Falleth 2006), we analyze the governance potential of stakeholder forums called Regional Forest Councils to devise Regional Forest Programs outlining the forest strategy for the region. More specifically, we look into knowledge resources that are produced and shared in the Regional Forest Program process, relational resources such as trust & reciprocity created & sustained in the Regional Forest Councils, & the capacity to mobilize resources & take action to implement the Program. The two processes we have analyzed demonstrate various elements of institutional capacity for collective action, & illustrate the challenges that a traditional hierarchically organized and expert-driven sector can face in developing more inclusive forms of governance. Healey, P., de Magalhaes, C. & Madanipour, A. 1999. Institutional capacity-building, urban planning & urban regeneration projects. Futura 18(3):117-37. Rydin, Y. & Falleth, E. 2006. Sabir, Imran (Universite de Paris IV-Sorbonne (EHESS), 54, boulevard Raspail, 75006 Paris, France [tel: 0033631609746; e-mail: imisa2@yahoo.com]), **Sociological Labor and Structurally Imposed Academic Dependency in South: A Case of Pakistan,** *International Sociological Association, Gothenburg, Sweden,*

¶ The organisation & future development of national systems of research among countries of the South are today frequently discussed & studied with reference to globalisation, cooperation, and the national division of scientific labour (See the introduction of this special issue). This triad of elements is itself often considered in terms of several permutations. Globalisation is often coupled to forms of cooperation, which when taken together comprise a worldwide learning network. Alternatively, multinational research synergies are suggested on the basis of the coordination of nation-ground divisions of national cognitive & technical labour through cooperation. International division of scientific labor is determined by the cosmopolitan mode of knowledge production. This cosmopolitism is not pragmatically conceivable as the transcendence of all forms of knowledge, considering it necessarily universal. In this article, we will explore the case of Sociology in Pakistan from its inception in 1954 to today which may be characterized by national isolation, outdated knowledge, & cognitively & institutionally static. Although, it's more than sixty years that Sociology as a discipline prevails in Pakistan, it is yet to attain a status of more than an academic discipline. In the passage of over half a century, how it is possible that Pakistani sociologists have published a mere 20 articles in Science Citation Index journals and that there never existed an indigenous research journal where Pakistani Sociologists could publish their research outcomes? Why the predominantly practiced research activity in the form of research dissertations written by the students revolved predominantly around almost identical issues, & identical research problems which were addressed by using age-old research methods? What does this activity in the name of learning and knowledge production tell us about issues of globalisation, cooperation & the national division of labour, especially in the third world? And importantly, How the relationship between the first world & the third world should be viewed & assessed when the former is viewed as the knowledge producing when taking scientific standards into account & the later as the dependent one in the age of knowledge economy? The explanation for this situation will be explored in the light of Pakistan's political and colonial & post-colonial history, the complex socio-linguistic norms extant in the educational system, the institutionally narrow and cognitively blinkered origins of Pakistan's sociology university departments, the intellectual & professional introversion & inertia & lastly the institutional and structural constraints of academic teachers & their professional habitus. Such a structurally imposed academic dependency on the North of the Pakistani Sociologists & their isolation from its scientifically valid knowledge production process may help us understand the nature of division of scientific labor in other Third world countries & in fact if it becomes predominant in a national science system, it may well prove fatal to its integration on a global level.

2010S02272

Sabour, Mhammed (University of Eastern Finland), **Cultural Consciousness and the Meaning of Knowledge: Taking Gramsci, Freire and Bourdieu to the Moroccan Academic Field,** *International Sociological Association, Gothenburg, Sweden,*

¶ Because of the demand for skilled manpower after the independence the first and second educated generations were integrated almost automatically in labour market of the State apparatus and its subsidiaries. Lately in the course of the last two decades this market has become saturated or very selective. For many lower class and strata with modest educational cultural capital and whose training and skills often leave much to be desired, find themselves unemployed especially in some fields of social sciences, humanities and even national sciences (e.g. biology). For accommodating the tremendous rising demand for higher education and the shortage of material means a policy of quantity was encouraged over quality. Many universities were created all over the country. One of the consequences that followed is the overproduction of ill-educated holders of diploma from mainly modest and lower classes were exposed to educational failure, dropout and unemployment. Building on Gramscis, Freires and Bourdieus theoretical frameworks the aim of this contribution is to shed lights on the meaning of knowledge and education for the students from different social classes and academic disciplines on the one hand, and to assess their cultural and social awareness of the ongoing development policy and global issues, on the other. Although this study focuses empirically on Moroccan society it will emphasise issues that are common to Southern Mediterranean countries.

Sacchi, Stefano, Berton, Fabio & Richiardi, Matteo (University of Milan and Collegio Carlo Alberto, Turin [e-mail: stefano.sacchi@unimi.it]), **Stopping Halfway on the Road to Flexicurity: The Learning Case of Italy,** *International Sociological Association, Gothenburg, Sweden,*

¶ Contrary to what is commonly believed, the Italian labour market is both a flexible & an insecure place, for the unemployed as well as for most of the employed workers. In this Italy represents a learning example for those European countries that followed the Oecd Jobs Strategy, on the one hand shrinking the employment protection legislation while on the other remaining loyal to a social protection system based upon social insurance principles: Italy indeed ranks second among the Oecd countries for its degree of compliance to the Jobs Strategy; nonetheless its recent history shows that a flexible labour market, workers' security & binding contribution requirements are hardly a consistent triple. We prove this in a three-step approach: along the lines of the flexicurity debate we start with a definition of "security in the labour market" as opposed to "security on the job"; second, we identify negative causal relationships between flexible working arrangements and the main determinants of security in the labour market; third, building on such determinants & on the definition, we propose a measure of security that is independent on the country-specific institutional framework, thus allowing for international comparisons. Our argument is that, on the road to flexicurity, social protection reforms that depart from employment-based entitlements are strongly called for.

2010S02274

Sackmann, Reinhold & Kopycka, Katarzyna (Institute for Sociology, Martin-Luther-University Halle-Wittenberg, D-06099 Halle (Saale) [tel: 0049-345-55-24252; fax: 0049-345-55-27150; e-mail: reinhold.sackmann@soziologie.uni-halle.de]), **International Anti-Ageist Policy against National Context?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Policies against ageism were strengthened by guidelines against discrimination set up by the European Union in the years following 2000. These policies were motivated by both egalitarian principles and employability considerations, which sometimes contradict each other. However, policies at the international European level do not necessarily determine national legislation or practice. Our presentation therefore concentrates on the question, whether a translation of "international" anti-ageist policies into national public debate is successful in so far as it results in a change of direction of public debates or whether it fails due to path dependencies of ideologies parallel to former institutional practice. Theoretically we model a tension between (sometimes very small) epistemic communities being quite important in world society structures & large membership organizations dominating the power game in national contexts. In this constellation simple models of "copy", "diffusion" or "modernization" of ideas & practices seem not to be as adequate for a realistic description as more complex models of an interrelated translation of ideas and practices (Latour), which we use in the analysis. To answer the research question on translation of anti-ageist policies an empirical case study of public policy debate on anti-age-discrimination policy in Germany & Poland was carried out. Articles in the two leading national newspapers Frankfurter Allgemeine Zeitung & Gazeta Wyborcza in the interval of the years 1999 to 2009 were studied by quantitative & qualitative content analysis. The analysis shows that the concept of age discrimination was new to both Poland & Germany. Resistance against anti-ageist legislation was strong in Germany, but after implementation on the one hand organizations took up new routines, but a juridification of age discrimination produced value

conflicts still leaving open whether a translation will last. In contrast, in Poland the debate on anti-discrimination policy shows a gap between a, only partly completed, superficial adaptation to the new law (official statements & regulations), which hardly influences organizational mentalities. With regard to causal constellations explaining different results of a translation of the international concept of anti-discrimination into local discourses, we see the relationship of actors as central. In Germany NGOs are weak in the anti-age discrimination discourse. They are supplemented by the European Union (which creates resistance). In Poland NGOs are stronger in the discourse of this field (but with less law-setting power). In both countries the translation of international anti-ageist policy is still not successful, which is reflected in a minimal effect of the new legislation on the dominant negative age typifications in the discourse of these countries.

Sada, Daphne Esquivel (Université de Montréal [e-mail: daphne.esquivel.sada@umontreal.ca]), **Synthetic Biology or the Route towards the Engineering of Life. Which Socio-Cultural Issues on the Move?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Rooted on an interdisciplinary effort, the domain of synthetic biology stems from a technological convergence, gathering heterogeneous technoscientific approaches & projects: the quest of (proto-)extraterrestrial life, the design of the living (bioengineering) for bioeconomy industries (energy, biomedicine, environment), the construction of proto-cell & minimal genome organisms, & the creation of novel forms of life (for instance, through new nucleic acids). In the present communication, we aim to contribute to a theoretical disentangling of socio-cultural issues raised by synthetic biology, notably by drawing a general portrait of this technoscientifc field, & highlighting its specificities: notably the standardisation chain of "biological parts" (biobricks), the "open source" logic, & the international Genetically Engineered Machine Competition (iGEM) used as teaching and recruitment tool. Then we examine its engineering spirit, which makes it swerve, we argue, from ancient ideas of "creating life" in labs, since its purpose appears to be rather the design of life than its creation. Finally, we suggest that the transformations of the scientific ethos that so follows counts for some of the majors synthetic biology's sociological stakes.

Sadegh, Salehi (University of Mazandaran, Babolsar,Mazandaran,IRAN; [tel: +981125224201; fax: +981125342602; e-mail: sadeghsa@yahoo.com]), **Public Attitudes towards Climate Change and the Impact of Transport,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Islamic Republic of Iran signed the United Nations Framework Convention on Climate Change (UNFCCC) at the Rio de Janeiro Earth Summit in 1992 & ratified the Convention in 1996. However, very little is known about Iranian people attitudes towards climate change. People's attitudes towards climate change were investigated in two cities of Mazandaran, Iran. Interviews for this study were conducted between 1 August & 6 September 2009. A quantitative survey was undertaken in Iran (Babolsar & Mahmoodabad) by the research assistants. A non-representative quota sample of 400 people aged 15 years & older was interviewed face-to-face in their own homes. The preliminary findings reveal that while people levels of concern about the climate change, knowledge about the cause of climate change is very low. It further shows that people do not see any connection between individual behaviours & climate change. Majority of people believe that international organization and developed countries are responsible to take action to tackle climate change issues. The paper will examine the relationship between socio-economic variables (age, gender, number of household, education, religion etc) with attitudes towards climate change.

Sadovskaya, Yelena (Institute for the Study of International Migration at Georgetown University, 3300 Whiteheaven str., Suite 3100, Washington DC, 20007 [tel: 202-687-2406; fax: 202-687-2541; e-mail: esa2004@mail.ru]), **International Labour Migration and Development in Central Asia in 2000s: Multiple Economic and Social Effects,** *International Sociological Association, Gothenburg, Sweden,*

¶ Central Asia is an emerging as an regional migration subsystem, a part of a larger post-Soviet migration system, wherein Kazakhstan is a country receiving labor migrants, & other countries of the region a Kyrgyzstan, Tajikistan, & Uzbekistan a are "sending" countries. The role of labour migration & remittances in the region is illustrated by the following figures: up to 20-45 percent of the economically active population are labor migrants in sending countries & the remittances to these countries were equivalent of about 35 percent of GDP in Kyrgyzstan & 59 percent a in Tajikistan in 2008. Migrants' remittances & their impact on increasing living standards is the most important outcome of international labour migration. The consequences of labor migrations are multiple & are observed at micro- (individual and household), meso- (community) & macro- (societal) levels. E.g., emigration of the excessive labor force especially from the poor and overpopulated agrarian regions of the Ferghana Valley in Kyrgyzstan & Uzbekistan mitigates the situation in the local labor markets, preventing social tension & unrest. However, the rising social & professional mobility of migrants & other effects of international labor migration remains largely unstudied. It is important to research it in comparative perspective to understand the relationship between migration & development in Central Asia.

Safarova, Gayane L. & Pirozhkov, Sergei I. (Saint-Petersburg Institute for Economics and Mathematics, Russian Academy of Sciences, Tchaikovsky str. 1, 191187 Saint-Petersburg, Russia [tel: 7 812 2722045; fax: 7 812 2737953; e-mail: safarova@emi.nw.ru]), **Trends of Population Ageing in Russia and Ukraine within European Context,** *International Sociological Association, Gothenburg, Sweden,*

¶ The changing age structure is raising concern among policymakers especially over the funding of social security systems. Fertility and mortality trends in Russia & Ukraine have been similar, they face similar political, economic & social problems. In the recent past Russia & Ukraine were "younger" than the majority of Western countries, but ageing there is progressing rapidly. Thus from theoretical & practical points of view it presents interest to compare ageing development in Russia & Ukraine with other European regions. The paper aims at analyzing current state and future trends of population ageing in Russia & Ukraine within European context. The analysis is based on census data, vital statistics & several population projections. Numerous ageing indicators have been computed & compared. Ageing trends in Russia and Ukraine are shown to be similar, the number of the elderly and their proportion will increase for a very wide range of scenarios. By the turn of the century some ageing characteristic for Russia and Ukraine became close to those for other parts of Europe, & by 2050 may become even greater. Revealing similarities and diversities in ageing trends, results obtained may contribute to the fruitful use of Western experience & to elaboration of effective ageing policies for Russia & Ukraine.

2010S02279

Sagebiel, Felizitas, Hendrix, Ulla & Schrettenbrunner, Christine T. (Department of Social and Educational Science, University of Wuppertal, Wuppertal, Germany, 42119 [tel: +492024392165; fax: +492024393149; e-mail: sagebiel@uni-wuppertal.de]), **How Women Scientists at the Top Change Organisational Cultures,** *International Sociological Association, Gothenburg, Sweden,*

¶ The research focus of the paper is the change impact of women in management positions. Are women able to change organisational cultures? Is there any gender difference in managing & leading at the top in science & technology? In a governmental funded German three years lasting project (2009-2012), eight case studies in companies, governmental research organisations, political institutions & universities have been constructed. Homepage analyses, expert interviews & focus discussion groups have been done for fieldwork; for deeper analysis of results typological & contextual methods have been used. First results show that top women use their power for changing content and culture of organisations, but meet at the same time obstacles of more traditional working cultures. They try to use power relations & to change organisational cultures in four ways: 1) Expectation of efficiency by a media based form of all-time-availability 2) Being a new role model of top management behaviour 3) Being a new role model in flexibility & expecting the same from their employees 4) Less delegating & using less hierarchical structures. Their entrance to men's networks is still hindered by power & gender stereotypes.

2010S02280

Saha, Lawrence J. (Australian National University, Canberra, ACT 0200, Australia [tel: 61-2-6125-2132; fax: 61-2-6125-2222; e-mail: Lawrence.Saha@anu.edu.au]), **Paulo Freire's Pedagogical Theories and Practice, and Socio-Economic Development,** *International Sociological Association, Gothenburg, Sweden,*

¶ The purpose of this paper is to review empirical studies which have evaluated the effectiveness of Freire-based literacy and educational pro-

grams in order to better understand the social and psychological foundations upon which they are based. Paulo Freire, who even in his lifetime was called "the best known educator of our time" (Gerhardt, 1993), continues to have a major impact on pedagogical theory & practice in both developed & developing countries. His influence on notions of "transformative learning" and on critical theories of education continues today, as does his related approach to literacy programs in the developing world. These are all particularly important since they are often closely linked with various forms of socio-economic development policies. Yet Freire himself was rarely precise about the techniques or underlying principles which should guide the application of his educational vision. This paper will examine specific literacy programs which were influenced by Freire in order to attempt an evaluation of their effectiveness. Ultimately this will result in a better understanding of the basis of Freire's pedagogy & the principles which affect its successful use in educational policy.

2010S02281

Saitta, Pietro (Department "w. Pareto" of the University of Messina, Via Tommaso Cannizzaro 278, 98124 Messina, Italy [tel: +39 090 641 1070; e-mail: pisait@gmail.com]), **Getting By in Sicily. Informal Economy and Social Change in a Roma Community,** *International Sociological Association, Gothenburg, Sweden,* (ITA)

¶ The present paper focuses on Mazara del Vallo, Sicily. It aims to show how a group of Roma from Kosovo, living in the area since the 1970s, has gained a livelihood through such enterprising methods as music, improvised handicrafts, & small-scale drug dealing. These individuals have been able to exploit the ambivalence of the authorities as well as opportunities presented by the thoroughgoing informality of this Sicilian town. Although a culture of poverty perspective would suggest that they are merely reproducing poverty from generation to generation, in-depth observation shows that the informal economy represents a paradoxical means for social advancement.

2010S02282

Saks, Mike (Office of the Provost, University Campus Suffolk, Waterfront Building, Neptune Quay, Ipswich IP4 1QJ [tel: 01473 338000; fax: 01473 339900; e-mail: m.saks@ucs.ac.uk]), **Marginalization, Professionalization and Public Policy: Emerging Health and Social Care Professions in the United Kingdom,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines from a neo-Weberian perspective the issues posed by shifts in public policy for emerging health & social care professions in the division of labour in the United Kingdom. It particularly focuses on the implications of recent moves by government to enhance public protection through the professionalization of a number of long-established but traditionally marginalized occupations in complementary and alternative medicine & social care in a challenging socio-political climate. The position of developing professional groups in these fields is contrasted with more dominant professions a & especially medicine which still forms a key part of the contemporary political landscape in shaping the outcome of professional projects. The position of such developing groups is also compared with less favoured non-professionalized occupations, including health & social care support workers. The analysis highlights that a while there are still limitations on what can be achieved by emerging professional groups a growing state concern to regulate the health & social care workforce to protect the public creates opportunities for the legitimation and consolidation of emerging professions. Whether these are realized will depend primarily on the view adopted by the state on specific areas & the response of already professionalized & currently professionalizing groups.

2010S02283

Sala Pala, Valérie (CERAPSE-TEMIS, 6 rue Basse des Rives, 42023 Saint-etienne Cedex [tel: +33 (0)4 é7 81 23 20; e-mail: vsalapala@aol.com]), **Urban Riots and Politicization in Popular Neighbourhoods. The French Case,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper, we try to analyse the relationship between urban riots and politicization in a popular neighbourhood of a French town. Our analysis relies on fieldwork in Firminy (near Saint-Etienne), more precisely "firminy-Vert", a mostly social housing neighbourhood (well known for being devised by Le Corbusier) where urban riots took place in July 2009. We focus on several levels of questions. Firstly, how can we relocate these urban riots in the framework of the structural transformations of this urban neighbourhood & of the politicization of its inhabitants? Secondly, how can we pattern the individual trajectories of politicization of the young people in this neighbourhood? What are their relationships to citizenship, how do they define themselves socially & politically & how do they interpret the urban riots? Thirdly, how are these events politicized (or depoliticized) by the local actors (municipality, social workers, street-level bureaucrats, etc.)? How do they interpret these events & how do they respond to them & try to act on their effects? Our fieldwork mainly relies on interviews with young inhabitants of the neighbourhood & with local actors.

2010S02284

Sala, Emanuela & Fumagalli, Laura (Institute for Social and Economic Research, University of Essex, Wivenhoe Park, Colchester, UK [e-mail: esala@essex.ac.uk]), **Telephone Coverage Error and Italian Polls. The Case of 2006 and 2008 General Elections,** *International Sociological Association, Gothenburg, Sweden,*

¶ The predictive capacity of Italian polls has been found to be poor (Gasperoni e Callegaro 2008). In this paper we investigate the role of coverage error in determining the poor performance of the Italian polls for the 2006 & 2008 general elections. Coverage error could potentially play a key role in determining the failure of the polls as more than 30% of the Italian households are currently excluded from the sampling frame (the telephone directory). It is just up to the each single household to decide on its exclusion from the telephone directory. Our hypothesis is that the households that are excluded from the sampling frame could be different from the included ones with regards to their voting behaviours and, therefore, the results of the polls can be biased. The paper is structured into four parts. We first describe the methods commonly used by pollsters in Italy (sample frame, mode of data collection, etc.) & we discuss the accuracy of the predictions of the polls. Secondly, we use data from the Italian "multipurpose Survey" 2006 & 2008 (sample size: 20,000 individuals) - which is the only survey that collects information useful to establish whether households are included in the sample frame - to compare the degree of the political awareness of respondents who belong to the two types of households. Preliminary evidence shows that the political participation of respondents who are included in the sampling frame differs significantly from the one of the excluded. The "multipurpose Survey", however, does not collect any information on actual voting behaviour or electoral preferences. Therefore, in the third part of the paper, we perform a statistical matching exercise using data from the Italian National Election Studies Survey (2006 & 2008) to test whether the households included in the sample frame have political preferences that are different from the one that are excluded. Issues concerning the introduction of a dual frame in Italian polls are discussed in the final section.

2010S02285

Salazar, Noel B. (CuMoRe, University of Leuven, Parkstraat 45, bus 3615, BE-3000 Leuven [e-mail: noel.salazar@soc.kuleuven.be]), **The Double-Bind of Cosmopolitan Capital Accumulation through Tourism,** *International Sociological Association, Gothenburg, Sweden,*

¶ Global tourism marketing encourages tourists to believe that the very act of travel & encounter with cultural "others" guarantees both a broadened cosmopolitan horizon & greater intercultural understanding. This paper, based on long-term ethnographic fieldwork on tourism conducted in Indonesia & Tanzania between 2002 & 2009, sheds new light on the relation between tourism and cosmopolitanism. The empirical findings shift the attention from tourists to service providers as those accruing most cosmopolitan capital through tourism. Local tour guides, for instance, are able to use their privileged contact with foreign visitors to nourish their dreams of escape from the harsh local life & to enhance their own cosmopolitan status. Many guides have developed an amazing personal repertoire of multi-cultural competencies. They substantiate the idea that cosmopolitanism is by no means a privilege of the rich & well-connected (although, it may be true that guides in developing countries may be richer & more connected than many other people around them). Furthermore, the analysis of guiding narratives & practices reveals that physical or spatial mobility is not a necessary condition to become cosmopolitan. Travel signifies not only a physical movement across lands & cultures, but also an imaginative journey in which wonderment about those who live differently makes it possible to see the world in another light. Attention to political economy and power relations, however, reveals that the exposure of tour guides to foreign people does not necessarily imply an easy blending of cultures. Paradoxically, the guides' dreams of moving (geographically) forward & (socially) upward a becoming more cosmopolitan (and more modern & Western) a can only materialize if they represent to tourists their lifeworld (including themselves) as developing little or not at all, because

it is this kind of perceived difference foreign tourists need for the buildup of their own cosmopolitan capital.

Salehi Omran, Ebrahim (University of Mazandaran, Babolsar, Iran [tel: 0098-9111119993; e-mail: edpes60@hotmail.com]), **Supply Side Explanations for the Women's Participation in Higher Education in Iran with Considering Nation-State Formation,** *International Sociological Association, Gothenburg, Sweden,*

¶ Higher education (HE) has been considered as a key element in the economic political & cultural processes of every modern and developing nation. In the past two decades most countries including Iran have experienced some form of expansion in their systems of HE. This expansion has also been accompanied by increases in the participation of woman in HE (Salehi 2002). In Iran, the number of women participating in HE has increased from 30.5 percent in 1979 to over 60 percent in 2009. Clearly, this constitutes a major breakthrough not only in participation rates for women but possibly also in terms of their changing role in society. The reasons for focusing on higher education relate not only to the specific issue of women's participation but also to the increased importance of HE to all societies because of globalization. The key point here is that without a sizeable HE sector which can train graduates to make links with the new globalize economy by generating networks with groups overseas & where possible creating indigenous hi-tech capabilities, developing nations will be isolated from international economic activity (World Bank, 2000). However, this article examines the supply side in order to explain the possible reasons behind the development of HE & why women have chosen to participation in it. Several theories are also considered in seeking to explain the supply side expansion of educational spaces by the state. These are human capital theory, public choice theory, conflict theory, varieties of feminist theory & state formation theory. With consideration to the interview with senior educational policy makers in Iran, it is concluded that a modified state formation theory is likely to provide the most adequate explanation of changes in relation to HE & especially women participation in Iran in the globalization age. Key words: Higher education, Social and economic theories, Iran, women, Nation-state

Salehin, Mohammad Musfequs (Dept. of Sociology and Social Policy, The University of Sydney NSW 2006, Australia [tel: +61 04 33287475; e-mail: msal5839@uni.sydney.edu.au]), **Beyond Islam: Factors Affecting Democratic Consolidation in a Muslim Majority State,** *International Sociological Association, Gothenburg, Sweden,*

¶ The relationship between democracy & Islam is very complexly articulated. Hence, there has been a long-standing debate on the issue of compatibility of Islam with democracy in the Middle East and other Muslim majority countries. Therefore, a rigorous scholarship is required to understand the complex relationship between Islam & democracy. This research paper will examine Islam's "compatibility/incompatibility" with democracy based on the evidences of the "success" of democracy in Muslim majority state, Bangladesh. This paper argues that Islam is not a problem in democratization, but lack of social capital & trust, fragmented party politics, patron-clientism, rent seeking middle class, and subsequent unequal distribution of economic & political resources hinder democratic consolidation in Bangladesh. Since no single rule or institution is sufficient for democratic consolidation, this paper argues, along with electoral competitiveness, presence of a vibrant civil society, large number local NGOs (for political and economic empowerment & de-clentisation), indigenous form of secularism & non-political use of Islam, constitutional guarantees & implementation can make democracy "successful" in Muslim society like Bangladesh.

Salento, Angelo & Spina, Ferdinando (University of Salento, Via dei Salesiani 25, Lecce, 73100, Italy [e-mail: angelo.salento@unisalento.it]), **Law and Irresponsible Firm,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper describes & explains the irresponsible behaviours of contemporary firms, i.e. those kinds of economic activities which, albeit legal, are violating some kinds of ethical & moral obligation or constraint. The "irresponsible firm" doesn't answer to any public or private authority, nor to public opinion, for the economic, social & environmental consequences of its activities. Its ultimate goal is the profit maximization, pursued by finance-oriented rather than market-oriented strategies, largely regardless of stakeholders' interests & needs. Our aims is to understand whether & how, notwithstanding the thirty-year neoliberal economical & institutional changes, contemporary legal systems can place restraints to firm's autonomy, obtaining accountability & promoting social justice. We deal with two distinct fields: workers & environment. Through some Italian and international examples we discuss how irresponsible firms cause tragic outcomes both on social conditions of workers & on natural environment. Finally, we suggest concepts & tools from labour law and environmental law in order to rethink & improve regulatory implementation.

Sales, Arnaud, Beschorner, Thomas & Celka, Arnaud (Université de Montréal, C.P. 6128, Succ. Centre-ville, Montréal, Québec, Canada, H3C 3J7 [tel: 1 514 343 7407; fax: 1 514 343 5722; e-mail: Arnaud.Sales@umontreal.ca]), **Role and Impact of International Private Authorities in the Ethical Regulation of Corporate Activities: Results from a Case-Study,** *International Sociological Association, Gothenburg, Sweden,*

¶ Modern States have confirmed their declining ability to control or regulate private sources of power, at a time when they have been multiplying particularly in the economic field. Although there remain essential national & international actors who have the ability to impose standards & rules for modifying individual and institutional practices, nation-states no longer have a quasi monopoly over regulatory authority. The general objective of the research project on which this paper is based is to understand how regulatory practices are developed by international private authorities & their impact on how firms operate. More specifically, this research aims to address the following two issues: a) how private standards systems involving voluntary participation are put in place in a globalized economy & in response to the significant increase in ethical & governance problems in the business world; & b) what strategies and structures are implemented by firms to adopt & comply with these standards in an effort to counter the criminal, abusive or irresponsible behaviours affecting many of their stakeholders, their reputation & even the long-term survival of the firms? Our research therefore examine the "new" development & dissemination processes as well as processes for implementing international standards systems for responsible governance, & the way in which firms implement these systems. In this paper based on field work and voluminous documentation analysis, we will show the paths by which a corporation went through a long process of recognition and adaptation to the needs of corporate social responsibility by working with different kinds of international private "authorities" & how far it can go in terms of strategies, structures & practices.

Salmonsson, Lisa & Mella, Orlando (Department of Sociology, Uppsala University, Uppsala, Sweden, SE-75126 [tel: +46703532516; e-mail: lisa.salmonsson@soc.uu.se]), **Medical and Cultural Authorization - A Study of Professional Health Journals in Sweden,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the recent year, concerns about growing shortages of health professionals, in particular nurses & doctors have emerged in OECD countries. These shortages have been met via international migration of health workers. Between 1970 & 2005, the number of foreign-trained doctors has increased at a rapid rate. This development indicates that non-Swedish medical doctors will continue to increase in the years to come. The Swedish Board of Health & Welfare categorizes this group into two subcategories which are used in this paper: (1) doctors trained in EU/EEA-countries, & (2) doctors trained in countries outside the EU/EEA. We used a grounded theory approach for analysing 23 selected articles from professional health journals. Preliminary results from this text analysis study indicate that doctors with training from outside the EU/EEA do not have the same social presumptions as doctors trained in the EU/EEA. Using a grounded theory approach, we have generated a theoretical explanation of the special presumptions of doctors trained outside the EU/EEA. We argue that the members of this group are ascribed a type of cultural capital that differs from the formal competence needed to serve as a doctor in Sweden which effect their professional integration process. We call this socio-professional phenomenon "cultural authorization".

Salo, Elena Pavlovna (International Department of Institute of Sociology RAS, Moscow, Russia, 117218 [tel: 7-495-719-0940; fax: 7-495-719-0740; e-mail: elenaULsalo@isras.ru]), **Problems of Professionalization of Healers in Russia,** *International Sociological Association, Gothenburg, Sweden,*

¶ The research has shown that folk medicine as a kind of activity is not included in the List of kinds of the medical activity which is subject to licensing. In practice the bodies of public health services do not carry out regulation of folk medicine & do not give diplomas of the healer. Healers have no opportunity to conduct actions on preparation, retraining & development of the communities & it inevitably affects a level of rendering healing services. They are still separated & cannot overcome difficulties alone. Some people are compelled to be engaged in healing without allowing documents, at own risk, others hide the activity under other forms of business, conducting consultations, massages, etc. Nevertheless, the healing has the lawful base. Unfortunately not all know about it. It is written in "law on Health Protection of Citizens". The sanction to work of the healer is a diploma. And to control work of healers should self-adjusting public organizations a Professional Associations in the field of healing. There exist many professional associations of folk medicine in Russia, which in main run only various conferences, congresses, seminars, etc. In our opinion, only World Association of Psychologists, Doctors, Spiritual & Folk Healers is being approached to the western classical model of professional association. The Association unites psychologists, doctors of official & traditional medicine and healers. In practice the Association helps healers not only to collect all the necessary documents to get diploma of the healer in the Ministry of Health to work legally but also manages all the activity of the healers a members of the Association. So, we can say that this Association plays a great role in professionalization of healers & helps them become the real professionals.

Saloma-Akpedonu, Czarina, A. (Department of Sociology and Anthropology, Ateneo de Manila University, Quezon City, Philippines, 1108 [tel: +63-2-4265990; fax: +63-2-4265990; e-mail: csaloma@ateneo.edu]), **Traditional Technology in an Urban Environment: Climate Change and Tropical Design,** *International Sociological Association, Gothenburg, Sweden,*

¶ In tropical megacities such as Metro Manila, substantial greenhouse gas emissions originate from the cooling, lighting, & operation of buildings, while traditional design principles have largely been forgotten or ignored since the end of the Second World War. This massive technological shift, part of a cultural change triggered by the unreflexive copying of western models inappropriate to the tropical climate, created a vicious cycle. Inappropriate design and construction technologies & neglect of public mass transport, among others, gradually led to an increasingly dismal environment; the dismal environment, in turn, led to increased consumption of inappropriate technologies & "escape" strategies which then contribute to the worsening of the already dismal environment. Tropical design principles, which embody the scientific ingenuity of our forebears, extensively apply principles of passive cooling and lighting, wind direction, sunshading, cross-ventilation, material selection & other design & construction details. Today, however, environmental hazards accompanying massive social and cultural changes pose severe limits to the application of these principles. For these traditional design principles to be viable again in a 21st century environment, they have to be combined with contemporary modern technologies. These concerns & possibilities will be discussed in this paper.

2010S02293

Salomone, Mario (Università di Bergamo, piazzale S. Agostino, 2 - Bergamo (Italy) 24129 [tel: +392052963; e-mail: mario.salomone@unibg.it]), **The "Social Club" Project. An Innovative "Small Scale" Collaboration among Italian Cooperative Societies Generating Social Capital, Sense of Community and Sustainability,** *International Sociological Association, Gothenburg, Sweden,*

¶ The "Social Club" was formally founded in 2009 after two years of pilot project by 32 social cooperatives & associations in the metropolitan area of Torino (Italy). The Social Club embraces more than 3,000 workers. Social cooperatives are established for social, health & educational services & for the job placement of disadvantaged people (people with handicaps, inmates or former inmates, aged unemployed & so on). The cooperatives are often rival & are in contention when tendering for a contract. Their workers are scattered in small service or production units, have low wages & don't have enough opportunities of socialization. The Club offers opportunities as sport, collective purchase of local food, co-housing, microcredit, educational activities, etc. The research examines the origin, development, outcomes, organizational patterns & governance of the Social Club, & the new relationships created by the Social Club within & among the organizations & their members. The tools of the research are interviews, data about the activities of the Club & cooperatives and social economy, a survey on the socio-economic status of the workers. The Social Club shows to be: - A tool for improving community & identity. - An effort of improving the dignity and the self-esteem of the workers which often are second-class citizens. - An aid to the purchasing power of the workers. - A factor of improving social capital, encouraging the sharing of goods & services & facilitating new sustainable life styles. Also some weaknesses & problems are showed.

Salzbrunn, Monika (EHESS Paris/Lausanne University, Lausanne, 1015, Switzerland [tel: +41216922706; e-mail: monika.salzbrunn@unil.ch]), **Recent Migrations in France - Consequences, Challenges and Impact of the Current Burqa Debate,** *International Sociological Association, Gothenburg, Sweden,*

¶ The French society, & particularly its immigrants & French citizens of Arab origin, is currently affected by a political discourse that tries to establish new categories & criteria of belonging to the nation. France has continued to receive an important number of immigrants despite the official end of immigration policy in 1974 & the hardening of immigration policy in 1993. Recent migration trends in France have shown an increase of immigrants from African countries, a slowly growing immigration from Asia & a decrease of European immigration. The current debate on the possibility to withdraw citizenship because of the wearing of a Burqa or a Niqab has an important impact on French Muslim citizens. The latter perceive a message of exclusion and non-belonging to the nation, despite the fact that an important number of Muslim citizens are part of the French society since the early 19th century. We will present the challenges & the consequences of the current political debates on the immigrants as well as on the entire population, & give an overview of recent research trends in French migration sociology.

Sama, Thomas B. (Department of Social Sciences and Philosophy, University of Jyväskylä, P.O. Box 35, FIN- 40014 Jyväskylä, Finland [tel: +358417743687; e-mail: babilasama@yahoo.com]), **Conceptualizing Non-Governmental Organizations: Still Searching for Conceptual Clarity,** *International Sociological Association, Gothenburg, Sweden,*

¶ This is a qualitative study which argues that there is a lack of conceptual clarity of the concept of Non-Governmental Organizations (NGOs). The study was designed to assess the current concept of "nGOs" by reviewing some of the conceptualizations of NGOs namely Private Voluntary Organization (PVO), Non-Profit Organization (NPO) and the Third Sector. The data for this study was collected through books from libraries, internet websites, Journal Articles and published research relating to NGOs. On the other hand, the data was analyzed qualitatively through content analysis. The findings revealed that first, in spite of the increasing importance of NGOs as partners in the development of both Northern & Southern countries, there is still a lack of conceptual clarity about the diversity of NGOs because academic research has not systematically followed & conceptualized NGOs in a manner that differentiates their various types, functions, networks, rationalities & the complex interactions within themselves & with other actors working in the same field. Second, the study found that the current literature is full of generalizations about NGOs as if all NGOs were the same or similar. Third, the study found that the literature that is often used to conceptualize NGOs is based on assumptions about the differences between the public & the private sector, rather than what the NGOs really are. The study concluded that it is not trying to encourage scholars working in the field of NGOs to change the concepts which they are currently using, but instead, what the study does is that it tries to make them more aware of the potential problems related to the concepts they are currently using, & the hidden implications behind them.

Samal, Kanak Lata & Sane, Neeta (HOD Sociology, Kelkar College, Mumbai University, Mumbai, Maharashtra, 400 081 [tel: 0251 2487355; e-mail: kanaksamal@gmail.com]), **Women Leisure Time Activities in Urban Informal Sector: A Case Study of Poli Bhaji Kendras in Dombivili,** *International Sociological Association, Gothenburg, Sweden,*

¶ Unlike industrialisation, globalisation has already impacted in feminisation of labour. More & more women have come out from house hold drudgery & employed themselves to supplement the family income firstly to meet the increasing demands of modern times, & the feeling of secured ness; besides basic needs. The outside engagement on the part of women is not that easy, because the shifting role necessitates the substitution of other women in support. That has been readily available as the unmet pri-

vate demand is filled up by the subjects of our study that is another group of women as the service providers. This empowers women who are working outside & those who are helping them supplying the daily homemade food. Former has generated the capacity to pay and the latter the need to eke something at their leisure hours out of formers need. These women have manned the Polli Bhaji Kendras opened in lanes & by lanes of Dombivili Township, one of the largest suburbs on Mumbai metro city. A tiny group of women coming together in their leisure hours as a freelance worker to prepare, pack & parcel food has been a unique supply chain to the daily demand of the vast working class population. These women are semiliterate & unfit for any regular job. They have at their disposal sufficient surplus time since their husbands are away at factory works & house hold works are simplified through modern gadgets like washing machines, gas stoves, water filter, pressure cookers & tapped water connection & use of refrigeration. Never has the relief so much bestowed in the life of women. Relief and leisure in abundance to these women, smoothly channellises them into growth of an informal, unorganized sector without institutional support. In an active society, the inference from our empirical study is derived that leisure is no longer passive; the women in the Polli Bhaji Kendra have made use of their free times more pleasurable by empowering themselves & bringing happiness to their families with additional income. After all leisure has different meaning when linked to earning. The leisure is productive, a new force to be reckoned now, & the women workers at these Polli Bhaji Kendra are examples of further minute study.

Sammet, Kornelia (Institut für Kulturwissenschaften, Universität Leipzig, Beethovenstr. 15, 04107 Leipzig, Germany [tel: + 49 341 97-35677; fax: + 49 341 97-35698; e-mail: sammet@uni-leipzig.de]), **Dealing with the Contingent: Religious Beliefs and Worldviews of Unemployed Persons in Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the sociology of religion the problem of contingency is considered as an important social function of religion: religions interpret experiences of uncertainty & describe ways how to cope with the contingent. The paper analyzes religious & non-religious worldviews as patterns to deal with the contingent. In the last years increasing experiences of social & biographical uncertainty can be observed in Western societies. Socio-political reforms in Germany as well as in other Western countries have laid emphasis on employment as most important mean of social integration attributing the responsibility in being employed on the individuals. As a result unemployment is likely to generate biographical crises and to enforce the consciousness of uncertainty. On the basis of biographical interviews with unemployed persons & working poor in Germany the paper explores how this situation is being dealt with. The presentation focuses on religion as a resource in biographical crises & examines the impact of life conditions on religious beliefs & worldviews. It will be discussed how unemployed people and working poor interpret their experiences & in which way they refer to religion.

Sampaio, Sofia & Vidal, Frédéric (CRIA-IUL, Lisboa, Portugal [e-mail: psoULsampaio@hotmail.co.uk]), **Touristic Practices and Social Production of Places in a National Context: Reflections on a Portuguese Case Study,** *International Sociological Association, Gothenburg, Sweden,*

¶ The objective of this paper is to discuss the practice of domestic or "internal" tourism - i.e. tourism in one's own country of residence - & the role it has played in the construction of the idea of a national territory. Adopting a multidisciplinary approach (historical sociology, geography & cultural studies) & based on an exploratory case study in Portugal, we propose to analyse this process by looking at concrete tourist practices, their memories and representations during the second half of the twentieth century. Our main assumption is that tourism, a complex system of actors, uses & interactions, has actively participated in the production of places & meanings that have ultimately imprinted themselves on the collective imaginary. Our proposal is to study tourism in its banal dimension, as enabling the development of relationships with the national territory & the transmission of social memories. Being a historical phenomenon, tourism stands in the meeting point of social, cultural, economic & technological developments. It is the result of such developments, but it is often also one of their prime movers. The way tourism & tourist practices contribute to the transformation of environments & the creation of places with very specific social dynamics (and not just "tourist sites") has been mainly an interrogation of human and cultural geography. Most of these studies are interested in looking at "processes" rather than "objects" (such as the tourist, a specific place or a specific community) & it is this line that we propose to follow by choosing three processes a the tourist journey/ itinerary, the construction of a national space and landscape, & the production of places a as our focal points.

Samuel, Robin, Hupka-Brunner, Sandra & Bergman, Manfred, Max (Institute of Sociology, University of Basel, Basel, Switzerland, 4057 [tel: +41 (0)61 267 28 12; fax: +41 (0)61 267 28 20; e-mail: robin.samuel@unibas.ch]), **Transfer of Cultural Capital: A Comparative Analysis of the Interconnection of Well-Being, Precariousness, and Insecurity,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper shows how the transfer of cultural capital is taking place over a developmental phase of seven years after completion of compulsory school. Of particular interest in this study is how this process is connected with well-being, educational achievement, and occupational success (e.g. credentials & employment situation, respectively). Using data from the Transition from Education to Employment Project (TREE), we will pinpoint areas of inequality with regard to the transformation of adolescents' capacity into credentials & labor market entry. TREE focuses on post-compulsory educational & labor market pathways of a school leavers' cohort in Switzerland. It is based on a sample of approximately 6000 young people who left compulsory schooling in 2000. The sample has been followed-up in annual surveys from 2001 to 2007. Our comparative analysis between the German & French-speaking parts of Switzerland will employ Longitudinal Structural Equation Modeling and Multinomial Regression. We will show how this perspective fosters the development of indicators of precariousness and insecurity with regard to the transfer of cultural capital.

Samuel, Yitzhak (Sociology, Univesity Of Haifa, Haifa, Israel 31905 [tel: 972 4 8249646; fax: 972 4 8240819; e-mail: SAMUEL@SOC.HAIFA.AC.IL]), **Organizational Failure: Causes and Consequences,** *International Sociological Association, Gothenburg, Sweden,*

¶ Organizations of all kinds encounter various problems & crises that lead them to fail & probably demise in one way or another. The phenomenon of organizational failure is ubiquitous in the realm of organizations. Many political organizations, social institutions, and numerous business enterprises fail all over the world. Most of failed organizations have vanished forever during the history. The notion of failure, no less than that of success, deserves careful attention of both scholars & practitioners in the field of organizations. The present paper portrays a diagnostic model of organizations' failure. Based on literature review, this model specifies conditions under which organizations are most likely to fail. In this sense, those conditions can be defined as antecedent variables affecting the life chances of organizations. Classified in broad terms, organizational failure may occur as an outcome of external effects (e.g., random shocks) or internal deficiencies (e.g., bad management), quite often due to a specific combination of both. Although failing organizations are likely to die, not all of them do so. Thus, declining organizations may turnaround; others prevail severe crises; & some failing organizations do survive for long periods as permanent failures. Those & other consequences are discussed in this paper.

Sánchez, Isis (Department of Sociology, University of Essex/ Universidad de Castilla- La Mancha, Colchester, UK CO4 3SQ [tel: 0034654047258; fax:; e-mail: IsisMaria.Sanchez@uclm.es]), **The Impact of the Antiwar Movement 2002-2004: A Comparative Analysis Between Spain and US,** *International Sociological Association, Gothenburg, Sweden,*

¶ The impact of the antiwar movement 2002-2004: a comparative analysis between Spain & US. The aim of this paper is to explain how a similar movement, the movement against the war in Iraq beginning in 2002, having similar demands in both countries, led to different outcomes. In the case of Spain there was a change of the government on the 14th March, from the Popular Party (center-right) to the Socialist Party (center-left) after the big mobilizations against the war on Iraq in 2003 & after the terrorist attack of 11th of March. In contrast with this, the antiwar movement in US between 2001-2004 did not have an impact on the election, being Bush reelected in 2004. Using the concepts of political opportunities structure, framing analysis & political culture, this paper aims to explain comparatively the reasons of such different outcomes having had both countries a terrorist attack & similar movements. My research methods include

qualitative analysis of 45 semi-structured interviews in US & 45 in Spain, qualitative analysis of newspapers & analysis of public opinion using Max QDA software.

Sanchez, Landy (CEDUA, El Colegio de Mexico, Camino al Ajusco 20, Mexico, DF. Cp.10740 [tel: +52 55 5449300; e-mail: lsanchez@colmex.mx]), **Networks and Gendered Labor Trajectories in Mexico City: How does Neighborhood Social Composition Matter?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Despite Mexico City high levels of income inequality, until de 1990s residential segregation remained small because extensive mixed between low- & middle-income groups This mixing was the result of historical patterns of urban growth, particularly limited subsidized public housing & extensive informal settlements. Many studies showed that the urban poor used their social networks as resources central to their survival strategies, particularly in developing countries. However, in Mexico City where income inequality & residential segregation has grown in the last decades, it is necessary to reexamine whether neighborhoods' changing composition could impact residents capacities to build and deploy social capital. By analyzing the labor trajectories of 95 residents of three neighborhoods of different social mixing, this paper addresses: how residents use neighborhood contacts & social capital along their labor trajectories, & whether there are gendered differences in such respect. Results suggests that across the board residents are highly dependent on neighborhoods social ties, but these are under deep stress because income instability. Although gender difference in neighborhood reliance are strong, these tend to dilute as men age & they lose opportunities in the formal labor market. Occupational diversity, it is key to secure a pool of neighborhood resources, but it is decreasing as the labor market is becoming increasingly polarized.

Sanchez-R, Magaly (OPR- Princeton University, Princeton, NJ, 09544 [tel: 1-609-2586966; e-mail: magalys@princeton.edu]), **Negotiating Identity: Latino Immigrants in United States,** *International Sociological Association, Gothenburg, Sweden,*

¶ This article is part of a larger work on the Conformation of Immigrants Identity in United States.(1) Based on the perception of their identity, as well as the position vis a vis American society, I will refer to the views & opinions of immigrants, in the process of incorporation & the negotiation of their identity. Latino immigrants in general arrived in the United States for different reasons & motivations, hoping for integration and mobility in the American society. After a while they encountered a society with high levels of discrimination, with extreme restrictive policies & a very diabolic image of (Latino) immigrants. The data was collected by conducting lengthy interviews with 159 first & second generation immigrants in the urban northeast corridor, from New York City through New Jersey and Philadelphia. The sample quotas were defined by the cross-classification of locations (Philadelphia, New Jersey, New York), origin (Mexican, Caribbean, Central American & South American), & generation (first & second). We recruited young immigrants between ages of 13 & 35 years old. (1) Douglas S Massey & Magaly Sanchez R Brokered Boundaries. Creating Immigrant Identity in Anti-Immigrant Times. RS.F. In print. Forthcoming Spring 2010

2010S02304

Sandell, Kerstin (Dept of Gender Studies, Lund University, Box 117, 221 00 Lund, Sweden [tel: +46462224059; e-mail: kerstin.sandell@genus.lu.se]), **Learning to Produce, See, and Say the (Ab)Normal: Professional Vision in Ultrasound Scanning During Pregnancy,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper deals with midwives learning to do ultrasound scans in around week 17 of pregnancy & a central aspect of that learning: seeing & communicating the (ab)normal. It is an investigation into acquiring what Charles Goodwin refers to as a "professional vision" (1994) & into what that vision entails in terms of embodied skills. The focus is on "what we learn how to see" (Haraway 1991:190), or the structuring of embodied seeing in a medical practice. The paper discusses the different parts of professional vision that Godwin points out: highlighting - in ultrasound that is the way in which deviances in the body of the foetus gets noticed by the midwives; coding - the way deviances are named; & material representations where the normal gets almost unrepresented but where there is a scopic focus on and interest in the deviant.

Sanderson, Peter & Thomas, Paul (University of Huddersfield, Huddersfield, United Kingdom, HD1 3DH [tel: 00 44 1484 478233; fax: 00 44 1484 478231; e-mail: p.j.sanderson@hud.ac.uk]), **Sense of Identity and Its Relationship to Space and Place: Young People in English Northern Towns,** *International Sociological Association, Gothenburg, Sweden,*

¶ The disturbances in 2001 in English Northern towns like Oldham and Burnley have been seen in the context of the post 9/11 polity, as evidence of a profound national rupture in civil society and national identity. Politicians have inscribed upon the events a discourse of segregation, & the need for "community cohesion", in which the politics of cultural difference leads through spatial differentiation to communities leading "parallel lives". This paper will argue that the specificity of the socio-economic trajectories which have shaped public space in Northern towns is obscured in this racialised/ethnicised discourse. The nature of multiple identity in these spaces is nuanced: even espoused cultural & religious identities need to be seen through the lens of locality & positionality, & how relative spaces have been shaped by economic change & decline. The paper draws on recent research in the Northern towns of Oldham & Rochdale. Reports on the 2001 disturbances stressed the segregated character of both towns, & the absence of shared identities. The research sought to produce data which would illuminate the sense of identity, & its relationship to space & place, amongst young people drawn from both sides of this apparent "divide". The data points to the way in which identity is shaped by complex factors, which include the gendering & racialising of public space within towns, & the perception of the residual status of these townscapes in the context of the success of the nearby metropolis. We place this data in the context of public policy in order to explore the way in which policy continues to racialise economic exclusion and stagnation.

Sanderson, Tessa, Calnan, Michael, Morrris, M. & Hewlett, S. (UEA, Bristol , UK [e-mail: m.w.calnan@kent.ac.uk]), **Is There Anything Normal about Biographical Disruption in Chronic Illness?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Biographical disruption has been seen as a key sociological concept for understanding the experience of people living with chronic illness, but its usefulness may have changed in the current cultural & social context. This paper assesses the explanatory power of this concept & other contrasting sociological explanations through an empirical study of those living with rheumatoid arthritis (RA). Informants (N=23) were recruited through a teaching hospital in a provincial UK city & interviews conducted & analysed using a Grounded Theory approach. Through the use of coding & a complementary analytical tool, Framework, which enables constant comparison of themes as well as contextual data, informants' stories were evident. Four types of normality narratives emerged from the data: disrupted, maintaining (easily or struggling), resetting (fluctuating or stable), & return to normality. Elements of each were shown to be present in individuals' illness narratives, with one normality narrative usually dominating at the time the illness narrative was presented during the interview. Narratives of "disrupted normality" did not dominate the majority of informants' illness narratives & the concept of biographical disruption had limited explanatory power for RA. The concept of "shifting normalities" was developed, which illustrates how normality is a central mechanism for constructing the illness narrative because "normal" & "not normal" is how people commonly talk about their bodies, their illnesses, themselves & their lives, & their identity. It provides a dynamic & fluid explanatory model of chronic illness that captures the interaction of intrinsic & extrinsic influences on living with & managing chronic illness.

Sandoval Robayo, Mary Luz (Anthropology and Sociology Department Caldas University, Manizales, Colombia, 0576 [tel: 0576 8868661; e-mail: maryluzsandoval@hotmail.com]), **Colombian Sociology in a Context of Conflict, Violence and Terror,** *International Sociological Association, Gothenburg, Sweden,*

¶ There is an emptiness derived from the existing gap between the contemporary practical problems relative to the sociology & the condition of cumulative sociological knowledge in a violent social and political environment, such as the Colombian society, immersed in an internal armed conflict for more than fifty years. Some sociological concepts have been overwhelmed by a phenomenon called chronic violence, one which accompanies this conflict & implies the use of an extreme violence, including terror; however, indicative that it is necessary to resort to creative ways to use the sociological theory in order to reach a wider range of interpreta-

tion of the Colombian conflict. Stated below are some problems related to the fragmentation of the social research on the topic of conflict in Colombia. The combination of social, political, economical & cultural violence that is expressed in symbolic & physical forms in an apparently peaceful context justifies new sociological questions not only related to the extent of sociological research to explain & solve these problems, but also how internal armed conflict affects the development of Colombian sociology as a science (Interviews with various Colombian academics of social science).

2010S02308

Sanogo, Sekou (LASA, UFR Sciences du Langage, de l'Homme et de la Société (SLHS), 30, 32 rue Mégevand, 25030 Besançon cedex [tel: 03 81 66 53 38 / 53 37; fax: 03 81 66 53 00; e-mail: sekou.sanogo@club-internet.fr]), **La sociologie en mouvement intentionnel dans le méta-espace-temps** (The Intentional Movement in Sociology in Meta-Space-Time), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ La sociologie en mouvement intentionnel dans le méta-espace-temps. L'homme strictement matérialiste s'est laissé prendre aux pièges du jeu de l'illusion qu'engendrent ses fonctions mentales. Parce qu'en réalité les lois physiques et scientifiques résultent d'habitudes dominantes profondément enracinées en nous de l'intérieur, conditionnant avec force le réel même. Cependant, si une large part de la réalité est une construction de l'esprit, ceci signifie que nous pouvons potentiellement en modifier les fondements et transgresser certaines lois de la physique classique. Dans certaines circonstances, certaines lois régissant le réel pourraient tout simplement voir leur application suspendue. À cet effet, les frontières communes du possible et de l'impossible s'en trouveraient alors bouleversées. D'où cette peur du dit "irrationnel" ou "spirituel", termes qui sont littéralement tabous qu'on nous a longuement serinés dans la mentalité par des méthodes d'abstraction et d'inculcation, de mentaphobie, se désagrégera. La sociologie de la connaissance et de l'épistémologie ne se réclame pas du scientisme pour être extrêmement chargée émotionnellement en se privant de l'il de l'âme pour ne se contenter que de l'il physique. Il va de soi que nous n'avalisons pas le point de vue que la vie et la destinée humaine vont vers un déclin irréversible. La vie et l'expérience humaine ne peuvent être comprises en fonction d'un système classique de la physique. En effet, la vie est un processus auquel des niveaux toujours plus élevés de complexité viennent s'ajouter et par lequel les connaissances, l'information et le discernement acquis constituent les aspects majeurs de notre démarche évolutive. Notre destinée est donc évolutive et présente des défis qui, par les leçons que nous en tirons, contribuent à l'évolution de l'espèce humaine sur le plan individuel et collectif. Nous sommes des êtres multidimensionnels dotés d'une essence spirituelle, et comme tels nous créons de plus en plus de liens par des processus de réfection de nos circuits qui viennent en fait augmenter notre potentiel interne d'ordre, de cohérence, de complexité et bien sûr d'intelligence. C'est ainsi que davantage d'informations nous arrivent et passent par nous. Au cours de ces cinquante dernières années, la science a reconnu que l'information acquise par un système se traduit en réalité par une entropie négative, soit par un renversement du processus de désordre croissant. La complexité augmentant pendant que nous traitons l'information, nous devenons des êtres toujours plus aptes à nous connecter sur le potentiel de l'univers. En tant que "systèmes énergétiques multidimensionnels vivants et dynamiques", nous sommes constamment en train d'échanger ouvertement de l'information et de l'énergie avec notre milieu environnant. Lorsque nous évoluons, cet échange s'intensifie et la structure interne qui nous permet d'être reliés au monde extérieur se modifie. Ces remarques précédentes posent des problèmes difficiles. Si nous voulons bien tenir compte des objections, nous devrons préciser plusieurs points : 1) quelle forme peut prendre la connaissance de soi, si ce n'est pas celle d'un savoir objectif ? 2) qu'est -ce qu'une prise de consistance de la conscience de soi ? 3) Quelle forme de conscience est requise pour qu'il y ait connaissance de soi ? Santarelli, Elisabetta & De Pascale, Anna ([tel: +393332615525; e-mail: elisabetta.santarelli@uniroma1.it]), **Economic, Housing Conditions and Health of the Oldest in Italy: Evidence from EU-SILC,** *International Sociological Association, Gothenburg, Sweden,*

¶ In Italy much is known about the strong direct relationship between socioeconomic status & health & also between economic status and housing (the richer you are, the more comfortable your house is). However, no attention was devoted to the relation between housing & health. In this work we explore the interconnections among these elements. We hypothesize that associations among individual economic status, housing & health can vary by living arrangement: people living alone are more likely to have scarce economic conditions & deprived houses that people living in households, so that their risk of bad health could be higher (and vice-versa). We focus on economic, housing & health conditions of people aged 65 or over in Italy. Data come from EU-SILC, wave 2007, which provides information on economic, working conditions, incomes and housing status of surveyed individuals. We firstly build a housing deprivation index to express the housing conditions that can affect individual health. Then, such index is included, among other covariates on economic conditions, in a logistic model where we test our hypotheses for individuals living alone & in a household. Results show that better economic status & good house quality are associated with a good health. Furthermore, living arrangements seem to matter & influence differently the relation between economic conditions, housing & health.

Santos, Fernando Burgos Pimentel dos (FGV-EAESP, Av. Nove de Julho, 2029 - 11o. andar - São Paulo/SP - Brail [tel: 55 11 8487-7213; e-mail: fernandoburgos@uol.com.br]), **Poverty and Inequality in Brazil: Reflections about Lula Government,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Lula government will end in 2010. Since its beginning, a large portion of the Brazilian population was hopeful that poverty and inequality would be reduced. After all, this was an ancient promise always remembered by President Lula, since its inaugural speech. Briefly, the number of people out of extreme poverty has been increased, especially through programs of income transfer. These programs begun in Cardoso's government. However, the Lula government has had a very important role in the continuation and expansion of these programs. The most important policy is called "bolsa Familia", which have benefited more than 11 million families. If poverty reduction has significant results, this did not apply to the inequality, as Brazil continues to be one of the most unequal countries in the world. Although the Gini coefficient, between 2001 & 2007, has fallen from 0.596 to 0.556, the result was not enough to change these uncomfortable position. The aim of this paper is to present what are the main strategies used by the Brazilian government attempting to reduce poverty & inequality in the country & assess whether the promises made by the Lula government have been fulfilled or not.

Santos, Fernando, Burgos Pimentel dos, Lemos, Roberta Freitas & Santos, Marinella Burgos Pimentel dos (FGV-EAESP, Av. Nove de Julho, 2029, São Paulo - Brasil [tel: 55 11 8487-7213; e-mail: fernandoburgos@uol.com.br]), **Sports and Public Policy: Identifying Relevant Elements for Its Formulation,** *International Sociological Association, Gothenburg, Sweden,*

¶ In 1978, UNESCO proclaimed the "international Charter of Physical Education & Sport," which in Article 1 provides that "the practice of Physical Education & Sport is a fundamental right for all." Since then, the process of recognition of sport as a human right has been growing. More recently, in 2003, the UN recognized the contribution of sport to achieve the millennium development goals. In a national scope and, more specifically, in Latin America, it is possible to verify that in their constitutions or federal laws, countries such as Brazil, Chile, Argentina, Colombia, Mexico & Peru recognize the sport as a human right to be promoted by the State. However, there are a few issues about how the sport is being addressed by governments that must be discussed. This research aims to reflect on the guarantee of the sports practice as a human right in conflict to its use as a tool to other policies. New elements, showed in an analytical board, may give relevant information to managers who work forward to guarantee the right for sport practice.

Santos, Jorge Nuno (Instituto Politécnico de Santarém, Santarém, Portugal [e-mail: nuno.jorge@esg.ipsantarem.pt]), **Shaping Medical Identities: An Internet Forum as a Set for Information Exchange, Career Counseling and Professional Consciousness,** *International Sociological Association, Gothenburg, Sweden,*

¶ With this paper I try to understand how recent graduates in Medicine (Interns) build their decisions regarding their professional career, & which strategies they adopt towards it. Internship is a very interesting & less studied part of medical career. It combines post-graduate formation & vocational training, compulsory to enter the profession, & it represents the transition from formal education to working life, defining ways of integration & choices, towards a new social identity. The empirical approach of this research includes the analysis of a sample of the 13,000 messages posted in a Portuguese online forum ("Medical Intern Forum"), where medical graduates discuss with their colleagues & get information about several aspects of their career integration. This forum gathered 900 active-participants, in the last 6 years, & it is the largest Portuguese online forum about a profession. It acts as a structure of support & advice for junior doctors, in the dependence of the Portuguese Medical Association. The analysis of the forum includes the identification of most-debated subjects, most-frequent participants & their logics, in order to understand the strategies of professional integration & forms of information & knowledge exchange. Other dimensions, like identity, sense of belonging, power & rules will be studied, to validate the thesis of a virtual community composed of Medical Interns.

Sanz, Esteve (Yale University, P.O. Box 208265, New Haven, CT 06520-8265 [tel: 0034622171417; e-mail: esteve.sanz@gmail.com]), **Towards an "Open" Machine? The fusion of Internet Culture and Bureaucracy,** *International Sociological Association, Gothenburg, Sweden,*

¶ This article presents some notes & a case study towards a cultural-sociological theory of the information society. It argues that the fusion of the Internet & bureaucracy is governed by the social construction of a new symbolic space, one that dislocates some of the fundamental rationalistic principles of modern organizations. This space is structured by the binary openness/closeness, which articulates the central meaning of the Internet. As a result of its organizational adoption, a new culture of creativity is emerging in contrast with the culture of secrecy of ideal type bureaucracies, while new patters of social exclusion could be emerging along the way.

São José, José (University of Algarve; FCHS-DCES, Faro, Portugal, 8005-139 [e-mail: jsjose@ualg.pt]), **Caring Trajectories and their Meanings: Dynamics between Family Care and Extra-Family Care,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper intends to contribute to the discussion about the dynamics, over time, between family care & extra-family care for older persons. This diachronic approach has been neglected in the previous research about this issue. The paper is based on the results of a qualitative research (54 semi-structured retrospective interviews with carers of an older relative). The interviewees were selected through convenience, snowballing & purposive sampling. The data was analysed through the "framework analysis" procedures. The findings show that caring trajectories are supported by different care arrangements through time, which entail different combinations between family care & extra-family care. The care arrangements are responsive to the changes in the available resources & the existent constraints along the caring trajectory, and they are anchored in different logics of action. Consequently, the caring trajectories have different meanings. The findings also demonstrate that the most sustainable caring trajectories are those supported by care arrangements which combine family care with "full-time" extra-family care. The lack of extra-family support tends to produce an erosive effect upon family care & a marginalizing effect on carers (some drift into situations of social exclusion).

Sapitula, Manuel Victor Jamias (Department of Sociology, National University of Singapore [e-mail: manuel.sapitula@nus.edu.sg]), **Catholic Popular Religion and the Transition to Modernity: The Case of the Perpetual Help Devotion in the Philippines,** *International Sociological Association, Gothenburg, Sweden,*

¶ Taking off from the need to understand the complexity of popular religion in modern society, this paper analyzes different aspects of the Perpetual Help devotion at the National Shrine of Our Mother of Perpetual Help in Parañaque City, Metro Manila in the Philippines. The "transition to modernity" in the Philippines that started during the revolution against Spanish colonialism did not necessarily efface the Roman Catholic Church from the public sphere. The devotion to the Mother of perpetual Help is one contemporary example of the vitality of Catholic popular religion in highly urbanized Metropolitan Manila. Using various documentary sources on the shrine, archived letters of devotees from 1948 to 2008 & interviews with present-day devotees, this research departs from a dualistic "official-popular religion" orientation and looks deeper into the dynamics the interaction of elite- and mass-oriented influences on devotional practices across time. Major shifts in ideological & structural factors in society have actively influenced the local moral worlds that support devotional practices, thereby leading to the conclusion that popular religion is a complex form of religious practice constantly interacting with the broader social structures of institutional Catholicism & the cultural & social forces of modernity in the Philippines.

Saretzki, Anja (Institut für Stadt- und Kulturraumforschung, Universität Lüneburg, Lüneburg, Germany, 21335 [tel: +49 4131 677-5543; e-mail: saretzki@uni-lueneburg.de]), **Destination Governance and Place-making,** *International Sociological Association, Gothenburg, Sweden,*

¶ The term destination governance describes approaches to the regulation of constellations with a limited influence on private & public stakeholders. Governance as "governing without government" does not know a central regulation authority but can be understood as the management of interdependence. This is linked to ideas of participation, balance of interests, self-organization of networks and reaching of consensus & community. In this case the destination is not just a product but also a medium of destination management. It is essential to join marketing & management efforts in destination governance with local meanings, culture and identity. Conceptualizations of destinations affect projects, plans and marketing. At the same time marketing & management concepts as well as promotion & branding efforts affect the space as representations in the sense of Lefebvre & thus become socially effective. Destination governance as "governance of place" can thus not be thought to be independent from processes of place-making & place-oriented community building. Discourses, action-guiding ideas & images of the place have to be incorporated in governance processes just as well as material conditions. The destination Lüneburg will serve as an example to demonstrate how destination governance can be conceived in view of this context.

Sarohe, Seema (Central Institute of Education, University of Delhi, India, 33 Chatra Marg, C.I.E., University of Delhi, New Delhi-110007 [tel: 919968721440; e-mail: seemaULsarohe@rediffmail.com]), **Empowering School Teachers for Social Transformation,** *International Sociological Association, Gothenburg, Sweden,*

¶ A recent document "national curriculum framework 2005" envisions an epistemic shift in the current discourse on education in India. It envisions engaging students as critical catalyst for social transformations by awakening in them a real concern for social justice to produce sensitive, interrogative, deliberative citizens. However, it fails to address the major responsibilities which lie with teachers and teacher educators. Various researches have shown that teachers practice their personal prejudices based on caste, religion, class and gender in their classrooms. Similarly many schools serve their aggressive cultural policing by spreading among students the "consciousness" fervor with communist, caste based & patriarchal "invisible pedagogies". Thus creating the dynamism of violence within the territory, it excludes the historically oppressed groups outside the domain of politics, from the right of political participation for deliberative democ-

racy. The teacher education programs completely lack appropriate pedagogy as well as content in training the prospective teachers in the discourse of citizenship education. The issue which needs urgent attention is the quality of school teachers in India where majority are under-trained, under qualified, under compensated & demoralized. This paper attempts to reflect on systemic constraints that dis- empowered the teacher and impede the process of pedagogical empowerment of the agency of the teacher. The paper also examines what are the possibilities to create spaces & resources for prospective teachers to enable them achieve the ideals ushered in a civil society where democracy is nurtured as civic virtue.

Sarpila, Outi & Räsänen, Pekka (Economic Sociology; University of Turku, Turku, Finland [e-mail: outi.sarpila@utu.fi]), **Trends in Appearance-Related Consumption in Finnish Households, 1998-2006,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper examines recent trends in personal care consumption of households in Finland. We are especially interested in gendered patterns of this type of consumption expenditure from the perspective of leisure time consumption. We ask whether spending on personal care products & services has increased during the 1998a2006 period. We also ask whether the impact of gender has weakened. The data are derived from the Finnish Household Budget Survey data from 1998 (N=4359), 2001 (N=5495), & 2006 (N=4007) provided by Statistics Finland. Personal care consumption is studied by using purchasing costs of personal grooming products and appliances, & spending on personal grooming services. The differences in expenditure patterns are analysed according to the respondent's gender & age, level of education & income, and type of household. Our results indicate that gender continues to be the key predictor of consumption expenditure across all household types. Moreover, household spending on personal care products and services has generally increased suggesting that expenditure on personal care forms an increasingly important category of leisure consumption.

Sarwar, Chaudhary Imran (CEO-Creative Researcher, 20, A-I, Township, Lahore, Pakistan [tel: 0923454634211; e-mail: imran.8vf@gmail.com]), **ASSESSMENT, ANTECEDENTS, and DEVELOPMENT of Intellectually Stimulating, Contingently Rewarding, Extra Effort Inspiring, Effective, Leading by Exception (Active), Idealized Influence (Attributed), Inspirationally Motivating, and, Satisfactory LEADERSHIP PERFORMANCES,** *International Sociological Association, Gothenburg, Sweden,*

¶ This research introduces theory on triads of typical-maximal-ideal (a) intellectually stimulating, (b) contingently rewarding, (c) extra effort inspiring, (d) effective, (e) leading by exception (active), (f) idealized influence (attributed), (g) inspirationally motivating, & (h) satisfactory leadership performances (for example via triad of typical, maximal, & ideal satisfactory leadership performances) adding diversification & precision to leadership assessment. It explores the proposition that within each triad - each of typical, maximal, & ideal leadership performances is theoretically & conceptually distinct & supports this distinction through data-based empirical analyses by using mean difference via one sample t-test & one way analysis of variance. Thereafter, it uses each triad of the distinct typical, maximal, and ideal leadership performances to introduce & empirically test the mechanism to quantify respondents' intrinsic desire and inherent potential to enhance their respective leadership performances. Finally, it suggests precedents of each leadership performance & presents implications for leadership development training on the basis of correlations & multiple regression analyses.

Satka, Mirja E (University of Jyväskylä, Department of Social Sciences, 40014 University of Jyväskylä, Finland [tel: +350-40-7173717; e-mail: mirja.satka@jyu.fi]), **Early Intervention - Governing the Social Risks of Finnish Children and Youth in the Culture of Fear,** *International Sociological Association, Gothenburg, Sweden,*

¶ Early Intervention refers to an idea & a method of governing younger generations' behavior & everyday life, whenever this life is considered risky by responsible adults. This paper analyses Early Intervention practices in Finnish social work with children and youth who have been caught either shoplifting or engaging in drinking. These practices are analyzed from the viewpoint of governing; Early Intervention is understood as one technique of normalization with a particular rationale for producing individuals who are able to regulate themselves, willing to work & consume as expected. The data consists of 8 qualitative theme interviews with social workers involved in children's risk evaluations, documenting their norm violations & giving them & their parents a good "talking-to". This data has been analyzed by applying Layder's idea of adaptive theorizing; the key concepts include governing, risk, the production of subjects, subject positions, & fear. More particularly, this paper introduces one tool for normalization, the Ladder of Fear, frequently applied in Early Intervention social work in interaction with children & young people. Their professional aim, the interviewed social workers said was to struggle towards a new culture in education in which both young generations & parents are willing to regulate themselves.

Sato, Yoshimichi (Faculty of Arts and Letters, Tohoku University, 27-1, Kawauchi, Aoba-ku, Sendai, 980-8576, Japan [tel: +81-22-795-6036; e-mail: ysato@sal.tohoku.ac.jp]), **Why Did Not Asian Sociologists Conceive "Social Capital"?: Universalism versus Particularism,** *International Sociological Association, Gothenburg, Sweden,*

¶ 1 Social Capital and Asian Societies: This paper explores the possibility of Asian sociologies focusing on the concept of social capital. Asian societies are rich in social relations & have indigenous concepts that express them–*aidagara* & *en* in Japan and *guanxi* in China. However, social capital, rather than these indigenous concepts, is more pervasive & popular in contemporary sociology. The research question in this paper is related to this: Why the indigenous concepts have not become universal concepts to express social relations. This question is broken down to two sub-questions about the supply & the demand sides of sociological concepts. The supply-side question is why Asian sociologists did not elaborate their local concepts as universal concepts. The demand-side question is why Western sociologists have not accepted the indigenous concepts. 2 Supply-side Answer: Ambivalent Status of Asian Sociologists To answer the first sub-question, this paper points out the ambivalent status of Asian sociologists when they study their local society with Western-born concepts. When they witness discrepancies between Western-born concepts & social phenomena in their societies, they tend to keep the concepts intact and/or to make slight modifications of them if any. 3 Demand-side Answer: Rejection of "thick" Concepts Even if Asian sociologists propose new concepts based on their observations of & experiences in their societies, the concepts are often loaded with meanings peculiar to their societies, which are called "thick" concepts in this paper. Such thick concepts are difficult to diffuse among Western sociologists because they impose a heavy cognitive burden on the receivers. 4 A Solution: From Particularity to Universality and Back to Particularity To solve this problem, this paper proposes the particularism-to-universarism-to-particularism strategy. This strategy means that an Asian sociologist conceives concepts, which are based on his/her observation of his/her society but are not loaded with local meanings, & then derives from the concepts other local concepts. This strategy would be preferable for Asian-born concepts to be accepted by the general audience in sociology.

Sattler, Sebastian, van Veen, Floris & Schulz, Sonja (Faculty of Sociology, University of Bielefeld, 33501 Bielefeld, Germany [tel: ++49 521 - 106 30 80; e-mail: sebastian.sattler@uni-bielefeld.de]), **Insights into One Dimension of the Decision Process in Deviant Behavior: Explaining the Detection Probability,** *International Sociological Association, Gothenburg, Sweden,*

¶ Rational choice theory is a powerful approach to explain fraudulent behaviour. We want to explain the detection probability using a dataset about cheating in academic contexts. There are several reasons, why it might be very fruitful trying to explain the variation in the RC-variables itself, especially detection probabilities: (1) Knowing about variables which affect the core variables of the theory leads a) to deeper insights into the actor's decision process & b) in the formation process of subjective probabilities itself. (2) Examining detection probabilities is highly desirable because these probabilities trigger the effect of punishment. E.g. a low detection probability leads to a slight impact of any punishing efforts. (3) Practitioners who want to combat deviance need strict information on how to influence (e.g. raising penalties) or change decision processes in the valued direction. (4) An indirect test strategy of rational choice theory is based on so called bridge assumptions about the connection between restrictions or social contexts and benefits, costs & probabilities. Explaining RC-variables itself equals a test of these assumptions. We examine individual as well as contextual effects, for example self-efficacy concerning cheating, risk preferences, framing effects, differential association &

the effectiveness of deterrence procedures. We use data from a paper & pencil study. Exemplary results are effects of self-efficacy & differential association.

2010S02325

Sauer, Carsten, Liebig, Stefan, Auspurg, Katrin, Hinz, Thomas & Schupp, Jürgen (Bielefeld University, Bielefeld, Germany, 33501 [tel: 0049 521 106 67289; e-mail: carsten.sauer@uni-bielefeld.de]), **What Is a Just Earning in Germany? -- Methodological and Substantial Results from f Factorial Survey,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the 2008 Socio-Economic Panel Study (SOEP) Pretest, the factorial survey method was tested for the first time for the use in the SOEP longitudinal study. In this paper, we describe the construction and application of the vignette module, which has its origins in the field of justice research & is used in particular in the measurement of income justice. We show that the factorial survey method is applicable in large-scale survey research when taking certain constraints into account. Respondents of varying ages and educational groups are able to answer the questions sufficiently well. The results obtained suggest that older respondents tend to take fewer dimensions into consideration forming their opinions. Further studies will be needed to determine whether this is evidence that the evaluation tasks were too complex for these respondents & should thus be interpreted as a method effect, or whether it represents a valid substantive result. The results of the study demonstrate convincingly that alongside occupation, education, & performance a factors relating directly to employment a familial aspects such as civil status, the partner's employment status, & number of children constitute important criteria for determining what constitutes a "fair" income.

Sauter, Theresa (Division of Research, Queensland University of Technology, Brisbane, QLD, Australia, 4066 [tel: +61 (0)413295697; e-mail: t.sauter@qut.edu.au]), **From Techniques of the Self to the Technological Self - Inventing the Self through Self-Writing on Social Networking Sites,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores online social networking sites (SNSs) as forums within which modern subjects invent & manage themselves. In contrast to some recent work on identity construction on SNSs (e.g. Buffardi & Campbell, 2008; Daalsgard, 2008; Rosen, 2007), this paper takes SNSs seriously as tools for individuals to form an understanding & expression of themselves. Michel Foucault defines technologies of the self as means for subjects to define & care for themselves "so as to transform themselves in order to attain a certain state of happiness, purity, wisdom, perfection, or immortality" (1988, p. 18). Foucault investigates writing as a particular technology of the self. This paper applies Foucault's notion of caring for the self to SNSs, arguing that the use of self-writing on SNSs represents a modern form of caring for the self & thus a particular way of forming a subjectivity. Significantly, this modern form of self-writing is open to a mass public. Hence, noteworthy continuities & discontinuities between ancient forms of self-writing, which Foucault examines, and self-writing on SNSs become apparent. This paper concludes that self-writing on SNSs, as a technique of the self, is a modern manifestation of the care for the self & acts as a pertinent means for modern subjects to construct a personal truth. Savvidis, Tessa (Freie Universität Berlin, Osteuropa-Institut, Garystr. 55, D-14195 Berlin [tel: +49-30-83854208; fax: +49-30-8517974; e-mail: hofmannt@ezdat.fu-berlin.de]), **Indigenous and Immigrant Minorities: Determinants of 'Successful' Integration,** *International Sociological Association, Gothenburg, Sweden,*

¶ My paper compares the situation of ethno-religious minorities in Germany (immigrants from Turkey) & Georgia (Armenian majority in the Samtskhe Javakheti province, Armenian minority in the capital city Tbilisi). In both cases, ethno-religious minorities are largely perceived by majorities as poorly integrated, with "successful" integration scored against the six determinants of language command, graduation, employment, career opportunities, civic participation & acceptance/tolerance/respect in interethnic relations. Social & cultural realities as established by field studies & other surveys will be discussed a) from a legal point of view, taking into account international laws and conventions on human, civic & minority rights, & b) popular explanation models about integration obstacles.

2010S02328

Sawadogo, Natewinde (School of Sociologogy and Social Policy, University of Nottingham, NG7 2RD [tel: +447519280256; e-mail: lbxns@nottingham.ac.uk]), **Why Sociologists Are in Trouble with the Concept of "Profession",** *International Sociological Association, Gothenburg, Sweden,*

¶ Sociologists have been facing serious conceptual challenges in the study of the professions. Foucauldian discourse analysis is used in this paper to carry out a critical review on the concept. The paper argues that the conceptual problem that is troubling sociologists of the professions results from the high "heteronomy" of the concept. From the first uses of the concept in the thirteen century to the last decade of the twentieth century the reality of the profession, as a social fact, has been almost fully "problematised" & institutionalised within the field of power. Sociological inquiry was only limited to the identification and specification of a concept that they did not developed or reconstructed through their disciplinary discourse. There has been a recent move in a more reflexive approach to the fact in term of "work", but the leading actors were ending their academic career (others their life) so that there is not yet a critical appropriation of the rediscovery. This rediscovery of the "true" reality of the profession is probably, as Salhins said about anthropology few years ago, the sociology of the professions' "enlightenment"; but on condition that those concerned with the matter do not delay in building up more on it.

2010S02329

Saz Gil, Ma. Isabel & Rodríguez Fernández, José Miguel (Business Management Department/ University of Zaragoza (Spain), Plaza de la Constitución, s/n. 22001 Huesca [tel: 34 974 23 93 73; fax: 34 974 23 93 75; e-mail: sazgil@unizar.es]), **La Rendición de Cuentas en Organizaciones no Lucrativas: Mejora del Compromiso con los Stakeholders** (Accountability in Nonprofit Organizations: Enhancing the Commitment to Stakeholders), *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ La gestión de las organizaciones no lucrativas ha de orientarse a dar respuesta a las expectativas generadas respecto a su papel en la sociedad, como es contribuir al desarrollo social, a la organización de la sociedad civil, al fomento de la participación de las personas y grupos y a eludir los peligros de un exceso de burocratización y de mercantilización. A ello se añade hacer frente a los retos y dilemas en relación con su propia naturaleza organizativa. Las organizaciones no lucrativas son organizaciones complejas que actúan en un entorno de gran complejidad y en continuo cambio, caracterizado por altas demandas de servicios, crecientes expectativas de rendición de cuentas y un aumento de la competencia en la obtención de fondos. El objetivo del presente trabajo es intentar analizar en qué medida la gestión stakeholder y la aplicación de la sociocibernética permite tratar los problemas de las organizaciones no lucrativas desde una perspectiva sistémica, involucrando a los diferentes stakeholders. De acuerdo con la teoría stakeholder las organizaciones serán más eficientes si adoptan un modelo plural de gestión basado en la incorporación de los intereses, necesidades y demandas de los diferentes partícipes

Scalon, Celi (Brazilian Sociological Society, Rio de Janeiro, R.J., Brazil, 22260-001 [tel: +55-21-22661933; e-mail: celiscalon@gmail.com]), **Changes, Continuity and Sociological Challenges in Latin America,** *International Sociological Association, Gothenburg, Sweden,* (POR)

¶ The future of Sociology should be considered in relation to its past and present, or will always be in constant reinvention? If we adopt the Weberian perspective, that Sociology is a Science fated to the "eternal youth", perhaps we could argue that it is, in fact, in constant transformation. In this sense, Sociology is a discipline, in the words of Weber, "in which new problems are continually raised by the eternal & continuous flow of culture." We reach to the conclusion that, although Sociology deals with a world in constant & fast changing, it does not necessarily leads to instability. On the contrary, Sociology is a discipline that combines theoretical & methodological tradition with conceptual advances, & experiences a continuous accumulation of knowledge. It is, therefore, a Science which has become mature without ever giving up its youth.

Scanlon, T. Joseph (Emergency Communications Research Unit, Carleton University, 1125 Colonel By Drive, Ottawa, Ont. K1S 5B6 Canada [tel: 1-613-730-9239; e-mail: jscanlon@ccs.carleton.ca]), **Steadily Increasing Control: The Professionalization of Mass Death,** *International Sociological Association, Gothenburg, Sweden,*

¶ Until recently, almost all research into disaster mass death was done during the past four decades. As a result that research did not establish that the way mass death was dealt with had changed just before to that period. By going back another 50 to 60 years, this paper shows that the way mass death is handled has changed dramatically and continues to change. While initial response is still often informal it is soon controlled by persons who might be called death professionals. These findings are based on a detailed study of scores of Canadian mass death incidents.

Schaan, Barbara (MEA, University of Mannheim, 68131 Mannheim [tel: +49 621 181 2774; e-mail: schaan@mea.uni-mannheim.de]), **Gender Differences in the Effect of Education on Depression in Later Life,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction: Education is known to be beneficial for mental health. But do men & women profit from education equally? And does the gender difference in the effect of education on depression depend on the cultural context? Methods: Following the work of Ross and Mirowsky (2006) I use two waves of the "survey of Health, Ageing and Retirement in Europe" (SHARE) to test resource multiplication theory (education improves well-being more for women, since they rely more on education because of socioeconomic disadvantages) and resource multiplication theory (education improves well-being more for men because they can derive higher labor market payoffs from it) within a European context. The Ross & Mirowsky study found support for the resource substitution theory by using a US American sample. My contribution to the existing literature is threefold: first, I repeat the analyses of Ross & Mirowsky by using a representative European dataset. Second, I exploit the broad cultural variety within Europe in order to test whether the gender difference in the effect of education on depression depends on the cultural contexts. Third, I put special emphasis on the population 50plus in order to explore whether possible gender differences in the education effect persist into retirement age & beyond. Results: Preliminary results indicate support for the resource substitution theory. Higher education decreases levels of depression more for women than for men, & this effect persists into retirement. However, the effect is significant in Southern and Eastern European countries as well as in Ireland only.

Schachtner, Christina (Institut für Medien- und Kommunikationswissenschaft, Alpen-Adria-Universität Klagenfurt,, Alpen-Adria-Universität Klagenfurt, Institut für Medien- und Kommunikationswissenschaft, Universitätsstr. 65 - 67, A-9020 Klagenfurt [tel: 00434632700-1803; fax: 00434632700-1899; e-mail: christina.schachtner@uni-klu.ac.at]), **Cultural Flows and Virtual Publics, The Role of Digital Media in Trans-Cultural Discourses,** *International Sociological Association, Gothenburg, Sweden,*

¶ "Flow" is defined by the cultural anthropologist Ulf Hannerz (1997) as the movements that permeate modern society such as capital flows, the flows of raw materials or the flows of migrants. This paper addresses the flows that criss-cross virtual space: flows of information, images and communications. These are cultural flows, or, to use the terminology of Schütz & Luckmann (1975), inter-subjective meaning contexts consisting of values, social rules, world views and patterns of behaviour that are increasingly dissociated from their national base thanks to the digital media. They are articulated, passed on, qualified, rejected or transformed into something else in online discourses. The idea of culture as a "self-contained sphere" has become obsolete in an age of digital media. Terms such as trans-culturality & trans-nationality represent socio-cultural developments that are closely tied to the development of digital media. This paper comprises a theoretical and empirical investigation of how the social is formed under the impression of cultural flows, whether trans-cultural tendencies are becoming apparent in the virtual publics that are in the process of being created, & how such tendencies can be identified. The debate concerns questions about how differences are handled, about the importance of hybrid forms of life & socio-cultural membership(s). Is it necessary to abandon the concept of the "citizen" as a concept that establishes membership, as recommended by Seyla Benhabib (2008)? However, tendencies to the contrary are also raised, such as homogenisation & particularism. The presentation is to be at both the theoretical & empirical level. It includes investigation results obtained within the framework of the research project on "Subject constructions and digital culture" financed by the VW Stiftung, Hannover & the FWF, Vienna & currently being pursued at four university locations. The subject matter of the research being pursued in the sub-project at the Alpen-Adria-Universität is communication in virtual publics from a cultural studies perspective.

2010S02334

Schachtner, Christina, Langeland, Katja, Duller, Nicole & Oljak, Katja (c/o Langeland–Institute for Media and Communications, University of Klagenfurt, Universitätsstr.65-67, A-9020 Klagenfurt [tel: 004346327001834; fax: 004346327001899; e-mail: katja.Langeland@uni-klu.ac.at]), **Subject Formations and Digital Culture Performative Arena: Communicative Publics in Cyberspace,** *International Sociological Association, Gothenburg, Sweden,*

¶ Our research project explores subject formations of teenagers and young adults between the age of 15 and 30 in online communities. They are the very first generation that grows up in the era of digital media. The amount of online users amongst this group is above average. Therefore these "digital natives" can be regarded as significant indicators not only for contemporary but also for future society and culture. In the light of the significance that cross-border communication holds for communicative virtual spaces, we include networks into our analysis that originated in different geographical regions and operate across cultural borders. Regarding the German-speaking sphere, we consider online platforms such as Facebook, StudiVZ, Netlog, Knuddels, and the SWR-Kindernetz (childrens network). On an international level we study English-speaking online networks such as Mideast Youth, TakingITGlobal and Global Modules. On all of these platforms topics like religion, values, politics, participation, gender, relationship and "new" forms of playing are investigated. Our research question focuses on how online actors constitute themselves by negotiating these aforementioned topics. During the session of the "Round Table" there will be four contributions regarding particular aspects of our research project. First, we would like to introduce the general idea of the project as well as its research focus. The next input will explicate our methodological approach towards virtual/online communication spaces. Last but not least, we would like to present some of our preliminary findings regarding the subject formations of online actors.

Schaefer, Heinrich Wilhelm (University of Bielefeld, Box 10 01 31 [tel: 33 501 Bielefeld; e-mail: heinrich.schaefer@uni-bielefeld.de]), **Social Power and Religion: The Creative Potential of Pierre Bourdieu's Sociology,** *International Sociological Association, Gothenburg, Sweden,*

¶ The economic crisis only renders it more evident: in spite of modernization, functional differentiation & individualism, social inequality, contradiction & conflict still abound. Conflicts about resources & identities, limited statehood & the evidence of violence point to social inequality as an underlying problem a even if, on the surface, religion plays a major role in legitimizing conflict & violence. That said modernization, individualization & functional differentiation are also present. For example, they are observable in the dissolution of religious monopoly (Latin America), increasing freedom of choice (especially in the mega-cities), new opportunities for upward mobility & in the importance of transnational (religious) relations. Religious practice responds to this complex picture: offering new challenges for the sociological understanding of religion. The sociology of Pierre Bourdieu a not only his writing on religion a is sufficiently broad to describe such practices. This paper is based on 25 years empirical research & sketches three important lines of research currently followed at the University of Bielefeld: the analysis of habitus, the model of the religious field & that of identity politics, & the (national & international) social space of religious styles. For more information & publications see the Centre for the Interdisciplinary Research on Religion and Society (CIRRuS): http://www.uni-bielefeld.de/theologie/forschung/religionsforschung/ forschung/index.html.

Schaeffer, Merlin (Social Science Research Center (WZB), Berlin, Germany, 10785 [tel: + 49 30 25491-459; fax: + 49 30 25491-452; e-mail: schaeffer@wzb.eu]), **Friend or Foe: How Are Resentment and Prejudices Overcome to Establish Interethnic Personal Contact?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since Allport, social scientists emphasize the importance of contact for overcoming prejudices & enhancing social cohesion in mixed societies. At the same time, co-habitation rather seems to foster the opposite: a growing number of studies from various countries shows that the more ethnically diverse the neighborhood, city, or even nation state, the less people trust others, are engaged in civic associations, support public spending, & the more prejudiced they are against people of other ethnicities. Still, Allport & contemporary spokespersons of the "contact theory" seem to be correct in one regard: people who have personal contact to persons of different ethnicities, meaning friends or acquaintances, are less prejudiced & distrusting. But how do people get into personal contact, if spatial proximity, as a first necessary condition, stirs prejudice & refusal to mix with others? This paper explores theoretically as well as empirically several of those determinants explaining the number of friends as well as the number of acquaintances of other ethnicities in the neighborhood, e.g. regular encounters at public places or average language abilities of migrants in the region. First results from a very recent German telephone survey (conducted October 2009 to February 2010), with data of 7500 respondents living in 55 regions and hundreds of neighborhoods, will be analyzed using multi-level modeling. The survey includes a sample of the general population as well as an oversample of immigrants in general & of people of Turkish descent in particular. The results suggest that for respondents with children & for respondents with a partner of different ethnicity, opportunity structures, such as public places, have a larger potential to establish contact. Furthermore, inter-ethnic contact increases with the average language skills of migrants.

Schaffrin, André (GK-SOCLIFE, University of Cologne, Cologne, Germany, 50931 [e-mail: schaffrin@wiso.uni-koeln.de]), **Who is Harmed by Climate Change? An Empirical Investigation on the Social Impact of Climate Policy,** *International Sociological Association, Gothenburg, Sweden,*

¶ Climate change remains a significant topic for both social sciences and politics. While solutions for climate change involve a lot of technical expertise & the assessment of climate policies is very much economically driven striving towards effectiveness, strategies towards the mitigation & adaptation of global warming appears to be highly reflexive & their impact on the quality of life remains unclear. National & international climate policies, therefore, appear to cause national & international distributional effects that influence social inequality. Drawing on the vast literature of environmental & welfare state research this paper corresponds to the question of how national climate policy strategies influence existing patterns of social inequality. I argue that the national welfare state arrangement determines both the probability to adopt certain climate strategies & the effect of these strategies on social inequality. Market based solutions of climate policies increase individual income inequality, while state oriented regulatory solutions effect income distribution more equally. Low income groups are harmed most by climate policies, e.g. through mechanisms like housing insulation & car emission standards. It is suggested that climate policies enacted through market strategies might cause even more inequality in countries without generous welfare state. The influence of climate policies on social inequality, therefore, is moderated by existing patterns of welfare policies. This paper sets a link between environmental politics, welfare state research & sociology of the environment in a multi-level approach targeting on both national & individual social inequality patterns. The analysis is based on individual survey data which is combined with institutional indicators on the macro level. This approach gives a more detailed insight in country specific institutional strategies towards the impact of climate policies on social inequality.

Schatz, Enid J, Madhavan, Sangeetha & Williams, Jill (Dept of Occupational Therapy/Dept of Women's & Gender Studies, University of Missouri, 420 Lewis Hall, Columbia, MO 65203 [tel: 573-882-7196; e-mail: schatzej@health.missouri.edu]), **Female Headship and Status Attainment among Widows in Rural South Africa,** *International Sociological Association, Gothenburg, Sweden,*

¶ At first glance, being widowed & head of household appears to be a disastrous combination in circumstances marked by high levels of unemployment & increasing HIV/AIDS mortality. Indeed, this is the situation in many parts of southern African where HIV-prevalence rates hover around 25-30%. In this & other contexts, female headship is often equated with crisis, disorganization, vulnerability & by extension, low status. There is little doubt that in communities facing a variety of challenges, that enormous responsibilities confront widowed household heads. However, not all women experience these conditions in the same way. In this paper, we examine qualitative interviews with female heads & members of their households to illuminate the context of headship for widowed women of varying ages in rural South Africa. The data show that contrary to being a monolithic category, headship for women entails a typology of statuses, each brought about by particular configurations of individual, household & network characteristics. Rather than viewing status as an individual attribute, we think about status recognition as a dynamic and shifting product of relationships between widowed heads, members of their household & kin networks. We conclude with a brief discussion of policy implications & future research directions.

Scheer, Dirk (ZIRN - University of Stuttgart, Stuttgart, Germany, 70174 [tel: ++59-6221-432391; e-mail: dirk.scheer@sowi.uni-stuttgart.de]), **Policy Relevance of Computer Simulations: Analytical Framework and Case-Study on Carbon Capture and Storage (CCS),** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper has been elaborated within the project "communication about prospects & limitations of simulation results for policy makers (COPLOS)". COPLOS - which is embedded in Cluster of Excellence "simulation Technology" (cf. http://www.simtech.uni-stuttgart.de/) a is a research project that will focus on the exchange between simulation experts & simulation users in various policy fields. The main objective is to elicit the dominant expectations and requirements from the policy side & match this input with the specific performance & reliability of the simulation processes under investigation. COPLOS follows a case-study approach taking Carbon Capture & Storage (CCS) into account. Simulations in the field of CCS are carried out for a great variety of applications, for instance energy system analysis (energy models identifying the future energy mix or CO2 emissions), technology process optimization for capture strategies & pipeline infrastructure or technology assessment studies for CO2-underground storage which include simulation for capacity estimates, site selection, CO2-injection & CO2-underground behavior as well as leakage and risk assessment studies. Thus, CCS related simulations serve for strategic future energy decision-making, cost estimations, safety and health issues etc. Against that background they potentially become interesting for policy. Main focus of this paper is on the elaboration of the analytical framework "policy Impact Matrix of Simulations (PIMS)" which aims at identifying different simulation clusters & specifies their potential policy relevance taking several polity functions into account.

2010S02340

Scheibelhofer, Elisabeth (Department of Sociology, University of Vienna, Vienna, Austria [tel: 00431427748218; e-mail: elisabeth.scheibelhofer@univie.ac.at]), **The Contribution of a Sociology of Space to the Discourse on the Integration Powers of Public Space,** *International Sociological Association, Gothenburg, Sweden,*

¶ Based on empirical studies of public spaces in Vienna that have been developed in order to "integrate" persons with migration backgrounds, I will argue that we are often starting with misleading concepts of the relationship between space & social relations. This argument is based on a theoretical review of the new sociology of space as it has been lately put forward by authors such as Martina Löw (2001), Helmuth Berking (2006) & others. It is argued that most migration & integration research is still based on an (unreflected & thus under-theorised) notion of essentialised space, while social scientific research on space has shown us that the social world is based on more than on this container-like notion of the spatial: Especially relational and constructivist notions seem to be appropriate & thus need to be integrated into research methodology in order to understand adequately the relationship of public spaces, migration, & social integration.

2010S02341

Scheibelhofer, Paul (Gender Studies Department, Central European University, Budapest, Hungary [e-mail: paul.scheibelhofer@univie.ac.at]), **Constructing Migrant Masculinity in times of "Crisis of Multiculturalism" a German and Austrian cases,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper, dominant contemporary representations of "foreign masculinity" in Germany & Austria are critically analyzed. Discourses in media, politics but also in the social sciences lately focus predominantly on the figure of the "Turkish Muslim Man" as the bearer of an unbroken archaic-patriarchal masculinity. In order to critically understand these dis-

courses, I argue that we not only have to analyze the ways that older colonial and racialized imageries about the gendered & sexualized Other are re-articulated. But also situate these imageries about "the Turkish Muslim Man" in relation to a rising discourse about the so-called "failures of multiculturalism" & contemporary integration-debates. In my paper, the imageries about "the Turkish Muslim Man" in Germany & Austria are analyzed regarding the "work" they accomplish in constructing national community and difference. The paper mainly builds on Marxist feminist postcolonial theories & develops an intersectional approach to theorizing constructions of masculinities within the context of migration & racism.

2010S02342

Schels, Brigitte (Institute for Employment Research (IAB), Nuremberg, Germany [tel: +49 911 179 3338; e-mail: brigitte.schels@iab.de]), **Long-Term State Benefits Dependency of Young Adults in Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ The study examines the dynamics of state benefits dependency of young adults in Germany. Which groups of young benefits recipients face a high risk of longer & repeated benefits claims? The theoretical discourse relates benefits receipt to questions of choice and opportunity. First, according to the arguments of rational financial decisions, learned helplessness & social origin as stated by the underclass debate, it is assumed that benefits dependency is related to the individual's low labour supply and high benefit orientation. But second, the opportunities of young benefit recipients may also depend on financial restrictions during school-to-work-transitions. Therefore longer benefits receipt might also correspond with poor individual resources or result from specific life circumstances & events during young adulthood like education or family formation. The analysis explores the determinants of continuous & discontinues benefits receipt using multilevel structural equation model (SEM) for event history data. The analysis is based on a combination of the survey "life Circumstances & Social Security 2005" & longitudinal register data of the German Federal Employment Agency for three years. The sample for the analysis consists of about 700 18- to 24-year-olds that have started to receive state benefits in January 2005.

2010S02343

Scherschel, Karin & Booth, Melanie ([e-mail: karin.scherschel@uni-jena.de]), **A New Emerging Underclass? The Impact of Activation Programs on Labour Market Orientations and Institutions,** *International Sociological Association, Gothenburg, Sweden,*

¶ The contribution focuses on the institutional implementation & the individual consequences of activation programs (often referred to as "hartz" reform) implemented in 2005 in Germany. The new labour market policy is a highly contested topic. The ongoing protest against this policy promotes speculations for further reformations. We approach the topic from the subjective perspective of the job seekers as well as the institutional side. On the basis of regional case studies, developed from interviews with different regional experts of labour market policies, we conducted a qualitative longitudinal survey of the group targeted by the most recent labour market reforms. We put a particular emphasis on the interrelation between unemployed persons' labour market orientations as well as their strategies of dealing with their position in the labour market, & the "rights & responsibilities" they are given by the new labour market regulations. We can show that the new activation program doesn't reflect the different types of unemployed people. Instead its standardised procedures show lots of unintended effects such as stigmatisation & social exclusion.

2010S02344

Scheuer, Angelika (GESIS - Leibniz Institute for the Social Sciences, P.O. Box 122155, 68072 Mannheim, Germany [tel: +49-621-1246-249; fax: +49-621-1246-100; e-mail: angelika.scheuer@gesis.org]), **Modeling the European Attitude System across Countries and Time,** *International Sociological Association, Gothenburg, Sweden,*

¶ There is a long-standing debate whether citizens' attitudes towards European integration & the European Union are well-organized and a if yes a how these attitudes are structured. My doctoral research showed that citizens in the EU-12 countries dispose of a well-structured & comparable European attitude system that consists of cognitive, affective & evaluative attitude dimensions (Scheuer 2005: 77). In order to model the attitude system, a comparative procedure was developed & applied to a survey drawn from the European Election Study of 1994. The EU-related beliefs are first grouped according to latent attitudes by means of Mokken scaling. These attitudes are subsequently arranged along latent dimensions by means of measurement modelling (CFA). The paper to be presented contains a replication of this study on the basis of Eurobarometer 66.1 (autumn 2006) & deals with three specific questions: 1) Is it possible to reproduce the model found for 1994 for the countries of the EU-12? 2) Does the same model apply for the countries of the Northern & (first) Eastern expansion? 3) How do more output-related attitudes fit into the model? The presentation will first set out the proceeding for developing comparative models for hierarchical attitude system for a large number of countries, & then proffer the outcome of the analysis. First results show that a range of robust Mokken scales can be constructed that apply to all EU-25 countries, which are partly direct replications of those previously found & partly new scales. Using these scales in the second step, comparative measurement models are constructed for all countries. Since the focus of the analysis is on attitude structure, the claims of invariance a across countries & across time a are restricted to identical item composition. The attitude structure in the EU-12 countries displays great stability over time, which supports the validity of the previously developed model. In addition, the scales and models found for EU-12 can be equally well applied to the countries of the Northern & the (first) Eastern expansion. This suggests that the underlying attitudes structure is identical in the member countries of the EU. The integration of output-related attitudes into the attitude model remains to be done; this constitutes a novelty because similar items were not available in the previous analysis. 2010S02345

Schhiff, Claire (Sociology Department, University Victor Segalen, Bordeaux 2, 33000, Bordeaux, France [tel: +33. 5.57.57.18.57; fax: +33. 5.57.95.80.92; e-mail: claire.schiff@lapsac.u-bordeaux2.fr]), **New Migrants and Ethnic Minorities Relating Online: Cultural, Generational, and Gendered Divergences among Young Adults of North African Origin Living in France,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper will present an analysis of intra-ethnic relations among young adult members of the North African Arab "community" (from Algeria, Morocco, Tunisia) composed of present day post-colonial migrants & descendants of migrants born in France. The empirical data is made up of internet discussion material gathered from a wide variety of different sites which cater to this group. Real life relations between the children & grandchildren of migrants who settled in France during the sixties & seventies (Beurs and Beurettes) & those who have recently settled there or who wish to do so (Blédards & Blédardes) are discussed among participants in an often acrimonious & critical manner with the intent of understanding why they tend to be marked by resentment and misunderstanding. Such value laden & often taboo issues as religious & cultural authenticity, transnational marriages and gender relations, social mobility & race relations, are discussed in light of the changing nature of post-colonial migration & of the persistent socio-economic marginalisation of a significant portion of France's North African minority. These discussion forums linking old minorities with new immigrants create a stage on which the conditions of anonymity & freedom of expression make it possible for participants both to act out & to critically assess latent intra-ethnic tensions fueled by deep-seated cultural and racial stereotypes & by renewed anti-immigrant policies.

2010S02346

Schiebel, Martina & Robel, Yvonne (University of Bremen, Department of Cultural Studies, Postbox 330440, D-28334 Bremen, Germany [tel: +49 421 21867651; e-mail: schiebel@uni-bremen.de]), **Enemy Images in the Cold War and Their Biographical Meanings in East and West Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ In East Germany as well as in West Germany political conflicts between the ruling party & "political dissidents" with opposite political opinions & ideals in the 1950s & early 1960s were nearly daily phenomenons. It is known that the ideological contrasts of the communist & the capitalist world had a fundamental impact on foreign affairs & increased the danger of a new world-wide war. But much less known is about the political impact this foreign policy had on the living conditions of individuals & especially their political activities. In our current research about political action & political biographies in the Eastern & the Western part of Germany we have done nearly 60 narrative biographical interviews with people living in East or in West Germany. All of them have made the experience of defining their political goals & aims as anticonstitutional & were sanctioned & arrested. The aim of this project is to reconstruct the bio-

graphical meaning of those processes of sanctions & arrest and the consequences for political action & political culture in East & West Germany. To answer this research question we are doing both discourse analysis of public newspapers & hermeneutic case reconstructions based on narrative life-history interviews.

2010S02347

Schifirne, Constantin (Department of Communication and Public Relations, National School of Political Science and Administrative Studies, Bucharest, Romania [e-mail: cschifirnet@yahoo.com]), **The Europeanization of Mass Media in a Society Tendential Modernity. The Role of Television in European Elections,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper focuses on the use of television with different aspects of European election campaigns. The first part concerns Europeanization of media, seen as a process with two directions: one from top-to-bottom, orchestrated from Brussels, through normative acts, and one from bottom-to-top, generated by citizens and member states. The achievement of an Europeanization of media faces some difficulties: the power on national states to regulate the communication systems, and the perpetual importance of linguistic and cultural barriers. In the second part, I analyse the Romanian mass media, which they have evolved together with society and consequently they make the transition from a society where modernity has been rather a tendency than a fully-articulated process to a European society. In the third part, I look at the structure of the European election campaigns on the national TV channel in Romania, using data collected. I emphasize the idea that the mass media are important ways in diffusion of information about Europe, and, in the same time, they can shape the behaviour of Romanians regarding the Europeanization Key words: Europeanization, European election, mass media, tendential modernity.

2010S02348

Schifirnet, Constantin (Department of Communication and Public Relations, National School of Political Science and Administrative Studies, Bucharest, Romania, Postal Code010643 [e-mail: constantin.schifirnet@yahoo.com]), **The Europeanization and the Tendential Modernity,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper analyses the process of Europeanization in a society which has a different modernization trend than many of EU member states. The first part analyses the effect of Europeanization on Romanian society. This is the fundamental reason to develop a theory which would offer an explanation about Romanian processes of modernity's development. In part two, I discuss Europeanization as a process which can change the configuration of the new European community, as a process which creates new forms of social, cultural and political organisation. In the third part, I study the concept of tendential modernity. This concept designates the reverse development, compared to the classical pattern of European capitalist evolution. It is useful in studying transitional societies, where modernization began with political institutional construction & not with the building of the capitalist economy. Modernity is the framework & main element upon which a nation is supported, a mosaic however not by means of economy, the basis of a national development & progress. In the Romanian space modernity finds its way slowly through the complicated network of traditional socio-institutional structures. Modernization is fragmented and unstructured.

Schmauch, Ulrika & Giritli Nygren, Katarina (Department of Social Sciences, MidSweden University, Sundsvall, Sweden [e-mail: ulrika.schmauch@miun.se]), **Re-Walking the Road from Margin to Center - The Hidden Boundaries of Everyday Places,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is based on a photo elicitation research project that focuses on the multiple ways in which recently arrived migrants, of different ages & backgrounds position themselves, & are positioned, in relation to the urban community in a medium sized town in central Sweden. The study aims at analysing how they use, interpret & attribute meaning to the places surrounding them in their everyday lives. From a theoretical point of view, the research connects theories on place & social relations in order to analyse the way the accessibility of place is structured & to explore the tensions between centre & periphery in a geographical, as well as sociological sense. Hereby, special attention is given to variations in different kinds of narratives of the town & to how these influence the migrants' experiences of inclusion & exclusion in their everyday life. The results shed light on the ways our informants construct places in their everyday life, & how they do, or do not, connect to the areas in which they live. Furthermore, the importance of place for integration and for the formation of social relations is discussed.

2010S02350

Schmidt, Joachim K.H.W. & Harms, Hans (Köln [e-mail: soregajkhws@aol.com]), **Manifesto: The Wealth of Autonomous Human Beings - New Foundation of Economy on Information,** *International Sociological Association, Gothenburg, Sweden,*

¶ Once born we are asked to reproduce ourselves, physically and economically. This paper focuses on *economical* reproduction of human beings. We are all born with capacity to absorb and to process information, we all potentially participate in the realm of information to a similar extent. Information is immaterial, its extent is inexhaustible and continuously expanding like our universe. On the base of received and processed information we are enabled to reproduce ourselves with help of our work in its broadest sense. And exactly this kind of economic reproduction is the essence of an economy fitting digital network society. An economic theory based on information will explain problems of mainstream economic theories. It shows the path towards a sustainable economy without crises, because it blows up the class structure of present societies, it prevents splitting up and disintegration of the social body. Present author replaces "homo economicus" of John Stuart Mill and followers with his *homo communicans.* It will be demonstrated that the deficiency of mainstream economics derives from its exclusion of real time. Mainstream economy operates, ideologically reasoned, within a closed space in which social classes struggle for most influential and profitable positions, i.e. the best piece of the cake. The here proposed new paradigm of economy, the network theory, is an open space economy, to be provided by assemblages, surterritorially operating round the globe, their space is digital, unmeasured, unlimited and borderless. Network theory focus on economic reproduction of the human being, capital will be subordinated to labour.

Schmidt, Luisa, Prista, Pedro & Saraiva, Tiago (Institute of Social Sciences - University of Lisbon, Av. Professor Aníbal de Bettencourt, 9, 1600-189, Lisboa, Portugal [tel: 003517804700; e-mail: schmidt@ics.ul.pt]), **Climate Change and Social Change - Adaptation Processes on Affected Coastal Areas,** *International Sociological Association, Gothenburg, Sweden,*

¶ Climate change (CC) & coastal erosion (CE) have recently brought to light the fragilities of European seashores, namely those of the Atlantic Ocean (EEA 2006). Indeed, media coverage recurrently uses dramatic narrative effects that tend to erase long traditions of perceiving & relating to coastlines as unstable spaces. It is thus possible to inscribe CC & its coastal impacts in a long run environmental history of societies coping with change. Nevertheless CC holds two radical novelties in relation with previous experiences of coastal instability: reflexivity & anthropogenic causes. This paper is a first presentation of the Research Project CHANGE which explores the interactions between global climate change, local risk practices & their impact on coastal erosion. It brings the preliminary results of 3 case studies in the Portuguese coast where erosion processes are already critical: Vagueira, in the Aveiro lagoon; Costa da Caparica, near Lisbon; the southern Algarve coast near Quarteira. Although these areas have in common recent growth dynamics with strong urban & touristic pressures over previous fishermen's villages, they underwent different processes of occupation & they present different degrees of on-going erosion. Our presentation will pay special attention to public policies & adaptation practices to climate change in sensitive coasts, taking in account the role of the memories of coastline erosion. We will make a first approach to the ways different coastal communities will be differently affected by climate change as well as to possible reactions by the multiple stakeholders (populations, local & central authorities, economic interests…) to different impact scenarios.

Schmitt, Christian & Trappe, Heike (University of Rostock [e-mail: heike.trappe@uni-rostock.de]), **The Impact of Gender Relations on Relationship Stability and the Likelihood of Separation,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of our contribution is to focus on the mechanisms, relating relative gender equality of couples to marital stability in Germany, differentiating between East & West. Specifically, we focus on the role of gender relations for the risk of separation. A key hypothesis in this context is that the varying social and institutional context in the West & the East continues to affect social behavior. We assume that this differential socio-

cultural background is reflected in gender relations to this very day and hence surfaces in differences in marital stability between East and West Germany. To address our research question, we use data from the German Socio-Economic Panel Study. Our sample consists of all first marriages that were formed between 1990 & 2006. All analyses are conducted for East & West Germany separately in consideration of the mechanisms that are likely to affect gender affairs & the likelihood of separation differently across regions. Using event history models, we will include time-constant as well as time-varying covariates in the empirical analysis. Our aim is to test whether economic independence or role specialization matters more for relationship stability of couples in present-day Germany.

Schmitz, Eva (Section of Health and Society; Halmstad University, Box 823, 301 18 Halmstad [tel: +4635167625; e-mail: eva.schmitz@hh.se]), **Sisterhood and Solidarity - The Swedish Women's Movement Political Strategy,** *International Sociological Association, Gothenburg, Sweden,*

¶ The purpose of this paper is to show what happens when women come together as a collective & what impact the slogan "sisterhood is powerful" had for changing women's lives. Focus is the women's movement in Sweden from 1968 to the beginning of the 1980s. Firstly I explore how women organized themselves in different parts of Sweden, from university to industrial cities. I show in what way women's groups mobilize to undertake the issues concerned most women & how they used collective actions to influence a broader public & get through their demands. The interaction between women's internal organizing, their collective actions & the question of female consciousness is explored. Secondly I focus on the significance the slogan "sisterhood is powerful" had for the commitment & activism. The slogan raises and problematizes several relevant questions what impact sisterhood had for the mobilizing for political action. How shall we understand the notion of women as a group & as a way to social change? Sisterhood as an idea contributes & creates a possibility of women unity as well as it raises the differences in women's experiences. Thirdly in the research on feminist organizations I deemed it necessary to include experiences of other marginalized women. In this paper I include some examples of collective actions by low paid working class women. I look at questions such as: how did social protest & the development of women consciousness intertwine? What importance had women solidarity & independent organizing in actions for the advancement of their struggle? How was it possible to, for a period to build an interaction between the women's movement & a worker's collective? My empirical research is based on interviews with former women activists and women at who went out in strike, fought for jobs or occupied the plant. Documentary material from the different groups have been collected as well as articles from daily newspapers to find out what space the movements action got.

Schmucker, Alexandra & Huber, Martina (Institute for Employment Research (IAB), Nuremberg, Germany [e-mail: alexandra.schmucker@iab.de]), **Is Lifelong Learning the Answer to Transformations in Modern Societies? Technological Innovation and the Ageing Workforce Requirement,** *International Sociological Association, Gothenburg, Sweden,*

¶ The German labour market is affected by technological & demographic change. Especially older employees are regarded as looser because of their insufficient qualification & the increasing age of retirement. One possibility to expand the competences of older employees is further training. But how we will show older employees are still a discriminated group considering their participation in further training. The implementation of new information & communication technologies affects the labour society & leads to changes considering working procedures or equipment (Borghans, ter Weel 2002). Additional, the consequences of the demographic change demand rethinking. A decreasing number of young employees have to balance an increasing number of old employees (Bellmann, Kistler, & Wahse 2007). Following, employees and employers have an interest to preserve & support the employability & productivity. In this context lifelong learning plays an important role. Therefore a unique Linked Employer-Employee dataset within the cooperation project "further Training as Part of Lifelong Learning" is constructed (Bender, et al.). First we will give an overview about the employment structure of the establishments. Additionally we show that older workers have a lower participation in further training. Using multivariate analysis we identified factors on employer & employee side that have an effect on the participation on further training of older workers. Our main results show that society has to prepare much more for the challenges of the technological change & the ageing of the labour force.

Schnabel, Annette & Grötsch, Florian (Department of Sociology, Umea University, SE-90186 Umea, Sweden [tel: +46 90 7869520; e-mail: annette.schnabel@sco.umu.se]), **"God With Us"? The Role of Religion for Cohesion and Integration in Current European Societies,** *International Sociological Association, Gothenburg, Sweden,*

¶ Traditionally, religion plays an important role in sociological theory and social cohesion analysis. While social cohesion depends on the distinction between 'us' & 'them' religion provides an important marker of self-conceptualisations: since the founding of the European Union, religion became an important aspect of shaping European identity & social cohesion at the EU-level. In contrast, at the national level religion developed into a characteristic of differentiation between the (Christian) 'us' & the (Muslim) 'them' lately. At the individual level, religiosity seems to change its content when it comes to identity formation. Our presentation follows these developments & addresses the question how religion and its regulation supports social cohesion on the different levels. We combine a document analysis of the role of religion at the European level with an quantitative multi-level analysis of individual attitudes. We assume that the articulation on the European level provides the broader ideological frame for the understanding of 'us' & 'them' within the EU-countries. The quantitative analysis should reveal whether religion in fact supports social cohesion. We use multi-level modeling including the national level data & individual affiliations to analyze if national differences & differences in individual religiosity support or hinder the individual perception of belonging.

Schneider, Cornelia (Faculty of Education, Mount Saint-Vincent University, 166 Bedford Highway [tel: 1-902-457-6206; e-mail: cornelia.schneider@msvu.ca]), **Research Ethics Policies and Their Impact on Research with Children: Comparing Canada and France,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper proposes an analysis of research ethics policies in regards to children in two different countries of different cultural backgrounds: Canada & France. It will consider the different current policies in place in both countries (the updated Tri-council policy in Canada, the project of the French Association of Sociology to develop a chart of professional deontology), and how they impact research practices with children. The presentation will compare concrete research projects & how they are dealt with in the different contexts. Given the current policies around vulnerable & incompetent persons (category under which children will have to be subsumed), the question will arise what types of research are currently conductible in the different countries and if there is an imbalance that is created under the pretext of research ethics. The paper will analyze different groups that are influencing ethical considerations around research: the children themselves, their parents & research ethics boards.

2010S02357

Schneider, Silke L., de Heus, Manon, Luijkx, Ruud, Kieffer, Annick, Barone, Carlo, Saar, Ellu & Bartušek, Aleš (Nuffield College, University of Oxford, OX1 1NF Oxford, UK [tel: +44 1865 278 501; fax: +44 1865 278 621; e-mail: Silke.Schneider@nuffield.ox.ac.uk]), **Harmonising Measures of Educational Attainment for Comparative Research: A Double Comparison of Measures across Countries,** *International Sociological Association, Gothenburg, Sweden,*

¶ Cross-nationally comparable measurement of educational attainment is vital for comparative social stratification & mobility research. Despite the wide utilisation of measures of education in cross-national comparative research, validation studies of such harmonised measures are scarce. Building on the earlier literature (Schneider 2009, Müller & Klein 2008, Kerckhoff, Ezell and Brown 2002, Kerckhoff & Dylan 1999, Braun & Müller 1997), this study shows the effects of harmonising "indigenous" measures of educational attainment into different cross-national educational attainment measures. Compared to previous studies relying on cross-national data, this paper uses national labour force surveys from seven countries (Czech Republic, Estonia, France, Germany, Italy, the Netherlands, the UK), which means that high quality country-specific education measures are available & the samples are large so that sensitive tests can be undertaken. The paper firstly discusses the challenges of cross-national comparability and loss of predictive power & potential bias of regression coefficients that result from the aggregation of detailed educational attainment categories into more crude ones. It then introduces the data sources, country-specific & cross-national educational attainment

measures, amongst which CASMIN, the ISCED 97 and years of education. The complete ISCED 97 is very difficult to implement in large-scale cross-national surveys, & too complex to be used in any statistical analyses. Therefore, actual data sources usually contain a simplified version of the ISCED 97, e.g. only reflecting the seven main levels (like in the European Social Survey), or differentiating subcategories only in a restricted way (like in the European Labour Force Surveys). An alternative simplification of ISCED 97, ES-ISCED, was proposed in Schneider (2009) & is tested here. It builds on the inspiration of distinguishing between different qualifications within levels of education found in the CASMIN scheme, as well as the rich documentation of national educational systems, conceptual framework and mappings (OECD 1999) of ISCED 97. The actual comparative construct validation uses linear regression models, predicting social status attainment (measures using ISEI scores) by educational attainment. For the single countries, models including the national measure of educational attainment are compared in terms of explanatory power (adjusted R2s) with models using the different comparable attainment measures. The use of the simplified ISCED 97 (levels only) strongly attenuates the association between education & labour market outcomes in most, but not all, countries, & biases regression coefficients, thereby making cross-national comparisons highly problematic. The more detailed version of ISCED used in the EU-LFS & the alternative simplification, ES-ISCED, as well as CASMIN, perform much better. The results thus confirm the findings by Schneider (2009) with higher quality data & more differentiated country-specific education variables as benchmarks.

2010S02358

Schneider, Simone (Berlin Graduate School of Social Sciences, Unter den Linden 6, 10099 Berlin [e-mail: simone.schneider@sowi.hu-berlin.de]), **Social Inequality and its Consequences for Life Satisfaction. What Role do Social Perceptions play?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Social inequality strongly affects the individual's well-being. Recent research points out that people living in areas of high income disparities report less happiness than people living in more equal environments. Due to observed group specific differences in these effects, Alesina et al. (2004) concluded that it must be the perception of inequality & its legitimacy which predominantly shapes the well-being of individuals. Bringing this finding together with previous research on social cognition, this paper aims to demonstrate the mediating character of perceptions of social inequality. Therefore, the paper is guided by two research questions: (1) Do people systematically vary in their perceptions of social inequality? (2) And what are the consequences for their well-being? Due to expected social biases in the perception and approval of social inequality, this paper argues that actual levels of social inequality are of only minor importance to the individual. It is rather the perception & evaluation of social inequality which matters most to the individual & his/her well-being. Data from the International Social Justice Project is used which relies on face-to-face interviews of a representative sample of the German population. Using structural equation modelling, the mediating character of perceived social inequality is analysed. The results mainly support the author's hypothesis and calls for the consideration of social perceptions within the field of well-being research.

2010S02359

Schnell, Christiane (Institute of Social Research, University of Frankfurt, Frankfurt, Germany, 60325 [tel: +496975618344; fax: +4969749907; e-mail: ch.schnell@em.uni-frankfurt.de]), **Professionalism, Social Theory and the Cultural Sphere,** *International Sociological Association, Gothenburg, Sweden,*

¶ Whereas the concept of professions played a distinctive role within classical approaches of social theory (e.g. Weber, Parsons, Durkheim), it seems to have no notable relevance for contemporary approaches anymore. This might be explained in particular by the blurring of traditional dualisms as it is shown for example in the theoretical models offered by Luhmann, Bourdieu & others. Debates about marketisation, the rise of academic knowledge & the societal transformation into a so-called information- or knowledge-society build another concrete background for the apparent disappearance of the professions within social theory. After displaying this context, I will draw the attention to new developments of professionalism, which occur beyond the established professions. I will argue in the paper, that in particular occupational structures & dynamics of professionalization within the cultural sphere are not only interesting in the perspective of sociology of professions but might also help to redefine the role of the professions within social theory.

2010S02360

Schnell, Christiane (Institute of Social Research, University of Frankfurt, Frankfurt, Germany, 60325 [tel: +496975618344; fax: +4969749907; e-mail: ch.schnell@em.uni-frankfurt.de]), **Working with Money. What Changes in the Banking Field Tell about Professionalism in the Knowledge Society,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper refers to the question, how the concept of professionalism is redefined as a mode of governing occupations, organizations and people. The tension between an inflationist use and a systematic advancement of the term professionalism will be fathomed. Therefore changes and challenges of knowledge workers in different fields of the service sector are examined. The role of an entrepreneurship attitude of professionals, the role of a shared service ideal even beyond the established professions, and the overlapping process of an individualization of professionalism, in terms of professional socialization, working conditions and value orientations, are high lightened as mainly important aspects to systematize these developments. After a brief and focussed summary of sociological approaches which describe the challenges of the emergence of the so called knowledge society a very particular but analytically illuminative example, the occupational field of bankers, is discussed based on an empirical case study from Germany.

Schnurr, Maria (Volkswagen Group, Wolfsburg, Germany [tel: 0049-5361-947561; fax: 0049-5361-921020; e-mail: maria.schnurr@volkswagen.de]), **The Role of the Car in Urban Futures,** *International Sociological Association, Gothenburg, Sweden,*

¶ Transport systems & technologies shape cities. Most modern cities are shaped by the automobile. Which transport systems will shape our future cities & which role will the car play in it? Already today there are signs that the role of the car in cities is changing. Besides measures to ban cars from city centers there are land-use planning approaches that make car ownership & use less necessary & attractive; the demand for mobility services which integrate private & public modes is growing; & driver licence rates among young urbanites are dropping. Yet, the desire for individual, independent mobility stays strong. This all hints at a qualitative change of the role of cars in future cities. Which changes can we expect for the urban car system, & how do they contribute to a better quality of life in future cities a socially, ecologically, & economically? This paper will review the current signs of change & provide a glimpse at the future role of the car system: differentiated, integrated, efficient, equitable, efficient.

2010S02362

Schober, Anna (Verona University, Verona, Italy, 37129 [e-mail: annamaria.schober@univr.it]), **Picturing 'Gender': Visual Translation, Popularisation and Contesting of a Key Discourse in the New Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ Over the last forty years philosophical/sociological concepts of "gender" have been developed & in the course of this have been transformed. They are new concepts in the sense that they do not correspond to anything already given in the traditional order of philosophical concepts. Simultaneously they do not correspond to anything given through sensorial experience either, since they are usually deconstructive concepts that seek to reveal that every identity is constructed - which enhances the need to "explain" them to a broader public. In the last two decades "gender" has become a central issue for social reform programs inside the EU, but also for political grassroots movements & artistic creation. In the course of this the concepts have been popularised & have been in this way also translated into images & visual worlds such as films, public performances, exhibitions, websites, etc. This paper investigates such examples of translating & adopting the philosophical concept "gender" into popular visual culture in various European cultural contexts. Thereby it focuses especially on the aspect of developing a methodology for analysing such visual adoptions. Within this larger framework, the paper presents: * examples of visual adoptions of gender concepts in art & mass culture, created by public reform strategy as well as by grassroots political tactics * an analysis of these images with respect to the meanings staged in them & how they interlink with meanings created by visual culture, set in motion by other social agents (for instance by advertising, medical discourse, or educational discourse of public reform agents) * an investigation into the processes through which individuals & groups are empowered to respond to these images or not, i.e. some particular reception histories & struggles these images set in motion are tracked. * a comparison of examples in various European countries The innovative methodological approach the proj-

ect presents consists in focusing especially on images & visual worlds into which the concept "gender" is translated. Hence the presentation does not, as sociological analysis has done up to now, focus on gender as an analytical category in order to investigate the social live of images as well as their relationship to empirical lives of men and women, but turns the question around by asking what image-creations the concepts themselves inspired. In doing so the presentation will trace the imaginative force the concept of "gender" unfolds a for instance by analysing the concrete visual reception histories in form of pictures but also self-performances & collective-body formations it triggers. Part of this is also to investigate where "gender" is employed in contemporary political strategies and grass-roots tactics & where rather "women" or "queer" are represented a for example, for the sake of directly addressing or seducing certain groups or in order to enhance the "popular" appeal of an action. Finally, the project analyses how the images coined in this way react on contemporary political emancipation movements & official strategies of public bodies themselves. This focus on the image & the specificity of its communicative powers makes it possible to access the complex reworking of the popular imaginary that goes along with the dissemination of gender discourse. The relevance of the project for current political culture in Europe lies especially in this emphasis on the broader popular as well as artistic signification processes concerning a key notion of current emancipation strategy & on the public life of the images created in this way.

2010S02363

Schofield, Toni (University Of Sydney, Sydney, NSW, 2006 [tel: 61 2 9351 9577; fax: 61 2 9351 9540; e-mail: toni.schofield@sydney.edu.au]), **Addressing Health Workforce Shortages: Gender Inequity in Healthcare Employment,** *International Sociological Association, Gothenburg, Sweden,*

¶ Health workforce shortages are expected to intensify over the next decade, posing health "crises" internationally. Those in low-income countries - mainly from the global South - are likely to shoulder the worst impacts, especially in Sub-Saharan Africa which has only 3 per cent of the world's health workers & 24 per cent of the burden of disease. This paper argues that the dominant problematisation of health workforce shortages is technocratic and, as a consequence, offers little as a research foundation for policy makers in redressing the problem. An alternative approach, drawing on sociological frameworks, is proposed with a focus on gender dynamics in the institutional organisation of healthcare, particularly in relation to gender inequity in healthcare employment.

2010S02364

Scholtz, Hanno, Glatz, Joel & Muggli, Bodo (Institute of Sociology, University of Berne, Lerchenweg 36, 3012 Berne, Switzerland [e-mail: scholtz@soz.unibe.ch]), **Measuring Individualization. Conceptual Issues, Methodological Aspects and First Results,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since its introduction 20 years ago, Ulrich Beck's concept of individualization has become a central argument of social change. In this paper, we discuss the opportunities & problems of its comparative measurement based on comparative survey data. Regardless whether the loss of foregone relations is seen within individual biographies or between individuals, individualization can be measured in terms of over time lowering relations between characteristics. The study analyses changes in the relations between individual characteristics using two different data sources which allow for the inclusion of rather different characteristics: the Luxembourg Income Study which provides detailed information on "hard" facts such as income, education & class in a relatively high survey quality & intertemporal coverage, & the World Values Survey which includes values as "soft" facts which measure individual self-positioning in everyday life. It concentrates on methodological aspects which are affected. The comparability of measures restricts the interpretation of results between countries, but provides both trend evidence & the assessment of within-country changes. First analyses reveal a divided picture: sparse if any individualization with regard to the LIS "hard facts", but significant trends towards individualization in the WVS value indices.

2010S02365

Scholz, Evi, Zuell, Cornelia & Schmitt, Hermann (GESIS, Mannheim, Germany, 68159 [tel: +49 621 1246283; fax: +49 621 1246100; e-mail: evi.scholz@gesis.org]), **Who Does Not Answer on the Meaning of Left/Right? Item Non-Response in Open-Ended Questions and Implications for the Left-Right Scale,** *International Sociological Association, Gothenburg, Sweden,*

¶ One of the main topics of the ALLBUS 2008 was "political attitudes and political participation". Self-placement on a left-right scale was asked as an indicator for ideological self-identification. Though left-right self-placement is a traditional measure in survey research, the respondents associations with "left" & "right" are only tested rarely. However, even for such a well-known indicator it is important to learn more about the interpretation of the scale by the respondents. In ALLBUS 2008 two open-ended questions were asked: "what do you mean by left/right?". Item non-response on these open-ended questions has to be considered before substantive analyses can start. About 20% of the respondents answered "don't know" or did not answer. Such a considerable amount of non-response might have effects on data quality and, hence, on the interpretation of the data. We assume that those non-respondents would have problems with the self-placement on the left-right scale. We further assume that demographic & indicators on political interest, participation, & knowledge influence the non-response behavior. We will present the basic results of our investigation of item non-response on the questions about associations with left/right & discuss quality problems related to the validity of the left-right scale itself.

2010S02366

Schoyen, Mi Ah (Department of Political and Social Sciences, European University Institute, I-50014 San Domenico di Fiesole [e-mail: miah.schoyen@eui.eu]), **Generational Politics: Who Pays for Pension Reform? A Comparison of Italy, Germany and Sweden,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper has a twofold aim. First, it attempts to shed light on how the costs of pension reform have been distributed across generations. To what extent do younger generations have to shoulder the burden of readjustment & how have the acquired rights of current retirees been protected? Second, the paper wants contribute to our understanding of "generational politics". It asks why we, despite similar policy objectives, see great cross-country variation in how the generational burden-sharing is carried out in practice. Here the attention shifts to the political dynamics underlying the observed policy outputs. These questions are addressed comparing reform trajectories in Germany, Italy and Sweden. Particular attention is paid to the transition periods associated with any pension reform. Theoretically the paper argues that although Esping-Andersen's "frozen landscape" hypothesis hardly holds, there is much to be said for an explanation emphasising the importance of policy feedbacks & variation in national context. Advanced democracies face a common dilemma consisting of the need to ensure the financial sustainability of old-age pensions while at the same time providing an adequate level of protection for all. However, due to historical legacies and different reform starting points, there is great variation in the nature of the challenge.

2010S02367

Schrecker, Ted & Chapman, Audrey (Institute of Population Health, University of Ottawa [e-mail: tschreck@uottawa.ca]), **Social Determinants of Health: Human Rights Challenge Neoliberalism and the Global Marketplace,** *International Sociological Association, Gothenburg, Sweden,*

¶ In 2008 the World Health Organization's Commission on Social Determinants of Health produced a report that began with the observation that "social justice is killing people on a grand scale." It proceeded to make an explicitly ethical argument for fundamental redistribution of money, power & resources, both nationally & within the international economy, in order to reduce health disparities. One of many implications of the Commission's analysis is the effective inseparability of health policy and social policy. Another, which acquires renewed urgency in light of the financial crisis that spread across the world in 2008, is the extent to which an unregulated global marketplace threatens the health & well-being of the many losers from transnational economic integration (globalization). A background report for the Commission by one of several supporting knowledge networks, the knowledge network on globalization, adopted a rubric of "redistribution, regulation & rights" from a 2005 paper published by the Finnish social policy unit STAKES. The first part of this paper expands on this recommendation, with reference to the evidence base for the destructive consequences of globalization a more specifically, the adoption of neoliberal economic policies, often under intense & self-interested pressure from the G7 countries & the international financial institutions that they dominate. The second part of the paper argues that the international human rights framework offers a distinctively valuable platform for challenging the values of the global marketplace, both conceptually (cf. Margaret Somers' notion of citizenship as "the right to have rights") & concretely. Specifically, an expanding body of research demonstrates the

potential effectiveness of making social & economic rights legally enforceable as a mechanism for holding governments and non-state actors accountable for meeting basic health-related needs. A human rights approach embodies clear recognition that the obligation to meet some such needs "trumps" the values of the marketplace, & such needs must therefore be given priority in public policy, both domestically & in terms of international commitments. The paper concludes with some recommendations for further research & priorities for advocacy in support of a human rights approach to social determinants of health.

2010S02368

Schroeder, Anja (Institute of Sociology, Otto-von-Guericke University of Magdeburg, Magdeburg, Germany, 39104 [e-mail: anjaschroe@aol.com]), **Professionalization of Managers: Non-Economic Dimensions of Management Careers and Managerial Work,** *International Sociological Association, Gothenburg, Sweden,*

¶ The research question was under which social (including biographical) conditions managers would become sensitized for the non-economic dimensions of their work & in what way they would tackle non-economic task dimensions. From a sociological perspective, particularly with reference to interactionist theorizing, professionalization means that the work activity of a professional person is oriented towards the welfare of the client. Although profession & management may appear at first sight as a contrast set, empirical research shows that managers can develop a similar kind of action orientations & identifications just as professionals do. Furthermore, managers are confronted with disturbing contradictory demands in their work, which is also a core feature of professional work. - Within the framework of narrative interviewing, managers' biographies have been collected, as well as case presentations from their work. The analysis focuses on the sequentiality & processual constitution of biographical and interactional processes. The data has been analyzed with the method of biographical analysis. Particular attention has been paid to the social conditions of professional identity formation as well as to deprofessionalization processes. The analysis shows that managerial work is problem-ridden & work processes involving employees as quasi-clients are fragile.

2010S02369

Schröttner, Barbara Theresia (Karl-Franzens-University Graz, Department of Education, Graz, Austria, 8010 [tel: +43 699 126 30 880; e-mail: barbara.schroettner@uni-graz.at]), **The Role of Education in India in the 21st century,** *International Sociological Association, Gothenburg, Sweden,*

¶ The investigation points to the fact that because of the breathtaking changes & shifts in India since the early 1990s, it is not surprising that India is expected to become one of the world's largest economic powers within the next 20 years. However, this development is overshadowed by the country's lack in infrastructure investment, specifically education. Because of India's deeply inefficient & astonishingly unjust education system, the country has mainly poorly educated masses who are only sometimes touched by the prosperity that characterizes India's ascent in the last years. As the investigation shows, the very poor in India can only participate marginally & largely indirectly in the prosperity that information technology & related developments generate. Therefore, the process of economic advancement cannot be detached from the expansion of literacy, basic education & primary health care which are essential elements for bringing forth human capabilities & ensuring life quality. It is possible to conclude that India has presently an economy with great prosperity which is nonetheless bound to its extreme poverty.

2010S02370

Schuerkens, Ulrike (EHESS, Paris, France [e-mail: uschuerkens@gmail.com]), **Crisis, Migration, and Remittances in a Global Era,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper intends to look back at how remittances sent by international migrants worldwide have become important for development in the last 30 years. The global economic crisis has made migration & remittances an issue for many developing countries. The data for 2009 show that remittance flows to developing countries have been remarkably resilient, while debt flows collapsed & FDI declined by a third. Migrants seem willing to wait out the crisis as prospects at home are often even worse. The paper intends to give an overview of crisis, migration and remittances in different world regions in the global era based on data from the World Bank, the International Organization for Migration & the International Labor Organization.

2010S02371

Schuerkens, Ulrike M. M. (Ecole des Hautes Etudes en Sciences Sociales, Paris, France [e-mail: uschuerkens@gmail.com]), **Crises and Social Transformations: A Theoretical Overview and some Recent Empirical Data,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper will analyze the notions of crisis & conflict, & their importance for social transformations by focusing on theoretical aspects. The author wants to contribute to an understanding of the notion of crisis & to possible openings that a theory of social transformations can provide in the current situation. This analysis should then permit a more rational handling of future crises with an open becoming. The author suggests that the financial crisis had a systemic & global character & that economic, political, and cultural thinking was not prepared to act in a global space where elites were only familiar with notions linked to the national space. In a second part, the author will give a short overview of recent outcomes of the crisis in different socio-economic systems in major world regions.

Schulz, Jeremy Markham (University of California, Berkeley 94709 USA [e-mail: jmschulz@berkeley.edu]), **Zoning the Evening: Constructing the Evening Work-Life Boundary among French, Norwegian, and American Business Professionals,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper provides an opening towards a comparative sociology of collective temporal orders as they are manifested in the evening routines of French, Norwegian, & American elite business professionals. Drawing from a large body of interview data regarding the evening routines (between 5 PM & 9 PM) of comparable elite business professionals in Paris, Oslo, & San Francisco, the paper distinguishes three different configurations of interlocking temporal orders corresponding to the these three societal environments. In the two European cases, these early evening hours are collectively zoned or territorialized as either private time (Norway) or working time (France). In the French case, the elite business professional is apt to structure his or her evening routines in accordance with the work-first orientation of le cadre supérieur. The elite Parisian business professional feels compelled to work during the evening hours as a testament to his passion for his metier & dedication to his occupation and status. Quite different temporal conventions prevail in the Norwegian context. In this societal setting, the 5-9 PM hours are typically treated as private time inaccessible to employers or clients. The Norwegian business professional enjoys a widely diffused dispensation to follow the "norwegian" or "scandinavian" pattern & leave the office relatively early (usually before 5:00 PM) to make time for personal & family life. Norwegian employers tend to respect employees' desires to leave early in conformity with a generalized temporal convention applying throughout the Norwegian work world. In these two European societal environments, both elite professionals & their employers must contend with strong macrotemporal conventions applying to the early evening hours. The American elite business professional, however, works in an environment where his or her employer enjoys a free hand in deciding how much of the evening ought to be allocated work versus private life. For this reason, while many American professionals work late hours, others who work in "short hours" organizations find themselves able to leave relatively early in the evening. Thus, the American context can be distinguished on a basic level from the two European contexts. In the American context, society-wide macrotemporal norms dealing with the disposition of the evening hours are relatively weak. As a consequence, the Americans' evening routines reflect the influence of relatively strong & autonomous local influences more than widespread society-wide temporal conventions diffused across organizational and occupational niches.

Schulz, Markus S. (UIUC [e-mail: markus.s.schulz@gmail.com]), **Future Moves and the Trenches of Development,** *International Sociological Association, Gothenburg, Sweden,*

¶ Global development brought dazzling progress in many fields but instead of ending or alleviating, it is often rather re-shaping and exacerbating persistent inequalities while escalating environmental threats. This paper explores future moves to overcome this predicament. Combining empirical & theoretical analysis, it discusses current trends by comparing quantitative data on global and national levels & by drawing on recent advances in democratic theory, social movement research, the philosophy of recognition, and futures studies. The proposed transnational approach examines capital flows & elite mobility but also migration, mediation, and mobilization from the grassroots. The paper advocates a future-oriented perspective that does not stop at diagnoses of past presents but engages

with alternative imaginaries & projects of subaltern actors, emerging ranges of possible, probable, and preferable scenarios, & their preconditioning dynamics.

Schulze, Nicole (Fraunhofer Institute for Systems and Innovation Research, Karlsruhe, Germany, 76139 [tel: +49 (0)721 6809344; e-mail: nicole.schulze@isi.fraunhofer.de]), **Knowledge Transfer beyond Patents and Scientific Articles,** *International Sociological Association, Gothenburg, Sweden,*

¶ Science & scientific institutions got under pressure in the last decades. They are increasingly forced to do research efficiently, and the transfer of their results should generate economic or societal benefit. In the natural sciences & engineering there are established ways to measure technology & knowledge transfer, e.g. patent analysis as well as citation & publication analysis. But what can be said about transfer activities of the social sciences and humanities? Patent & publication analyses of these disciplines are much more difficult to conduct & imply severe deficiencies (Moed 2005). New approaches are needed to assess transfers beyond patents & bibliometric analysis. My paper presents results of an analysis using data collected by the German Council of Science & Humanities. These data were the basis for a recent large-scale research rating in Sociology & Chemistry examining the research output & the technology & knowledge transfer of universities & non-university research institutes. However, this study's report (Wissenschaftsrat 2008) mainly focused on publication output. The data dealing with transfer aspects were interpreted only cursorily because they were just available as text strings. Therefore I developed a codebook informed by the transfer literature considering a wide range of transfer types like reports and consulting activities. Coding the data enables me to use statistical methods & carry out more detailed analyses. The results show significant differences in the transfer performance and transfer approach of the two disciplines. Another observation is the allocation of different transfer types at various universities & the several disciplines.

Schutter, Sabina (German Youth Institute, Munich, Germany, 81541 [e-mail: schutter@dji.de]), **Early Education of Children - Tensions between Economization, Standardization and Inclusion,** *International Sociological Association, Gothenburg, Sweden,*

¶ The decrease of birth rates & the public debate about children - designing children as human resource, as future workers, sustaining the social insurance system and as caregivers for elder people - lead to increasing expectations in the education of children. This coincides with the PISA-results of the correlation of social class an success in education. Both phenomenons tend to focus on the early education of children to intervene in educational processes as soon as possible. Controlling instruments as there are several diaries of development, language knowledge tests & tests of other skills become part of the early education. Examples of these instruments & the discourse of early education will show that there are several informations included about the social status and the family. These informations could affect the social inequalities in education.

2010S02376

Schwarz, Christoph Heiner (Goethe-University Frankfurt a.M. [e-mail: schwarz.net@gmx.net]), **"I Have Never Seen My Village, but One Day I Will Return There." Adolescence and Intergenerational Transmission in a Palestinian Refugee Camp,** *International Sociological Association, Gothenburg, Sweden,*

¶ Palestinian society is one of the "youngest" societies worldwide, with over 65% of the population under the age of 25. These youths grow up under conditions of extreme political instability and permanent (civil) war. In the Westbank, it is especially the refugee camps that have seen some of the roughest confrontations in the ongoing conflict with Israel. When nowadays adolescents in these camps call themselves refugees & state, for example, that they have never seen their villages, & that one day the will return there, they identify with a political & militant struggle based on a narrative of "return" that has been transmitted from one generation to the other since 1948. My Ph.D. project explores the structure & dynamics of adolescence & political socialization in a Palestinian refugee camp. Doing group interviews with boys & girls between 15 & 18 years I pursued the question to what extent & under which conditions youths in this context are provided with a "potential space" (King 2002) to develop their life plans. Moreover, I focused on how adolescence is related to processes of intergenerational transmission of the refugee narrative & the political identifications implied therein.

Schwittek, Jessica & Bühler-Niederberger, Doris (University of Wuppertal, Gauss-Strasse 20 [tel: 0029 239 22 83; e-mail: buehler@uni-wuppertal.de]), **Growing up in Kyrgyzstan and Germany–Children's Issues,** *International Sociological Association, Gothenburg, Sweden,*

¶ A study project of the University of Wuppertal in cooperation with Aga Khan Foundation & Unicef aims at developing a typology of childhood in Kyrgyzstan, taking into account the great variety of situations families & children are facing in this central Asian society. To transform our implicit assumptions deriving from German childhood research & experience into explicit theoretical conceptions there's always constant comparison involved & data collection was extended to German Kindergartens & families as well as to Kyrgyz families living in transit between both societies (through migration or study- & work stipends). First results of fieldwork including participatory research with children as well as interviews with parents are pointing towards new dimensions influencing the quality of childhood. These appear to become evident especially in the direct comparison of two countries, as the specific meaning of certain indicators may content (beinhalten?) a high variation of ideas & therefore influence quality of childhood in very different ways. Dimensions in focus are: rooms & spaces made by & for children, meaning of nuclear and extended family, child's position within the family hierarchy, emotional vs. functional elements of intrafamilial relationships.

Schyns, Peggy (The Netherlands Institute for Social Research SCP, PO BOX 16164, 2500BD, The Hague [e-mail: p.schyns@scp.nl]), **Subjective Well-Being in Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the past decade, governments of European nations have seem to become aware of the importance of measuring well-being in broader terms than just economic progress. Although GDP is still one of the most widely used indicators to measure progress of nations, new sounds can be heard. The report of the Club of Rome, the Stiglitz report, & the OECD World Forum are just a few examples in which the necessity to develop alternative measures of the well-being of societies is being stressed. In this paper I first address two European initiatives at the governmental level over the past years to measure progress or well-being from a broader perspective. Next I will focus on subjective well-being indicators. An overview of recent European indicators on subjective well-being is given at the national level, in particular happiness, life satisfaction, and emotions. Third, variation in subjective well-being is explained looking at individual level characteristics in six countries. Personality characteristics, social networks, income & not being unemployed all play an important role in SWB evaluations. Data from the European Social Survey 2006 are used. I will finally discuss merits of using broader measures of well-being for policy makers.

Schyns, Peggy (The Netherlands Institute for Social Research SCP, PO BOX 16164, 2500BD, The Hague [e-mail: p.schyns@scp.nl]), **The Couchsurfing Network: Altruism Meets Budget-Travelling in an Era of Egoism and Materialism,** *International Sociological Association, Gothenburg, Sweden,*

¶ Living in the age of the fast & furious has led many to believe that our modern lifestyle has become more fluid, individualistic, "consumptionist" & self-centred than ever. If we want to follow some contemporary critical writers, postmodern people are less engaged with each other, only live in their own private bubble, think in terms of costs & benefits, & have withdrawn more and more from public & political life. This is one way of looking at daily reality. Another is to look at new initiatives where values such as trust & selflessness on the one hand, & consumption patterns such as budget travelling converge & make for new interesting social realities. One example of this phenomenon where citizens turn into helpful & trusting social beings, while travelling all over the world is CouchSurfing. This internet-based international community focuses on hospitality, & connects more than 1.5 million people in more than 200 countries in a shared mutual cultural understanding. Couch surfing is used as a case study to address issues such as social trust, bridging & bonding social capital, spillover effects to formal organisations, altruistic motives, & cultural understanding. Interviews with key figures of the network in the Netherlands were held.

2010S02380

Scodellaro, Claire & Pan Ké Shon, Jean-Louis (INED, Paris, France, 75020 [tel: +33 1 56 06 22 84; e-mail: claire.

scodellaro@ined.fr]), **Anorexia Nervosa as Excesses in Control,** *International Sociological Association, Gothenburg, Sweden,*

¶ Important inequalities in prevalence of anorexia nervosa are reported by sex, age & social class in the psychological literature. We study inequalities mainly by sex & age, in a young population, making the hypothesis that anorexia nervosa is the result of a double excess of control, by others & by oneself. The research is based on the quantitative analysis of data collected from 39,000 17-year-old people attending a compulsory civic day in France in 2008 & including a set of questions about symptoms related to anorexia from age 12. In our sample, 97% of the persons reporting such symptoms are women & significant inequalities are also observed according to parental social status. Different indicators suggest that anorexic women exert more control than others in their life, chiefly on their body but also in other socially valued areas, such as studies.

2010S02381

Scott, Bernard (Cranfield University, Shrivenham, Wiltshire, UK, SN6 7HL [tel: 01793 762303; e-mail: b.c.e.scott@cranfield.ac.uk]), **Education for Enlightenment,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper highlights the need for education that is truly enlightening, an education that provides reflexive awareness of what it is to be a human social actor, one that is empowering for self determination, one that makes clear the nature of ethical choices, in particular, the choice between, on the one hand, selfless service for the greater good or, on the other hand, the pursuit of short-term personal goals. The paper sets itself in the context of the many problems that are facing humankind globally in the 21st century, namely, unsustainable economic growth, unsustainable population growth, climate change & a wide range of other ecological disasters. The thesis developed is that education for enlightenment is a necessary part of any putative solutions for dealing with the global problems. The main arguments are drawn directly from concepts in cybernetics that are helpful in providing a rational account of what is education for enlightenment. Works cited include those of von Foerster, Pask, Luhmann & Ricouer Armed with a clearly articulated cybernetic framework for understanding human social actors & their choices of how to behave, it is possible to usefully draw out from existing spiritual and pedagogic traditions those aspects which are shared & are compatible with the cybernetic understanding. The traditions addressed include Confucianism, Christianity, & critical pedagogy. On the basis of these comparisons & considerations, it is possible to set out, in outline at least, the curriculum for education for enlightenment. The curriculum in itself is not new. What is innovative is the use of concepts from cybernetics to stand as foundations for that curriculum.

Scott, Wilbur, McCone, David & Sayegh, Lisa (Dept of Behavioral Sciences and Leadership, United States Air Force Academy, 2354 Fairchild Dr. 6K-105 USAF Academy, CO 80840 USA [tel: 719 333-6740; fax: 719 333-6711; e-mail: wilbur.scott@usafa.edu]), **Methodological Considerations in the Assessment of National Guard Soldiers: Combining Quantitative and Qualitative Approaches,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the summer of 2009, the authors received a grant to study readjustment & resilience among Army National Guard (ARNG) soldiers who have deployed to Afghanistan & Iraq. ARNGs have been referred to as "weekend" warriors since they hold civilian jobs, train for military duties once a month on weekends, & typically perform domestic missions (e.g., relief associated with hurricanes or floods). However, ARNG units lately have been attached to active-duty military units or deployed separately in support of them outside the United States. This scenario has created unique strains & stressors for ARNG soldiers & their families. The purpose of this paper is to explore the study's methodological features. We use a purposive sampling strategy to focus on sites likely to provide vivid illustrations of ARNG experiences & a triangulated design to play the strengths of a quantitative survey off the strengths of qualitative interviews. We describe these design features and, using preliminary findings, report on their utility in such studies.

Scrase, Timothy J (CAPSTRANS, University of Wollongong, Wollongong, NSW, 2522 [e-mail: tims@uow.edu.au]), **Neoliberal Markets and the Creation of the "Entrepreneurial Self": A Case Study of Artisans in India,** *International Sociological Association, Gothenburg, Sweden,*

¶ The globalization of economic production has impacted profoundly on artisans & craft workers in India. Numerous factories in China, for instance, are now mass producing various "Indian-style" handicrafts, fabrics & artifacts that were once the preserve of highly-skilled individuals from unique artisanal communities and castes. Moreover, the demand for certain Indian crafts is declining and hence many artisans are losing their traditional jobs and becoming displaced, unemployed & impoverished. Based on fieldwork conducted in New Delhi, this paper describes & analyzes the numerous problems encountered daily by artisans & documents their various survival strategies. During interviews, artisans identified problems ranging from corruption & labor exploitation, to the copying of designs & craft styles. Significantly, I argue that artisans in neoliberal, globalizing India are expected to become increasingly entrepreneurial. In this context, this paper addresses the notion of the re-definition of the self, a "market-defined self" where the marginalized individual hopes to survive in a world of ever increasing social competition & diminishing, realistic economic opportunities.

Scribano, Adrian, Cena, Rebeca & Peano, Alejandra (CEA-UE-UNC-CONICET, Av. General. Paz 154, 2do Piso (5000) Córdoba, Argentina [tel: 54-11-47725653; e-mail: adrianscribano@gmail.com]), **Policies of Bodies and Emotions: The Experiences of Agents Involved in Collective Actions,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ This paper is part of a larger research project that seeks to explain what were the social processes, under the current capitalist system context, which make possible the maintenance & expansion of the mechanisms that the system of extraction & depredation of energy required for their reproduction. During the nineties, was implemented in Argentina, a series of neoliberal policies established by the Washington Consensus, which set up a new structure in the State-Society relationship. This economic, social and political system collapsed in December 2001 & the policies of the bodies & emotions associated with it was transforming too. The modifications in the political economy of morality, which occurred from changes in material conditions of living and structures of the sensitivities, had a direct impact on the collective practices. This paper shows some of the changes that have occurred in mechanisms of social bearability & devices for the regulation of sensations that affecting the structure of the policies of bodies & emotions. From an analysis of interviews and focus group describes the experiences of agents who participate in collective actions in the city of Villa Maria & the changes in social sensibilities linked to them.

Sebastien, Lea (University of Brussels, Brussels, Belgium, 1050 [tel: 0032487667672; fax: 003226504312; e-mail: lsebasti@ulb.ac.be]), **Death of NIMBY. Awakening of Argumented Resistance. The Case of Opposition to a Landfill Project, Essonne, France,** *International Sociological Association, Gothenburg, Sweden,*

¶ Waste management is a very important component of sustainable development. Among techniques available to treat domestic waste, landfill is considered of very poor value. But at the beginning of this century, 60% of domestic waste is still landfilled. This paper will first review impacts of opening a new dumping site on a territory. In most cases, this yields to NIMBY type of reactions among the local communities, a systematic disapproval largely explained by ignorance & selfishness. Here is an example of an organized resistance to a project of landfill in the village of St-Escobille (Essonne, France). Because it does not fall into the NIMBY framework, this particular case brings interesting matters on the question. We show that this type of opposition, which we define as an argumented resistance, leads to the creation of social relations, of new type of knowledge, & of patrimonial values. Organizational aspects of the local resistance will be described in the second part of this paper, together with unsuspected reconfiguration of the social relations in the community.

Sébastien, Richard (Sociology Department, University of Montreal/University of Paris 1 [tel: +01 514-303-7520; e-mail: sebastien.richard.3@umontreal.ca]), **The Epistemological Dimension of the Nanoworld: A Critical Investigation into the Production of Knowledge in Nanotechnologies,** *International Sociological Association, Gothenburg, Sweden,*

¶ From the laboratory to the popularization publications, our perception of nanotechnologies is grounded by social mechanisms. Public debates & the so-called "social acceptability" of the Nanoworld undervalue the epis-

temological dimension of the R&D in nanotechnologies. Based on a set of fifteen interviews & a six month field work in two nanomaterial research groups in Montreal, and following the discourse analysis of several scientific popularization articles & public policies, this communication aims to demonstrate the underestimation of the mechanisms of legitimization between all the actors of knowledge in nanotechnologies (scientists, actors of vulgarization and public/private experts). Tough, we will argue that the epistemological dimension of nanotechnologies is grounded on a continuum between three components (absence of external reference, "thing knowledge" & an emphasized popularization), all tied by a legitimization relation. In the end, we suggest a critical reinvestment, for the public debate, of this epistemological dimension to help build future standards of nanotechnologies comprehension.

2010S02387

Sedini, Carla (University of Milano-Bicocca, via Bicocca degli Arcimboldi 8, 20126 Milano, Italia [tel: 3493633737; e-mail: c.sedini@campus.unimib.it]), **Beyond Creativity: Entrepreneurship and Every-day Life in Milan,** *International Sociological Association, Gothenburg, Sweden,*

¶ The passage to the so-called Information Society (Castells, 1989) was characterized by several changes in the processes of production, and in the goods produced, which have been mainly constituted by characteristics of intangibility & by high levels of symbolic content. Milan has been always considered a nodality for creative, design & fashion industries & also for sectors linked to those, such as advertising, public relations & finance. The arrival of the Internet, & a process of cultural commercialization created new jobs & new specializations, which were well integrated in the Milanese territory. Through the interviews conducted with several founders of enterprises which operate in creativity & knowledge dissemination sectors, it will be delineated the characteristics of these enterprises & the conditions which bring to their born. First of all, the controversial concept of "creativity" will be analyzed through the definitions which those entrepreneurs gave of it. On top of this, one of the main elements of my research was the relationship which the interviewees have with Milan. What are their needs, their critics & the positive elements which they can stress, not only as entrepreneurs but also as citizens?

Sedlakova, Renata & Vidovićova, Lucie (Department of Journalism, University of Palacky, Olomouc, Czech Republic, 771 47 [tel: +420 776699 725; e-mail: renata.sedlakova@upmedia.cz]), **Images of Older People and Ageing in the Czech Media,** *International Sociological Association, Gothenburg, Sweden,*

¶ Media are key agents of social construction of reality & they participate on the process of ascription of meaning. The image of old age drawn by media is in general evaluated as negative, stereotypical & unfavourable. Paper presents findings of the second wave of the study of news coverage of three Czech national TV-channels & main dailies. It compares results from the analysis of news issued in year 2004 & 2008. Key words were used for the sample selection; quantitative (content analysis) as well as qualitative techniques were used for the analysis. In the quantitative part we focused on topics of news & its framing. We found out that older people are underrepresented in the news services. We analysed the language of the news, labels used for signification of older people & main attributes connected to old age & ageing. Most of the presented news had features of infotainment & soft news. Abusing of chronological age as a self-explaining category was very common. Discussion about the function of media as a social exclusion tool, as agent contributing to discrimination of old people & possibilities to influence the journalist praxis is part of the paper.

Seedat Khan, Mariam (Sociology, University of Johannesburg, Johannesburg, South Africa [tel: 27115593466; fax: 27115593466; e-mail: mseedat@uj.ac.za]), **Domestic Workers in South Africa: No Sign of Hope,** *International Sociological Association, Gothenburg, Sweden,*

¶ Domestic workers in South Africa continue to remain the poorest of the poor black African women. Despite legislation that has been promulgated to effect change little evidence is visible in the sector. They have not witnessed the full benefits of a just and democratic society. Education remains a challenge & does not provide the necessary resources that are required for completion. They continue to turn to domestic work as a means of survival. This paper explores the experiences & challenges that ten black African domestic workers face in a post apartheid South Africa.

2010S02390

Seedat Khan, Mariam, Naidoo, Kammilla & Smit, Ria (Sociology, University of Johannesburg, Johannesburg, South Africa [tel: 27115593466; fax: 27115593466; e-mail: mseedat@uj.ac.za]), **Subjective Experiences of Working Mothers: A Case of Academics Balancing Work and Family,** *International Sociological Association, Gothenburg, Sweden,*

¶ The face of academia has undergone dramatic changes in the last decade both locally & globally. The freedom that academics once had to read, think, & create new knowledge is a distant memory. With the commercialisation of academic institutions we have moved from the once enjoyable role of academics & researchers who knew the names of their students to the role of academics & administrators with hundreds of faceless students. Universities are short sighted in their cutbacks of administration staff. They force academics to turn into administrators leaving them with little or no time to engage in social scientific research. In addition to this the demands & competitive nature of academia makes it increasingly difficult to balance family & work. The poor salaries that academics earn play a very critical role in this scenario. This paper is based on qualitative interviews conducted with thirty academics at the universities of Johannesburg, Witwatersrand, and Natal. We look at the coping strategies & social networks that academics create, draw on & form, in order to perform & deliver both as academics & as parents. This paper also brings to the fore critical issues around gender division within the household where there is at least one parent that is an academic.

2010S02391

Seferiades, Seraphim & Kotronaki, Loukia (Panteion University of Social and Political Science, Athens 17671, Greece [tel: 00302109201827; e-mail: ssefer@panteion.gr]), **Sacredness, Emotions and other Dynamic Dimensions in Militant Protest: Insurrectionary Collective Action in Greece (December 2008),** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper focuses on a conspicuously understudied form of militant protest: Insurrectionary Collective Action (ICA). Mustering evidence from the convulsive events that shook Greece in the aftermath of the unprovoked shooting of teenager Alexandros Grigoropoulos by riotous police in December 2008, we seek to conceptualize, interpret & explicate the ensuing social eruption employing (and seeking to further refine) analytical tools drawn from the literature of Contentious Politics. Explosions such as the Greek "December days" are usually portrayed as senseless violence, mere rioting. "riots", however, are nowhere defined, which precludes serious analysis & explanation. Starting off our analysis from this conceptual core (What constitutes & What causes rioting?) we claim that the Greek events were something profoundly more intense & politically consequential. Involving far more than mere violence, the novel form we conceptualize, i.e. ICA, was characterized by broad diffusion processes, whereby riotous activity originally undertaken in the centre of Athens snowballed to engulf the whole of the country. In it, participated a large number of underprivileged strata - school students, second-generation migrants, precariously employed etc - whilst its political message was framed in utterly uncompromising ways, making a shambles of official leftist rhetoric. Calling attention to key structural factors helping explain this diffusion, we lay special emphasis on three neglected dimensions of contentious politics, the emotional, the spatial & the temporal. We also enquire whether or not December 2008 has the potential to transform the nature of Greek contentious politics as a whole.

Seguin, Thomas (University Paul Valéry Montpellier 3/Departement Sociology, Route de Mende, 34199 Montpellier Cedex 5, France [tel: 00 33 (0)6 72 77 36 33; e-mail: seguinULt@yahoo.fr]), **Social Signs as Effective Psychological Tools: Towards a Comprehensive Approach of Symbols,** *International Sociological Association, Gothenburg, Sweden,*

¶ Few studies deal with the influence of signs in a social context. The latter nonetheless have considerable influence both on the ecology of mind & the ecology of society. Postmodern theory brings interesting reflections on the importance of ideas in themselves as a fundamental part of the functioning of society. The foundations of our knowledge & the foundations of our acting are interlinked. Metaphysics, politics & life are constitutive dimensions of what we mean by social experience. Symbols are alive in their own texture & in their interaction with the formation of individuals and society. Signs are mental (semantics) & physical (semiotics) entities. Can we trace a cognitive & physical mapping of the forces that shape social mentalities, social bodies? These questions lead to many others con-

cerning determinism (difference, self-construction, identity) or even democracy (freedom, globalization & hermeneutics).

Segura Trejo, Fernando (Ecole des Hautes Etudes en Sciences Sociales de Paris, 105, Bd Raspail. Pairs, France, 75014 [tel: 0033637226720; fax: 0033153635101; e-mail: fernandoseguraste@gmail.com]), **The Experience of the Homeless World Cup. Social Inclusion through Football?,** *International Sociological Association, Gothenburg, Sweden,*

¶ We have seen a great number of social programs in the world using football as a social tool in this new century. Some of the projects are encouraged by international organizations such as FIFA, UEFA or even the UN, others are developed by civil organizations or local NGO's. Based on the experience of an international competition such as the Homeless World Cup, gathering a great amount of local NGO's using football as a social tool to help homeless people, political refugees, former convicts & exdrogue consumers we have explored the benefits, the impacts & the limits of this "façade" of football. The principal statement of the research has been that although football can bring together different effects, various realities & imaginary construction these kinds of projects allow individuals to follow an associative carrier. We analyze then the forms of those carriers & the effects they produce on young people. After two years of field participatory field work, formal interviews & informal conversations we can state that football, though as a social tool & aimed at further objectives helps people to quit isolation, build social networks and enhance personal change. It also provides motivation and meaning to footballers. However, social work must accompany in order unexpected consequences such as failures.

Seim, Sissel (Faculty of Social Sciences, Oslo University College, St. Olavs plass 4, 0130 Oslo, Norway [tel: +47 22 45 35 13; fax: +47 22 45 36 00; e-mail: sissel.seim@sam.hio.no]), **The Challenge of Involving Children and Youths as Participants in Research. Participatory Action Research in Researching Children's Participation in Child Care,** *International Sociological Association, Gothenburg, Sweden,* (NOR)

¶ This paper is based on the ongoing project Professional Practice and the Participation of Children, conducted at Oslo University College, in cooperation with two child protection centres in Oslo. Participatory action research (PAR) is the chosen methodological approach for researching children's participation; & both child protection workers, children & their parents should ideally take part in the research process. The subject of this paper is to discuss how children & youths can be involved as co-researchers. Dialogue-based participation groups aimed at involving children and youths in the research process, provide the empirical basis for the discussion. For ethical reasons group meetings are arranged through the child protection centres, based on consent from both children and their parents. Four group meetings have been arranged so far, but the meetings with children have given valuable input in the process. Our preliminary analysis concludes that involving children in the research process has presented some unexpected challenges; the child protection workers are reluctant to involve children in research, & there is still great need to investigate models for involving children & youths in the research process.

Seiz, Marta (Institute of Economics, Geography and Demography. CSIC, Madrid, Spain [tel: +34916022752; e-mail: marta.seiz@cchs.csic.es]), **Values or Necessity? An Analysis of the Variables Guiding Post-Birth Employment Choices in Spain and Sweden in Relation to the Institutional Context,** *International Sociological Association, Gothenburg, Sweden,*

¶ The labour market behaviour of women following childbirth has been the object of intense academic study over the past decades. Increasing attention has been devoted to the existing heterogeneity among women regarding their labour supply decisions once they become mothers. Most studies have placed their focus either on aggregate cross-national trends or on individual-level variation without considering the linkages that may exist between macro- and micro-level factors. This paper aims to make a contribution in this respect by examining whether the welfare state-related structural context influences the type of variables determining women's choices. More specifically, it assesses the degree to which Spanish and Swedish mothers differ on their being guided by situational and value-related aspects, respectively, when deciding among different employment strategies after the birth of their first child. For this purpose, a comparative micro-level logistic regression analysis is performed based on the latest Spanish Family and Fertility Survey & the Swedish Young Adult Panel Study. The findings suggest that a structural context generally favourable to the reconciliation of work & family life, as the Swedish one, does not necessarily translate into a greater weight of attitudinal variables in the decision process. The employment choices of recent mothers in both of the countries studied seem ultimately guided by situational & material considerations at the individual-level; in contrast to what preference theory would envisage.

Sekine, Kae, Hisano, Shuji & Boutonnet, Jean-Pierre (University of Kyoto, Grad. School of Economics, Yoshida-Honmachi, Sakyo-ku, Kyoto, Japan [tel: +81 75 723 6773; fax: +81 75 723 6773; e-mail: kaesekine@hotmail.co.jp]), **Is Transnational Corporations' Contribution to the Sustainable Development of Local Agro-Food Systems Possible?: A Case Study of Dole Food Company in Japan and France,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recently remodeled transnational corporations' investment in agro-food sectors has brought about profound changes in the context of global trend of investment in "green" businesses as a refraction to the citizens' social movements for the sustainable development. This trend questions whether transnational corporations' contribution to the sustainable development of local agro-food system is possible & in what strategies. Dole Food Company, one of the biggest transnational agribusinesses in the fruits & vegetables sector, has launched its fruit & vegetables business, integrating from production to marketing both in Japan and France. This company adopts the strategies of promoting its contributionin "food safety", "human health", "environmentally friendly" & sometimes "local agro-food system". In each country they operate several private standards & certifications. Are these goals feasible on a private basis in the competition of markets economy? Our purpose in this paper is to depict (1) Dole Food Company's fruits & vegetables businesses with their distinct strategies in Japan & France, (2) the consequences & challenges of its businesses in each country, (3) the alternative strategies operated by local stakeholders for the sustainable development of local agro-food systems & (4) to discuss about the limit of the "green" strategies of transnational corporations & the significance of the government support at the state level. To address these objectives, we analyse statistics & survey some relevant studies to grasp & identify with the institutional, historical, political & societal differences of agro-food system in each country. Also, the impacts of the activities of these transnational corporations on rural areas are examined based on a series of detailed qualitative surveyss conducted from 2003 to 2009, in which we interviewed key actors such as : Dole Japan, Dole France, their local co-operators & partners, their branches, agricultural cooperatives, contractual farmers, agricultural wage workers & local governments in both countries, in the aim of comparing the similarities & differences in the strategies between Dole Japan & Dole France. We also look at some alternative approaches of Dole's competitors, who rely on the geographical indications supported by the States & local governments based on our literature as well as field surveys. Firstly, we illustrate the process of Dole's penetration into the Japanese & French agro-food markets. In Japan, since the late 1990s, Dole Japan has established three joint corporations with Japanese firms as a means to get involved in the fresh food distribution sector. At the same time they started contract farming scheme by organising individual farmers. Later in 2000, they launched into the management of eight franchise farms to produce broccolis for the domestic (high quality) market. Dole Japan has extended the range of agricultural production & gained a substantial share of the domestic market of broccoli under the brand of its own: high quality, but without any third-party certification. In France, on the other hand, Dole is largely engaged in the import of exotic fruits for the domestic market. Recently they've started exporting French apples to Northern and Eastern European countries & Middle East. They source apples from traders & big producers in Southern France mainly relying on spot trade. [Abstract shortened by ProQuest.]

Sekula, Paulina (Institute of Sociology Jagiellonian University, Krakow, Poland, 31-044 [tel: +48 602383490; e-mail: paulina.sekula@uj.edu.pl]), **Unconventional Public Participation in Post-Communist Poland: Its Determinants and Blockades,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper addresses a question of the role of unconventional public participation in contemporary Poland, the country where mass demonstrations & strikes a followed by negotiations between government & opposition a brought about the regime change, which served as a source of inspiration for other European communist societies. Have Poles experienced the post-

honeymoon phase? Have there been changes in the scope of support for and actual participation in the forms of unconventional political behaviour for two decades of democracy in Poland? What are the dominant forms of unconventional participation? What are the main factors that enhance & hinder Poles' involvement in direct action? To answer these question the results of a number of international surveys (World Values Survey, International Social Survey Programme) & national studies on civic engagement in Poland is analysed. The findings suggest that: 1. level of support for & engagement in protest activity has been lower than in most democracies, both established & post-communist, 2.protest intensity has been lower than in late 1980-ties & early 990-ties, 3. there can be identified waves of social protest that follow economic reforms, 4. there dominate concrete economic demands, 4. there are niches of issue-based (including environment & gender) protest behaviour.

Selikow, Terry-Ann ([e-mail: Terry-Ann.Selikow@wits.ac.za]), **Of Structure and Agency and Moments In-between: the complexity of HIV/AIDS amongst young people in South Africa,** *International Sociological Association, Gothenburg, Sweden,*

¶ HIV/AIDS in South Africa has reached endemic proportions with young people bearing the brunt of the epidemic. Transmission of HIV is primarily by heterosexual intercourse, therefore it is imperative to explore sexual relationships of young people; the focus of this paper. At two extremes of the continuum, research has focused on the structures that determine women's vulnerability to HIV/AIDS thus positioning women as passive victims in the HIV/AIDS epidemic, or, as women having unbridled agency, thus portraying women as free actors who are able to resist social forces. Moreover, most South African research has depicted men as existing within structures that produce dangerous hegemonic masculinities that encourage having multiple partners & coercing women into unprotected sex, thus ignoring men's emotions & capacity for love, trust and intimacy & underplaying how some men exert agency in challenging hegemonic masculinities. Thus HIV prevalence has largely been explored within a limiting theoretical framework that fails to capture the nuances & intricacies of sexuality. Moving outside of the dualistic structure / agency debate, my research draws on a critical realist approach & explores the intricate interplay of structure & agency: the moments-in-between. By theorising moments-in-between, I am able to look beyond the bifurcated structure / agency debate to begin to develop a space where intimacy, pleasure, & love reside. To access these moments-in-between I engaged in conversations with 70 youth in an urban setting in South Africa. As advocated by critical theory's emancipatory approach, I explore how youth discourse have implications for HIV prevention programmes, , Further, & also inline with a critical realist approach, I recognise the role of self-reflexivity as an applied practice, & I offer commentary on how my own discourses placed limitations on my conversations with youth & the analysis thereof.

Sellke, Piet, Amlot, Richard, Brooke, Rogers, Rubin, James, Pearce, Julia & Mowbray, Fiona (University of Stuttgart, Institute for Social Sciences, Department of Environmental Sociology, Stuttgart, Germany, 70174 [e-mail: piet.sellke@sowi.uni-stuttgart.de]), **Public Information Responses after Terrorist Events,** *International Sociological Association, Gothenburg, Sweden,*

¶ The threat western societies face through terrorist attacks became much more apparent than ever before through the attacks of 9/11 (New York & Washington 2001), 11-M (Madrid, March 11, 2004) and 7/7 (London, July 7, 2005). The new quality of those attacks comprised the deliberate attempt to cause as many fatalities as possible & to disrupt economic & social life. Not least the ruthlessness & sophistication of the attacks carried out made the use of radiological or biological substances for attacks conceivable, if not likely. How the public reacts to biological or radiological terrorism will help to determine how extensive the attack's medical, economic & social impacts are. Yet our understanding of what the public is likely to do in case of a radiological and/or biological attack is limited. Will they spontaneously evacuate affected areas? Are they willing to attend mass treatment centers? Will unaffected people demand treatment and monitoring? Will people avoid affected areas even after clean-up operations have been completed? As yet, we do not know. While emergency plans & simulations dealing with these scenarios assume a relatively compliant public with easily understood behaviors, evidence from previous incidents suggests that the reality may be different. As such, a first step to preparing better plans to protect the public is to identify actions they intend to take in the event of one of these scenarios occurring, & to assess how prevalent such intentions are in society. In this presentation results from a two-year research project will be presented, addressing the questions outlined above & comparing them between Germany & the United Kingdom. In a first set of 20 focus groups (10 in Germany, 10 in UK) participants were confronted with a fictive news broadcast either on a terrorist attack with smallpox or an attack with a radiological embedded device (RED). Results of the focus groups were being used to design representative surveys for Germany & the UK. In a second set of 40 focus groups (20 per country), the news broadcast stimulus has been altered according to the information needs & behavioral responses articulated in the initial focus groups & according to the results of the surveys. The presentation will emphasize the question of whether behavioral intentions of the public can be influenced by tailored emergency communication & the satisfaction of public's information needs and what possible differences in the response to terrorist attacks exist between Germany & the United Kingdom.

Semenova, Anna (Institute of Sociology of RAS, Moscow, Russia, 117218 [tel: 7-495-719-09-71; fax: 7-495-719-07-40; e-mail: mansurov@isras.ru]), **The Transformation of the Security Agencies Image in the Acts of Terrorism Coverage (based on the Russian press),** *International Sociological Association, Gothenburg, Sweden,*

¶ The research purported to demonstrate how the image of the security agencies is transformed, & this was supposed to be done based on the press releases, covering acts of terrorism. In accordance with the goals of the research, the published announcements in Russian press were chosen as the empiric subject matter. The selected articles were dedicated to the interpretation of the two major acts of terrorism on the territory of the Russian Federation: the Dubrovka Culture Center act of terrorism of 23rd October of 2002 (hereinafter referred to as N/O), & the Beslan school 1 act of terrorism of the September 1st of 2004. The hypothesis of the given work is based upon the idea that the media concerns about certain quality of its audience appear to be one of the basic mechanisms of self-restrictions while covering the act of terrorism. The image of the security agencies is disclosed through basic informational blocks to be traced in the press reaction to the act of terrorism, such as search of motives, recommendations & solutions to the authorities & the society, suggested by the journalists, events forecasts; images of terrorists, hostages, their relatives, of other groups of victims; the way the world community reacts to the security agencies actions.

Semprebon, Michela (Università degli Studi di Milano Bicocca, Via Bicocca degli Arcimboldi 8, 20126 Milano [tel: 0039 347 987 0015; e-mail: m.semprebon@campus.unimib.it]), **The Emergence of Immigrants' Voice in the Genesis of a Contested Space. Two Cases of Local Conflicts in Northern Italy,** *International Sociological Association, Gothenburg, Sweden,*

¶ While it has been traditionally a country of e-migration, Italy has recently experienced increasing waves of im-migration. In turn, Italian cities have been confronted with a growing heterogeneity in the use & appropriation of urban space. This clashes with the widespread introduction of safety policies which try & preserve an established urban order. Against this background, the paper proposes to analyse the conflict that has emerged around the regulation of phone centers. A pragmatic approach (Boltanski and Thévenot 1991) will be adopted to grasp contentious dynamics, with emphasis on phone center-owners, which are mostly of immigrant origins. Departing from prevailing interpretations on immigrants' collective action, it will be demonstrated that there is more to it than political opportunity structures. Actors will be observed "in action", in various forms of engagements, including those reaching beyond institutional scènes. The investigation will be lead in a comparative light, with focus on two northern Italian cities: Verona & Modena. The fundamental question will be addressed of how different uses of an urban space have been integrated, thus leading to a transformation of the urban order, alongside processes of inclusion, exclusion & resistance. This will also show that conflicts can promote forms of institutional innovation.

Semyonov, Moshe (Sociology and antropology, Tel-Aviv University, Tel-Aviv, Israel, 69978 [tel: +972 3 6446589; e-mail: moshes@post.tau.ac.il]), **Modes and Research Traditions of Israeli Mainstream Sociology,** *International Sociological Association, Gothenburg, Sweden,*

¶ Israeli mainstream sociologists have long been publishing research findings not only in Israeli journals but mostly in reputable international journals. They consider themselves as an integral part of the international sci-

entific community. They often adopt general (mostly Western) theoretical models & orientations. Likewise, they hold dialogues & debates more frequently with sociologists in other countries than with Israeli sociologists. Review of several leading sociological journals reveals that only half of the articles published by Israeli sociologists focus on Israeli society. The second half deals with other societies or is conducted within a cross-national comparative framework. The body of research produced by Israeli sociologists can be divided into four major research traditions: studies unique to Israeli society that do not attempt to generalize from the findings to other social contexts; studies that adopt a theoretical typology to Israeli data without considering the special social context of Israeli society; studies that apply a theoretical model to data obtained from Israeli society; studies that examine a model while casting it within the social and political economic context of Israel, thus, providing a comparative perspective. Illustrations for the various research traditions are presented & discussed.

2010S02403

Sequera, Jorge (Universidad Complutense Madrid, Madrid, Spain [e-mail: jorgesekera@hotmail.com]), **Welfare State, Housing Rights and the Right to the City,** *International Sociological Association, Gothenburg, Sweden,*

¶ Checking again in economic system crisis, the political power does not seek alternatives to the hegemonic model but replicates the problem through internal stabilizing economic & political, to help regenerate economic growth & avoid recessions. Thus, the welfare state is one of the mechanisms for crisis management (regulating the processes of socialization & capital accumulation), trying to ensure the survival of these exchanges privately controlled. We see how the consolidation or improvement of social rights, civil or political rights are directly related to the management of cyclical economic-political crisis in contemporary capitalism. And one example is found in the current provision by public authorities to improve the welfare of the population through the implementation of social policies related to housing, just at a time of construction recession in the Spain, actually the main engine this national economy. The welfare devices that the State manages, trying to stabilize the consequences of these events (eg, through housing subsidies as income of emancipation of youth). Beyond these improvements, partials & questionable, it seems clear that the possibility that all citizens get to have a decent housing accommodation and, is opposed to the current reality, if we consider the paradox that Harvey tells us: capital accumulation is sustained on the base of the shortage of resources.

Serafim, Lizandra, Nakano, Kazuo, Cobra, Patrícia & Uzzo, Karina (University of Campinas (Unicamp), Campinas-SP, Brazil [tel: +55 11 26154168; e-mail: lizaserafim@gmail.com]), **Social Participation in the Improvement of Housing Conditions in Diadema: A Multi-Level Approach,** *International Sociological Association, Gothenburg, Sweden,*

¶ Diadema is a municipality with a small overpopulated urban area located in the São Paulo metropolitan region where urban development fell behind the dramatic population increase stimulated by industrialization, generating housing & infrastructure deficits, & consequently forcing people to live in sub-human conditions in the shantytowns that mushroomed around the industrial parks. The region became a melting pot for social movements in the communities & in the trades unions. Since the return to democracy in 1982, the municipality has been governed by left-wing parties with intensive citizen participation in policy elaboration and decisions, which gave birth to a innovative housing policy, territorial planning & management & a participative governance structure in the municipality. This research examines the municipal housing policy which became a model for national-level policies with the election of the same left-wing party for presidency, in 2003. It highlights, from the improvement living condition point of view, the importance of the commitment of government & political parties in opening citizen participation & involving considerable articulation with social movements & the role played by different community activists from the church & trade unions as a central catalyst condition to build democratic governance & innovation in policies.

Serajzadeh, Seyed Hossein & Roozkhosh, Mohamad (Tarbiat Moallem University, No.49 Mofateh Ave. Tehran, Iran, 15719-14911 [tel: 0098 21 88062608; fax: 0098 21 88062608; e-mail: serajsh@yahoo.com]), **The Development of Iranian Sociology,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since its introduction as an academic discipline nearly half a century ago, Iranian sociology has created much controversy. Some have approached it with skepticism, considering it to be yet another apparatus of Western cultural imperialism. Some, however, have pursued it with hope & enthusiasm, considering it to be the science of progress & development of their society. Despite these controversies, Iranian sociology has eventually strengthened its basis, & its terms & concepts are now widely used by politicians, administrators, journalists & even the everyday people. The Iranian Sociological Association, founded nearly 20 years ago, has been one of the well-established academic associations, which has been able to attract many sociologists and social scientists from across the country. In spite of its rapid growth & also its general respected position within the Iranian society, Iranian sociology has faced severe challenges & has become the subject of harsh criticism from both internal and external critiques. This paper makes an attempt to introduce the development of Iranian sociology & the Iranian Sociological Association & intends to point out some of these critiques and challenges. It will be argued that these challenges & debates are themselves an indication of Iranian sociology's maturity, self-consciousness & self-confidence.

Serapioni, Mauro (Centre for Social Studies, University of Coimbra, Colégio de S. Jerónimo [tel: +351 239855570; fax: +351 239855589; e-mail: mauroserapioni@ces.uc.pt]), **The State of Art of Citizen Participation in Health Care System,** *International Sociological Association, Gothenburg, Sweden,*

¶ Issues of public involvement & governance have assumed a great relevance within western democracies. Public participation is configured as an instance of reconstruction of social action, autonomous in relation to both the bureaucratic logic of the state and to the mercantilist logic of the economic system. This debate, very intense among social scientists since the eighties, is very alive today in the context of the health sector. Several studies have been highlighting a strong tension between the technicism of medicine & bureaucratic organization of the health system, on one side, & the communication model of the life word, on the other side. In fact, one of the central issues of health care reforms of the last 20 years has focused on the valorization of the citizens' point of view. Partnership, participation & empowerment are some of the most appealing key words in the texts of reform in many western countries. However, experience in this field shows that despite some good intentions & appreciable efforts, public involvement is unlikely to be fully implemented. The paper begin with brief sketches of new sociological approaches aimed at linking social systems with the real world - micro with macro dimensions; structure with action. Next, the results of a cross national study concerning Italy, Great Britain & Brazil are synthetically reported. Then, the actual state of citizens' participation in western health systems is presented, as result of a literature review, highlighting both new strategies of patient involvement and critical issues & constraints. In closing, some reflection on the complexity of the relation between the health care system and patient & user associations are presented for discussion.

Sergiyenko, Aliye M. (Siberian Branch of Russian Academy of Sciences, Institute of Economics and Industrial Engineering, Novosibirsk, Russian Federation, 656031 [tel: +7 3852 247339; fax: +7 3852 366395; e-mail: aliye@list.ru]), **Social Position of Rural Inhabitants and Mechanisms of Its Formation in the Crisis Conditions and Before in Russia,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper presents findings of dynamics in countrymen social position in 2000s & social mechanisms of its formation in Russia. Special attention is paid to processes in income & employment spheres, access to social services, demographic reproduction, peculiarities of nation state & local social policies towards rural areas. The findings based on quota sample inquiries of rural inhabitants (N=1011, 2008; N=1100, 2002) & several expert questionings. Profound changes in countrymen social position for last two decades has showed in concentration of poverty & unemployment, social services access worsening, rights violations in income & labor spheres, alcoholism & drug addiction spreading, neediness of elementary public utilities, intensive migration of young people from rural areas. Since the middle of 2000s some positive trends in countrymen welfare standards, education & public health have appeared. Ineffective using of social policy technologies and imperfection of government bodies interactions with business structures & public organizations, keeping of leading role of social networks in social maintenance of countrymen, lack of effective technologies for adaptation to global economic crisis are revealed. Main social mechanisms of countrymen social position formation (social policy, peasants economic behavior & influence of business & public organizations) are described in the paper.

Serradell, Olga, Carmona, Roser, Lopez-Nistal, Monica & Vidu, Ana (Autonomous University of Barcelona [tel: +34935812406; e-mail: Olga.Serradell@uab.cat]), **Romaní Women Movement: The Driving Force of Romaní Culture,** *International Sociological Association, Gothenburg, Sweden,*

¶ Romaní women have passed from not having any organization of their own to being organized in almost any remote region in less than twenty years. The current Romaní women movement represents an example of a contemporary social movement. In his paper we will present an analysis of this movement's principles & activities, not only for the inclusion of Romaní women, but also as a driving force for their community. Romaní women are considered one of the pillars for the Romaní culture & their organizations are running many processes of change in their neighborhoods, with their families & their children's schools. As one of the main agents for the transmission of the culture, Romaní women have always functioned between the past & the future, at the crossroads of traditions & modernity. Romà organizations of women like Drom Kotar Mestipen are opening up many spaces for dialogue & negotiation about their own cultural community, women & the society in general. Thus, they are creating new understandings of their identity, changing gender and family relations throughout the introduction of feminist ideas. Furthermore, they are also making their own decisions to better face current uncertainties in a globalized world & developing strategies to generate new opportunities, in order to achieve a fully participation of Romà in society. In the last decades a network of associations has flourished throughout Europe leading transformative actions, originated in the individual lives of Romaní women & also in their social contexts. In order to analyze this contemporary social movement in the multicultural societies, we will present their claims particularly in terms of opening up spaces of participation in the educational domain for themselves as well as for their community.

2010S02409

Serrano, Maria Manuel & Neto, Paulo (University of Évora - Department of Sociology, Largo dos Colegiais, 2. 7000-803 Évora. Portugal [tel: +351 266 740 805; e-mail: mariaserrano@uevora.pt]), **The Innovation Public Policies and the Companies' Adoption Of Innovative Processes - A New Methodological Approach for Evaluation,** *International Sociological Association, Gothenburg, Sweden,*

¶ Today innovation is present in the discourse of politicians and business leaders. They see innovation as a positive value & as a solution to solve social problems & company's competitiveness, so organizations are encouraged to adopt innovative practices through incentives & innovation policies. Several economic and sociological studies have shown that Portuguese companies adopt more easily technological innovations (with short-term effects) then organizational & social innovations. In this sense, we will consider innovation public policies effects at Portuguese companies and how they take available opportunities for innovation. The aim is to know if the concept of innovation spread by these policies is multidimensional (eg social, economic & technological) or restricted. We propose to study the factors (internal & external) that affect innovation processes in enterprises through case studies methodology. This research strategy will show us the processes of innovation from within the organizations & analyze the socio-economic context in which organizations operate.

2010S02410

Serrano-Velarde, Kathia (Heidelberg University, Dept of Sociology, Bergheimer Str 58, 69117 Heidelberg [tel: +49 6221 5411976; fax: +49 6221 5411999; e-mail: kathia.serrano@soziologie.uni-heidelberg.de]), **"Investing into European Higher Education" The Discursive Construction of Organisational Hybridity,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this contribution is to describe & discuss the increasing hybridization of European universities. Indeed, national policies grant universities an increasing share of autonomy, thus leaving them the choice of organizing themselves. This leads, in the absence of sufficient state funding, to the search for 1) untapped funds & 2) organising principles that allow for an efficient use of resources. Consequently, European universities reveal a growing mix of "public" & "private" attributes. The paper addresses the notion of hybridity from a discursive point of view by investigating the notion of educational "investments" in EU policy talk. Since the launch of the Lisbon Agenda in 2000, EU policies became increasingly explicit with regard to the financial sustainability of universities. The political ambition to foster private investment into higher education leads to the proliferation of reports & studies regarding return on investment strategies, scientific philanthropy or intellectual property rights. Yet, framing universities' funding as "investment" changes the (discursive) social order they are embedded in & mirrors the complexity/hybridity of constraints/expectations, universities have to cope with. The study is based on a discourse analysis of EU policy documents & a series of interviews with actors involved in EU policy making.

2010S02411

Sevänen, Erkki Tapio (Department of Cultural Research, University of Eastern Finland, PL 111, 80101 Joensuu, Finland [tel: +358-13-2514354; e-mail: erkki.sevanen@uef.fi]), **Does Contemporary Constructivist Epistemology Break the Connection between Knowledge and Societal Praxis?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Niklas Luhmann's constructivism warns us against the intellectual hybris that societal movements, social planning & totalitarian ideologies might practise in society. Luhmann also wanted to impose limits on social criticism, Enlightenment thinking & on social movements that dream about the moral-practical perfection of society. His constructivism is, however, vulnerable to critique. Sociology is epistemically not as closed with regard to societal-cultural reality as Luhmann presumed. Social agents are not passive marionettes; agents form beliefs, interpretations and valuations concerning societal-cultural, & in their action agents apply those beliefs, interpretations & valuations & transform them into reality. As Ian Hacking points out in his own version of constructivism, through this societal-cultural reality is dependent on agents' ways of giving meanings to that reality. Luhmann ignores the level of agents. Hence, he could not see that agents' interpretative acts are a constitutive factor in the structure of societal-cultural reality, & partly for this reason, agents have genuine knowledge of society. Although Luhmann denied the possibility of genuine knowledge of objective reality, he thought that, within certain limits, theoretical representations of society can be estimated by means of rational epistemic criteria; therefore the social movements which strive for emancipation are able to present epistemic grounds for their views of society. The connection between knowledge & societal praxis is, however, stronger, because agents are also able to produce societal-cultural reality. Unfortunately, this dimension is missing from the Luhmannian constructivism.

2010S02412

Sever, Brion, Ranjan, Datta, K & Jebunnessa, Chapola (Monmouth University, West Long Branch, New Jersey, USA [tel: 001-647-70-2042; e-mail: rda027@gmail.com]), **Immigration, Immigrants, and Criminal Justice System: A Comparative Study between Norway and USA,** *International Sociological Association, Gothenburg, Sweden,*

¶ Immigration has become an increasingly significant topic within the field of criminology over the past few decades in both theory and research. Most studies on immigration have focused on its impact on crime, police, & the criminal justice system as a whole. There has been minimal focus, however, on the assimilation of immigrant populations into their new country or origin. The present study compares the assimilation of 441 immigrants into two countries, the United States & Norway. Specifically, this study compares the understanding that Bangladesh immigrants have obtained about the criminal justice in both these countries. Factors influencing the differences in the level of understanding of the criminal justice system by the Bangladesh immigrants will be discussed.

Seveso Zanin, Emilio J., D'Amico, Marcelo & Vergara Mattar, Gabriela (CONICET/CEA-UE, General Paz Avenue, 154, 2 floor [tel: 54-351-4341124; e-mail: emilioseveso@hotmail.com]), **Cuerpos y emociones en los conflictos pos crisis 2001: Una mirada interclasista del caso cordobés** (Bodies and Emotions in the Later Conflict of the 2001 Crisis. An Interclass Look to the Case in the City of Córdoba), *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ The 2001 crisis in Argentina can be interpreted as a breaking point, as continuity, or as a logic of rupture-continuity of certain factors, processes & components of the capitalist structure in the context of neo-colonial dependency. In this paper we propose to examine these multiple logics in terms of policies of bodies and control of emotions, taking into account the inter-class differences. We will analyze a set of individual & group interviews realised in Cordoba in 2008, to actors who present degrees of involvement with social organizations or collective actions, with emphasis on the social places of their bodies, experiences & sensitivity that they expressed not only in relation to the 2001 crisis, but also in relation to the previous and later context. As a working hypothesis we postulate that the increasing of the expulsion & impoverishment which characterize the

social structure of our country, it is shown in the ways by which the subject live, feel & rebuild their possibilities for social transformation.

2010S02414

Seward, Rudy, Ray (Department of Sociology, University of North Texas, Denton, Texas 76203 USA [tel: 940 565 2295; fax: 940 369 7035; e-mail: seward@unt.edu]), **Exploring Fathers' Involvement with Children: Concepts, Clusters, and Inclusive Theoretical Model,** *International Sociological Association, Gothenburg, Sweden,*

¶ Although most studies of fathers' involvement with children have, at least until recently, been only minimally guided by an integrated theoretical framework, some concepts have dominated the literature. These concepts, plus some from other proposed models, provide a substantial foundation for research because they (a) address what fathers bring to their relationships; (b) offer insights on the familial & broader social contexts of these relationships; and (c) highlight the multi-dimensional nature of involvement with children. This paper is a response to calls for further conceptualization & the integration of existing theories and models used in the research on fathers. Building on other recent efforts to address these calls, extant theories, models, and research concepts are delineated, grouped into major clusters, and the clusters combined in a single model proposing causal relationships. The result is a more inclusive set of concepts that better reflects the complexity of fathers' involvement. Testing the model empirically should provide a greater understanding of the meanings attached to the status of father, of the father status-making process, & of how these are both interpersonally and institutionally negotiated & constructed.

Seymour, Jane E (University of Nottingham; School of Nursing, Midwifery and Physiotherapy, Queens Medical Centre, Derby Road, Nottingham, NG7 2HA [tel: 0115 8231202; fax: 0115 8231211; e-mail: jane.seymour@nottingham.ac.uk]), **Dying at Home: The Good Death?,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper draws on a programme of research involving older adults to provide some critical reflections on the trend encouraged by the End of Life Strategy in England to see death at home as synonymous with the "good death". The direction of policy is supported by evidence from cross sectional quantitative surveys which suggest that most people will express a preference for a home death if asked on any one occasion. The paper draws on findings from several studies using qualitative methods to examine the experiences, views and concerns of older people living in community settings about death, dying & bereavement, including those classically considered to be in minority or marginal groups, such as black and minority ethnic groups, lesbian, gay & bisexual elders, & those in very late old age (85 years & older). It examines some cultural, interpersonal, practical & existential issues in relation to the provision of end of life care & death in the domestic home expressed by older people, most of who drew on biographical experiences of bereavement & provision of care for others at the end of life, as well as expressing their expectations and concerns for their own care at the end of life. The paper concludes that current trends in policy are based on ethnocentric, gendered & ageist assumptions & reveal a lack of engagement with the problems & costs confronting older people & their informal carers in accessing help & support during a final illness.

Seymour, Kathryn M (School of Criminology and Criminal Justice, Griffith University, Mt Gravatt Campus, 176 Messines Ridge Road, Mt Gravatt, Australia QLD 4122 [tel: +61 7 3735 6806; e-mail: k.seymour@griffith.edu.au]), **Doing Research with Young People,** *International Sociological Association, Gothenburg, Sweden,*

¶ The last decade has seen an increased interest in the role that young people can & should play in research that is about them. This has involved a shift away from a traditional research approach which has tended to conduct research "on" or "about" young people towards a more participatory model of research conducted "with" and "informed by" young people. An increasing amount of work is being done to explore research methods that not only encourage the inclusion of young people but are also methodologically and ethically sound. From ethics approval to getting out in the field this paper will reflect on a research model adopted for the Queensland Youth Development Research Project that actively included young people in the research process.

Shah, Bindi (Roehampton University, 80 Roehampton Lane, London SW15 5SL, UK [tel: +44 20 8392 5032; e-mail: b.shah@roehampton.ac.uk]), **Jainism in the Lives of Second-Generation Jains in UK and USA - Cage or Resource for Navigating Choice, Risk and Uncertainty?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The resurgence of Jainism in the 1990s & early twenty-first century among the children of South Asian immigrants in the UK & USA provides an opportunity to examine how a religion with roots in South Asia provides a resource for second-generation Jains living in societies characterised by late modernity. Utilizing qualitative data, I explore particular interpretation of Jainism & Jain religious practices & their meanings in the everyday lives of second-generation Jains in these two countries. I demonstrate that Jain spirituality, stripped of the ritual practice prominent in the first generation, provides a resource for young Jains to deal with the challenges of risk & uncertainty. Specifically, it acts as a moral compass as young Jains navigate the multiple & competing values present in religiously plural societies. I also argue that Jainism's appeal is further heightened for young Jains growing up in societies where individualism is an expression of Western heritage because it allows for the development of a Jain religious self that is congruent with a second trend identified by Beck, that of individualization or the process of "becoming individual".

Shahabi, Mahmood (Sociology Department, Allameh Tabatabai' University, Tehran, Iran, 1998855551 [tel: +98 21 22223001; fax: +98 21 22227075; e-mail: mshahabi88@gmail.com]), **Sub-Cultural Effects on Educational Performance: A Study on Tehran's High School Students,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores the sub-cultural effects on educational performance among high school students in Tehran. Framed in social reproduction theory (in its two competing versions, namely Bourdieu's reproduction theory & Willis's resistance theory), this study tests the applicability of these two explanations to the Iranian context of educational performance. The paper is based on a quantitative study of a random sample of 651 high school students in Tehran. They were recruited through clustered two-stage stratified method of sampling by April 2008. A multiple regression were used to determine the conjoint & separate contribution of all the study's independent variables in predicting the variance in pupils' educational performance. After controlling for other independent variables, including parental & pupils' economic, social & cultural capitals, the author finds a significant negative association between the pupils' anti-school subcultural attitudes & behaviors, on the one hand, & educational performance, on the other. The findings suggest that the effect of sub-cultural attitudes & behaviors nullifies the positive effects of parental & pupils' enjoyment of a higher degree of economic, social & cultural capitals.

Shahrokni, Nazanin (Sociology, University of California USA 94720 [tel: 1-408-3965674; e-mail: nazanin@berkeley.edu]), **Gender Segregated Spaces: Traversing the "Public" in Iran,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since the establishment of the Islamic Republic of Iran in 1979, gender segregation has become a prominent feature of the Iranian urban space. This paper focuses on the major sites of gender segregation in the urban spaces of Tehran, Iran: parks, public transportation, & sports stadiums. By taking into account the variations across these cases, this paper complicates the unidimensional theorization of gender segregation, focuses on the different mechanisms through which these spaces are produced and consumed, & highlights the fact that physical segregation is not necessarily accompanied by social segregation. In this paper, the phenomenon of gender based segregation of urban space is treated as a "subject-making" process rather than as a purely "Islamic process."

Shahrokni, Shirin (University of Cambridge, UK [e-mail: ss751@cam.ac.uk]), **The Identification Strategies of Upwardly Mobile Descendants of North African Immigrants in France,** *International Sociological Association, Gothenburg, Sweden,*

¶ How do social ascent & the status change it generates inform upwardly mobile individuals' self-presentations & identity negotiations? How in particular does the experience of intergenerational upward mobility shape the repertoire of tastes, ideologies, & aspirations of members of stigmatized groups? These questions are at the backward of my current qualitative investigation among descendants of North African immigrants, enrolled in France's prestigious educational institutions, the "grandes Ecoles". In a context of ongoing discrimination against North-African immigrants & their children in France, entry into these selective institutions represents an individual-level phenomenon of boundary crossing while the unequal distribution of resources remains unabated. Drawing on in-depth interviews with Grandes Ecoles students of North African working-class backgrounds, I focus on the rhetoric used by the respondents in order to display resistance to major status change. First, I show how they reconstruct their trajectories as tied to a distinctive family capital. These are depicted as collective accomplishments, resulting primarily from the former generation's migratory project, ideals, & struggles. Second, I shed light on the rhetoric they mobilize to demonstrate their enduring sense of attachment to, and loyalty vis-à-vis, their home environment, despite an acculturation to the lifestyles of the "elites" they daily interact with. Third, I outline a set of moral & social attributes, departing from the traditional elite's cultural capital, which, the respondents explain, have made their social climbing possible. I suggest that these discursive strategies be understood as micro-level forms of resistance against broader processes of socio-cultural marginalization.

Shaikh, Riaz Ahmed (Institute of Business & Technology (Biztek), Main Ibrahim Hyderi Road, Korangi Creek, Karachi, Pakistan, 75190 [tel: (+92-21)35091874; fax: (+921-21)35092384; e-mail: riazsheikh06@yahoo.com]), **Unresolved Conflicts and Clash of Neighbors in South Asia,** *International Sociological Association, Gothenburg, Sweden,*

¶ The partition of sub-continent resulted in the creation of two independent states- India & Pakistan in August, 1947. This development not only brought the geographical changes but also effected in several other means. More than 1 million people were killed on communal rights & world's biggest migration resulted shifting of more than 5 million from either side of the borders. Alongwith this human tragedy, border disputes emerged at the time of partition, still remain unsettled. One of the key disputed issue is Kashmir. Pakistan & India both have fought two major wars in 1947 & 1965 & several other clashes took place in 1986 & 1999 over it. Kashmir conflict is on UN agenda since 1948 & one of t he oldest unresolved conflict. This has not only generated severe disputes between both neighbouring states but has emerged as a serious threat for the world peace. Pakistan & India both are nuclear state & in case of any clash this area can become a theatre of nuclear war. This paper shall discuss the history of Kashmir conflict & how it has become dangerous for the peace of the world & why it is required to resolve this issue on priority?

Shapiro, Ephraim ([e-mail: eas97@columbia.edu]), **Religious Involvement and Immigrant Health in the U.S.,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction: Religious communities can affect many aspects of immigrant lives, including health-related ones. There is a paucity of theory-driven quantitative research, however, on the relationship between religious involvement with the health of immigrants. Aims: This study sought to examine the relationship between religious attendance & health outcomes for immigrants in the U.S., & whether country of birth affects these relationships. Methods: Analyses were performed using the New Immigrant Survey, focusing on U.S. immigrants from Mexico, Guatemala & El Salvador. Multivariate analyses were conducted using religion, immigrant and other demographic variables. Outcome measures included health status & health behaviors. Comparisons were made among these countries & with non-Latino immigrants. Results: Over 1200 adult immigrants from these countries participated in the NIS. Associations were found between church attendance & better health status & with less smoking, less binge drinking, & greater physical activity. Variations were found by birth country. Conclusion: A relationship exists between religious involvement and immigrants' health. Efforts to target immigrant needs in faith communities, especially Latinos, may be important strategies to potentially counteract the decline of immigrants' health that typically accompanies longer U.S. residency.

Sharifi Dryaz, Massoud (Ph.D. Student at École des Hautes Etudes en Sciences Sociales, EHESS, 54 boulevard Raspail, 75006 Paris, France [tel: 0033 6 16 11 44 90; e-mail: m.sharifi@ehess.fr]), **Authoritarianism and Sense of Security in Iranian Society,** *International Sociological Association, Gothenburg, Sweden,*

¶ This is an attempt to conduct an empirical study on authoritarianism and the factors having a certain influence on it, with a special attention on the sense of security in Iran. The political conservatism & fundamentalism are analyzed as the consequences of the interactive relationship between authoritarianism and insecurity. A principal challenge of the current study was the creation of a scale for authoritarianism & sense of security variables by paying attention to the social & cultural background of Iran. For this purpose, firstly a three-dimensional definition of authoritarianism is presented based on Altemeyer's conceptualization. Secondly, the sense of security is confined to four dimensions: i.e., life, financial, thought & collective. The data was collected in 2005 among 365 participants ranging from 18 to 65 years old, through a survey & a questionnaire applied in 8 districts of Teheran. The bivaried analyses indicated to the lack of a significant relationship between the sense of security and authoritarianism. Through a factor analysis we found out two factors: material security & post material security. A structural equation analysis showed that material security had a negative effect on authoritarianism while the post material security showed a positive & strong effect on authoritarianism.

Sharma, Onima & Pal, Archana (Department of Sociology, D.A.V (P.G) College Dehra Dun, Dehra Dun, Uttarakhand, India, 248001 [tel: +91 9997109503; e-mail: onima1@rediffmail.com]), **Ageing, Leisure and Well Being: A Study of Elderly in Urban Settings of Dehra Dun (India),** *International Sociological Association, Gothenburg, Sweden,*

¶ Leisure as a topic is mostly ignored in developing countries like India, particularly among elderly. Leisure can play an important role in achieving & maintaining well being in later life. The study aimed to find out meaning of leisure & assess quality and quantity of leisure for elderly in Indian urban society. The hypothesis constructed is 1)Sex, age, & income affects participation in leisure activities. 2)Ageing, health & income act as barriers in pursuing leisure activities. 3)Overall being is associated with leisure activities. 206 respondents aged 60 and above, from urban settings of Dehra Dun (India) were selected through a stratified disproportionate random sampling. To collect data, semi-structured interview schedule was used. Statistical methods were used for data analysis. Findings reveal that by leisure activity majority of respondents mean an activity that gives sense of pleasure. Females & old-old participate in less number of activities. Major barriers in pursuing leisure activities are health, income & growing age. Leisure activity increases mental, physical health & strength.

Overall well being although is associated with leisure activities but is not the sole factor responsible for overall well being.

2010S02427

Shaw, Susan M., Hilbrecht, Margo & Mainland, Michael (Department of Recreation and Leisure Studies, University of Waterloo, Waterloo, Ontario, Canada N2L 3G1 [tel: 519-888-4567 ext. 35019; fax: 519-886-2440; e-mail: sshaw@uwaterloo.ca]), **A Critical Constructionist and Mixed Methods Approach to Understanding Parenting Practices and Children's Leisure,** *International Sociological Association, Gothenburg, Sweden,*

¶ Children's participation in healthy leisure activities has received increasing attention in recent years, fueled by data that raise concerns about childhood obesity, poor diets, & inactivity. Parents are seen to be key players in terms of promoting children's health. Yet this focus on parents is often simplistic, with little attention to social & cultural influences on parenting ideals, practices, or constraints. Thus new approaches are needed that locate children's leisure within the broader cultural and ideological context. This paper discusses the role that critical constructionism can play in terms of understanding culturally constructed notions of health, leisure, & parenting, with sensitivity to issues of gender, class, & race. An on-going study of children's leisure & parenting practices forms the basis of this discussion. The study involves content & discourse analysis of popular parenting magazines in North America to reveal dominant media messages about parenting & parental responsibilities. In addition, the study involves in-depth interviews with parents to understand the ways in which parents respond to dominant messages, and adopt or reject these messages based on their material & /or socio-cultural location. Focusing on the negotiation of ideological and socio-cultural influences connects leisure, family and parenting to the broader social reality.

Shen, Xiaomeng (United Nations University, Hermann-Ehlers-Str.10, Bonn, 53113 [tel: 00492288150258; e-mail: shen@ehs.unu.edu]), **Flood Risk Perception and Mitigation in Different Cultural Contexts -- A Case Study in Wuhan, China and Cologne, Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper investigates flood risk perception amongst key institutional stakeholders involved in flood risk management in different cultural settings of China & Germany. Using qualitative social research methods, this study aims at: firstly, comparing the different mitigation strategies between the two countries; secondly, identifying the discrepancies of risk perceptions between the actors in China & Germany; & finally, analyzing how the differences in perception & mitigation strategies are embedded in cultures using Cultural Theory as a theoretical framework. The research results from the case study conducted in Wuhan, China and Cologne, Germany have shown eminent differences between the flood risk management strategies as well as risk perceptions. Flood risk is perceived to be controllable with "scientific methods" in China, which displays the propensity to "scientism". In Germany, on the contrary, uncertainty in flood risk management has penetrated into the authorities' mental maps. Risk management in Wuhan focuses on crisis management, whereas flood risk prevention and awareness is stressed by the actors in Cologne. The flood risk strategies both in China & Germany showed strength, but also revealed some challenges. This paper analyses & illustrates the advantage each society has & the challenges faced & how cultural factors impact on risk management.

2010S02429

Sheykhi, Mohammad Taghi (Department of Social Science, Al-Zahra University, Tehran, Al-Zahra University, Tehran, [tel: 009821-22859416; e-mail: mtshykhi@yahoo.com]), **Shortage of Leisure within the Elderly People in Iran: A Sociological Appraisal,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper explores how mounting elderly are facing lack of leisure and recreations in Iran in general & in Tehran in particular. Though their number is increasing, & their life patterns changing as compared with the past ageing people, yet they lack leisure services. Income, region & social status all influence what an older person chooses to do. Those with low income, & little education, & those with high income, or middle income & more education show different involvement in leisure pursuits. Some theories of aging describe leisure activity of the elderly people as those that they did in their middle age. Though the elderly are largely in need of increasing welfare services & leisure, yet there are not sources enough to meet such needs. Increasing life expectancy everywhere including Iran means that they would need more leisure & for more time for the ageing people. However, in Iran retirement diminishes family's income which eventually leads to lower budget to spend on leisure pursuits. Similarly, death of a spouse is followed by shortage of leisure for the other. After reviewing the background theories & literature, some 452 questionnaires were completed, & through that various queries were examined. In the process of referral, the researcher could find 272 live ageing men against 402 ageing women on random basis. However, though in theory people are expected to have more fun and leisure during their old age, yet it does not happen so in Iran in most cases due to shortage of funds & financial resources. Because of considerable socio-cultural change in recent years, the elderly much feel detached from the family network, i.e. the network which was used for their leisure time according to the erstwhile standards. The unprecedented population ageing in Iran especially in Tehran followed by shortage of leisure among them is a new phenomenon. In this process, we need invention rather than imitation. That is, we cannot look to the past for ways to create a good old age today. However, to prevent the elderly from social exclusion, leisure pursuits need to be provided for them.

Shi, Shih-Jiunn (Graduate Institute of National Development, National Taiwan University, 10617 Taipei, Taiwan [tel: 886-2-33669726; fax: 886-2-23676176; e-mail: sjshi@ntu.edu.tw]), **Saving in Addition to Contributing: Political Economy of Pension Privatization in Greater China,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since the 1990s pension reforms have been one of the major welfare reforms in Taiwan, China & Hong Kong. A conspicuous phenomenon has been the introduction of individual accounts as a major pillar of old-age security (HK), or as a supplement to the existing pension schemes (China, Taiwan). This article seeks to adopt the theoretical insight of the political economy approach to account for the outcomes of pension privatization in the three cases. This article argues that the way in which individual accounts are established in the three cases is related to their respective models of industrial development. To achieve the reform of state-owned enterprises & the attraction of foreign direct investments, the Chinese pension reforms concentrated on the combination of social pooling & individual accounts. Taiwan's economy is famous for her high proportion of medium- and small-sized enterprises as the main propeller. Individual accounts have been introduced on top of the Labour Insurance in order to alleviate enterprises' financial burden while increasing labour force mobilization. Hong Kong's economic development is driven by its service industry in favour of financial capitalization and market fluidity, leading to her choice of mandatory provident funds as the major pension scheme for the workers.

Shibata, Yasuko ([e-mail: cedrus23@hotmail.com]), **Who Should Be Alienated in a Perfect Poland? The Discourse against the "Others" of the League of Polish Families 2001-2007,** *International Sociological Association, Gothenburg, Sweden,*

¶ The battle over the meaning of "being Polish" was intensified in the political sphere of Poland before & after its EU accession in May 2004. The discourse notably involved sexual minorities & women as the antagonists of "true Poles." Focusing on the discursive strategies against these "sexual others," the paper examines the process of making & alienating the "enemy" in Polish society. The research material is the language of the politicians of the League of Polish Families (Liga Polskich Rodzin; LPR) in 2001-2007; it includes party programs, bills & media interviews among others. The adopted methods are the "discourse-historical approach" of critical discourse analysis & an approach of literary studies called the "critique of ideological fantasies." Analysis shows that the politicians dehumanize homosexuals, feminists & supporters of the right to abortion & justify such "de-Polonization" in the name of law, justice & responsibility. The cultural images of the "polish Mother" & the "dying heroic woman," who protect Poles from the "quasi-Jewish" sexual others, are further mobilized in the discourse. The research results attest that the alienation of "non-Poles" takes place by evoking the imagery of the "suffering nation," which aspires to build the perfect world if only in the future.

Shilliam, Robbie (Political Science and International Relations, Victoria University of Wellington, Kelburn Parade, Wellington, New Zealand [tel: +64 4 4635613; e-mail: robbie.shilliam@vuw.

ac.nz]), **Forget Freedom, Remember Slavery,** *International Sociological Association, Gothenburg, Sweden,*

¶ Freedom is a fundamental analytical category & normative concept of modern political thought. However, in stark contrast to evolving literatures in the discipline of History (and to a more limited extent Sociology), the concrete relationship between Europe of the Enlightenment & the plantation slavery of the New World is still under-appreciated in genealogies of modern political thought. This is all the more alarming considering that in this period, seminal treaties of man's freedom from natural & social domination were written in Europe. However, if the contemporaneity of European freedom & New World slavery is accepted as co-constitutive of a colonially induced modernity, then what coherence does freedom retain as an organizing category or concept for modern political thought if it has been crafted through the very forgetting of this co-constitution? In short, if we remember Atlantic slavery, is it possible, or desirable, to think of modern freedom - even in the abstract - as a political condition that is in diametrical opposition to domination? This paper suggests that "unfreedom" provides a keener analytical & normative sense of the modern condition.

Shilova, Valentina Alexandrovna (Institute of Sociology, Russian Academy of Sciences, Moscow, Russian Federation, Krzhizhanovskogo street, 24/35, bld. 5, 117218 [tel: +7 - 499-128-33-32; e-mail: vshilova@yandex.ru]), **Social Communicative Technologies and Their Influence on Personality Formation: Possibilities and Limitations,** *International Sociological Association, Gothenburg, Sweden,*

¶ Present-day diversity of communicative environment as well as incredible richness of information flows makes actual research done in order to answer the question to what extent do they influence personality formation. Such an influence is a kind of axiom for sociology. However due to complexity of the research field above influence hasn't been measured up to now exactly, using a kind of objective quantities. Social stereotypes, human attitudes, preferences, norms & values are the main objects of such influence. Possibilities of influence increase in the following cases: A) when communicative effect works into the structure of existing values; B) when some communicative effect is actuated and becomes a catalyst of influence (for example, halo-effect or "mass infection" effect, etc.); C) when communicative influence is soft and gentle & gives respondent feeling that he (she) is independent in a process of decision making; D) when communicative influence is visual, emotional as well as attractive for ear and intellect; E) when some material stimulus is built into communicative influence. Influence of communicative technologies is limited when: A) communicative influence comes into conflict with norms, stereotypes & values; B) when any kind of boomerang communicative effects exists; C) when communicative effect has hard, fixed character; D) when it is not attractive visually or emotionally; E) when communicative influence has some side effects for addressee.

Shim, Jae-Mahn & Shin, Eunjung (Department of Sociology, University of Chicago [e-mail: jaemahn.shim@gmail.com]), **Aging Populations and the Professionalization of Traditional, Alternative and Complementary Medicine,** *International Sociological Association, Gothenburg, Sweden,*

¶ Are aging populations more likely to promote the professionalization of traditional & alternative medicine (TAM)? Due to the lack of available data on TAM professions, little is answered from a global perspective. By utilizing a global dataset of international medical organizations which specifically seek for the professional promotion of TAM, this paper systematically tests if aging is related with the professional development of TAM. It finds that countries with more aged population (65+) tend to have more memberships in international organizations of TAM. This finding holds true even after several potential confounding variables are controlled for. Based on these findings, this paper hypothesizes two possible mechanisms which link a population process (i.e. aging) to the establishment of TAM professions. First, chronic illnesses & long-term care needs which are characteristic to aging people may explain the association between aging & TAM professionalization. Second, it may be alternatively the old generations' relative familiarity with holistic worldviews in TAM that were as legitimate in their lived past as modern bio-medicine is today. This paper leaves it to subsequent studies to differentiate these epidemiological & psychological processes and to elaborate how the two are related.

2010S02435

Shim, Young-Hee (Sociology/Hanyang University, Seoul, Korea 133-791 [tel: 82 2 2220 0845; fax: 82 2 2281 4554; e-mail: yhshim@hanyang.ac.kr]), **Family-Oriented Individualization and Second Modernity: An Analysis of Transnational Marriages in Korea,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper has explored a Korean pathway to second modernity by examining transnational marriage from the perspective of individualization which involves the objective (institutional) and the subjective (cultural) dimensions. We have shown how poverty or life-threatening risks as consequences of globalization & rush-to industrialization push individuals to be unleashed from the given framework of collective welfare & to move in the direction of individualization. More specifically, unmarriageable rural bachelors in Korea & women marriage migrants from abroad had no choice but to leave the existing family due to the failure of the family & for family responsibility. Thus we think that the theory of individualization by Beck & Beck-Gernsheim (Beck, 1992; Beck and Beck-Gernsheim, 2002) can be extended to non-Western countries like Korea insofar as we are concerned about the objective dimension of push factor in second-modern transformation. With regard to the pulling factors, we have attempted to show how transnational marriage as a new institution has emerged and expanded sharply in Korea. As part of institutional individualization, this objective dimension of pulling energy can also be well grasped by extending Beck's theory further. However, when we come to the subjective (cultural) dimension of pulling factors, the typical pathway of East Asia differs significantly from that of the Western countries due to the lack of cultural tradition of individualism in the former. The individual here is not leaving the family due to disenchantment of the family, but for responsibility of the family in crisis. Consequently, individualization goes well together with affectionate family networks. Needless to say, we should not generalize this observation hastily. It is possible to think of variations within East Asia depending on the specific combination of the two axes of objective-subjective dimensions & push-pulling factors. For instance, Japan may be considered to be ahead of Korea & China in terms of individualization when seen from the perspective of Beck and Beck-Gernsheim. Overall, nevertheless, East Asia can be characterized by concomitant development towards individualization and flourishing community networks, as a distinctive characteristic of East Asian second-modern transformation. Finally, we would like to explore the implication of this finding for the question of re-embedding. Beck admits that individualization at this level involves "a new type of social commitment," that is, reintegration into a community. Logically, Beck's concept of individualization is leaning towards a "libertarian" community whose entry & exit are just open to individual choice. A community exists, but only in the background, while individuals are placed in the foreground as the agent of individualized sovereignty. This is a consequence of radicalization of such principle of modernity as individual freedom and liberty. The whole cultural & emotional landscape of East Asia seems to be significantly different from this Western pattern of value configurations. The balance between individual and community, between reason & emotion, between production and distribution, & so on, has been deeply built into the deep structure of unconscious mentality. Perhaps, in this context, we can better understand why the relationship between individual and the family in the transnational marriage & family life in Korea stands far from the typical characteristics of individualization suggested by Beck & Beck-Gernsheim. [Abstract shortened by ProQuest.]

2010S02436

Shimizu, Chihiro & Watanabe, Tsutomu (Reitaku University, The International School of Economics and Business, 2-1-1, Hikarigaoka, Kashiwa, Chiba, Japan,277-8686 [tel: +81-4-7173-3439; fax: +81-4-7173-1100; e-mail: cshimizu@reitaku-u.ac.jp]), **Housing Bubble in Japan and the United States,** *International Sociological Association, Gothenburg, Sweden,*

¶ Japan & the United States have experienced the housing bubbles and subsequent collapses of the bubbles in succession. In this research, these two bubbles are compared & the following findings are obtained. Mankiw & Weil (1989) paid attention to housing demand changes & forecast that U.S. housing prices would decline 47% in real terms over 20 years to 2007. When looking at the relationship between the demand for houses & house prices based on the time-series data, there is a positive correlation between the two elements. However, upon conducting an analysis using the panel data, which is based on data in units of prefectures or states, there is no significant relationship between the demand for houses & house prices in both Japan & the United States. In this sense, it is hard to explain whether there is a bubble & the size of the bubble according to prefecture (state) using demand elements. This suggests that it is possible that the concept of demographics having an impact on the demand for houses, which thus

caused the house prices to increase, is not effective in explaining the price fluctuations in neither Japan nor the United States.

Shimizu, Shinsaku (Graduate School of Arts and Letters, Tohoku University, 27-1 Kawauchi, Aoba-ku, Sendai, 980-8576 Japan [tel: +81-22-795-6034; e-mail: shimizus@sal.tohoku.ac.jp]), **Daniel Bell as a Public Intellectual and Sociological Controversies over Neoconservatism,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study focuses on Daniel Bell's sociological works and intellectual style within the history of public intellectuals in sociology because he can be considered a typical public sociologist with a considerable global impact through such intellectual, not academic, journals as The Public Interest, Commentary, & Dissent. However, most sociologists regard him as only a has-been because they consider him a typical neoconservative. For example, Michael Burawoy, who promotes public sociology, has never referred to Daniel Bell as a public sociologist. However, Bell denies that he is a neoconservative & insists that he is "a socialist in economics, a liberal in politics & a conservative in culture." I attempt to overturn the negative evaluation of Daniel Bell by describing his disagreement with the godfather of neoconservatism, Irving Kristol, who co-edited The Public Interest with Bell & is considered his political partner in constructing a new public philosophy to replace neoconservative & old liberal viewpoints. Examining Bell's intellectual history leads us to understand the points on which we can criticize neoconservatism.

Shin, Jin-Wook (Department of Sociology, Chung-Ang University, 221 Heukseok-dong, Dongjak-gu, Seoul, South Korea [tel: 82-2-820-5752; fax: 82-2-826-9730; e-mail: socioshin@yahoo.com]), **Webs of Symbols and Master Framing in Cycles of Protest: An Analysis of Symbolic Networks in the Candlelight Protest in South Korea, 2008,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study analyzes symbolic networks & frame structures created in the 'candlelight protest' in South Korea, 2008, which was a massive citizens' mobilization against the US-Korean agreement on the import of US beef products. Previous framing analyses in movement research tended to focus on SMOs' framing strategies, while the present study compares (1) official announcements of major SMOs, (2) pickets produced by various participant groups, & (3) memos stuck to public boards by individual citizens who participated in the protest action. This study used the method of (1) quantitative content analysis (VBPro), (2) network analysis (UCINET, Netdraw), and (3) qualitative text interpretation. The findings: Major SMOs concentrated on injustice framing, particularly, criticism of a concrete action by police & the government. In the pickets and memos which were present in places of protest actions, an antagonistic binary structure between agency frames ('people', 'candle') & injustice frames ('Lee Myung-Bak', the president) was dominant. Contrary to the common assumption of a persuading, educating role of SMOs, the case of candlelight protest shows the possibility that major SMOs' frames are restricted to specific issues, while loosely networked individual participants produce master frames with a higher degree of generality, flexibility, and political antagonism.

Shin, Won-Chul (Pusan National University, Busan, South Korea [tel: +821047366039; fax: +82515830211; e-mail: wcshin@pusan.ac.kr]), **Workplace Innovations and the Non-Standard Employment: A Case Study of a Korean Shipbuilder,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper deals with the change of workplace innovation activities of a major Korean shipbuilder during 1990-2008. A unique Korean style TQC activity called 'unit production meeting' was established in 1990s, but has lost a great deal of its vigor after 2000 in the shipyard. This change can be explained in relation to the increased use of in-house subcontract workers (2.7 times more than 2000), which has resulted from the strategy of the management pursuing the numerical flexibility of the workforce. And the enterprise union system has also influenced the increased use of in-house subcontracting. Owing to the increase of the non-standard workers, the 'unit production meeting' attended by regular workers only has become ineffective. As for further training programs, "education programs for the performance & innovation" were provided mainly for supervisors working for the subcontract companies. With the more detailed production management being introduced, those supervisors should play more significant roles & be more competent. The turnover rate of junior subcontract workers was so high that the efficacy of training programs for them, if any, was doubtful. In conclusion, 'the high commitment strategy in human resource management' & 'the cooperation in industrial relations', which were the prerequisites for the success of the workplace innovations, could not be found in the shipyard. Thus the principles of the traditional Taylorism were reintroduced. But it is not sure that such work organizations based on the dual and discriminative employment strategy could meet the high value-added business model in the 21st century. (Keywords: workplace innovation, non-standard employment, shipbuilding industry, in-house subcontract worker)

Shirahase, Sawako (University of Tokyo, Department of Sociology, 7-3-1 Hongo, Bunkyo-ku, Tokyo 113-0033, Japan [tel: +81-3-5841-3879; fax: +81-3-5841-3879; e-mail: sshiraha@l.u-tokyo.ac.jp]), **Poverty among Families with Small Children in Japan with Cross-National Comparisons,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper, I will examine poverty among families with small children in Japan with cross-national comparisons & explore the reasons for the differences in child poverty among industrial societies. The societies which will be compared with Japan are the United States, France, Sweden, & Taiwan. The disposable income with the equivalent scale of the number of household members will be used, & the family with pre-school child(ren) are the target of my analysis. The recent increase in the extent of income inequality among young households can be partly explained by the increase in the number of lone-parent households. Although being a single mother has been a stigma in Japan, as the divorce rate increases, the number of lone-mother households is increasing. A large majority of lone mothers are in the labor force. Nonetheless, their poverty rate is very high. My analyses confirm that Japanese working lone mothers are more likely to suffer from poverty than American, French, & Swedish counterparts. What is apparent among Japanese lone mothers is that despite the high labor participation of lone mothers, their work does not seem to prevent them from falling into poverty & does not provide enough livelihood security for the mothers & children.

Shirokanova, Anna (Faculty of Philosophy and Social Sciences, Belarus State University, Minsk, Belarus 220131 [tel: +375293779778; e-mail: shirokaner@gmail.com]), **Is Religiosity Being Reproduced at the Post-Soviet University? A Case from Belarus,** *International Sociological Association, Gothenburg, Sweden,*

¶ Post-Soviet rise of religiosity has spurred debate on the position of Church in the public space. The number of young people declaring their belief in God has been growing since 1990 & exceeded 66 per cent in 2008. University students declared (in 2008) their belief in God less frequently than young people in general, but students' belief in specific Christian concepts (Heaven, hell, soul, etc.) was significantly higher than average. Humanities & science students alike have shared this pattern. Therefore, I hypothesized that religiosity might be implicitly present in the university milieu. I analysed dynamics of religiosity & structure of religious belief in Belarus in 1990-2008 & studied university curricula of popular humanities courses on religion in Belarus. Results have shown that the 1990s "religious revival" meant a general increase in religiosity among the population, & was not accompanied by mass institutionalization of religious education. Although the Orthodox Church is now involved with the state, official politics remains "secular-Orthodox". Thus, religiosity of the students is not to be explained on the policy level. I conclude that in Belarus the lack of religious policy has resulted in fragmentary knowledge of religion among young people on the background of general religious rise.

Shisuke, Sakumichi (Faculty of Humanities, Hirosaki University, 1 Bunkyo-cho, Hirosaki, Aomori, Japan [tel: 0172-39-3218; e-mail: sakumici@cc.hirosaki-u.ac.jp]), **The Emergence of Ewosin-a-ngacin (Anal-Rectum Stuck By Feces) among the Turkana, the Pastoralist in the Northwestern Kenya: An Embodied Adjustment to the Drought-Induced Social Change,** *International Sociological Association, Gothenburg, Sweden,*

¶ 1. Background: The Turkana people are pastoralists of semi-arid area in the northwestern Kenya. This area has been taken over by successive drought since 1980s & its consequent social change. At the same period, an illness, called Ewosin-a-ngacin (EAN), has emerged. Its main symptoms are abdominal problems. The remedy is a massage. 2. Purpose: It is

to show by the video analysis of massage that EAN is the new illness based on the intercorporeality which the interaction of massager-patient, having a common experience of drought, constructed. 3. Field & Method: The interview of 12 massagers & 17 patients & the video analysis of massage at 4 towns in 2002-2005. 4. Findings: The new body of EAN is substantiated on the body of patient in the massage by massagers' fingers. It is the body in massage that mobilizes the folk knowledge of livestock anatomy & human illnesses that has been accumulated in the pastoral culture, activates emotional memories of drought & reflects the hardship in presence. 5. Conclusion: The emergence of EAN means the effort for the Turkana to adjust to the social change by the elaboration of intercorporeality between the massager & the massaged; it is an embodied adjustment. The new body has been transmitted by massagers' fingers & patients' body and become a common body representing the situation of since-drought. It is resonate with the recent affirmative movement of "pastoralists as a minority".

Shkaratan, Ovsey (State University - Higher School of Economics (Economics Department), Pokrovskiy Bd., 11, Moscow, Russia, 109028 [tel: +7 495 772 95 90 (2058); e-mail: ovsey.shkaratan@gmail.com]), **Traditional Estate Stratification in Today's Russia,** *International Sociological Association, Gothenburg, Sweden,*

¶ The type of social stratification & the corresponding structure of intergroup relations validate our arguments, that in contemporary Russia there emerged a neo-etacratic societal order, which forms as an inertia of development of countries, which belonged to etacratic (pseudo-socialist) system in former Soviet Union. Our results invalidate the arguments of most Western & Russian researchers. The typical gradualist stratification hierarchy is not appropriate in the case of contemporary Russian society. Also the neo-Marxist and the neo-Weberian classification models give no adequate explanation for the nature of its social differentiation due to the presence of peculiar relations "power-property" & undeveloped labor market. By applying the method of entropy analysis we designed stratification criteria, which most adequately describe social differentiation. In case with neo-etacratic Russia we are most likely to deal with a special type of social stratification, which combines some elements of class differentiation (typical for developed post-industrial countries) & estate differentiation. In other words, the basic inequality criteria in Russia a authority status & closeness to sources of economic distribution, which determine estate belonging a has not changed since its pre-Soviet and Soviet past. We have found some certain proof to that by the data of repeated representative surveys (1994, January; 2002, November; 2006, December). Thus, we deal with a stratification hybrid of some sort, where despite the sizes of human & cultural capital most of the population can be assigned to lower strata of non-owner frontline employees (74% of the population in 2006). 22% of respondents were nominally assigned to intermediate, partly middle strata owning some minimum of property & having some degree of authority (small & medium proprietors, self-employed, minor shareholders & managers). The higher middle & partly higher strata, which consists of larger employers & top-managers, make 4% of the population.

Shojaa, Mahdieh & Jouybari Leila, Sanagoo Akram (Rsearch department, Golestan university of medical sciences, Gorgan,Golestan,Iran [tel: 00989126060285; e-mail: mahdieh.shojaaULmw@yahoo.com]), **Common Myths among a Group of Iranian Women concerning Sexual Relationships during Pregnancy,** *International Sociological Association, Gothenburg, Sweden,*

¶ Background: Many couples, during a pregnancy, experience changes in their emotional & sexual relationships. There are a variety of ideas and beliefs among women about sexual relationships in pregnancy period. Identifying taboos & making clear the rights & wrongs could be useful for the mental health of couples. Methods: The open ended interviews were conducted with 51 pregnant women who were referred to the teaching clinic in Gorgan (Iran). The criteria for the stop data gathering was "data saturation" which is usual term in qualitative studies. All of the interviews were tape recorded and transcribed line by line. The data were coded & categorized as it usual in qualitative methods. Results: Two main themes in the study are "anxious of harmfulness" & "feeling sin". Fear of abortion, fetus suffocation, fetus abnormality, rupture of fetus hymen, & concern of the harm of the mother are some of myths among our participants. Conclusions: Since some beliefs are harmful & could have a negative impact on relationships, the role of an evidence-based education in providing a healthy sex life should be considered. Key words: Myths, Sexual relationship, Pregnancy, Women, Iran

Shortell, Timothy & Krase, Jerome (Sociology Department, Brooklyn College CUNY, Brooklyn NY 11210 USA [e-mail: shortell@brooklyn.cuny.edu]), **On the Visual Semiotics of Collective Identity in Urban Vernacular Spaces,** *International Sociological Association, Gothenburg, Sweden,*

¶ As a result of the global circulation of people & cultures, urban neighborhoods in global cities are increasingly diverse. In the social spaces of urban vernacular neighborhoods, "cultural strangers" must negotiate the various forms of quotidian interaction. Simmel, & later, Lofland, noted the importance of "visual impressions" in making sense of the urban environment. Using spatial semiotics, we can investigate the ways in which urban vernacular spaces are both the context of & product of ethnic and class transformations. Starting with a simple phenomenological insight, that people change the meaning of social spaces by changing how spaces look, we develop an interpretation of the functions of visual markers of collective identity that reveals similarities in multicultural neighborhoods in global cities such as Berlin, Brooklyn, Frankfurt am Main, Lisbon, London, Los Angeles, Manchester, Paris, Philadelphia, Rome, & Washington, DC. Signs of collective identity can be abstracted from their original context as commodities in local & global marketplaces, resulting in ethnic & class "theme parks." We analyze researcher-produced data generated by a particular kind of photographic survey of urban vernacular spaces. We apply visual semiotics to interpret the content of the images. The meanings of visual signs can be a and often are a different for the producer & viewer of the sign. Bringing to bear a sociological analysis of the public sphere, we can examine the possible sources, such as media frames or local histories, for various interpretations of the markers of collective identity in urban vernacular neighborhoods.

Shterin, Marat (Department of Theology and Religious Studies, King's College London, London, WC2R 2LS, UK [tel: +442078482637; fax: +442078482255; e-mail: marat.shterin@kcl.ac.uk]), **Anti-cultism and the State: The Case of Contemporary Russia,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper discusses the impact of anti-cultism on the state management of religious diversity, focusing on contemporary Russia. It argues that anti-cult concepts, approaches, & activities have played a decisive role in the increasingly restrictive & discriminatory legislation & public policy towards the country's minority religions. Having started from targeting a relatively small range of new religious groups that emerged after the collapse of the soviet system, anti-cultists managed to promote their views to the status of dominant discourses & translate them into legislative measures & public policy that now capture a much wider range of religious minorities a or, potentially, any dissenting minority. Further, by drawing on Lewis Coser's & Georg Simmel's conflict theories, the paper shows the role of the anti-cult ideology and politics in creating an imaginary unity & degree of cohesion in the otherwise fractured dominant "majority".

2010S02448

Shterin, Marat (Department of Theology and Religious Studies, King's College London, London, WC2R 2LS, UK [tel: +442078482637; fax: +442078482255; e-mail: marat.shterin@kcl.

ac.uk]), **How the State Shapes Religion: the Case of Post-Soviet Russia,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper investigates the ways in which the state shapes religion as a social institution, drawing on the post-Soviet developments in Russia. It explores the legal & political mechanisms as well as cultural resources that the state employs in its attempts to manage religion & the different consequences that these attempts have for religious associations. At the same time, the paper points to the usefulness of the distinction between the concepts of the state and government, which allows to discern & explore inconsistencies and contradictions between & inside different state agencies, such as presidency, legislature, & government departments. It focuses on ways in which these inconsistencies & contradictions are addressed through informal & semi-formal mechanisms, in particular in countering the international legal & political mechanisms for protecting religious freedom. It points to the discernible trend of increasing institutionalization of these informal & semi-formal mechanisms & the consequent adaptation and resistance strategies of affected religious actors. These issues are explored through two interlocking case studies: Russia's implementation of the decisions of the European Court of Human Rights & the anti-missionary initiatives of the Ministry of Justice.

Shucksmith, Mark & Ronningen, Katrina (School of Architecture, Planning & Landscape, Newcastle University, Claremont Tower, Newcastle upon Tyne, NE1 7RU, UK [tel: +44 191 222 6808; fax: +44 191 222 8811; e-mail: m.shucksmith@ncl.ac.uk]), **The Uplands after Modernism - Small Farms' Role in Rural Sustainability,** *International Sociological Association, Gothenburg, Sweden,*

¶ The modernist project foresaw no role for small farms, but this can no longer be regarded as axiomatic. This paper considers the questions of what contribution small farms & crofts in the uplands can make to societies' goals, what role they might play in the sustainability of rural communities in such regions, & how this contribution might be supported by state policies. In addressing these questions the paper draws on case studies of upland areas in Scotland & Norway, where reviews & studies have recently been undertaken of crofting & of mountain & upland farming areas respectively. Building on these case studies, the paper discusses what sustainability might mean in localised & practical terms, and considers what might be the role of the state in supporting rural & environmental sustainability in the uplands. One conclusion is that debates about rural sustainability should encompass the state's role in regulating land ownership & use.

Shutes, Isabel (Centre on Migration, Policy and Society, University of Oxford, Oxford, UK, OX2 6QS [tel: +44 1865 284986; e-mail: isabel.shutes@compas.ox.ac.uk]), **Dynamics of Choice in Social Care: Immigration Controls and the Employment of Migrant Care Workers,** *International Sociological Association, Gothenburg, Sweden,*

¶ Central to the reform of social care has been the principle of greater "choice & control" for service users over care provision. Less attention, however, has been given to the dynamics of choice for those who provide care. Western welfare regimes are increasingly dependent on migrant workers to provide care for older people. This paper examines the concept of choice with regard to the employment of migrant care workers. It draws on the findings of research in the UK, which included in-depth interviews with migrant care workers employed by nursing & residential care homes, home care agencies & directly by older people or their families. The immigration status of interviewees varied, including EU nationals, work permit holders & "irregular" migrants, with differentiated rights to work & to remain in the UK. The paper explores how immigration controls shape the exercising of choice & control by migrant workers over their labour in terms of, first, their reasons for entering care work and, second, their relations with employers, thereby structuring who provides care & under what conditions.

2010S02451

Shuuya, Hoshino & Yoshihiko, Yamazaki (The University of Tokyo, 7-3-1 Hongo Bunkyo-ku Tokyo 113-0033 Japan [tel: +81-3-5841-3514; fax: +81-3-5684-6083; e-mail: mm67027@mail.ecc.u-tokyo.ac.jp]), **Prevention of Dementia in the Elderly at Adult Day Care Centers in Tokyo: A Qualitative Study,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this study was to clarify the views & activities of elderly people for prevention of dementia. Seven elderly people were interviewed for about 30 minutes in June 2009. The elderly people (82.00±11.33 years) were asked about their activities which they thought helped prevent dementia. They thought using their hands such an reciting poetry, calligraphy, and knitting or communicating with others were good for prevention of dementia. In the elderly people, those activities seemed to be hobbies & daily routines, & also they could provide sources of enjoyment rather than other specific activities for the prevention of dementia. The results of this study suggested that it is very important to help elderly people to have their hobbies or activities which they could enjoy.

2010S02452

Shuvalova, Olga (State University - Higher School of Economics, Moscow, Russian Federation [tel: +74 95 6218916; e-mail: shuvalova@hse.ru]), **Specific Features of Public Attitudes towards S&T in Russia and Eastern Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper is based on the secondary analysis of the results of the public opinion polls in 32 European countries (2001-2005, presented in the Eurobarometers 224 & 225) & Russia (1995a2009, Higher School of Economics). The results revealed some specific features of public attitudes towards S&T in Eastern & Western Europe. The most typical feature of Eastern European citizens a belief in science, manifests itself in strong positions of scientism together with optimism regarding science & new technologies. Interestingly, this finding was not supported by personal cognitive interest. The correlation analysis demonstrates that the Eastern European citizens, in comparison to their Western peers, show a stronger support for the freedom of scientific research (.68), believe that Science & technology can sort out any problem (.54) and that an economy only becomes more competitive through the application of the most advanced technologies (.56). At the same time the Eastern European population demonstrates a lower level of interest in scientific discoveries (-.59) & new inventions and technologies (-.53), a lower level of scientific literacy (-.43), or fewer visits to science or technology museums & science centers (-.43). Yet, other attitudes towards S&T show similar values in Eastern & Western European countries.

2010S02453

Sibireva, Maria (St.Petersburg State University, St.Petersburg, Russian Federation [e-mail: vesna172@yandex.ru]), **The Influence of Megacity on the Socialization of the Child,** *International Sociological Association, Gothenburg, Sweden,*

¶ The understanding of the native city is formed in childhood. On the one hand, the environment of the big city, especially such megacity as St. Petersburg, comprises the set of opportunities, but on the other hand, risks & negative influences. Social stratification, various pathogenic factors are aggravated by the influence of big city. Such situation makes child perceive the world as a source of dangers & threats. In the 2008 a 2009 I conducted a research in nine kindergartens of St. Petersburg. The sample included 205 children. To know what children think about their native city I used a projective technique "The Person in the city". The analysis of pictures & interviews allowed to define whether preschool children see themselves as a part of St. Petersburg. There are a lot of positive pictures, in such cases parents and tutors play an important role. Simultaneously 5 - 7 year old children feel uneasiness & vulnerability in St. Petersburg, they do not know what they would do in one situation or another, sometimes children simply do not perceive themselves as small townspeople. Therefore constant research will help to reveal the actual problems & to find out what consequences different components of the city environment have.

2010S02454

Sidorina, Tatiana (Higher School of Economics, Moscow Russia [tel: +7(495)251-00-95; fax: +7(495)7729590*4193; e-mail: mirros@mail.ru]), **Virtualization Trends in Social Policy,** *International Sociological Association, Gothenburg, Sweden,*

¶ Contemporary social policy is a sphere of radical change, which relate not only to the practical innovations, but also theoretical foundations. The paper is devoted to the formation of systemic representations of particularities and trajectories of social process in the sphere of social policy. The foundation for such discourse is a concept of virtualization as a paradigm of social change. The virtualization of all spheres of social life & human activity is one of the characteristic feature of social transformation of the late XX a beginning of XXI centuries. The problem of theoretical significance & practical applicability of contemporary models of social policy is regarded through the comparative analysis of various theoretical approaches: theories of post-industrial society, post-modernization, glo-

balization, virtualization; comparative analysis & evaluation of alternative theoretical models of social change.

2010S02455

Sidoti, Francesco (Dipartimento di culture comparate, L'quila University [tel: 0039 0862 319975; fax: 0039 0862 319985; e-mail: frasidot@tiscali.it]), **Investigation, Media, Violence,** *International Sociological Association, Gothenburg, Sweden,*

¶ My research is founded on group discussion, covert participant observation, & interviews with the people who decided to enter in an academic course on criminal investigation, which started in August 2000 & was the first in Italy & probably in the world. Practitioners, professionals, amateurs, public servants, and ordinary students were concerned. The research has been practised also in Switzerland, England, Turkey, & United States. The primary source is given by quantitative data already collected in other different research. Interviews, group discussion & covert participant observation were made in order to check quantitative data. Investigation ranges from risk analysis to computer crimes, from organized crime to disorganized crime, from serial killers to environmental disasters. A good democracy is based on investigation procedures: trials, congressional hearings, insurance companies, free journalism. There is not investigation without an open society. For an ideal public opinion, investigation means: control on the media, for the media, by the media. In the interviews, the media & the judicial system, with all their oddities and strengths, continue to lose credibility among the public. Violence (Wieviorka) is frequently seen as ludicrous & justice appears as characterised by frequent mistakes.

2010S02456

Sieh, Edward W (Justice Studies, Lasell College, 1844 Commonwealth Avenue, Newton Massachusetts 02466 [tel: 617 243 2407; fax: 617 243 2480; e-mail: esieh@lasell.edu]), **Human Dignity and Total Institutions; A Tool for Offender Reform,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper argues that human dignity should be taught in prison to offenders as an essential element of prison life & that prisoners who come to understand the concept learn to effectively adapt to prison & to the outside world. One of the essential underpinning of human rights is the dignity of the individual. This paper, based on the author's experience with teaching male and female prisoners courses on human dignity, will argue that prisoners exposed through educational programming to the essential elements of human dignity are capable of making the adjustment to prison & are better at adapting to life on the outside. It is believed that a program that offers an alternative to the destruction of the self provides the prisoner with an understanding of their own value & worth & provides them with some essential skills for dealing with the staff & other inmates as the prisoner comes to understand the qualities that provide them with value and worth. This new understanding provides the prisoner with both the skills & motivation to handle adverse conditions in the prison.

2010S02457

Sikora, Joanna (School of Sociology, Australian National University, Canberra, ACT 0200, Australia [tel: +612 61254574; fax: +612 61252222; e-mail: Joanna.Sikora@anu.edu.au]), **Gender-Specific Career Plans and Their Implications for Australian Youth,** *International Sociological Association, Gothenburg, Sweden,*

¶ It is well established that women have surpassed men with respect to educational attainment & yet labor market returns to female education are mostly below the returns enjoyed by male workers. This is often attributed to the accumulation of disadvantage women experience as a result of juggling careers & unpaid work. But some theorists, argue that young women mostly succeed in realizing their ambitions. To better understand this problem in the Australian context, I investigate gender differences in the formation & realization of educational & occupational plans formed by the cohort of young Australians who were 15 years old in 1998. I trace their educational & occupational trajectories for about 10 years. My source of information is the Longitudinal Surveys of Australian Youth which followed a representative sample of young Australians from 1998 to 2008. Using regression on person-year data I compare the importance of school plans separately for men & women. This comparison is set in the context of preference theory & the institutionalist theories which reaffirm gender equality in education & work. In this theoretical framework I explore the extent to which youth plans are gender-segregated & hence lead to gender-specific destinations.

2010S02458

Silis, Vents (Department of Humanities, Riga Stradins University, Riga, Latvia, LV - 1007 [tel: +371 67409103; e-mail: ventsULsilis@yahoo.com]), **Health Behaviour of Elderly People in Latvia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Paper attempts to explain health behaviour of elderly people in Latvia in context of health lifestyle model based on Max Weber's conception of lifestyle (Cockerham, 2007). The hypothesis is that health behaviour of older people is influenced mostly by the objective quality of life factors (life chances), & less by life conduct. Paper is based on results of a research "factors Influencing the Quality of Life & Life Styles of the Old People in Latvia" (2007/2008). Data has been gathered via quantitative telephone survey of people at the age of retirement (64a94), the size is n = 400. Survey questionnaire covers everyday health habits of elderly people, as well as their self-perceived health status, capability & health competence. Data was processed by means of statistical methods. Results approve the hypothesis: the most influential factors are insufficiency of income, (though not all of its effects are negative), biological aging which is objectively associated with a decline in health, & the nature of health problems (such as chronic illness or impairment). The most widespread means of caring for health is taking medication and visits to the medical specialists.

Silva, Ana Amelia da (Department of Sociology, Catholic University of Sao Paulo, PUC-SP, São Paulo, São Paulo, Brazil, 05015-001 [tel: + 55 11 38148755; fax: + 55 11 38148755; e-mail: anamelia@uol.com.br]), **Cinema and Images of Exception: Challenges for the (Re)Configuration of Critical Ruptures,** *International Sociological Association, Gothenburg, Sweden,*

¶ The main purpose of the communication is to establish the relations between cinema & experience of knowledge in Social Sciences, through the aesthetical reflections of Walter Benjamin, specially the notions of dialectical images & montage. By incorporating these notions, some film-essays present their epistemological potential to the comprehension of what Benjamin called "documents of barbarism", as relating the historical experience to cinematographic images & the construction of memory in various societies. Although in minor scale nowadays, as compared to entertainment cinema, the film-essays confront the overall scenery of excess, saturation & media manipulation of images as spectacle. Based on a research of some film-essays from the contemporaneous & the Brazilian recent cinema, examples will be reflected as establishing the contrast with what could be called images of exception. With a predominant presence in cinema nowadays, & demanding a critical reflection, these images produces the naturalization of important social questions, the clichés, the reified visions, the aestheticizing of poverty and violence and, above all, forge the affective identities in the direction of an increasing critical apathy. Producing the forgetfulness of memory, they challenge the experience of knowledge in social sciences as for the (re)configuration of previous critical & aesthetical ruptures.

Silva, Dulce Sá (Escola Secundária de Camões / FCSH - UNL, Lisboa, Portugal [e-mail: dulcesasilva@gmail.com]), **Educação de adultos: um desafio voltar à Escola** (Adult Education: A Challenge Again for School), *International Sociological Association, Gothenburg, Sweden,* (POR)

¶ A mudança constante obriga-nos a aprender e a reaprender de forma permanente ao longo da vida. Paulo Freire (1997) afirma que ninguém educa ninguém, nem ninguém aprende sozinho, nós homens aprendemos através do mundo. Knowles (1986) aborda comparativamente os modelos pedagógicos e os andragógicos. Por exemplo, relativamente ao papel da motivação, diz-nos que são os factores internos (satisfação, auto-estima, qualidade de vida, etc.) que motivam os adultos para a aprendizagem. Num primeiro olhar, adulto é todo o indivíduo que alcançou o grau máximo de desenvolvimento morfológico e fisiológico potencialmente possível. Daqui deduz-se que a criança cresce e o adulto já cresceu. No entanto, ao longo da idade adulta, o Homem vai continuando a vivenciar novas experiências acumulando conhecimentos, alterando comportamentos, isto é, vai crescendo emocional, intelectual e socialmente. Os adultos, enquanto estudantes, têm objectivos bem determinados, claros e concretos, relacionados com a melhoria da categoria profissional ou com a auto-estima e realização pessoal. Em regra, da sua ampla experiência resulta um sentido prático da vida que lhes permite participar activamente nas actividades de aprendizagem. A motivação destes alunos, para terem êxito, é muito significativa e manifestam um elevado nível de responsabilidade.

Silva, Jeannette (Sociology Department, Faculty of Social Sci-

ences, Lund University, Paradisgatan 5, Hus G 22100 Lund Sweden [tel: 046-2228844; fax: 046-2224100; e-mail: jesil2001@hotmail.com]), **Academic Mobility within the European Context: A Qualitative Approach from a Gender Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is focused on academic mobility as a specific process of migration in the global era. It has two main goals: i) to comprehend the main features of the trajectories of academic mobility from the subjective experience of the actors involved and ii) to contribute to the sociological analysis of the academic profession from a gender perspective. Consequently, it needs to be understood & embedded within the specific context of scientific migration & the nature of academic careers. The study consists of a qualitative study which works with opinions provided by semi-structured interviews. The non probability sampling procedure is based on the following aspects: gender, type of academic activity & region of the world. Therefore, opinions have been provided by males & females between the ages of 23 & 40, who are conducting PhD or post-doctorate programmes, & some who are working as academics at the university level within the European context. The research findings show relevant features and contextual factors that shape the course of the studied trajectories of academic mobility. In addition, perceptions of academic mobility & description of lived experience within academia are presented.

Silva, José Pedro (Instituto de Ciências Sociais - Universidade de Lisboa [e-mail: jose.silva@ics.ul.pt]), **River Pollution and Local Environmental Action,** *International Sociological Association, Gothenburg, Sweden,*

¶ Water pollution, namely fresh water pollution, is a severe problem in today's world, one that is associated with water scarcity and constitutes one dimension of the increasingly acknowledged "water crisis". In a time of mounting concentration of population in urbanized areas, urban rivers are under intense pressure, originated by industrial & domestic waste waters, land usage and intrusion on both their beds & margins. The Tinto river, a tributary of Douro - one of the main rivers of the Iberian Peninsula - runs across three cities in the Porto Metropolitan Area, the second largest & most populated urban agglomeration in Portugal. This river has been affected by pollution problems along the last few decades a & still is, despite residents' protests and interventions by political authorities. A local environmental group emerged from this scenario, defining the rehabilitation of the river as their primary objective. Using data from interviews and documental analysis, this paper intends to rebuild the history of the Tinto's degradation, stressing its social causes & the measures adopted to address the issue, as well as the local environmental group's origins & its role in the acknowledgement of & response to the problem.

Silva, Manuel Carlos, Jorge, Ana Reis, Carvalho, Margarida & Queiroz, Aleksandra (Department of Sociology, University of Minho, Braga, Portugal, 4710-057 [tel: 00351939306913; fax: 253678850; e-mail: mcsilva@ics.uminho.pt]), **Conjugal Dissolution and Gender (In)equalities: A Study of Divorce Processes in Portugal,** *International Sociological Association, Gothenburg, Sweden,*

¶ Like other democratic societies, Portugal has known an important reduction of gender inequalities, mainly by the action of women's social movements and some political forces. However, recent (inter)national studies confirm the social borders and inequalities persistence in many contexts (work, values and symbolic regulations, institutional frames and daily interactions). In this paper we will focus our analysis of the conjugal dissolution processes and unequal distribution of power between men and women. Regarding these matters there is an extended debate, where we propose an articulation between the concepts of gender and class. We assume as fruitful an articulation of the Marxist model with the feminist one and, indirectly, a critical and synthetic crossing between (neo)Marxism and Weberianism, being this one also articulated with symbolic interactionism. Based on official statistics, in the analysis of some interviews about the motivations for/in divorce, and in the empirical evidence from the divorce judicial processes, we present some preliminary results of a collective project held on some regions of Portugal named: "Gender Inequalities in work and private life: from the norms to social practices". The central hypothesis of this project is that the forms of gender inequality and domination are tributaries of macro-economic and institutional mechanisms but they're also playing at the micro level (family, business, public and private institutions), involving both variables, namely, in a crossing of Weberian-Marxist perspectives, the presence/absence of certain level of empowerment by social actors. That means that women's position depends and/or differs in function of factors such as available resources and rewards, the place in the organizational and (re)productive sphere of the family and the place in the interactions and in roles negotiation. Key-words: Divorce, gender, class, inequalities, domestic power, women empowerment.

Silva, Manuel Carlos, Sobral, José Manuel, Ribeiro, Fernando Bessa & Ramos, Mariana (Department of Sociology, University of Minho, Braga, Portugal, 4710-057 [tel: 00351939306913; fax: 253678850; e-mail: mcsilva@ics.uminho.pt]), **Gypsies and non-Gypsies: Conflicting Images in a Vicinity Context - The Neighbourhood of Atouguia, Guimarães, Portugal,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper we intend to show up, based on a study of the "bairro social" (public housing neighbourhood) of Atouguia in Guimarães, where Portuguese Gypsies & Portuguese non-Gypsies live side by side, some of the images that each of the groups has of itself & of the other group. These are communities in trouble, territorially & socially devaluated, where in the case of the Gypsies they are associated to a stigma with historical deep roots. Understanding if there have been advancements in the inter-knowledge & in the social proximity of both groups, also means the assumption that the inter-ethnic coexistence, with some rare exceptions, is strongly influenced by prejudices & negative interactions & by rare contacts between both groups. Our empirical findings are based, on one hand, on a survey that was conducted in the neighbourhood, with a sample of 80 non-Gypsies and 14 Gypsies, & on the other hand, mostly to deal with the social representations, we relied on some on-spot observation & mainly on interviews. Theoretically, we draw on different perspectives in ethnicity & social classes, deriving from a combination of Weberian & Marxist approaches, but especially incorporating the approach suggested by Veit Bader that structures the phenomena of interethnic conflict & of racism taking into account the societal, organizational & interactive levels. The relations between Gypsies & non-Gypsies in this neighbourhood, where they meet each other in common public spaces (streets, bars, shops), are characterized by the differentiated degree of resource control, by the different habits & lifestyles & by a considerable social and relational distance based on stereotypical images of the Other, based on prejudice & interethnic negative representations, an overall situation of latent, & sometimes manifest, conflict. Key-words: gypsies, prejudice, stigma, representation, stereotype, power, racism

Silva, Maria & Teodoro, Vitor D. (DSCA, FCT - New University of Lisbon, Monte de Caparica, 2829-516 Caparica [tel: + 351 214580322; e-mail: ceciliasilva@netcabo.pt]), **Examining a Physics-Chemistry Exam Using Extended Angoff and Contrasting Groups Methods,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper reports & provides comparative standards setting results from the 2009 Portuguese Physics-Chemistry first exam for the last year of secondary schooling using different item-grouping approaches. Two standard setting methods, Extended Angoff and Contrasting Groups, were applied in order to study the differences in item, panellist & item difficulty in the final performance. For each method, a panel of twenty-five school teachers devised a set of content standards & analyzed this exam with selected-responses & polytomous constructed-responses. Preliminary conclusions point to teachers overestimating student performance standards. These conclusions will be used on future research about combining different methods to obtain performance standards in complex assessments.

Silva, Teresa Almeida (Instituto Superior de Ciências Sociais e Políticas (Universidade Técnica de Lisboa), Rua Almerindo Lessa, 1300-663 Lisboa - PORTUGAL [tel: (+351) 965756191; e-mail: tasilva@iscsp.utl.pt]), **The Modern Language of Terror: The Role of Media on Terrorism,** *International Sociological Association, Gothenburg, Sweden,*

¶ With the attacks of September 11, 2001, the world awakened, quite violently, to the phenomenon of terrorism. This does not mean that terrorism did not exist before, however the attacks on the Twin Towers of the World Trade Center seems to have served as a propellant for Western society to pay more attention to this form of subversion that has been used as an instrument of international politics. In fact, after 2001, the states themselves began to be more attentive to their safety & have joined in this fight against a common enemy: international terrorism. In this communication (that we intend to present in the joint session about the language of terror), we will examine the phenomenon of international terrorism & we will see how it is being used as a counter-power, whose main purpose is to achieve a political objective. We will also analyze how the media have been used by terrorists in order to achieve their objectives & how the media can be a vehicle for the transmission of the terrorist ideology. Consequently, we will try to establish an association between the use of the media & the proliferation of terrorism.

Simmons, Kevin M & Sutter, Daniel (Austin College, 900 N. Grand Suite 61591, Sherman, TX USA 75090 [tel: 19038132341; e-mail: ksimmons@austincollege.edu]), **Preparing for Danger: On the Impact of Tornado Watches on Tornado Casualties,** *International Sociological Association, Gothenburg, Sweden,*

¶ Pan American Abstract Tornado watches issued by the Storm Prediction Center alert residents to the potential for tornadic thunderstorms to develop. Tornado watches could create value to residents by conveying information about potential future risk. Residents would be unlikely to take any protective action when they learn that a tornado watch has been issued for their area, because the time necessary to actually respond for a tornado (that is, take shelter) may be only a few minutes or seconds. But lead times on tornado warnings are relatively short, an average of less than 15 minutes in 2004, & since residents will not necessarily receive the warning as soon as the warning is issued, prompt response upon issuance of a warning is crucial. A tornado watch could alert residents to quickly seek out information on a possible tornado warning if severe weather subsequently threatens, or ensure that emergency alert radios or pagers are ready for a nighttime watch. This paper examines the impact of tornado watches on tornado casualties using a data set of over 20,000 tornadoes in the U.S. between 1986 & 2004. Tornado warnings & warning false alarms are also controlled for in the analysis. We test both for a direct impact of watches on casualties & for an impact of watches on the value of subsequent tornado warnings, particularly for nighttime tornadoes.

Simo, Montserrat (University of Barcelona; Dept. of Sociology, Avda.Diagonal, 696 Room 340 Building 696 Barcelona 08034 Spain [tel: 0034934024478; fax: 0034934021542; e-mail: msimo@ub.edu]), **Social Effects of Crisis: Impacts upon Medium Class and Urban Sprawl,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the last years, Spain has involved in a strong estate boom that supposed a change on the residential strategies of the medium class. This process was especially important in the Metropolitan Region of Barcelona. The immoderate increase of the prices together with a policy of easy concession of mortgage credits both contributed to a change of the residential model. The medium classes left the big cities, too expensive & with houses little adapted to their needs. Young couples with or without sons got houses in a new market: the urbanizations in the sprawl areas. The new sprawl model -characterized for a type of constructive morphology of low density & high specialization & segmentation, with scarce or null presence of other urban functions- has invasive consequences for the environment & huge energetic costs. This is a subject that occupies time & effort of researchers and professionals. However few woks consider the effects this way of urban expansion about the social relations, nor about the quality of life, understanding in the aspects tied to the social sustainability. The problems are so much more important how we think -this is our hypothesis- that a good social functioning necessarily goes associate -although not exclusively- at the density, heterogeneity & quality of the social interrelation and that the disperse urban morphology influences on them, weakening them. The strong global financial crisis has effects over these families who went to live to sprawl areas: the increase of the mortgage, the unemployment & the difficult to access to the services of the city aggravates their situation, especially people with dependences & with less economical resources hitting upon their condition of social vulnerability. The main aim of this communication is to analyze the expansion of disperse urban planning related to new residential strategies of the medium class using results from a public project financed by the Spanish Government. The empirical work carried out a survey in 21 residential areas classified by demographic characteristics and socioeconomic level & a set of interviews in depth carried out in residents in these areas.

Simpson, Paul (Manchester University, University of Manchester, Oxford Road, Manchester M13 9PL [tel: ++44 0161 865 1744; e-mail: Paul.Simpson-2@postgrad.manchester.ac.uk]), **Fairy Tales: 'Suffering, Surviving and Surpassing' in Midlife: the Cultural Politics of Midlife Gay Men's Responses to Ageing,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper will explore spoken & corporeal narratives co-produced in interviews with 27 men in Manchester & 20 observations within its "gay Village." It analyses narratives/practices relating to the production of surface appearances via body management/modification. Midlife/older gay men's corporeal practices serve to distinguish them from forms of embodiment associated with: 1) younger gay men; 2) heterosexual men of a similar generation; & 3) older de-sexualised masculinity. These forms of distinction are mobilised through a polyvalent notion of "authenticity" that can serve as a form of emotionally-inflected cultural capital & a practical moral framework for understanding ageing. Age-appropriate "dressing for comfort" looms large & is contrasted with more ostentatious, (inauthentic), youth-coded forms of body modification/display/interaction. Moreover, changes in bodily labour & interaction with ageing register in three different (sometimes overlapping & contradictory) ways. They can be experienced as: 1) loss, decline, exclusion; 2) negotiation with ageism; 3) creative recuperation/resistance to negative definition. Following Plummer's triptych (1995) of late modern narratives, these elements constitute a cultural politics of gay male ageing involving "suffering, surviving & surpassing" - governmentalised, negotiative & agentic responses to conjoined discourses on gay male ageing. Singelmann, Joachim & Siebert, Rosemarie (Dept. of Sociology, Louisiana State University, Baton Rouge LA 70803 U.S.A. [tel: 225 578 1646; fax: 225 578 5102; e-mail: joachim@lsu.edu]), **The Importance of Management for Agricultural Success in the Context of EU Policies: A Case Study in Eastern Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ Twenty years after the fall of the Berlin Wall, agriculture remains the only industrial branch in unified Germany that is more productive in the east than in the west. Much of this situation has to do with the fact that despite every attempt by the government after unification to support the (re)establishment of family farms, the overwhelming proportion of agricultural land in eastern Germany is cultivated by cooperatives & limited partnerships. These farm enterprises own and/or lease much larger amounts of land than the typical family farmer: in western Germany, agricultural enterprises, on average, cultivate 35 hectares, compared to 198 hectares in eastern Germany. This paper is based on a longitudinal study of the transformation of agriculture in one country within the former East Germany for which we regularly collected production and employment data as well as conducted expert interviews. In this county, agricultural land has a low soil value & farming is dominated by cooperatives & limited partnerships. The key question that we ask in this paper is, how important is the adaptation of agricultural enterprises to EU policies for their long-term economic viability? We first describe the continued existence of all agricultural enterprises in the county of our study twenty years after the fall of the east German regimeaa situation unparalleled in any other industrial branch. Analyzing the latest wave of expert interviews, we show how the ability of managers to diversify their enterprise has affected the outlook for a continued viability of the farms. Agricultural enterprises that open up non-agricultural sources of income minimize risks & gain

resource efficiency. For example, by engaging in farm tourism, retail marketing of their products, or establishing linkages to wholesale & distribution channels), farms lower become less affected by price variations for agricultural products, & those non-agricultural activities help them to better utilize their means of production such as buildings, machines, & labor. The gradual shift of agricultural support by the EU from production agriculture to more general rural development (the so-called second & third column of the EU agricultural policy) facilitates such diversification. Thus, managers who take advantage of those opportunities to search for new & future activities & markets hedge income & employment of their farms. This is especially important for agricultural enterprises located in areas with disadvantaged conditions of production and/or limited availability of land suitable for cultivation.

Sinha, Nistha, Buvinic, Mayra & Sabarwal, Shwetlena (The World Bank, 1818 H Street NW, Washington DC, USA [tel: ; e-mail: nsinha@worldbank.org]), **Impact of Aggregate Economic Shocks on Women: A Review of Evidence,** *International Sociological Association, Gothenburg, Sweden,*

¶ Do women weather economic shocks differently than men? A review of evidence from past crises shows this to be the case. In the past, women from low-income households have typically entered the labor force, while women from rich households have often exited the labor market in response to economic crises. In contrast, men's labor force participation rates have remained largely unchanged. Evidence also suggests that women defer fertility during economic crises; and that child schooling & child survival are adversely affected, mainly in low-income countries, with adverse effects on health being greater for girls than for boys. In middle-income countries, by contrast, the effects on children's schooling & health are more nuanced, & gender differences less salient. Providing women in poor households with income during economic downturns makes economic sense. We review workfare programs & cash transfers and find that the former provide poor women with income only when they include specific design features. The latter have been effective in providing mothers with income & protecting the wellbeing of children in periods of economic downturn.

Sinhoretto, Jacqueline (Universidade Federal de São Carlos, São Carlos, Brazil [tel: 55 11 97075187; e-mail: jacsin@uol.com.br]), **The State Conflict Settlement Field: Trying to Understand Brazilian Four Intensities Justice,** *International Sociological Association, Gothenburg, Sweden,* (POR)

¶ The paper aims to interpret the functioning of the State conflict settlement field from the perspective of disputes among corporations, knowledge & institutions, also rituals that produce different results & effects. A reflection on the Brazilian case proposes the existence of at least four conflict settlement logics or four interaction intensities to which correspond hierarchies of rituals, persons & types of conflict. In the first intensity level on the scale, conflicts are resolved taking into account the rights & guarantees of all those involved & all legal system potentialities are in action; in the second, we have common justice and legal rituals, with its access barriers & its service delivery failures; in the third, the informalized courts & police services have facilitated access to justice, but individual guarantees are relaxed; the fourth corresponds to the use of informality & non-judicial techniques of conflict settlement by State institutions. Informal, unofficial or illegal rituals are non-negligible part of conflict settlement field, always in dispute with legal rituals. Collective actors, such as social movements have politicized the field & they have achieved to introduce innovations in legal system; but many innovations have their effects limited by the fragmentation of the field & their logics. There are limits to activist intervention insofar as universal themes are received locally & have their meaning transmuted, been absorbed in accordance to internal field logics & hierarchies.

Sire Pierre-Olivie, P-O.S. (Université Toullouse II le Mirail, Toulouse, France, 31500 [tel: +33 561489072; e-mail: posire@hotmail.fr]), **CSR and Social Organization: Civil Society as an Industrial Relation's Actor?,** *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ This article investigates CSR in a semi-peripheral country (Mexico), to underline how corporatism leads to the association of workers unions with civil organizations to take CSR into account and to democratize industrial relations. We characterize the corporatism in Mexico to understand that beyond industrial relations sphere, it is a way of social governance complicating CSR compliance. Next, we specify dominant instrumentations of CSR by multinational firms, looking at its consequences on workers unions and CSO's actions. The adaptation of CSR to the institutional expectancies makes it a corporate culture, post-fordist management tool to obtain empowerment and legitimacy for the firm. Then, we show how workers unions manage CSR to democratize industrial relations, and why they must associate themselves with CSOs. Finally, we expose how application of CSR within a semi-peripheral and corporatist country has to pass by CSOs, making them actor of industrial relations to promote CSR and democratic industrial relations. Sawn the role of CSOs in the CSR promotion and the democratization of workers unions operations, we conclude on the centrality of this actor that reflects the institutionalization of CSR, generating the apparition of the firm as a CSO actor to impose it vision to the whole society.

2010S02476

Sire, Pierre-Olivier (Université Toullouse II le Mirail, Toulouse, France, 31500 [tel: +33 561489072; e-mail: posire@hotmail.fr]), **CSR: Rationalized Myths of a New Firm's Culture within Semi-Peripheral Countries?,** *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ We propose to show how the Corporate Social Responsibility can be a postfordist management tool & a communication strategy in a semi-peripheral context as is Mexico. We initially describe Mexican corporatism as a way of social governance which reveals national legal differentials within the work's sphere. Then we give a brief history of the CSR. Next, we see how firms are using it to work out management policies. The adaptation of this management tool to institutional expectancies produces an instrumentation of CSR at organizational ends as a "postfordist tool" by the propagation of a firm culture to obtain legitimacy & control. Lastly, we approach its discursive use throughout various communication strategies. CSR confused with philanthropy becomes brand image by the green washing or window dressing, generating a common language drifting of the economics' government, vector of the firm's culture. CSR becomes then the substrate of rationalized myths aiming at establishing reliance. Across the communication and organizational strategies, because of national differentials within the globalization, we conclude that CSR can generate firm's culture establishing rationalized myths by its discursive instrumentations.

Sisjord, Mari Kristin (Norwegian School of Sport Sciences, P Box 4014 Ullevaal Stadion, 0806 Oslo, Norway [tel: +47 23262426; e-mail: mari.kristin.sisjord@nih.no]), **The Quest for Challenges by Sideways Movements. A Study of Adult Snowboarders,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper focuses on adult snowboarders' experiences from & motives for snowboarding with particular reference to challenges, bodily expressions & risk taking. The study was conducted at a summer snowboard camp in Norway, June 2008. The camp attracted 12 participants, among those eight were interviewed (seven males and one female). One of the interviewees was 19 years, the rest were aged 33-41 years. The results reveal that except for the youngest all participants had formerly done a lot of cross-country and downhill skiing, & in search for new challenges they had taken up snowboarding. Improvements & performance appear significant, on jumps as well as free-riding & off-pist snowboarding. With regard to stretching ones limits & risk taking, the majority expressed the feeling of flow & "kick" as major ingredients while emphasizing the need of control as well as perceptions of consequences, which some of them explained in terms of age and maturity. Furthermore, the interviewees feature two main categories: one dedicated to a variety of board sports whereas the other associates more to out-door life, nature & mountaineering. The latter is also reflected in the participants' expressions of bodily experiences through snowboarding. The results are discussed in relation to risk taking in alternative/extreme sports as well as perspectives of modernity, identity & reflexivity.

2010S02479

Sisodia, Madhu (Sociology, Banaras Hindu University, DAV PG College, DAV Pg College, Varanasi, India [tel: 91-9450395248; e-mail: madhusisodia@gmail.com]), **Widows of Vrindavan (Mathura): A Sociological Analysis,** *International Sociological Association, Gothenburg, Sweden,*

¶ Vrindavan is situated 12km away from the Mathura City (Uttar Pradesh), on the bank of Yamuna at 27.33N & 77.41E the place is the heart of Brij where Radha & Krishna acted divinely. In Padam Puran it is described as place of divine bliss, body of the great almighty etc. That's why it has been a center of religious people come here to reside till remaining lives. They gets salvation by taking part in Raslila, meeting with sadhus, Kirtan, Bhagvat etc. Preciously this is the reason which attracts widows for coming in Vrindavan from the whole country, particularly from West Bengal, E-staes & Bihar come here they search the meaning of their chanting a divine word "hare Rama Hare Krishna." These widows are isolated from family life & reside in various Ashram to search their aim of life. One can see them as beggars in front of houses & temples. Being in toughest struggles of life. Physically & mentally tortured. They try hard to get their two times meals. They get help from government & NGOs but that is not sufficient. These help are one dimensional & practices of corruption are there. Most of the widows do not get these help. Proposed research contains three units of study upon which the sampling is based: (1) Widows living in Ashrams. (2) Manegement, persons involve in ashrams. (3) Shopkeepars reside near to ashram or person who observe them. Purposeful sampling is the basis of study. The place of study is Vrindavan. Interview-schedule & Observation will be used as primary source for fact finding secondary sources will be used if needed. Proposed research objectifies following points regarding widows: (1) causes responsible to move widows to Vrindavan from their native place & causes behind their choice of Vrindavan. (2) Economic sources of widows & role of Ashram. (3)Day to day living of widows. (4) Main problem of widows.

Siverskog, Anna (National Institute for the Study of Ageing and Later Life, Linköping University, Norrköping, Sweden 601 74 [tel: 004611363462; fax: 004611105590; e-mail: anna.siverskog@liu.se]), **Lustful Old Chaps and Mature Women - Representations of Ageing Bodies in Web-Based Gay Communities,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Internet offers new sites for establishing contacts & for presenting the self. In web-based communities where persons seek friends, partners & sexual contacts, the personal profiles vary from shorter personal descriptions with mug shots to more explicit pornographic texts with pictures of the naked body. This qualitative study is based on 284 profiles of persons identifying themselves as homo-, bisexual, transgender or queer aged 60 and over in two web-based gay communities. It aims to explore how the self & the ageing "queer" body is presented, & how notions of (old) age, class, gender & sexuality are constructed and negotiated. The thematic analysis indicates that ageing bodies in these profiles are associated with physical decline, constructed in contrast to youthfulness & attractiveness. This is at times handled by the use of self-irony & humour; by emphasizing maturity & experience as connected to ageing; or by ignoring age and instead accentuating sexual preferences, cultural interests or class. There is also expectations of personal responsibilities to keep the own body young, fit & in shape. Simultaneously, conclusions show how these communities can constitute social arenas for agency & for challenging ideas of old age as synonymous with asexuality, passivity & frailty.

Siza, Remo ([e-mail: remo.siza@tiscali.it]), **The Concept of Social Sustainability in Community Development,** *International Sociological Association, Gothenburg, Sweden,*

¶ It is possible to identify two main approaches, each based on differing assumptions about the role of social relationships in community development: (1) in a self-referential, models needs, goals and policies are intended as relatively standard phenomena, with policy-making regarded as a more or less uniform process; (2) communicative & collaborative models are based on dialogue and interaction, engaging all those with differing interests in the search for solutions to a problem. Further analysis leads to an elaboration of this distinction, introducing the concept of social sustainability: a program has to identify a degree of coordination considered acceptable respecting the growing wishes of groups, citizen to reinforce own social autonomy.

Sjöblom, Björn (Department of Child Studies, Linköping University, Tema Barn Linköpings Universitet 581 83 Linköping [tel: +46 735 055295; e-mail: bjorn.sjoblom@liu.se]), **Spatial and Temporal Coordination in Co-Located Computer Gaming,** *International Sociological Association, Gothenburg, Sweden,*

¶ The focus of this paper is to explore some of the methods players of co-located multiplayer computer games have for coordinating their actions & of how they manage the temporal & spatial structures of the game in tight cooperation with their co-players. The data used in this analysis is video recordings of multiplayer game-sessions in internet cafés. The use of video recordings, supplemented with video capture of the players' screens, provides detailed access to most of the communicative modalities utilized by the players. Achieving coordination, a prerequisite for success in these game (such as World of Warcraft & Counter-Strike), involves a complex interplay between actions both on & around the screens. In line with ethnomethodological research, this study is an analysis of the interactional work necessary for succeeding in the game & of the practical actions whereby a group of players become a team. The spatial & temporal order of the game-play is understood as an interactional achievement, & from this perspective, coordinating actions in time & space is considered the players' own problem that is discovered, accounted-for and managed using the local material & semiotic resources at hand.

Slariya, Mohinder Kumar (Department of Sociology, Govt. Post Graduate College Chamba, Himachal Pradesh University, Shimla India, Chamba, Himachal Pradesh, India-176310 [tel: +91 1899 232040; e-mail: mkslariya@gmail.com]), **Psycho-Traumatic Analysis of Displaced and Native People of Chamera-I in Chamba district of Himachal Pradesh India,** *International Sociological Association, Gothenburg, Sweden,*

¶ Rivers have had remarkable contribution in the history of development since the inception of civilization. All the important civilizations of the world had developed in the vicinity of the rivers. The rivers have gained more importance after the invention of electricity. These days rivers have been heavily targeted for the hydroelectric power generation, which is necessary for the development & for international & national interests, but the local interests of the people who are living in the vicinity of the dams, who have been deprived off all the ecosystem services which is being provided by that ecosystem & their interests and concerns has not been listen by the policy makers as well as by the profit makers. It is the lobbyist pressurized model of development, where interests of the local people have always been ignored and this led to trauma for the people who have been displaced or living in the vicinity of developmental project. The present paper is based on primary data collected by the researcher during UGC sponsored research project by applying four point Likert Scale analysis. For this anal-

ysis 200 respondents (displace & native) from the commissioned Chamera-I power project have been taken for empirical analysis. This presentation is an attempt of the researcher to highlight the deprivations received by native as well as displaced & their responsibility to cause psychological trauma. The generalizations derived out of this research can apply to understand the real causes of psychological trauma because of such types of developmental activities in any part of the world. Key words: rivers, ecosystem, displaced & native people, psychological deprivations, trauma.

2010S02484

Slaughter, Christine (Department of Sociology, Yale University [e-mail: christine.slaughter@yale.edu]), **Gendering Political Legitimacy: The Case of Nancy Pelosi,** *International Sociological Association, Gothenburg, Sweden,*

¶ In 2007, Congresswoman Nancy Pelosi was inaugurated the first woman Speaker of the House of Representatives in American history. Hailed as a gender milestone, the occasion provides an opportunity to examine gendered discourses of citizenship & political legitimacy in American culture. In order to examine assumptions made about gender & sexuality in relation to an individual's legitimacy as a democratic political actor, I analyze the content of several major media events related to Pelosi's accession: her inaugural address, two in-depth television interviews with major journalists, & an interview on a popular late night television talk show. I find that Pelosi attempts both to neutralize & to make into assets "feminine" traits that have previously been coded as anathema to qualification for political leadership: motherhood, domestic decorum, & domestic discipline. I also find that Pelosi balances these re-coding efforts with her efforts to frame herself as an "authentic" American woman in terms of gender & heterosexuality. That is, to be a credible re-coder of women's roles in the democratic political sphere, she must herself be seen as a competent performer of womanhood in the broader public sphere. Through her discursive negotiations, Pelosi both symbolically expands the range of legitimate democratic actors in terms of gender as well as reinscribes hegemonic notions of what a female American citizen, & thus a potential democratic political leader, must be in terms of gender & sexuality. I conclude that Pelosi's symbolic inclusion in the political sphere through reliance on implicitly gendered qualifications may have the ambiguous consequence of enabling a particular type of woman to claim legitimacy as a political leader, while continuing to exclude others.

Small, Neil (School of Health Studies, University of Bradford, Bradford, UK BD5 0BB [tel: +441274236456; fax: +441274236458; e-mail: N.A.Small@bradford.ac.uk]), **Class, Ethnicity and Migration History, Understanding Infant Mortality and Morbidity in a UK City,** *International Sociological Association, Gothenburg, Sweden,*

¶ Infant mortality is higher in Bradford (a city in the north of England) than UK averages & higher than other UK cities with similar deprivation. Mortality is highest in babies whose mothers are of Pakistani origin, highest rates are for first generation migrant mothers but rates are still higher than city averages for babies of second generation, UK born, mothers. A similar pattern is evident in low birth weight & infant morbidity. A birth cohort study, Born in Bradford, began recruitment of pregnant women in March 2007. To date (April 2010) 10000 women have been recruited, the cohort target is 13000. Half of those recruited to the cohort are of Pakistani origin. Mothers & their babies and, where possible, fathers are followed up to consider the developing health of the baby in the context of their biological & social context at birth. This paper draws on Born in Bradford data & data from local health agencies to plot social class, ethnicity & migration history to patterns of infant mortality & morbidity. What emerges is a complex picture in which the shortcomings of analysis by class are highlighted. It is argued that excess mortality in babies of Pakistani origin is best described using a hybrid construction of deprivation, ethnicity & migration history. This formulation is considered in terms of indicators of enhanced risk; health relevant behaviour (diet, smoking & alcohol use), age of mothers, living conditions, access to antenatal care, social practices particularly choice of marital partner, social capital. Some of these indicators correlate with social class, some are best linked to ethnicity, some appear to relate to length of time in the UK. The paper considers cohort data in the context of an ongoing debate about class gradients in the health of British South Asians.

Smart, Carol (University of Manchester, Manchester, UK M13 9PL [tel: +44 161 2750262; e-mail: carol.smart@manchester.ac.uk]), **Memories, Secrets and Family Life in England,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper I shall explore whether what family members cannot remember, or what they are not sure about remembering, can be an important facet of family memories. With the rise in amateur genealogy, more people are discovering what they did not know about their families. For example they may discover that their grandparents had illegitimate children that were never mentioned, or they might find out that a sibling has a different father. It is increasingly difficult to keep family secrets (or so it seems) and so memories can be abruptly challenged when "truth" emerges. But it is also the case that although people may not know their family secrets (by definition) they may be aware that something is being hidden & this memory of things hidden may be as significant as a memory of things known. This paper will be based on an analysis of written narratives held in the Mass Observation Archive at the University of Sussex, UK. In 2000 the panellists who write for the Archive were asked to write about their family history & also their family secrets. Many denied having secrets but other respondents wrote in complex ways about having secrets, holding secrets & discovering secrets. Although this area poses incredibly difficult methodological problems for the researcher I shall argue that how family secrets are managed are part of the process by which families represent themselves to both themselves and the outside community.

2010S02487

Smeby, Jens-Christian (Centre for the Study of Professions, Oslo University College, Box 4, St.Olavs plass, 0130 Oslo, Norway [e-mail: Jens-Christian.Smeby@hio.no]), **Developing Professional Competence,** *International Sociological Association, Gothenburg, Sweden,*

¶ One of the key challenges for our society is how to recruit and qualify professional personnel in education, health & social work. Pre-service professional programmes are criticized for lack of quality as well as relevance for future professional work. On the one hand, graduates from these programmes are confronted by an increased demand for evidence-based knowledge. On the other hand, they are criticised for lacking practical knowledge & skills. The point of departure for this paper is that simple dichotomies between theory & practice are inadequate to understand these challenges. Professional competence is based on practical synthesis including "knowing that" as well as "knowing how". The present paper examines the development of professional competence in terms of codified knowledge & practical skills among students in teaching, nursing social work. Data are drawn from a longitudinal Database for studies of Recruitment & Qualifications in the Professions in Norway (StudData). While higher education literature tends only to focus on the importance of study quality & student efforts, preliminary results indicate that students' learning outcomes in these professional programs are positively related to being encouraged to focus on the relationships between theoretical and practical aspects of professional competence.

Šmídová, Iva (Sociology (Gender Studies Program), Faculty of Social Studies, Masaryk University, Brno, Czech Republic [tel: +420 549 497 090; fax: +420 549 491 920; e-mail: krizala@fss.muni.cz]), **Do the right thing! Men at Childbirth,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper elaborates the question & feminist dilemma whether the presence of fathers at childbirth is an experience that furthers gender equality or presents an opportunity for men to dominate yet another sphere of power. The argument is based on a small scale qualitative empirical study in the Czech context, where the presence of men-spouses at childbirth has massively occurred only as late as at the turn of the 2000s. The paper presents gendered aspects of biomedical approach to childbirth & their relation to representation of masculinities in the birthing room. The paper concludes, not surprisingly, that there are several aspects of (lay) men's presence at childbirth that encourage advancement of gender equality but there are counterparts that reproduce the status quo. The paper describes these aspects & analyses their potentials as well as their stumbling-blocks. Special analytical attention is directed towards similarities & differences of the Czech praxis in comparison to the vast body of international research on gender & reproductive medicine.

2010S02489

Smietana, Marcin W. (University of Barcelona, Department of Sociological Theory, Barcelona, Spain, 08034 [tel: +34 934034896; e-mail: marcin.smietana@ub.edu]), **Trust and Communication between Lesbian and Gay Families and Their**

School Communities, *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores how communication is framed by imposition of assumptions resulting from inequality of social positions. In particular, it deals with the emergence & role of trust in the process of construction of family communication strategies by members of minority families with lesbian or gay parents, & their school communities. Following J. Searle's (2004) critique of J. Habermas' (1983) theory of communicative action, it takes into account the impact that the social context has on communication. The paper is based on in-depth interviews with twenty lesbian mother & gay father families in Spain from 2008 to 2010. The interviewed families assumed different communication strategies: open communication, selective disclosure, & non-disclosure. If on the basis of an intersubjective evaluation process the families came to perceive their school communities as trustworthy, they ventured on open communication. Nevertheless, even in similar interaction contexts some of the families were more prone than others to assume open communication, which was related to the parents' ideas about their rights & social inclusion. Habermas, J. (1983) The Theory of Communicative Action. Boston: Beacon Press. Searle, J., Soler, M., eds. (2004). Lenguaje y ciencias sociales. Barcelona: Roure.

2010S02490

Smirnov, P.I. & Smirnov, Ph.P. (St-Petersburg State University, str. Smolnogo 1/3, entry #9, St-Petersburg, Russia [tel: 7-812-710-00-77; fax: 7-812-710-00-77; e-mail: philipps@kristom.com]), **Civilization: Natural and Controlled Stages of Social Evolution,** *International Sociological Association, Gothenburg, Sweden,*

¶ Some eminent sociologists of the 20th century - K. Popper, R. Nisbet, C. Tilly, I. Wallerstein - expressed doubts regarding the applicability of the concept "evolution" to the process of social changes. It was stated that processes happening in a society cannot be described & understood using the approach of strict causality. However, the current state of a modern society indicates that dignifying life of the mankind is doubtful without elaborated scheme of social evolution and universal guiding line for the control over the further society evolution. General logics of social evolution can be traced by the change of human position in a society. Describing this change with the help of the activity-value approach (it is being developed by A.O. Boronoev, Y.M. Pismak & P.I. Smirnov in St-Petersburg) one can construct ideal types (models) of such evolutionary stages as wilderness, barbarism & civilization. The study of features and indicators of social evolution ideal types shows the regularity of two natural civilizations appearance: home-service civilization and market one. They appear on a different technological basis. For example, countries of home-service civilization are ancient Egypt, China, & Russia (since Moscow became the political capital). Athens, Novgorod Republic & Western countries are examples of the market civilization. The study of the market civilization leads to the conclusion that its long existence is doubtful. That is why the USA intentions to take over the evolution process, taking market civilization type as a reference point are extremely dangerous for the mankind. Authors can propose (as discussion) an ideal type of spirit-game civilization as a long-term guiding line for the controlled social evolution. Moving in this direction, mankind could save itself & solve its main problems, in particular, give the opportunity for every human being to realize himself in the environment. Key-words: evolution, civilization, ideal type, activity, values.

Smit, Ria & Rugunanan, Pragna (Department of Sociology, University of Johannesburg, Johannesburg, South Africa, 2006 [tel: +27115592319; e-mail: rsmit@uj.ac.za]), **Being a Refugee in South Africa: Experiences of Forced Migration, Family Life and Well-being,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since 1994, when South Africa made the transition to democracy, this country has become the place of destination for many asylum seekers from across the African continent. According to the UNHCR South Africa was the largest recipient of applications for asylum and refugee status in the world in 2008. One can therefore comprehend that nearly half a million individuals have officially sought refuge in South Africa since 2002. The existence of a relatively large refugee population in South Africa has stimulated important research in the field of forced migration studies. This paper is based on the findings of a qualitative study done in South Africa among refugees living in Pretoria who originally came from central African countries. Rather than utilising a deficit or pathogenic approach, which questions the individual & family's ability to cope with challenges in the face of adversity, this study embraces a fortigenic or strengths paradigm. The study aimed to shed light on the perceptions & experiences of refugees with regard to inter alia their daily life experiences & survival strategies; their individual sense of well-being; & their family life. In light of the fact that refugee families are often exposed to prolonged periods of adversity & accumulative stressful life events, special attention was paid to resilience & whether this quality is evident in the family lives of the refugees in the sample.

2010S02492

Smita, Verma & Divya, Pande (Isabella Thoburn College, Lucknow-226016, India [tel: +91-522-2310803; e-mail: smittenULyeah@yahoo.com]), **Sexuality and Reproduction in Globalized India: Mapping the Gender Dynamics of Fertility Behaviour,** *International Sociological Association, Gothenburg, Sweden,*

¶ Modernization & Globalization have opened doors for women apparently opening new vistas for them but the socially induced particularities of woman's tangentially ingrained identity still remains intact. Although female identity easily features as another site of ideological disputation & examination of obligatory meanings, it remains instead entwined in conventional set-up of prescribed, apparently colossal & irrefutable, corporal figurations. The construction of new womanhood by modernity, & as offshoot of globalization seems to be simultaneously attempting at challenging & enlivening dominant patriarchal edifice of feminine identity & sexuality. Studies of fertility behavior & needs have mostly overlooked gender dynamics & sexual relations and reproduction. Some of the studies show that the selection and acceptability of a fertility regulation method is strongly influenced by the predilection & pressures of other people in a woman's life particularly her spouse. Studies till now by & large have shown that women have no control over their body, pregnancy, contraception & abortion. The patriarchal Indian society provides a prolific ground to get insights into the role of men in regulating the sexuality & fertility pattern, which could have significant implications for family planning & reproductive health policies. The irony of the situation is that all these impinge women's health status in a major way & lack of decision making in this regard only stands to disadvantage the women further adding to her physical & psychological discomfort. It is interesting to study how the interplay of gender relation and self-image, & socio-cultural norms & expectations influence sexual behavior. In fact, a gender based approach is critical because of a sexual double standard in most cultures that allow a man but not a woman to have multiple sexual partners .Such inequality in sexual power & control often leaves little room for women to protect themselves against infection as well as unwanted pregnancy. In this context, understanding the sexual attitude and behavior of the male partner becomes imperative to any effort at understanding the fertility behavior of women. Against these backdrops this paper attempts to analyze the socio-cultural and demographic determinants of fertility behavior of the educated women in India with focus on Lucknow. The paper would locate the difference between two groups of women--the educated and economically independent & the educated homemakers regarding the autonomy & the power exercised by them over their own bodies. It will investigate how lived religion explains the process behind fertility behavior in both the groups of women & also examine the interplay of globalization, gender, education & religion to see how women engage themselves to control their body in "private spaces". This paper attempts to underscore the importance of power and negotiation within the sexual relationship-throwing light upon the differences in women's & men's access to & control over resources influencing fertility behavior. This study would contest the foresaid questions & issues about fertility behavior and human rights using both qualitative & quantitative data using the interview schedule & case study. Key words: fertility behavior, sexuality, autonomy, negotiation, religion, gender

2010S02493

Smith, Andy (Chester Centre for Research into Sport and Society, Department of Sport and Exercise Sciences, University of Chester, Parkgate Road, Chester, CH1 4BJ [tel: +44 (0) 1244 513387; fax: +44 (0) 1244 511337; e-mail: andy.smith@chester.ac.uk]), **The Politics and Policy of Physical Education and School Sport: A Case Study of School Sport Partnerships in North-West England,** *International Sociological Association, Gothenburg, Sweden,*

¶ One of the most significant youth sport policies to have been introduced in schools in England has been the School Sport Partnership (SSP) programme, which was launched in 2006. The SSP programme is now central to the implementation of the Physical Education, School Sport & Young People (PESSYP) strategy & is now an important infrastructure through which government seeks to achieve its sports-specific goals & non-sport

objectives related to physical education & school sport. This paper draws on data generated by semi-structured interviews conducted in June & July 2008 with 14 Partnership workers from a SSP in north-west England to shed light on aspects of the political & policy processes that have been associated with the introduction of the SSP programme. In particular, the paper explores how the desired outcomes of the programme are constrained by the conflicting political & policy priorities of government & how these limit the extent to which the participating groups can effectively pursue their policy goals.

Smith, Justin G. & Jussaume, Raymond A. Jr. (Community and Rural Sociology, Washington State University, Pullman, WA 99164-4006 [tel: 509-335-7626; fax: 509-335-2125; e-mail: rajussaume@wsu.edu]), **Rhetoric and Realities of Social Equity with Respect to Agri-Food Systems,** *International Sociological Association, Gothenburg, Sweden,*

¶ The growth of alternative agri-food systems in many represents a "moral shift" in the ways we collectively produce & consume food. The alternative system has been framed in this view as a more integrated & sustainable agri-food system that address the perceived shortcoming of the conventional system. Supporters of the conventional system are seeking to utilize the language of sustainability to demonstrate their own social responsibility while maintaining the perceived productive superiority of the conventional system. It remains unclear whether such efforts represent an attempt to address the shortcomings of the conventional agri-food system, or an effort to re-frame the image of the conventional agri-food system. While sustainability is conceptually linked to economic, environmental & social equity dimensions, much of the ongoing research on agri-food system development does not adequately consider the extent to which social equity is being addressed. The purpose of our study is to better understand the degree to which the rhetoric of social equity with respect to alternative & conventional agri-food systems coheres with reality. Using evidence from the United States, we compare the frames used among actors engaged in alternative & conventional agri-food systems, & we examine the extent to which social equity is actually being addressed.

2010S02495

Smith, Philip (Yale University, Department of Sociology, 140 Prospect Street, New Haven, CT 06511 [e-mail: philip.smith@yale.edu]), **Communicating Climate Change: The Case of Al Gore and "an Inconvenient Truth",** *International Sociological Association, Gothenburg, Sweden,*

¶ In contrast to other mooted global or environmental threats, such as SARS or BSE, climate change has proven difficult to 'market'. There is a disproportion between levels of scientific concern & popular interest or worry. The paper explores the notable exception to this pattern: the documentary film "an Inconvenient Truth" (2006). Using resources from cultural sociology, literary & film theory the paper explains this unlikely outcome. It unpacks the narrative and visual techniques through which this movie succeeded as a communicative gesture. Ironically many of these sit uneasily with the communicative ideals of science itself. Hence "an Inconvenient Truth" embodies a larger bind in which climate change science is situated.

Smith, Tom W. (NORC/University of Chicago, Chicago, IL, USA 46321 [tel: 773-256-6288; e-mail: smitht@norc.uchicago.edu]), **New Perspectives on the Total Survey Error Paradigm,** *International Sociological Association, Gothenburg, Sweden,*

¶ TSE is a very valuable paradigm for describing & improving surveys, but it can be improved. First, either TSE needs to be limited to covering just instances of differences between true & measured values, or TSE should be rechristened as total survey measurement variation (TSMV) if other forms of measurement-related variation are to be included. Second, the TSE/TSMV typology needs to be as detailed & comprehensive as possible. A single, rigid taxonomy of errors is not needed, but all schemes need to account for the whole range of error sources. Third, TSE needs to be thought of as heavily involving the interaction of error components & the concept of comparison error should be used to extend TSE to cover multiple-surveys including trend analysis, comparative studies, and longitudinal panels. Fourth, the minimizing of TSE is an important goal in survey research & the TSE paradigm can be used as both an applied application & a research agenda to achieve that goal. But minimizing error is a function of both applying the best science and having sufficient resources. Finally, TSE has both individual and aggregate components & an absolute & situational aspect and the role of each of these needs to be kept in mind.

2010S02497

Smooha, Sammy (Department of Sociology and Anthropology, University of Haifa, Haifa, Israel, 31905 [tel: +972-4-8240991; fax: +972-4-8240819; e-mail: ssmooha@univ.haifa.ac.il]), **Israeli Critical Sociology: Facing the Challenge of American Sociology,** *International Sociological Association, Gothenburg, Sweden,*

¶ Israeli sociology functions as part of the hegemonic American sociology. Israeli sociologists apply American theories & methods to Israeli society, publish in American journals, spend post-doctoral & sabbatical years in the US, use American standards for evaluation of sociological knowledge & colleagues, and join American sociological networks. They are members of Israel's academia which is Western & predominantly American. This is true for all streams of Israeli sociology: mainstream, critical and radical. Israeli critical sociologists are oriented to the critical current in American sociology. Their critique exposes Israel's growing inequalities, differential treatment of non-core population groups, weaknesses of democracy & social problems, but they do so as American critical sociologists would do. The dilemma Israeli critical sociologists face is not to disengage from American sociology but rather how to strike a balance by asserting themselves, giving more consideration to Israel's exceptionalism and semi-Western character, becoming more regional & European, doing more comparative work, & opening up more to Southern Sociology. This reorientation will increase the potential of Israeli sociology to contribute new contextualized sociological knowledge to world sociology, & not just reproducing American knowledge on the basis of Israeli data.

2010S02498

Smyczyńska, Katarzyna & Soares, Isabel (Department of English, Kazimierz Wielki University, Bydgoszcz, Poland, 85 - 064 [tel: +48523401687; e-mail: ks@ukw.edu.pl]), **Speaking about the Unspeakable: The Ageing Female Body in "Menopause… so be it!",** *International Sociological Association, Gothenburg, Sweden,*

¶ The article addresses recent developments in cultural representations of female ageing, focusing on a Polish stage performance entitled "Menopause… so be it!", which has since its premiere in 2006 enjoyed immense popularity among audiences. Drawing on sociological studies of the body and on textual theory, the author analyses the construction of the experience of menopause in the performance. The article examines interwoven discourses of the ageing body manifested through visual and textual signification, and their possible influence on the social perception of ageing and gender. The blatant articulation of common fears and problems associated with this lifestage and their neutralisation through humour may mark a positive cultural shift. However, the article also points to the ambiguity of the carnivalesque convention employed in the show and questions its subversive potential.

2010S02499

Snehalata, Panda (Berhampur University, Berhampur,Orissa, India [tel: 06802292483; e-mail: snehalata.panda@gmail.com]), **Gender and Violence Comparing Tribal and Non Tribal Women in India,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper has four sections first section includes conceptual framework, where in concepts like gender, tribal, non tribal, violence, hypothesis, organisation of the study, method of data collection and analysis are explained. The second section includes a profile of the area and sample. In the third section discusses hoe violence is perpetrated even in families where women are earning and financially independent from their husbands. The hypothesis that violence is not linked to financial independence is examined. The last section includes major findings.

2010S02500

Soares, Isabel (CAPP/ISCSP - Technical University Lisbon, Pólo Universitário Alto da Ajuda, R. Almerindo Lessa, 1300-663 Lisboa, Portugal [tel: +351 919123653; e- mail: isoares@iscsp.utl.pt]), **Telling About Risk: Bridging Literary Journalism to Sociological Methods,** *International Sociological Association, Gothenburg, Sweden,*

¶ Why does literary journalism matter to the sociological research of risk or to sociology? We propose that literary journalism contributed to expose risk in the form of social problems such as poverty, crime & vice. Since the connection between literary journalism & sociology has been neglected by academe, we aim at bridging these two overlapping fields by examining the influence literary journalists had on the sociological / imagological construction of social problems. We examine a corpus of literary

journalism texts resorting to qualitative methods, namely content and discourse analysis, to prove that literary journalism constitutes an input to the understanding of risk in its social contexts. Because risk is such an overwhelming social phenomenon whose study can only benefit from a transdiciplinary approach, we also analyse which research methodologies are common to literary journalism & sociology while exposing risk. This paper concludes, that literary journalism & sociological research are linked in the study of risk societies through the use of the same data gathering methods such as interviews or participant observation. All things considered, the pioneering nature of our research shows that the work of literary journalists can be used as a tool to enhance sociological research.

2010S02501

Soares, Jose Francisco, Marotta, Luana & Delgado, Victor, M.S. (Faculty of Education/Ufmg - Brasil, Belo Horizonte, Brasil 31270-901 [tel: +55 31 34434789; e-mail: francisco.soares.ufmg@gmail.com]), **Measuring the Quality and Equity of Basic Education Systems,** *International Sociological Association, Gothenburg, Sweden,*

¶ The first objectives of any country's educational system are to provide school access for all children & to keep them in school. After these, the quality of the educational system is better assessed with student achievement data. Since the proficiency of individuals can be different simply as the result of students' interest & attitudes, an educational system should be studied through the analysis of the statistical distribution of their student's achievement. In this paper an educational system is considered of good quality if its distribution of achievement is concentrated on levels compatible with the knowledge & skills necessary to a future productive life. Therefore a quality of education index should be defined as the distance between a reference distribution & the actual distribution. The reference distribution should not have high dispersion or polarization since these characteristics have unwanted social consequences. The equity of the system is measured by the distance between the distribution of achievement of groups of students defined by socio-demographic characteristics & the distribution of all students. The distance between the different distribution of achievement used in the definition of the indexes of quality & equity of the educational systems proposed in this paper are based on the concept of relative distribution. These indexes are used to measure the quality of Brazilian basic education, through a reference distribution chosen by using the PISA data. In addition, measures of equity were produced by groups of students defined by their race, sex, SES and region of residence.

Sofos, Emmanuil & Gouvias, Dionysios (Pre-School Education Department, University of the Aegean, Greece, 1, Demokratias Avenue, Rhodes 85100, Greece [tel: +302241061621; e-mail: sofos@rhodes.aegean.gr]), **Adult Education Provision Policy and Implementation in Peripheral Contexts: A Case-study,** *International Sociological Association, Gothenburg, Sweden,*

¶ According to the Lisbon European Directives (2000), lifelong-learning strategies are being progressively incorporated and institutionalised in the Greek Educational System. Two of the main manifestations of informal adult education in Greece are the foundation of Adult Education Centres & Second Chance Schools. In the definition of learning strategic objectives in Europe, it is claimed that a successful implementation of "lifelong learning" strategies will contribute, on the one hand, to increasing employability, economic growth, social inclusion & adaptation of skills, whereas on the other hand, to fulfilling individual needs and aspirations. In our paper we attempted to investigate the extent to which the latter dimension is satisfied via the educational activities provided by the Adult Education Centres and Second Chance Schools, as they operate in the periphery of Greece. We carried out a case study in an island located in the South-eastern part of Greece & our target groups included trainees of the two aforementioned institutes. We used qualitative, research methods in order to obtain information concerning participation into adult learning activities. Our data set contain information about demographic characteristics, motivation towards training, levels of job satisfaction & self esteem, on the one hand, & vocational aspirations & expectations, on the other. More specifically, we held two sets of interviews each one consisting of participants of the respective target groups. Our findings were analysed via grounded theory method & seem to indicate a gap between the E.U. Directives concerning lifelong-learning policy & the way it is implemented in the Greek Adult Education context. Moreover, it is hypothesised that there appear to be discrepancies between the motivations, aspirations and expectations of the two target groups, respectively. These findings are supposed to be of significance with respect to policy making and implementation strategies within the Greek Adult Education framework, with particular emphasis to the local needs.

Sohl, Lena (Department of Sociology, Uppsala University, Box 624, 751 26 Uppsala, Sweden [tel: + 46 18-4717681; fax: + 46 18-4711170; e-mail: lena.sohl@soc.uu.se]), **"To Become Upwardly Mobile You Have to Be a Swede": Class, Migration and Diasporas in Women's Narratives of Class Mobility,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this paper is to develop an intersectional understanding of women's narratives of upward class mobility in a Swedish context. The paper is based on individual life-story influenced interviews with upwardly mobile women aged between 25 & 34. One woman, born and raised in Sweden but with both parents born in Latin America, connected the possibility to be upwardly class mobile with being "a Swede". In order for her to become upwardly mobile her parents distanced themselves from the Latin-American diaspora community in Sweden. This raises questions about who is regarded as "a Swede" and why the Swedishness is perceived as a desirable position. To understand the women's narratives of class mobility an intersectional analysis is needed. How can the possibility to become upwardly mobile be linked to race & gender? What kinds of connections are made between upward mobility & notions of Swedishness & whiteness? In order to understand these questions, I argue that the analysis of women's narratives about class mobility can be developed using feminist & postcolonial theory in general & the concepts of diaspora & transnationalism in particular.

Sola, Jorge & Campillo, Inés (Department of Sociology I, Complutense University of Madrid [tel: +34 630104649; e-mail: yulcaUL@hotmail.com]), **One Step Back, Two Steps Forward: A Republican Reassessment of the Welfare State,** *International Sociological Association, Gothenburg, Sweden,*

¶ The retrenchment/dismantling debate has become a pervasive theme in the research agenda on the Welfare State in the era of globalization. Researchers are worried to measure & assess how incremental or radical the changes Welfare States have suffered from the 1980s have been. This focus on the retrenchment/dismantling debate has had two non-intentioned effects: (1) most researchers had lost sight of the normative principles that direct social policies, focusing mainly in their quantitative aspects; (2) they have confined their approaches to the defence of the existing policies, thus limiting the horizon of what is thought possible. To overcome this defensive stance, we propose to reconsider some important questions about the normative and political nature of the Welfare State programs, in order to critically asses our present social policies. As some classical authors underlined, the Welfare State is not an end itself, but a complex institutional device that works as a mean to achieve certain goals: a good society, social justice, equality, etc. The aim of our paper is to reflect on the content of two basic ideals ("social citizenship" & "just society") in order to appreciate what kind of new social policies could guide us to such ideals.

Solanas, Facundo (CONICET - Instituto de Investigaciones Gino Germani/Facultad de Ciencias Sociales/Universidad de Buenos Aires, Buenos Aires, Argentina, 1114 [tel: (5411) 47834350; e-mail: fsolanas@yahoo.com]), **La Unión Europea y el MERCOSUR hacia la convergencia de sus Sistemas de Educación Superior: un enfoque comparado** (The European Union and MERCOSUR towards Convergence of Their Higher Education Systems: A Comparative Approach), *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ Tanto la globalización, como los procesos de integración regional, están modificando o afectando de distintas formas a los Sistemas de Educación Superior. El llamado "proceso de Bolonia" (1999) es prueba de ello. Pero si este proceso es consecuencia directa de las políticas de movilidad académicas impulsadas por la Unión Europea durante más de una década, sin embargo, sus amplias implicancias se explican como consecuencia de haber nacido de una iniciativa intergubernamental de los ministros de educación de los principales Estados miembros del bloque. Por otra parte, en el MERCOSUR, donde la posibilidad de crear un sistema de créditos al estilo de los ECTS fue descartado, se han realizado significativos avances en materia de convergencia de los Sistemas de Educación Superior. Lo característico de ambos casos es que son procesos de carácter voluntario, impulsados por los Estados miembros de ambos bloques y, al mismo tiempo, no cuentan con una base jurídica importante que los respalde. Tomando como referencia parte de la literatura académica sobre el tema,

así como un conjunto de entrevistas con informantes clave, nos proponemos abordar los orígenes del proceso de Bolonia a partir de elementos de análisis provenientes de la sociología de la acción pública.

Sole, Carlota, Sorde, Teresa, Alcalde, Rosalina, Flecha, Ainhoa, Serradell, Olga, Petroff, Alisa, Cavalcanti, Leonardo, Parella, Sònia, Santamaría, Enrique & Garzón, Luis (Autonomous University of Barcelona, GEDIME (Immigration and Ethnic Minorities Research Group), Campus UAB. Facultat de Ciències Polítiques i Sociologia, Despatx B3.117-2 [tel: +34935812406; fax:; e-mail: Carlota.Sole@uab.cat]), **Social Cohesion: Scientific and Political Contributions in Multicultural Societies,** *International Sociological Association, Gothenburg, Sweden,*

¶ Despite being one of the most used concepts by the scientific community & political discourses, social cohesion lacks of a rigorous & shared definition. The different scientific contributions allow the definition of three dimensions of the social cohesion: the cultural, the redistributive of resources and the relational (social capital). By contrasting these three dimensions with the underlying political discourses in the European, Spanish & Catalan migratory policies it has been identified a will to build a common frame of reference. Our proposal is to highlight the contribution that brings Social Cohesion for the processes of acknowledging the cultural diversity and the access to basic rights of the ethnic minorities in the current multicultural societies. Keywords: Social Cohesion, Immigration, Integration, Consensus, Redistribution, Social Capital.

Soler Castillo, Sandra (Universidad Distrital Francisco Jose De Caldas, Carrera 7- 40- 53 [tel: 57(1)3701051; e-mail: SSOLER73@HOTMAIL.COM]), **The Representation of National Identity in Social School Text in Colombia,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper analyzes the characteristics of racism in Colombia. It focuses on how social school texts represent "the national identity" in Colombia. Using Critical Discourse analysis (CDA) try to identify a few of the discursive strategies through which it has been developed & maintained. Through the analysis of the discourse of school texts, a series of meanings is revealed in which Afro-Colombians & indigenous people are eliminated from the national panorama or presented through stereotypes or biased information that turn them into simple numbers, parts of the landscape, curiosities or, worse, into problems, while the Spaniards & Europeans are represented in the texts as dominant "races", endowed with heroic traits. These representations have circulated since the colonial era & justify the subjugation, the deprivation of rights & the invisibilization of indigenous people and Afro-Colombians.

Soler, Marta, Elboj, Carmen & Serrano, Maria Angels (Dpt. Sociological Theory, University of Barcelona, Diagonal 690, 08035 Barcelona, Spain [tel: +34 93 4035099; e-mail: marta.soler@ub.edu]), **Theoretical Contributions from Communicative Acts to the Analysis of Social Inequalities,** *International Sociological Association, Gothenburg, Sweden,*

¶ Social inequality has traditionally been studied through the analysis of the social structure or the social actions. Furthermore, pragmatic linguistics have contributed some more concrete aspects of each social actor's utterances & interactions that have great effect on both the social construction of inequality & the actual experience of such inequality. In debate with John Searle on speech acts & communicative acts we agree, on the one hand, with Searle's critique of Habermas' misinterpretation of speech acts in his theory of communicative action; on the other hand, we also agree with Habermas' attempt to differentiate between the language used in actions based on power claims & those based on validity claims. However, both Habermas' & Searle's developments have limitations when we want to analyze, for instance, the degree of equality (or freedom) in the relationship between a professor & a student in an office hour or the boss & his female subordinate in a business lunch. To analyze these situations we developed the concept of "communicative acts", which include speech and non-verbal acts, as well as the analysis of dialogic & power interactions inherent from the social structure & the individuals' actions in which such communication takes place.

2010S02509

Soler, Marta, Pulido, Cristina & Redondo, Gisela (Sociological Theory, Philosophy of Law and Methodology of Social Sciences. University of Barcelona, Spain [tel: 934039853; e-mail: cristinapulido@ub.edu]), **The Impact of Communicative Acts in the Analysis of Gender Interactions,** *International Sociological Association, Gothenburg, Sweden,*

¶ Interactions through Internet are a quotidian fact in our life. The popular use of social networks & communication programmes are an example of that. One of the questions related to this issue is to analyze how gender interactions are in this panorama. For this purpose a theoretical concept is introduced to deep this analysis: communicative acts. This concept collects contributions of significant authors as Austin (1984), Searle (1969) & their respective contributions on Speech acts theory & Habermas (1984) and his contributions of Communicative action theory. But communicative acts contribute to go beyond of this analysis & it includes other key aspects to consider in the analysis of interactions (Soler 2004). These aspects are; analysis of verbal and non-verbal communication, social context of the interaction, intention of speaker & responsibility of communication. The analysis of these interactions through this theoretical concept allow to deep more the difference between gender relationships based on dialogic or power interactions, & its consequence; to identify which interactions are promoting equality & which are promoting violence nowadays. Soler, M & Rivera-Ferre, MG (Department of Applied Economy, University of Sevilla, Spain [e-mail: msoler@us.es]), **Urban Agriculture, Sustainability and Food Sovereignty: Towards a Proposal of Indicators,** *International Sociological Association, Gothenburg, Sweden,*

¶ Urban agriculture is growing both in rich & poor countries. It is not a new activity but the growth is suffering & its implications in the Food Sovereignty constitute a new challenge for the promotion of sustainable agriculture. In poor countries, urban agriculture is linked to food requirements & income generation for poor & excluded people. Through urban agriculture this people enter collective networks of food production & consumption, reducing their socioeconomic vulnerability. In rich industrialised countries, this activity is mainly focused to attend leisure and public, collective spaces to improve citizen's health & standard of living. At the same time, urban agriculture contributes towards integration & social cohesion as well as to healthy & quality food for family self-consumption. Urban agriculture can contribute to Food sovereignty as described by La Via Campesina, since gives the people the opportunity to realize the Right to Food (right to healthy, culturally appropriate food & the resources needed to produce it) through local, sustainable, fair & self-sufficiency systems. The achievement of the Food Sovereignty principles will depend on the production systems, sociocultural organization, market relationships & commercialization strategies. Furthermore, through this Food Sovereignty orientation of urban agriculture, it can also generate environmental benefits in the cities, specially through the promotion of agroecological practices: incorporation of green spaces to the urban design, shortening the food chain, reducing the use of industrial inputs & agriculture pollutants, reducing fossil fuel dependency & CO2 emissions and, consequently, contributing to climate change mitigation and adaptation strategies. But all these sociocultural, ecological and economical potential benefits of urban agriculture will depend on the model applied, as well as on the compromise with sustainability and Food Sovereignty. Following this paradigm, we propose to: -reflect on the interrelations among urban agriculture, sustainability & Food Sovereignty in the present context of food, energy & ecological crisis. -reflect on the importance of elaboration of a proposal of sustainability & Food Sovereignty indicators for urban agriculture that can help to visualize the benefit of this activity, as well as a tool to support this activity through the generation of relevant information for decision makers

Somashekher, C (Dept. of Sociology, Bangalore University, Jnana Bharati, Bangalore - 560 056, Karnataka, INDIA [tel: 00 91 80 22961777; fax: 00 91 8472 263206; e-mail: somashekher.c@rediffmail.com]), **Climate of Industrial Relations and Corporate Social Responsibility (CSR) Initiatives,** *International Sociological Association, Gothenburg, Sweden,*

¶ The business firms world over have taken to corporate involvement in social sector through innovative interventions in diverse aspects of community life. With the rise of post industrial society, devoid of constraints

faced by the earlier economies & demands of responsible corporate governance obliged to be met with, corporate spending on social issues has increased manifold irrespective of type, stage & sector of economy. However, it is acknowledged that the CSR performance of the firms varies along with diverse organizational & contextual traits which could be taken as explanatory or causative variables determining their performance on the CSR front. One such contextual variable that is assumed to be associated with the effectiveness & achievement of the firms on CSR initiatives is the climate of industrial relations ascertained on the basis of cordiality & harmony between the managements and the workforce. The paper, hence, deals with the differentials in CSR performance of the selected firms viewed & explained in terms of climate of industrial relations. Forty two (42) Indian work organizations engaged in CSR projects were studied in which climate of industrial relations was classified as cordial, neutral and hostile based on the number of disputes on labor issues resolved and unresolved as well as the nature of interaction & exchange between managements & the workforce. The CSR performance was ascertained on the basis of targets achieved in terms of intended outcome, as evidenced by the official records & acquaintance with the stakeholders in person. The performance so ascertained is classified as high, moderate & low. The analysis reveals that firms with neutral industrial relations do better on CSR front followed by those with cordial industrial relations. Hostile climate of industrial relations could be seen as not conducive for effectiveness of CSR initiatives. It was also noted further, that planning, allocation, monitoring & involvement in CSR initiatives themselves could be issues for disputes negatively contributing to the climate of industrial relations with unions seeking a greater say in these matters. It may also be stated that, the hostile climate of industrial relations which could have negative implications for operational efficiency & productivity in itself could have constraining effect on CSR allocations dependent on operational profits of the firm thus having a dampening effect on CSR initiatives & achievements.

Somayeh, Moazeni & Javad, Jafari (Payam-e-noor University of Tehran [e-mail: moazeniULsomayeh@yahoo.com]), **The Success of New Towns in Metropolis of Isfahan Case Studies: Baharestan and Majlesi New Towns,** *International Sociological Association, Gothenburg, Sweden,*

¶ Rapid population growth, development of urbanization, rural migration to large cities & thereby, exacerbate of urban problems are the effects of Industrial Revolution. Mentioned problems lead to presented solutions by the experts. One of these solutions is designing new towns. In Iran, in addition to the direct and indirect effects of the industrial revolution, changes such as Land Reform Act, the loss of traditional relations of production in rural areas & development of capitalism economy & relying on single-product economy (oil export) cause lose of economic and social balance between human settlements. Isfahan, at present, is the second concentrated industrial pole in Iran. According to forecasts in urban & regional development plans, 1.3 million populations will be almost reduplicated by 20 years. Such growing increase in population will create new needs that require solutions. Designing new towns is the implemented & predicted one. In this context, during last 3 decades four new towns are located: new towns of Shahinshar & Baharestan, Majlesi and Fouladshahr. Studying social, economic, physical aspects of Baharestan & Majlesi new towns, as samples of the new towns on mentioned orientations, & their impact on sustainable development of Isfahan Metropolis are the subjects of this essay. This descriptive-analytic research is base on the library and documentary sources & the studied populations are Baharestan and Majlesi New Towns: the two new towns in Isfahan. In sum, success of Baharestan & Majelsi new towns are regarded too limit in the sustainable development of Isfahan. They, not only, reduce the urbanization burden of the city, but also have added its urban region problems. Key words: sustainable development, new towns, urbanization, Iran, metropolis of Isfahan, Baharestan new town, Majlesi new town

Song, Jesook (East Asian Studies, University of Toronto, 130 St. George Street, #14087, Toronto, ON M5S 3H1 [tel: 416)652-5187; e-mail: jesook.song@utoronto.ca]), **Housing Rental System and Rotating Credit Association in South Korea: An Alternative Interpretation of Financial Capital,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper focuses on understanding of the financial capitalism and its accumulation process through South Korean residential rental system, called chônse, on which working poor class people heavily rely. By describing this unique rental system in relation to the now urbanized traditional private credit system (kye) in the context of post-War Korean economic development, it engages in Marxist theories of rent & value. It also addresses a broader historical question of the role of financial capital in the evolution of Korean capitalism, especially at the level of the political economy of the individual household. My argument takes a critical stance toward the predominant understanding of Korean capitalism, which is currently explained as being the result of a state-planned economy with big corporations playing the leading role in South Korea's economic success.

2010S02514

Sonn, Jung Won & Shin, Hyun-Bang (University College London, London School of Economics and Political Science [tel: 020 7679 4893; e-mail: j.son@ucl.ac.uk]), **Home Ownership, Zoning and Primitive Accumulation of Capital: The Case of South Korea, 1970s,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper looks at how the state can enhance home ownership & use it to facilitate primitive accumulation of capital in a developing country context. In the mid 1960s, mid- to high-rise flats quickly gained popularity among the middle class. This cultural change coincided with an explosion of the middle class. The South Korean government took advantage of this situation to facilitate the formation of national capital. In this paper, we argue that the state made possible primitive accumulation of capital through the dispossession of public assets & potential profit. More specifically, we examine the state designation of "apartment zone" in land use planning, which were given exemption from existing density regulations. This preferential treatment was combined with the grant of development permits to a selected small number of construction companies in the private sector, who subsequently oligopolised unrealised land rents. On the top of that, the initial investment by the state sent signals on where to invest & the resulting concentration of investment ensured profitability. Consequently, construction companies such as Hyundai Construction were elevated to large conglomerates in the 1970s & became capable of investing in other sectors, including heavy industries, eventually placing South Korea among late-industrialised economies in the 1980s. The findings of this research show that, in a developing country context, housing boom can be a catalyst for industrialisation as well as an outcome of industrialisation.

Sorensen, Kerstin (Department of Political Science, Elon University, Elon, North Carolina, USA, 27215 [tel: +1 336 2786438; fax: +1 336 2786401; e-mail: ksorensen@elon.edu]), **Multiculturalism and the Scandinavian Welfare States,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper investigates how increased ethnic diversity is affecting the Scandinavia welfare states. Since the 1990s, there has been growing pressures on the Scandinavian welfare states, among them immigration. Scandinavian societies are experiencing increasing ethnic diversity, accompanied by a growing religious plurality, including a significant group of Muslims, dominated by Christian denominations. This diversity presents a number of challenges and questions about how the new multicultural contexts across Scandinavia is shaping public policy. Assuming that the welfare state is dependent on achieving & maintaining a high level of solidarity among citizens based on feelings of commonality, does ethnic diversity make it more difficult to sustain expansive social programs? If so, why & how? How does the new multicultural reality play out in terms of party politics surrounding public policy? What are the political parties' responses to this new multicultural context? How is it reflected in political party platforms & policy proposals? This paper aims to generate new and important insight into how increased ethnic diversity influences Scandinavian social policy.

¶ Cuidado de personas ancianas en instituciones de larga estadía en Brasil El trabajo discute el habitus femenino de cuidado en la atención de personas ancianas en instituciones de larga estadía, es decir, disposiciones de saber afectivo y moral adquiridas en las familias por las mujeres cuidadoras y su transformación en mercaderías. El estudio, cualitativo, fue realizado entre los años 2007 y 2008 en instituciones localizadas en el Distrito Federal de Brasil (Brasilia y ciudades del DF) y el Estado de Goiás, (en

la ciudad de Goiania). Utilizó etnografías, observación participante, entrevistas con cuidadoras y personas ancianas y directores de las instituciones. Observó los siguientes aspectos: organización del trabajo y rutinas de cuidado; características socio-demográficas de las cuidadoras; interacciones entre cuidadoras y personas cuidadas, focalizadas en las dinámicas afectivas y morales de dominación/sujeción. Reveló conflictos en la situación de interdependencia entre la intimidad y el mercado. El cuidado es moldeado por las prescripciones institucionales relativas al orden del trabajo y por la legislación del trabajo asalariado. En la relación entre cuidadoras y personas cuidadas, observamos la compleja trama de prácticas afectivas y morales relativas al sentido de superioridad de la cuidadora y el abandono, soledad y decrepitud de la persona anciana.

2010S02517

Sorj, Bila (Departamento de Sociologia, Universidade Federal do Rio de Janeiro, Rio de Janeiro, RJ, Brazil [tel: 552122742075; e-mail: bilsorj@attglobal.net]), **Work and Care for Family in Brazil: Some Implications for Gender Equality,** *International Sociological Association, Gothenburg, Sweden,* (POR)

¶ For at least three decades, there have been a substantial increase in the participation of women in the labor market & a significant decrease in the differences in the economic activity rate between men & women. While this tendency brings Brazil more into line with developed countries, there prevails in the society the private conception of family responsibilities, which is expressed in the insufficiency of adequate public support in the provision of care. The aim of the paper is to examine how the care is distributed among different social institutions (the family, the market & the State) taking gender & class as the main perspectives of analysis. This paper is divided into four parts. In the first, there is analysis of the recent changes in family structure & the labor market that have aggravated the set of problems concerning "conciliation" between work & family life. In the second part, the distribution of care within the institution of the family is examined, showing that, besides the substantial gender gap, there exists an important variation in the time dedicated to housework by women from the different social classes. The third part covers the care provided by the institution of the market, concentrating on the evolution of paid domestic work, showing that the commodification of care work reproduces the intense social inequalities in the country, besides promoting polarization among women. The fourth part is dedicated to examination the gender and class effect of a public policy carried out by the State as the promotion of access of poor children to early childhood education (age range 0 a 6).

Sosunova, Irina A. & Mamonova, Olga N. (IIUEPS, Vice-rector, Russia, Moscow, 127299, Kosmonavta Volkova str., 20 [tel: 0074954123592; fax: 0074951591727; e-mail: sosunova@mnepu.ru]), **Ecologists: Institutionalization and Establishing of New Social-Professional Group on the Base of Sociological Survey,** *International Sociological Association, Gothenburg, Sweden,*

¶ The present study examined the phenomenon of institutionalization of new social-professional group in Russia. The findings of the expert survey present the social attitudes & system of values of these professionals & the views of the lay public about their role in society. The main hypothesis of research is that in contemporary Russia the new social-professional group is institutionalized, which features are: adequate axiological & emotional relation to society & nature, the availability of specific knowledge, capacities to creative action & thinking, which help them to analyze the real socio-ecological problems & to make the balanced optimal decisions in the sphere of nature protection. The institutionalization of ecologists is influenced by its special characteristics: special role of ecological ethics & morality in activity of the professional & the importance of professional activity in conditions of local ecological crisis which leads to development of professional self-identity & professional pathos. Ecologists differs a lot from the traditional specialists of ecology as a part of biology & "improvising" specialists of other specialties. "Ecologist" is characterised by unique specific - its sphere of activity for mass consciousness is quite uncertain & vague, even inside of scientific community there is the free interpretation of this definition.

2010S02519

Sotomayor Morales, Eva & Diaz Moreno, Verónica (Universidad de Jaén, Paraje las Lagunillas s/n. 23071 [tel: 34953213444; e-mail: esotoma@ujaen.es]), **Risks of Social Vulnerability of Spanish Families in a Economic Crisis Context,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ In crisis situations the social exclusion risk tends to get worse for the most vulnerable people. Once that the first impact in capitalist countries begins to appear, the influence of the interest groups is restored. Therefore risks moves towards the most vulnerable & disadvantaged people. Thus, despite the enrichment of the countries of advanced capitalism, inequalities are most obvious & generates the split or fractured society, especially as middle-income households, the most vulnerable people that suffer the effects of living standards increased, the instability of protection systems social, the unemployment increase & the living cost partly because that is based on external financial supports. Therefore in this papers aims to provide the results of a study that we are currently working the Study Group on Social Trends (GETS) & the Foundation Sistema directed by Professor of Sociology at the UNED, Jose Felix Tezanos. The research objective general is build an analysis on Spanish families in a vulnerable situation or in a social exclusion risk in a context of economic crisis in four levels: (i) the parameters behavior that generate their vulnerability, (ii) strategies generated to address the crisis situation, (iii) the system internal or external attributions & (iv) compensatory strategies & actions undertaken under the institutional environment (social support) and the social environment (family networks).

2010S02520

Soudant-Depelchin, Estelle (University Lille 1/ Clersé CNRS, Villeneuve d'ascq, France, 59650 [tel: 00336 16 79 77 99; e-mail: estelleULsoudant@yahoo.fr]), **Homeless Men and Homeless Women: Case Study in the North of France,** *International Sociological Association, Gothenburg, Sweden,*

¶ In France, homeless women recently emerged in institutional literature and in scientific fields, but as a ratio rather than as a gender. Sociological studies estimate between 10 & 15% the proportion of women among the people with the street [Marpsat, 1998]. Sylvie Célérier (2003) estimates that the proportion of women amongst those in need of services for people of no fixed residence is between 20 & 25%. To speak about gender is to ask questions about the social construction of differences & the relationship between men & women, while refusing to reduce them to "mere" biological differences [Devreux, Kergoat (2001)]. Do women adapt to public space more easily than before or have more easily recourse to the institutions? Does the sexualized treatment of space and institutions is a key to analyze trajectories of the men & women living in the street (or having lived in the street)? This communication is based on my observations carried out in the street and in the center to homeless people, interviews & formal talks that allow an update regarding the construction of the invisibility of homeless women.

Souliotis, Nikolaos (DPRD University Of Thessaly, Volos, Greece, 38334 [tel: 0030 210 9245152; e-mail: nicolassouliotis@hotmail.com]), **"Creative City" Strategies, Global Financial Crisis and the Importance of Local Contexts: The Case of Athens,** *International Sociological Association, Gothenburg, Sweden,*

¶ During the last decades, Athens (Greece) adopted a number of internationally diffused cultural strategies of urban (re)development: tourism gentrification of the historical center and ex-industrial areas, public-private partnerships in high-culture institutions, cultural mega-projects etc. However, unlike the most famous examples of "creative cities", Athens's cultural economy is consumption-oriented (as productive sectors declined due to the competition from more advanced cities) and dominated by small family firms. Furthermore, the consumer public comprises tourists & local middle classes composed by liberal professionals & upper & middle civil servants, rather than managerial classes of finance & cultural industries. The paper examines Athens' cultural economy (sectoral composition, main types of cultural entrepreneurs & consumers) as a case-study revealing the path-dependent character of "creative city" strategies & the uneven development within the globalized cultural economy. We argue that the dynamics of the Athenian cultural economy are linked to three processes: the restructuring of the city's economy since the 1980s in favor of, largely labor-intensive, services; the expansion of private & public borrowing following the integration of Greece into the Euro Zone that changed the terms of social reproduction of upper & middle classes; the interaction of mainstream "creative city" strategies with specific characteristics of the Athenian political-economic and cultural context (domination of small firms in the tertiary sector, tradition of bourgeois-led cultural nonprofits etc.). We conclude that the Athenian cultural economy is, at least in medium-term, severely threatened by the recession of tourism and the overall depression of the Greek economy that is expected to follow the implementation of the IMF stabilization program.

Souza, Angelo Ricardo, Gouveia, A & Schneider, G. (Universidade Federal do Paraná, Curitiba, Brazil [tel: 55-41-33605380; e-mail: angelo@ufpr.br]), **The Construction of an Education Quality Conditions Index: Methodology and Evidences,** *International Sociological Association, Gothenburg, Sweden,*

¶ This article works with data collected by standardized assessment systems. Even knowing the accountability goals of these systems over the actions of teachers, these data can help us to face many aspects of authoritarian control over public education. In this sense, this work presents a methodology developed to evaluate educational policies: Education Quality Conditions Index (ICQ). This methodology tries establish more objectives elements for evaluate the relationship between education policies & quality. Understanding that quality education can't be reduced only to the students results measured by evaluation systems, we included the idea of "quality conditions", as the conditions available for teaching & learning; & it provides from dimensions recognized in literature as important for the educational work; & using data available by Brazilian Basic Education Evaluation System questionnaires (SAEB), the index consists of three parts: School Framework Conditions (ICME), Teacher Conditions (IP) & School Administration Conditions (IG). All of this was analyzed against student proficiency results. The ICQ application shows that the student proficiency has a strong correlation with the best quality conditions, suggesting that when government invests improving teacher salaries & material & management conditions, the public school responds appropriately.

Sozanski, Tadeusz (Krakow, Poland [e-mail: ussozans@cyf-kr.edu.pl]), **How Main European Languages Conceptualize the Social? A Case of Linguistic Relativity,** *International Sociological Association, Gothenburg, Sweden,*

¶ The language of sociology, unlike that of mathematics, is not protected against the Sapir-Whorf hypothesis, as it may reflect some peculiarities of ethnic languages in which masters of social thought wrote their treatises. When sociologists try to identify the domain of social phenomena, they may well invoke the meanings of the counterparts the English adjective "social" has in their native languages. But do there always exist counterparts? Some historical issues (the Greek-Latin origin of sociologie, Weber's decision to replace Gemeinschaftshandeln with soziale Handeln) justify the claim that two attributes, known in the English speaking world as social & common, are central to sociological discourse. In this paper, we discuss four patterns of co-existence of these two concepts in main European languages: (i) the Byzantine pattern (Greek & East Slavic languages) in which the social is reduced to the common (koinós); (ii) the Latin pattern (Latin, Romance languages & English) with sociale & commune as distinct but complementary concepts; (iii) the German pattern, turned into a theoretical distinction by Tönnies & Weber, with Gemeinschaft and Gesellschaft functioning as opposite categories; (iv) the West Slavic pattern where both adjectives etymologically grow out from the common root.

Spaaij, Ramon (La Trobe Refugee Research Centre, School of Social Sciences, La Trobe University, and Amsterdam Institute for Social Science Research, University of Amsterdam, Melbourne, Victoria 3086, Australia [tel: +61 3 9479 1985; e-mail: r.spaaij@latrobe.edu.au]), **Using Sport to Engender Social and Cultural Capital in Disadvantaged Communities: The Brazilian Experience,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper builds on the concepts of social & cultural capital to investigate the capacity of sport-based intervention programs to contribute to the personal, social & professional development of disadvantaged people. It draws on survey data & qualitative interviews with participants of the Vencer program in Rio de Janeiro to examine how the program impacts on participants' personal & skill development & social connectedness. Surveys and interviews with stakeholders provide additional perspectives on the program's impact on participants. It is argued that the program's contribution to the development of social & cultural capital is closely associated with its ability to develop linkages with multiple institutional agents & the provision of a facilitating institutional context which enables young people to get to know one another & broaden their social horizons.

2010S02525

Spano, Antonella, Musella, Pasquale & Perone, Elisabetta (Università deggli Studi di Napoli Federico II, Vico Monte di Pietà, 1 -80138- Napoli, Italia [tel: +39 081 2535845; fax: +39 081 2535836; e-mail: spano@unina.it]), **Europe and Gender: Mobility in Space, Time and Identities,** *International Sociological Association, Gothenburg, Sweden,*

¶ Gender is one of the aspects in which the various national contexts differ in terms of development/underdevelopment. In particular, relationships of a non-egalitarian kind, based on a patriarchal model, are a as is well known - more evident in less developed contexts, such as southern & eastern Europe. However, also in these contexts there is currently a process of redefining traditional gender roles, also as a result of the expansion of the geographical space within which people's biographical experiences unfold. In this sense, the process of European integration, which, through an intensification of material & symbolic exchange among the various countries, encourages more fluid exchange of identity (plural, transnational, supra-national) - can also be seen as an opportunity for the (de-) re-construction of gender identity. In fact, comparison with a context different from one's own requires biographical work, thus activating deep processes of reflective questioning about who one is. The specific aim of this contribution is to ascertain under which conditions contact with more open and advanced realities, where there is a greater institutional commitment to gender equality, may actually activate a process of change. This paper analyses the issue starting with from an analysis of biographical-narrative interviews collected in Italy as part of the Euroidentities Project (VII EU Framework Programme). More specifically, it consists of interviews to women & gay people who have had significant biographical experiences in other European countries, for study, work or because they were in a mixed couple. The study aims to provide a reading of "bottom-up" processes of social change i.e. starting from the experiences of the subjects. It also means showing that mobility from traditional-type community contexts to more developed socio-cultural contexts does not necessarily imply that women can overcome the traditional role of wife/mother or that homosexuals can free themselves of the stigma of deviance. There is in fact a need for specific resources in terms of cultural & social capital.

Speed, Chris & Corino, Gianni (Edinburgh College of Art, Lauriston Place, Edinburgh, UK EH3 9DF [tel: +44 7917225815; e-mail: c.speed@eca.ac.uk]), **Technology and Networked Memory: Toward an Internet of Old Things,** *International Sociological Association, Gothenburg, Sweden,*

¶ "My emotions exist I guess in my brain, not in the stuff that I own, the things that I feel… the things I do, don't relate to the photos I've got in a box or an object that I keep at home, or you know, an antique teddy bear." Jasper Joffe, 2009. In the summer of 2009 Jasper Joffe staged the sale of everything that he owned at the Idea Generation Gallery in London. Everything from his paintings, drawings, teddy bears, & rare books was grouped into 33 different lots, each on sale for 3,333 pounds sterling. Part of the publicity for the show involved a short interview on BBC Radio. During this interview he described how the installation / performance offered him an opportunity to "re-think everything" & to overcome a tendency of "getting stuck with old habits". Whilst it is both difficult to take seriously the explicit exchange of mundane object for artefact, particularly as wider society is in economic recession, Joffe revisits a common legacy of Modern cultural practice: to be free is to relinquish oneself from belongings, and that memory & object can be easily separated. Using cultural coordinates from twentieth century & recent history, this paper traces the history of "letting go" of objects & offers an understanding of the trait as a measure of technological determinism, which adheres to a linear & teleological model of time. The paper uses this argument to question the momentum behind the technical & industrial Internet of Things that has invested millions of pounds in tagging new objects, & ignoring the old.

2010S02527

Speranza, Lorenzo (Department of Studi Sociali, University of Brescia, Via San Faustino 74/B, 25122 Brescia, Italy [tel: (0039-030)2988891; fax: (0039-030)2988893; e-mail: speranza@jus.unibs.it]), **Four Ideal Types of Physicians on Search of an Author,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper the impact of motivations for practicing medicine on physicians' identity will be analyzed. Following a survey of 900 doctors whose findings have been discussed at the Oslo meeting, this time I have been turning to qualitative inquiry in order to seek the views of medical practitioners themselves on motivational factors & other, correlated, issues. The findings of semi-structured in depth interviews with forty doctors living in a medium sized town in the South of Italy are elaborated. As for motivational factors, the stratification of professional identity thesis has been confirmed & four ideal types of doctors have been devised. 1. The ones that

have chosen "emotionally" & for whom medicine was a "call" & that never even considered another option. 2. For a second group a singular episode was very important, namely the presence of a family doctor in their childhood that used to visit their relatives & that they admired and loved very much. 3. A third group was particularly attracted by the human organism & interested in the way it works. 4. Finally, there are those who have considered other works, often connected with hard sciences, & for whom medicine was more a rational choice. Other related issues are then discussed, particularly the main cleavage among the above groups of doctors that is the division between physicians & surgeons.

Spickard, James V (Dept of Sociology and Anthropology, University of Redlands, Redlands, CA 92373 USA [e-mail: jimULspickard@redlands.edu]), **Are We Stealing the Elgin Marbles? Exploring the Limits of a World-Conscious Sociology?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The sociology of religion arose as a Western enterprise, whose core concepts were developed out of Enlightenment reflections on Euro-American religious history. Recently, scholars have begun to explore other cultural & religious traditions, seeking ways to conceptualize aspects of religion that were less emphasized in Western Christianity, but are no less important overall. Are these explorations truly inclusive a opening up our discipline to new insights by broadening the theoretical toolbox by which religions are understood? Or do they amount to a new imperialism, an appropriation that tears such ideas from their social & cultural contexts, bringing them "home" for museum display? This paper argues that theoretical imperialism is an issue, but not a decisive one. On the one hand, the effort to mine non-Western traditions does constitute an Enlightenment universalism, which exposes all particular cultures as partial in their understanding of religious life & posits that only disinterested Reason can grasp the whole. On the other hand, this effort exposes universalism's grounding in an eschatological faith - which constitutes a recognition of its own partiality. The attempt to appropriate other cultural and religious insights thus highlights its own conceptual limits - a humbling but useful reflexivity for a post-imperialist age.

Spierings, Niels (Radboud University Nijmegen, the Netherlands [e-mail: n.spierings@fm.ru.nl]), **Assessing Outcome Equivalence in Studying Women's Employment in Six MENA Countries: Logistic Regression versus QCA with Absolute Outcome Versus QCA with Relative Outcomes,** *International Sociological Association, Gothenburg, Sweden,*

¶ Relatively few women in the Middle East & North Africa (MENA) are employed. The question which women are employed & which women are not employed raises several theoretical & methodological issues, which I will address in this paper. Different studies have pinpointed important aspects of women's lives that influence their chance on employment: education, having (young) children, marital status, urbanization of living environment, personal & household values, gendered family roles, & socioeconomic status of the women & her partner. Considering this collection of potential influences, we can ask ourselves: Which of these is most important? Is the primacy lying with education, as most studies show, or does education only influence women in certain contexts? Is their only one route to employment or are there different routes with equivalent effects? In relation to these questions some fundamental and methodological questions arise. For instance: Can we simply pool data from different MENA countries?; & To what extent does the chosen method pre-structure the outcomes? By applying two methods to the same question & doing this for several MENA countries (Algeria, Egypt, Jordan, Morocco, Syria & Tunisia), we can establish what the variation or equivalence in outcomes is across countries & across methods. The methods compared are logistic regression & Qualitative Comparative Analysis (QCA). Given the probabilistic (large-n), dichotomous and context-dependent nature of the studied phenomenon (women's employment), logistic regression analyses would be the "default choice". However, lately several social scientist have argued that QCA is more appropriate in identifying influences in such a complex environment. Additionally, QCA allows us to use a country relative outcome. The method works with configurations (specific combinations of values on the different explanatory variables) and the rate of "success" for such a configuration. Besides studying which configurations lead to a certain proportion of women to be employed (e.g. 80% or more, or half or more), it is possible to use an outcome measure such as "three times the average employment in a country". The latter option is what I call "a country relative" outcome. If the analyses with a relative measure of employment show more equivalent outcomes, this implies that establishing equivalence in outcome measures in terms of relative proportion can help our understanding of influences on women's employment. Consequently, in the future it might direct our choice of methods from an equivalence perspective. Overall, this paper first provides insight in the influences on women's employment in the Middle East and North Africa & how they vary across the countries. Second, the use of different forms of the explanandum (linked to different methods) gives insight in which way of measurement produces the most similar outcomes across countries & this way helps us to establish equivalence.

Spies, Tina (University of Kassel, FB Sozialwesen, Arnold-Bode-Str. 10, 34109 Kassel, Germany [e-mail: tspies@uni-kassel.de]), **Performing Ethnicities in the Context of Migration, Masculinity and Criminality,** *International Sociological Association, Gothenburg, Sweden,*

¶ Listening to most statements given in German public debate concerning delinquency of immigrants, one gains the impression that it is the level of integration which determines any immigrant's criminal (in)conspicuousness. It is argued that criminality of young migrants originates from identity conflicts caused by living between two cultures a regardless of how long they have been living in Germany. Also, masculinity linked to a rather diffuse "concept of honour" is often used as an explanation for criminal behaviour, thereby attributing violence of young ("Turkish") men to their "cultural origin". Explanatory models used in German public debate hardly pay any attention to masculinity studies, which for example consider violence as an act of substitution to overcome a fragile male gender identity. Moreover, so-called "trans-concepts", for example hybrid identities or postmodern subjects, are rarely ever mentioned in public debates. Instead, self-descriptions as "transmigrants" are commonly (mis)interpreted as prevention or denial of integration. This paper presents the analysis of life story interviews with juvenile "migrant" delinquents. It deals with the question of how these young men position themselves in the context of public discourses about migration, masculinity & criminality. How do they integrate discriminatory discourses in their biographical self-representations? Do they use alternative identity strategies? And in which context are they able to perform ethnicities?

2010S02531

Spillman, Lynette (Sociology Department, University of Notre Dame, Notre Dame, Indiana, United States 46556 [tel: 574 631 8067; fax: 574 631 9238; e-mail: spillman.1@nd.edu]), **"Professional Commitments" and "Feelings of Family": Vocabularies of Motive in American Business Associations,** *International Sociological Association, Gothenburg, Sweden,*

¶ What does business mean to business owners & managers? Popular commentary & scholarly analysis typically emphasize the self-interested pursuit of profit & stability as the obvious grounding for capitalist economic action. Contrary to these taken-for-granted assumptions, I argue that business peoples' vocabularies of motive & understanding of their economic action are richer than this stereotype suggests, & also invoke solidarity & disinterest. Examining naturally-occurring discourse in a large, systematic sample of American business associations, I demonstrate that particularistic economic interests provide only a subordinate language, & discourses of collective interests exclusive of particular member interests, of professional identity, and of occupational community are all more important for making business meaningful to business people in this context. Business people often understand themselves as disinterested rather than self-interested actors. They often think of what they are doing in terms of technical expertise, professionalism, stewardship of the public good, & occupational community, & these vocabularies of motive are a constitutive part of many business identities. This argument builds on recent calls among some economic sociologists to transcend the persisting analytic & empirical separation between "economic action" & "culture," & suggests a new approach to understanding the power of business.

Spires, Anthony J. (The Chinese University of Hong Kong, Hong Kong [e-mail: ajspires@cuhk.edu.hk]), **Learning to Be 'Professional': Foreign-Funded Training Programs, Study Tours, and China's Emerging Civil Society,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper engages with debates about global civil society through in-depth study of China's experience with NGO training programs and study tours sponsored by foreign foundations. By focusing attention on the impact of ideas from abroad, looking specifically at the language, assumptions, & discourses about what constitutes a "good" NGO, I illuminate

how some spaces for civil society development in China are expanded while others are diminished. I argue that the ideas about civil society being brought into China are based predominantly on the experiences of a small segment of North American nonprofit organizations. Rather than reflecting the diversity of American associational life - in all its messiness and vibrancy - these training programs & study tours emphasize the concepts & tools of management most recently developed and advocated by the professionalized segment of US civil society. I argue that the inroads global civil society has made into China represent less a new form of imperialism than a process of consolidation of a neoliberal agenda. The thrust of foreign ideas is perfectly in tune with the Chinese party-state's own political and social agenda, one that gives lip-service to democratization yet does little to change the status quo, all the while bringing in large sums of money to address some of the country's most pressing social needs & keep an anti-state, anti-capitalist counter-hegemony at bay.

Spreckelsen, Thees (Nuffield College, Dept of Sociology, University of Oxford, Oxford, United Kingdom, OX1 1NF [tel: +447963091868; e-mail: Thees.Spreckelsen@nuffield.ox.ac.uk]), **Cross-national and Cross-temporal Equivalence of Measures of National Identity,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper uses multi-group confirmatory factor analysis to test for cross-temporal equivalence of meaning in of ethnic & civic national identity. The paper extents existing MGCFA analysis of cross- national equivalence & argues that additional information about the equivalence of meaning can be gained by integrating a time dimension. Using data from the ISSP 1995 & 2003 the paper tests whether a scale measure of ethnic- & civic- national identity is equivalent across time & 23 countries. The paper investigates whether changes in the meaning are significant and substantive or methodological in nature. Following previous cross-national research the expectation is that equivalence in substantive terms is present. However methodological equivalence in the error terms is not expected. These expectations are confirmed.

Spurway, Kim (School of Social Sciences and International Studies, University of New South Wales [e-mail: k.spurway@unsw.edu.au]), **Knowledge, Decision, and Disaster: A Systematic Review of the Literature,** *International Sociological Association, Gothenburg, Sweden,*

¶ Decision-making models are often constructed to operate within a rational choice framework, with knowledge being regarded as a critical element in decisional processes. This configuration is also common for disaster & emergency decision-making, with high quality information being fed into the process to better inform rational, evidence-based decisions. However, despite disaster management's long history of quality research, there has been no real attempt to date to comprehensively understand what the existing body of research has to say regarding knowledge and decision in disaster. This study will, therefore, investigate how different types of rationality & associated kinds of knowledge are used in decision-making in the fields of disaster & emergency management. This study aims to complement the existing body of literature through a systematic review of empirical studies from 19 electronic databases. To date, out of the 11,339 studies retrieved, 128 studies have been selected, synthesised, analysed & a scoping review generated. This initial scoping review will improve our understanding of the extent, content & nature of this body of research. Another 37 studies are currently being qualitatively analysed to generate conceptual frameworks based on the text of the selected studies' key findings.

Squire, Corinne (Centre for Narrative Research, University of East London, 4-6 University Way, London E16, 2RD, UK [e-mail: c.squire@uel.ac.uk]), **'You Are Here': Visual Autobiographies from East London,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines visual & oral autobiographical narratives produced in a joint project set up by an artist & a social researcher in Spitalfields, East London, an area with a long history of migration & transnationalism, social exclusion, and social division across racialised, ethnic & religious differences. The research distinguishes itself from the considerable amount of work that has addressed East London as a site of social history with attendant nostalgia & neglect of the present. At the same time, the project broadens methodologies of research on social diversity in East London, to include participant-generated visual productions. It understands social positioning as an imaginary as well as a material effect, & as involving material & imaginary transnationality, as well as locality. Finally, the project extends previous visual arts and visual ethnographic work about East London social subjectivities, by recruiting a broad group of participants across a Spitalfields transect that takes in an art gallery, an out-of-school project, and a South Asian cultural centre. The 30 participants produced lifesize "body map" self portraits & engaged in semistructured interviews about the processes of constructing them. Analysing both visual & spoken texts as self-narratives, the paper analyses the links between local, national & transnational place & the texts produced; the relation of the visual & spoken

2010S02536

Squire, Corinne (Centre for Narrative Research, University of East London, 4-6 University Way, London E16 2RD, UK [e-mail: c.squire@uel.ac.uk]), **Stories of HIV and Citizenship,** *International Sociological Association, Gothenburg, Sweden,*

¶ Contemporary citizenship includes the biological alongside the political. This paper examines how people living with HIV in the UK generate story genres of HIV citizenship differentiated by nation, citizenship status, "race" & gender, but also by health status, generating a form of HIV citizenship that intersects with these other social configurations. The paper examines the particularity of such HIV citizenship in relation to health & biological citizenship more generally & investigates, also the shifting situations in which different conjunctions of citizenships become salient. The paper's materials are drawn from a longitudinal semi-structured interview study on HIV support with people living with HIV in the UK from 1993-2010. Data are examined through narrative analysis, & the paper argues that personal narratives offer particularly helpful materials for tracing the intimate politics of HIV & citizenship.

2010S02537

Squires, Gregory D., Hyra, Derek S. & Renner, Robert N. (Sociology, George Washington University, Washington, D.C. USA 20052 [tel: 202-994-6894; fax: 202-994-3239; e-mail: squires@gwu.edu]), **Place, Race, and Re-regulation: The (Mis) Place of Markets in Accounting for and Responding to the Global Financial Crisis,** *International Sociological Association, Gothenburg, Sweden,*

¶ Place, Race, & Re-regulation: The (Mis) Place of Markets in Accounting for & Responding to the Global Financial Crisis by Gregory D. Squires, Derek S. Hyra, & Robert N. Renner Subprime lending followed by record-level foreclosure rates, & the ensuing global financial crisis have generally been explained in terms of ill-informed borrowers, irresponsible lenders, greedy investors, lax regulators, fraudulent appraisers, & other institutional actors in the financial & insurance services industries. Few have asked whether broader contextual factors influence the growth of high-cost loans. We find that uneven development of metropolitan regions & particularly levels of racial segregation constitute significant correlates of subprime lending. Using multivariate OLS regression models, with data from the 2006 HMDA report, the 2006 American Community Survey, & the 2000 Census, & credit score information, we find evidence that even after controlling for percent minority, low credit scores, poverty, & median home value, racial segregation is clearly linked with the proportion of subprime loans originated at the metropolitan level. This research suggests that levels of racial segregation constitute an important determinant of subprime lending. The findings further indicate that policy initiatives should address the context of segregation and uneven development, in addition to consumer behavior, banking practices, & regulation of financial services industries.

2010S02538

Stachura, Krzysztof (Department of Social Sciences, University of GdaAsk, GdaAsk, Poland, 80-952 [tel: +48 523 24 00;e-mail: kastachura@gmail.com]), **Sociability And Its Correlates In The Digital Age. New Social Practices Around The Internet,** *International Sociological Association, Gothenburg, Sweden,*

¶ The theme introduces the phenomenon of sociability & is aimed at describing & interpreting forms of sociability in relation to the social space of Internet. The analysis concerns taking a closer look at interactions maintained using the new medium as well as assessing their strength & intensity. On describing the set of means performed to keep up sociability, the meanings of social interactions via Internet need to be drawn, along with creating a typology of users with different attitudes towards interacting online. The aim of the paper includes an in-depth analysis and interpretation of the relations between Internet use & the everyday life of people. That includes examining the meanings people attach to using Internet & explaining the most profound functions of web use. As a result, we can

expand on the present state of knowledge within the influence of cyberspace on the type and character of interpersonal relations. Their growing significance is undisputedly a crucial element in the transformation of contemporary Internet culture.

Staffieri, Simona, Sarlo, Scipione & Pantoja, Manuel ("Sapienza" Università di Roma, piazzale Aldo Moro 5, 00185 [tel: 00390649690250; e-mail: simona.staffieri@uniroma1.it]), **Progress: How Indicators can be used to Measure it?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Over the past 10 to 15 years there has been significant growth in interest in measuring social progress using social indicators. Social indicators are quantitative statistics that can be monitored over time to identify changes in social phenomena. They attempt to summarise the most important aspects of these phenomena in a way that is accessible to policy makers & the general public. These indicators have been developed for a variety of purposes, ranging from measuring the progress of a nation or community or measuring general community "wellbeing". There are now hundreds of initiatives underway at global, national & sub-national level around the world aimed at measuring societal progress and wellbeing. This paper provides a concise overview of quantitative social trends & policies across the OECD data base, World Bank data base & Eurostat data base, including a wide range of information on social issues a such as demography & family characteristics, employment & unemployment, poverty and inequality, social & health care expenditure, & work & life satisfaction. The paper will analyse a set of headline social indicators summarising social well-being in OECD countries. In order to address the aims of this paper Latent Trait Models are carried out.

2010S02540

Stamm, Isabell, Schmiade, Nicole & Kohli, Martin (Free University Berlin, Institute for Sociology, Garystr. 55, 14195 Berlin [e-mail: nicole.schmiade@fu-berlin.de]), **The Spirit of Family Entrepreneurs Forming a Profession of its Own?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Classical ideas of professions rest upon a horizontally differentiated society: groups of people with a similar position within the production process share a core of values & identities. Max Weber declared the work ethic as an essential element of professionalism and saw the entrepreneur as a gatekeeper & distinct social type. With the continuing social differentiation of modern societies, however, classical entrepreneurs who at least partially own & run their business, either by themselves or jointly with family members, seem to have forfeited their unique position in society; they now appear as anachronistic. Not only are successors in family businesses under suspicion of not fulfilling the contemporary normative expectation of an autonomous conduct of life. Moreover, in a global market economy based on networks, fluidity and flexibility, entrepreneurship has turned into an attitude rather that is suggested to be internalized within organizations ("Intrapreneurship" f.i. Pinchot), by everyone offering one's labor on the market ("Arbeitskraftunternehmer" Voss / Pongartz), or by social activists or nonprofit organizations ("Social Entrepreneurship" f.. Drayton, Faltin) and, hence, can no longer be claimed by a specific social group. Returning to the question of social integration & differentiation, can we today speak of "the entrepreneurs" as a profession? What has happened to their professional identity & work ethic? And what position in society do they see for themselves? In our work we revisited the classical family entrepreneurs. Their economic impact today is still tremendous: the majority of (European) businesses are controlled by families. According to a recent estimate for Germany, e.g., they account for 95% of all businesses & employ 57% of the work force (IfM 2007). Over thirty biographical-narrative interviews have been conducted with family entrepreneurs & their family members across Germany. Biographical case reconstructions (Rosenthal) & global analysis of the cases have revealed a still existing strong idea of the entrepreneur made up of a set of common activities, a distinct understanding of their function within the production process as well as a sense of obligation & responsibility. On an individual level, this imagination serves as point of reference for personal identity & provides orientation throughout the life course. On a group level, the vision of the entrepreneur constitutes an elite business community sharing a collective identity & actively differentiating themselves from others such as managers, investors or lower-level employees. We outline how family entrepreneurs distinguish themselves from bare entrepreneurial activity & draw much of their professional understanding from their intermediate position between institutional spheres (the business & the family) & their contribution to a society based on performance. They continue to be socially integrated via functional dependability, but also via their appropriation of their biography and their position within society. Family entrepreneurs still obtain a specific social status & (varying degrees of) political and economic power based on a sense of belonging to a collective responsible for its own criteria of good & successful practice. They can thus be considered as a modern profession.

Stampa, Inez Terezinha (Pontifícia Universidade Católica do Rio de Janeiro; PUC-Rio, Rio de Janeiro, Brazil [tel: 55 21 35271290; fax: 55 21 35271291; e-mail: inestampa@ig.com.br]), **Recent Transformations in the World of the Work and its Consequences for the Brazilian Workers and Their Organizations,** *International Sociological Association, Gothenburg, Sweden,*

¶ This article points out some elements of the recent changes in the world of work & its consequences for the Brazilian workers and for their unions. The reflection has as its main focus the comprehension of the union performance in a context of restriction of public space & collective practices. The democratic process, in Brazil, is going through a major transformation. Today, the public space debate is an important factor to understand the dynamics of the unionism. In this sense, it is very important to emphasize the fact that the unionism is a kind of collective action. In this direction, the unionism cannot be analyzed only inside the workplace or even from the institutional space of professional relations. The ampliation of the syndicalism field of action became an interesting question as the traditional union strategies are recognized now as insufficient in the sense that it cannot face the disputes & the struggles that take place outside of the work, but are also important for the workers, & that are so many & so complex that no organization alone can face it. In that confrontation, the building up of public spaces is a strategy that may help to rethink the debate putting aside the opposition "state owned versus private owned". However, this new strategy brings also new challenges for the unionism. How to establish alliances that surpasses the workplace limits in the sense of increasing its organization & mobilization capability without losing the historical role of the unions?

Stampnitzky, Lisa (Institute for Science, Innovation, and Society, University of Oxford, Oxford, OX1 1HP, United Kingdom [e-mail: lisa.stampnitzky@sbs.ox.ac.uk]), **Shifting Conceptualizations of the Media as an Actor in Terrorist Dramas,** *International Sociological Association, Gothenburg, Sweden,*

¶ "The media" have been implicated in terrorist incidents & the larger debates about the problem of terrorism, not just as a neutral space where facts are reported, but as a site of conflict: over definitions & labeling, the meaning of terrorism, & the proper role of the media itself. In the 1970s, debates raged over whether media organizations were, through their very coverage of terrorist incidents, fulfilling the terrorists' desire for publicity. Debates focused upon the question of whether or not responsible media organizations ought to practice a degree of self-censorship, or perhaps even have government censorship imposed upon them. In more recent years, however, debates over the role of the media in covering terrorist incidents have often shifted to questions of the role of the media in the labeling or construction of terrorists & terrorist events. Building upon a study of expert and media discourse on terrorism from 1970 to the present day, I address the question of how & why this transformation occurred.

2010S02543

Stanbridge, Karen (Dept. of Sociology, Memorial University of Newfoundland, St. John's, NL, Canada, A1C 5S7 [tel: (709) 737-7455; fax: (709) 737-2075; e-mail: kstanbri@mun.ca]), **Child and Nation: Conceptualising the Link,** *International Sociological Association, Gothenburg, Sweden,*

¶ To help conceptualise the link between the modern child & the modern nation, the paper builds & assesses a typology of ways in which children have participated in the national enterprise. It uses as a model the classification scheme formulated by Anthias and Yuval-Davis (1989) to catalogue the ways women have been involved in modern national processes. A comparison of the typologies shows that the national child & the national woman are in some ways analogous, & highly inter-reliant. But the national child also occupies her own place in the nation owing to her biological immaturity. The paper ends with some thoughts on how the typology can contribute to macro/structural & micro/interactive studies of children, nations & national ideology.

2010S02544

Stanciugelu, Irina, Frunzaru, Valeriu & Sergiu, Stan (Faculty of Communication and Public Relations, National School of Politi-

cal Studies and Public Administration, Bucharest, Romania, 010643 [tel: +40213180881; fax: +40213180888; e-mail: irina.stanciugelu@comunicare.ro]), **Social Amplification of Risk and Crisis Communication Planning,** *International Sociological Association, Gothenburg, Sweden,*

¶ Risk management has become a dominant concern of public policy & the ability of government to anticipate the strength & focus of public concerns remains weak. The social amplification of risk framework (SARF) was designed to assist in this endeavor. It aims to facilitate a greater understanding of the social processes than can mediate between a risk event & its consequences & suggests a causal & temporal sequence of actions. In order to identify categories of mediator/moderator, in December 2009 we conducted a CATI survey on the Bucharest population aged 18 & over (N=1376). The outcomes of the survey show that more than half of the respondents heard in the last six months about an earthquake (53.3%), especially from the television (73.2%). They are worried and very worried about an earthquake (63.5%) rather than a fire (54.1%), a pandemic flue (43.9%) or a terrorist attack (33.8%). All the outcomes of the research investigation regarding a possible earthquake–which is the main source of information, what do people know about the actions to take, what kind of aids they expect to receive & from whom a are used for developing risk/crisis communication plans destined to the General Inspectorate for Emergency Situations.

2010S02545

Staszynska, Katarzyna M. (Chair of Social Sciences, Kozminski University, Jagiellonska 57/59, 03-301 Warsaw, Poland [tel: +48 510 12 14 12; fax: +48 814 11 56; e-mail: kstaszynska@kozminski.edu.pl]), **Reliability of Survey Data As an Effect of Respondents' Definition of the Interview Situation,** *International Sociological Association, Gothenburg, Sweden,*

¶ Although the understanding of the social nature of the interview is more or less common among survey methodologists, the implication of this fact for the quality of survey data has not been yet fully examined. The survey research process is a social interaction and, thus, respondents' definition of the survey & its context is an important source of interview bias. It also affects the choice between satisficing & optimizing strategy of answering questions and, finally, the quality of answers. The proposed paper is examining the results of the monthly public opinion survey conducted by Public Opinion Research Center (CBOS) on a nationwide random representative sample of N=1,650 adults conducted in February, 2004. Factor & regression analyses were applied to analyze the findings. The analysis proves that respondents' definition of survey situation, education, political participation and survey experience as well as level of acceptance of the current political system & trust in political institutions are the main factors determining positive attitudes towards the interview, consequently leading to more accurate cognitive processes, lower tendency for satisficing & better quality of answers.

Staton, Monte (Loyola University Chicago, Chicago IL 60626 [e-mail: mstato1@luc.edu]), **Therapeutic Governmentality and the Meaning of Freedom for Mentally Ill Offenders,** *International Sociological Association, Gothenburg, Sweden,*

¶ Therapeutic jurisprudence argues that drug & mental health courts free offenders from social ills, while critics such as Nolan say the special courts are therapeutic governance ala Foucault, limiting freedom & instead coercing offenders to self engineer along state wishes. In this paper, data collected in observation of three mental health courts in Illinois as part of a state-funded study is analyzed by comparing the three courts in terms of how offenders are processed by the mental health court staff, & how much offenders participate in decision-making during mental health court program appearances before a judge. The goals of therapeutic jurisprudence are investigated during courtroom observations, and analyzed in terms of the Foucaultian concept of bio-power exercised in governance of the population of persons with mental illness who commit crimes. Recent scholarly work on Foucault's understanding of law & on his political philosophy is discussed in terms of the meaning of freedom for mentally ill offenders. The paper concludes that mental health court programs free some offenders from incarceration, but increase their management by the state & are thus evidence of an expanding carceral network via law. For mentally ill offenders who cannot perform along mental health court program guidelines, there is no alternative but continued incarceration & mental health care within punitive institutions.

Stauffacher, Michael, Lang, Daniel & Scholz, Roland W. (Institute for Environmental Decisions–Natural and Social Science Interface ETH Zurich, Zurich, Switzerland [e-mail: michael.stauffacher@env.ethz.ch]), **The Role of Science in Sustainability Transitions: Neither "Speaking Truth to Power" nor "Political Activist", but What?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Scientists involved in sustainability transitions jeopardize their societal role: abandoning the classical role of "speaking truth to power", scientists may end up as "political activist". Such peril is not unique to sustainability transitions, but common in many applied, commissioned or transdisciplinary research setting. Our considerations depart from the Transdisciplinary Case Study (TdCS) design that we have developed at ETH Zurich & applied in more than 20 projects aiming at contributing to sustainability transitions since 1993. The term transdisciplinary refers in our understanding to a form of knowledge production that complements traditional disciplinary & interdisciplinary scientific activities by integrating stakeholders from outside academia. In TdCS like in most studies related to sustainability transitions we deal with problems that share a number of characteristics: high scientific uncertainties, the necessity to include knowledge from diverse stakeholders & the public as well as to gauge diverging goals & interests & scrutinize possible trade-offs. Different ways of knowing, various perceptions, interests & believes collide already with respect to the questions "what is the actual problem" & "is there a problem at all". Hence, it is essential to deliberately & collaboratively frame the problem to be tackled from different perspectives at the very beginning. Missing or incomplete joint problem framing can be a crucial impediment for creating valuable results both for sciences & participants from outside academia. Focusing on this problem framing phase, we discuss & reflect how we have organized the respective steps and what experiences we gained from three exemplary large-scale transdisciplinary project. One crucial aspect that becomes visible across our projects is the role distinction during this phase. There seem to be steps that can & should be conducted in a collaborative way. However, there also seem to be the need for reflective steps in which both science & people from outside academia clarify, specify & follow their specific goals and questions. We conclude that only by paying enough attention to the initial phase of a 'common construction of reality' by jointly framing the problem makes it possible for all participants to achieve their distinct goals. In our opinion sustainability transitions project should depart from a "real" partnership among science & people from outside academia, where both join on equal footing with their own interests & goals. Both sides cede part of their autonomy, but must at the same time allow freedom and fulfillment of the other's societal function. This implies that a continuous process of mutual differentiation is required as part of a joint problem framing process. Overall a new role for science becomes visible: being involved in sustainability transitions but still following a distinct societal role of advancing the scientific knowledge base.

Stecher, Antonio & Martinez, Antar (Faculty of Psychology, Diego Portales University; Santiago, Chile; [tel: 56-2-6762501; fax: 56-2-6762502; e-mail: antonio.stecher@udp.cl]), **Contributions of Narrative Approach to Psychosocial Inquiry. Two Empirical Studies on Identitarian Construction Process in the Contemporary World,** *International Sociological Association, Gothenburg, Sweden,*

¶ The so-called 'narrative turn' is one of the most significant developments of recent decades in the field of social research. The various & diverse narrative approaches in the social sciences have contributed to make visible the centrality of story-telling in shaping the social world & in fashioning personal & collective identities. One particular aspect of interest to the field of Social Psychology is how the notion of narrative allows including the contributions of the "linguistic turn" in regard to the constructive & constitutive nature of language–moving away from its representational conception. This without necessarily moving to the extremely socioconstructionist positions in which categories such as 'identity', 'agency' & 'experience' are blurred and subsumed under the theoretical primacy of the concept of discourse. In this context, this paper presents two empirical studies that contribute to illustrate & discuss the theoretical and methodological use of narratives in the field of psychosocial research. The first study addressed the issue of collective identity construction in a group of activists belonging to sexual minority movements in the city of Barcelona. The second one was aimed at studying personal identities of workers employed in retail industry in Santiago de Chile, in a context of labor flexibility. From the above we hope to contribute to the debate on the scope and limitations of narrative approaches in the study of identity processes in the field of Social Psychology.

2010S02549

Stecy-Hildebrandt, Natasha (University of Manitoba, Winnipeg, Canada, R3T 2N2 [tel: (204) 638-7812; e-mail: nULstecyhildebrandt@yahoo.ca]), **Family & Work at the University of Manitoba,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study examines issues of leave-taking, work-family conflict, and child care among faculty from the perspective of gender norms. In addition, the relation of family leave policies to job and relationship satisfaction among faculty members was examined across policy contracts at the University of Manitoba. Respondents with at least one child living at home were recruited by email sent on my behalf by the University of Manitoba Faculty Association. Results indicated that respondents were more satisfied with the length of their leaves after 2001 than before. Neither job nor relationship satisfaction differed across contract years. Leave-taking and work-family balance were found to be structured along gender lines. Child care is suggested as the new frontier in work-family reconciliation research as many respondents showed dissatisfaction with the current child care situation.

Stefanelli, Laura (University of Montreal, Canada/CPDS, Montreal, QC, Canada H3T 1N8 [tel: 0015145631393;e-mail: laura.stefanelli@umontreal.ca]), **The "Reproductive Labour" of Care: A Case Study of Migrant Women Working in Italy,** *International Sociological Association, Gothenburg, Sweden,*

¶ This is a case study on the living conditions of the transnational move of the women domestic workers in Italy. The migration of women as domestic worker responds to the "deficit of care" for the reproductive labour in the host countries. I develop an explanation of how social, economic & political transformations occurred in Southern Europe, & in Italy in particular, has helped create both demand for & a supply of female (im)migrant care workers, while migration policies have played a key role in shaping migration flows. Thus, the analysis of domestic work is focused on the nexus of care, gender & migration processes. By using an intersectional perspective to look at the social positions of women in migration, I am able to illustrate how migratory processes engender relations of inequality between women. This work suggests the idea of agency of migrant women as an important complementary dimension to the existing literature on the domestic issue. Women can be considered as transnational welfare provider (TWP) in the receiving country and in the country of origin, i.e. they provide "well-being" for their families back home & for the families in the host societies.

2010S02551

Stenersen, Johanna (Dept. of Media and Communication Studies [e-mail: johanna.stenersen@oru.se]), **Voice and Violence. Contested Practices of Civic Participation,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper seeks to explore the concept of participation from a civil society perspective in a context of international development cooperation & will specifically draw on field experiences from civil society organizations (from the women's movement) in Central America. The empirical data derive from a research project situated in the field of communication & social change that aims at exploring citizen participation, voice & violence by looking at the discourses in which "people" assume the role of citizen and what communicative practices/strategies that are used to reinforce their involvement? What motivates or impedes people from engaging in different social and/or political issues & in what ways their involvement relates to issues of democracy, rights, power and citizenship. The paper further discusses the dynamics between various forms of communicative & cultural practices with particular regards to the emancipatory expectations that are associated with different forms of communicative action. Notions of voice, recognition & power/empowerment are central to this paper and will be addressed from a multi-disciplinary set of theoretical perspectives, ranging from political theory, democracy studies and post-colonial theory to development communication, political anthropology & cultural studies.

2010S02552

Stepchenko, Anna (University of Latvia, Riga, Latvia, LV-1019 [tel: +371 26315642; e-mail: anna.steo@apollo.lv]), **Discrimination Against the Elderly Outside and Inside the Labour Market in Latvia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Aim of this case study is an analysis of causes leading a majority of the elderly of today to poverty & social exclusion. Methods: analysis of statistical data & changes in the laws concerning the elderly, interview. The major factors leading to victimization of the our time elderly are the liberalism, domination of juvenocracy at the beginning of transition, materialistic value system, implement of pension reform in 1996, institutional violence against working pensioners decreasing their pensions to concrete sum of LVL 60 in the period 1996-2002 & by 70% since 1st July, 2009 until 31st January, 2010.

Stephan, Viola (Georg August University Goettingen–Center of Methods in Social Sciences, Goettingen, Germany, 37073 [tel: +49 551 398354; e-mail: viola.stephan@gmx.de]), **Multiethnic Families from and in the Successor States of the Soviet Union: Transformations within both Society and the Families,** *International Sociological Association, Gothenburg, Sweden,*

¶ How do multiethnic families deal with different ethnic belongings? In this presentation we will present our empirical findings concerning this question based on family history & biographical interviews with members of several generations of families living in and coming from the successor states of the former Soviet Union. In terms of the Soviet Union's bureaucracy, national belonging in terms of the relevant entry in the person's passport was an ever present issue (and could lead to potential problems). Despite official propaganda, which claimed that national differences would eventually die out, one must take into account the importance of the various "nationalities" in the former Soviet Union & the role these nationalities played in the hierarchy of social prestige (or social "status"). After the collapse of the Soviet Union, the ethnic belonging in daily life was suddenly played a much greater role. In our presentation we will concentrate on the continuing history of multiethnic families after the collapse of the Soviet Union. We will introduce families that migrated to Germany as well families that remained in the successor states of the Soviet Union (such as Kazakhstan, Kyrgyzstan, & the Ukraine). We will discuss the changes these families were subject to after the demise of the Soviet Union as well as how the different families went about constructing their family pasts against this backdrop. We intend to address the question of how the existing established-outsider figurations (in Elias's sense of the term) operate in both the successor states of the Soviet Union as well as in Germany. In doing so we shall focus on the changes in the overall social and intrafamilial power balances as well as how they interplay with one another. In this context, we will also illustrate when & how ethnic belonging becomes relevant in intrafamilial, intragenerational, & intergenerational discourses.

2010S02554

Stephenson, Max Jr. & Zanotti, Laura (Virginia Tech Institute for Policy and Governance; Virginia Tech, 205 West Roanoke Street Blacksburg, Virginia 24061 [tel: 540-231-6775; e-mail: mstephen@vt.edu]), **Envisioning Peace and Social Justice: Exploring the Political Imaginaries of Community-Based Philanthropies in Haiti and the Balkans,** *International Sociological Association, Gothenburg, Sweden,*

¶ Government officials & international institution leaders have increasingly recognized the role of Non-Governmental Organizations (NGOs) as important in peacekeeping & peacebuilding processes. Heightened interest in human security to protect populations from an array of dangers that range from poverty to violations of human rights have opened new spaces for political action for NGOs. However, the growing role of NGOs in national & international governance is controversial. Some analysts have suggested these trends are creating a progressive alternative to state-based politics (Kaldor, 2003). Meanwhile, other scholars (Duffield, 2007, Duffield & Waddel, 2006) have argued that NGOs represent a liberal form of bio-political empire. Researchers who remain attached to the state as the only possibility for political organization have also criticized NGOs. This paper both problematizes dismissals of NGOs as carriers of imperial agendas and romanticized appraisals of their work. We explore the ways community-based philanthropies in the Balkans & in Haiti have framed their political imaginaries & negotiated relationships with multiple local, national & international interlocutors and constituencies to examine how these entities appropriate political spaces for action & how they invent (with varying degrees of success) strategies to secure social change. Stephenson, Svetlana (London Metropolitan University, London UK N5 2AD [tel: 44 207 1335030; e-mail: s.stephenson@londonmet.ac.uk]), **Ruling the Streets: Violent Youth Groups in Moscow,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper addresses the practices associated with the domination of local spaces by youth groups at the outskirts of Moscow. It shows how young people construct themselves as the local "violent specialists" (Collins, 2008) using a variety of interactional devices. In the streets & courtyards where they live they develop defensive obsessions & construct their social world as a field of battle between the contaminating "others", young people from other areas, & themselves, the heroic warrior youths, who protect their area. The non-combatants, the so called "nerds" (local middle class young people) become objects of ridicule and victimisation. The paper analyses the practices of arranged fights and performative verbal violence & shows how these practices allow the young people to limit the use of extreme physical violence. It argues that in Russia, a late moderniser, these practices are rooted in the collective memories of violent rural rituals as well as in the working class cultural prescriptions. It also argues that that the norms of dominant masculinity & the imperatives of power relations based on violence are particularly salient for young men who are displaced from stable kin relationships & who do not value their place in the education system. Being as displaced as they are from more structured social environments of urban society, these young men are thrown into the space of the streets, where they play out the ancient dramas of power & domination, fear & exhilaration. The paper argues that the re-working of ancient rituals & working class cultural prescriptions can also be seen as a reaction to the need of re-solidification of the social world in the conditions of greater insecurity & diversity of the global city.

2010S02556

Sterchele, Davide (Department of Sociology, University of Padua, Padua, Italy, 35123 [tel: 00393490953934;e-mail: davide.sterchele@unipd.it]), **The Cult of Authenticity in Post-Sports: Individualism or Social Engagement?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The relation between institutionalized traditional sports & emerging bodily practices can be interestingly analysed by exploring its analogies & differences with the relation between traditional forms of religion & new forms of spirituality. An important convergence can be found in the search for "authenticity" which is realized, in the field of sport such as in the religious one, through a process of de-institutionalization of the social practices. Many open-air practices & lifestyle sports aim at retrieving a through a bodily experience relieved by spaces, times, rules & goals imposed by sport federations a a deepen relation with the environment & with the most authentic core of one's own self. The consciousness of self & of the world gained through sensations & emotions of personal experience tends to replace the interiorization of the bodily movement patterns learned by trainers & instructors. Whether the analogy between sport and religion has been criticized by many scholars mainly because of the lack (or low relevance) of the transcendent dimension in traditional sport practices, the recent sociological elaborations of the concept of spirituality seems to provide new interesting tools for interpreting the emerging forms of bodily movement. Keywords: authenticity, de-institutionalization, post-sport, spirituality

Stevens, Martin & Hussein, Shireen (Social Care Workforce Research Unit, King's College London, Strand, London, WC2R 2LS [tel: 0044 20 7848 1669; e-mail: shereen.hussein@kcl.ac.uk]), **International Care Workers in England: Practices and Identities,** *International Sociological Association, Gothenburg, Sweden,*

¶ Older people's social care support is at times undertaken in England by people who are economic migrants. This paper presents findings from a two-year study exploring motivations, experiences, practice and future plans of migrant workers in the care sector in six case study sites in England. This paper focuses on data from interviews with migrant care workers, both those who are specifically recruited from outside the UK & those who take up care work upon arrival in the UK. In-depth qualitative interviews explored migrants' experiences in the sector, different perceptions and implications for their own career progress & the care sector. The analysis drew on theoretical frameworks giving attention to gender and identity in care work. Findings were contextualised with other in-depth interviews with stakeholders such as employers, colleagues, recruitment agencies' managers & service users. Themes emerging relate to the varying motivations of migrant workers in relation to different circumstances & route of employment (directly employed from home country or after arrival to the UK), perceived identities & dynamics with employers, colleagues & older people receiving social care. How possibly different cultures & attitudes to older people's care & support are negotiated by the care home sector is discussed.

2010S02558

Steyer, Véronique (ESCP Europe, Paris, France [tel: + 33 6 70 80 67 73; e-mail: veronique.steyer@escpeurope.eu]), **Public Authorities and Private Sector in France: An Essential but Problematic Collaboration in Preparing Influenza Pandemic,** *International Sociological Association, Gothenburg, Sweden,*

¶ As in Britain, France's preparation for influenza pandemic has progressively recognized the mobilization of the private sector as a major axis. Indeed, the latest versions of the French national plan for the prevention & control of influenza pandemic assign the private sector the mission of ensuring the continuity of the economic activities in the country during the pandemic period, while protecting its employees' safety. This recognition of businesses' role fits with the current trend tending to blur the public-private borders in risk management, as underlined by Borraz (2008). Some even call for public-private partnerships for managing large scale risks (Godart et al., 2002). At least, as Dingwall (2008) underlines it, the question of coordination between the public sector, the private sector & the NGO sector is vital for the preparation efficiency. This communication will question the actual emergence of a new model of relationship, or "partnership", between public authorities & businesses in this pandemic threat preparation. How do these actors relate and coordinate themselves? Which levers do public authorities use to mobilize companies? How do companies react to this request? How do conflicts of interest shape complex plays of responsibility allowance & let us wonder about the limits of this collaboration? This paper will be supported by a longitudinal study. 27 interviews were carried out (21 with firms' representatives & 6 with public authorities' ones). In addition, regular meetings of a group of large firms' representatives exchanging information on pandemic influenza preparation, inviting regularly public authorities' representatives & two colloquiums on the French preparation in September 2008 & 2009 have been observed & analysed. If this study doesn't imply a historical comparison, the emergence of a new influenza virus A (H1N1) in April 2009 offers us a unique opportunity to directly observe the reaction of both sides to the alarm.

Stock, Paul, Peoples, Sue, Burton, Rob & Campbell, Hugh (Centre for the Study of Agriculture, Food and Environment; University of Otago, Dunedin, New Zealand, 9054 [tel: 64 03 479 9242; fax: 64 03 479 5266; e-mail: Paul.Stock@otago.ac.nz]), **Between Commodity Competition: Divergent Trajectories in the NZ Pastoral Farming,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the wake of the liberalisation of New Zealand agriculture in 1984 the two dominant pastoral sectors have followed divergent paths. While sheep & beef producers have struggled with generally low commodity prices, the dairy sector has ridden the crest of a commodity boom. Liberalisation was supposed to assist the agricultural industry to become more efficient through enhanced competition. However, while farms are indeed getting larger and more efficient, preliminary results from the Rural Futures project suggest it is the competition between the farming sectors that is having the greatest impact on New Zealand's pastoral agriculture. The economic power of the dairy industry is clashing with traditional sheep/beef farming cultures in a battle for land, resources, communities, & even identity. Other features typical of neoliberalism are also at work. The introduction of a weak and decentralised Resource Management Act has favoured the expansion of the dairy industry through reducing the relative importance of environmental impact on approvals of land use change. Overall, the move to a liberalised market appears to have created a situation where commodity prices are dominating agricultural development. This is leading to the generation of considerable wealth in the short term, but is potentially also creating an agricultural sector that is heavily dependent on a single commodity & has limited cultural or community resilience. In this paper we discuss the conflicts & congruences between these industries & implications for the liberalisation of agriculture in other countries.

Stoddart, Mark C.J. & Tindall, David B. (Sociology & Social Anthropology, Dalhousie University, Halifax, Nova Scotia, Canada [e-mail: mcjs13@gmail.com]), **"Governments have the Power?" Interpretations of Climate Change Responsibility and**

Solutions among Canadian Environmentalists, *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper, we examine interpretations of climate change among "rank & file" members of Canadian environmental groups. We focus on environmentalists' attribution of responsibility for addressing climate change & their beliefs about the necessary solutions to this problem. Our analysis is based on responses to open-ended questions that were part of a self-administered survey completed by 1227 members of nine different environmental organizations. For this group of environmental movement participants, the federal government is typically seen as most responsible for addressing with climate change. Government leadership is seen as necessary because it has the power set regulations & lead corporations & citizens towards pro-environmental behavior. State-oriented solutions are similarly favored by a majority of participants, with an emphasis on stricter legislation & punitive taxation. Besides the focus on government leadership, a large number of participants assert that "individuals are the driving force" in dealing with climate change. In this framework, individuals can take responsibility either through making lifestyle changes, or through applying pressure to government & businesses as citizens & consumers. A dominant theme is that corporations are unwilling to change on their own. Instead, recalcitrant corporations must be coerced into becoming more environmentally sustainable by a strong state.

2010S02561

Stoffle, Richard William (University of Arizona, Tucson, AZ 85721 [tel: 520 6212462; fax: 520 6219608; e-mail: rstoffle@u.arizona.edu]), **Community Resilience and the Use of Quality of Life Indicators As a Sustainability Assessment Measure,** *International Sociological Association, Gothenburg, Sweden,*

¶ After six years of research in the central Bahamas that involved 572 interviews using different approaches, Quality of Life indicators were found to be the most useful for predicting why six traditional coastal communities responded differently to three separate Marine Protected Area proposals. Social cause & effect is always complex especially when it involves both understanding natural & social co-adaptations developed over hundreds of years & assessing the impacts of unique threats to these dimensions of resilience. MPA proposals that involve restricting the access of coastal people to traditionally utilized marine ecosystems is one such potential impact that must be assessed. All six of the subjective QofL indicators were useful for understanding community well being and their responses to the MPA proposals, but the Agency Indicator is suggested as particularly important for understanding present and predicting future community behaviors. The paper argues that community resilience can be understood with QofL Indicators and when studied together they are useful tools for conducting Sustainability Assessments.

Storelli, Elizangela (Sociology Department, Boston College, Chesnut Hill, MA 02467 [tel: 617-552-4130 ; fax: 617-552-4283; e-mail: storelli@bc.edu]), **Aging and Development in Latin America,** *International Sociological Association, Gothenburg, Sweden,*

¶ Most developing regions are currently experiencing rapid population aging. Population aging affects all aspects of society & in most countries in Latin America this transition is taking place in the midst of fragile economies & low levels of institutional development. In 2002 the Second World Assembly on Aging formulated the Madrid International Plan of Action on Aging (MIPAA) as a policy framework for national response to population aging. The MIPAA places "older persons & development" as one of its three priority directions guiding policy formation & implementation. Explicit consideration of the connections between aging and development has been limited. Framed within a post-modern theoretical view of development, this paper examines aging and development within Latin America using three critical priority areas established by the MIPAA: (1) social protection; (2) older workers & labor markets; & (3) health care. After exploring the implications of the MIPAA within Latin America & addressing the national responses, this paper concludes that connections between aging & development in Latin America are conceptually similar, yet substantively different from those in more developed regions.

2010S02563

Strandell, Harriet (University of Helsinki, Department of Social Research, PB 18, 00014 Univ. of Helsinki, Finland [tel: +358 40 7080341; fax: +358 9 19123967; e-mail: harriet.strandell@helsinki.fi]), **School Children's 'After-School Careers' in the Light of Discourses on Children's After-School Time,** *International Sociological Association, Gothenburg, Sweden,*

¶ Children & childhood have since the 1990s become an intensified target of welfare state politics & governance in Finland. The need for parental & societal investments in children has been underlined. The formation of the modern individual is increasingly defined as a public responsibility, preferably to be carried out in partnership "contracts" between private & public instances. School children's after-school care represents an area in which new principles of governing are put into operation, as legislation in 2004 put municipalities under the obligation to arrange care and activities for children in first & second grade in their after-school time. The public debate about school children's after-school time has been lively. This paper reports results from a study combining ethnography with document analysis on 7-9 year old children attending after school centres. Links & connections between cultural constructions of childhood produced in the public debate on children's after-school time, the implementation of the after-school reform, social practices of after-school centres and children's understandings & experiences are in focus in the study. This paper focuses on children's "after-school careers", that is how children tell about their entry into institutionalised after-school care, their way through it, often moving from one type of centre to another, & finally, how they anticipate leaving after-school centres behind when finishing second grade. Children's self-positioning will be studied in relation to discourses about childhood, & "good" after-school time in particular.

2010S02564

Strauss, Susanne & Ebert, Andreas (University of Tuebingen [e-mail: susanne.strauss@uni-tuebingen.de]), **Old Age Pension as Indicator for Cumulative Inequality between Educational Groups,** *International Sociological Association, Gothenburg, Sweden,*

¶ Empirical findings show that lower qualified individuals in Germany face a higher risk of low statutory pension. Since statutory pension rates closely reflect previous labour market experiences, one can deduct several risk factors which lower a person's old age pensions. Factors decreasing statutory pension rates are: short periods of social security contributions; low mean contributions as well as pension reductions due to early retirement. We know from previous research that lower qualified individuals are more likely to face one or more of these risk factors throughout their working life. The aim of our study is to estimate the quantitative influence for each of these risk factors on differences in old age pension between educational groups. We compare the influence of unemployment spells, low income, interruptions in social security contributions & early retirement. Using Oaxaca-Blinder decomposition (Jann, 2008), we estimate the percentage share of each form of flexibility throughout the employment career on individual old age pension entitlements. The empirical analysis is based on retrospective data about the cohort of individuals who retired in 2007, provided as Scientific Use File by the German statutory pension insurance (Vollendete Versichertenleben 2007).

Strazzeri, Irene (University of Foggia, via arpi 155 [tel: 0039 881 587624; fax: 0039 881 587615; e-mail: straire@hotmail.com]), **Is Still Living the Frankfurt Tradition? Axel Honneth and the New Paradigm of Recognition,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper start from the Axek Honneth reading of the first Critical Theory. In the second part, I will examine the limits individualized by Honneth in the Habermas sociological perspective, particularly those referred to the his two levels model of society. In the third part, finally, I analyze the actuality of the new paradigm of recognition in relation to three problematic spheres: the cultural pluralism, the normativism, the connection between political philosophy & social theory. In relationship to the pluralism, I will try to understand if recognition really represents an alternative between liberals & communitarians. In the normative sphere, if the recognition represents a valid alternative between foundationalism & proceduralism. About social theory, I will try to clarify if the paradigm of recognition succeeds indeed to move the matters of social justice & the diagnosis of the actually social pathologies from the juridical/institutional & political level to the society, or, better, to a new Critical Theory of our society.

Strecker, David (Department of Sociology, University of Jena, Germany [e-mail: David.Strecker@uni-jena.de]), **Power and Justification: Conceiving the Interdependence of Political Philosophy and Social Theory as Perspectival Dualism,** *International Sociological Association, Gothenburg, Sweden,*

¶ While both social theory & political philosophy analyze social phenomena, they are commonly held to do so in distinct ways which can more or less be pursued separately. Social theory aims at explanatory models of the structure & evolution of society; accordingly, its focus is on causes. In contrast, political philosophy discusses justifications for why society should be structured or changed in one way or another; hence it focuses on reasons. This is obviously not a sufficient characterization of the two disciplines: In some of its variants social theory does look at reasons; & some forms of political philosophy try to deal with problems of institutionalization & social stability. Yet, when Weber, e.g., considers reasons, he treats them as causes; & when Rawls discusses non-ideal conditions, he does so only after the basic tasks of justification have been fulfilled. The first approach develops a specific understanding of social explanation, but remains purely explanatory, nonetheless, while the second one turns to explanation only as an addendum to justification. In contrast to such conceptualizations I argue that the relationship between explanation & justification is more intricate. Modelled adequately, social theory & political philosophy must be understood as representing two distinct perspectives which may neither be conflated nor isolated. Social theory expresses the objectifying perspective of the observer of social phenomena; political philosophy embodies the performative perspective of the participant of social praxis. To illustrate how both are dependent upon each other, I look at the central concepts of both disciplines, namely power & justification, & trace their interrelation. In political philosophy justification is the primary task. This task is not confined to analyzing what is justified; as theories of procedural justice have made clear, one must also analyze the conditions under which justifications are given. Do justifications relate to true or real interests? Or must they count as inauthentic & distorted due to power relations which have caused them? Whether or not this is the case can only be decided on the basis of a social theory of power. However, social theory is also dependent upon political philosophy: All kinds of influences have been conceptualized as power. In fact, the notion of power has been understood as referring to repressive as well as constitutive influences exerted by social relations & has been analyzed as a function of actions as well as of structures. Hence, from an objectifying perspective every social situation can be analyzed as touched by power relations, leaving nothing in society that is free from power. Any attempt to limit the concept in such a way as to refer only to specific causal relations is in need of a criterion that can only be provided by normative argument from the perspective of a participant in social interaction. An adequate understanding of society therefore requires switching back and forth between social theory & political philosophy & the two related perspectives. The paper aims at elaborating how the relation between the two perspectives is to be understood. In doing so, I start by following in the footsteps Marx' ideology critique, the early Frankfurt School's concept of interdisciplinary materialism as well as Habermas' reconstruction of critical theory all of which have tried to tackle the problem of perspectival dualism (interestingly in contrast to current reformulations of the Frankfurt tradition like those of Honneth or Forst which totalize the participant's perspective).

Stypinska, Justyna (Department of Sociology, Jagiellonian University, Grodzka 52, 31-004 Kraków [e-mail: justyna.stypinska@gmail.com]), **The Ageist Prism among Polish Employers–Facts and Fiction,** *International Sociological Association, Gothenburg, Sweden,*

¶ Methods, research questions: This paper will present the preliminary results of a study on Polish labour market situation of persons 50+ with regard to the attitudes of employers towards older workers and the opinions on their employability. The study will include both qualitative & quantitative methods: survey of 400 men & women of age 50+, as well as expert interviews. The study will answer the following research questions: 1. What are the major economic and cultural determinants of ageism & age differentiating behaviors among employers in Poland? 2. In which sectors of economy does ageism occur? Where does it not occur? 3. What types of ageist attitudes & behaviours are the most prevalent in the Polish labour market? 4. What is the knowledge of the employers of the anti-discrimination legislation on European & national levels? Results & conclusions The results of the study will enable to reveal the scope & character of ageism & age discrimination experienced by the older workers & job seekers with regard to the sector they work in. The study will attempt to answer if the "ageist prism" is a severe hindrance for older people to find and maintain a satisfying job in Poland.

Suarez, Marcial Alecio Garcia (Universidade Federal Fluminense, Campus do Gragoatá, Niterói, Rio de Janeiro [tel: 55-21-26131576;e-mail: marcialgsuarez@gmail.com]), **Twenty-First Century Terrorism: The Definitional Problem of Complex Political Environments,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper addresses some problems in understanding twenty-first century terrorism. The focus is on the singularity that results from the relationship between complex political environments and aspects of contemporary terrorist actions. The analysis examines some of these aspects, so as to understand the inherent problem with which the international system & the international organizations (i.e., the United Nations) have to deal with in the era of international terrorism. The paper focuses on two main aspects of terrorism: the definitional problem & the analytical framework. Such analysis could offer a pathway to the challenges of achieving a clear understanding of terrorism as one of the main political issues of the twenty-first century. Two main questions are addressed here: Why is it so difficult to have a widely accepted definition of terrorism? What kind of difficulties does the United Nations face in enforcing counterterrorism strategies? This paper tries to offer some answers to these questions, while conceding that such answers are just a particular view & that there may be several possibilities.

Suchet, André (Institut de Géographie Alpine, University of Grenoble, 14 bis, Avenue Marie Reynoard, 38 100 Grenoble, France [tel: 0033 6 03 69 72 04; e-mail: a.suchet@wanadoo.fr]), **Social and Cultural Geography of Mountain Tourism Imaginaries: from Sex to Death,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the French Alp, numerous challenges face the winter sports industry both at an international & national level, but at the same time heritage tourism constitutes a new phenomenon that is largely important. This presentation deals with social & cultural imaginaries of these two types of tourism. One can question, on one hand, whether the winter sports industry is critiqued for being unsustainable while, on the other hand, for self enjoyment & even an erotic environment? Does heritage tourism become the new attraction for mountain areas or is it correlated to sadness, old and death imaginary? The paper analyzes the actual experience of the tourists & residents in the village of Abondance, a little ski resort closed recently, where the public policy wished to develop heritage tourism (gothic monastery from the 11th century). The presentation describes the different types of sociability using a methodological approach of the "sensitive". 1) A number of people evoke a feeling of festivity, playful & almost erotic which characterizes the ski resort. The ski season is for many families an island of pleasure in Mountain. Like the myth of the "beautiful ski guide" dream, young people of the resort fantasize about the arrival of females vacationers "from the north". The opening of the ski season is associated with the organization of private parties & nightclubs opening. 2) In contrast, heritage and cultural tourism are associated with the terms of "old age", "religion", "sadness" or "death". For many, the murals of the cloister are not exciting & represent only the possibility of becoming a "crossroads of retirement homes". Heritage is actually only attached to the imaginary of old age, as if seniority places necessarily correspond to a length of public & images.

sion Making Resulting in Marginalization of the Powerless Prostitution Community in Silir-Semanggi of Solo, *International Sociological Association, Gothenburg, Sweden,*

¶ The city government of Solo has made an unchangeable decision that street vendors operating in the city's Revolution Monument in Banjarsari Square for years must be relocated to the new built traditional market, called Pasar Notoharjo. This study utilized ethnographic methods, a combination of methods including observation, in-depth interview, focus group & the unobtrusive method including collecting written information. The study shows that the decision of Solo city government which tended to privileging street vendors' interests resulted in the prostitution life chance was deteriorated & marginalized. The city government has accommodated street vendors' demand to remove the organized prostitution community operating in Silir-Semanggi of Solo since 1960s as one of requirement for their relocation to this area, where the new built traditional market with more than one thousand kiosks were provided for street vendors. The procuresses' demand to obtain their rights of the land they occupied for more than 20 years on behalf of their legal ownership failed due to administrative, bureaucratic & legal obstacles. Prostitutes were inhumanly chased away by the city government apparatuses in collaboration with the police from the site of operation in 2006 and it resulted in the social & economic lives of procuresses and prostitutes get worse since their prostitution activities in this location were totally forbidden & finished. Both procuresses and prostitutes were marginalized because they do not have links to the powerful stakeholder who are able to protect their rights. Their health was in danger because the city government concern to their activities was limited in particularly since 1998 when the location was formally closed by Solo mayor of the New Order. Keywords: decision making, marginalization.

Sujata, Patel (University of Hyderabad, Hyderabad, India 500046 [tel: 91-40-2313 3261; e-mail: patel.sujata09@gmail.com]), **Multiple Modernities in the Worlds of Differences,** *International Sociological Association, Gothenburg, Sweden,*

¶ Multiple modernity theses incorporates a way to understand different pathways to modernity. It displaces the "cultural & acultural" essentialisations of the European modernity promoted by classical and early 20th century sociological thinkers & constructs a theory of modernity that is universal & particular. These modernities are evaluated by locating them spatially. It assumes that there is an organic linkage between history, culture and space. Its architecture is woven around: (i) the diffusion of European model, (ii) its engagement with axial civilisations (iii) the role played by the nation-states to institutionalise the dialectics between (i) & (ii). At another level, social theorists highlight two methodological deficits contending that they act as discourses of power. The first thesis is that of coloniality of power & deliberates with one of the axioms of sociology-to categorise & classify groups & cultures to understand differences. It suggests that these differences are constructed into binaries, wherein an immanent validity is posited to "I", making it superior to the "other". The second thesis argues that the nation & the nation-state structure both "I" & the "other". Groups & culture are located within & bounded by the territory of the nation-state. This paper asks whether the theory of multiple modernities has succeeded to eliminate these deficits in its project of evaluating varied modernities. Through the discussions on the "Indian" case, I indicate how this perspective carries various fallacies. This paper highlights how (i) the model prioritises the European experience by organising itself as the index (ii) it discusses modernities as belonging to nation states, leading to the collapse of the community (nation), culture and territory, thus implying organisation of state by society (iii) it disregards the existence of "other nations" outside, beyond and below these elite conceptions (iv) it essentialises a culturist definition of modernity & ignores the processes of capitalism with which modernity is organically linked. Can we construct sociological languages that are structured on immanent diversities?

Sujoldzic, Anita & Tomic, Ivan J. (Institute for Anthropological Research, Zagreb, Croatia, 10000 [tel: +385 1 5535104; e-mail: anita@inantro.hr]), **Europeanization of Cultural Tourism and Local Identity,** *International Sociological Association, Gothenburg, Sweden,*

¶ The EU has recognized cultural tourism as an important agent of both economic change & the Europeanization process, funding projects through which each destination could stress both its own uniqueness and an added European value. Within the context of neoliberal economy, regions are pressured to present themselves as desirable destinations, while their authorities increase efforts into branding & marketing by drawing not only on the pre-existent cultural resources, but also on the public discourses of creating a European sense of belonging. This paper adresses the impact of the European practice of "unity in diversity" on tourism of the multicultural Croatian region of Istria. The qualitative analysis of tourist brochures, web-sites & research interviews is focussed on the ways in which the rhetoric of cultural tourism is articulated in translating local sites into a global/European site. The findings indicate that selections of what to present often conceal contestations of cultural values & heritage traditions, and that tourism should be approached as a political and ideological field of struggle. The promises of economic benefit conditioned by the EC rules that are compatible with belonging to the supranational community have important repercussions on identity & local cultures.

Sümer, Sevil (Department of Sociology, University of Bergen, Rosenbergsgate 39 5020 Bergen Norway [e-mail: sevil.sumer@sos.uib.no]), **Towards a European Gender Regime? The European Union as a Supranational Actor of Gender Policy,** *International Sociological Association, Gothenburg, Sweden,*

¶ Although the principle of gender equality is firmly integrated in the EU legislation, the power of the Union in promoting changes in this field is a contested issue (Sümer 2009). In this paper, I will review the developments in the gender policies of the EU, focussing on a critical discussion of work-family reconciliation. Drawing on data gathered through the research project "Transitions: Gender, Parenthood & the Changing European Workplace", I will discuss how reconciliation policies are implemented in practice in four specific workplace contexts (Social Services in Norway, the UK, Bulgaria & Portugal). The paper will conclude by discussing if resort to the European Union legislation can be especially useful in traditionally "familialistic" countries & if the EU focus on reconciliation can be instrumental in bringing care related issues onto the political agenda in various European countries which have a tradition of treating these as private matters to be resolved within families. Sumiala, Johanna Maaria (Department of Social Research, University of Helsinki, P.O. Box 54 00014 Helsinki, Finland [tel: + 358 40 777 4543; fax: + 358 9 191 24849; e-mail: johanna.sumiala@helsinki.fi]), **Social Imaginaries of Violence: Rethinking the Visual Dimension of the Social,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper takes a challenge of exploring the visual dimension of the social by discussing the social as a shared imaginary constructed around images of violence. The theoretical problem inspiring the effort here is the question of the (re)constitution of the communicative conditions for social bonding & community in the "postmodern condition" (la condition postmoderne) as formulated by Jean François Lyotard already in 1979. The analysis starts with the Lyotardian assumption that the communicative basis of the social is being fragmented. As a result, the social itself becomes fragmented, & consequently event-based & imaginary (Readings 1991). This implies a shift in interest to "imagocentric" and image-based visual communication (Mitchell 2005). The question addressed therefore, is this: How to construe the profile of this "new" form of communication. It is postulated in the paper that images can establish communities by stimulating social imaginary (Castodiaris 1997) & by serving as catalysts of unfulfilled participatory needs & desires a but they can also threaten established communities, for instance by materializing controversial visualizations of shared imaginary. Seen in this perspective, violent images can be equally suitable for the "massification" of culture & the preservation of false consciousness as the basic organizing principle of the social, as Debord (1967) has argued, but they can also stimulate unpredictable sparks of illumination, conduits for unconventional knowledge, opportunities for non-incremental imagination, change and, consequently, revolution. Baudrillard, J. [1981] (1992) "Simulacra and Simulations" in Poster, M. (ed.) Jean Baudrillard. Selected Writings. Cambridge, UK: Polity Press. Castodiaris, C. (1997) World in Fragments. Sun, Hsiao-Li Shirley (Division of Sociology, Nanyang Technological University, HSS-05-48, 14 Nanyang Drive, Singapore 637332 [tel: +65 6316-8832; fax: +65 6794-6303; e-mail: HLSUN@ntu.edu.sg]), **Pronatalist Policies and Reproductive Decision-making in Singapore: The Logic and Limits of the Developmental Welfare State,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study examines pronatalist policies & individual reproductive decision-making. Singapore is a significant research site. In spite of two decades of state pronatalism, the Total Fertility Rate remained below 1.5 since 2001, & reached 1.28 in 2008. My three main findings are based on semi-structured individual interviews with 165 women of childbearing age, & 39 focus-group interviews with these women & their peers, spouses or prospective spouses and parents. First, there is a disjuncture between the "merit-based" thrust of state policies & citizens' quest for a more supportive socioeconomic environment as a precondition for having a (an additional) child. While citizens did not invoke individual "rights," they did ask for, in particular, state-provided or guaranteed access to education & more subsidized health care and housing. Second, there is a mismatch between the state's paradigm of "citizen-worker" & citizens' varying aspirations & social realities of parenting. Third, in making childbearing decisions, parents & prospective parents are also guided by notions about desired qualities of children. In conclusion, I argue that the gap between the stated aim of the pronatalist population policies and the persistent low fertility reflects the limitations of the developmental state & the inherent contradiction of the human resources economic development paradigm.

2010S02577

Sun, Jiaming (Texas A&M University-Commerce, Commerce, TX 75428, USA [tel: ; e-mail: jiamingULsun@tamu-commere.edu]), **The New Global-Local Nexus: Global Connectivity and China's Transformation,** *International Sociological Association, Gothenburg, Sweden,*

¶ Increasing overseas traveling, booming Internet & electronic communication, and expanding global social ties are primary features of intensifying global connectivity & integration. The author conceptualizes global connectivity as a powerful but varied mechanism that links local people to the global society. The main themes of this paper are that the massive global connectivity has been woven in recent three decades in China; people with stronger & more extensive global connectivity, net of other social economic characteristics, is more likely to demand global products, & to engage in global consumer behavior therefore induces greater cultural adaptation in local transformation. By employing empirical study method, this paper featured detailed quantitative analyses. To measure global connectivity, the author have constructed a latent index--personal global connectivity (PGC) that consists of four observed variables, such as: have worked for foreign companies locally, have been abroad, have relatives overseas, & often surf foreign web sites. The main dependent variables include consumer behavior, value orientation, spatial differentiation, community satisfaction, and some other variables that comprise multiple measures of local adaptation in cultural & space. The multifaceted relationship between global connectivity & local transformation has become a central domain of social science inquiry & is subject to in-depth study of the emerging & complex global-local nexus. The case of China turns global-local nexus to a new meaning that it reveals a mechanism of social change, & the link between micro-interactions and macro-transformations. Furthermore, with bottom-up approach, it indicates that individual based global connectivity as element of the system makes the local society, as macro-structure, being transformed.

2010S02578

Sun, Xiaoyi (Department of Public and Social Administration, City University of Hong Kong, Hong Kong [tel: (852)51880122;e-mail: xiaoyisun2@student.cityu.edu.hk]), **From 'Work Unit' to the 'Community': The Transformation of Residents' Committees in Shanghai in the 1980s,** *International Sociological Association, Gothenburg, Sweden,*

¶ Residents' committees, as a unit of grassroots management system, are experiencing a revitalization in today's China. However, without the understanding of the starting point of this revival, it lacks the base for the further study of the development of residents' committees. 1980s witnessed the transition of residents' committees from "work unit system" to "community system," which laid the foundation for its revival in the 1990s. The author conducts an empirical study, based on archival data & interviews about residents' committees in Shanghai, to examine how this transition happened & try to identify the driving and constraining forces. I argue that 1980s is an important historical period in the development of residents' committees in modern China: on the one hand, it is the end of "work unit system" for it was the first time that residents' committees try to resume its normal functions from the turmoil of the Great Leap Forward & the Cultural Revolution. On the other hand, it is the beginning of "community system" when the institutions & tasks of residents' committees were legalized to fill the void of the retreat of work unit. I also argue that the working of residents' committees was largely shaped by macro political & economic environment. The transformation of residents' committees was closely related to China's transition from planned to market economy, & its corresponding change of the ways of state control at the grassroots society from strong in socialist era, to weak in market economy, and then strengthened again since late 1990s. Keywords: Residents' committee, grassroots management, transition

2010S02579

Sündal, Fatma & Turan, Göksel (Anadolu University, Department of Sociology, Anadolu University, Yunusemre Campus, 26470 Eskisehir [tel: +90 222 3350581/4064; fax: +90 222 3206101; e-mail: fsundal@anadolu.edu.tr]), **Secularisation as Disciplining Religion: The Idea of Science and Religion in Turkish Political Thought,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper aims to understand secularisation in Turkey through a rediscovery of the idea of science & religion in Turkish political thought, in which a tension between the two has been dominating since 1700s & ended up with the rise of a secular law. However, a "disciplining attitude" toward religion from the angle of a positivistic conception of science is shared by secular-minded intellectuals & official religious elite. The outcomes of this process have not left space for religion to exist as itself. Here we are diverged from some cliché rarely questioned, such as, the idea of upbringing "enlightened men of religion", & a continuing critique of traditional visits to the tombs of medieval saints. Both are shared by secular political thought & official religious discourse. The process of secularisation in Turkey comes close to two models described & criticised by Habermas. First, the "replacement model" proposing the replacement of religious language by a rational language is obvious in the legal reforms of laicist bureaucrats of Ottoman times. Second, the "expropriation model" based on the takeover of religious language & property has been able to dominate Turkish model of separation between state and religion relying on the "replacement model".

2010S02580

Sungun, Ebru (Sociology-EHESS, Paris, France [e-mail: ebrusungun@gmail.com]), **Language of the State or the State of Language: Using the Language as a Means of Civilizing the Kurdish Women in Turkey,** *International Sociological Association, Gothenburg, Sweden,*

¶ As French historian Ernest Renan noted "Forgetting is an essential element in the creation of a nation". Comparable to the argument developed by Renan, in the Turkish Republican history, through a series of reforms, particularly that of the adoption of Latin alphabet over the Arabic one in 1928, the collective memory of the nation witnessed a national amnesia. Built upon the ashes of the Imperial heritage that has been denied partly by the reform-minded Republican bureaucrats, Republican ideologues introduced, like the alphabet reform, a set of other Western reforms from within the young nation-state which led to a process of estrangement of the people from their own cultural practices. As it is seen with the reform of alphabet, overnight, entire nation was cut off from their own past & people were made illiterate as a result of these state sponsored practices. In Turkey, inhabited by a great number of different ethnic communities, whose mother tongue is not Turkish, no other language except Turkish shall be thought to Turkish citizens at any institution of education. This is even confirmed by the Article 42 of the Turkish Constitution. The Kurds as an autochthonous community populating the eastern & south-eastern Anatolia, & today as a result of forced migration, the every parts of Turkey, are not allowed to use their native language neither in the public space which has serious sociological results in the private sphere. In my presentation, taking the language as the most impressive domination tool of the Turkish state against the Kurds, I will focus on the ways in which with an education project called Haydi Kizlar Okula (Let's go to school girls)-supported also by UNICEF- Turkish state discipline peers into the daily lives of the Kurdish women under the mask of "civilizing mission". Through elaborating on the arguments developed by critical theorists I will

focus on the construction of the binary oppositions such as developed-underdeveloped, ignorant-educated & their operations in constituting effective Turkish nationalist policies. As it is characterized in the post-structuralist formulation, I suggest that as a social and ideological project for the constitutions of social categories and identities, this assimilative attempt in the form of progressive project has a great role in the transformation of the state into identities & bodies of national subjects.

Surak, Kristin (University of London, Sainsbury Institute, B404 SOAS, Thornhaugh Street, Russell Square, London WC1H 0XG, UK [tel: +44 (0)7950.512.969; e-mail: ksurak@yahoo.com]), **Gendering Bodies Through Tea Ceremony,** *International Sociological Association, Gothenburg, Sweden,*

¶ Although commonly seen as an aesthetic hobby of Japanese housewives, tea ceremony was historically not a "Japanese" but a relatively "elite" & largely male practice. For most of its 400 years of history, tea ceremony provided a means for elite men to cultivate the self through bodily & spiritual training. By mastering the detailed modes of physical comportment & personal conduct, elite men could learn & hone governance skills, social responsibility and respect for hierarchy. Now, however, women constitute the bulk of its two million practitioners. This change in gender composition came as tea ceremony was transformed from a class-defining into a nation-defining practice. When practitioners in contemporary Japan learn tea ceremony, they craft a somatic sensibility and performative capability deemed exemplary of the nation. In the presentation, I draw on ethnographic & interview data to show how a distinctively feminine version of Japaneseness may be projected by or developed through the practice as tea ceremony is treated as an avenue for cultivating women into "proper Japanese women." But when encountering & countering this feminized image, male practitioners often stress spiritual or aesthetic elements of the practice couched in gender-neutral terms rather than a distinctive masculinity cultivated through tea.

2010S02582

Surian, Alessio, Crudi, Roxana, Haimovici, Nora M. & Reynals, Cristina (Dipartimento di Scienze dell'educazione, Università di Padova, Padova, Italy, 35137 [tel: 390498274866; fax: 390498715303; e-mail: alessio.surian@unipd.it]), **Knowledge Production and Socio-Political Struggles: The UBA-UPU Collaboration,** *International Sociological Association, Gothenburg, Sweden,*

¶ The authors address the issue of partnership relationship with social actors in order to prevent the researcher from taking away knowledge from the "object" of study. At the occasion of the RC-10 Round Table they address in particular both the research & training features of a method that has been adopted to promote the Co-producción de Conocimientos (Co-production of Knowledge) by the first two "Encuentros Internacionales: Construyendo la Universidad Popular Urbana en América Latina". These two continental meetings of the Urban Popular University (UPU) are an initiative of the International Alliance of Inhabitants & were organised in partnership with the research group co-ordinated by Alberto Bialakowsky at the Universidad de Buenos Aires (2006) & with Universidad Autonoma de Santo Domingo (2007). The outcomes were discussed during the Foros Internacionales ALAS (Asociación Latinoamericana de Sociología) in Guadalajara 2007 & Buenos Aires 2009. The authors show the importance of the Encuentro discursivo (conversational meeting/ relationship) as a key research component that makes "Co-producción investigativa" (Co-productive Research- a method developed in Buenos Aires & Latin America) qualitatively different from standard approaches routinely used in social research. Working with social movements requires the adoption of a perspective of collective production of narratives and knowledge. Within this perspective two crucial elements are: "convergencia dialógica" (Dialogical Convergence/with a conversational focus) & the opportunities for the social actors to feel & to implement direct ownership of the narratives and knowledge which results from the research process.

Susen, Simon (School of Geography, Politics and Sociology, Newcastle University, Newcastle upon Tyne, NE1 7RU, UK [tel: +44 (0)191 222 5610; fax: +44 (0)191 222 5421; e-mail: Simon.Susen@cantab.net]), **The Transcendental Status of 'Recognition Claims' in Habermas's Theory of Communicative Action,** *International Sociological Association, Gothenburg, Sweden,*

¶ Habermas's theory of communicative action has been extensively discussed in the literature. It is widely acknowledged that Habermas's communication-theoretic approach to the social is based on a number of key conceptual tools, such as "lifeworld" and "system", "communicative reason" & "functionalist reason", "social integration" & "functional integration", as well as the "ideal speech situation" & "systematically distorted communication" a to mention only a few of the most important concepts which underlie Habermas's plea for a "linguistic turn" in critical social theory. It is striking, however, that in most of the debates around Habermas's theory of communicative action one central concept has been largely ignored: the concept of recognition. One of the main reasons for this is that the concept of recognition tends to be associated with the work of Habermas's intellectual successor, Axel Honneth, rather than with Habermas's own oeuvre. Indeed, at first glance it appears that, from a Habermasian perspective, the normative foundations of critical theory are to be derived from the emancipatory potentials inherent in "communicative action", rather than "recognitive action". It is the purpose of this paper to shed light on the philosophical significance of the concept of recognition in Habermas's theory of communicative action. By demonstrating that our daily engagement in communicative action involves not only the raising of "validity claims" but also the raising of "recognition claims", the paper makes a case for the view that the perspective-taking exercise of mutual understanding is inconceivable without the role-taking exercise of mutual recognition. The paper draws to a close by proposing that only if we acknowledge the transcendental status of "recognition claims" in the communicative construction of society can we consider the paradigm of mutual understanding to be the normative cornerstone of a truly cosmopolitan critical theory.

Sushma, Sood (Dept of Sociology, University of Rajasthan Jaipur, JLN MARG Jaipur 302015 India [tel: 919414079596; e-mail: soodsushma@gmail.com]), **Overcoming Barriers to Peace through Tourism: A Sociological Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ Tourism being a vast & multidimensional subject defies all efforts to be cast in a narrow mould & strait-jacket. Tourists are endowed with a special psyche which wants to explore new ideas, visit new places, meet new sets of people & experience new situations. A good tourist gifted with a positive mind treats inconveniences as minor adventures & enjoys the thrill of over-coming them. Tourism, by its intrinsic nature, encourages people to people contacts which broadens understanding of different perspectives. We in India have a hostile environment with our neighbour Pakistan & have fought three wars till date. Diplomatic efforts & military conflicts have not brought us closer to peace & solution of our mutual problems. Amongst the new initiatives for peace, people to contacts through related visa restrictions for promotion of tourism has been contemplated as a viable option with rich payoffs. Groups of youth, students, artists have been visiting each other as tourists & the feedback received has been encouraging. This has broadened understanding of each other's conflicting perspective. The tourists with their first hand knowledge of the country being visited are not solely dependent on official propaganda & media projections to form their view point & opinion. Being respected as objective, fair & impartial observers the tourists enjoy high credibility. They can be the ambassadors of peace & help opinion making for resolution of conflicts through dialogue, discussions and understanding. Tourism thrives in an atmosphere of peace and tranquility. Its spurs economic growth. The tourism trade and economic growth has been directly proportionate to the peace barometer. Tourism helps in growth of wealth & prosperity in a big way in Singapore, Scandinavian countries & cosmopolitan cities like London & Paris. The Jammu & Kashmir valley in India faced an economic slump due to lack of tourists when insurgency was at its peak in the region. In nutshell, Tourism by spurring economic growth creates a vested interest in maintenance of peace in the region. This paper shall focus on a case study of selected tourists visiting India & their contribution to better human understanding & their positive role as ambassadors of peace in maintaining social & regional harmony.

Susuman, A. Sathiya (Statistics, University of the Western Cape, Private Bag X17, Bellville 7535 [tel: +27 21 959 3898; fax: +27 21 959 2909; e-mail: sappunni@uwc.ac.za]), **How Childhood Mortality Decline in Ethiopia?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Ethiopia's childhood mortality has continued to decline although at a swift pace. The drop in urban childhood mortality decline, duration of breastfeeding is the principle reason for the overall decline in mortality trends in Ethiopia. Data from the Ethiopian Demographic and Health Surveys 2000 & 2005 were used. Indirect estimation of Brass & Trussell's methods were adopted. Selected demographic and socio-economic vari-

ables were included in the analysis with statistically significant effects. Findings clearly show neonatal and post neonatal mortality decline gradually. Even though, Ethiopia's childhood mortality rates are still high. The result shows less than 2 years birth interval have higher infant mortality rates than higher birth interval (113 deaths per 1000). The proper spacing of births allows more time for childcare to make more maternal resources available for the care of the child & mother. Therefore, further research is urgent for regional level and national level investigation.

Suzuki, Miki (Middle East Technical University, Department of Sociology Middle East Technical University 06531 Ankara Turkey [tel: 904322251515; e-mail: mikisuzukihim@hotmail.com]), **Learning to Control Own Body: A Case of Kurdish Migrant Women in Van, Turkey,** *International Sociological Association, Gothenburg, Sweden,*

¶ This is a case study of persisting high fertility among Kurdish rural-urban migrant women in Van, one of the provinces with the highest fertility rates & a large Kurdish population in Turkey. This study challenges a cultural approach & alternatively proposes a feminist political-economic analysis which takes into consideration deepening socioeconomic inequalities, displacement and reconfiguring patriarchy that many Kurdish citizens have experienced over the last twenty-five years. Fieldwork was conducted in one of the Kurdish neighbourhoods between February and July 2008. It is consisted of both voluntary & conflict-induced migrants both of who tend to be with low educational attainment and meagre income. Data were collected by in-depth interviewing with forty women who were selected by snowball technique & theoretical sampling. They were analysed manually by within- & cross-case analysis & iterative tabulation. The study found that Kurdish migrant women struggle to control their reproduction as the other women in the country. However, low educational attainment and increasing social control over women after migration seems to make a process of learning to deal with patriarchy & to control own body harder & longer for them than many other women in the country & for forced migrant women than voluntary counterparts.

Svedberg Helgesson, Karin & Jolly, Philippe (Department of Management and Organization, Stockholm School of Economics, Box 6501, SE 113 83 Stockholm, Sweden. [tel: +46 8 736 93 32; e-mail: karin.svedberghelgesson@hhs.se]), **Among Experts, Outsiders and Critical Advocates. Hybridization and Dichotomization in Organizational Identity Construction,** *International Sociological Association, Gothenburg, Sweden,*

¶ For attempts at identity change in the public sector, the private sector has been a role model for quite some time. Many studies have shown how public organizations are encouraged to imitate their private counterparts in order to become more efficient, customer orientated, flexible, accountable, & controllable, & so forth. Interestingly, the result of market reform attempts is seldom quite as was intended. Instead of a shift from public to private forms, the result rather tends to be mixed forms & hybrids. Still, the dichotomization of "public" & "private" remains strong in theory as well as in practice. In a way, the public-private dichotomy is continuously being enacted even when used as a premise for new versions of seemingly boundary blurring practices like public-private partnerships. For in order for boundaries to become fuzzy around the edges, & for hybrid arrangements to arise, a separation of forms, or types of actors, need to be presumed in the first place. With this view of the categories of public & private as part of its frame of reference, the present paper sets out to discuss how attempts at changing the identity of public organizations towards a more market like one may unfold in practice. As we know from previous research that the resulting new identity is likely to be mixed, we focus more on the interaction and possible friction between the previous identity & the new one, than on effects of reform attempts per se. In other words, our unit of analysis is the identity in the making rather than the identity as a result. Empirically, we ask how one goes about constructing a new identity, built upon market logic, in a political organization. The paper is based on an interview study of the Swedish Social Insurance Agency (SIA), the public agency that organizes & administers the social insurance system in Sweden. In recent years, SIA has attempted to change its identity in order to become more business like. In all, 27 persons at SIA were interviewed. This included the Director General, representatives of middle management, functional specialists, & lower level staff. One conclusion of the analysis is that there exists a gap between identity as intended by top management, & identity as experienced and expressed by lower level employees. On average, informants in managerial positions tended to be more positive towards the new identity & more inclined to embrace change. By comparison, members of professional groups tended to identify more with the professions. This is a finding in line with much previous research on the difficulties of identity change, & the functions of hypocrisy & overselling in organizational reform. Another finding was that instead of a shared identification of "publicness" to serve as a point of departure for identity reconstruction, there were several. We found five different sub-identities at the Agency: Enthusiasts, Experts, Outsiders, Critical Advocates & Followers respectively. Thus, rather than being a case of transforming a unitary public identity into a hybrid, this was a case of trying to converge & transform a range of sub-identities into one coherent business identity. Hybridity did not arise due to the mixing of public & private. It was already there. In conclusion, we discuss some implications of this "hybridity in residence" for organizational identity change & stability.

Svensson, Sven (Department of Social Science, Mid Sweden University, 83125 Östersund [tel: +46 63 165949;e-mail: sven.svensson@miun.se]), **Flexibility, Trust and Innovation,** *International Sociological Association, Gothenburg, Sweden,*

¶ Innovation & organizations capacity for innovation & the developing of new ideas & products are officially pictured as the rescuing solution for post industrial European economies. In parallel official documents & management-strategies are in an increasing fashion focusing on flexibility as a strategy for adapting to changing market demands. One such flexibility strategy is the use of temporary agency workers (TAWSs). These strategies may be contradictive since flexible working life conditions can be expected to result in a decrease in trust, which in turn could be expected to affect a firm's innovation capacity. This study take a closer look at this paradox through a comparison of TAWs and ordinary client company employees' levels of generalized trust. Data were collected in a survey study & the results reveal that the TAWs do have a lower level of generalized trust & the implications of these findings for firm innovation-capacity are discussed.

2010S02589

Sverrisson, Arni (Stockholm University, 10691 Stockholm [tel: +46 8 674 7295; e-mail: arni.sverrisson@sociology.su.se]), **Cultural Artefacts in the World Economy: Wildlife Images and Their Social Networks,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper analyses images in terms of actor network theory (ANT) and similar theories that approach images as artefacts & image technologies as elements of (cultural) production. International wildlife photography is discussed as an instance of this approach, but parallels are drawn to other globalised & vernacular photographic genres, fashion & war photography. The paper is, moreover, positioned in the theoretical landscape of sociology through brief mention of pertinent works by Goffman, Becker and Bourdieu. I will focus on two key concepts in my presentation. First I will discuss the circulation of reference (aka as the issue of truth) that cements cultural production networks (and Latour has analysed in the case of science) & how this idea helps in analysing the transformations/translations of images that takes place in vernacular photography networks. I will then briefly address the question whether photographs can be meaningfully conceptualised as "boundary objects," that connect different social worlds, & whether this could be helpful in developing an ANT-style analysis.

2010S02590

Svete, Uros (Faculty of Social Sciences, University of Ljubljana, Ljubljana, Slovenia, 1000 [e-mail: uros.svete@fdv.uni-lj.si]), **Are Covert Operations the Only Way of Effective (Military) Answer Against Asymmetric Warriors?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Not just last cases of asymmetric wars in Iraq, Afghanistan and Caucasus but also other historical cases show, with conventional approach asymmetry is very hard to be defeated. Here could be quoted very old saying asymmetric warrior is winning the conflict in case that it's not losing. But for their opponents holds the opposite. If the results are not coming fast & if they are not obvious, the time becomes more & more ally of asymmetric warriors. Especially when the environment is taking into account, where rules of engagement, national limitations armed forces have to consider & international (humanitarian) law are not convenient for contemporary nature of the conflicts. So the question for every regular armed force-military is, ought it sooner or later tactics as well strategy to be changed in a sense it become practically similar as it is used by asymmetric or irregular forces? This hypothesis is going to be answered with analysis of covert operations which are becoming predominant battle tactics espe-

cially in Iraq, Caucasus, Afghanistan & Pakistan (for this purpose a covert operation is meant as military, intelligence or law enforcement operation that is carried clandestinely and, often, outside of official channels. Covert operations aim to fulfill their mission objectives without any parties knowing who sponsored or carried out the operation). Although is this topic domain of intelligence studies per se, it has also tremendous military-sociological implications. Western intelligence and security services are in recent times more militarised (they have even established own military units with modernist surveillance and long distance operative technology) as should be, on the other hand military special operations units perform comprehensive secret operations. Obviously former US defence secretary Rumsfeld was right he predicted war against terror (in theory it is typical asymmetric war) should be carried out in almost complete public absence. Meanwhile the fight against asymmetric opponents sometimes was focused more to their distinguishing from civil support, and psychological operations which have to split unity of rebellions, nowadays is no doubt, without anti-head operations asymmetry is very hard to achieve especially political & long term strategic goals. Israelis precision warfare & new tactics in Iraq described by very famous & influenced journalist Bob Woodward are more then sufficient proofs of the changes in contemporary warfare as well military & intelligence-security services. Although Woodward in his book The war within: A Secret White House history 2006-2008 has been talking just about new secret weaponry, there is no doubt, new technologies & tactics of reconnaissance, surveillance, identification & neutralisation have been used. And this kind of anti-asymmetric tactics presumes the closest cooperation between military & intelligence (military as well internal) structures. Last but not least our attention has to be focused also on special military units built within intelligence services. So Russian FSB as well American CIA are using in their combat against asymmetric opponents more & more own military units. Long tradition of anti insurgency is namely more then clear: insurgents or with modern terminology characterised asymmetric warriors can be defeated or at least limited just with same tactics & measures as used by them. But these kinds of units are very hard to be controlled by state authorities, public opinion & expert publics. And at the end international humanitarian law as well domestic regulations oughtn't to be respected so strictly as in regular forces as well. When we add private intelligence & military companies, which are also skilled, trained & appropriate more then enough for covert operations, is the complexity of the story complete. And in the frame of scientific debate, covert operations & asymmetric warfare offer above all the dilemmas of civil military relations, internal relations among particular national security components (especially militarization of intelligence & policisation and deetatization of the military) & consideration of international (humanitarian) law as well.

Swain, Brajakishor (Dept. of Sociology, SGB Amravati University, India, Nagpur, India, 440 033 [tel: + 91 9422823634; e-mail: bkswainUL47@yahoo.com]), **Leisure Work of the Ageing Populations: A Study of Nagpur City [India],** *International Sociological Association, Gothenburg, Sweden,*

¶ "Leisure" & "work" have wide range of meanings and implications in the contemporary world. The concept of leisure, ideally speaking, means that part of the whole time never spent for earning money. Thus leisure in the above sense means free time, left over after the day's work, & is being used by the man to take up a variety of activities as a matter of his subjective choice & interest. For Parker (1976), leisure even excludes from its realm the time to meet the physiological needs of the man such as eating, sleeping, etc. As exemplified in the study of Hunter (1961, p.16) the leisure work may include such things as "household duties, rest, relaxation, social contact, family life, voluntary work, sport & hobbies & an opportunity for man's mind and mood & whole being to move in a different world from the world of work & production". In his study Soule (1957) distinguishes leisure time from the work time by reckoning them as unsold & sold time, respectively. The present study is concerned with the leisure & work patterns of the ageing populations in the city of Nagpur in India. Although the phenomenon of aging is ubiquitous the demographic trends of various world communities have shown uneven impact on aging populations. Consequently ageing in India has shown a tendency to start quite early & hence lengthened the leisure time compared to the developed countries in the world. With the nuclear family system coming into vogue and ongoing exit of the traditional joint family system the leisure time of the aging populations has virtually assumed some new dimensions. The aged now are increasingly engaged more in non-traditional & outdoor leisure works than the traditional and indoor ones. The traditional & indoor leisure works have gradually reduced with the breakdown of the traditional joint family system. The paper focuses on various indoor & outdoor leisure works of the aging populations with systematic analysis of the leisure benefits derived by the aged as well as the family.

Swain, Margaret Byrne (Women & Gender Studies, University of California, Davis, 1 Shields Drive, Davis CA 95616, USA [tel: (530) 752-7649; fax: (530) 752-0222; e-mail: mbswain@ucdavis.edu]), **Cosmopolitan Worldviews and Tourism Vistas–Hype and/or Hope for the Future,** *International Sociological Association, Gothenburg, Sweden,*

¶ Tourism as a "world-making power" contributes to re-valuation of local places & cultures in spaces between global-local realities, changing, creating new/old vistas, imaginings, for individuals and societies. Cosmopolitan theory offers some philosophical underpinnings for understanding this complex industry of mobilities, identities, political economies, & knowledge. Derived from basic ideas about the rights of "citizens of the world", cosmopolitanism has multiple iterations. This paper engages tourism with progressive cosmopolitanism, promoting universal ethical norms; critical cosmopolitanism, seeking transformation for social justice; & feminist cosmopolitanism, questioning intersections of multiple identities & equity in opportunity, experience, and influence. Cosmopolitan analysis reveals that tourism offers hype and hope for transnational understanding. Tourism is not inherently cosmopolitan, but rather profit driven globalizing industry hyping flatten imaginings & worldviews of sameness disguised as cultural difference. Simultaneously, transformative world-making promises of tourism to empower cosmopolitan equity, social justice, & ethical experience, have hope. As tourism researchers, how might our cosmopolitan (or not) perspectives influence experience in our changing/ tourism worlds?

Swiatkiewicz-Mosny, Maria & Wagner, Aleksandra (Jagiellonian University, Krakow, Poland, 30-044 [tel: +48509961530; e-mail: aleksandra.wagner@uj.edu.pl]), **Social Representations of the Energy Crisis in Polish Press,** *International Sociological Association, Gothenburg, Sweden,*

¶ We live in spoken world & media play an important role in it by their ability to sustain communication dynamics, which in modern world results in stimulating social dynamics (see Luhmann, 2000). In some moments of human history we could have noticed defining social change in the categories of development & progress while in other moments rather categories of risk, crisis & decline are used by scholars. Last year of XX centuries & beginning of new age seems to be affected rather by the latters. The most discussed crises during last years in Europe were financial & energy crisis. It was noticeable especially in mass media where the topic of crisis was discussed in many forms. The paper aims in presenting the conceptual background of international research project realized in Slovakia, Ukraine, Hungary & Poland on Social Representation of energy crisis in press. Using the Social Representation Theory we are going to focus on the role of mass media in creating & sustaining social representation of energy crisis (in situation when the crisis is still not experienced directly for most citizens). We refer to Moscovici's (Moscovici, Duveen 2001) conception of themata in Social Representations, because it let us pay attention for narrative aspects of collective generating process of SR. Observing the ability of mass media of transferring the elements of knowledge between groups, we consider the differences in Social Representations of energy crisis in distinguished types of discourse in media: ecological, scientific, political, economical & the "common thinking " type using the perspective of human everyday reality. We are going to present some results of our research (the Polish part): the structures of media stories on energy crisis in different types of press discourse, the dynamics & mutual impact of them (for example the potential of transfer some elements of knowledge between discourse group). In conclusion, we are going to present how Social Represenatation analysis could be useful for re-constructing media narration, which in consequence can affect social paths of thinking on energy crisis. KEY WORDS: Social Representations, Energy crisis, Poland, media narration, East Europe. 1. Serge Moscovici, Gerard Duveen(eds),Social Representations: Essays in Social Psychology, 2001 2. Niklas Luhmann, Reality of Mass Media, 2000

Szafir, Milena (Manifesto21.Tv, Sao Paulo-Sp Brasil 05415012 [tel: 551192716213; e-mail: milena@manifesto21.com.br]), **Towards a Cellphone Cinematography [A Discussion about Mobile Telecommunication as a Tracking Particle or Foucault Checkmated Inside Widespread Movies],** *International Sociological Association, Gothenburg, Sweden,*

¶ During my last studies I've been interested to pointed out how realism dependes upon a system of intertextual & extratextual codes, i.e. my movies analyses must include breaking out a range of signification codes, looking at widespread as specific cultural contexts (mobile phones & Foucault studies are "the widespread one" & Brazillian movie & its social reality are "the specific one'). Throwing out of Metz & Kracauer wrote: cinema as a collective production, i.e. how the cinema could be said to signify, or generate, a society common meaning. In my presentation I'll show a video about 'Surveillance Wireless Vj'ing Performance" that it aimed to be a dialogue between art, technological everydayness situations & the audience; audience here is effectively participant, i.e., without the audience inside this work in progress, totally immersive on it, interactive with it, nothing could exist. All these data (at our information society) have been voluntary given. People allowed to be taped, tracked (to be famous streamed?) in the same proportion they would love to be a voyer. Therefore, I'd like to talk about our "Panopticon Performance Way" (2003-2009). Nowadays 'new' digital technologies and online networked life, where everything appears to be transparent, mean a kind of digital democracy in a naif perspective: it makes us to believe that we're 'free' to manifest ourselves to the world, live. But these digital systems are tracking us not just in virtual space but also at the physical one. Nowadays the panopticon structure–the Bentham dream a is much more a perfect system where everyone can track everybody. Szalo, Csaba (Department of Sociology, Masaryk University, Brno, Czech Republic, 60200 [e-mail: szalo@fss.muni.cz]), **Critical Cosmopolitanism and Social Performance,** *International Sociological Association, Gothenburg, Sweden,*

¶ According to cultural sociology, sociological interpretations are performative acts embedded both in the reasonable conversation of academic discourse & in the life-world that surrounds their potential audiences. In this sense, sociological interpretations are emerging from the interplay of the empirical reconstruction of reality; the conceptual structures of social theory; & the requirements of social performances. My paper will focus on the interconnection of critical cosmopolitanism & the critique of methodological nationalism with a particular attention to the performative dimension of these critical approaches.

2010S02597

Szelewa, Dorota Maria (BIGSSS, Bremen, D28334, Germany [tel: +49 421 218 66361; e-mail: dszelewa@bigsss.uni-bremen.de]), **Administering Europeanization: Public Bureaucrats and the EU Equality Policy in Poland,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Eastern European Countries needed to adopt the EU legislation concerning important laws strengthening gender equality. Though not directly obliged, the new MS are also encouraged to reform their service sectors in order to improve the access to childcare. Yet, neither the adoption of law went smoothly in most of these countries, nor was the process of its implementation satisfactory. Additionally, the use of structural funds, especially with regard to the issues of gender mainstreaming, could also proceed more dynamically. With regard to Eastern Europe a considerable group of scholars has been occupied with very general problems of re-masculinisation of public policies & anti-feminism as the response to the "pseudo-emancipation" that women experienced during the period of socialism. One could say that the slow adoption of gender mainstreaming practices would be the consequence of the conservative attitudes of the population. Still, the level of conservatism towards gender roles in the post-communist countries is not considerably higher than in the West. Yet, popular attitudes are not always relevant, as they do not reflect the ideas held by the political elites in charge. As I will argue furthermore, it is also not enough to focus on politicians. As the Ministers were changing very often during the first years after the collapse of communism, bureaucrats were the only ones who really knew how it worked. The goal of this paper is to emphasise the administrative, as opposed to (or complemented by) political channels of Europeanization within the field of implementation of the European Union non-discrimination policies & social standards. For illustration of my case, I am analysing the policies of the two consecutive governments in Poland in this field: one social democratic government in office between 2001 & 2005 and one–a conservative led by Kaczynski brothers from 2005 till early elections in 2007. My argument is that in order to understand these policy processes we need to go beyond the observable politics and the major political figures, & focus on the process of policy formulation itself. Therefore, as I will argue, the main source of the considerable success of the 'EU-induced' policies that took place after 2005 were organisational changes in the mode of administrative operation in the crucial units in the Ministry of Labour. The changes in organisational culture resulted in speeding up the administrative procedures, which in turn led to a much greater & effective absorption of the EU funds. But this organisational change was possible only due to the individual action of a senior official that used her structural power.

2010S02598

Szklarska, Anna (Jagiellonian University [e-mail: a.szklarska@gmail.com]), **The Problem with Polish Civil Society a Why Doesn't It Work Right?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Polish civil society is underdeveloped & has many weaknesses in the light of recent researches, such as Civil Society Index (CSI a project developed by CIVICUS, conducted in Poland by Klon/Jawor Association) or "Social Diagnosis 2009". Findings of both researches show, that limited engagement of citizens in any public activity, including support for civil society organizations (CSO) is the biggest weakness. Only the minority of Poles were members of any CSO a 13.2%, which is a declining tendency according to "Social Diagnosis 2009" a & devoted themselves into any action for their local community (15.6%). Findings of CSI show, that the strength of polish civil society lays in the positive values, that it promotes & practices. However those values, such as tolerance, democracy, equality, are not supporting development of civil society & civic awareness & responsibility. What are the reasons for citizenship disability, for lack of participatory public? What are the barriers for the development of strong civil society & as a consequence for stable, well functioning democracy? The explanations can be found in political and economical situation of the society, also in the heritage of the communist system, which enabled development of self-awareness and self-consciousness as an citizen. The low level of interpersonal trust, as well as trust towards public institutions & government is another factor which gives explanation. If individuals identity doesn't have components of civic responsibility for common wealth, there can exist no effective community & civil society. Poles have therefore (due to many reasons, above them those mentioned) little citizen's experiences & they don't have an opportunity to learn how to become a upright citizen. Lack of citizenship awareness & skills effects already weak & underdeveloped civil society, but in the same time this very weakness affects adversely the will of individuals to learn how to act within the civil society.

Szücs, Stefan, Zaring, Olof & McKelvey, Maureen (Centre for Public Sector Research (CEFOS), University of Gothenburg, Box 720, 405 30 Gothenburg, Sweden [tel: 46 31 7864498; e-mail: stefan.szucs@cefos.gu.se]), **Local Political Capital for Innovation in the Global Knowledge Economy,** *International Sociological Association, Gothenburg, Sweden,*

¶ Over the last decade, policy initiatives to promote innovativeness and growth, inspired by normative models of capacity building through industrial clusters, triple helix & innovation systems, have proliferated. Theories of economic development offer several explanations of the emergence of clusters in particular environments. Most theorists would argue that specific, natural, economic, or institutional factors determine capacity build-

ing in terms of cluster development. Other theorists emphasize the role of local social networks & phases of regional knowledge-based spaces in explaining the emergence of such capacity building. Neither of these theoretical streams offers systematic explanations of differences in the emergence & success of capacity building, beyond finding that crucial resources are unevenly distributed. The theoretical linkage between & capacity building through innovation governance is unclear. We still do not have a relevant theory explaining the influence of innovation governance involving local/regional government–industry–university relationships on capacity building leading to successful innovations. Therefore, we are making a proposal to further develop theory by focusing on capacity building through different sequences of innovation governance in relation to components of local political capital–values/norms of identity, networks & local-global relations–in the era of the global knowledge economy.

Szvircsev, Tibor Tresch & Christof, Bill (Military Academy at the ETH Zurich [e-mail: tibor.szvircsev@vtg.admin.ch]), **Motivation of Swiss military Cadets to be Professional Officers,** *International Sociological Association, Gothenburg, Sweden,*

¶ This article examines the issue of the most important deciding factors that affect young adults to take up a military career, especially a career as a professional officer. For this purpose, the opinion of Swiss military cadets, which are trained at the Military Academy (MILAK) to become professional officers, is collected by use of a standardized questionnaire. Results show that general interest in military, the pleasure in leading people, & the versatility of this career are the main motivating factors. The private environment reacts in different ways to the career choice of the cadets. A clear difference can be found between father & mother. Whereas the fathers are mostly proud of the career choice of their child, the mothers usually try to act supportive. Keywords: Swiss military cadet; professional officer; motivation; reactions in private environment

Szydlik, Marc (University of Zurich, Institute of Sociology, Andreasstr. 15, CH-8050 Zurich, Switzerland [tel: 0041-44-635-2340; fax: 0041-44-635-2399; e-mail: szydlik@soziologie.uzh.ch]), **Inheritance and Inequality in Old Age: An Investigation of 14 Countries,** *International Sociological Association, Gothenburg, Sweden,*

¶ Inheritances have a crucial effect on family relations, they have far-reaching economic consequences, and, in particular, inheritances have & will continue to have significant effects on current & future social inequality. This presentation is concerned with previous & future inheritances from an international comparative perspective. The analyses are based on the Survey of Health, Ageing & Retirement in Europe (SHARE). This survey includes respondents of 50 years & older (and their partners) in 14 European countries. Theoretically, I will draw on a general model of intergenerational solidarity, which distinguishes between three levels of analysis: individual, family & society. The empirical analyses (multilevel models) prove the importance of all three levels. Individual opportunities & needs, family structures & cultural contexts all play a vital role. This applies both to previous & future inheritances. There are considerable differences between individuals, families and, not least, countries, for example, in regard to long-term consequences of political & economic regimes.

Tabara, David J. (Autonomous University of Barcelona, Campus UAB - E08193 Cerdanyolla Valles, Catalonia, Spain [tel: +34935812974; fax: +34935813331; e-mail: joandavid.tabara@uab.cat]), **Integrated Climate Governance in Regions? Assessing Catalonia's Performance Using the 'Climate Learning Ladder',** *International Sociological Association, Gothenburg, Sweden,*

¶ While developing climate change policies, regional governments and agents may aim at different purposes, follow different strategies, and use different appraisal procedures than those of the national governments or of other regions within the same countries. Climate change adds an additional source of problematisation to the functioning of traditional nation-states structures, not only at the international level, but also with regard to their relations with sub-national agencies. This paper tests this hypothesis by analysing the emergence of climate strategies & capacities in region of Catalonia, north-east Spain, through the use of a novel integrated assessment tool called the 'climate learning ladder'. This tool can also be used to support transition-oriented processes within the broader framework of Integrated Climate Governance (ICG) and sustainable development. In particular, the climate learning ladder looks at four main dimensions: (1) how perceptions on climate change have evolved in this region since the beginning of the 1990s; (2) what type of incentives or systems of sanctions have triggered climate action, (3) what specific options are available or have been developed; and, (4) what new institutional arrangements have been put in place during this time. Results indicate that although in Catalonia distinctive climate appraising processes have been tried, new measures have been implemented and new institutions have been created, not much of a distinctive progress regarding Integrated Climate Governance has been achieved. Furthermore, this research shows that so far the main incentives which triggered climate action & innovation have been largely exogenous to the region.

Tadafumi, Kimura (Faculty of Arts and Letters Tohoku University, Sendai, JAPAN, 980-0871 [tel: i1481-22-795-6034; fax: i1481-22-795-6034; e-mail: tadafumiULkjp@yahoo.co.jp]), **Self-identity in Media Communicationain Consideration of Frame Analysisa,** *International Sociological Association, Gothenburg, Sweden,*

¶ The purpose of this study is consider the roles of media communication about our acquisition process of self-identity with utilizing the ideas of Goffman's Frame Analysis. In Frame Analysis, one of Goffman's works in his later years, he investigates the problems of cognition of social reality to lay the foundation for his "interaction order theory." He argues the relations between our cognition of social reality & that of self-identity with utilizing the "frame" concept. We act a particular role according to situational norm in face-to-face communication. From necessity, however, we take some distances to the roles to convey the impressions of our self-identity toward the others. We can acquire a consistent sense of self-identity by integrating the various situational roles or role distances. Today, our everyday life is surrounded by various media. Communications through media bring us more various types of cognition of social reality than face-to-face communication. As a result, we acquire various chances to take diverse roles or role distances which are difficult to be integrated with a consistent self-identity. In conclusion, media communications make our acquisition process of self-identity more complex & fluid today.

Taddeo, Gabriella (Dipartimento DICAS, Facoltà di Architettura, Politecnico di Torino, Torino, Italy, 10100 [tel: +39 347 4446543; e-mail: gabriella.taddeo@polito.it]), **Digital Storytelling and Cultural Mash-Up: a "2.0" Approach in Lifelong Learning Contexts,** *International Sociological Association, Gothenburg, Sweden,*

¶ Nowadays, storytelling is considered not only as an interesting tool for contents, values, cultural practices re-elaboration, but also as a means for socializing & sharing knowledge. Through stories, "sketches", tales, in fact, a considerable amount of formal and informal knowledge is shared both in small institutions and enterprises & in the big ones (Salmon 2007). In this paper storytelling will be investigated as a laboratory activity for students: an experimental environment–based on 2.0 web tools that allow students to produce contents & to create simple "narrative scenarios" will be analysed. Through the scenarios, formal, impersonal notions can be transformed into stories, personal re-elaborations, & they can be enriched of colours, psychology as well as experiential depth. Furthermore, the elaboration of a storytelling-based learning methodology allows us to carry out interesting analyses from the sociological point of view: from the development of new reflexivity & auto-reflexivity practices (Giddens 1991) that animate the participatory culture (Jenkins 2006) up to the new relations between learning practices & media consumptions. In fact, the "fictional" dimension created by storytelling can be associated to media education practices and learning contents can be analytically & critically compared with media stories, stereotypes & the whole implicit knowledge deriving from media landscape.

Tadesse, Bamlaku, Tesfaye, Yeneneh & Beyene, Fekadu (Department of Gender & Development, Haramaya University, Dire-Dawa, Ethiopia, P.O. Box: 198 [tel: (00 251) 025553 0086; e-mail: bamlakutadesse@gmail.com]), **The Role of Women in Indigenous Conflict Resolution Mechanisms: The Case of Erer District, Somali Regional State of Eastern Ethiopia,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is based on the findings of research in to the role of women in indigenous conflict resolution among the Issa and Gurgura of Somali. This paper examines the system of indigenous conflict resolution mecha-

nisms, the level of women's participation in indigenous institutions for conflict resolutions & the socio-cultural & economic factors that contribute to the low level of women's participation in these institutions. In order to have a better understanding of the role of women in negotiations and peace processes as well as the factors that hinder them from the formal means of representation & decision making processes in conflict resolution, it is first important to describe the general socio-cultural settings of the Issa & Gurgura communities. In these descriptions the paper focuses on some of the important elements of the socio-cultural settings of the study community (women's access to information & their skill to communicate since they are mostly confined to their homesteads, decision making power, ways of negotiating, persuading, mediating, etc) that are in one way or another related to conflicts & indigenous conflict resolution mechanisms. To this end, the paper focuses on how marriage practices in Issa & Gurgura communities & the residence rule after marriage affects women in decision making processes at household & community level. It explores how harmful traditional practices related to marriage influences women's physical & psychological well being. It also examines the positive aspects of marriage practices in the formation of social capital which strengthens friendship & unity instead of enmity. The paper also tries to examine other aspects of the socio-cultural settings like kinship relationships, lineage ties (genealogies), the organization & structure of social institutions, and ceremonial practices. In this descriptive analysis the research tries to see the status & position of women as well as their role in decision making activities both at household & community level. Key words: Indigenous conflict resolution, Erer, gender, Xeer, ethnic conflict, Ugaz, resource competition, kinship, marriage

Tag, Miriam (Institute for World Society Studies, Bielefeld University, 33501 Bielefeld, Germany [e-mail: Miriam.Tag@gmail.com]), **The Global Semantics of Early Childhood a Analyzing the Construction of Childhood under Conditions of Globalization,** *International Sociological Association, Gothenburg, Sweden,*

¶ With regard to my PhD project on the constitutive rules & conditions for the globalization of early childhood, this paper argues that changes in the semantic conceptualization are constitutive for the globalization of early childhood. It presents findings of a discourse-theoretically inspired analysis of processes of the global constitution & construction of early childhood, focusing on the constitution of global expectation structures & changes in the semantic conceptualization of early childhood. How is reality assigned & meaning given to EC? How are conceptions of EC changing? How do these semantic changes allow for the globalization of the semantics of EC? In a tripartite analysis of political and scientific documents a enriched by ethnographic field studies in 4 difference sites–the constitution & construction of early childhood was studied with regard to statements & lexical perspectives, arguments & rhetoric, & normative expectations and rational models. Processes of the differentiation and integration as well as of rationalization & individualization of conceptions of early childhood are interpreted as constitutive rules for the globalization of the semantics of early childhood.

Taguchi, Hiroko & Haruo, Hayashi (Graduate School of Informatics, Kyoto University, Research Center for Disaster Reduction Systems, Disaster Prevention Research Institute, Kyoto University, Gokasho, Uji-city, Kyoto, Japan, 611-0011 [tel: +81 774-384283; fax: +81 774-384283; e-mail: taguchi@drs.dpri.kyoto-u.ac.jp]), **A Verification Method for Emergency Response Function: Visualizing the Production Line of Emergency Response Manuals, Kobe City,** *International Sociological Association, Gothenburg, Sweden,*

Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (858) 571-8979. Fax: (858) 571-8694. E-mail: info@csa.com

¶ This study focused on disaster management manuals presented in a regional disaster management plan of a municipal government. Taking account of the importance of establishing fundamental logistical tasks of municipal agencies under disasters, it is essential to indentify how they should function during the period of emergency response. Several studies have showed their analyses to point out effective operations in emergency response. The quality of recent emergency response manuals has been very high as an individual operational level. One of the reasons is that manuals are regularly revised & improved so that municipal staffs can operate more efficiently. For these new manuals, new analysis method is required in order to verify the consistency & to check if their activities flow smoothly. By adopting an inverse operational approach, we could visualize the information process shown in manuals as a "Production Line". This enables us to verify & visualize the details of input/output data & activities in the process. In this way, we could point out the missing items & clarify necessary improvements on their forms & manuals.

Tajmazinani, Ali Akbar & Williamson, Howard (University of Glamorgan, Faculty of Humanities and Social Sciences, Pontypridd, Cardiff, UK [e-mail: amazinan@glam.ac.uk]), **Youth Policy Discourses in Post-Revolutionary Iran,** *International Sociological Association, Gothenburg, Sweden,*

¶ Youth policy in post-Revolutionary Iran has been shaped by various discourses which have been affected by the broader characteristics of five distinct historical phases. In the Early post-Revolution phase (1979-1981), young people played a unique role in the establishment of the Islamic Republic as "pioneers of the Revolution". The second phase, Holy Defence, coincided with the Iraq-Iran war (1981-88) & every aspect of youth life was affected by the related discourse of "youth as vanguards of the Holy Defence". With the appearance of some signs of western inspired youth life-styles & culture in the third phase (Reconstruction: 1989-97), the "youth as victims of western culture" discourse dominated youth policy & the "Supreme Council of Youth" (1992) was established & various policies were adopted to combat it. The fourth phase (Reforms: 1997-2005) was influenced by the "youth as agents of social change & development" discourse. The expansion of youth NGOs, the establishment of several youth related national bodies & the formulation of various youth policies took place under this discourse. The Principle-ist administration of Ahmadinejad (2005-present) introduced the "youth as agents and beneficiaries of social justice" discourse.

Takahashi, Masahito (Department of Humanities and Social Sciences, Yamaguchi University, 1677-1 Yoshida, Yamaguchi, JAPAN, 753-8540 [tel: +81 83 933 5243; fax: +81 83 933 5243; e-mail: takahasi@yamaguchi-u.ac.jp]), **An Immune System Model in the Research of Moral Socialization: Formation of Reflective Morality through Adolescent Relativism,** *International Sociological Association, Gothenburg, Sweden,*

¶ For a long time, moral socialization has been considered as the internalization of external norms in a given society. However, internalization models have been overlooked the linguistic, interpretative & reflective nature of moral socialization. Instead of internalization models, we shall attempt to illustrate an immune system model, which emphasize multiple, reflective and specifying processes in detecting & resolving socio-moral problems. Our data from Yamaguchi Adolescent Surveys in Japan (N=5,492) & Taipei Adolescent Survey in Taiwan (N=805) show decreasing conformity to some norms during adolescence. We can reconstruct this adolescent relativism from the most strong and stable norms of "true badness" (=harm). Reflective morality can be measured by the gaps of responses between to "true badness" and to other types of badness. This adolescent relativism implies their advanced competence at testing, specifying & grading some types of badness in the real world. Moral socialization can be reconstructed via a process whereby moral strictness is relaxed and the classifications of badness & its variations are refined to allow for more realistic solutions. The naïve dualism of childhood is gradually replaced by a more complex concept of badness with a highly gradated grayscale.

Takenaka, Katsuhisa (Meiji University, School of Information and Communication, Tokyo, Japan, 168-8555 [tel: +81 3 5300 1726; fax: +81 3 5300 1203; e-mail: take-katsu@pop11.odn.ne.jp]), **The Concept of Organizational Culture and Sociology of Organization in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ Sociology of organization in Japan is different from Western countries on the method to treat concepts of organizational culture. In Western traditional theory of organization, researchers consider that organization is the rational system firstly, & which has nonrational components such as organization culture & climate, secondary. In 1980's studies of organization analyzed the concept of organizational culture as a variable which was able to be controlled & managed. However, in sociology of organization in Japan, from the first, researchers treat organization as the nonrational culture itself & argue that organizations are the process in which conflicts of rationality & nonrationality are reconciled. In other words, although Western theories tend to differentiate organizational Culture from rational systems of organizations, Japanese theories tend to consider organization as a nonrational symbol itself. In this presentation, I will argue that the latter

perspective will be useful to analyze not only for recent themes such as an organizational identity & image which are constructed by many symbols & artifacts, but also for the traditional themes such as the difficulty of changing organizational culture.

Takenoshita, Hirohisa (Department of Sociology, Shizuoka University, 836 Ohya Suruga-ku Shizuoka 422-8529, Japan [tel: +81 54 238 4494; fax: +81 54 238 4494; e-mail: jhtaken@ipc.shizuoka.ac.jp]), **Family, Labor Market Structure and Dynamics of Self-Employment in Three Asian Countries: Gender Differentials in the Self-Employment Entry in Japan, Korea and Taiwan,** *International Sociological Association, Gothenburg, Sweden,*

¶ Comparative research on dynamics of self-employment has highlighted that institutional arrangement of labor market structure & family led to the cross-national variations in self-employment. Labor market structure & family-based social capital has played a crucial role in initiating & maintaining small businesses. Japan and Taiwan has been considered as countries with the higher level of family-based social capital, which allows people to start small business. However, the family structure in these countries might implicitly assume the patriarchy, under which men could dominate the household, whereas wives are expected to be subject to male domination. In other words, the extent to which people could employ family based social capital might differ significantly between men and women. Labor market structure should also be noted because the way in which family matters such as marriage, childbirth and childrearing would influence female labor market participation depends considerably on the labor market structure. What these arguments imply is that family & labor market structure could lead to the cross-national variations in the way in which gender would affect entry into self-employment. This paper will attempt to compare the process of self-employment entry between men & women in the three Asian countries.

Takeuti, Norma Missae & Potemkina, Tamara (Universidade Federal do Rio Grande do Norte, Campus Universitário LagoaNova, 59072-910, Natal-RN, Brazil [tel: 55 84 32153559; fax: 55 84 32153556; e-mail: nortak@uol.com.br]), **Résistance Sociale et Inventivité Dans La "périphérie sociale" Immigrants from the CIS Countries in Moscow: Benefit or Threat?,** *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ According to the Russian State Statistics the growth of immigration to the Russian Federation will increase substantially. Both the positive & negative effects of the increasing immigration are best seen in the capital city of the Federation. The ethnic composition of Moscow already changed from 89.7% Russians in 1989 to 70 % Russians in 2007. In the same year migrants from 74 countries worked in the city. Most of them were from the former Soviet republics. The growing number of migrants to Moscow raises serious interethnic problems. In the opinion of the ethnic majority the interethnic relations can be described as tense. Among the main factors that cause tensions the respondents identify : the socio-economic crisis, errors in ethnic policies, confrontation of political forces & the mass media. The share of the local population in Moscow which regards the inter-ethnic relations as a threat increases. Muscovites are particularly worried by the influence of immigrants from the former Soviet republics on the cultural situation in the capital. Nevertheless, the content analysis of the metropolitan press & official speeches shows the growth of positive attitudes.

2010S02614

Taki, Hirofumi (Doshisha University, Kyoto [e-mail: esh3401@mail2.doshisha.ac.jp]), **Distinguishing Characteristics of Education and Inequality in East Asia: An International Comparison,** *International Sociological Association, Gothenburg, Sweden,*

¶ The purpose of this paper is to clarify the distinguishing characteristics of education & inequality at the secondary-school level in some East Asian countries by conducting an international comparative analysis. Recently, there is an increasing number of studies which are taking account of the institutional differences of societies to show the different meaning of inequality between societies (e.g. Shavit & Muller, eds., 1998). However, although some East Asian countries like Japan are known as countries of high-stake tests & remarkable academic performance of students, it seems that the distinctive features of East Asian educational system compared with other societies are not empirically shown enough from institutional perspective. Therefore, we focused on education & inequality in some East Asian countries & compared it with European countries, US & Canada. The main data used in this paper is PISA which has targeted the academic performance of 15-year-old students. Based on the typology of the educational system, we conducted HLM analysis for each country mainly focused on the effect of family socio-economic status (SES) & school average SES (School SES) to the academic performance, controlling some other variables. From the analysis, we can conclude that one of the institutional characteristics of the East Asian countries compared to the other countries is strong school SES effect and relatively weak individual SES effect. This East Asian pattern of SES effect is similar to the pattern of highly differentiated educational system like Germany, but educational stratification process should be interpreted differently because of the meaning of institutional difference between them.

Tamayo, Sergio (Universidad Autonoma Metropolitana, Ciudad de México, México, 02200 [tel: (52)(55)5575-1399; e-mail: sergiotamayo1@prodigy.net.mx]), **Identidades colectivas y cultura política. La protesta Estudiantil** (Collective Identities and Political Culture. The Student Protest), *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ Son importantes para la política las movilizaciones y las marchas de protesta? Son útiles? La trascendencia del impacto político de una marcha es la utilidad pragmática o la cultural? Por qué si su eficacia no es tan ostensible, los movimientos la siguen utilizando como uno de los repertorios más importantes de la movilización?Crea identidad o sólo refleja un tipo de identidad colectiva? El objetivo de este paper es comprender la forma en que las identidades colectivas se expresan a través de la movilización. La marcha de 45 mil estudiantes del 2 de octubre de 2008, que conmemoró 40 años del movimiento estudiantil de 1968 en la ciudad de México, fue en realidad la conmemoración de un suceso, dentro de muchos, que simbolizó la "victimización" del joven estudiante ante las prácticas represivas del Estado: fue la matanza de estudiantes, el crimen de Estado, el mejor ejemplo de la heroicidad de la resistencia contra un enemigo leviatán, intangible, y de la lucha por un mundo sin explotación y sin opresión, su utopía. Una especie de lucha entre David y Goliat, el héroe y el demonio. Al invocar el pasaje histórico, este suceso muestra más que una conmemoración de un hecho, la conmemoración de una identidad, que tipifica al estudiante de hoy. El estudiante entonces se reconoce a sí mismo ahí en ese lugar y en ese momento. No puede ser de derecha, no puede ser porro, sino de izquierda y radical, una izquierda "no-institucionalizada"; tampoco puede ser pasivo sino activista; no puede ser irresponsable sino consciente de una realidad que lo aplasta pero que también se la imagina aplastando a otros dominados. El contexto político es lo que profundiza la separación generacional e ideológica entre los grupos estudiantiles de hoy y las organizaciones tradicionales "históricas" de ayer. La marcha de estudiantes, si bien informa algo del pasado, revela mucho mejor la realidad del movimiento estudiantil de ahora y de su cultura política. Las identidades colectivas son parte sustancial, inevitable, de la cultura política.

Tambe, Shruti (Department of Sociology, University of Pune, India, University of Pune, Pune, MS, INDIA [tel: +9102025601305; fax: +9102025690389; e-mail: stambe@unipune.ernet.in]), **'At Least a Paper Tiger': Policies and Alliances in Working Class Politics in India,** *International Sociological Association, Gothenburg, Sweden,*

¶ While in the West there is a rethinking about relevance & usefulness of social policy in the wake of global recession, in India networks involved in working class politics used democratic spaces to get new policy documents passed through contestations with the state. The paper addresses the question whether policies are "victory" of working classes or a tool of legitimation on the basis of interviews with union leaders & activists. National elections, state assembly elections & pressure from international bodies for policy reforms worked as a force resulting in policy reforms. Loss of livelihood opportunities, absence of basic services coupled with agrarian crisis leading to migration to urban centres show the crisis. The government has passed policies & laws without strong implementation machineries to tackle the ensuing legitimacy crisis. Analysis of two recent policy documents in India the Domestic Workers' Bill & the Urban street vendors' policy illustrates how the ruling classes attempt to temporarily pacify the working classes & tackle the crisis of legitimacy in a superficial way. The response of the unions & associations is twofold-considering these policies as a sign of "victory" & disenchantment with these "paper tigers".

Tamura, Shuichi (Graduate School of Humanities, Kobe University, 1-1 Rokko-dai-cho Nada-ku Kobe, Japan, 657-8501 [tel: +81 788035564; e-mail: zhouyiULt@hotmail.com]), **Brain Death Problem and Cultural Tradition in Japanese Society: Application of Legacy of Talcott Parsons' Sociological theory of Medicine,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores the theoretical framework to solve ethical problems related to the definition of concept of death, referring to the case of Japanese society: the definition of brain death of "Medical Law on Organ Transplantation." And I would like to discuss especially about a relationship between the definition of concept of death of human being & sociocultural tradition applying theoretical framework of Talcott Parsons' Sociology of medicine. The circumstance of modern medicine has been changing rapidly. Advancements in medical high technology bring about new problems on medical ethics & bioethics. Modern medicine cannot solve new ethical problems what death of human beings adequately any longer, because modern medicine on the basis of natural sciences is oriented to the extension of life or recovery from disease. On these problems of bioethics, Parsons suggested that the concept of life & death should be redefined not only from scientific attitude but also from religious value. In Japan, judging criteria of brain death especially have become a social problem, because criteria of life & death are deeply related to practical problems of organ transplantation. Medical Law on Organ Transplantation was enforced in 1997, & was revised in June 2009. This revised law redefines strictly the brain death as death of human beings. Medical institutions in Japan including this law tend to follow the medical systems of Europe & America without discussing on the own ethical basis. We Japanese people need to find ethical foundation of criteria on life & death of human beings that is appropriate for the current situation. We should reconstruct the ethical foundation based on own socio-cultural tradition, & to innovate ethics at the same time.

2010S02618

Tanaka-Naji, Hiromi (German Institute for Japanese Studies (DIJ), Jochi Kioizaka Bldg. 2F, 7-1 Kioicho, Chiyoda-ku, Tokyo 102-0094 [tel: 03-3222-5077; fax: 03-3222-5420; e-mail: tanaka@dijtokyo.org]), **Identifying and Explaining Ambiguities in Middle Adulthood: An Analysis of an Interview with K, a Working Mother in a Japanese Gendered Society,** *International Sociological Association, Gothenburg, Sweden,*

¶ One of the most popular questions in major surveys on individual lives and living is whether people are happy & satisfied with their lives (e.g. World Value Survey, Asia Barometer, General Social Survey, etc.). Macro data generated by these surveys allow us to identify tendencies among the respondents & make generalized statements on the way we human live on the basis of these tendencies. However, there are aspects in individual lives that are hard to scrutinize with a quantitative approach a aspects that involve ambiguities & ambivalences, the state of betwixt and between, the process of pondering & deciding or even not deciding. This presentation introduces & examines the way I analyze an interview with K, a Japanese working woman, aged around 50, married with two children. In the analysis, I will focus on ambiguities in K's life as a woman in her middle adulthood in a present society & attempt to identify these ambiguities, of which contours get more & more visible in her narrative, as the interview goes, & explain them by paying attention to features of Japanese gendered society.

2010S02619

Tanaka-Naji, Hiromi & Ng, Catherine W. (German Institute for Japanese Studies (DIJ), Jochi Kioizaka Bldg. 2F, 7-1 Kioicho, Chiyoda-ku, Tokyo 102-0094 [tel: 03-3222-5077; fax: 03-3222-5420; e-mail: tanaka@dijtokyo.org]), **Single Working Women in Hong Kong and Tokyo: Cases of Normal Deviance?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The past three decades witnessed the increased tendencies of less and later marriage among younger generations of women in industrialized societies in East Asia. While this demographic and life course change has been identified in studies based on large-scale quantitative analyses, there is little discussion that connects this structural change with the patterns of individual decision-making. Ours is a qualitative study that aims to shed light on the factors that shape single working women's choices. We are interested in learning how they perceive their singlehood status, and to what extent their decisions about work and marriage are influenced by the socio-cultural context they are in. Our research draws heavily on data collected through semi-structured interviews with single working women in Hong Kong (19) and in Tokyo (17).

Tanatova, Dina K. (Russian State Social University, Moscow, Russia, 129256 [tel: +74991698215; fax: +74991691556; e-mail: dktanatova@mail.ru]), **Negative Connotations of the Ethnicity in the Russian Society,** *International Sociological Association, Gothenburg, Sweden,*

¶ Negative connotations of the ethnicity in the Russian society In the Russian science & the Russian society were formed some inconsistent tendencies rather 1) content of the ethnicity; 2) information of the ethnic structure of the country; 3) formation of an image of the ethnic "enemy". 1. Ethnicity & nationality. Their content is identified with the concepts of the ethnicity, an ethnic belonging & ethnic identity. Such position could be ignored, if this situation did not find reflexion in a real cultural & political context. For example, in Constitution of the Russian Federation, the state is positioned as the multinational nation. There is a question what does it mean: many nationalities or a lot of the ethnic communities (let's leave a polysemy of the term "people" severely alone). For the educated person it's not the same. In a scientific discourse in a greater degree the nationality is treated as the state belonging (for example, the Russian nation). Ethnic identity as a self-identification of the person, social group with a concrete ethnic community. However in the Russian society was historically formed an understanding and use of the nationality as an ethnicity. As a result of terminological discrepancy there is a discord between scientific interpretation & vital practice. The ethnic understanding of a nationality continues to work & finds direct reflexion, for example, in legal documents. 2. The politicians & mass-media often use in their statements the statistical data on ethnic structure of Russia. However it's well-known that it's not the official data. In the population census of years 1989 & 2002 concrete questions on an ethnic belonging were absent. There is only approximate data on some regions which, as a rule, are received during researches of private character (for example, by preparation of dissertations). Thus there is an attributing of the latent ethnic status. The interethnic relations are politicized, ethnocentric the concept is used in achievement of definite purposes of political leaders, parties & movements. 3. Despite lacking the authentic statistical data about ethnic structure in reportings of mass-media it is used negative connotation which creates an image of ethnic "enemy". As a rule, in these reportings it is a speak about criminal crimes, ethnic business. For example, the term "the Azerbaijan criminal group", "the Chechen trace", "the Chinese mafia", etc. At the same time, it is obvious that in these groups not all members are Azerbaijanians or Chechens. Generalisation with ethnic accent can be concerned to display of a real discrimination practice. Thus, the modern Russian situation is characterised by an exception of "strangers" according to an ethnic sign on institutional & symbolical levels. The sense of ethnicity, supported institutionally, creates illusion of threat to the state, its national unity, cultural homogeneity.

Tangian, Andranik (Hans Boeckler Foundation, D-40476 Duesseldorf [tel: +49 211 7778-0; e-mail: andranik-tangian@boeckler.de]), **Flexicurity Indicators for Collective Bargaining,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper develops a negotiation model for flexicurity-relevant collective bargaining developed within an EU-project. Flexicurity is a European labour market policy which should compensate flexibilization of employment relations by advances in employment security & social security.

Flexibility is promoted by employers, whereas trade unions are concerned with security. First, the opposite interests of negotiating sides are expressed by indicators which evaluate flexibility & security aspects of a collective agreement (CA). A fair agreement should have 0-balance, by analogy with credit-debit 0-balance in finances. Since the flexibility and security indices are expressed in different scales ('in different currencies'), the substitution rate ('exchange rate') is determined by regression analysis of flexicurity-relevant CAs from the past practice. The data are taken from the Dutch computer archive of about 5400 CAs in years 1995 - 2007. For a given CA, a positive deviation from the flexibility-security 0-balance means that flexibilization issues are well compensated by security measures (better than on the average). A negative deviation means that flexibility prevails over security, implying that trade unions are disadvantaged. The model outputs tables & graphics & can be regarded as a kind of interactive check-list. It shows shortages and advantages of a given collective agreement with several indices, & displays its relative position with regard to all reference CAs considered, to those of the given year, to those within the branch, or within the branch in the given year. Finally, the total evaluation of the CA is made in terms of so called flexicurity balance. This approach can be easily extended to issues beyond flexibility & security. Besides pragmatic goals, the study provides empirical evidence of increasing flexibility at the price of security. This is a serious warning against improper implementation of flexicurity & one-sided use of this policy in favor of employers. The computer tool developed is just aimed at enhancing the position of trade unions to the end of surmounting this negative trend.

Tano, Daisuke (Konan University, Kobe, Japan [tel: +81784314341; e-mail: dtano@nifty.com]), **The Axis of Leisure: The World Recreation Congress of 1936 and Japanese-German Cultural Exchange,** *International Sociological Association, Gothenburg, Sweden,*

¶ For 8 days at the end of July 1936, directly before the opening of the Berlin Olympics, the second World Congress for Leisure Time and Recreation took place in Hamburg. Under the motto "Joy and Peace!" approximately 3000 participants from 61 countries took part in discussions on the organization of leisure & recreation. This congress became the focal point of the international recreational movement & at the same time provided the stage from which the brilliant success of the National Socialist recreational organization "Strength through Joy" was broadcast to the world. Moreover, the congress awakened great interest in Japan, which was strengthening its ties with Germany at the time, & gave a crucial impulse to the development of the Japanese recreational movement, especially the foundation of the Japan Recreation Association. The "Alliance of Joy" announced by the congress was ultimately brought into direct connection with the Anti-Comintern Pakt & the Tripartite Pakt when Japan accepted the National Socialist idea and flaunted its alliance with Germany to the public. However, the course of the Japanese recreational movement remained inconsistent to the end, being neither able to imitate the German model consistently nor to develop in an autonomous Japanese direction, and it sank finally with the escalation of the war. Although the congress was so important, researchers have hardly dealt with it up till now, & apart from contemporary reports there have been very few references to it. This paper therefore tries, on the basis of Japanese as well as German historical sources, to clarify the course & significance of the congress & to examine in particular the roles that Japanese participants played in it and the influence they had on the Japanese recreational movement, in order to give a snapshot of the Japanese-German cultural exchanges at the time with regard to leisure & recreation.

Tanschus, Nele Marie (Department of Gerontology, University of Vechta, Driverstr. 22, 49377 Vechta, Germany [tel: 0049 4441 15 609; fax: 0049 4441 15 621; e-mail: nele-marie.tanschus@uni-vechta.de]), **Ageing in Tanzania,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction: In Tanzania population changes have been evolving during the last decades. In addition to the ageing of the population there have also been other simultaneously changing processes in the fields of economy, media, politics, AIDS etc., which all seem to have a certain impact on older people in Tanzania, & especially on grandparenthood. The aim of the ongoing research a based on a collaboration with the St. Augustine University, Mwanza a is to conceptually link the current situation of older people, the relationship between the young & the old, & the general attitude towards older people in Tanzania to these social, economic and demographic processes. Methods: The paper explores the situation of older people in Tanzania based on a study of the available research literature & secondary analyses of available data. Results: The preliminary research findings indeed suggest a change of the Tanzanian elderly population regarding the intergenerational relationships & the images of ageing. There are currently two opposed directions of developments which both have an impact on the living situation & the general attitude towards the aged in Tanzania. On the one hand, especially grandparenthood a given the dramatic implications of AIDS a is increasing in relevance while, on the other hand, in some Tanzanian regions older people are more & more regarded as a burden to their relatives and for that reason have to quite often face violence, attempted murder or being cast out by their own families. Conclusions: The demographic change will have an undeniable impact on the Tanzanian population. The topic of age & ageing in Tanzania needs to become a more relevant research area in order to being able to react to those current & future changes in sufficient time & extent. Finally, this paper will attempt to outline exemplary future research questions & programmes.

2010S02624

Tantrigoda, Pavithra K. (Department of English, University of Colombo, Sri Lanka [tel: +94771159259; e-mail: pavithra.tantrigoda@gmail.com]), **Limits of the Visual in the 'War without a Witness',** *International Sociological Association, Gothenburg, Sweden,*

¶ Since the inception of the technologies of visual, the power of the visual data & its ability to provide a transparent reflection of the world has been underscored. However, the current studies on visual have come to recognize the limits of the visual and, consequently, its status as a medium that provides an unmediated access to the truth/real has been interrogated (Banks, 2001). The visual (re)presentations of the recently concluded conflict between the separatist Tamil Tigers & the Government of Sri Lanka can be regarded as a site that reveals the limits of the visual data. During the last months of escalated fighting, the warring parties used visual media to construct & reinforce their versions of 'truth' regarding the conflict. The reliability & veracity of the visual evidence presented thus was eroded by the attempts to contest their validity by the warring parties. However, as the only remaining visual testimonies to a 'War without a Witness', these visual representations of each others barbarities stand as a 'real' that is irreducible & construct a macabre narrative of death, destruction, & suffering that point towards the ineluctable and irreducible reality of the conflict.

Taschner, Gisela B. (Department of Public Administration, School of Business Administration of Sao Paulo, Fundaçao Getulio Vargas, Avenida Nove de Julho 2029, Sao Paulo, SP, Brazil, zip code 01313-902 [tel: 55 (11) 3799-7700; fax: 55 (11) 30814935; e-mail: gisela.taschner@gmail.com]), **Children's Entertainment, Marketing and Consumer Protection,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper addresses the exposure of children to the marketing of goods & services targeted to them, particularly by the media, in Brazil. It is part of a work-in-progress & has the Critical Theory as its departing point. It has already been pointed out that parents indulgence toward their children's desires has empowered children & converted them a sometimes even toddlers a in decision makers for many items & brands of consumption: clothes, accessories, dishes, cutlery, food, places for vacations, toys, just to name a few. On the other hand, children, particularly small ones, may not even be aware of the ads & other marketing strategies they may be exposed to. In any case, they cannot contend them, given the immaturity inherent in childhood plus the information asymmetry. Some consequences of these processes have been depicted in problems like child obesity, deviant behaviors (violence, robbery), family indebtedness. This paper focuses on the problems involved in the attempts which have been carried out so far to cope with this situation in Brazil, so far, particularly in terms of public policies for regulation of the media.

2010S02626

Taschner, Gisela B. (Department of Public Administration, School of Business Administration of Sao Paulo, Fundaçao Getulio Vargas, Avenida Nove de Julho 2029, Sao Paulo, SP, Brazil, zip code 01313-902 [tel: 55 (11) 3799-7700; fax: 55 (11) 30814935; e-mail: gisela.taschner@gmail.com]), **Leisure in Brazil: Key Moments of its History,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper addresses the history of leisure in Brazil, in the context of Latin America. It has the Critical Theory as a departing point, but also uses contributions from the area of Cultural Studies. As this is a history which

has not yet been told or written, the paper makes use of literature on such aspects of Brazilian life as economics, sociality & culture as primary sources for gathering relevant data, going back to the reports of the XIXth century European visitors of the country. In this process, leisure is related to the Brazilian socio-cultural roots, to the different social classes life-styles, to the development of the cultural and entertainment industry & to the coming of age of consumer culture.

Tashakor, Zahra (Independent Researchers on Women In Iran(-IRWI) [tel: +98-21-55744811; e-mail: ztashakor@gmail.com]), **Unveiling the Mind, Unveiling the Body, The Case of Hijab in Iran,** *International Sociological Association, Gothenburg, Sweden,*

¶ In spite of colonial view in Western propaganda, veil is neither merely a dress code nor simply an object of political sphere for Iranian woman. It is a highly subjective matter through which Iranian woman redefines her new moral codes of conduct, gender roles & modifies her traditional believes & values. Her veil is being changed along with her idea on identity & chastely visibility in public, social situation & practice, knowledge, family status & religious believes. It seems many intellectual and ideological questions for an Iranian woman start with hijab. Hijab for Iranian woman in middle class religious-traditional background has not been an exterior imposed reality, but more, a silent endless inner challenge in mind & daily life, also, between two generations or groups: one who wants move beyond the traditional norms & tradition preservers. Hijab is not a plain static picture, but is a sign of change toward a new ideological make up & a process of exfoliation. The static picture as imposed politically object has been offered in analysis of hijab by secular middle class woman stand point. In this article, I will try to focus on it as painful dynamism for middle class religious-traditional woman's mind. Beyond the oppressive aspect, focus on the subjective characteristic of hijab, I believe, would help us to examine deepness & wideness of social changes, to redefinition & remaking of Iranian woman of "self" & her social role as modern citizen in domain which is out of the state manipulation. Thirty years after the revolution, some questions still seem to complex to answer: why & how the mandatory hijab has been tolerated by Iranian women? Do we have actual meaning of hijab? Have meanings of hijab changed? How? Why the superior patterns advocated by the Islamic state, has not been accepted by Iranian women & they invented new forms which are mostly the state headaches. I will try to look at complexity of meaning of hijab for Iranian women & follow its changes over two generations. Through my article, many interviewed women narrate Iranian woman pondering over her veil for three decades to understand & bring her freedom & individual rights boundaries into question.

2010S02628

Tastsoglou, Evangelia (Department of Sociology and Criminology, Saint Mary's University, Halifax,, N.S., Canada B3H 3C3 [tel: 001 902 420 5884; fax: 001 902 420 5121; e-mail: evie.tastsoglou@smu.ca]), **Gender, Families and Transnational Care Giving,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is based on a case study of transnational care giving arrangements by a group of racially & ethnically diverse immigrant women & men in Halifax, Nova Scotia, Canada. The group members, who are also newcomers, have been or are involved in various transnational care giving arrangements in the last five years. Transnational care giving includes but is not limited to transnational parenting, as it often entails care for extended family members or friends, encompassing broader kin ties & social networks. Care giving might take place on site, and/or may require financial support & the organization of care provision from afar. While providing care across borders is not an exclusively female activity, the gendered social construction of care giving generally results in men & women providing care transnationally in gender-specific ways. Using feminist perspectives on global migration flows & the forms of transnational practices, this chapter aims to: (1) to map out the transnational social care networks & family/kin ties, of immigrants; (2) to focus, in particular, on transnational care arrangements: how & in what contexts is care provided across borders? Who are the care-givers? Who are the care recipients? Are caregivers, paid, unpaid, underpaid? (3) What are the consequences for the settlement and well-being of care providers & their families? (4) what are the consequences for their practice of citizenship & sense of belonging? (5) What is the gender-based division of labour & the gender implications in transnational care-giving arrangements?

Tateyama, Noriko (Kanto-Gakuin University, 1-501, Mutsuura-higashi, Kanazawa-ku, Yokohama-city, Kanagawa, Japan [tel: +81-45-786-7760; e-mail: tateyama@kanto-gakuin.ac.jp]), **Comparative Research on Personal Networks in Urban, Suburban, and Rural Areas, Focusing on Households as Human Resources,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study presents several comparative points for analyzing suburban life, within the urban core & rural villages. It is based on a case study of the Tokyo Metropolitan Area, focusing on personal networks as resources for childcare. The data set for analysis is a questionnaire designed for mothers with a child aged 3-5 years old attending kinder-garden or nursery school, total of 1,135 cases. The analysis focuses on the personal networks inside the household (husband & parents), as well as the personal networks outside the household (next of kin, neighbors, friends and "mama-friend"). Several events are perceived: first, the types of household are different in the urban core, suburbs & rural villages. Second, of these three areas, suburban husbands (fathers) have the most difficult work/ life balance. And third, poor resources within the household make suburban wives (mothers) develop personal networks outside their household as further resources. Finally, this study points out the significance of the differences of these three areas with respect to personal networks as human resources, & questions whether the suburbs that have developed on the outskirts of the urban core, represent the ideal environment in a modern society.

Tatsuki, Shigeo & Comafay, Nicolle B. (Doshisha University, Kyoto City, Japan 6028580 [tel: +81-75-251-3441; e-mail: tatsuki@gold.ocn.ne.jp]), **Evacuation and Sheltering Assistance Planning for Special Needs Population: Kobe Disadvantaged Population Mapping Project,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper reports the results from the 2008 Kobe Disadvantaged Population Mapping Project, which demonstrates the use of GIS for mapping special needs populations in order to facilitate community-based evacuation & sheltering assistance planning. In response to a national government request, the Kobe city administration collated separate social service recipient databases, resulting in an integrated database involving one hundred & twenty thousand individuals who were considered being potentially vulnerable in times of disaster. The database identified 4,329 people with physical disabilities in Hyogo Ward. The 2008 project geocoded & mapped them on land slide & tsunami hazard layers. 914 individuals were found residing in hazardous areas. These individuals were visited by interviewers & 612 or 67% responded to a structured questionnaire which measured demographics (i.e., age & gender), levels of disability, social isolation, housing fragility, & physical immobility. A social vulnerability score was then calculated as a function of these five variables for each respondent. As a result, 17% of those who responded were found the most vulnerable & requiring priority assistance at times of disaster. Furthermore, a social vulnerability weighted kernel density map of people with special needs was created. The weighted kernel density map indicated which particular areas require more man power for assisting a special needs population for evacuation & sheltering. The project product maps helped representatives from special needs groups, community emergency response teams, community social services, & emergency management centers to initiate evacuation & sheltering assistance planning in the project areas.

Tavakoli, Mortaza (Faculty of Human Science, University of Zabol, Zabol, Iran [tel: 00989151444054; e-mail: tavakoly52@gmail.com]), **Spatial Effects of Climate Change on Society of Rural Poor in Iran,** *International Sociological Association, Gothenburg, Sweden,*

¶ Abstract: Climate change is a reality & will affect the rural poverty. Although industrial countries are responsible for most greenhouse gas emissions, the impact of climate change is most severe in the poorest countries. Most countries determine their national poverty line as the value of a basket of basic food & essential non-food items. A vantage point of history will observe that most poor countries were vassals of the great colonial powers of the 19th & 20th centuries. The exit strategies pursued in granting independence cemented geographical boundaries that were inspired more by the politics of empire than the creation of new nation states. While climate change, or global warming, has been a contested idea in the scientific & public realms, international scientific organizations agree on the basic facts: Our Earth's temperature is rising, at least part of that change is due to human activities, & the impacts of climate change

are already affecting human & ecological systems. Climate change has already directly impacted our rural populations & economies. The economic, health, & community impacts described below are likely to increase in scope & scale over the coming years. In many places, the rural economy is closely tied to its natural environment. Rural workers & communities are the stewards of most American forests, watersheds, rangelands, agricultural land, and fisheries. Each of these environments has already been affected by climate change, with both positive & negative results for rural economies. Rural communities in the Iran have an important stake in the climate change debate. First, climate change effects already have direct impacts on our rural populations & economies. Second, climate change legislation & policies currently under consideration in the Iran will have serious repercussions for rural livelihoods & prosperity. Third, rural residents & the landscapes that they manage have the potential to make important economic & conservation contributions to climate change mitigation & adaptation efforts in the Iran. The purposes of this study are to determine the geographical areas, areas affected by climate change of Iran. Research findings in the form of a map-based geographical information system (GIS) to specify & poor rural areas are provided. Results Verification of overlapping and poor rural areas is affected by climate change. Key words: spatial effects; climate change; rural poor; GIs; Iran

Tavares, Breitner (Universidade De Alagoas–Instituto de Cieências Sociais, Campus A.C. Simões s/n, BR 104 - Norte, Km 97 Tabuleiro do Martins - CEP: 57072-970 - Maceió / AL Brasil [tel: 55-82-33136793; e-mail: btavares.ufal@gmail.com]), **Attitude in the Lyrics, Real Women: Youth Female Representations in Brasília–Brazil and in its Neighboring Areas' Hip Hop Context,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper aims at contributing to academic discussions regarding the issue of youth & gender. We propose to carry out an empirical study about some collective orientations & on the importance of cultural styles for youth & adolescent groups, especially those who are "victims" to social marginalization, sexism, & racial discrimination. In that respect, we approach what is known as Hip Hop, a contemporary youth manifestation that brings with it the problematic of generation issues, as well as aspects connected with gender relations. This paper focuses on its manifestation, in the Brasília the capital of Brazil, because it is significant in terms of this youth representation in the Brazilian Hip Hop scenario, in particular, for the pioneering work developed by the rap Brazilian singer Vera Veronika. This paper analyses the content of musicians lyrics, hip hop magazines & interviews The objective is to discuss what questions the female rap establishes as representative speeches of social imaginary. Key words: youth, feminism, & racism.

2010S02633

Tavares, David (ESTeSL / CIES, Av. D. João II 4.69.01 1990-096 Lisboa [tel: 351 919260082; e-mail: david.tavares@estesl.ipl.pt]), **Between Doctors and Nurses: The Case of the Professional Identity of the Cardiopneumology Technicians in Portugal,** *International Sociological Association, Gothenburg, Sweden,*

¶ The purpose of this paper is to analyse the professional identity of the cardiopneumology technicians in Portugal, a specialised emerging group in the health sector in Portugal, which possesses academic capital that is legitimised by higher education institutions. The paper is based on the results of a research project that was operationalised by a case study that entailed the application of a diverse set of sociological research techniques - documentary & bibliographic research, interviews (semi-structured), direct observation in a hospital context, and the questionnaire The production of professional identity of the group studied is influenced by two main dimensions: the socialisation processes which produce structural identity values, references & forms of identification & identization inherent to professional culture (1); the professionalization process (2). In terms of the first dimension, the study revealed a specific socialization process located between the dominant models of medicine & nursing, between the "technicist model" & the "humanist model". In terms of the second dimension, the case study reveals a professionalization process that is firstly supported by the acquisition of academic capital (similar to nursing), which reflects on an expansion of the group's competencies that have generally been achieved by medical delegation.

Taylor, Ann C. (School of Humanities and Social Science, University of Newcastle, New South Wales, Callaghan, NSW 2308, Australia [tel: (61) 249216834; e-mail: Ann.Taylor@newcastle.edu.au]), **'New Midwifery' in Australia: What Kind of Professionalization is Likely to Emerge from Current Processes of Change?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Australian maternity services are divided between public & private sectors & take diverse forms in different States & regions. A 2009 Commonwealth review proposed a greater role for midwives in primary & cooperative care & opened Medicare funding for private practice within certain limits. This paper addresses the type of professionalizing project being envisaged in Australia based on an analysis of the publicly available submissions to the review. These were downloaded from the websites of the Commonwealth and various professional organisations & analysed thematically to ascertain how "midwifery" was constructed & how issues such as safety, evidence & equity were addressed. The paper considers the extent to which stakeholder expectations are being fulfilled in the current policy environment & finds that, while "macro" issues of government funding & micro-issues of woman-centred care are most frequently addressed, the "meso" level of regulation, guidelines & inter-professional cooperation are either absent or a cause of contention. It is suggested that submissions reflect diverse & changing models of professionalization & that greater clarity about this is needed to avoid a shift in the balance of public & private midwifery & a widening of scope of practice with implications for safety & equity.

Taylor-Cole, Wilfred, O. (Mount Royal & St Mary's Universities, Calgary, Alberta, Canada [tel: (403) 440-6425 or (403) 254-3719; e-mail: wtaylorcole@mtroyal.ca;wilfred.taylor-cole@stmu.ab.ca]), **Biographies and the Life Course Perspective: Persons with Disabilities(Mental Illness) in Society,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines selected biographies of persons receiving social assistance due to the nature of their disabilities in society. The life course paradigm is employed with particular reference to persons diagnosed with mental illness in a segment of Canadian society. The qualitative analysis reveals that economic, political, social & cultural conditions have cumulative effect upon health including feelings of helplessness, hopelessness & dependency on social programs. The analysis is within the context of the Sociology of Health, Illness & Medicine. Various conceptions of illness are explored with particular reference to persons diagnosed with mental illness & eligible for the AISH Program (assured income for the severely handicapped in Calgary, Alberta, Canada.

2010S02636

Taylor-Gooby, Peter, F. (SSPSSR, University of Kent, Canterbury, CT2 7NF, UK [tel: 44 1227 827514; e-mail: p.f.taylor-gooby@kent.ac.uk]), **Security, Equality and Opportunity: Dualisation and Support for Social Protection,** *International Sociological Association, Gothenburg, Sweden,*

¶ The overall objectives that welfare state pursue, by various means, may be summed up under three headings: greater social equality, more extensive opportunities for citizens & better access to them, & greater individual security. Social changes & new policy initiatives impact on all three areas. Market incomes have become more unequal & welfare states are constrained in their capacity for expensive direct interventions to address inequalities. Opportunity & access are increasingly concerns of welfare states, a policy discourse echoed at the EU level. Policy changes including those associated with dualisation affect the ability to guarantee security for the mass of the population and the class compromises based on it. This paper consider the implications of these changes for the sustainability of welfare states, using data from the 2008 European Social Survey.

2010S02637

Tazreiter, Claudia (School of Social Sciences & International Studies, University of New South Wales, High Street, Kensington, Australia, 2052 [tel: + 61 2 93853691; e-mail: c.tazreiter@unsw.edu.au]), **Human Rights and Justice a from Normative Horizons to Lived Experience. Mapping the Politics of a Contested Discourse,** *International Sociological Association, Gothenburg, Sweden,*

¶ The well established understanding of human rights as the only truly global moral code of the 21st century has an attendant & growing literature on justice & its global manifestations. A good deal of this literature is motivated by evidence of exploitation, marginalization & deprivation: in short, violence in all its forms. A general theory of human rights in tandem with a theory of justice at the global level is persuasive in calling for entitlements in the form of human well-being (basic rights) and further, that

these entitlements should foster human flourishing. At the same time we need to be mindful that human frailties and vulnerabilities have social & cultural contexts that first, warrant careful understanding & differentiation & second, are likely to require fine-tuned rather than generalisable responses. This paper considers some problems & tensions in the mediation between the normative discourses of human rights & the methodological problems of "facts on the ground". Rather than proceeding from the horizon of global justice & the "ought", the paper outlines an argument for proceeding through an interrogation of injustice & the evidence of humiliations, stripping bare humanity through forms of economic, social and/or cultural rightlessness. Ultimately, the paper argues that human rights viewed through a sociological lens may provide some ballast to the problems alluded to.

2010S02638

Tchetgnia, Lucas (UMR196 Paris Descartes/INED/IRD, Paris, France, 75006 [tel: +33178949870; e-mail: tchetgnialucas@gmail.com]), **The Reception of Contradictory Discourses on HIV and Their Impact on Prevention among Cameroonian Youths,** *International Sociological Association, Gothenburg, Sweden,*

¶ One of the reasons why young people in Cameroon do not protect themselves against HIV/AIDS lies to the fact that they receive contradictory discourses on this pandemic. In-depth interviews and focus group discussions were conducted among young people of both sexes aged 15-24 both from urban & rural areas. They are roughly under the influence of five discourses: biomedical, religious, traditional medicine, traditionalist, dissident discourse linked to conspiracy theory on HIV. In a context of several illnesses and uncertainties in so many aspects of their future, these young people pick pieces of information here & there & try to make their own opinion. Information received through various channels is scrutinized, analyzed, reinterpreted. This situation leads to an atmosphere of misapprehension & doubts over many aspects of awareness regarding the prevention against HIV/AIDS. These youths are meshed into these contradictions & their implications, which somehow influence their relations to condom use & protection.

Te Kloeze, Jan & Jimenez, Carmen (WICE-DSL, Elzenpas 2, 6666 HE Heteren, The Netherlands [tel: + 31 26 4722639; e-mail: jan.tekloeze@wice-dsl.nl]), **Analyzing the Peace through Tourism Concept: The Challenge for Educators,** *International Sociological Association, Gothenburg, Sweden,*

¶ It is fair to say that tourism has become into one of the largest and faster growing industries of the planet. The tourism sector represents 3-5% of the GDP, jobs & investment in first world countries, & up to 30% in developing countries. As tourism continues to gain economic importance as a source of foreign exchange, so does the debate about its positive & negative effects in contemporary literature. There are several authors stating that international traveling promotes understanding and trust among people from different backgrounds. This line of thinking has brought up to surface the concept of Peace through Tourism. Sometimes regarded as an over-statement, this concept is a worth mentioning topic of debate. The present paper discusses both views on the subject; the supporting arguments defending it & the arguments stating that it is rather a naïve conception of what tourism really is. The aim is to clarify the real scope of the notion of Peace through Tourism & propose a rationale & working concept for tourism educators. In addition, the paper presents some of the challenges that still lay ahead for tourism educators dealing with this topic. Key words: Tourism, Peace, Education, Rationale, Working definition

2010S02640

Tegtmeyer, Lina Louise (Universität Siegen, American Studies, Adolf-Reichwein-Str. 2, Germany, 57076 Siegen [tel: +49 (0) 271 / 740 - 4110; e-mail: tegtmeyer@anglistik.uni-siegen.de]), **Do We See Visual Exclusion? Tourism Imagery in the Urban Imaginary. The Cases of New York City and Detroit,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the study of tourism, it was discovered that visuals play a key role in the negotiation of realities. They are the most disseminated form of representation used by the tourist industry, the host society & tourists themselves. What is the relation between place & image for tourism & cities as tourist destinations? Tourist bubbles are organized along the lines of inclusion & exclusion: certain destinations or fragments of a place are categorized as sights to be seen (sightseeing). A visual communication is guided by certain pictures which are distributed repetitively. There are also places that guidebooks recommend the tourist explicitly not to visit (the Bronx at night or the entire downtown area of Detroit). There are usually no images for these places. We know tourism is about idealization, that is not the challenge. The problem is that tourism is also a reality. And it is shaping the lived reality of tourists but also of non-tourists. It is no longer a concern only for the privileged, because it stayed an activity for the privileged - despite what is called the democratization of leisure by the development of mass tourism since the 1950s. In this sense, I argue that tourism imagery is an important factor in the urban imaginary (Sharon Zukin) of Detroit and New York City, shaping certain visual discourses for certain areas in a city as tourist destinations. Analyzing pictures in guidebooks & postcards, the question is –of course–what discourses are represented in these images?

2010S02641

¶ This paper analyzes the Brazilian modernism intellectual disposition to suppress the signs of heteronomy from its colonial past. As a part of the cultural movement towards the modernization of the country, the Paulista modernist movement undertakes both the erasure of parts of the Brazilian history a silencing its Portuguese culture origin–and the hypertrophy of others–allowing the fabling of self-foundation processes. Although the process of self-reassurance formulated in the Brazilian modernism has taken a different way from that conceived as the original meaning of modernity, as it appears in Habermas' The Philosophical Discourse of Modernity, it is possible to consider that it is a category defined by its self-reassurance dimension. Therefore, the purpose of this paper is to delineate the specificity of this way, establishing the connection between the project of reformulation of the culture & the project of edification of the nation through Brazilian modernist literature in which, & as a result, an image of Brazil should emerge as an self-reassured conception of its history.

Teotia, Manoj Kumar (CRRID, 2A, Sector 19A, Chandigarh, India 160019 [tel: 00911722725406; fax: 00911722725215; e-mail: mkteotia@gmail.com]), **Towards Improving the Human Nature Interactions in Urban India to Counter the Challenges of Urbanization: A Case Study of Participatory Environmental Revitalisation in a Segregated Colony of Chandigarh,** *International Sociological Association, Gothenburg, Sweden,*

¶ The human nature interaction has deteriorated rapidly in urban India with unplanned & rapid urbanization. The growth of population in segregated settlements called slums, environmental degradation, denial of human rights in terms of accessibility of housing, basic amenities & livelihood etc are some of the crucial challenges of many of the urban human settlements. The urban development practices adopted by the policy makers further seem to have affected the harmony between urban human society & the nature. The un-sustainable practices & initiatives in environmen-

tal management coupled with the poor role of institutions have affected the already deteriorating urban ecology. Chandigarh, the first planned Northwest Indian town is not exception to this emerging general urban scenario. With the rapid growth of urban population, Chandigarh also experienced emergence of large number of slums and segregated "slum like-rehabilitated colonies" including Ramdarbar which grew rapidly. With the rapid influx of poor migrants the human nature interaction deteriorated continuously in Ramdarbar for about two decades & it became one of the most segregated settlements of the city with highly degraded environment. Some local initiatives in urban India seem to have shown the way to improve the human nature interaction. Chandigarh also experienced some good initiatives in Ramdarbar which changed the face of the highly deprived colony. The present study of Ramdarbar experiment is an effort to underline the role of participatory environmental revitalisation initiatives in improving human nature interaction in a segregated urban settlement. The Paper has analyzed the dynamics of participation of local community in revitalizing urban environment. The participatory initiatives by the local people/Neighborhood Revitalization Committee supported by the area councilor has changed the face of colony from a very congested, encroached & polluted habitation to open, clean & green settlement. The environmental & social fabric of the colony has improved considerably after voluntary removal of encroachments, development of 90 parks, plantation drives, neighborhood sanitation programme & many other initiatives, which can be replicated in other rehabilitated colonies of Chandigarh & other cities for improving human nature interaction in urban settlements to counter the challenges of urbanization, environmental degradation and climate change.

Terada, Ryoichi (Meiji University, 1-1 Kanda Surugadai, Chiyodaku, Tokyo, Japan 101-8301 [e-mail: teradary@kisc.meiji.ac.jp]), **Constructing Citizens' Actions against Invisible Pollution: Framing Strategies of the Anti-Toxic Chemical Movements and the Policy Outcomes.,** *International Sociological Association, Gothenburg, Sweden,*

¶ One of the difficulties that the recent environmental movements on pollution issues face would be that they have to tackle potential and uncertain environmental risks of today. Industrial pollution and health hazards such as Minamata mercury poisoning & Love Canal dioxin contamination, for example, have attracted broad public attention. These sufferings were so visible that the public could recognize the gravity of the issues. Recent environmental risks, such as toxic chemicals that function as endocrine hormone disrupters, on the other hand, are latent & less tangible. Environmental movements on toxic issues today need to make extra efforts to visualize the "invisible pollution" & to convince the public of the significance of the issues. I will analyze the cases of anti-toxic movements such as MSC (multiple chemical sensitivity) sufferers' movements & the movements for information disclosure of toxic chemicals. The hypothesis here is that the rhetoric & the framing through which the movements pursuit their goals to minimize the invisible risks would lead to some of the new key policy principles such as "precautionary principles" & informational democracy (community right-to-know).

¶ Language Shift is a common problem throughout the modern world, but is by no means a new issue. We understand language shift as the situation when speakers of a given language die without having transmitted the language to their children. This happens when two or more languages are in contact & speakers of one of the languages shift to another one, i.e. speakers cease using their native language. In the last decades the death of minority languages has increased & if this trend continues, it seems inevitable that half of the existing languages (5000 to 6000 languages worldwide) will become extinct by the year 2100. As can be expected, this tendency also affects American Indigenous languages, including Mexican Indigenous languages. Our different case studies have shown that language shift in Mexico has intensified in the last decades. Thus the problem is worthwhile to be analysed. Analysing language shift or language death means searching for the causes of the phenomenon. Sometimes these are similar in some language communities. However, this is often not the case. We can find important variations by analyzing contexts and processes closely. The aim of this paper is the presentation of some results of our study of language shift in Mexico, based mainly on the [to] identification of certain language shift traits & the way they relate to three different socio-graphic contexts: 1) Sub-urban communities, 2) easy-access rural communities & 3) difficult-access rural communities. In this way, we believe, its possible to formulate a diagnosis of the degree of vitality of many indigenous languages in different contexts.

Terpe, Sylvia (Institute of Sociology, University of Halle, Halle, Germany, 06099 [tel: +49 345 55 24 246; fax: +49 345 55 27 150; e-mail: sylvia.terpe@googlemail.com]), **Moral Feelings: What is There to be Learnt from Political Philosophy?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Charles Taylor (1985) proceeds from the assumption that in their feelings people get a sense of what they value. This claim of a strong connection between people's emotions & their values might inspire empirical research on moral orientations which is "emotionally informed", i.e. which takes into account feelings as indicators for moral commitments. At the same time, this claim raises at least two questions: (1) Do emotions which may be experienced as oppressive (like shame & guilt) or which may result in humiliation or exclusion (like contempt) deserve to be called "moral feelings" from a sociological perspective? (2) Does one have to & how can one distinguish between feelings as expressions of moral orientations & feelings which just refer to social conventions without moral content? I will argue for the dynamic perspective explicated by Hans Joas (1999, 2004), who goes on from Taylor & describes the articulation of values as motivated by a gap between feelings & those values a person thinks of him-/herself as being attached to. Against this background, the boundary between moral & non-moral feelings is permeable & shifting in the course of the articulation of one's emotional experiences.

Terral, Philippe & Gojard, Loïc (SOI Université de Toulouse, 118 route de Narbonne 31062 Toulouse cedex 09 France [tel: +33 (0)6 67 67 45 80; e-mail: terral@cict.fr]), **French Physical Education Teacher Education: How Teaching Leisure Seriously?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Studying French case, we try to learn how leisure becomes a medium of education, how teaching leisure education is? The support of our research is a scholar discipline: Physical Education. We specially try to understand how leisure (and particularly sports in this case) is transformed a "translated" as would say Callon and Latour (Callon, 1986; Latour, 2006) a to become educative. Thus, we consider PETE (Physical Education Teacher Education) & this evolution. More than fifty interviews (with teachers & students who wish to become teachers) & ten years of ethnographic observations were the base of our empirical materials. Our communication suggests that becoming a physical education teacher need to change the profane conception of leisure & sport elaborated by simple users. To be included in the scholar curriculum, sport has to be "translated". More precisely, we note an intellectualization process in the conception of sport teaching with a huge production of theories more or less technological or scientific. Physical education teacher also have to show that social problems concerning sport (doping, cheating, violence aBB) are treated & reduced to be introduce in scholar pedagogical contents. Considering PETE contents at university, we could argue that those both processes ("intellectualizing" & "euphemizing") perform simultaneously. Following the carriers (Becker, 1985 ; Hughes, 1996) of students who want to become physical education teacher, we will detail these two processes. We will show how, progressively, they have to change their vision & their way of sport & leisure practice to obtain this professional position.

Teruhito, Sako (Sociology Department, Tokyo Metropolitan University, 1-1, Minamiosawa, Hachioji, Tokyo 192-0397, Japan [tel: +81-42-677-2054; fax: +81-42-677-2059; e-mail: telsako@tmu.ac.jp]), **On the Concept Shakai(Society) in Chino-Japanese Intellectual Traditions,** *International Sociological Association, Gothenburg, Sweden,*

¶ Today we are in a transition phase of social evolution from nation-based political-economic-cultural conglomerate to some other, unknown form of social life. Coupled with it, today's academic communities need critical reflections on, & radical reorganizations of, the basic concepts of their own. For sociology and social sciences "society" is the very concept that needs most thoroughgoing reconsideration. To make the debate fit to the width and depth of the present global transition we are facing, I'd like to introduce Chino-Japanese history of the concept of SHAKAI(society).

About 140 years ago, Japanese intellectuals translated "society" as SHAKAI, at the beginning moment of Japanese modernization & industrialization. SHAKAI was a medieval Chinese concept that connotes 1) the gathering that stands against the official rule. 2) It is the cooperative body beyond everyday social ties ablood, region, class, gender, language, ageaBB– 3) It is transient & volatile, but quite powerful concentration. The on-going debate on sociological reconceptualization of "society" can be more fruitful if it reflects some aspects of SHAKAI. Or, I assert it must be so. Because Japan is now the second largest market of sociology next to the U.S., & China shall be the world largest in the near future.

Tetyana, Ivanova (Department of Sociology and Psychology, Sumy State University, Sumy, Ukraine, 40007 [tel: +38 067 377 4715; e-mail: sociolULtanya@mail.ru]), **Boundary Mental Conditions,** *International Sociological Association, Gothenburg, Sweden,*

¶ The results of studying some boundary mental conditions are presented. As object of studying inhabitants of the Sumy area (Ukraine) have acted. In total 400 persons, from them–186 men & 214 women are interrogated. The main emotional states–uselessness (35 %), depression (34 %), despair (33 %), & doubts (32 %). Results have been analyses using factorial analysis. The first, most loaded factor or, in other words, prevailing mental condition with investigated to sample, included following conditions and experiences: the understanding of incomprehensibility of the world, grief, apathy, feeling of uselessness, nostalgia on the past, impression that a life passes by, absence of desires, fear before the future. The second factor included fears of illnesses, robberies, sincere suffering, grief, absence of pleasure, sensation of danger. The conducted research allows making a number of conclusions. The steady & homogeneous emotional condition endured by the majority is observed. The basic characteristics of this condition are alarm & apathy experience, absence of active actions on change of the position. The considerable part of the population is inclined to produce negative emotions & to concentrate on dangers & complexities of world around.

Tetyana, Ivanova (Sumy State University, Sumy, Ukraine, 40007 [tel: +38-067-3774715; e-mail: sociolULtanya@mail.ru]), **The Main Deviating Orientations of the Ukrainians,** *International Sociological Association, Gothenburg, Sweden,*

¶ The internal structure of the relationship to various forms of digressive behavior was studied. The first factor includes the forms of behavior connected with a general low cultural level. The second factor testifies of an expressed tendency to spiritual and behavioral anabiosis. The third factor includes behavior connected with economic law breaking. The fourth factor includes behaviors with a negative impact. This factor reflects not a tendency to digression, but the existence of an expressed tendency in the public consciousness to a strong unacceptance of these behaviors. The fourth factor includes types of sacrificial behaviors when an individual is oriented not on the satisfaction of personal needs, but on the providing for the welfare of others. The fifth factor included the behavior oriented on the rude assertion of personal belief, the ignoring of interests of others, or the examination of others as a means for accomplishing personal goals. The sixth factor included are behaviors oriented on the destruction of different levels. In this factor such behaviors as a suicide, murder & forms of behavior whose results may destroy the social structure are included.

Tewari, Babita (CSJM University, Kanpur, Uttar Pradesh, India, 208013 [tel: +919415475057; e-mail: babita.tewari@yahoo.co.in]), **Can the Family Reunite? An Effort from Leisure,** *International Sociological Association, Gothenburg, Sweden,*

¶ Family is a universal social phenomenon. The universality of the family can be accounted for by the indispensable functions it performs & the difficulty of ensuring the performance of these functions by any other social group. The fundamental functions of a family may be grouped in four categories: the sexual, the economic, the reproductive & the educational. The other functions of the family include socialization, health care, civic awareness, social regulation, recreation & religious function. The most important role of a family is in socialization. It is the family wherein a child is born. A long stay with the parents & other relations, because of his dependency on them, inculcates the emotional bond between the child & elder members of the family. And, here the child gets the earliest & the most fundamental lessons in socialization. He is mentally formed according to the norms of the society, which get ingrained in him to re appear in his adult life as conscience & super-age. Further, authoritarian and equalitarian units of family, supply cultural traditions & other natural elements required for socialization. The 'joint family System' is one thing that has the potential to ensure sustainability of life & natural resources on this planet. In countries like India, with increase in population & resources like land & space becoming scarce, the families & individuals are leading a life filled with stress & worry. On the other hand the situation in developed countries is similar for different reason. In developed countries like US & Australia, the individuals are stressed out for different reasons. Some of the major problems that people living in developed countries face are job insecurity due to unstable economy, difficulty in raising children while pursuing career ambitions, young adults having difficulty starting out on their own. Therefore whether living in developing countries or in developed part of the world, the model of 'joint family' has potential benefits that can lead to secure, healthy, stress free & affluent individuals. What I propose is to draw a correlation between leisure & joint family system in context to India. I explore that social & leisurely functions being practiced amongst Hindu Brahmin families act as a binding force for those who are socially disconnected with their co-family members, either by virtue of compulsion, or due to any other reason. I have followed the interview procedure & tested one hundred families of Kanpur City.

2010S02653

Tewari, Sanjay (CSJM University, Kanpur City, Pin Code 208024, India [e-mail: sanjay.tewari@yahoo.co.in]), **Education through leisure - Is it a distant dream?: A case of India,** *International Sociological Association, Gothenburg, Sweden,*

¶ Leisure Education may be defined as a process to enable individuals to identify and clarify their leisure values, attitudes, and goals; deciding for oneself what place leisure has in one's own life; total movement to enable individuals to enhance the quality of their lives in leisure; a process whereby individuals determine their own leisure behavior and evaluate the long- and short-range outcomes of their behavior in relation to their (leisure) goals; developing the potential of individuals to enhance the quality of their own lives in leisure; a movement in which a multiplicity of disciplines and service systems have a role and responsibility; a lifelong, continuous process encompassing kindergarten to retirement years; relating one's own needs, values, and capabilities to leisure and leisure experiences an so on. Leisure Education is now receiving increasing attention within schools and community recreation settings in the developed world. It is primarily focused upon children who are grade school age and older. For younger children, leisure education would expose the developing child to an array of play experiences. Parents, teachers, aides, and various specialists, can work together to introduce the child to a variety of age appropriate leisure materials, skills, and behaviors. This is what defines leisure education. But what is the meaning of education for the rural masses dwelling into the heart of India? Can it ever reach the height of education in the form of leisure? Can leisure itself become a mode of education, particularly in a country where statistically speaking nearly 9 million children are yet to be enrolled and less than 40 percent of adolescents attend secondary schools? It is true that in today's global knowledge economy, education plays a vital role in determining a country's economic growth and its people's standards of living. Importantly, evidence from around the world suggests that secondary education is critical for breaking the intergenerational cycle of poverty, providing huge beneficial impacts on health, raising the marriage age, reducing fertility rates, and improving child rearing practices. My paper is an effort to explore that less than 40 percent part which imbibes children going till the secondary education level and the possibilities of imparting higher education to them by means of leisure. For this purpose, I intend to sub divide this analysis into three areas. The first part will throw light on the research and data available for this section of children. The second portion will try to elucidate the leisurely practices, particularly in the Indian framework, which can be helpful to aid higher education. The third and last part will conclude with recommendations for adapting practices and strategies to accept leisure education, and for this purpose I will also take experiences from some developed societies.

2010S02654

Tewari, Sanjay (CSJM University, Kanpur, India, 208024 [tel: +91 9415078389; e-mail: sanjay.tewari@yahoo.co.in]), **Socialization of Life (Health) Insurance in India,** *International Sociological Association, Gothenburg, Sweden,*

¶ There is a need for context-sensitive research on the links between macroeconomic performance & the fundamental goal of raising human welfare. There is also a clear need to bridge the hiatus between theoretical & empirical findings & social policy making, and between means & ends. The paper is guided by the view that globalization entails multiple, contradictory processes & that there is a need for informed debate about the con-

tinued possibilities for progressive social reform & critical analysis of the nature of those reforms that are taking place. By way of contribution to this debate, this paper critically discusses the possibilities that regional & transregional forms of collaboration in social policy offer for such reform. The major problem identified, from a development perspective, i.e. in context to India, is the difficulty of devising comprehensive social policies within regional formations that are mainly economic, and more particularly trade-oriented, in aim. The almost exclusive preoccupation of these formations with economic issues has led to a reaction from international civil society organizations which increasingly demand that social issues be addressed as well. I study the social inclusion element within the life insurance industry here in India, specifically in the insurance liberalization era after the year 2000, when the life insurance had been opened for private participation for the world. The paper is divided into four parts. The first part briefly describes the changes that took place in the life insurance arena after passing of the Insurance Regulatory & Authority Bill, along with a terse account of life insurance in India. The second part examines the problems in incorporating the informal sector, such as the self-employed, unorganized workers, peasants, marginal farmers, employees in micro enterprises etc. The fourth part identifies potential factors for social inclusion of this class in the mainstream & the last portion outlines & draws lessons from some developed country experiences & identifies some common policies to incorporate excluded groups & reduce inequalities by income, gender, geographic area & among indigenous peoples, and to protect the poor & the elderly.

2010S02655

Tewari, Sanjay (CSJM University, Kanpur City, Pin Code 208024, India [e-mail: sanjay.tewari@yahoo.co.in]), **The Life Insurance Reforms sans the Deprived: Social Dimensions of the Crisis in Context to India,** *International Sociological Association, Gothenburg, Sweden,*

¶ **Financial crisis** affect vulnerable sections of the society, including labor, far more than non-vulnerable sections. Hence in interests of such sections, ensuring against financial contagion should receive top priority. Especially in the case of insurance, one would appreciate that it is not merely the affordability factor that is responsible for the poor growth levels but the inability to understand its role. As a part of encouraging financial inclusion, the insurers have been mandated with targets to be achieved from these sectors. The performance of most of the insurers tends to indicate whether they are looking at it as business potential, rather than as targets to be fulfilled, which is a very positive sign. The overall performance of the insurance companies in bringing the deprived sections of the society within the bracket of life insurance needs to be assessed. As a part of investigation, the focus should be on issues which have detracted the insurers as a consequence of the **recession** affecting their premium income and profitability and its possible solutions. Historically, it has been mentioned that poverty is at the root of poor development in the rural areas; and on more than one occasion, even wished away in exasperation. The revolution that has been brought in by the services sector has under-pinned the importance of proper marketing strategies that would bring in the desired changes in the thinking of rural masses. Ironically, the loss of the wage-earner or the loss of an asset for these sectors could be tremendous. Providing Social Security for the informal sector is a critical component of transformation of social and economic status and insurance is an essential ingredient of this social security. It assumes great significance in a country like India where a large portion of the population lives in villages, depending on agriculture, which in turn depends on the vagaries of monsoon. Thus the priority for these sections is to earn daily bread and butter, and have no means to save for the rainy day. Similarly, even on the urban front, one gets to see a huge number of people like the carpenters, plumbers, construction labor, just to name a few depending on daily wages and not having a regular stream of income. Ever since the opening of the life insurance sector in India for the private insurers, it was made mandatory for all to cover stipulated portions from the rural sectors. The primary aim was to bring more and more persons under the umbrella of insurance. An estimated 58 million small scale enterprises in non-agriculture unorganized sector employing less than 10 workers contribute around 31% of the GDP. This speaks of the importance of integrating the social sector into financial inclusion, and insurance in particular through mandatory obligations. The provision of the social security benefits to unorganized workers, farmers etc. proved successful in respect of many associations when the same were implemented under the auspices of nodal agencies, Self Help Groups, Microfinance etc. The bygone nine years after the opening of the insurance sector has witnessed all the life insurance companies fulfill their social sector obligations, with the state owned Life Insurance Corporation of India contributing optimally. The life insurance industry has grown from a total premium income of USD 7354 Million in the year 2000-01 to USD 42385 Million in 2007-08; showing an average growth of 28.97 % over 7 years. This growth has been substantial, and moreover all the insurance companies have successfully fulfilled their rural and social sector obligations. What I intend to study is the overall increase in the performance of the life insurance companies in India ever since the liberalization, and further the element of social coverage in this from the times of crisis and turbulence up to the end of the current financial year. This will help us in drawing a conclusion as to whether the turmoil has affected the social sectors, as the insurers are not finding it easy and viable to comply with their Corporate Social Responsibility. The targets, for example, have being fixed for these insurers are to cover 2.5 million lives from the year 2006-07 to 2009-10. But it remains to be studied and evaluated as to whether these targets are enough considering the mammoth size of the Indian population still to be insured. My analysis will draw conclusions on the growth within the life insurance industry, then the growth in the form of social inclusion, and lastly as to whether the financial turmoil has taken a toll on the growth trajectories in context to those who had to be included under the bracket of life insurance and social security.

Tézli, Annette (Sociology, University of Calgary, 2500 University Dr. N.W., Calgary, AB, T2N 1N4, Canada [e-mail: atezli@ucalgary.ca]), **Keeping the Family Intact–The Lived Experience of Sheltered Homeless Families,** *International Sociological Association, Gothenburg, Sweden,*

¶ Homelessness is an extreme form of poverty & one of the fastest growing groups among the homeless are families with dependent children. The most frequently cited structural causes for homelessness are large scale economic changes, increasing income inequality, trends in the housing market, declining social assistance rates & social policy changes. My paper explores the lived experience of sheltered homeless families living in one of Canada's economically most prosperous regions. Despite the economic boom of recent years, the number of homeless families steadily increased over the past decade, challenging the notion that economic prosperity alone will eradicate poverty & homelessness. This trend is exacerbated by the current economic downturn. Using rich ethnographic data collected at an emergency shelter for homeless families that houses both single- & two-parent families with dependent children, my research focuses on contextualizing individual poverty experiences. My paper seeks to delineate how a broad range of structural factors such as developments in the local housing market, economic changes & wage trends, social policies, governmental funding for homeless shelters & shelter organization interact with individual level challenges homeless families face and thereby produce instances of extreme poverty in an industrialized country.

Theobald, Hildegard (University of Vechta, Centre for Research on Ageing and Society, Vechta, Germany, 49377 [tel: +49 4441 15551; fax: +49 4441 15621; e-mail: hildegard.theobald@uni-vechta.de]), **Migrant Carers in Long-Term Care Provision: Interaction of Policies Related to Long-Term Care, Professionalisation of Care Work and Transnationalisation,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since the 1990s in Southern European countries & recently in Continental European countries migrant carers are increasingly conducting care activities within the family framework. Furthermore, since the EU enlargement carers from the new EU member states have been employed within formal care provision in some EU-countries. The distinct developments can be explained by the country-specific institutional framework related to long-term care. The institutional framework is created by the interaction of long-term care policies, the mode of professionalisation of care work & transnational policies, i.e. migration policies and policies related to EU enlargement. The design of the policies and their interaction differ between countries based on national conditions & the impact of EU regulations. The paper aims to provide a systematic analysis of the institutional framework to reveal different types of interaction of the policy fields in a cross-country comparison. Conceptually, it combines different approaches related to international comparative research on long-term care policies as well as professionalisation of care work and transnational policies, i.e. related to EU-enlargement as well as migration policies. Empirically, it analyses approaches in the different policy fields in a cross-country comparison & relates them to care employment patterns on the basis of statistics.

Therborn, Goran (University of Cambridge, Dept. of Sociology,

Free School Lane, Cambridge CB 3RQ, UK [tel: 01223 334527; e-mail: gt274@cam.ac.uk]), **End of A Paradigm. The Current Crisis and the Idea of Stateless Cities,** *International Sociological Association, Gothenburg, Sweden,*

¶ Urban studies in the social sciences have for two decades been driven by a hegemonic conception, under slightly different, competing labels, world city, global city, world city networks. While making important cognitive contributions, it has, this article argues, been fundamentally flawed in assuming nation-states and state-processed national economies to be unimportant to the world economy & to world/global cities. While in several ways enriching urban knowledge, its dominance has also impoverished urban research by reducing cities to zip codes of firms & labour markets, leaving out that cities are also places of meaningful built environments, in which people live & interact. Basic assumptions and arguments of the world/global city idea by the three most distinguished representatives of the approach are critically scrutinized, John Friedmann, Saskia Sassen, & Peter J, Taylor. The current economic crisis has demonstrated these assumptions and arguments about cities in the world economy as untenable. The economic crisis is spawning a paradigmatic crisis, which should as be seen as an opportunity for wider views of cities to be opened up.

2010S02659

Thevenot, Laurent M. (Ecole des Hautes Etudes en Sciences Sociales [e-mail: theveno@ehess.fr]), **Capacities, Powers and Oppressions: New Contributions From the Sociology of Engagements,** *International Sociological Association, Gothenburg, Sweden,*

¶ Social theories differ according to their focus on social orders and structures which determine distributions of powers and, on the other hand, the role they give to the dynamics of actions or interactions which calls into question such ordering & leads to change through either creativity or criticism. The contribution proposes to relate both concerns while escaping "structuring and structured structures". The suggestion is to address the issue of forms of guarantee which we invest in to appease inquietude in living together. These forms are not restricted to collective conventional institutions since their plurality includes, among others, the form of confidence in close personalized familiarity with the environment. The notion of regime of engagement encompasses this plurality in a unique framework relating dispositions of human beings & dispositions of the world they live in. The dynamics of the regime unfold in the two faces of the guarantee : closing one's eyes with blind faith in the guarantee; opening one's eyes to what it sacrifices. Possible reifying reductions of such regimes bring light on the mechanisms through which devices that contribute to ensure are also those that lead to abusive or oppressive power. It shows how "objective-oriented governance" blocks criticism.

Thing, Lone Friis & Ottesen, Laila (Department of Exercise and Sport Sciences, Copenhagen University, Copenhagen, Denmark [tel: ++45 35320851; e-mail: lfthing@ifi.ku.dk]), **When Leisure becomes Work: Are the Civilizing of the Body Healthy?,** *International Sociological Association, Gothenburg, Sweden,*

¶ When health promotion & prevention in science of public health is discussed, it is rarely from an Elisian perspective. Based on a theoretical analysis of Norbert Elias' sports sociology (Elias and Dunning 1986), & the concept of quest for excitement, the article discusses health orientation in the society as an expression of a growing civilisation of the body. In national governmental health messages sports participation & general physical activity are presented as the essential health-promoting instrument that keeps illness & disease away & prolong life. But the allpervading guide to physical activity & sport–often with a focus on quantitative dimensions like frequency, duration and intensity –as measurable effects, risks turning movement culture into a fixed management like salary work for the population. Not the least because health messages are presented in a risk perspective (Lupton 1995; Beck 1997), which priorities a disease perspective & excludes pleasure & desire dimensions. Elias' sports sociology with an emotion sociological angle can put the risk orientation of public health into perspective and contribute with new knowledge which critically can analyze the forces of body civilizing in the health policy & not the least its weaknesses. The concept of quest for excitement was developed in a framework of leisure activities being equalising the unexcitement of modern industrial work life. The paper therefore also critically debate the need for adjusting Elisian sport sociology in late modern (Beck 1997) or postmodern life (Bauman 1997) reality. The article concludes that figuration theoretical aspects such as emotions & relational thinking should not be overruled in public health & health policy when population problems such as physical inactivity have to be solved.

Thomas, Kevin J. A. (Pennsylvania State University, University Park, PA 16801 [tel: 814 863 2387; e-mail: kjt11@pau.edu]), **Migration, Household Contexts, and the Well-Being of Orphans in Post-Genocide Rwanda,** *International Sociological Association, Gothenburg, Sweden,*

¶ Using data from the 2002 Rwandan census, this study situates the discourse on migration & orphan well-being within the context of the household. The results indicate that migrant orphans are more likely to live in households with less adverse structural characteristics, e.g. in female-headed or single-parent households, than non-migrant orphans. Significant differences are also found in the implied gains to living standards & schooling associated with migration, among paternal, maternal, & double orphans. Additionally, the study finds that, on average, the higher living standards & schooling attainment of orphan migrants, relative to their non-migrant counterparts, disappear among children living in child-headed households. More generally, the results suggest that the higher living standards of migrant orphans are, in part, driven by the fact that they mostly live in households with other migrant household-heads or migrant spouses. Yet the analysis also suggests that orphans living within these contexts experience higher levels of intra-household discrimination in investments in their schooling relative to orphans who live in non-migrant households.

Thomas, Kristy, A. (Department of Sociology, University of Massachusetts, Amherst, MA 01003 [e-mail: kthomas@soc.umass.edu]), **Judicial Constructions of Parenthood: Gender and Sexual Orientation in Child Custody Decisions,** *International Sociological Association, Gothenburg, Sweden,*

¶ Today more than three quarters of families no longer fit the heteronormative family ideal of a legally married monogamous heterosexual couple & their biologically related children. This demographic change has led to increased anxiety about the institution of the family, particularly about whether same-sex couples can legally marry or become parents. In this changing family landscape, American courts have become the frequent arbiters of determining how the state should define family & parenthood. Child custody cases, in particular, reveal the contested nature of parenthood, as courts are forced to draw the boundary lines of who constitutes a legal parent. While scholars have argued that the gender or the sexual orientation of the parent plays a role in the custody decision-making process, my research explores how courts define family in the context of variations in both the gender and sexual orientation of parents. Using qualitative textual analysis of child custody decisions, I compare how the courts construct gay fathers & lesbian mothers as parents. Understanding how judges and courts use language to construct families is a significant task as courts hold enormous power to influence the cultural definitions of family.

Thomese, Fleur (VU University, Sociology, De Boelelaan 1081, 1081 HV Amsterdam, The Netherlands [tel: + 31 20 598 6785; e-mail: gcf.thomese@fsw.vu.nl]), **Evolution and the Contribution of Grandparental Child Care to Working Women's Fertility Decisions: A First Test in a Dutch Population,** *International Sociological Association, Gothenburg, Sweden,*

¶ How does grandparents' babysitting affect the way working women choose between work & having children? Sparse findings suggest that this care may have a much greater impact on fertility than formal care does. This would be in line with the evolutionary grandmother hypothesis, which posits that investments in children's offspring increases fitness for the oldest generation. This would first lead to a preference for caring for daughter's children. Following the more common opportunity cost model such a preference would be conditional upon the daughter's needs & alternatives, and the grandparents' own opportunities for caring. Second, evolutionary reasoning would restrict effects on fertility to grandparental care, whereas the opportunity cost model would predict a similar effect for formal child care. Data come from the Netherlands Kinship Panel Study, a prospective study including 2,013 men & women aged 18-49 years in 2003. Preliminary descriptive & regression analyses corroborate the preference for maternal grandchildren, & suggest that grandparental care may have an effect on fertility which formal care does not. Results must be weighted in the context of Dutch welfare state & culture favouring informal child care. But we may conclude that older people's contribution to fertility has been underestimated.

Thompson, Lee A. (Faculty of Sport Sciences, Waseda Univeresity, 3-4-1 Higashifushimi, Nishitokyo, Tokyo, Japan 202-0021 [tel: +81-42-4511023; fax: +81-42-4511023; e-mail: thompson@waseda.jp]), **The Role of Newspapers in the Development of the Championship System in Japanese Sumo,** *International Sociological Association, Gothenburg, Sweden,*

¶ The symbiotic development of sports & the media from the late 19th century onward has been widely documented. It is perhaps less well known that such so-called "traditional" sports as Japanese sumo also developed in close relationship with the media. Sumo was regularly performed for paying customers in the large cities of Japan from at least the 17th century, & the current organization has its roots in the mid-18th century. However, these performances were not organized to determine an individual champion based on record. From the late 19th century, newspapers began to recognize individual wrestlers for performance in the periodic tournaments. Initially wrestlers were awarded prizes for going undefeated over the course of a tournament. The criteria for the awards were gradually changed to produce an individual champion. This presentation will examine the development of the championship system in sumo & the role played by newspapers therein.

Thörn, Catharina (Department of Cultural Sciences Göteborg University, Box 200 405 30 Gothenburg [tel: +46 31 786 6175; e-mail: catharina.thorn@kultur.gu.se]), **(Re)Searching Gothenburg–An Introduction,** *International Sociological Association, Gothenburg, Sweden,*

¶ Equipped with one of Europe's biggest ports, Gothenburg rapidly became a leading industrial city. Today, after the shutdown of the shipyards & with the car industry in the midst of a crisis, Gothenburg is the Swedish city where the transition to a postindustrial condition is most evident. Should this transformation primarily be understood through the local history of Gothenburg, or in relation to a more general global development? Could one even study with worldwide urban changes by researching Gothenburg? In this presentation, one of the editors, present a new book (Re)searching Gothenburg. A book that is an attempt to bridge the gap between academic urban research & the public debate on urban transformation. Scholars from a number of disciplines were invited to write a text that would not require previous knowledge of Gothenburg, but at the same time would offer native Gothenburgers new perspectives on their city.

2010S02666

Thörn, Håkan (Department of Sociology, University of Gothenburg, Box 720, 405 30 Göteborg, Sweden [tel: +46 31 773 4786; e-mail: hakan.thorn@sociology.gu.se]), **Urban Transformation, Social Order and Social Movement,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is based on an on-going research project on urban transformation on Scandinavian cities, focusing on two case studies of the districts of Christiania in Copenhagen & Haga in Gothenburg. The proclamation of the "Free City of Christiania" occurred in 1971 in the closed down military area of the centrally located working class district Christianshavn. Haga, one of several working class districts in the inner city of Gothenburg singled out for slum clearance, was from the early 1970s & 15 years on the site of an "alternative culture", encompassing social movements of national significance. While Christiania today remains a highly contested district, the struggle to save Haga contributed to a gentrification of the district, as it became officially "reevaluated" & up-graded. For the analysis of the interaction between authorities & movements in both cases, a focus on cultural strategies in order to construct a new urban identity to attract tourism, industrial investment & the new middle class, is of high relevance. The reevaluation of Haga occurred at the same time as the municipality began to formulate a new post-industrial identity for Gothenburg. The current claims from the authorities for a "normalizing" of Christiania occurs against a background of a strategy to market "Beautiful Copenhagen". In connection to this, a struggle to define Christiania's historical heritage has emerged: while the Danish government wants to preserve the heritage of the old military area, the Christianites are arguing that it is the "alternative cultural historical heritage" that must be preserved.

2010S02667

Thung-hong, Lin & Wu, Xiaogang (Institute of Sociology, Academia Sinica, 128 Sec. 2 Academia Rd., Nankang, Taipei 11529, Taiwan [tel: 886 2 2652 5127; fax: 886 2 2652 5050; e-mail: zoo42@gate.sinica.edu.tw]), **Beyond the Market Transition: Changing Institutional Structure and Class Inequality in Contemporary China,** *International Sociological Association, Gothenburg, Sweden,*

¶ Previous studies in the market transition debate tended to focus on the returns to human capital & political capital to infer the changing stratification mechanisms. This article brings the class back into the analysis of changing order social stratification in China's economic transition since 1978. We develop a Chinese class schema based on the unique socialist institutions such as the household registration (hukou), the work unit (danwei), the cadre-worker distinction, & the emerging of private ownership of the means of production in China's transition economy, which, in a neo-Marxian perspective, are associated with different forms of productive assets: labor power, organization, capital, and authority/skills. We argue that China's momentum of changing inequality is associated with the shifting effect of the exploitative/accumulative capacity of the ownership of these four production assets. Based on data from various waves of national representative surveys conducted between 1988 & 2005, we demonstrate that three decades of economic reform has first loosened the bound of labor power through the hukou system & then undermined the role of organizational assets tied to danwei in social stratification. On the other hand, The development of labor markets & that the privatization since 1993 seem to have enhanced the role of the ownership of skills & economic capital in generating inequalities in the course of China's market transition.

Tikhomirova, Tatiana (Institute of Psychology, Russian Academy of Sciences, Moscow, Russia [tel: (903) 114-28-10; fax: (495) 682-92-01; e-mail: tikho@mail.ru]), **Scientific and Educational Personnel Preparation in Modern Russia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Retaining & development of personnel potential in the system of science & engineering as well as supporting of scientific knowledge continuity is regarded to be one of the basic directions of the Russian state policy in the field of development of science and technologies. The role of the state in financial supporting of fundamental science & training of scientific specialists is particularly important. One of the most actual goals in Russia is a transition from a policy of support of research collectives that was necessary for retaining of scientific specialists to a policy of generation of the innovative-oriented studies. In view of this problem the federal special program "Scientific & educational personnel of innovative Russia" is developed & implemented for 2009-2013. The program includes different actions stimulating interactions with colleagues abroad: maintaining of stable dialogue with the Russian scientific diaspora, searching & generating of innovative forms of involvement of scientists-migrants to realization of the Russian segments of the international scientific programs & projects, specification of stimulus for scientists-migrants to come back. Liberalization of the Russian legislation regulating realization of competitions within the federal special programs is also necessary. Our analysis indicates that the existing legislation is not adapted for realization of mass competitions in the field of scientific researches.

Tiryakian, Edward A. (Duke University, Durham, NC 27708-0088 [tel: 919 660 5632; fax: 919 660 5623; e-mail: Durkhm@soc.duke.edu]), **After Gouldner: The Coming Demise of Rational Choice Theory?,** *International Sociological Association, Gothenburg, Sweden,*

¶ In 1970 Alving Gouldner published "The Coming Crisis of Western Sociology", a radical critique of mainstream sociology & its leading theorist, Talcott Parsons. For the past three decades of so, rational choice theory (RCT) has become the mainstream theoretical perspective of choice, in areas ranging from social capital to the sociology of Religion. Utilizing Gouldner's approach to functionalism, this paper argues that the rise of RCT has had "elective affinity" with the broader liberal economic frame encouraged by Thatcher & Reagan, & continued by their successors in the UK & the USA. However, for reasons discussed in the paper, a disenchantment with RCT is emerging, even within economics, & it is time for sociological theory to consider alternative models of social behavior.

2010S02670

Tiryakian, Edward A. (Duke University, Durham, NC 27708-0088 [tel: 919 660 5632; fax: 919 660 5623; e-mail: Durkhm@soc.duke.edu]), **Civilization in the Global Era: One, Many… or None?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Fifteen years ago Martin Albrow called for a renewal of the sociological imagination its vocabulary & conceptual framework as the world was entering "the global age". His call is being heeded by reawakening interest

in the comparative study of civilizations, as a megaframe of structural changes in the dynamics of societies. If globalization is taken as a complex set of multicentered processes of flows, of goods, people, & information which limit the "moat" of nation-states, how are civilizations being altered, and in turn, how does the global age alter civilizations that have been fixtures on the world scene since the First great axial age? We take this starting point to consider three possible scenarios that may be actualized. First, the increased interdependency of the world might promote a single civilization of modernity with a core of Enlightenment values (including some dark sides). We might term this a "liberal" perspective. The second scenario of "many civilizations" is a pluralistic perspective, viewing each of the initial world civilizations spreading around the world (from such processes as flows of people, capital, technology) beyond their primary historical environment .The third scenario is that of a global catastrophe, partly nature-made, partly man-made, which could before the end of the century reduce the global age to small-scale societies bereft of civilization.

Tiryakian, Edward A. (Duke University, Durham, NC 27708-0088 [tel: 919 660 5632; fax: 919 660 5623; e-mail: Durkhm@soc.duke.edu]), **The Diaspora Community: Lifeline or Albatross in Peace Process?,** *International Sociological Association, Gothenburg, Sweden,*

¶ In various regions of the world marked by severe intrastate and interstate ethnic tension & conflicts, often with violence taking its toll on civilian populations, the instauration of a peace process is fragile & often nonlinear. Its realization is long-term & contingent on many factors, including material and moral support from the international community. While much attention has been given to the peace process (including conditions for successes, breakdowns, & apparent stalemates), a variable that has been under examined is that of the role of the diaspora community where it is an actor in at least one side of the conflict. This paper argues that greater attention should be given to how, in specific situations, the diaspora community is a stakeholder in the peace process, providing resources to the homeland group but also at a distance having an interest in maintaining the tensions, if not overt aspects of the conflict. Hence the title of this communication.

Titarenko, Larissa (Belarusian State University, Department of Sociology, Minsk, Belarus 220030 [tel: +375 17 259 7041; fax: +375 17 2840882; e-mail: larisa166@mail.ru]), **Contemporary Russian/Belarusian Sociology: National Traditions and Innovations,** *International Sociological Association, Gothenburg, Sweden,*

¶ When discussing sociology of post-soviet states one can talk at least about two different roots of this sociology: (1) pre-revolutionary Russian sociology that consisted of several national schools of thoughts competing with each other; (2) soviet sociology known as the Marxist school of thought. The first period was multi-paradigmatic: positivist schools coexisted with subjectivist and Marxist schools. However, the national traditions were broken after 1917, when Marxism-Leninism transformed sociology into a part of the dominant ideological system. Even those scholars who were not Marxists had to use its terminology & present their concepts within the approved theoretical framework. Other traditions of Russian sociology have been forgotten. During post-soviet period some pre-revolutionary ideas were recalled: necessity of national schools & recognition of the "special Russian way of development". Russian sociologists Sorokin, Kareev, and Kovalevskij have been recognized as "classics". In other countries sociologies also constructed their national roots trying to keep sociological heritage & also follow the global trajectories. The contemporary important issue is to unite national sociological associations as parts of ISA. It will help to promote comparative research, present their results in ISA journals, follow international standards, & become an integral part of international community.

2010S02673

Titilayo, Ayotunde (Demography and Social Statistics, Obafemi Awolowo University, Ile-Ife, Osun State, Nigeria, 234 [tel: 2348023292667; fax: nil; e-mail: liasuayotunde@gmail.com]), **Early Childbirth and its Implication for Poverty Regeneration Among Women in Nigeria,** *International Sociological Association, Gothenburg, Sweden,*

¶ ABSTRACT: Measured by any standard, vast majority of Nigerians are living in abject poverty. The three core values of development (Sustainability; Self-Esteem; & Freedom from servitude) are nothing to write home about especially among women. Observing the trend of early childbirth in Nigeria, the study investigated teenage childbearing patterns with a view to examining its consequences on human development in Southwest Nigeria. Employing 0.3 as the prevalence rate of early childbearing from Nigeria Demographic & Health Survey 2003 & 10% sample size adjustment factor for non-response rate, 355 women aged 15-49 years were interviewed through a systematic random sampling technique. Structured questionnaire that investigated socio-economic variables of early childbearing was used for the study. With a mean age at first birth of 17 years, the study revealed a high prevalence rate of early childbearing among women. Furthermore, the incidence of early childbirth cut across parental socio-economic characteristics. Lastly, this study observed serious consequences ranging from high school drop-out, low employment opportunities, higher infant & maternal morbidity & mortality to the issue of poverty regeneration among women who experienced early childbirth in South-western Nigeria.

Toader, Maria Roxana (Department of Sociology and Social Work, University of Bucharest, Schitu Magureanu Str, 9, Bucharest 010181, Romania [tel: 0040723541209; e-mail: roxana.toader24@gmail.com]), **Comparative Analysis of Scientific Literacy Scale by Gender,** *International Sociological Association, Gothenburg, Sweden,*

¶ The National Science Foundation scientific literacy scale was applied in recent years on different audiences at the European level. My objective is to explore gender differences in answers to the scientific literacy scale items, in order to identify variations in levels of scientific literacy & also variation in style factors. Gender sensitivity is variable across items & across style factors in different countries. I explore the distribution of DK answers & acquiescent answers across gender categories and countries. I use the Romanian "Science & the public– STISOC" 2009 survey, covering a national sample, & the 2005 Eurobarometer 63.1, in order to conduct a comparative analysis at European level.

2010S02675

Todorova, Nonka Bogomilova (Institute for Philosophical Research of the Bulgarian Academy of Sciences [e-mail: nonka_bogomilova@mail.bg]), **Class and Religion: The Classical Ideas and The Modern Party's Practices,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper intends to analyze some classical theses in the social-philosophical thought regarding the relationship between class & religion: K. Marx, F. Engels, M. Weber, early E. Fromm and to test their (no)heuristic in explanation of some contemporary democratic party practices & ideologies. The local "case study" will focus on the Balkan experience, Bulgaria & Serbia. The main hypotheses/conclusion of the paper is: the connection between the class situation & the party's ideology & practice today becomes more & more invisible & indirect, & the instrumentalization of religion, as a consequence, more active & fanciful.

2010S02676

Toepoel, Vera (Department of Leisure Studies, Tilburg University, Tilburg, the Netherlands, 5000LE [tel: + 31 13 466 2452; e-mail: v.toepoel@uvt.nl]), **Social Capital and Leisure: Which Leisure-Related Activities Make Older People Feel Less Lonely?,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study investigates the impact of leisure activities on the social status of the elderly based on a heterogeneous sample of the Dutch population. Close relationships are also analyzed to identify which people are successful stimulators of leisure participation. The social capital profile confirms that older people have fewer social contacts & often feel lonely. Cultural activities, reading books, and hobbies are found to be successful predictors for social integration of older people. This study shows that leisure activities explain a relatively small part of social integration, although the effect of leisure activities on social integration increases with age. Neighbors play a relatively insignificant role in stimulation older people to participate in leisure activities. Friends serve most often as stimulators. Partners play a role in participation in cultural activities & sports; parents stimulate participation in voluntary work & holidays; siblings facilitate voluntary work & sports; & children participation in cultural activities, reading books, & shopping. Local communities can use these close relationships & develop special programs to increase social integration & hence improve quality of life for older adults.

2010S02677

Tognetti, Mara & Ornaghi, Annalisa (Department of Sociology and Social Research, Faculty of Sociology, Milan-Bicocca Univer-

sity, Milano, Italy, 20126 [tel: +39 02.64487571; e-mail: mara.tognetti@unimib.it]), **"The Quality of Life of the Elderly (of Age 80+) in Italy",** *International Sociological Association, Gothenburg, Sweden,*

¶ The studies of social inequalities, particularly those of health, have recently received a growing attention. However, for the particular case of older people of age 80+ this is not true, as if in our imagination, being older transcends social divisions, which nonetheless exist also for the elderly. Moreover, in 2050, 30% of Europeans will be older than sixty years, & fact that allows us to understand why studying the quality of life in this age group is important. To study the quality of life of elderly is not straightforward, mainly because some of the theoretical indicators used in the literature to define social status are totally or partially missing. Older people are inactive & therefore it's not easy to differentiate them in relation to their profession & at the same time their educational qualification is often outdated or difficult to classify, so that some of the usual indicators cease to be relevant for comparative study. But even without clearly defined indicators compared to other age groups, social inequalities persist. The paper will focus on the quality of life of older people of age 80+ in Italy. In particular, we will use data resulting from a research (field work) conducted in an urban municipality close to Milan to describe relevant empirical facts as well as to support some of our working hypothesis & theoretical arguments which we had developed with regards to the topic.

Toma, Stefania (Romanian Institute for Research on National Minorities, Cluj-Napoca, Romania, 400697 [tel: 0040-745-759089; e-mail: tomastefania76@yahoo.com]), **The Last Drop–Mixing the Cause and the Consequence of Ethnic Conflicts–The Case of Romania,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recently, the number of ethnic conflicts in which Roma are involved has risen considerably in Romania. These cases (Apata, 2007, Csikszentmárton & Csikszentkirály 2009) gained a large interest in public discourses & faced the authorities with new challenges for public policies. The present article proposes to present the preliminary results of a recent sociological survey through which we tried to identify some factors which can contribute to the appearance of interethnic-conflicts. One of our first hypotheses was that these conflicts have a common structure, although we can talk about processes as well. The different factors (demographic, social-economic, legislative/institutional, symbolic-attitude & conflict-management traditions) may form a "critical mass" which forms a "conflictual cloud". This conflictual cloud, with the "last drop" can turn into an open conflict or just to contribute to the risk of a conflict. The action of the structure of the conflict (the factors) & the "last drop" is enforced or re-directed by the impulse of different actors of the conflict. We try to explore further the question what determines that a conflictual situation is defined as ethnic conflict & in which cases the "last drop" is seen as the cause or the consequence of the conflict.

2010S02680

Tomanek, Pawel ([e-mail: pawel.tomanek@uj.edu.pl]), **Explaining Experts, Interpreting Parents? Reflexive Parenting and the Cognitive/Hermeneutic Divide,** *International Sociological Association, Gothenburg, Sweden,*

¶ One of the most influential perspectives on late-modern reflexivity is Scott Lash's distinction between cognitive & hermeneutic reflexivity, the former being based on individual appropriation of expert knowledge, & the latter a on "intensive semantic interchange" between subjects enmeshed in "shared webs of meanings". While this distinction is of great heuristic value, it does not give any clues as to how (if at all) the two types of reflexivity intersect & interact in everyday practice. Are they mutually exclusive, hostile, or can they merge in individual insights & identity projects? This question will be applied to a particular field of practice a child-rearing & its reflexive background. Through in-depth analysis of two most popular Polish parenting web forums a one of them involving the presence of an expert, the other being run by parents themselves I want to show how experts & "laypersons" differ in the ways of defining and interpreting parenting issues, & to what extent those differences can be subsumed under the cognitive/hermeneutic distinction. My particular goal will be to determine whether a and how a scientific truths concerning child nature and development can support "hermeneutic" claims concerning parental obligations. In this way I want both to examine the empirical validity of Scott Lash's conceptual framework & to restate the concept of reflexivity as a unified (though not uniform) phenomenon.

2010S02681

Tomaszewski, Wojtek & Barnes, Matt (National Centre for Social Research, London, UK [tel: 0044 2075498567; e-mail: wojtek.tomaszewski@natcen.ac.uk]), **Investigating the Drivers and Consequences of Social Detachment at Older Age: Evidence From the English Longitudinal Study of Ageing,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper focuses on the relational & dynamic aspects of social exclusion by introducing the concept of social detachment, which aims to capture the "discontinuity in relationships with the rest of society" (Room, 1999), & its links with well-being. The main goal of the paper is to investigate how social detachment at older age is shaped by socio-economic inequalities prevalent in contemporary Britain, & to assess its impact on a range of well-being outcomes at older age. The research is based on the first three waves (2002, 2004 & 2006) of the biennial English Longitudinal Study of Ageing, the first study in the UK covering a broad range of topics necessary to understand the economic, social, psychological & health elements of the ageing process, with a sample representative of all people in England aged 50 & more. Using the approach adopted in earlier research (Tomaszewski & Barnes 2008), we use ELSA to measure social detachment based on six domains of social participation: contacts with other people, social support, civic/political involvement, participation in culture, participation in recreational activities/hobbies & participation in leisure. We use ordinal logistic regression to identify the factors most strongly associated with the duration of social detachment, while controlling for a range of other, potentially confounding, characteristics of older people & their families. We also use various regression-based models, including fixed and random effect panel data models, to assess the effect of social detachment on the subjective well-being outcomes.

2010S02682

Tomic, Patricia (Sociology, University of British Columbia Okanagan, Kelowna, BC, Canada [e-mail: Patricia.tomic@ubc.ca]), **Hyper-mobility and Temporary Work: Mexican Farm Workers in the Okanagan Valley in Canada,** *International Sociological Association, Gothenburg, Sweden,*

¶ This presentation addresses the mobility of Mexicans who journey yearly to Canada to labour in farms, nurseries, hothouses & other agricultural jobs. Current scholarship emphasizes contemporary mobility as an essential characteristic of a globalized world. For example, a hyper-mobile world is the underlying theme in the works of authors such as Bauman, Castells & Urry. Their theories of globalization stress a kinetic elite & the weakening of nation and nationalism. In contrast, in this paper I look at the Mexican workers who, lacking the social, cultural & financial capital of the elites, first advance in fits & starts from their homes in Mexico to the airport in Mexico City. I analyze their hesitant crossing of the Canadian border & their journey to farms where they become immobilized by a system that ties them to the land and to farm owners. Finally, I examine their

trip back to Mexico once the agricultural cycle is complete for the year. I rely on interviews with Mexican farm workers in the Okanagan valley, farmers in the same area, personnel from the Mexican Consulate and the Canadian institutions involved with these workers.

Tomic-Koludrovic, Inga & Petric, Mirko (Department of Sociology, University of Zadar, Obala kralja Petra Kresimira IV 2, 23000 Zadar, Croatia [tel: +385917357002; fax: +38521535072; e-mail: itomic@unizd.hr]), **Cruise Ship Tourism and Heritage Cities in the Adriatic: The Adverse Impact on Urban Identity, Public Space, and Local Flows,** *International Sociological Association, Gothenburg, Sweden,*

¶ Cruise ship tourism has in recent years proven to be the pinnacle of exploitation of the local resources. Its critics claim that it wears down the local infrastructure & makes use of the local sights without even adequate financial remuneration, as the profits are for the most part made based on the consumption on the ship itself. On the other hand, this type of tourism has had devastating effects on the fabric of local life, turning them into stage sets for the tourists & depriving them not only of the population living in situ but also of the more "sustainable" types of tourists. The presentation outlines & discusses the effects of cruise ship tourism on both the natural & social environment of selected urban locations in the Adriatic Sea. It is argued that the combined effect of this kind of drastically "unsustainable" tourism is especially visible in the example of the area under discussion. Namely, on the one hand, the Adriatic Sea is a closed, Mediterranean basin sea with a slow change of water. As such, its environmental sensitivity to pollution is beyond average. On the other hand, it is a very rich area in terms of cultural heritage, as evidenced by a large number of UNESCO-protected heritage sites. Given the long urban tradition & specific cultural profile of the Mediterranean cities, it is argued that the culturally negative impact of cruise ship tourism can be illustrated particularly well on the example of the Adriatic harbor cities included on UNESCO's World Heritage List. Following a brief introduction on the nature and general effects of cruise ship tourism on natural, social and cultural environment, the particular adverse effects on heritage cities will be illustrated by examples relating to traffic congestion (Dubrovnik), changing the nature of urban flows adversely affecting the sense of urban identity (Split) & the adverse effect on the symbolic capital of a prominent public space (Venice). Key words: cruise tourism, globalization, heritage cities, deterritorialization

Tomse, Vesna (University of Zurich, Zurich, Switzerland, 8001 [tel: +41 76 568 48 48; e-mail: v.tomse@gmail.com]), **Housing for the Poor: The Busting Bubble in St. Petersburg, Russia,** *International Sociological Association, Gothenburg, Sweden,*

¶ With the busting real estate bubble most foreign investors left St. Petersburg in 2008 the up to 50% profit margins from the golden years could not be sustained in the beginning crisis. Only marginally involved in housing construction, the international investors didn't have much influence on housing, even though their flight heavily influenced the commercial sector. Much more influence on housing came from the international financial system in general & its lack of liquidity: Half of the new constructions remained unfinished, demand fell six fold & the prices 20% - even though in the "hungry market" real demand exceeds supply by far. But the probably most enduring effect of the crises is a further segregation of the population in St. Petersburg along the lines of construction "classes". Not only does the Russian Federation build social housing for lower income strata in anti-cyclical construction programs, but construction companies erect "economy class" housing at the edges of the city for the poor and substandard suburban housing for the impoverished. Being the hope of people, who escape the overcrowded "kommunalky" a municipal soviet housing mostly located in the historical centre the ghettos of the future are being built at the city edges & beyond.

Tonah, Steve (Department of Sociology, University of Ghana, Legon-Accra, P. O. Box LG 65 Legon-Accra, Ghana [tel: 233-21-500312; e-mail: tonah@operamail.com]), **Chieftaincy, Party Politics and Recurrent Conflicts in Ghana's North,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper provides an overview of three of Northern Ghana's intractable chieftaincy & ethnic conflicts among the Dagomba, the Nanumba & the Kusasi/Mamprusi ethnic groups. These three conflicts, just as many others in the region, have so far defied all attempts to resolve them. One common characteristic of Northern Ghana's conflicts is that they have with time become politicized with the various factions aligning themselves with the two major political parties & using state power & influence to seek solutions which invariably turn out to be shortlived. The paper provides a detailed ethnographic account of the groups involved in the conflict, the various trajectories through with these conflicts have traveled & accounts for the increasing polarization of the conflicting parties. These conflicts have with time created a situation of lawlessness & insecurity with criminal gangs taking advantage of the chaotic situation to commit violent crimes and settle personal disputes. The paper also examines individual accounts & experiences during the conflicts & how these conflicts have affected & altered the lives of prominent and ordinary residents in Northern Ghana.

Tong, Joy Kooi-Chin (Purdue University, 700, W State Street, West Lafayette, IN 47907 [tel: 1-765-3374255; e-mail: joytkc2004@yahoo.com.sg]), **Religious Experience of a Young Congregation: Case Study of a Mega-Church,** *International Sociological Association, Gothenburg, Sweden,*

¶ The primal challenge of religious faith under the influence of consumerism & globalization is the commodification of everyday life. Religious institutions are facing the issue of how to retain the loyalty of the next generation amidst fierce competition from "Madonna, Microsoft & McDonalds". Nevertheless, the turning of thousands of young people towards mega-churches over the last decade has challenged us with the questions: how do they construct a modern experience which excels in the religious marketplace? This ethnography focuses on one of the largest mega-churches in Asia City Harvest Church in Singapore, which has about 27,000 weekly attenders whose average age is 26 years. It seeks to examine the unique religious experience constructing through the combination of rational structures, emotional expressivity with a consumer ethic. The church's proactive engagement with media is particularly fascinating as it has created world-class quality media performances & a "pastor-entertainer", i.e. a Hollywood singer, for the Asian market (secular & religious). It is significant to study how religion interplays with media and commodification & how it is transformed in the process.

Tormos, Raül & Arroyo, Liliana (Universitat Autònoma Barcelona, Centre d'Estudis d'Opinió, C Pau Claris, 138, 4t, Barcelona, Spain, 08009 [tel: 0034655920350; e-mail: rtormos.ceo@gencat.ca]), **Post-Traditional Religiosity in Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ A country's level of religiosity is widely related to the percentage of postmaterialist people in the overall population. However, scientific literature has pointed to a lack of association between these two variables at the individual level. We argue that this lack of association is in fact indicating the incapacity of current religious categories to grasp a new phenomenon that takes place in many advanced industrial societies: post-traditional religiosity. We propose a new typology with respect to the content of religious beliefs. The process of (post)modernization & the development of these societies towards a reflexive modernization (as Beck identifies the process of self-building of biographies through individual multiple choices) could be producing not only secularization, but also a post-traditional form of religiosity. Then we can establish a new cleavage separating traditional from post-traditional religious beliefs. As a point of departure for our analysis we use Halman & Draulans classification (2006) of religious beliefs & religious practices with a slight modification. By means of cluster analysis we define two groups of religious people comparing their degree of heterogeneity in moral beliefs & values. The more homogeneous & in line with the official position of institutional religions the more religiously traditional the person is, & vice versa. Data from the most recent European Values Study surveys are used to perform our analyses. Religious change involving this post-traditional dimension takes place all over Europe, but following different speed & extension depending on the country & its characteristics. In the second part of this paper we explore these differences using a multi-level perspective. In doing so we improve both the approaches of Norris & Inglehart (2007) & Halman and Draulans (2006) by taking into account the actual multi-level structure of the data.

Torny, Didier & Pontille, David (INRA - RiTME, 65 Bld de Brandebourg 94200 Ivry-sur-Seine France [e-mail: torny@ivry.inra.fr]), **When Journals Challenge Their Ratings: The Politics of Classification in Social Sciences and Humanities,** *International Sociological Association, Gothenburg, Sweden,*

¶ In a growing number of countries, public administrations & agencies seek to systematically evaluate the scientific outputs of their universities & research institutions, The impact factor (IF), fashioned by the Institute for Scientific Information, was for a long time the gold standard for the ranking of scientific productions according to their forms of publication. Nevertheless, even when used, IF was less accepted & integrated into social sciences & humanities practices. It is currently being superseded by ad hoc tools such as peer-reviewed journals lists & ratings. Journals were usually not consulted during the rating processes: they remained mute objects, manipulated & compared by expert panels & administrations. In June 2008, a group of British journals a specialized in history of science, technology and medicine & dominant in their field a published a joint declaration entitled "Journals under Threat" to ask for their withdrawal from the European Reference Index for Humanities (ERIH). From this moment on, journals began to publicly act as competent actors to provide judgments on the hierarchies made, forecasting the performative dimension of ratings on the organization of research, especially funding & publications strategies. The balance of power between scientific communities & research management institutions thus went through the very design of academic journal lists & ratings.

Torres, Anália, Brites, Rui, Coelho, Bernardo & Cardoso, Inês (Professor in the Department of Sociology at ISCTE-IUL (Lisbon University Institute) and researcher at CIES/ISCTE-IUL [e-mail: bernardo.coelho@iscte.pt]), **Family and Gender in Europe: Trends of Convergence and Divergence Comparing Countries,** *International Sociological Association, Gothenburg, Sweden,*

¶ Family & work are fundamental dimensions for individual projects. Gender relations play an essential role on the ways organizing daily experience around work & family practices, expectations and responsibilities. Family & gender ordering within the family have been dramatically changing. We briefly identify four main European trends: valuing feelings & emotions; secularization; individualization; women's search for autonomy & gender equality. We look to a scenario to a clear passage from traditional gender values towards gender equality, opening room for gender relation's negotiation in family context, highlining the common pathways in Europe & understanding the European diversity, their different starting points & dynamics. Research results lead us easily to two findings. First, gender equality values within family division of labour are clearly sustained by the majority of the Europeans while practices in the same domain point out to gender differences and inequalities. Second, there are persistent models of practice reproducing more traditional gender regimes. So, the transformations of the family in Europe follow the same patterns but in different rhythms & cultural variants. Exploring the European Social Survey Round 2 (2004) & Round 3 (2006) data we analyse & discuss differences among countries & among sexes regarding gender & family values.

2010S02690

Torres, Anália, Coelho, Bernardo, Brites, Rui, Cardoso, Inês, & Jerónimo, Paula (Professor in the Department of Sociology at ISCTE, Lisbon University Institute, researcher at CIES/ISCTE., Lisbon University Institute [e-mail: bernardo.coelho@iscte.pt]), **A Mysterious European Threesome: Work-Care Regimes, Work-Family Pressure and Gender,** *International Sociological Association, Gothenburg, Sweden,*

¶ Based on discussions about orientations to work & care, we contribute to enlighten regularities & singularities among European countries. Identifying the interplay between structural, institutional & cultural determinants of orientations, we mobilize European Social Survey data from three rounds (2002, 2004 and 2006) & data from Eurobarometer 2003. This paper is organized around three analytical aims: (i) as work & family became in recent years one of the most striking dichotomies in sociological discourse, it seems fundamental to understand the way family and work are perceived by Europeans. Contradicting stereotypes both men and women across Europe value work & family as fundamental dimensions for their projects. (ii) As these two dimensions produce a complex set of potentially conflicting interactions it become pertinent to look at different European political packages. We present a work-care political package typology trying to overcome some analytical problems faced by other welfare state typologies. (iii) Consequently, we discuss the connections between those policies & the production or reproduction of gender order within the family on one hand, & work pressure on European families on the other. In countries with gender egalitarian values & policies targeted at work care arrangements, individuals experience less work-family conflict. Conversely, in countries with more traditional gender values & restricted or disadvantaged policies we found more family-work conflict. But institutional constraints don't act alone: orientations to work & care differ according to age, education, parental & employment status.

Torres, Cristobal, Robles, José Manuel, Molina, Oscar & De Marco, Stefano (Universidad Autonoma de Madrid, Madrid, España, [e-mail: cristobal.torres@uam.es]), **Digital Democracy and Digital Divide. Political Parties and Internet in Spain,** *International Sociological Association, Gothenburg, Sweden,*

¶ In recent years we have witnessed an astounding development of the uses & services offered through the Internet. Of these uses and services, it is worth paying special attention to those which allow citizens to improve their relationship with their representatives, to think about social, economic & political issues of their interest & to organize themselves in a more efficient and productive way to reach their goals. The political services and tools offered through the Internet form a structure of political opportunity for the increase & improvement of the repertoire of citizen's political practices. However, this is also a scenario which, given the size & depth of the digital divide, can generate new forms of political inequality. In this paper, we study the debate regarding the new political opportunities & risks brought by the Internet. We offer two theoretical frameworks. The first theoretical framework is one where the political possibilities of the Internet are debated. The second is one where we analyse the development of the digital divide in general & the political digital divide in particular. We then introduce an empirical section which allows us to analyse the effects of the digital divide on the political possibilities of the Internet. Our aim is to provide a comprehensive picture of the possibilities and limitations of digital democracy.

Torres, Manuel (GCEIS, U. Santiago de Compostela [tel: 34655601325; e-mail: codi1966@hotmail.com]), **Making no Sense: Biography, Mental Illness and Sociology,** *International Sociological Association, Gothenburg, Sweden,*

¶ We argue that Niklas Luhmann sociology (1997, Social Systems) & G. Spencer-Brown logic (1979, Logic of Sense) allow to construct a reflexive medical sociology. We applied it in our investigation on mentally ill in Galicia (North west Spain). Between 1992 & 2008, we collected biographies of three groups of related to mental illness: patients with a psychiatric diagnosis; relatives of patients; and, workers in health services. Each group observes differently mental illness using distinctions. These distinctions generate social expectations & a medical ideology. The biographies collected show that these distinctions & expectations work because each of these three groups uses them with different meanings & in contradictory ways. They make sense to each group because each one gives them a different sense. We argue then following Luhmann's theory that sociology cannot be prescriptive or normative but it has to bring an element of self-reflection to social complexity.

Torres, Nilton Ricoy (University of Sao Paulo, Rua do Lago 876 Sao Paulo, SP, Brazil, 05508080 [tel: ++ 55 11 3091 4571; fax: ++ 55 11 3091 4539; e-mail: nrtorres@usp.br]), **Informal Networks of Governance: Collaborative Practices of Planning in Brazil,** *International Sociological Association, Gothenburg, Sweden,*

¶ This work explores the idea of planning as a democratic process where arguments are freely discussed, carefully scrutinized and thoroughly evaluated through an open debate. In this process, planning is neither a strategic nor an instrumental calculation, but rather a collaborative dialogue where people get together to build consensus within an adaptive & learning scenario. The text argues that in some formal (public) settings planning may display a practice quite different from the above idea, while in informal ones, a growing network of disenfranchised agents acting interactively & collaboratively may be approaching that ideal, in practice. The text argues that planning is perhaps dependent on the actual social/institutional assemblages: under formal and institutionalized frameworks it may turn itself into an instrument of power & obstruct any process of change; under informal (ad hoc) settings, planning can become a democratic construct & act to neutralize forces attempting to distort the dialogue. The research makes use of the ethnographic method & focuses on the experience of social movement leaders, NGOs activists, citizens and planners, when facing conflicts & confrontations. Acting collaboratively these agents deal with complex situations & seek to solve distressful problems in contexts where public intervention is absent or failed. The study focuses on specific cases of Brazilian local governance experience & identifies how planners and citizens, assembled in informal & participatory networks, are able to

invent solutions to get through thorny situations. The research takes the dialectical approach of Paulo Freire, in order to emphasize the encounter of dialogues & non-dialogues in the arenas of planning. It seeks to highlight how the networks operating informally & collaboratively can counteract manipulation, by providing information, counter information and technical capacity. The paper evaluates the ontology of planning as an evolving experiment a an ongoing practice of cooperation among free, diverse, adaptive, & learning agents, working independently but interactively in complex social settings. It seeks to highlight the emergence of these "informal networks" & to identify their roles in the context of Brazilian planning practice. Would these "webs" be an emerging mode of urban governance in the twenty-one century?

Torres, Sandra (NISAL, Linköping University, Campus Norrköping, 601 74 Norrköping, Sweden [tel: +46 11 36 34 65; e-mail: sandra.torres@isv.liu.se]), **Understanding of Ethnic 'Otherness' in Relation to Elderly Care Provision/Recipiency,** *International Sociological Association, Gothenburg, Sweden,*

¶ Globalization is changing the ethnic composition of most European societies. The elderly care sector is consequently being challenged by it. This project aims to shed light on how assumptions regarding ethnic "Others" affect this sector. Ethnographic data has been collected over a period of 60 days resulting in 300 hrs of participant observation & a total of 37 semi-structured interviews (26 with care providers, 8 with care recipients & 3 with their relatives). The presentation will focus on the understandings of ethnic "Others" that were uncovered in the nursing homes studies. Some of them attested to ethnic "Otherness" being understood in terms of exceptional caring skills while others attested to lack of professionalism. Ethnic "Others" were, in other words, presumed to be skilled at care provision but not as good as far as staff relations are concerned. The presentation will address these conflicting understandings and the division of labor that these notions unintentionally bring about. The presentation concludes therefore by suggesting that diversity challenges the manner in which we think about what constitutes high quality & user-friendly care in old age. Understandings of ethnic 'Otherness' need therefore to be more in focus when cross-cultural interaction in care settings is at stake.

Torres-Albero, Cristobal, Robles-Morales, Jose Manuel, Fernandez-Rodriguez, Calos & Morales-Molina, Oscar (Departamento de Sociologia/Universidad Autonoma de Madrid (Spain), Cantoblanco, 28049 Madrid (Spain) [tel: +34914974639; e-mail: cristobal.torres@uam.es]), **The Social Inequalities in the Information and Knowledge Society. The Digital Divide in Spain,** *International Sociological Association, Gothenburg, Sweden,*

¶ The development of the Information & Knowledge Society has brought with it new forms of social inequality. This is the case of the Digital Divide, which refers to the unequal access to Information and Communication Technologies (ICTs) in general & to the Internet in particular, among different social groups as a result of their place of residence, their age or their level of education, among other factors. However, in spite of the significant increase of research into this social phenomenon, there are still important aspects that remain to be studied with regard to the digital divide. This paper aims to contribute to clarifying some of these aspects by pointing to the important relationship between the digital divide & the social differences that characterise a given territory. We focus on the case of Spain and, from a logistic regression statistical model designed specifically for this purpose, we advocate that the differences in the usage of Internet between some territories & others can be fully accounted for by pointing to the unequal social distribution existing among said territories. This allows us to conclude that the reduction of the digital divide is dependent upon the decrease of social differences.

Tousijn, Willem W. (Facoltà di Economia, University of Turin, Corso Unione Sovietica 218 bis, 10134 Turin, Italy [tel: +39 011 6706094; fax: +39 011 6706097; e-mail: willem.tousijn@unito.it]), **Integrating Health and Social Care: Interprofessional Relationships in Multi-Disciplinary Teams in Italy,** *International Sociological Association, Gothenburg, Sweden,*

¶ Integrating health & social care has been one of the main objectives of recent policy reforms in Italy in both sectors, the main drivers being the necessity to meet changing population needs (chronic and multiple diseases) & the demand for more effective & holistic treatments. Integration has been implemented on three different levels: institutional, organizational, professional. At the professional level a number of multiprofessional teams have been created or transformed (if already existing) in several areas: aged persons, under age persons, the disabled, abuses & maltreatments, addictions, Alzheimer's Disease, adoption & fosterage. The paper will describe & discuss some results of an empirical research based on about fifty interviews on managers & members of multiprofessional teams from the Turin area. Research topics include: interprofessional tensions, models of team work, obstacles to integration, effects on the traditionally dominant role of the medical profession, effects on the relationships between professionals & managers.

2010S02699

Tovey, Hilary & Bruckmeier, Karl (Department of Sociology, Trinity College Dublin, Dublin 2, Ireland [tel: +353 1 8961371; e-mail: htovey@tcd.ie]), **A Route Towards Sustainable Development for Post-Industrial Societies? A Critically Discussing the "Dematerialisation Hypothesis",** *International Sociological Association, Gothenburg, Sweden,*

¶ In the debate about transitions to a knowledge based society or economy the hypothetical argument has been formulated that economic development towards post-industrial societies implies less & less use of material resources, is becoming more dependent on immaterial resources, & hence is necessarily more environmentally sustainable. This argument needs to be discussed critically, from both empirical & theoretical perspectives. At a first glance it recalls the old Rostow-hypothesis about stages of development used in the economic development debate since the 1950s combined with the environmental Kuznets curve argument: after a take-off towards economic development & industrialisation, developing economies may first go through a phase of environmental pollution, but the more developed they become the less they pollute the environment and waste resources. The more recent debate about "ecological modernisation" in the discourse of sustainable development uses similar arguments, that industrialized societies can develop into clean economies by developing environmentally friendly & resource saving technologies. Sociological theories of globalisation as global circulation of knowledge or information also tend to support a de-materialising interpretation of social change. That the

reality of a globalized economy is more complex & contradictory has been discussed recently, e.g. by ecological economists analyzing resource flows between the Southern & Northern hemispheres with resulting "ecological distribution conflicts" under conditions of global "unequal exchange". The measurement of natural resource use through ecological footprints or material and energy flow accounting supports the argument that sustainable development in Western countries is a "rich country illusion", neglecting the high use of non-domestic resources by these countries & the export of polluting industries to the South. Starting from these recent debates we discuss the possibilities of more critical & interdisciplinary studies & frameworks (such as social & human ecology) to refocus the discussion about dematerialisation & national transitions to sustainability in a global perspective, including the (socio-economic) world system and the (ecological) earth system.

2010S02700

Trabka, Agnieszka (Institute of Sociology, Jagiellonian University [fax:; e-mail: a.trabka@gmail.com]), **Nomadic Self-Identity in Late Modernity,** *International Sociological Association, Gothenburg, Sweden,*

¶ Many sociologist argue, that in the contemporary, globalized late-modern society the crisis of traditional social structures and institutions may be diagnosed. It has, undoubtedly, important consequences for the process of self-identity forming: it is no longer inherited. It becomes a project, an obligation–it has ethic dimension since every decision one makes can be seen as significant for the process of identity construction. In this context we can speak about individualization, as an important characteristic of contemporary society. On the other hand, high mobility of people, money, ideas or things results in a sense of unrootedness. I would like to analyze the consequences of mentioned processes to the self-identity on the example of global nomads (called sometimes third culture kids). According to David Pollock third culture kid "is a person who has spent a significant part of his or her developmental years outside his/her parents' culture. Although elements from each culture are assimilated into the third culture kid's life experience, the sense of belonging is in relationship to others of the same background, other TCKs". I shall try to describe a nomadic, unrooted self, focusing on the ways continuity of self-identity is maintained & on the most important identity strategies.

2010S02701

Tramonte, Lucia, Marotta, Luana & Willms, J. Douglas (Department of Sociology and Canadian Research Institute for Social Policy, University of New Brunswick, PO Box 4400, Fredericton, New Brunswick, Canada, E3B 5A3 [tel: +1 (506) 458-7257; e-mail: b4nw2@unb.ca]), **The Effect of Cultural Parental Practices Over Children's Life Course,** *International Sociological Association, Gothenburg, Sweden,*

¶ Most studies of social mobility have found that academic achievement and occupational attainment are largely determined by people's family origin & educational experiences (Bielby 1981; Kerckhoff 1996; Sewell, Hauser, & Featherman 1976). Dominant status groups hold economic, political, & symbolic power (Collins 1971), and their success depends on the use of their social & cultural capital in strategic ways (Bourdieu 1990). Sociological explanations of the association between children's educational outcomes & family background have often referred to economic and cultural capital as the main components of parental resources (De Graaf, De Graaf, & Kraaykamp 2000). Recent studies have shown that middle & upper-class parents adopt strategies of "concerted cultivation" with their children, promoting child-rearing practices that are valued by schools (Lareau 2003; Bodovski and Farkas 2008). This paper aims to test the "concerted cultivation" hypothesis using a longitudinal Canadian database, the National Longitudinal Study of Children & Youth (NLSCY) study. Analyses are based on 7 cycles of the NLSCY, following from 1994 to 2006 a sample of children aged 0-11. Using multilevel growth modelling, the paper analyzes whether two class-specific parenting strategies, "concerted cultivation" & "accomplishment of natural growth" (Lareau 2003), are consistently applied throughout children's life course. Moreover, this paper examines variation of the impact of concerted cultivation on children's mathematical skills and self-esteem over time. The paper focuses on the time-varying effects of three dimensions of concerted cultivation on children's outcomes: organization of daily life, language use, and interactions between families & institutions.

2010S02702

Trancart, Danièle & Meda Dominique, Georges Nathalie (Centre d'études de l'emploi, Centre d'Etudes de l'Emploi 29 promenade Michel Simon 93 166 Noisy-le-Grand Cedex France [tel: 00 33 1 45 92 68 52; e-mail: daniele.trancart@cee-recherche.fr]), **Couples' Work Schedules, Satisfaction and Work and Family Balance,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this communication, we attempt to study the impact of work schedules on couple's satisfaction of their work & family balance in France. Since several years & surveys, we know how important is the organisation of work schedules for parents who have to face flexitime, shift work, non-standard hours, etc. Most of all, workers ask for predictable schedules in order to organize their family life. The use of the "Families & employers survey", lead by INED (French institute of demographic studies), helps us to understand better which are the most important factors inducing workers' satisfaction to reconcile their job with their family life. This data give us the opportunity of knowing the opinion of both members of couples, so we can include in the study not only the personal characteristics of people explaining their own satisfaction, but also those of their spouse, which allows a richer comprehension of the causes of satisfaction of work & family balance. In particular, we build couples variables for work schedules depending of the compatibility of their timetables (for instance when both work more than 40 hours a week, or one of them only, or none of them, etc.). We especially stress the potential effects of the reduction of working time which took place in France since 2001. We find evidence that work time organisation is, far from the others, the first factor which impacts workers' satisfaction, whatever the gender is. Besides, the effect of the reduction of working time seems to be hidden by the importance of schedules. As we already knew, we confirm that women who are in charge of young children have much difficulties in reconcile their vocational & personal lives, so they are much at risk to leave the labour market. The compatibility of the spouse's schedules leads to higher satisfaction & better work & family balance, and, on the contrary, the addition of non-standard hours worsens the satisfaction of both members of the couple. We conclude that better work & family balance not only depends on people's individual work position, & the political debate must take into account household situations.

2010S02703

Trask, Bahira Sherif (University of Delaware, HDFS, 111 Alison West, Newark, DE 19716 [tel: 3028318187; fax: 3028318776; e-mail: bstrask@udel.edu]), **Incorporating a Gendered Analyses into Perspectives on Globalization and Families,** *International Sociological Association, Gothenburg, Sweden,*

¶ Insight into the relationship between globalization, gender, and families remains limited, despite the fact that globalization is a widely recognized & disputed social phenomenon. Mainstream approaches to globalization frame it as gender neutral, characterized by transnational economic, political & social flows and processes, between & within societies. This perspective is particularly problematic in light of a marginalized but insightful scholarship that has critically documented the role of gender in globalizing processes. By not incorporating gender into mainstream analyses, the internal mechanisms & the external manifestations of globalization are not adequately captured. As a result, policies and programs meant to aid or circumvent potentially negative consequences that may arise as a response to globalizing processes for women & their families, often have limited, if any, utility. This paper considers the relationship between constructions of gender & the material forces that shape families, communities, and the negotiation of everyday life in a global context. Globalization joins men & women, citizens & non-citizens, and individuals in industrialized & developing countries in various negotiated relationships with each other. These negotiations are closely tied to often conflicting ideological representations of men's & women's roles. These relationships are characterized by power differentials & varying access to systems of prestige, status, & resources. Moreover, the globalization process itself is affected by the players a & since the players are engaged in gendered relationships, globalization, too, becomes a gendered phenomenon.

Travisani, Tatiana (ECA/USP [e-mail: tati_travi@yahoo.com.br]), **Global Cities Under the New Media Artists Eyes,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ Several events, shows & festivals have arisen in recent years that address issues of cities & urban areas with new artistic explorations, such as site specific, & mobile art. This means that cities are such interesting for many artists. Using a theoretical & historical survey on the formation of so-called "global cities", this paper analyzes the main aspects of direct and indirect processes responsible for this panorama, & the processes of contemporary immigration, to understand the design of the contemporary

city, in a artistic view. And so, reflect on the tendency of cities to become protagonists of current artistic experimentation through the use of new electronic media. Also, it examines some contemporary artworks that seek to portray the global cities, enabling discussions about the arts similarities and differences between them.

Treitler, Vilna Bashi (Dept. of Black and Hispanic Studies, Baruch College, City University of New York, Baruch College, 55 Lexington Avenue, B4-280, New York, NY 10010 [tel: 646 312 4448; fax: 646 312 4441; e-mail: vbt@baruch.cuny.edu]), **The Ethnic Project,** *International Sociological Association, Gothenburg, Sweden,*

¶ Each US ethnic group's history is a tale of racial inclusion, because in the US ethnicity is a placeholder in the ordered listing of racial categories that comprise its racial hierarchy. When newcomers enter, a racialized fiction about their origins, prospects, culture, & physical appearance is created, indicating their status position. Indeed, their ethnic label becomes nearly synonymous with the bottom of the racial hierarchy. Importantly, while racial categories (like "white" & "black") are fixed in status, ethnicity is far more flexible a social construct. Some groups manipulate this flexibility, changing the racial connotation of their ethnic label by undertaking ethnic "marketing" campaigns ("Ethnic Project") to upgrade the public image their ethnic labels connote & distancing themselves from the racial bottom. If the dominant population accepts that the newcomers are culturally or racially different enough from the hierarchical bottom to merit uplift the project succeeds, providing group members relief from the damning prejudices & exclusionary practices that first plagued them. Many ethnic groups have attempted "racial uplift" but not all succeed. I am now writing a book on successful, failed, and ongoing struggles for increased racial status. My ISA presentation will discuss two Ethnic Project cases to illustrate the theory.

Trichopoulou, Anna (4th Health Regional Administration of Macedonia and Thrace, Aristotelous 16, 54623 Thessaloniki, Greece [tel: +30 2313 327832; fax: +30 2313 327845; e-mail: magoul-@otenet.gr]), **Social Exclusion Risk: Indicators and Comparisons,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper presents a theoretical sociological model analyzing the social exclusion risk of the society & proposes key indicators that enable the measurement of the risk as well as the comparative analysis among different countries. Apart from the quantitative Leaken indicators that are measuring the income, education and health inequalities, more dimensions & subjective well being indicators are included in the measurement model. The proposed indicators consist a methodological tool, necessary also, for social policy planning & evaluation. The proposed measurement model includes 5 areas of social exclusion/social integration: economic, social, political, cultural, symbolic references. The author is applying, in this paper, some of indicators in each area of social exclusion to compare the social exclusion risk in Greece with the EU 15 average (the former 15 EU Member states), the EU 27 average (refers to the 27 EU Member States) & the NMS12 average (refers to the 10 countries that joined the EU in May 2004 & the two countries that joined the EU in January 2007).

Trimikliniotis, Nicos (PRIO Cyprus Centre, University of Nicosia, PRIO Cyprus Centre, 3 Sophoullis, 1096 Nicosia [tel: +357 99491912; fax: +357 22878846; e-mail: nicostrim@gmail.com]), **For a Sociology that Moves beyond Sociology: Learning from Comparing Violent Conflicts and Reconciliation Processes,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper aims at exploring how to utilize knowledge derived from various ethnic, national, state conflict situations drawing on a comparative perspective that scrutinizes alternative modes of understanding & dealing with the violent past. Such knowledge is a precondition to contemplating the potential for resolution or transformation of conflict & how reconciliation comes about in society. This requires a sociology that is by its inception interdisciplinary & open. Such as sociology is a knowledge system which possesses the conceptual & methodological frame capable bridging the gap between disciplines & specializations through which "violence" & "conflict" have so far been studied separately from "reconciliation". Political scientists, sociologists, anthropologists, psychologists, psychoanalysts, lawyers, typically study different aspects of conflicts and reconciliation processes but not how they relate to each other. Moreover, the works of art, poetry, theatre & literature provides valuable insights which traditionally have not been properly integrated within the discipline as bodies of knowledge of equal significance or value. However, in order to address such complex social problems, we need a sociology that draws on these dimensions, not in an eclectic manner; we require a knowledge system that allows for creative integration of various approaches from different disciplines into a broad interdisciplinary perspective that is theoretically sound & policy-relevant. This would allow for a sociology of reconciliation that is global as well as contextual, universal as well as particular: hence, it would have the potential for providing a frame for explaining and understanding violent conflicts & reconciliation processes as distinct modes within a single social phenomenon. This would be a sociology that moves beyond the sociology as we have known it.

Tripathi, Prashant & Mishra, Pawan K. (Dept. of Sociology, V.S.S.D.College Kanpur, India, V.S.S.D. College Kanpur, India. [tel: 0512-2605681; e-mail: pkmkit@gmail.com]), **Contemporary Theoretical Scenario in Sociology and the Possibilities of Indian Contribution,** *International Sociological Association, Gothenburg, Sweden,*

¶ It is being widely accepted that era of meta narratives & universalization are gone & only way is multiculturalism. This situation emerged from the failure classical sociological theories. Instead of looking for proper alternate the goal itself is being rejected. But here we suggest that alternate may be found in Indian philosophical tradition. Sociological theory is going through the process of radical changes. Basic assumptions of Modern or Classical Sociology are being rejected. But no clear alternative is being presented. Classical sociology took Society or System as primary cause & individual consciousness was ignored in the realm of sociology. At best it may be seen in structural-functionalism. The failure of this approach in understanding & solving social problems paved the way for neo-functionalism, post-structuralism, phenomenology & such various other alternative approaches & methods. Overall direction was & is towards postmodernism which leads us towards no proper alternate other than nihilism. When we try to enquire about root cause, it is found in the basic characteristics of prevalent western ideologies & thought process. It depends upon antitheses and dichothemical classifications. Thus thesis & antithesis never provide synthesis but antithesis after antithesis is produced and that too is dependent upon contemporary situational changes. To be honest, it is not theorization but interpretation. And this deficiency ultimately leads to the conclusion that human nature is something photonic. Thus Social Physics takes the root to be Social Quantum Physics. On the other hand, Indian sociology never emerged from the western impact & seldom looked to indigenous philosophical roots. But at this juncture of theoretical void sociology must have too look at traditional Indian philosophies like Vedanta, Yoga, Sankhya etc. as they provide us the tools of solving the problem of complex dilemmas like particularity vs. universality, individual vs. society, unit vs. structure. 1. Troeva, Evgenia Petkova & Mancheva, Mila Nikolova (Ethnographic Institute, Sofia, Bulgaria [e-mail: troeva@abv.bg]), **Religious Transformations among First Generation Immigrant Muslim Women in Bulgaria,** *International Sociological Association, Gothenburg, Sweden,*

¶ The proposed paper aims to discuss the relationship between religion, gender & migration in the case of Muslim immigrant women in Bulgaria. It is based on qualitative research conducted among female immigrants from Arab countries from both denominations of Islam (Shia & Sunni) as well as among representatives of local Islamic institutions. Bulgaria presents a very interesting case in a study of such focus as it emerges as a new country of immigration, located on the transit routes between Asia, Africa and the rest of Europe & is also an entry gate to the European Union. The paper provides analysis of the place of religion in the process of adaptation

of immigrant Muslim women in the host society, based on indicators such as accommodation patterns, social networks, gender divisions at home & in public & religious practices, related to life cycle & calendar. The study's main focus is placed on the negotiation of religious performance, clothing and children's (religious) education by female immigrants in the secular society host of Bulgaria, dominated by Orthodox Christian population. In this framework the paper discusses the observed prayer preferences of immigrant Muslim women to local churches rather than mosques as well as their attraction to the Catholic movement of the "Fokolars" as a channel easing socialization in the host society. The paper will present field work preliminary results that reveal a strong tendency of retaining Islam as important element in female immigrants' complex identities. Immigrant religion however, is observed to seek & find non-public and muted forms of expression in the host society. Religious performance of immigrant women retreats to the private sphere and resorts to various strategies of invisibility in the public sphere that sometimes come to the expense of some Islamic requirements. The study is conducted in the framework of a comparative FP7 funded research project (GeMIC) focused on the interplay between migration and inter-cultural interaction in eight European countries.

Tropia, Patrícia Vieira (Universidade Federal de Uberlândia, Av. João Pinheiro, 30 apto 402, Uberlândia, Minas Gerias, Brasil, 38200124 [tel: 034-98081133; e-mail: tropia@uol.com.br]), **Le syndicalisme brésilien en dispute dans les années 90 : origine, racines sociales et adhésion active de la force syndicale au néolibéralisme** (The Brazilian Trade Unionism in Dispute in 90 years: Origins, Social Roots and Active Membership and Neoliberalism), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Résumé : cet article analyse l'origine, les racines sociales et l'adhésion active de la Force Syndicale au néolibéralisme. La Force Syndicale est née de la confluence de deux courants de droit agissant dans le syndicat : le "peleguismo" traditionnel et le "sindicalisme de resultats". Ces deux courants se sont unis quand le premier gouvernement néolibéral arriva au pouvoir au Brésil au début des années 90, en fondant, de se fait, la Force Syndicale. La Force Syndicale, qui représente majoritairement les syndicats du secteur prive industriel, rencontra un écho pour les propositions néolibérales et pour les aspects de l'idéologie néolibérale, surtout la critique diffuse des privilèges du fonctionnement public. La centrale a soutenu activement la politique de privatisation, de déréglementation des relations de travail et la réduction des dépenses sociales, et s'est ainsi constituée comme une force sociale active des gouvernements néolibéraux dans les années 90. Mots clés : Néolibéralisme. Force Syndicale. Syndicalisme

Trucco, Daniela, Möller, Sebastian & Sunkel, Guillermo (UN Economic Commission for Latin America and the Caribbean (ECLAC), Av. Dag Hammarskjöld 3477, Vitacura, Santiago, Chile [tel: +562 2102530; e-mail: daniela.trucco@cepal.org]), **Learning and Teaching with ICT in Latin America. Potential Benefits,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ This is a research paper that seeks to identify the possible benefits of promoting the use of ICT in the Latin American school system. This is relevant in times where the majority of this region's countries are investing significantly in ICT policies. It starts out with a revision of the main findings of worldwide research in this area, concluding that impact is not clear cut, that results depend on the type of technology & the type of use promoted, and that learning results are difficult to measure. It continues with a statistical description of the access & uses in place for students & teachers, using the data available through international assessment tests: PISA 2006 & the Second Regional Comparative & Explanatory Study, SERCE 2006. The research finds that, in general, the school system acquires a very important role in compensating the unequal home access that kids from different socioeconomic backgrounds have. The paper advances in the discussion of the "second digital divide", which refers to that of the actual use that kids acquire & the competences that they can finally develop. Using multivariate & multilevel statistical analysis, the paper presents what variables are related to the different types of ICT use developed by students, & what association can be found between them & student scientific learning results.

Truninger, Monica & Evans, David (Institute of Social Sciences, Av. Prof. Bettencourt 9 [tel: +351 21 7804700; fax: + 351 21 7940274; e-mail: monica.truninger@ics.ul.pt]), **Exploring Sustainable Food Consumption: A Conventions and Practice Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ Debates surrounding the nature, necessity & possibility of sustainable consumption have gained momentum in recent years to become a hot topic in the global environmental arena. Against this, food has emerged as a key domain through which academic, policy and popular discourses have converged to engage with this issue. This presentation takes as its focus two empirical studies of grassroots efforts to consume food differently. The first study derives from qualitative work with consumers of local food in three British rural areas, who offered varied justifications for their food practices. Tensions between their meanings for eating locally and the pressures in coordinating food practices with work schedules, provisioning systems & social networks are explored, which are indicative of the limits for normalizing alternative practice. The second study derives from a series of in-depth interviews with persons in the UK who identified themselves as attempting to live more sustainably & whose narratives overwhelmingly accorded a good deal of importance to consuming food more sustainably, describing a similar story to the one depicted by respondents in the first study. In analysing these data, we utilise conventions theory (Boltanski & Thévenot 1991) to explore the accounts of food consumption revealed by the participants in the empirical studies. Here, it is noted that conventions theory has been effectively utilised in the exploration of alternative agro-food networks but less well developed in the study of alternative food consumption. As such, we assess the heuristic capacity of conventions theory in terms of analysing consumers & consumption, focusing in particular on the processes of normalization towards a sustainable society. In doing so, it is suggested that conventions theory is perhaps best deployed in conjunction with other theories. Here, we position theories of practice (Warde, 2005) a which have received significant attention in the sociology of consumption and, in particular, food & sustainable consumption a as the most fruitful place to turn. Crucially, we suggest that bringing a conventions together with a practice perspective offers up the possibility of developing a distinctly sociological account of sustainable food consumption.

Tsagolova, Ruth (Faculty of World Policy, Moscow State University, Moscow, Russian Federation, 119992 [tel: +74959390559; e-mail: ruth.tsagolova@bk.ru]), **Language and the Economy,** *International Sociological Association, Gothenburg, Sweden,*

¶ "Language and the Economy" is the congress theme to demonstrate a linguistic investigation of the science terminology as a system structure with the elements combined on the basis of functional & semantic signs into complexes for exposing their coordinations. The terms being considered as the elements of the concrete system are characterized with special signs which can be recognized with the system itself. The main method for the linguistic research of the economic terminology is considered to be the system approach which is pre-determined extralinguistically, depending on the conceptual system of the concrete knowledge the given science. The investigation of the terminology system of the economy science is motivated by the fact that this scientific sphere a the Economy was often subjected to great transformations & modifications, not only in the relevance to the language & sociality but also to the conceptual variations. Sometimes the reconstructions can do a lot of harm or vice versa. Practically it can cause the destruction of the whole economic structure & consequently the lexicological system of the economic terms with its particular order where each term has a proper place among the others & they all are in definite relations between each other, depending on the type of the term. So all the essential historic transformations, processes should be taken as the transformations of the social structure as well.

Tsai, Ming-Chang (Department of Sociology, National Taipei University, 151 University Rd., Sansia Taipei 237, Taiwan [e-mail: mtsai@mail.ntpu.edu.tw]), **Global Mobility and Transnational Relationship in Four East Asian Societies:,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study investigates the phenomena of transnational mobility and social relationships in four East Asian countries. Mobility across borders allows people to uplift themselves above & outside the national territory & become exposed to other distinct cultures. Global mobility does not implicate personal dislinkages or loss of identity; rather, transnational social relations often are pursued and sustained. Using East Asian Social Survey data collected in 2008 in China, Japan, South Korea & Taiwan, we found that transnational mobility is not practiced on a leveled field. For

East Asian people, Europe & North America are privileged regions. These geographies can only be reached & the foreigners therein can become acquaintances only for those with strong economic and networking capacities. When it comes to transnational social relationships, certain network capitals facilitate the building of personal relationships. Economic & non-economic factors both constitute necessities to an individual's global exposure and transnational intimacy. The effects of global mobility and transnational relationships are further explored, to see if they influence nationalist attitudes & evaluations of globalization outcomes on local society & economy.

Tsai, Shu-Ling & Kanomata, Nobuo (Institute of Sociology, Academia Sinica, Taipei, Taiwan 11529 [tel: +886-2-2652-5142; fax: +886-2-2652-5050; e-mail: tsai@gate.sinica.edu.tw]), **How Structural Change Increases Women's Schooling: Taiwan and Japan in the Postwar Era?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since 1945, women's education has increased dramatically around the world. A variety of explanations have addressed the issue of cross-national variability in changing patterns of gender difference in educational attainment. These include educational expansion & six causal factors related to structural change in three different aspects: (1)change within families(the increase in mothers' & fathers' education), (2)macro-economic change(the growth in national income & in service sector employment), and(3) change in women's practice (women's increasing participation in the economy & control over fertility). The relative importance of these changes, however, is not fully understood, largely because previous research has not tested all of these changes simultaneously. This paper tests the potential effects of the above six factors with structural cointegration models & time-series data for Taiwan & Japan that cover the experiences of birth cohorts of 1946 to 1985. The results reveal that each of these explanatory variables exerts a significant (bivariate) effect on the increase in women's schooling over the long run, but it is the growth in mother's education that matters more. This pattern holds true for both cases. The paper also discusses emerging differences in the educational growth between the two East-Asian societies.

Tsobanoglou, George Odysseas (University of the Aegean, Mytilini, Lesvos, Greece GR117 41 [tel: +306973985432; e-mail: g.tsobanoglou@soc.aegean.gr]), **Eco-Technical Sustainability in Times of Crisis: The Role of Gender/Based Social Economy Actions in Greece,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper aims at presenting some views for a strategy for sustainable rural development. The main focus is upon the insertion of smallholders & women in rural areas into an employment relationship. I will refer briefly to certain instruments for development policy for rural areas by means of training for human resources & communications & financial infrastructure (micro-lending & NGOs). Due to a great variation in the countries involved only broad principles can be mentioned here and a special reference to Greek circumstances will be made. Rural societies & traditional communities seem to undergo important processes of transformation & disturbance derived from the trend towards "glocalization". Societies confront a trend whose intensity makes many people foresee significant changes in their ways of life & their systems of values & labor. Sustainable development has been promoted as a valid option to address these phenomena. Local conditions depend upon the emergence of new types of social organization, local trust relations & modes of cooperative conditions. The recognition of the patrimonial value of rurality as embedded in local institutions constitutes a fundamental aspect for the success of gender based food cooperatives in Greece. Cooperatives have been identified as important to the development of social capital & economic sustainability. The extent under which cooperative work forms are able to develop physical capital is a question here. In our case we found that women's coops in Lesvos have been able to facilitate the development of social & physical capital setting the parameters for local sustainable development. Key words: Sustainability in Rural Areas, Greece, Gender Coops

2010S02717

Tsobanoglou, George Odysseas (University of the Aegean, Mytilini, Lesvos, Greece, GR117 41 [tel: +306973985432; e-mail: g.tsobanoglou@soc.aegean.gr]), **Political and Social Divisions Challenging Symbiotic and Inclusion Policies in Greece,** *International Sociological Association, Gothenburg, Sweden,*

¶ Greek affairs have been center-staged in the global political theatre due to a complex multilevel "crisis" involving EU and OECD member states. An aid scheme (110 bill Euros) has been organized to address the "deficit" of a country that has been receiving for over 30 years European Funds finances addressing welfare/employment issues. The paper address the issue of the nature of Greek political administration's relation to a *social control/integration regime*, as it has tried, during those years, to organize rationally the "order of population". The interplay between state, society and party has been producing a fragmentary administration, bearing a strong and costly non-civil sector (army/church) and a divided labor market between the "public" (regulated) and the "private" cum informal and underground sectors. The corresponding social protection/health scheme; has been defined by the politics of Labor Ministry (Public Employment Service (OAED) and Social Security Organization -IKA) which "oversees" the labor market (private sector) by having also its own employment qualification regime. This system differs from the public welfare regime (employment selection, National Health Services), which enjoys a steady employment relationship with social security/health conditions. The composition of the wage relation differs between the two sectors, i.e., public and private. Social control and social integration as regimes have been unable to take control in the power system as evidenced by the absence of organized disciplines such as Sociology /Demography/ Anthropology in the National Universities in Greece (Athens and Thessalonica). The resulting lack of operational knowledge did not allow for the emergence of a credible policy addressing the issues of poverty/employment and inclusion to emerge. The main deficit may be located in the still unfounded local government/citizenship relationship. Our research on labor and institutional divisions has been evidenced by studies on service delivery for children in the Attica region.

2010S02718

Tsuladze, Lia (Department of Sociology, Faculty of Social and Political Sciences, Tbilisi State University, 14 Chavchavadze Ave., Tbilisi 0179 Georgia [tel: +995 32 250819; e-mail: ltsuladze@ucss.ge]), **Youth Culture in Modern Georgia–A Case of Westernization or Invention of a New Tradition?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper discusses how youth identities are constructed through bricolage in modern Georgia. Based on the assumption that in the contemporary changeable world, the fact of being exposed to the values & lifestyles of different subgroups or subcultures gives individuals "the power of a personal manipulation of the diversified materials provided by their society … [and] under these conditions, the culture that is experienced differs notably from the culture that is given" (Camilleri, Malewska-Peyre, 1997), my research has aimed to explore this "experienced culture" of youth in modern Georgia, to demonstrate how the youth manipulate with "diversified materials" provided by both their local society and the global culture, & to find out whether it results in the invention of a new tradition. The research has focused on youth's leisure activities as the ways of representing their lifestyle and expressing their creativity, & my target group has been the youth aged 16-21. Attempting to bring closer "the world of engaged scholarship & the world of everyday life" (Narayan, 1993), I have involved my students as co-researchers in the study aiming to analyze the youth culture seen from the perspective of youth themselves, as these co-researchers represent the same age group involved in similar cultural practices as the target group. Thus, the ultimate findings come from the comparison between the interpretations by my students & me, & the secondary interpretation by me as a means of gaining "thick description" (Geertz, 2000). Such an approach has proved to be especially revealing in identifying research subjects' different kinds of narratives: "cultural stories"; "told from the point of view of the ruling interests & the normative order" & "collective stories"; told from the perspective of those "who are silenced or marginalized in the cultural story" (Richardson in Miller & Glassner, 2004). In our case, these two distinct narratives have illustrated the research subjects' contradictory aspirations toward tradition (told to me from the perspective of "cultural story") & modernity (told to their peers/my co-researchers from the perspective of "collective story"), & helped me get closer to the real implications of three most fashionable trends among the contemporary Georgian youth revealed by the research "being distinctive," "being intellectual," & "being national".

Tsutsui, Junya, Chen, Yu-hua & Koh, Chi-Young (Ritsumeikan University, 40 Scollard Unit 1403 Toronto Ontario M5R3S1 Canada [tel: +81 90 70399164; e-mail: Junya_tsts@nifty.com]), **The Transitional Phase of Mate Selection,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper challenges the orthodox concept of mate selection research. Almost all research on mate selection presupposes the binary model, "arranged marriage vs. love marriage". This simple model, though it is pervasive, is not enough to grasp the reality of mate selection. An alternate model, which divides the mate selection process to "search" & "decision", is proposed in this report and is applied to the actual data. Data of EASS2006 (East Asian Social Surveys, 2006) is used to do a comparative analysis among Japan, Korea & Taiwan. Analyses suggest there is a substantive amount of cases that cannot be described as either "traditional" or "love" marriage; there is a considerable number of transitional cases of mate selection. In some cases, the first meeting with spouse was initiated in a modern way but also suffer strong parental intervention regarding the decision whether to marry. In other cases, the first meeting was arranged in a traditional way but couple had a free will to decide whether to marry. Japan, Korea & Taiwan share basic trends from traditional marriage to transitional marriage to modern marriage, while the regression analysis shows that there are also nation-level differences in factors that explain the shift.

2010S02720

Tsutsui, Takako, Matsushige, Takuya & Otaga, Masaaki (Department of Social Services, National Institute of Public Health, 2-3-6 Minami, Wako-shi, Saitama 351-0197 Japan [tel: +81 48 458 6133; fax: +81 48 458 6177; e-mail: tsutsui@niph.go.jp]), **From 'Care by Family' to 'Care by Society' and 'Care in Local Communities': Switching to a Small Government by the Shift of Long-Term Care Provision in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ Japan, which used to promote the socialisation of elderly care work, has recently reached its turning point. The long-term care insurance system, which was launched in 2000, was revised only five years after, where the government stressed the importance of integrated community care system, a scheme in which health and social as well as formal & informal caring bodies collaborate. This policy turn can be understood as growing recognition that disproportionate weight on public service could lead to the collapse of the system & that mutual aid in a local community may complement the system. This study examines the background of this paradigm shift based on empirical research. In the shift from "care by society" to "care by community", "sorge" as the nature of care draws attention. In other words, the revision in 2006 Japan has the potential to arouse "sorge" in society and create a new form of social solidarity.

2010S02721

Tu, Su-hao (Center for Survey Research, RCHSS, 128 Sec, 2 Academia Road, Nankang, Taipei,Taiwan [tel: 886-2-27898169; fax: 886-2-27881740; e-mail: suhao@gate.sinica.edu.tw]), **The Process of Survey Cooperation: Refusal Conversion and Interviewer Assignment,** *International Sociological Association, Gothenburg, Sweden,*

¶ This article aims to explore the prospective chance for efficiently acquire final cooperation from those who were contacted at the first time. Data from national CATI-telephone surveys in Taiwan were used to examine the likelihood of the different types of unit nonresponse including appointment, refusal, break-off due to busy, illness, language etc. being able to be converted into cooperation at the last contact. The particular attention is paid to the conversion of refusal due to the recently rapid increase in refusal rate around the world. As suggested in the previous literature, the extent to which a person or household who refuses during a very short period of initial interaction at the first contact finally cooperates at the last contact would depend on different nature of refusals (eg., soft or harsh). In other words, there is still a chance to obtain cooperation from the previous refusals. In addition, the experienced interviewers with more skills to persuade the refusers are theoretically assumed to be more likely to obtain cooperation. To the contrary, Stoop (2005) found the cooperation rates is higher when the persons or households were assigned to the same interviewers, no matter whether they are experienced or not, than when those to different interviewers. The extent to which the assignment of interviewers to the initial refusers is associated with cooperation rate remains further explored. The analysis based on Cross-classified Multilevel Model is expected to answer the debated questions.

Tubadji, Annie & Hall, John (Osteuropa Institut, IAB and Portland State University [e-mail: atubadji@gmail.com]), **The Culture-Based Development Hypothesis,** *International Sociological Association, Gothenburg, Sweden,*

¶ The role of the social factor in the developmental growth process has been noticed in general by the economic literature. The role of culture, however, though one of the most socially powerful forms of social expression & influence of ideas, has somehow dropped out of the focus. Lately, satellite concepts such as diversity, creativity & globalization have touched on the cultural nexus in developmental studies. But there is still a lot to be translated from the sociological notions of what culture is in the economical reality in order to comprehensively & holistically describe the role of culture in the developmental phenomenon. The current theoretical paper seeks to elucidate the Culture-Based Development Hypothesis, by a) establishing its meaning; b) noting its significance; & c) clarifying its implications for socio-economic developmental analysis. We strive to convince the reader of the existence of culture: as an overlooked & exogenous source of creative ideas, that could also serve to promote development in a manner broader than traditional measures of growth rates of GDP. Our inquiry also relies upon an institutional approach that considers cumulative causation, as well as cultural capital's effects upon sustainable development.

Tulle, Emmanuelle & Dorrer, Nika (Department of Social Sciences, Glasgow Caledonian University, Glasgow G4 0BA [tel: +44 331 8652; e-mail: e.tulle@gcu.ac.uk]), **Narratives and Representations of Physical Competence in the Gym: A Comparison of Older Gym Users and Instructors,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper is based on a research project examining experiences and narratives of bodily ageing among older gym users & their (younger) instructors & is derived from participant observation sessions, qualitative interviews with 10 "active seniors" & 3 instructors & a focus group with the instructors. The "active seniors" are men & women aged 60+ who started attending the gym following a referral from their physicians prompted by health problems, such as CV disease or impending frailty. They do not have any prior history of participation in sustained sporting activity, although some have been physically active in the past.The instructors who support them in the gym have undergone specialist training & have known them for many years. Negotiating and constructing physical competence in later life emerged as a central theme in the data. Both sets of informants wove in & out of traditional narratives of ageing, to account for the amount of physical capital lost by ageing/illness & regained by the exercise regime, the "motivation" to exercise & submit to discipline, the role of external barriers to exercise (the physical environment, financial considerations, caring responsibilities, etcaBB) & "looks" in a setting traditionally dedicated to the enhancement of physical & aesthetic capital amongst the young. The paper will examine whether the tensions between the lived experience of the ageing body & traditional assumptions about bodily capital in later life reflect the murky boundary between biology & culture.

Tuominen, Elia, Takala, Mervi, Karisalmi, Seppo & Kaliva, Kasimir (Finnish Centre for Pensions, 00065 Eläketurvakeskus, Finland [tel: +358 10 751 2151; fax: +358 9 148 1172; e-mail: eila.tuominen@etk.fi]), **From Early Intentions to Retirement–How Well Intentions Predict Actual Retirement,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction: The aim of the study is to examine the factors that influence older employees in their plans to continue at work or to retire & to find out how well retirement plans are actually implemented. The study's frame of reference is Beehr's model (1986) of the retirement process. It consists of three stages: preferences (thoughts of retirement), pension intentions, & the actual retirement. Data & statistical methods The target group of the survey consists of private sector employees born between 1942 and 1945. Register data on actual retirement has been attached to the survey data. The dependent variables of the survey - the estimated and the actual retirement age a were classified into three categories: those under 63 years (early retirement), the 63-year-olds (the lower age limit of old-age pension) & those over 63 years (postponed retirement). The explanatory factors were classified into personal & work-related factors. A logistic regression model that progresses in stages was applied in the analysis of the data. Results Pension intentions predict actual retirement fairly well. Intentions to continue at work were most consistently explained by good work ability, a low degree of mental strain & positive attitudes by the employer towards ageing employees continuing at work. In addition to age, work-, career- and finance-related factors affected actual retirement. Conclusion Summarizing the results & referring to Beehr, we conclude that divergent factors are emphasized as explanatory variables at different stages of the retirement process.

Turek, Konrad & Perek-Bialas, Jolanta (Institute of Sociology, Jagiellonian University, Krakow, Poland, 31-044 [tel: +48 506 177 105; fax: +48 12 430 20 99; e-mail: konrad.turek@uj.edu.pl]), **Older Workers in Polish Companies: Approaches, Strategies and Actions of Private and Public Institutions (Based on SHARE and ASPA Projects),** *International Sociological Association, Gothenburg, Sweden,*

¶ Poland, as a relatively new EU Member State (from 2004), is aiming to increase the lowest in Europe employment rates for older workers. Government actions, according to EC recommendations, attempt to keep older workers as long as possible at the labour market. However economy can gain on activity of older workers & their contribution to the wealth societies, still both sides of labour market, namely employees & employers, have to be convinced of particular benefits of professional activation of the group aged 50+. This paper will present findings from two researches. Firstly, based on SHARE data the characteristics of working vs. nonworking of 50+ will be presented with an attempt to calculate the probability of deactivation before the official retirement age, as well as answering what limits & what encourages to work longer from the perspective of labour force. Secondly, there will be discussed findings of unique for Poland nationwide sample survey of more than 1,000 companies (from public & private sectors) conducted within the European project of "Activating Senior Potentials in Ageing Europe (ASPA)". It will concentrate on a diagnosis of employers policy & attitudes toward the group of 50+ in Poland. The results of both analytical paths will attempt to specify possibilities & limitations for active ageing strategies in Poland. Additionally, examples of companies which take care of population ageing phenomena & successfully apply age management will be discussed.

Turley, Ruth Lopez (Sociology Department, University of Wisconsin, Madison, WI, USA, 53706 [tel: 608-332-4062; e-mail: rturley@ssc.wisc.edu]), **Social Capital and Child Outcomes: Testing Causal Effects through a Cluster-Randomized Trial,** *International Sociological Association, Gothenburg, Sweden,*

¶ Although social capital is believed to be the source of many positive outcomes, there is much conceptual & causal ambiguity in the literature. Defining social capital as a property of groups rather than individuals, this study aims to test, through a field experiment, the causal effects of social capital on the cognitive and social development of children. In particular, we investigate relations of trust & shared expectations in schools, focusing on the structure & quality of relations among parents, school staff, and children. Although we cannot randomly assign students to social capital, we randomly assigned schools to an intervention intended to boost social capital among families & between families and schools. Our sample consisted of 52 elementary schools in Phoenix, Arizona, & San Antonio, Texas. Each school is populated by a high proportion of socioeconomically disadvantaged Hispanic families. In each city, half of the schools were randomly assigned to participate in an intervention known as Families & Schools Together (FAST), an intensive 8-week after-school program designed to build social capital among parents, school staff, & children. The other half served as comparison schools. Results from the first year of data collection, representing the first 24 schools, showed that (1) there were no pre-treatment differences between the treatment & control groups, (2) the intervention increased parent-reported social capital, & (3) treatment schools rated better than control schools for some indicators of children's social skills.

Turner, Bryan (University of Western Sydney and CUNY, Locked Bag 1797, Penrith South DC, NSW 1797 Australia [e-mail: bryansturner@yahoo.com.sg]), **Three Models of Citizenship: Market, Welfare State and Developmental State,** *International Sociological Association, Gothenburg, Sweden,*

¶ Any discussion of citizenship will have to consider the relationship a & especially the changing relationships–between the state, the market & civil society. It is appropriate to argue at the outset that civil society is the site of citizenship & the social foundations of democracy. In short, the idea of citizenship is central to any political discourse about rights, participation and identity. Citizenship of course comes in many forms, but in this commentary I shall identify three types that conveniently map onto state, civil society & market. The first is national citizenship which typically takes on the mantle of ethno-nationalism & has been important in nation-building activities from the nineteenth century onwards. In Asia, this form of citizenship is also closely related to the so-called developmental state. In Latin America, national citizenship was also closely related to nation building. However, Latin America & the Philippines can be said to have experienced an authoritarian & militaristic version of nationalist citizenship as the legacy of Iberian colonization, and is often referred to as "bureaucratic authoritarianism" or in the case of the Philippines as "cacique democracy". The second form is social citizenship that is strongly connected to civil-society institutions rather than to the state or market. It involved the creation of social rights in association with the development of the welfare state. In the twentieth century, this form of citizenship was related to democratic developments in Scandinavian societies & with the United Kingdom in the post-war period of social reconstruction when Keynesian economics were important in rebuilding a shattered economy. The third form of citizenship identifies the citizen with participation in the work force and emphasizes self-reliance & autonomy. This type of citizenship, which was explored by the American political philosophy Leslie Shklar, was associated with American liberalism & emphasized the private provision of insurance ands welfare. In this lecture, I argue that with economic globalization & the development of neo-liberal strategies the various forms of citizenship have converged onto a single market model of passive citizenship in which the state has withdrawn from the provision of entitlements and civil-society institutions have been eroded. The market rather than civil society has become the institutional setting for citizenship. The result is the emergence of the a-political, isolated citizen as consumer.

Tuulentie, Seija & Kietäväinen, Asta (University of Lapland, Rovaniemi, Finland, 96101 [tel: +358 50 391 4438; e-mail: seija.tuulentie@ulapland.fi]), **The Rhetoric of Climate Change in Strategic and Grass-Root Level in Lapland Tourism,** *International Sociological Association, Gothenburg, Sweden,*

¶ Rural communities in sparsely populated areas are facing considerable social changes as a result of depopulation & the introduction of new livelihoods. In official policies, tourism is regarded as a blessing for these areas & tourism strategies as important tools for tourism development. Climate change is one of the big issues when considering the future of tourism sector. In this paper, we ask how such global issues as climate change are taken into account in strategy speech, & how the issue is dealt with in the grass-root level. Climate change is regarded here as an emblem of how the changing operation environment & global issues are taken into account by & large. We analyze how Finnish national tourism strategy, regional tourism strategy of Lapland & local strategies of the biggest ski resorts in Finland deal with the climate change adaptation. In addition, we compare the rhetoric of the strategies to the rhetoric used by the interviewed tourism actors from the ski resorts. Rhetorical analysis of the textual material is used in order to show how strategic documents do not simply describe the situation but are actually active & powerful in creating and shaping the future development. Thus, they also shape the way the tourism actors think about the future of the sector. Our results show that climate change issues are dealt with in an abstract level. Tourism growth is regarded as inevitable & the only possible future. The positive side of climate change is emphasized: Lapland is regarded as a snow secure area & there is expectation for more winter tourist. However, the interviews show that in the grass-root level also structural changes in tourism sector are demanded.

Tuzikov, Andrei Rimovitch (Kazan State Technologycal University, Russia, 420015 Kazan, K.Marx str. 68 [tel: +7-843-231-40-55; fax: +7-843-231-40-55; e-mail: atuzikov@rambler.ru]), **Is There a Border for Consumerism?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Is there a border for consumerism? Consuming is the dominant ideological imperative of the majority of contemporary societies. A growing number of public & private spheres of life have been shaping by consumerism. A lot of people start consuming education and medical aid, health & beauty, which traditionally were not objects for consuming but the ones to worship & cultivate. The universities becomes a sort of commercial enterprise which are focused on making money through selling educational & scientific service. Who think about "temple of truth"? Medical aid has also become a sort of service. Who think about Hippocrates oath? But Sociological surveys reveal the contradiction between managerial approach of state officials & paternalistic logic of the majority of population, especially on the topic of medical aid. To my mind the results of sociological surveys could be interpreted as the "clash" between "medical service" & "medical help" approaches in Russian Public Health. From the one hand the population prefers to get medical help but does not like to take responsibility of their health. From the other hand the state prefers to elaborate medical standards & to organize the providing of medical ser-

vice. The problem is that both sides are equally right. But speaking frankly could the Truth & Health be packed, sealed & delivered?

Twigg, John, Kett, Maria, Bottomley, Helen, Nasreddin, Hussam & Tan, Lin-Tze (Department of Civil, Environmental and Geomatic Engineering, University College London, Gower Street, London WC1H 6BE, UK [tel: 0044-20-7679-2436; e-mail: j.twigg@ucl.ac.uk]), **Disability and Public Shelter in Emergencies,** *International Sociological Association, Gothenburg, Sweden,*

¶ There are over 600 million people with disabilities (PWDs) worldwide. PWDs are highly vulnerable to natural disasters, on account of both their impairments & their social marginalisation. Rapid access to medical & social support during & after disaster appears to be a major factor in PWDs' short-term survival & long-term health status. Emergency shelters can play a key role here but communal shelters, whether purpose-built or temporary occupations of other facilities, are rarely designed or managed with disability in mind. The question of what can realistically be done to improve shelter access & facilities for PWDs in different contexts has not been investigated. This paper reviews the findings of research into the problem & sets out the challenges to optimising support for PWDs, especially in developing countries with substantial capacity and resource constraints.

Tyagi, Sudesh & Tyagi, Sushil (E.C. Member R.S.A. [tel: +919413567400; e-mail: rajsociosktyagi@yahoo.co.in]), **Leisure Among the Urban Labour: A Sociological Study of Jhunjhunu City,** *International Sociological Association, Gothenburg, Sweden,*

¶ Leisure among the Urban Labour: A Sociological Study of Jhunjhunu city The present study is based on the labourer families of district Jhunjhunu in Rajasthan. Jhunjhunu is 180 Km. far from Jaipur, the capital of the state of Rajasthan in India. Jhunjhunu was established in 5th century by a Jat named "Jhujhar", that is why the place was called Jhunjhunu. The area of this place is approx 52,98 Sq Km. The aim of the present study is to identify the trends of leisure among the urban labourers of Jhunjhunu city. What they do in their leisure time or in free time is the focus of the study. Data has been collected for this study from 80 labourers belonging to different castes, educational backgrounds, economic status etc. The methods used for the study are interview schedule, observation and personal interviews. After analysis of the data, it was found that the labourers suffer from alienation,exploitation.frustration and loneliness. As such it was suggested & came to fore that the only remedy to reduce the social evils prevalent among them & to reduce their tensions & conflicts, it is necessary that they take out time for themselves & have some leisure so that they also have time to communicate among themselves & also with others. However, it is possible only if managements of the businesses wherein these labourers are working take concrete steps in providing them some free time & leisure activities. Sudesh Tyagi, EC Member, Rajasthan Sociological Association, & Sushil Tyagi, Head, Deptt of Sociology, S.M.L. (P.G.) Collage, Jhunjhunuu, rajsociosktyagi@yahoo.co.in

Tyagi, Sushil (University of Rajasthan, S.M.L.(P.G.)College Jhunjhunu (Raj)INDIA [tel: +919413567400; e-mail: rajsociosktyagi@yahoo.co.in]), **Changing Trends of Leisure in Indian Families: A Sociological Study,** *International Sociological Association, Gothenburg, Sweden,*

¶ The present study is based on 100 families of district Jhunjhunu in Rajasthan. Jhunjhunu is 180 Kms far from Jaipur, the capital of the state of Rajasthan in India. Jhunjhunu was established in 5th century. The aim of my study is to identify the trends of leisure among the families of a middle sized city like Jhunjhunu. The focus of the study was to enquire about the amount of leisure these families have & to know about their free time activities. Data has been collected for this study from the respondents belonging to different castes, educational backgrounds, economic status etc. The sample of the study was constituted of 50 males & 50 females. The methods used for the study are interview schedule, observation & personal interviews. After the analysis of data, it was also found that the collapse of joint family structures is leading to the deterioration of India society. Joint family structure is now giving way to the emergence of nuclear families. Due to this reason people now do not get time from their daily routines since now they have to perform all the duties of the household (along with their professional duties) which were earlier shared by other members of the joint household. Now people are avoiding traditional ways of leisure. In fact they have almost forgotten to celebrate small festivals, functions & rituals which were so frequently celebrated in joint families. Now people have been diverted towards electronic media for entertainment, which has further destroyed their social life. The only way out to redeem from such a situation is through leisure only. Dr. Sushil Tyagi Head, Department of Sociology S.M.L. (P.G.) College Jhunjhunu(Rajasthan) INDIA Email-rajsociosktyagi@yahoo.co.in

Tyurina, Irina Olegovna (Institute of Sociology, Russian Academy of Sciences, Moscow, Russian Federation, Krzhizhanovskogo Street, 24/35, bld. 5, 117218 [tel: +7 (495) 719-0940; fax: +7 (495) 719-0740; e-mail: irina1-tiourina@yandex.ru]), **Education as a Channel of Global-Local Social Inclusion. Does it Work in Present-Day Russia?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Problem of social inequalities a the one so actual in post-reform Russian society a couldn't be reduced to income inequality only. Among the most important factors mediating typical for Russia social inequalities are: territorial differences, age discrimination as well as differences in level of education proving to be in the present context a mechanism able to keep bars between social & cultural groups of a society. Educational inequalities have at the least two interrelated units. The first one a immediate & real a is quite evident for the majority of Russians limitations (and sometimes fundamental impossibility) of access to high-quality education. This unit of educational inequalities could be characterized as cumulative one: springing up at a level of elementary or primary school above inequalities tend to develop in secondary & then consolidate in the upper school. The second dimension of social inequalities in educational sphere is of a protracted character. The case in point are abilities to use those advantages which has or should have an individual with some fixed & certain level of his (her) human capital's development, i.e. on reaching one or another educational level. In present-day Russia above abilities & advantages turned out to be greatly differentiated among the representatives of different social groups & strata: certificates of degree are not "automatic pass to paradise", a guarantee of opportunity to find an interesting job, successful employment, high-level incomes and common social prosperity. Disabilities to use advantages of being well-educated are predetermined under modern Russian conditions by tendencies of social exclusion, especially evident if the matter concerns poor, needy & underprovided strata of the society as the main "victims" of increasing social differentiating processes. All this is ridiculous against a background of a fact that education is especially valued in present-day Russia. Suffice it to say that the overwhelming majority of those surveyed (82%) states that getting a high-quality education is one of their most important life plans which is as valuable as, for example, those concerned with a family, friends, wish to live honestly & so on. At the same time level of actual achievements of Russians seeking after getting good education turned out to be lower: only 50% of those feeling like this manage to do it. And it's a serious social problem hampering the future progress of Russian society.

Tzeng, Albert P.W. (Department of Sociology, University of Warwick, Coventry CV4 7AL, United Kingdom [e-mail: p.w.tzeng@gmail.com]), **Managerialism, Academic Globalism, and Impact on Sociology: Comparison of Taiwan, Hong Kong, and Singapore,** *International Sociological Association, Gothenburg, Sweden,*

¶ The higher education funding/governing bodies across many Asian societies have since the mid 1990s adopted more business-style discourses & various initiatives aimed at boosting the 'academic productivity,' partially as responses to the perception of growing international competition. Less known is how the rise of 'managerialism' & 'academic globalism' were reshaping on the intellectual life of domestic sociologists, & consequently the trajectories of national sociologies. Based on 59 interviews with sociologists in Taiwan, Hong Kong & Singapore, I shall in this paper provide a critical assessment how these perceived changes were shaping their professional practices, & compare the inter-case differences for an informed analysis of the relationship between sociologists & the host societies. The major findings should be summarized in three arguments: 1. The introduction of various managerislist practices & the internationally- oriented publication incentives has caused, among its mixed implications, a significant degree of perceived discrimination against certain type of publication (book, or non-English publication) & even research (e.g. theoretical, ethnographic), discouragement on teaching and public engagement, & some impacts on collegiality. 2. Particularly in the case of Hong Kong & Singapore, there were indications that these changes are leading to the restructuring of sociological knowledge-flow in a way that could be

criticized as both 'being lifted-up from the local' & 'reproducing an imperial gaze.' 3. The responses of sociologists in Taiwan, Hong Kong and Singapore can be characterized, respectively, as 'resistant and negotiating', 'compliant thought reluctantly,' & 'supportive with a minor degree of reservation.' These contrasts derive from the difference in political context, identity politics, & ultimately, the post-war geopolitics.

2010S02735

Uffer, Sabina (Geography and Environment, London School of Economics and Political Science [e-mail: s.m.uffer@lse.ac.uk]), **The Entrepreneurial State: How Does It Differ From a Private Enterprise? The Case of Berlin's Housing Politics,** *International Sociological Association, Gothenburg, Sweden,*

¶ Berlin has long suffered from a housing oversupply. The economic and demographic decline after re-unification superseded the private and public investment & the housing industry struggled with increasing vacancy rates. However, the vacancies are not evenly distributed & an increased uneven development has been observable in recent years. This paper enquires how Berlin's government has responded to this development. How has the local state restructured its housing politics? Has there been a re-orientation towards market logics? The paper counters the theoretical argument that the state is in decline & argues that the state is actively adapting and reshaping its strategies. The analysis is based on three case studies of housing estates & analyses the strategies of state-owned housing companies owning these estates. A document analysis & interviews with representatives from the housing sector have been conducted. The paper shows Berlin's housing politics has become more entrepreneurial & the state's strategies are comparable with private investors' strategies. However, looking more closely at the state-owned companies' actions, it becomes clear that there are areas of resistance within the entrepreneurial state whereas the state-owned housing companies are going against market logic & adhere to their social responsibility despite financial pressures.

Uggla, Ylva (Centre for Urban and Regional Studies, Örebro University, CUReS, Örebro University [tel: +46 19 303271; e-mail: ylva.uggla@oru.se]), **Global Concern with Local Implications: The Role of 'Urban Nature' in Biodiversity Preservation and the Construction of 'Nature' in Urban Planning,** *International Sociological Association, Gothenburg, Sweden,*

¶ In urban planning there is a new trend with concentration in reaction to urban sprawl. This tendency raises the question of the role & function of green sites in the city. The urban often is depicted as the anti-thesis of nature, implying a firm distinction between nature & culture. Although, such a distinction is anything but given, the modern definition of nature as "the other" of human society & culture is apparent in the relationship between humans & their environment, whether it concerns humans' mastery over nature or humans as its keeper. The notion of "urban nature" is an oxymoron that alludes both to people's well-being (parks & recreation areas in the city are often pointed out as important places for comfort & good health) and to environmental concerns (e.g. "green corridors" are stressed & promoted as vital in the endeavour to preserve biodiversity in urban areas). The aim of this paper is to analyze the construction of "nature" in urban planning. What are the arguments for a certain nature care in urban areas? What function and values are attached to "urban nature"? What negotiations between sometimes contradictory social, cultural & environmental values are taking place in the planning process? The paper includes a case study of Stockholm, where a new general outline plan is under construction. This planning process evinces a redefinition of green sites & their function in the city, implying a shift from an ideal of the "green city" towards an ideal of the "compact city". Furthermore, this shift in planning ideal indicates an emphasis on the notion of urbanity, referring to values such as density & cultural diversity at the expense of green spaces for recreational purposes & not least at the expense of greenfield sites & "wildlife corridors" for environmental reasons. Keywords: biodiversity, urban planning, urban nature, nature-culture divide

Uhde, Zuzana (Institute of Sociology, Academy of Science of the Czech Republic, Jilska 1, Prague, Czech Republic, 11000 [tel: 00420222220924; fax: 00420222220143; e-mail: zuzana.uhde@soc.cas.cz]), **Care between Tradition and Market: Reflections on Relationship between Feminism and Neoliberalism,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the paper I would like to look at the historical intersection of feminist claims & strategies to valorise care & the changing social context of rising neoliberal globalization. The issue of valorisation of care has been in a centre of feminist debate on gender equality since the outset of the second wave feminism. However, I argue that the feminist idea of gender equality was distorted, the personal hasn't become political; instead the personal was marketized but remained private within a private economy. This distorted process of women's emancipation presents one of the paradoxes of late capitalism: While the contemporary societal development enables some groups of women to break free from the responsibility for care & domestic work, the same processes keep marginalised groups of women in bonds of unpaid or underpaid reproductive labour. Thus, the social organization of care in late capitalist societies is systemically connected to social & global inequalities. In the light of these processes I will point out structural interconnection of present-day social organization of care in late capitalist societies to the logic of neoliberal globalization & outline conceptual impasses of feminist vision of gender equality with respect to caring responsibilities.

Uhnoo, Sara (Department of Sociology, University of Gothenburg, Box 720, 405 30 Gothenburg, Sweden [tel: +46317864788; e-mail: sara.uhnoo@sociology.gu.se]), **The Rules of Violence a Young Peoples Moral work in Talk About Violence,** *International Sociological Association, Gothenburg, Sweden,*

¶ The study focuses on "self-policing" among youth & the method of discourse analysis is used to explore how young people do moral work concerning the often taken for granted concept of violence. The material consists primarily of focus group interviews conducted with forty young people resident in Gothenburg on how they experience "violence". The study shows that moral work results in a variety of, often conflicting, rules about the legitimate and illegitimate behaviour(s) in different types of conflict & fight situations. Even if they frame some more general "ground rules" such as violence is bad, the meaning/interpretation of what "violence" is become negotiated & re-interpreted during the interviews. The analysis focuses on some colliding rules & moral dilemmas that the young people address during the interviews. Rules become differently constructed when they talk about "youth fights"; on the streets or at private parties, between formerly unknown (young & mostly male) youngsters, in relation to so called "sibling fights" or "play fights" between friends, or fights between heterosexual partners. These rules limits or broaden the spaces for interpretation & action available to young people. Possible discrepancies between the legal/adult discourses of violence & the youngsters own are discussed.

2010S02739

Ulriksen, Marianne S. (Centre for Social Development in Africa, University of Johannesburg, P.O. Box 524, Auckland Park, Johannesburg 2006, South Africa [tel: +27 (0)11 559 4253; fax: +27 (0)11 559 1575; e-mail: Marianne_s_ulriksen@hotmail.com]), **Social Policy Development and Global Financial Crisis in the Open Developing Economies of Botswana and Mauritius,** *International Sociological Association, Gothenburg, Sweden,*

¶ In line with global trends of economic liberalisation Botswana and Mauritius have increasingly become highly open economies. Western based welfare regime literature suggests that open economies tend to have higher levels of social protection. However, it is disputed how economic openness in a globalised world facing financial crisis affect social policy developments in developing countries. From one perspective, it may be argued that globalisation & increasing demands of economic competition force a dismantling of social policies. Alternatively, it may be proposed that open economies a facing greater volatility & risks, especially during the financial crisis a push for greater social protection. Using the examples of Botswana & Mauritius, two developing countries with similar economic, institutional, & democratic attributes, this paper argues that, in fact, both arguments may be correct. Whether open economies are pushed to keep social policies at a limit or instead insist on continued social policy protection depends largely on the social policies already in place & the social forces promoting such policies. Social policies with broad reach and supported by well-organised & influential groups are harder to reverse than targeted & limited policies.

2010S02740

Umali, Violeda Acosta (Vienna School of Governance, University of Vienna, Spitalgasse 2, Hof 1/1.11 [tel: +431-4277-49453; e-mail: violeda.umali@univie.ac.at]), **Local Government Units and the Localization of the Population Policy in the Philippines,** *International Sociological Association, Gothenburg, Sweden,*

¶ Despite the many problems that are either the consequence of, or aggravated by, a huge population size, the Philippines has failed to come up with a national population policy that will address the twin issues of population growth & family planning. This situation is attributed mainly to the Catholic Church's strong opposition to a policy that includes promoting artificial methods of contraception. Occupying a central position in the highly contentious population policy-making arena are the local government units (LGUs), which have a significant degree of autonomy in policy formulation and/or implementation. Thus, one is led to ask: With the lack of clear directives from the national government, and given the presence of interest groups that have different and sometimes conflicting views on what the country's population policy should be, how have the LGUs dealt with the challenge of population policy-making at their level? The analysis is anchored on two theoretical perspectives: 1) Bourdieu's theory of practice in general & his critique of the political field in particular, and 2) the propositions of Baumgartner et al. regarding policy advocacy and policy change. The data come from key informant interviews with representatives of four Philippine LGUs, & relevant documents on local-level population policies & initiatives in the Philippines.

Uña, Octavio (Departamento de Ciencias Sociales, Universidad Rey Juan Carlos, Fuenlabrada, Madrid, Spain, 28943 [tel: +34 914888214; e-mail: octavio.una@urjc.es]), **Language, Sociology and Communication in the Work of Hannah Arendt,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ The entire work of Arendt feeds from various fields of knowledge: philosophy & social sciences especially, but also literature and poetry. Under the influence of Heidegger & Hölderlin, for Arendt in the source language lives: remembering is the essence of thinking, as Plato stated. Sense is accumulated in the language sense. Think consist of an exercise of "thawing" of meanings that inhabit the language. Therefore, there is no thought without words. The language allows trade with what is not sensible. Language is the medium in which manifests thought. Indeed, the thought needs language not only for speech, but to get moving. Moreover, such is the priority of language, that words & their joints are the only weapons we have to account for the facts of the world. Moreover, language founds community. The city & society are by the public nature of the logos. The city, the "Politeya" is construction of facts & words. By word & action we fit into the strictly human world. This is another of the basic beliefs of the Jewish thinker: the action is really policy by the word, by the speech. The society is when men talk & feel each other. And when we lose "the powerful light of the agora" lost community. If Arendt's contribution to language in its relation to knowledge & social life are extraordinarily creative, are not least with regard to poetic language in its role of creativity. Her amazing memory for poetry & his deep reading of Goethe from twelve till her another belief: that poetry makes the language "original substance". From the bowels of the loneliness that she experienced & from the fearsome face of the night, also appeared before her on a continuous basis will be able to glimpse the initial power, mythic founder of the word.

Uprichard, Emma & Nettleton, Sarah (University of York, UK, Dept of Sociology, University of York, York, UK, YO10 5DD [e-mail: eu500@york.ac.uk]), **Meta-Methodological Issues Involved in Researching the Changing Social World: Food, Time and Temporality in York (UK),** *International Sociological Association, Gothenburg, Sweden,*

¶ There are many ways of researching the changing social world. However, whatever approach is used, there are necessarily three inter-related issues involved that render any empirical study aimed at exploring the changing social world particularly problematic. The first relates the problems of nonlinearity, the second has to do with time & temporality, & the third issue relates to the ontological & epistemological nature of the changing case, whatever that case may be. Together, these three issues raise meta-methodological implications that may ultimately require a substantial reassessment in current ways of knowing the changing social world. This argument draws specifically on an ongoing project relating to the study of the patterns of change in food and eating across the life course in the city of York since 1945, where both individuals & the city in which they conceptualized as changing dynamic nested systems, as an illustrative example of both the conceptual challenges involved in studying the changing social world, as well as the methodological alternatives that are currently being explored.

Urbano, Cláudia (ESSS-IPSantarem/Cesnova-FCSH, Portugal [e-mail: claudia.urbano@fcsh.unl.pt]), **How Non-Universitary Institutions Fit in the New Concept of Higher Education?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Analising the portuguese situation as a case study, we aim to discuss how the polytechnic higher education redefines itself towards the changes due to the Bologna process. The main focus of our research has been the polytechnic higher education, which has been the less socially valued subsystem. However, at the start of the 21st century, just before the beginning of the Bologna process, this subsystem won some notoriety in the scenario of higher education in Portugal. The normative field is not the same: laws concerning higher education have changed in Portugal in the 90s & the graduation is now more balanced between the two subsystems (polytechnic & university). In this period of change, also it is visible an effect on demand for higher education & in particular for polytechnic higher education. Will also the demand trend be changed, after 10 years, now that both subsystems will offer similar first & second cycle diplomas with the Bologna process? Trying to accomplish European goals in order to increase graduate population, will not the higher education try to answer to even more missions than those it traditionally had? Besides, will the Bologna Process allow–or even catapult–a new strategy in positioning, action & even identity by the polytechnic higher education institutions, allowing this subsystem to access to the two exclusive dominions of the universities a namely post-graduate education & research? These are some of the questions that we aim to address to this debate about europeanization & governance of higher education.

Uri, Shwed (Columbia University, New York, NY, 10027 [tel: 2128540368; e-mail: us2121@columbia.edu]), **Speaking Truth to Publics: Quick Detection of Scientific Consensus Formation,** *International Sociological Association, Gothenburg, Sweden,*

¶ When does a scientific community consider a proposition as a fact, and how can we know that? this question is usually left for experts, whether these are practitioners, ethnographers, or STS scholars serving as intermediaries between practitioners & publics. This paper develops a strategy for quantitative evaluation of the state of scientific contestation on issues, allowing many publics to evaluate science independently, & engage the formal representatives of science on a leveled playing field. The crux of the evaluation rests on Latour's black box imagery, here observed in scientific citation networks. As consensus forms, the importance of internal network divisions to the overall structure declines. I consider cases that are now accepted as facts, such as the carcinogenicity of smoking. In all cases, the quantitative measure identifies consensus shortly before expert committees report it. Then, the same analysis is employed for currently contested cases: the suspected carcinogenicity of cellular phones, & the relationship between MMR vaccines & autism. The analysis shows that both cases have obtained scientific consensus. The presented strategy allows quick dissemination of scientific innovations to many publics, without the mediation of agents who may wish to extend contestation & argue that "The science is still inconclusive".

2010S02745

Uri, Shwed (Columbia University, New York, NY, 10027 [tel: 2128540368; e-mail: us2121@columbia.edu]), **When Do We Know: Quick Detection of Scientific Consensus Formation,** *International Sociological Association, Gothenburg, Sweden,*

¶ Utilizing a cutting edge community-detection algorithm for networks, this paper engages with the epistemological problem of discerning consensus: When does a scientific community consider a proposition as a fact, & how can we know that? Old & new traditions in Sociology & Science Studies leave this question to experts, whether these are practitioners, ethnographers, or "meta-experts". This paper develops a strategy for quantitative evaluation of the state of scientific contestation on issues. The proposed strategy involves modeling time in dynamic networks, utilizing a moving window of variable length, & a statistical evaluation of contestation based on network structure, rather than content analysis. As such, it offers an independent evaluation of science. The crux of the evaluation rests on Latour's black box imagery, here observed in scientific citation networks & modeled mathematically with Leicht & Newman's community detection methods for directed networks. The presented strategy allows quick dissemination of scientific innovations without the mediation of agents who may wish to extend contestation & argue that "The science is still inconclusive".

Uribe-Malla, Consuelo (Pontificia Universidad Javeriana, Carr. 5a # 39-00 Edif. 95, Bogotá, D.C. Colombia [tel: (571) 210-4969;

e-mail: curibe@javeriana.edu.co]), **"I am a Stratum Two-guy Looking for a Likewise-Stratum Girl": Identity, Inequality and Urban Public Policy in Bogota,** *International Sociological Association, Gothenburg, Sweden,*

¶ Social & spatial segregation in Bogota has been remarkably acute since colonial times. Poor have tended to settle in southern areas, whereas more prosperous families have tended to reside in the northern part of the city. Since the 1980s, a public policy dividing groups of residences into six separate socioeconomic strata for charging different tariffs of public utilities, introduced further segregation, enhancing the north-south divide. The policy, aimed at subsidizing tariffs for utilities for poorer residents, had a beneficial impact in terms of coverage of utilities & in poverty alleviation. However, it had unintended effects on the city's spatial distribution, influencing the choice of neighborhoods where people settle. Furthermore, the policy has affected social representations about social order, enhancing perceptions about social inequity. Not only are strata functional groups for the Distrital administration, they have become part of the individual & social identity of Bogota dwellers. The presentation is based on research conducted by the author & her research team in 2005-2009 in Bogota. Data from 2196 households, several focus groups & over 20 life stories was collected on three different projects that looked into different aspects of the stratification setup.

Ursin, Marit (University College of Bodoe, Bodoe, Norway [tel: +4772557974; e-mail: Marit.Ursin@hibo.no]), **Everyday Violence and its Influence on Youth's Home Narratives in Brazil,** *International Sociological Association, Gothenburg, Sweden,*

¶ One of the most alarming challenges in contemporary Brazil is the prevalence of pervasive everyday violence against young people. In the period between 1979 & 2003 almost 400.000 young Brazilians (aged 15 a 29 yrs) were killed (Tourinho Peres 2006). A high percentage of these deaths is estimated to be related with the ongoing fierce war between rival drug cartels & the police ongoing in the favelas, the deprived urban neighbourhoods. Poor youngsters are wanted both as consumers & soldiers. Earlier it was assumed that children & youth were at more danger in the city streets, fearing death squads. Because of youngsters' involvement in the drug war, as consumers & soldiers, they become targets of the police, informal "security patrols", & enemy drug cartels. However, the empirical findings from this study suggest that the landscape of everyday violence is changing. Reasons include petty theft, crack debt, drug trafficking, violence, etc. Hence many youngsters seek asylum, hiding in the streets of city centres and middle class neighbourhood which are perceived safer because of more police vigilance, increased visibility & less drug trafficking & fire arms. This paper draws on multi-method qualitative fieldworks & documents how poor youth's experience of violence influences their home narratives in Salvador, Brazil.

Urze, Paula & Manatos, Maria João (FCT/UNL, Faculdade de Ciências e Tecnologia da Universidade Nova de Lisboa; Socius, Centro de Investigação em Sociologia Económica e das Organizações, FCT/UNL [tel: + 351212948500 extensão: 10402; e-mail: pcu@fct.unl.pt]), **Multinational R&D Subsidiaries: Designing Trajectories of Autonomy,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper aims at mapping the trajectories of autonomy of R&D subsidiaries within the companies' global strategies & the relations established locally in order to earn power within the global value chains. The advent of the knowledge society, by the deep transformations operated in the environment where multinational companies act, give rise to new demands in the way companies acquire & develop their competitive advantages. These developments are commonly associated with the economy globalization process, more specifically with the increase of the interdependences outside borders between different markets. It is difficult, if not impossible, to establish clear causalities between developments related to globalization, but their interdependence is undeniable. The growth of the interdependence between economical actors in different locations changes the way in which companies organize their innovating activity both spatial and organizationally (Cantwell et al., 2001). In a growing trend, companies tend to invest abroad, in order to explore the resources and the activities already in place, but also increasingly trying to create new activities & competencies. If before, the MNCs were seen mainly in terms of their ability to explore the advantages generated in the headquarters of the MNC, recently, this point of view has been changed, emerging, increasingly, the potential to create knowledge by companies fitted in chains of global value. The empirical work is grounded on a local case study & on one "extended" case from automobile & electronics industries. The "extended" case study involves more than one unit of analysis. At this level, three cases belonging to the same network were studied (as well as the co-ordination mechanisms): a local R&D unit (Portugal) a foreign R&D unit (Holland) & also the headquarters (Norway). The local case is a portuguese subsidiary with a central position within the network, which is, strongly, a consequence of the competencies developed locally. The extended case is an example of a MNC where R&D is developed mainly in the headquarters but is also delocalized to some subsidiaries, with a certain level of autonomy.

Urzha, Olga (Russia State Social University, Moscow, Russia, 129226 [tel: +7 (499) 1532508; fax: +7 (499) 1532508; e-mail: ourja@ultranet.ru]), **Modern Youth and Working Out Social Policy of the Municipal Administration in Russia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Nowadays the question under consideration & investigation is the state of modern Russian youth, the dynamics of its development, forming of its interests & elaborating the adequate social policy. The real basis for working out the adequate social policy is the knowledge of the real state of social structure of Russian youth, the dynamics & tendencies of its changes. Social structure of Russian youth & of Russian society is a phenomenon which needs detailed rethinking according to its previous & its contemporary state. The lack of reliable knowledge of social structure of the society & the dynamics of its development is a cause of numerous failures in social policy. Political & economical changing in Russia during the last 20 years influenced the attitude of the young people to politics & taking part in administration. This situation leads to the number of serious consequences, such as aging of people in the government, having no possibility to share the experience with the young successors, the lack of adequate youth policy in the country & its regions. Several sociological researches have studied this problem. It enabled us to estimate political activity of Russian young people & their readiness to take part in local municipal administration, according to their place of living, the level of education, the sphere of occupation and etc. These & other data will be presented in the report by the author.

2010S02751

Ushida, Chizuru (Nanzan University (Princeton University 2009-10), 18 Yamazato-cho, Showa-ku, Nagoya, Japan, 466-8673 [tel: 1-609-258-6965 (Princeton Univ.); fax: 1-609-258-1039 (Princeton Uni.); e-mail: ushidac@nanzan-u.ac.jp]), **"The Latino Community in the United States: Appellation, Ethnicity and Political Awareness",** *International Sociological Association, Gothenburg, Sweden,* (JPN)

¶ In my presentation I will focus on the appellations such as Hispanic, Latino, Hispano, Chicano, etc. that have been used to identify Latin American immigrants or US citizens of Latin American origin, as a ethnic group by themselves or by mainstream society in the United States. Through the historical observation of the adaptation and preference of different appellations, I will analyze the transition of their ethnic identity, political awareness & social integration. The basic materials used for this research are newspapers such as the New York Times, La Opinión (Spanish newspaper

issued in California), El Nuevo Herald (Spanish newspaper issued in Florida), & several representative newspapers in Latin American countries, mainly during the days Latino immigrants were protesting against the Federal Immigrant Reform Bill in 2006. The frequency & the context of use of the appellations prove that the Latino identity has been strengthened politically & emotionally. In addition, there has been increasing solidarity with the people and the governments of Latin American countries, & their transnational ethnic identity is shown more remarkably when they pursue the common political & economic interest.

Uys, Tina (Department of Sociology, University of Johannesburg, PO Box 524, Auckland Park, Johannesburg, South Africa, 2006 [tel: +27-11-5592885; fax: +27-11-5593787; e-mail: tuys@uj.ac.za]), **The Whistleblower as Organisational Citizen: South African Policy and Practice,** *International Sociological Association, Gothenburg, Sweden,*

¶ Whistleblowing (or ethical resistance as it is often referred to) is defined as the unauthorised disclosure of organisational wrongdoing to those who are perceived to be in a position to take action. The growing literature on whistleblowing focuses largely on ethical issues related to whistleblowing, the victimization & protection of whistleblowers & developing an understanding of organizational responses to whistleblowing. Research on whistleblowing has largely neglected exploring the implications of whistleblowing being viewed as a form of organizational citizenship behaviour. This entails that whistleblowers act as organizational citizens promoting the public interest as well as those of the organization as a whole, while sometimes being victimized by the very organization in whose interest they are acting. This paradox should be scrutinized in order to design effective ways of protecting whistleblowers. This paper analyses the experiences of five South African whistleblowers in order to determine the extent to which South African whistleblowing policy & practice enables them to demonstrate their organisational citizenship.

2010S02753

Vaajala, Tiia S. & Koskela, Inka M. (University of Tampere, Tampere, Finland, 33014 [e-mail: tiia.vaajala@uta.fi]), **Contextual Knowledge and the Relevance of Action in the Control Rooms,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper, we will study how participants share & make explicit their contextual knowledge to build up joint actions & shared understanding in two types of control rooms: emergency call centre and air traffic control. Applying multimodal conversation analysis, we focus on the ways in which participants produce their local milieu & its changes recognizable so that the other can follow and make sense of the activities in progress. In the case of emergency calls the establishment of joint understanding of the participants is hindered by the fact that the communication between them is mediated. The participants have only limited access to each other's local activities during the conversation. In the ATC training instead shared understanding is tied to the epistemic configuration of the participants. If the trainee does not notice, recognize or understand relevant contextual resources necessary in controlling the traffic he/she will be instructed. The paper highlights the ways in which participants with different contextual framings establish a joint understanding in & through various communicative resources, including talk, prosody, the sequential progression of action, gestures, embodied orientation, material environment. The empirical data consist of 1) 100 emergency calls, and 2) 39 hours video data on ATC training.

Väänänen, Ari, Turtiainen, Jussi, Anttila, Erkko & Kivistö, Sirkku (Centre of Expertise for Work Organizations, Finnish Institute of Occupational Health, Topeliuksenkatu 41 a A, 00700 Helsinki, Finland [tel: +358 40 5824540; fax: +358 9 2413 496; e-mail: ari.vaananen@ttl.fi]), **Longing for Fit Employees and Workplaces: A Historical Sociological Analysis on the Occupational Health Debate,** *International Sociological Association, Gothenburg, Sweden,*

¶ This presentation discusses the historical shifts in the concepts of ideal employees & work organizations from the 1940s to the early 21th century. It particularly focuses on the growing role of psychological & "psychosocial" perspectives in the shaping of ideal workers & work organizations in the occupational health sciences & legislation related to occupational health & safety. It discusses how work stress & other concepts highlighting the importance of mental well-being have gradually gained more space in the debate on occupational health & well-being. Finland provides a unique national context for this study, as over the past 70 years the country has changed rapidly from an agricultural society, through industrialization, to a late modern information society characterized by high technology, a service sector, & flat democratic work organizations. As research material, the study uses occupational health & well-being literature published during this period. It also makes use of legal documents reflecting the main shifts & contradictions in the debate on ideal employees and ideal workplaces. The empirical data is discussed, for instance, from the perspective of emotionalization, feminization, and psychologization, which are closely embedded in the processes of modernization & democratization. As a whole, the Crafting the Ideal Employee project attempts to reconstruct how, over time, the work organizations, policy-making, & applied sciences related to occupational well-being have evolved toward ideals stressing mentally fit, ideal workers & work organizations, & at the same time, more rational, democratic ideals. It also examines the position into which employees have placed themselves in relation to these ideals when forming their subjectivity.

Vachya, L. & Nagarjuna, B. (Research Scholar, Dept. of Economics, University of Hyderabad, Research Scholar, Dept. of Economics, University of Hyderabad, Hyderabad, Andhra Pradesh, India- 500 046 [tel: 91-9963425217; e-mail: vasuhcu@gmail.com]), **Micro Finance and Poverty Eradication: A Case Study of Tribal Village in Andhra Pradesh,** *International Sociological Association, Gothenburg, Sweden,*

¶ Developing countries have large number of their population living in below poverty line. The percentage of people living below poverty line, though difference exist among countries amounts to about 40 percentage of the entire population of the developing world. Any progress without improving the lot of poverty-ridden sections of the world population cannot be considered as meaningful progress. Poverty alleviation is one of the primary objectives of any planning in a national economy. Therefore, it becomes imperative to formulate situation specific poverty alleviation policies and programmes for generation of a minimum level of income for rural poor, which form the substantial percentage of national population in developing societies. Thus in India, the central & state governments initiated several programmes to eradicate the poverty and providing micro finance is the important one. Moreover, this development activity is fully involved by SHG's (Self-Help Groups). Micro finance system can only supplement the role of banks and financial institutions to helping sole the problems of poverty and unemployment in the country. In this process the governments, Central & state governments have introduced several women specific schemes for empowering women in general & rural women in particular, but this programme is unique & succeeded some extent. It is important to note that this micro finance is SHGs is having significant impact in Andhra Pradesh, particularly women economic conditions, organizational structure & their literacy, etc. Moreover, The Government of Andhra Pradesh stated that it has taken up the theme of women's empowerment as one of the main agenda items to tackle rural poverty & socio-economic issues. Development agenda of the state in the last few years has been to place the poor. In this connection there is a need to study the impact of micro fiancé on rural women (SHGs), weather the benefits of this developmental programme has percolated down or not, particularly at micro level. Hence In this paper an attempt to assess the impact of micro finance on socio economic conditions of SHGs with reference to tribal, at micro level. It also examines the impact of this programme on structural change in rural villages. An intensive study was conducted in a tribal village of Andhra Pradesh to meet the study objectives.

Vaid, Divya (Lokniti, Centre for the Study of Developing Societies, 29 Rajpur Road, Delhi 110054 [e-mail: divya.vaid.09@gmail.com]), **Assortative Mating: Education, Class and Mobility in India,** *International Sociological Association, Gothenburg, Sweden,*

¶ Despite the question of "who marries whom" being considered a "fundamental building block in understanding social structure and social life" (Mare, 1991), little national-level empirical research in this area has been conducted in India. Research on the mobility of married women has shown a strong association between father's & husband's class in India; however, limited work has looked at the association between husband & wives' own occupations/social class & their level of education. The primary questions posed in the paper are: First, what are the patterns of educational & social class assortative mating in India? Second, has there been any change in these patterns in light of the increasing literacy & educational attainment of women? Third, as most marriages in India still take place within the

broader caste group, do people from particular castes & communities tend to be more homogomous (or hypergamous) than others with regard to education & social class? I use two data sources: The first is the newest round of the individual-level National Election Study dataset (NES 2009) with 36,508 respondents, & the second is the household-level National Family & Health Survey dataset (NFHS 2005-6) with 36,727 cases in its couples-recode file. These datasets jointly contain information on the education and occupation of both the respondent & their spouse, as well as information such as age, religion, caste of the respondent. I use log-linear models & a birth-cohort approach to analyse the questions posed & study any changes over-time.

Vainio, Annukka & Paloniemi, Riikka (University of Helsinki, Department of Social Psychology [e-mail: annukka.vainio@helsinki.fi]), **Global Climate Change and Environmental Action Interests of Citizens,** *International Sociological Association, Gothenburg, Sweden,*

¶ Generally, people's understandings of climate change motivate their willingness to act. However, individuals have other psychological barriers to their environmental action, such as materialistic values, uncertainty about the existence of climate change and mistrust towards scientists or government officials. In our study, we tested a model where the concepts of knowledge & competence, trust, & post-material values predicted environmental action interests of citizens. In Study 1, we tested young people's environmental political action interests in the municipal context. Data were collected by means of a survey of young people (ages 15a30) living in Finland (N=512). The research question was tested by a structural equation model, which showed that the combination of post-materialist values & political competence increased interest in environmental political action, & trust in political parties & NGOs was indirectly associated with interest in environmental political action. In Study 2, we tested the model established in Study 1 in the context of climate change on Eurobarometer 69.2 survey data of adult people living in Finland (N=1004). The results help political authorities to develop policies to encourage people's participation in environmental politics & increase their inner motivation to take responsibility in local & global environmental problems.

Valantiejus, Algimantas (Vilnius University, Vilnius, Lithuania [e-mail: Algimantas.Valantiejus@fsf.vu.lt]), **Lessons For and From the History of Social Theory: Experiencing the Global-Local Interaction,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper attempts to explore the ambivalent relations between the "local" & "global" trends in sociology by specifying both the theoretical & the institutional problems of its contemporary development. The paper discusses the relevance of the relatively new conceptual ideas of "post-modern social theory", "public sociology", & "global sociology" for the contemporary theoretical discussions, especially those concerned with the reorganization of the contemporary division of labour between the well-established "theoretical centers" & subordinated "sociological peripheries." The argument is that the highlighting and criticizing of particular aspects relevant to the intellectual and institutional histories of indigenous sociologies allows a better understanding of the potentially inclusive project of global sociology. For this reason, an organizational agenda to enhance global examples of sociological communication must be based on a critical analysis of both the contemporary & the previous local/global experiences, including the three a professional, institutional, public a spheres.

2010S02759

Valdiviezo, Rene (Universidad Autonoma de Puebla, 4 Sur No. 104 Col. Centro Puebla, Pue. Mexico 72000 [tel: 52+222 2466484; fax: 52+222 2466484; e-mail: cs001240@siu.buap.mx]), **Mexico: Political Parties, Religión and Local Elections,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper analyzes the relation between the votes obtained by the three major political parties in Mexico (PRI, PAN & PRD) & the presence of Catholic Christians & Non-catholic Christians in the 31 states of the country. The paper only studies the elections for governor in every single state & the strength of the religious groups, in order to establish hypotheses about the influence of these groups in the results of the local elections. The paper uses information about the general results of the elections for governor in the 31 states of the country (Mexico City is not studied) and the official information about the religious groups & the presence in each entity.

2010S02760

Valeeva, Rania & Bracké, Piet (PhD candidate in Sociology at Ghent U, Belgium), **The Differences in Mobilization of Health Strategies: Do Personal Education, Generalized Trust, and the Types of Welfare States Contribute?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The study question is whether personal education, generalized trust, and the types of welfare states contribute to the differences in the mobilization of health strategies. We employed a subsample of the European Social Survey 2004 (N =25909) of 14 West-European countries characterized as long-standing members of the European Union (Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Luxembourg, the Netherlands, Portugal, Spain, Sweden, and the United Kingdom). The mean response rate was 61.3%. Hierarchical multilevel linear models were estimated using MLwiN package. *The mobilization of health strategies* was measured on the basis of the answers on four questions in the form of vignettes, each briefly describing a common health problem: a very sore throat, a serious headache, serious sleeping problems, and a serious backache. This variable indicates how frequently the respondent decided to utilize resources, such as informal, pharmaceutical, formal, alternative or others. *Personal education* was measured by a question about the number of years of completed formal full-time education. *Generalized trust* or the trust in generalized others, was measured on the basis of the answers on the questions on trust, fair and help. These questions were analyzed by using principal component analyses, which has provided the one factor solution, and it was used in the analyses. *The types of welfare states,* which reflect different welfare services and social security programs and policies, were measured in accordance with the typology of Ferrera (Ferrera, 1996). The results indicate that less educated persons are likely to mobilize more often the health strategies. Moreover, we found that persons with less years of education are likely to be less trusting in generalized others than those with more years of education. However, trusting in generalized others turned out to have no influence on the mobilization of health strategies. *Key words:* mobilization of health strategies, personal education, generalized trust, the types of welfare states, welfare state typology of Ferrera.

2010S02761

Valeeva, Rania & Bracke, Piet (PhD candidate in Sociology at Ghent U, Belgium), **Trying to Understand the Differences in Subjective Well-Being: The Role of Personal Education, Mobilization of Health Strategies, and the Types of Welfare States,** *International Sociological Association, Gothenburg, Sweden,*

¶ Empirical research reports the differences in subjective well-being both at the individual and country level. The study question is whether personal education, mobilization of preventive resources, and the types of welfare states contribute to those differences. Our starting point is that humans have a capacity to develop skills and resources, from which we derived our hypotheses on individual, country and cross levels. We employed a subsample of the European Social Survey 2004 (N =25909) of 14 West-European countries characterized as long-standing members of the European Union (Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Luxembourg, the Netherlands, Portugal, Spain, Sweden, and the United Kingdom). The mean response rate was 61.3%. Hierarchical multilevel linear models were estimated using MLwiN package. *The subjective well-being* was represented by happiness and life satisfaction, each of them an outcome variable in our study. They were measured on basis of the answers on questions about personal happiness and life satisfaction on a ten-score scale. *The mobilization of health strategies* was measured on the basis of the answers on four questions in the form of vignettes, each briefly describing a common health problem: a very sore throat, a serious headache, serious sleeping problems, and a serious backache. This variable indicates how frequently the respondent decided to utilize resources, such as informal, pharmaceutical, formal, alternative or others. *Personal education* was measured by a question about the number of years of completed formal full-time education. *The types of welfare states,* which reflect different welfare services and social security programs and policies, were measured in accordance with the typology of Ferrera (Ferrera, 1996). The results indicate that less educated persons are likely to be less happy and satisfied in life, than those who are more educated. They are also more likely to mobilize health strategies than those with more years of education. The results indicate that subjective well-being is influenced by the welfare state type of a country where people live. Finally, the effect of personal education on subjective well-being differs between the types of welfare states. *Key words:* subjective well-being, mobilization of health strategies, personal education, the types of welfare states, welfare state typology of Ferrera.

Valentova, Marie & Berzosa, Guayarmina (CEPS/INSTEAD, Differdange, Luxembourg, L-4501 [tel: 00352/585855458; e-mail: marie.valentova@ceps.lu]), **Indicators of Attitudes Toward Integration of Immigrants. A Comparative Study of Natives, Second Generation Immigrants and Foreign-Born Residents in Luxembourg,** *International Sociological Association, Gothenburg, Sweden,*

¶ The present paper uses the EVS data from 1999 & 2008 & analyses attitudes toward integration of immigrants in Luxembourg, a country with the largest proportion of immigrants in the population in the EU. The analyses are conducted in two steps. In the first step, we explore a battery of items concerning integration & construct two composite indicators that measure how residents of the country perceive integration of immigrants, or more precisely, what are the main preconditions for immigrants to be considered as integrated: multicultural & assimilation approach toward integration. We assess the overtime & between groups equivalence of these indicators; i.e. we test for the group invariance between 1999 and 2008 & among three groups of residents with different migratory background (natives, first & second generation immigrants) In the second step, we apply the proposed measurements & examine whether Luxembourg residents with different migratory backgrounds apprehend integration of immigrants in the same way; whether their perceptions have changed over time; & whether it evolved more in direction of assimilation or multiculturalism. The proposed indicators of attitudes toward integration & conducted analyses may provide a useful feedback to policy-makers & researches formulating, implementing or evaluating integration policies and have a potential to be used in a cross-country comparative research.

Valeriu, Frunzaru & Loredana, Ivan (SNSPA, 6-8 Povernei, Bucharest, 010641 [tel: +40213180881; fax: +40213117148; e-mail: valeriu.frunzaru@comunicare.ro]), **Dancing Tango in Bucharest. A Way to Express Yourself in Leisure Time,** *International Sociological Association, Gothenburg, Sweden,*

¶ A new community has developed in Bucharest in the past years a a tango community. People aged especially 25-35, with higher education studies, have been taking Argentinean tango lessons in Bucharest & around the world. They have attended tango seminars in Europe & Argentina, have learnt the tango language & have spent together important festive days: birthday, New Year's Day, Women's Day, Valentine's Day, etc. For many of them almost all of their leisure time is dedicated to tango. The questions are: why do they spend so much for tango, what kind of people are they, how has this community developed, & what is the role of globalisation in this social phenomenon? To answer these questions, we have conducted semi-structured interviews with tango community members. The outcomes of the research underline, on the one hand, the fact that tango community meets social & emotional needs, & on the other hand, the important role taken by the globalisation in spreading the Argentinean tango. After the fall of the communist regime, Romanians have discovered the consumerism, but some of them want more, they want spiritual satisfaction & to be part of a community that satisfies their belongingness needs.

Valgaeren, Elke M.C. (Hasselt.University, Diepenbeek, Belgium, 3590 [tel: +32 11 268659; e-mail: elke.valgaeren@uhasselt.be]), **Equal Opportunities and Subjective Well-Being in Flanders: Explaining Life Satisfaction in Various Domains of Life by Making Use of Indicators of Perceived Equal Opportunities,** *International Sociological Association, Gothenburg, Sweden,*

¶ The use of subjective indicators to measure the quality of life in societies has a long-standing tradition (Veenhoven, 2002). Indicators of satisfaction have been used to capture the quality of life (Noll, 2002; Veenhoven, 1996) in general or in specific domains of life such as work or health (Cummins, 1996). Different objective & subjective correlates of satisfaction with life have been studied. In their overview of studies on life satisfaction Bowling & Windsor (2001) mention objective variables such as income, sex or occupation & subjective variables such as perceived feelings of autonomy, social support & the importance attached to different domains of life that have an influence on satisfaction. For example, there appears to be a negative relation between aspirations & life satisfaction (Nickerson, 2007). This paper contributes to the literature on the relationship between subjective variables & life satisfaction by using perceived equal opportunities as an additional determinant of the satisfaction with different domains of life: does the evaluation of the opportunities a person has got in life, influence his or her satisfaction with life? In the current literature on quality of life in general and the subjective determinants of life satisfaction in particular little can be found on equal opportunities. Noll (2002) points to the fact that issues of social cohesion have been rather neglected within mainstream quality of life research. One dimension of social cohesion is the reduction of disparities, inequalities, fragmentations & cleavages in a society. Equal opportunities are a central value in liberal welfare states & could also be regarded as an element of social cohesion. Some authors refer to societal indicators. Veenhoven (1996) discusses social-opportunity structures in relation to life satisfaction, but in this respect he refers to objective indicators on an aggregate & individual level. In a comparative study on life satisfaction, Böhnke (2008) includes the perception of the quality of society by individuals as a predictor of life satisfaction, but she uses the trust in social systems & in other people, the perception of tensions between groups & the quality of public services. These indicators do not capture the impact of the societal structures on individuals as is the case for perceived equal opportunities. The purpose of this paper is to use both objective indicators and perceived equal opportunities in different domains of life to explain the satisfaction in these domains of life. Seven domains of life are included in the study: education, paid work, relations, leisure, health, material welfare & personal development. 1-46.

Van Aerschot, Marjan (Steunpunt Gelijkekansenbeleid, Universiteit Hasselt, Agoralaan Gebouw D, 3590 Diepenbeek, Belgium [tel: +32 11 268665; e-mail: marjan.vanaerschot@uhasselt.be]), **Self-Employed Women and Maternity Leave in Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ Previous research on the combination of work & private life, and more specific maternity leave, is mainly focused on employees or on organisations. Self-employed persons find themselves in a special position: they are confronted both with the organisational demands (how can I assure the continuity of my organisation when I am not available) & the individual constraints (how can I spend time with my family without neglecting my work?). The coincidence of being one's own employer & one's own employee has advantages and disadvantages. The freedom to organise the work according to one's own preferences & needs interacts with the responsibility to make the organisation work. In our paper we would like to present the results of our research on self-employed women & maternity leave in 15 countries of the European Union. To start we will state the main differences in work characteristics between self-employed people & employees. These characteristics have consequences on the level of protection they receive from social security systems, including maternity leave. We elaborate on this special situation of self-employed young mothers & the way they try to combine their responsibilities in their job & their responsibilities concerning their young baby. Further on we give an overview of the government arrangements for maternity leave in 15 countries in Europe that self-employed women have access to. Our main question is: do self-employed women conceive government help to combine their formal work & family life through maternity leave programs? The countries involved in this study are: Belgium, Denmark, Germany, Finland, France, Greece, United Kingdom, Ireland, Italy, Luxembourg, The Netherlands, Portugal, Austria, Spain & Sweden.

van Bottenburg, Maarten, de Bosscher, Veerle & Shibli, Simon (Utrecht School of Governance, Utrecht University, Bijlhouwerstraat 6 [tel: 3511ZC; e-mail: m.vanbottenburg@uu.nl]), **In-Between Formal and Informal Governance. Redistributing the**

Money in a Democratically-Governed Network of National Sport Organizations, *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ Inspired by theoretical notions of informal & multi-level governance, this paper analyses the ways in which NOC-NSF (the Dutch Olympic Committee & Sports Federation) tries to mobilize a majority to give priority to minority interests in a democratically-governed network of national sport organizations. It builds on two case studies of discussion & negotiation processes initiated by NOC-NSF to radically redistribute governmental, Lottery & sponsorship money to its affiliated sport organizations. The first case study concerns the attempts of NOC-NSF to focus elite sport policy on priority sports & develop a new governance structure to coordinate this. The second case study examines its attempts to redefine the position & role of national sport organizations with respect to 'sport for all' in the Netherlands & to base financial support for these organizations on their contribution to the strategic agenda of NOC-NSF. The paper draws upon empirical data gathered from one year participatory observations of two expert groups set up by NOC-NSF to streamline the processes under study; interviews with key persons in these processes; & a documentation study of primary & secondary sources to cast light on the structural roots of these processes. The paper argues that in these processes, fluid, ad hoc, and problem-focused networks are created with a certain degree of autonomy, to allow for more flexibility, openness, dynamism and innovation. These networks operate "in-between" the informal practices & the formal structures of consultation and decision-making & as such become influential new governance structures with less-clearly defined roles & accountabilities.

Van Bouwel, Jeroen (Ghent University, Blandijnberg 2, 9000 Gent, Belgium [e-mail: Jeroen.VanBouwel@UGent.be]), **Consensus in Social Science and Society: The Relevance of Chantal Mouffe's Agonistic Pluralism for Sociological Theory,** *International Sociological Association, Gothenburg, Sweden,*

¶ In sociological theory, one longstanding debate concerns consensus and conflict, often exemplified by contrasting Durkheim (or Parsons) as a consensus viewpoint on society with Marx as conflict viewpoint (e.g., Giddens, 1993: 721). In this paper, I want to advocate the relevance of the work of political philosopher Chantal Mouffe to elucidate the idea & problems with consensus as well as take the debate one step further & shift to a debate on meta-consensus. Intuitively the meta-consensus can be understood as the (minimum) common ground or the shared framework which accommodates the plurality of perspectives & conflicts in society. A more exact formulation of the meta-consensus results however in a variety of accounts (compare e.g. Rawls, 1993; Mouffe, 2005; Dryzek and Niemeyer, 2006). Where the discussion between consensus theorists and conflict theorists has often been characterised as theorists simply talking past each other the debate on meta-consensus does not seem to be that easily solved. I will present different accounts elaborated in political philosophy & democratic theory, and especially advocate Chantal Mouffe's version of the meta-consensus. Mouffe's understanding of (meta-)consensus and pluralism can help us to elucidate & advance the concept both in the sociology of science (cf. Van Bouwel, 2009) & in sociological theory. References Dryzek, J. S. & S. Niemeyer (2006) "Reconciling Pluralism & Consensus as Political Ideals." American Journal of Political Science 50(3), 634-649. Giddens, A (1993). Sociology. London: Polity Press. Mouffe, Ch. (1999) "Deliberative Democracy or Agonistic Pluralism?" Social Research 66, 745-758. Mouffe, Ch. (2005) On the Political. London: Routledge. Rawls, J. Van Craen, Maarten (Hasselt University, Diepenbeek, Belgium, 3590 [tel: 0032 11 26 86 73; fax: 0032 11 26 86 79; e-mail: maarten.vancraen@uhasselt.be]), **Determinants of Ethnic Minority Confidence in the Police: Three Theoretical Frameworks Tested in Belgium,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper we test what contribution (aspects of) the social capital theory, the performance theory & the procedural justice-based model can make towards explaining ethnic minorities' (low) confidence in the police. The central question is what determining factors account for their (low) level of confidence in the police. To answer this question, we conduct regression analysis of quantitative data collected from minority group members living in Belgium (456 face-to-face interviews). The results make clear that an explanation of the confidence that ethnic minorities place in the police must give a prominent place to feelings of insecurity and perceptions of discrimination.

van de Maat, Jannine (Institute of Political Science, Leiden University, Leiden, the Netherlands, 2333 AK [tel: +31 (0)71 5277960; e-mail: maatjvande@fsw.leidenuniv.nl]), **Public Opinion Without Opinions?,** *International Sociological Association, Gothenburg, Sweden,*

¶ It remains an open question as to whether the individual opinions that polls collect do have any meaning of substantive content. One particular gap in the literature is whether public opinion, as measured by mass opinion polls, is as robust as it is often assumed to be, or whether it is (partially) created by the ways in which the questions are asked & the response alternatives offered. Although the final & conclusive answer as to all response effects is not available yet, this paper contributes to this debate by addressing the question: how does the use of filter questions affect the outcome of an opinion poll? On the basis of a split-ballot experiment in the Netherlands with two questionnaires which only differ in the (none) inclusion of filter questions, one can conclude that the effect of filter questions is more substantial the less the topic of the question is well-known to and relevant for the individual respondent. Furthermore, in general the level of non-response is significantly higher when filter questions are used in comparison to a standard survey design, although the exact levels differ per issue area.

van de Ruit, Catherine (Sociology, University of Pennsylvania, 3718 Locust Walk, McNeil Building Ste 112, Philadelphia PA 19104, USA [e-mail: catheri4@sas.upenn.edu]), **Reframing Struggle: Children's Rights Activism in Post Apartheid South Africa,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper considers the historical continuities & contradictions embedded in the extension of socioeconomic rights to children in South Africa during the 1990s & 2000s. After apartheid, the scale of poverty & inequality, together with the social disruption of family & kin groups placed child rights at the center of South African constitutional & public policy reform. However the AIDS pandemic & its likely implications for children brought new dilemmas & policy considerations to the forefront. One of the critical debates concerned the definition of the category "AIDS orphan" & the socioeconomic entitlements that persons so categorized could access. Over the course of a two year archival and ethnographic study in South Africa from August 2007 to June 2009, I observed conflicting initiatives embedded in NGO activism: NGOs created an environment to support progressive children's policy reform, & yet NGO practices have advanced neoliberal approaches to welfare & heath care service delivery. Building on emerging work in the sociology of human rights, I contend that NGOs create 'private' spaces that advance human rights policy as well as produce new privatized forms of service delivery that arguably work against human rights goals.

Van den Bulck, Hilde & Panis, Koen (University of Antwerp, Department of Communication Studies, Belgium [tel: +32 3 265 55 62; e-mail: koen.panis@ua.ac.be]), **When Fame Meets Non-Profit: Flemish Non-Profit Organisations' Views and Motivations Regarding Celebrity Endorsers,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper wishes to provide insight into the motivations of non-profit organisations to engage with celebrities. Framed in broader social trends such as the commercialisation of the non-profit sector, we look at the different roles of a celebrity activist & the advantages & disadvantages for both the organisation & the celebrity as identified in academic literature. These theoretical observations are tested empirically trough in-depth interviews with communication managers of eight non-profit organisations in Flanders (the Dutch speaking part of Belgium). Three specific research questions are addressed: What are considered the main benefits & pitfalls of using celebrity endorsers? Which criteria are taken into account when selecting a celebrity? What is considered the ideal role for a celebrity? Results show that Flemish celebrities are mainly used to reach the general public rather than policy makers. Smaller, lesser known organisations seem to value the usefulness of celebrity endorsers more than larger, better known organisations. Concerns involve the right balance between using "entertainment" techniques and getting the message across. In choosing

the "right" celebrity, the most important considerations are the match between the personality & the organisation's core values, the absence of controversy surrounding the celebrity & no connections with other non-profit organisations.

Van Der Bly, Martha C.E. (London School of Economics; Centre for the Study of Global Governance, Houghton Street, London WC1 [tel: 0044-7535965149; fax:; e-mail: marthavanderbly@gmail.com]), **Romantic Globalization–New Directions for Globalization after the Crisis,** *International Sociological Association, Gothenburg, Sweden,*

¶ The logic of globalization was often thought to follow the logic of the dominant paradigm of the era that witnessed its emergence. In this paper, I suggest making a distinction between rational, or "Classical Globalization", as we know it, with my novel concept of "Romantic Globalization." Based on research set in a 'global village' & on a 'global island' in Ireland, I describe the dissolution of rationalized globalization, with its intrinsic normative connotations, setting of uniform standards and plasticity of cultural forms into "romantic globalization", moulded by spirit–Weltgeist–& driven by both a search for unity & the desire to cross borders. In a world, struggling with the troubles of cultural polarization & uniformity & the now very obvious irrationalities of rationalism, romantic globalization shows the rationality of irrationality: for it is in the context of autonomy & love that innovation comes into being & that mankind realizes itself. In this paper, I argue that Romantic Globalization can set the post-crisis agenda with the creation of an interconnected yet diversified world society, as an innovation from the periphery. A vision made by villagers & islanders alike.

van der Schans, J. W., Wiskerke, J. S. C., Derkzen, P. H. M. & Bock, B. B. (Rural Sociology Group Wageningen University, Postbus 8130, 6700 EW Wageningen [tel: 00 31 70 3358206; e-mail: jan-willem.vanderschans@wur.nl]), **How to Feed the City? Competing Paradigms in Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ Like many international public bodies, national governments & NGOs the United Nation's Food & Agriculture Organization (FAO) is concerned about the social, economic, ecological & health consequences of the concentration of the world's population in and around large cities. The FAO writes: "The food dimension of poverty in urban areas still has not been translated into sufficient policy action in many countries. A paradigm shift in both urban & agriculture development, planning & policy formulation is required in order to ensure access to urban food security, improved environmental management & enhanced rural-urban linkages" (emphasis added). However, the question is what the FAO has in mind while speaking of a "paradigm shift". The word "paradigm" is a highly deflated nowadays; it indicates radical change but it can leave the starting position of this change unquestioned. This paper will explore the different ideas and models which are proposed for this "paradigmatic shift" towards the development of urban & regional modes of food provision. We will examine on what kind of values and sustainability promises different models for urban & peri-urban food production are based. For example, how radically different are models towards metropolitan agriculture from the current industrialization of food production? We argue that a real paradigmatic shift is based in changing values rather than in new technical configurations based on prevailing routines. Will we try to feed the city or to nourish the city?

van Dijk, Tara, Martinez, Javier & Sridharan, N. (Amsterdam Institute of Metropolitan and International Development Studies, University of Amsterdam, Nieuwe Prinsengracht 130, Amsterdam, 1018VZ [tel: ++31-0205255820; fax: ++31-020-525-5822; e-mail: t.k.vandijk@uva.nl]), **IT and Municipal Governance in India: Spectacle or Mechanism for 'Good' Governance?,** *International Sociological Association, Gothenburg, Sweden,*

¶ IT is widely believed to facilitate "good" urban governance. However, fieldwork in Indian municipalities shows that it has yet to meaningfully increase revenues, accountability or work-place efficiency. The classification systems required to digitize and quantify governance processes can exclude or adversely include the urban poor. Particular focus is put upon the e-governance complaints system & the determination of its below-poverty-line households to illustrate how attempts to modernize, depoliticize, and render transparent issues of service provision & access to entitlement programs can in practice further marginalize the urban poor. Additionally, the type of municipal employees & citizens implied by the shift to e-governance is compared to the heterogeneity of staff & citizens present.

2010S02776

van Dijkum, Cor (Department of Methodology and Statistics, Utrecht University, Heidelberglaan 1, Utrecht, 3508TC, The Netherlands [e-mail: c.j.vandijkum@uu.nl]), **Reflections on the Complexity of Feedback Processes by Using Computers,** *International Sociological Association, Gothenburg, Sweden,*

¶ It was only in recent decades that the social sciences became aware that feedback plays an important role in the phenomena they study. Thereby it was realized that feedback functioned in a system. Moreover it was understood that most of the time the feedback was non-linear & that one deals with complex systems. To study such systems one needs a different methodology than the standard static methods of describing & analyzing phenomena. An adequate method of representing such feedback cycles is found in simulation models, particularly simulation models such as the ones developed in dynamic systems theory. That introduces the computer & included software as instruments of research & poses the question of how this instrument initiates new ways of getting knowledge. To explore this we made a start with empirical research using such simulation models for problems in social care for youth, autobiographical memory & in the medical field about the way patients cope with their complaints and the way they communicate about those complaints with a General Practitioner. In this paper we discuss how such research by using computers bring new knowledge & a new way to reflect on the complexity of feedback processes.

Van Houtte, Mieke & Van Maele, Dimitri (Ghent University, Korte Meer 3-5 [tel: +32(0)92646802; fax: +32(0)92646975; e-mail: Mieke.VanHoutte@UGent.be]), **Students' Sense of Belonging in Technical/Vocational Schools Versus Academic Schools: The Mediating Role of Faculty Trust in Students,** *International Sociological Association, Gothenburg, Sweden,*

¶ The large-scale research into the consequences of educational stratification has dealt with several educational outcomes, but has seldom considered outcomes pertaining to the well-being of students. However, ethnographic case studies show that lower track students often get alienated from school, resulting in study disengagement & poor achievement. Moreover, it has been demonstrated that teachers associate in a more negative way with students in lower tracks. Subjects are treated in a less interesting & challenging way & discipline & control are stressed more. Teachers in technical/vocational schools show to trust their students less. By means of multilevel analyses (HLM6) on data of 3475 students & 754 teachers in 28 technical/vocational schools & 3376 students & 461 teachers in 22 academic schools, this study examines Flemish students' sense of belonging in the different secondary school types & the role faculty trust in students plays herein. The results show that students in technical/vocational schools have a significant lower sense of belonging at school than students in academic schools. This association holds controlling for several school features–size, sector, ethnic composition–and student features–gender, age, socioeconomic status, migrant origin, parental support & prior achievement, but decreases firmly and gets non-significant when taking into account faculty trust in students. Our findings indicate that teachers fulfill a crucial role in the divergent nature of students' social integration across different types of schools.

2010S02778

van Krieken, Robert (School of Sociology, University College Dublin, Belfield Dublin 4, Ireland [tel: +353-833559965; e-mail: Robert.vankrieken@ucd.ie]), **The Celebrity Society: Taking Paris Hilton Seriously,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper sketches some elements of a sociological approach to celebrity as a particular, constantly changing, social form, characterized by a specific social grammar of esteem and recognition. The core concept in the more analytical studies of celebrity is "celebrity culture", but in this paper I argue for the concept of "celebrity society", in order to capture the specific institutional forms & modes of structuring both social relationships & the performative sense of self (Goffman) characterizing modern social life, with celebrities functioning as "nodes" of concentrated symbolic capital within a distinct field and political economy of celebrity. The analysis draws on Elias's account of court society, outlining the ways in which celebrity society should be been as its descendant, as well as exam-

ining the implications of "synopticism" & the rise of the "viewer society" (Matheison), with "the many watching the few" for the analysis of power.

2010S02779

Van Lancker, Wim (Herman Deleeck Centre for Social Policy, University of Antwerp, Sint Jacobstraat 2, 2000 Antwerp, Belgium [e-mail: Wim.VanLancker@ua.ac.be]), **The "Have-Nots" in a Flexible Society: An Analysis of the Poverty Risk Associated with Temporary Work for Low Skilled Women in the European Union,** *International Sociological Association, Gothenburg, Sweden,*

¶ In recent years, European labour markets have witnessed a proliferation of temporary employment. Temporary contracts are seen as a way to increase labour market flexibility & allow employers to circumvent the often strict hiring & firing regulations. However, temporary contracts are also associated with low wages and little security & often seen as "dead ends" for employees. As to date, very little attention has been devoted to the impact of working with temporary contracts on income protection for different vulnerable groups in the labour market. Therefore, the main aim of this paper is to analyze the poverty risk associated with temporary work in the "flexible labour markets" of European Union's member states, for men & women with different educational levels. Using recent survey data (EU-SILC 2007), we compare the position of low skilled women vis-à-vis their higher skilled counterparts and evenly skilled men. It is hypothesized that the low skilled will be overrepresented in flexible working arrangements, that such arrangements will lead to a higher poverty risk & that especially low skilled women will be worse off than low skilled men thus pointing to a gender dimension. Next to this, we expect to find differences between countries, irrespective of the different composition of the workforce or individual or household characteristics. A more general aim is to identify good practices, i.e. countries where low skilled female tempworkers are sufficiently protected against poverty, & to initiate further research into the "how & why" of these cross-country differences.

2010S02780

Van Maele, Dimitri & Van Houtte, Mieke (Ghent University, Department of Sociology, Korte Meer 3-5, 9000 Gent, Belgium [tel: +3292649190; e-mail: dimitri.vanmaele@ugent.be]), **The Role of a Homogeneous Staff Culture in the Formation of Collegial Trust,** *International Sociological Association, Gothenburg, Sweden,*

¶ Educational research increasingly acknowledges the establishment of professional learning communities as a key factor of schools' effectiveness. Accordingly, the formation of within-school social capital, in particular the creation of trusting relationships among teachers, becomes an important aspect of schools' policies. Large-scale research investigating the impact of the organizational school context on teacher trust relations is negligible however. Moreover, it is unclear if a homogeneous staff culture a in terms of the degree to which teachers share assumptions about students' teachability a induce collegial trust. By means of stepwise multilevel analyses on data of 2104 teachers across a representative sample of 84 Flemish secondary schools, this study examines collegial trust across different school contexts & the role a homogeneous staff culture plays herein. The results, controlling for teacher characteristics, show that collegial trust is lower in public than in private (catholic) schools & quite worrisome in schools where ethnic minority & working class students are concentrated. The latter association, however, disappears & gets nonsignificant when taking into account the homogeneity of staff culture. Our findings indicate that the school context affects collegial trust, & that divergent views of teachers on the students' teachability explains the low levels of collegial trust within low socioeconomic schools. School leaders and teachers should be aware of how structural, compositional, and cultural school characteristics relate to the nature of collegial trust in secondary education.

2010S02781

Van Mol, Christof (Centre for Migration and Intercultural Studies (CeMIS, Universiteit Antwerpen), Prinsstraat 13, Antwerpen, 2018 [tel: +322655953; e-mail: Christof.VanMol@ua.ac.be]), **From EU-Identification Towards a Wider European Identity. The Influence of European Student Mobility on European identity,** *International Sociological Association, Gothenburg, Sweden,*

¶ European student mobility increased significantly over the last decades in a contemporary Europe characterised by the free movement of persons, goods, & capital. Two rationales underpinned the European mobility programmes, namely an economic & a civic one. The civic rationale aimed to create European citizens through the exposure of students to an international a European a context. However, research on this identity feeling among European students remains very limited. In this paper, the author presents some findings of his research project into the influence of European student mobility in a European context on European identity and subsequent migration intentions, combining quantitative and qualitative research methods. For the quantitative part of his study, he collected data through an online-questionnaire at 28 universities in 21 European countries, with both mobile and non-mobile students (for comparative purposes). For the qualitative part of his study, in-depth interviews were conducted with students in Austria, Belgium, Ireland, Italy, Norway, & Poland. The research findings suggest that mobile students already dispose of a European identity feeling before going abroad, which is mainly characterised by a political identification with the European Union. Interestingly, after returning from their stay abroad, a shift was observed from this political identification with the European Union towards a more cultural, wider European identity.

Van Sterkenburg, Jacco (Utrecht University, Janskerkhof 13, 3512 BL Utrecht, Netherlands [tel: 0031-6-23616495; e-mail: j.c.vansterkenburg@uu.nl]), **Racial/Ethnic 'Others' in Dutch Televised Soccer Commentary,** *International Sociological Association, Gothenburg, Sweden,*

¶ International migration of professional athletes increasingly brings together people from a great variety of racial & ethnic backgrounds in various professional sports. The sport media provide us with implicit & often hidden discourses about the race and ethnicity of these athletes. In this paper I discuss the results of a qualitative content analysis that uses insights from grounded theory to illustrate how Dutch televised football commentary reproduces & challenges hegemonic discourses about race/ethnicity. My findings suggest that twenty-first century Dutch soccer commentary displays a number of dominant racialized/ethnicized themes that resonate with colonial discourses and are (partially) congruent with racialized/ethnicized sport media representations found in other contexts. More specifically, my findings suggest that "Surinamese" & "Latin-American" soccer players were (re)constructed as the "Other" in Dutch soccer commentary. Studying representation of race & ethnicity in this way has not been done before & will contribute to a better understanding of how race & ethnicity are socially constructed through popular media culture. Findings will be discussed in a broader historical & internationally comparative perspective.

Vancea, Mihaela (Internet Interdisciplinary Institute, Open University of Catalonia, Castelldefels (Barcelona), Spain, Parc Mediterrani de la Tecnologia, 08860 [tel: +34 635921873; e-mail: mvancea@uoc.edu]), **Transnational Political Engagement: A Comparative Study of Immigrant Associations in Barcelona,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper addresses two fundamental questions in the transnational migration research field: whether or not all immigrants engage in political transnationalism? And which are the main determinants of their transnational political activism? To answer the first research question, I specifically compare different degrees of transnational political engagement of various national/ethnic origin immigrant associations in Barcelona. To answer the second research question, I focus on meso- & macro- levels determinants. The study shows that transnational political engagement is not generalised among all immigrant associations in Barcelona, presents a relatively low level of regularity, & is generally nationally based. It also underlines the importance of studying the effect of the exit context and, in particular, of the political opportunity structure in home country on the political transnationalism of immigrant associations. Meso-level determinants like social networks & sources of funds also seem to explain the variance in immigrant associations' transnational political engagement.

Vancluysen, Kris, Van Craen, Maarten & Ackaert, Johan (Hasselt University (SEIN), Policy Research Centre on Equal Opportunities, Agoralaan, Gebouw D, 3590 Diepenbeek, Belgium [tel: +32 11 268673; e-mail: kris.vancluysen@uhasselt.be]), **Perceived Discrimination and Integration: The Case of Moroccan and Turkish Minorities in Flemish Belgium,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the relation between perceived discrimination and integration among persons of Moroccan & Turkish descent living in Flemish Belgium. Two opposing theories exist concerning this relationship. The assimilation theory (Gordon, 1964) posits that the more ethnic-

cultural minorities are integrated into the country of residence, the less discrimination they perceive. The ethnic competition theory (Portes, Parker & Cobas, 1980) proposes the opposite: the more ethnic-cultural minorities integrate, the greater their perception of unequal treatment. The two competing theories are tested quantitatively by regressing perceived personal discrimination & perceived discrimination of the ethnic-cultural group on a number of structural & social-cultural integration indicators & a series of background characteristics. Data are used from the Survey Integration 2008, a representative face-to-face survey in three multicultural cities (Antwerp, Genk and Ghent) designed by the Policy Research Centre on Equal Opportunities. Analyses show a mixed pattern of findings. Social-cultural integration appears to be negatively associated with perceiving group discrimination, thus supporting the assimilation theory. With respect to structural integration, the findings are more ambiguous. A high occupational level goes together with perceiving more personal discrimination. A prosperous financial situation, on the contrary, is related to less experiences of personal & group discrimination.

Vanderstraeten, Raf (Department of Sociology, Ghent University, Ghent, Belgium [e-mail: raf.vanderstraeten@ugent.be]), **Trivialization, Socialization, and Education,** *International Sociological Association, Gothenburg, Sweden,*

¶ Sociologists employ the concept of socialization to analyze relationships between individual & society. This concept & that of education typically indicate that individuals have to interiorize the values, norms, & knowledge forms on which the continuance of society depends. This classic meaning is questioned here, tracing the consequences of a hypothesis formulated by Heinz von Foerster: the more an element of a system acts "trivially" (i.e., predictably), the weaker its influence on the global behavior of the system. As von Foerster stated it metaphorically, individuals who act trivially will feel more alienated, because they will not recognize themselves in their group's activities. Inversely, individuals have a greater impact on the group, & are less alienated, the more they act nontrivially, in the sense of non-deterministically. Perspectives for a reconsideration of the concepts of socialization & education are outlined by elaborating on two consequences of this hypothesis. (1) Relations between the values that guide an individual's activities & the social values that socialization & education are expected to transmit to assure individual & social well-being do not have to be simple and rigid; differences in this regard account for processes of social evolution. (2) The particular lay-out of classrooms (one teacher, several pupils) with their apparatus of tests seems to provoke a trivialization of individuals; but one might also suspect that this constellation invites deviant activities of pupils who oppose the processes of trivialization (youth cultures). Intentional socialization creates its own side-effects.

Vanneste, Damien (Catholic University of Mons, Mons, Belgium [e-mail: damien.vanneste@fucam.ac.be]), **How do Urban Policies Avoid Conflicts? A Localism Responses,** *International Sociological Association, Gothenburg, Sweden,*

¶ If cities are largely considered as places of heterogeneity and conflicts, small towns are often read from the opposite side, characterized by the myths of unity & peace. Yet, American studies of local communities have pointed out that in some contexts conflicts are neglected in order to legitimate unequal social orders. Following this perspective, we focus our paper on political life in small towns & show how localism manages to survive today by mitigating the emergence of conflicts. Upon two case studies (on Belgian towns), we bring to light ways of making invisible on the political scene the possible urban conflicts: uphill, by preventing them; downhill, by muffling them. In both cases, it consists in restricting any conflict within the strictly political sphere while social life is read in a consensual way. This phenomenon seems to be a way of achieving some social functions of the traditional "political machine": personalization of the social system and/or exchange of services. Since localism as "clientelistic" regulation is no more legitimate, we argue that these ways of avoiding conflicts manage to achieve, either in an institutionalized way, or secretly, the classical goals of localism.

2010S02787

Vanneste, Damien (Catholic University of Mons, Mons, Belgium [e-mail: damien.vanneste@fucam.ac.be]), **Urban Policies and Localism Survival–How Combining Personalized Political Regulation and Democratic Goals?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Today, localism is no more a legitimate form of political regulation of cities & small towns. As the Merton's "political machine", localism is criticized in two ways: it generates a too personalized political system & it concentrates power around only one person. Yet, classical forms of democratic representation are criticized too. So, an apparent contradiction appears: on the one hand, the illegitimacy of clientelistic regulation; on the other hand, the crisis of formal representation. The contemporary political stake consists in combining the collective dimension of democracy & the personalized regulation of political system. In valorizing citizens' participation, urban policies can be considered as one way of resolving this paradox. Upon three case studies of Belgian towns, we develop this question. We argue that localism is a social form which persists whereas neighborhood does not keep any sociological sense. This social form can be declined in different ways: from an institutionalization of proximity processes to a secret nepotistic system. We could consider that urban policies does not get rid of localism but, unintentionally, give it new contents which, positively, consist in giving certitudes and stability to local community in an age of complexity & change.

2010S02788

Vargas Maseda, Ramon (National Autonomous University of Mexico (UNAM), Ciudad Universitaria, Mexico city, 04510 [e-mail: ramonvm@yahoo.com]), **Incorporating Art into Social Theory as a Means to Transcend Determinism,** *International Sociological Association, Gothenburg, Sweden,*

¶ The dominant sociological theory is still based on the metaphysical or modern epistemology as it still considers that there is a reality–society– which is objective because it has a structure of its own that can be described, known & determined by human thinking. This epistemological tradition conduces to the multiple dichotomies in sociological theory. Two of those are the dichotomy between science as an objective knowledge as opposed to art, which is still considered as subjective, & the dichotomy between structure and agency. The determinism implied in these dichotomies reduces the richness of social reality & sociological theory, as well as it impedes the search for new approaches to the analysis of social reality. Therefore, in order to understand the future of our society, the sociological theory of Erving Goffman & his inextricably use of the dramaturgical perspective can be seen as a useful theoretical framework for sociological analysis because it allows us to think beyond determinism & thus to bridge the gap between science & art as well as the gap between social structure and agency.

Vargas, Hustana Maria (Faculdade de Educação/Universidade Federal Fluminense, Niterói, Rio de Janeiro, Brazil, 24.020-350 [tel: (+5521) 2629-2692; e-mail: hustana@gbl.com.br]), **Manifest and Latent Inequalities of Higher Education in Brazil,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the recent expansion of higher education in Brazil with a view to an eventual democratization process, where one can notice the recruitment of students regardless of their socioeconomic background. It highlights the unequal characteristic of Brazilian society, considered here by a strong correlation among the chosen careers for the students & their social background, in the midst of a crystallized hierarchy of careers & reputation of institutions. Done through the Microdata time series of the National Courses Exam about different social prestige courses, this paper identifies the students socioeconomic profiles also verifying if new social profiles where included in the period & in what institutions. Finally the research shows that the democratization pattern expected was not observed owing to the government invests on merely quantitative expansion of higher education without considering the internal inequalities of the system. The social origin of students remains crucial for their integration into the system, pre-determining their destiny & their professional situation & social status. There is therefore the presence of latent mechanisms of reproduction of inequalities in higher education with the consent of important sectors of Brazilian society.

Varun, Sharma (Gokhale Institute of Politics and Economics, Gokhale Institute of Politics and Economics, BMCC road Pune Maharahstra (India)-411004 [tel: +91-9970320184;e-mail: sharmavarun84@gmail.com]), **HIV/AIDS-Beyond Numbers,** *International Sociological Association, Gothenburg, Sweden,*

¶ Rational/issue: The rationale behind this paper is to highlight the hidden facts about the HIV/AIDS epidemic & driven forces of socio-economic norms. This paper tries to investigate qualitative aspect of HIV infection & the problems associated, which is beyond the numbers. On a background of qualitative aspect of life, this paper has addressed the problems & stories of PLHIV & the inferences drawn thereon. Objectives: To highlight the underline facts & problems which are cause & consequences of HIV. To draw inferences from the cases & recommendation as on. Methodological Base: This paper is based on the qualitative study, of six case of PLHIV. Cases comprises of WLHIV, MSM, CLHIV, migrant male worker, domestic sexual violence, woman driven to sex trade due to economic crunch. HIV data (prevalence) are used as background information for this paper. Data sources used in this paper are from UNAIDS, yearly fact sheets & data on Indian epidemic are cited from NACO, & BSS-2006 & NFHS-III. Selection of case: Cases for the study were selected from the registered PLHIV with PLC, Pune (India) an initiative of NMP+ India. Ethical issues were well taken care of. Study design: Data from UNAIDS, NACO, NFHS-III as background information. Six case studies, qualitative analysis based on face to face semi structured interview. Inference & discussions: Few enumerations based on the cases are- mal- treatment with WLHIV needs social security. CLHIV and burden of economic crunch on elderly, this advocates some social policy measures for CLHIV. Hidden crimes in the society like children sexual abuse, which may lead to change in sexual orientation of child as well. Domestic sexual violence against women in marriage. Economic crunch & sex trade. Migrant workers are more vulnerable to HIV infection. On the basis of these cases supplemented with empirical data, inferences derived would be open for discussion.

2010S02792

Vasconcelos-Oliveira, Maria Carolina (Department of Sociology, University of São Paulo, Brazilian Centre for Analysis and Planning (Cebrap), São Paulo, Brazil [tel: 551123641156; e-mail: mcarololiveira@gmail.com]), **Cultural Institutions Impacting Cultural Practices: Findings of SESC-São Paulo Case Study,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recent developments in publics studies shows that educational attainment & familiar background, that were once seen as the main determinants of an individual's cultural practices profile, are indeed strong influence factors, but the context in which the cultural practice is led & the institutional efforts guided by cultural centres also represent considerable influence over an individual's or group's relation with the universe of culture. This paper aims to show the main findings of qualitative research conducted with SESC-Sao Paulo, one of the most important organizations of the city of Sao Paulo's cultural context. The general aim of the research consisted in investigating whether and how SESC-Sao Paulo is able to influence their publics' relation to the universe of culture in three different branches of the institution, located in three districts of the city of Sao Paulo that differ in terms of socio-economic characteristics of its inhabitants & availability of other cultural equipment. Despite largely influenced by French tradition of publics studies, this research considers Brazilian context, where income concentration and quality of public education are still important issues when it comes to cultural consumption. The paper shows that the differences in publics' patterns of cultural practices in the three branches can be explained not only by socio-educational characteristics of the interviewees & characteristics of the districts where the branches are located, but notably by the differences in the mediation strategies (including programme) implemented in each centre.

2010S02793

Vasecka, Michal (Department of Sociology, Faculty of Social Studies, Masaryk University, Jostova 10, Brno, 60200, Czech republic [tel: +420549497713; fax: +420549491920; e-mail: mvasecka@fss.muni.cz]), **Quo Vadis, Independent Research of Ethnicity? Influence of Donors over Research of Ethnicity,** *International Sociological Association, Gothenburg, Sweden,*

¶ Research on ethnicity, identity, inter-ethnic relations & cultural determinants of ethnic interactions is from the methodological point of view specific & differs between various cultural contexts. At the same time ethnicity research is insufficient and problematic due to various structural factors. One of these peculiar issues is an incompetence of research recipients and donors. Author argues that donors & various types of beneficiaries influence quality of research more than researchers do & they always find those who will be ready to conduct a research, no matter of what is desired methodology. Paper brings evidences that international organizations tend to be more problematic in this respect than local & regional bodies. Author point out at incompetence & lack of knowledge on the side of donors–incompetence in the field of research work in general, incompetence in the field of social research, lack of knowledge of ethics of a research work, lack of knowledge of potential methodological approaches, incompetence in the course of creation of a questionnaire, inability to "read" data & to understand results of a research, pressure on researchers to acquire "right" result, to confirm presuppositions of contractors, lack of realistic thinking in the course of deadline assessment, incompetence in the field of finances assessment, or inappropriate desire to put a control over research. Paper opens serious question on whether researchers should foster specific methodology of "ethnicity research" & author investigate whether high quality research on ethnicity can be done outside of independent academic research. Finally author analyzes how neo-liberal shift toward efficiency of money spend on a research call for practical results and how this shift cripples ethnicity research.

2010S02794

Vatikiotis, Pantelis ([e-mail: vatikiotisp@yahoo.co.uk]), **The Fluid Social Imaginary of New Mediating Practices,** *International Sociological Association, Gothenburg, Sweden,*

¶ New mediating practices involve considerable occurrences of representation & participation of the "ordinary" a people, their activities & discourses a in public space. From this perspective, the communication terrain expands to include practices and processes that are not realized within the formal political society, but across the nooks & crannies of civil society, and along different public spheres formed on multiple scales, on the grounds of the realization of citizenship. In this context, further challenges & questions are addressed in regards to the interplay of these categories. -challenges: the line demarcating the political & the non-political becomes blurry, prioritization of "difference" versus "unity" as the ground for the realization of citizenry -questions: do new mediating practices envisage a broader societal dialogue across the full spectrum of adversarial interpretations & cultural practices? Could less deliberative modes of engagement in mediating practices a hobbies & features of play in general, also be included in our evaluation of democratic citizenship? Critical issues are raised here concerning the nature of "being a citizen" & "doing democracy", figuring out another agonistic space for understanding democracy & its most profound processes.

2010S02795

Vautier, Claude (Université de Toulouse 1 Capitole, Manufacture des Tabacs, 21 Allée de Brienne, 31 000 Toulouse [tel: 033 698 56 22 52; fax:; e-mail: claude.vautier@univ-tlse1.fr]), **Faut-il Simplifier le Système Politico-Administratif Français ?** (Should the French Political-Administrative System Be Simplified?), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Cette communication porte sur le débat autour de l'opacité ou de la transparence des politiques publiques, des structures qui les portent et des procédures qu'elles mettent en oeuvre, de leur faible lisibilité et/ou de leur simplification. On se basera notamment sur l'expérience de la décentralisation française depuis 1982-83. Elle développe l'idée que la simplification, la transparence totale, conduisent à ignorer des aspects fondamentaux

des systèmes, de leur complexité et s'inscrit dans une conception de la nécessité du "clair-obscur" dans tout système sociétal en subsumant que, dans certaines limites qu'il est possible de déterminer, l'opacité joue un rôle fondamental dans l'organisation et l'évolution de ces systèmes. Elle suggère non seulement que l'on dispose d'outils théoriques et méthodologiques pour déterminer des zones d'opacité utile, mais encore qu'il est possible de gérer cette opacité utile par la pratique d'une démocratie participative dans la construction et la mise en oeuvre des politiques publiques.

2010S02796

Vázquez, Rolando (Roosevelt Academy, University of Utrecht, P.O. Box 94, 4330 AB Middelburg, The Netherlands [tel: +31 118 655525; e-mail: r.vazquez@roac.nl]), **Translation as Erasure, Exploring Modernity's Epistemic Violence,** *International Sociological Association, Gothenburg, Sweden,*

¶ This text circles round the question of translation in the light of the modernity coloniality debate. Translation is here addressed in an ambivalent manner, that is, as a movement of hegemony and emancipation. Translation designates the permeability, the movement at the borders of a given language, a given system of meaning and more generally of a given epistemic territory. We will explore two divergent processes that are revealed through the focus on translation. The first one, translation as erasure, speaks of the coloniality of translation; that is of the way in which translation performs a border keeping & expansion of modernity's epistemic territory. The second, translation as plurality, speaks of the configuration of dialogues & the thinking of the borders that are bringing to question the modernity / coloniality system of oppression. The fight against exclusion makes use of translation to define a territory of difference that is dialogical & plural. The text puts its emphasis on translation as erasure in an effort to contribute to the critique of modernity by showing modernity's mechanism of epistemic exclusion & oppression.

2010S02797

Vdovichenko, Larisa (Russian State University for the Humanities, Moscow, Russian Federation, 125993 [tel: +7 495 9254320; fax: +7 495 9254320; e-mail: vdlarissa45@yandex.ru]), **Drafting of Organized Interests in Local Governance,** *International Sociological Association, Gothenburg, Sweden,*

¶ The regional situation in Russia is extremely diverse. The legislation should set up conditions where the resource & economic potential of each region would be used for the economic growth,ensuring the quality of people's life. The right of the legislative initiative secured by the Russian Constitution is one of the main forms of participation of Russian regions in the federal legislation process. In my report I present the results of analysis of legislative initiatives of Russian regions & how to take into account in drafting local organized interests. To obtain the data in my case study I used content analysis of regional legislative initiatives, results of surveys & other sociological methods. The legislative initiatives of Russian regions are aimed, above all, at the improvement of the legal regulation of social relations related to the legal situation of the human being & citizen (31.3% of a total number of initiatives). On the second place– proposals to introduce a considerable number of amendments to the tax & budget legislation (27% of the total number). On the third place– proposals how to improve of the quality of life & social support of various categories of people (23.5% of the total number).A somewhat less quantity of legislative initiatives (18.2% of the total number) is related to the improvement of legal regulation of relations in the sphere of economic activities (bankruptcy, state registration of firms, urban planning, communications, etc.), environmental protection, rational use of the subsoil & other resources. An attempt to identify the most acute interests of local communities & problems of their legislation at federal and regional levels is necessary not only for all interested participants of legislative activities but for the civil society institutes & citizens. The potential of regional & local subjects of the right of legislative initiative is used not in full measure. The results of the analysis of regional initiatives show that after the consideration by State Duma of Russian Federation only 2% to 6% of these proposals found their way into federal laws. That's why the monitoring of regional & municipal legal acts and of legal enforcement practice is necessary to improve this situation in drafting of organized interests in local governance.

Vega, Ana L. (Departamento de Sociología, Universidad Autónoma Metropolitana, México City, Mexico, 09340 [tel: +52 55 58044791; fax: +52 55 58044791; e-mail: vjal@xanum.uam.mx]), **Mexico City: Contemporaries Problems and Social Inequalities,** *International Sociological Association, Gothenburg, Sweden,*

¶ Mexico City is currently experiencing the consequences of the process of economic globalization. On one hand, the construction and building sectors of the economy have received large amounts of investment to build "social" housing. On the other hand, the low income inhabitants, who represent 65% of the entire population, do not receive any help from this economic process. In addition, the government does not pay any attention whatsoever to this portion of the population. Low income groups have, on their own, built their own housing in illegal settlements. This specific problem is hereby addressed in this paper. The Metropolis is in constant movement. There is mobility of low income groups towards the spaces of the municipalities in the north & east of the greater metropolitan area. One of the reasons for this is the low cost of land in these areas that were previously rural, but are rapidly being converted to urban use without any adequateness of infrastructure. Also, this paper shows how the modification of regulations regarding the agrarian, financial & urban development sectors have generated severe consequences for the recent transformation that the urban periphery of the Mexico City Metropolitan area have undergone.

2010S02799

Vega-Lopez, Maria Guadalupe & Gonzalez-Perez, Guillermo Julian (University of Guadalajara, Guadalajara, Mexico, 44630 [tel: 523336411119; e-mail: mgvega.lopez@gmail.com]), **Harsh Treatment or Violence? The Relationship between Adolescents in School,** *International Sociological Association, Gothenburg, Sweden,*

¶ The violence between adolescents in the school has been recognized as an educational & social problem. For researchers in this area, the differences in the way of qualifying the violent acts, as well as the way of typifying them make difficult the comparison of results. The response to a questionnaire depends on the perception that teenager have on their relationship with peers. From previous interviews to students we established that there are three key elements in the perception of the violence: intention, hurt & the feeling that provokes the violent act, especially the last one. Therefore, this paper seeks to identify the prevalence of violence between adolescents, public schools students of Jalisco, Mexico and to analyze the value given by the victim to certain forms of aggression. A cross-sectional, analytical study was carried-out with a representative sample of enrolled in secondary school teenagers during 2009. The results show that the students' proportion that can be considered at the same time both victims and aggressors almost duplicates to the aggressors' category; furthermore, variables reflecting a history of familiar violence or the characteristics of close friends are significantly associated to be a victim. Moreover, many victims confer little value to the discomfort or fear that an action labeled like aggressive can cause them. For the adolescents, the daily interaction between peers can be considered harsh but not necessarily violent, although most teachers & researchers qualify it as such.

2010S02800

Veit, Susanne & Koopmans, Ruud (Wissenschaftszentrum Berlin für Sozialforschung (WZB), Reichpietschufer 50, D-10785 Berlin, Germany [tel: +49 (0)30 25491 459; fax: +49 (0)30 25491 452; e-mail: veit@wzb.eu]), **Cooperation Within and Across Ethnic Boundaries: Evidence from a Large-Scale Survey Experiment,** *International Sociological Association, Gothenburg, Sweden,*

¶ Social dilemma game studies in laboratory settings as well as field evidence show that human behaviour often violates the "homo economicus" assumptions of rational choice theory. Social concerns are prominent candidates to explain why humans sometimes seem to act irrational. Most existing experimental studies on social dilemmas are not well-suited to study these concerns because participants are not given any information on the socio-cultural context of the game. To overcome this limitation we experimentally investigate cooperation within ethnic groups & across ethnic boundaries & provide people with information on the ethnicity of other participants. Within this setting, we ask which social motives & other-regarding preferences influence people's willingness to cooperate (e.g., stereotypical expectations, in-group favouritism, normative pressure or social control within ethnic groups). To move beyond the artificiality of the laboratory and the limitations of students as research subjects, we integrated a prisoner's dilemma game within a large-scale (N survey a 7500; N exp a 1200) telephone survey in Germany, which includes sizeable numbers of different ethnic groups. By means of multilevel analyses cooperation is regressed on 1) contextual characteristics (such as communities' ethnic diversity) as well as on variables at individual level (experimental conditions & individual characteristics).

2010S02801

Velastegui, Napoleon (Facultad de Arquitectura, Universidad de Guayaquil, Guayaquil, Guayas, Ecuador, 0901 [tel: 59342399317; fax: 59342397071; e-mail: avsn1@gye.satnet.net]), **América Latina: Movimientos Sociales y Teoría del Cambio** (Latin America: Social Movements and Theory Change), *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ América Latina: Movimientos Sociales y Teoría del Cambio Napoleón Velástegui Bahamonde Al determinismo no basta declararlo muerto, es necesario darle apropiada sepultura. 1. Problema: la dirección del enfoque sociológico frente a los cambios sociales en América Latina no potencia conceptualmente su riqueza operativa. 2. Importancia del tema: la dirección del enfoque contribuiría a garantizar una mejor síntesis de los movimientos sociales en AL como contribución a la teoría del cambio en sociología. Podríamos replantear una de las preguntas que nos convoca : "How could theories that avoid the future be modified?", por: "cuáles son las teorías que construyen ese nuevo tejido conceptual para modificarnos y revitalizarnos junto a ellas?" 3. Enfoque: metodológico. La carencia de un "gran angular" holístico, excluye los aportes de otras ciencias, en particular de las ciencias naturales, la ecología, las matemáticas, para nutrir el aparato conceptual de la sociología. 4. Resultados: orientados a promover políticas de investigación concretas. 5. Implicaciones: estos movimientos sociales que no sólo alientan visiones del futuro sino que crean proyectos de futuro, demandan de síntesis de sus extraordinarias experiencias del imaginario social. América Latina destruye a diario múltiples posiciones deterministas sin un apropiado correlato teórico.

Velez Cuartas, Gabriel (Universidad de Antioquia/Sociology Department FCSH, Medellin, Colombia, Calle 67 Número 53 - 108 bl. 9 [tel: 5742195773; e-mail: gabrielvelezcuartas@yahoo.com.mx]), **Meaning Networks Model to Map Science,** *International Sociological Association, Gothenburg, Sweden,*

¶ A methodological model to map Science is presented. These maps allow to observe theoretical & methodological emergent themes, specialties & interdisciplinarity of such issues & their genalogies. To map theories & methodologies in a set of texts, a theory of meaning is required. Traditionally, meaning has been concern of hermeneutics & phenomenology. These fields allow to interpret meaning in a limited amount of texts but is difficult to deal with meaning in a large set of texts with such methodological tools. Luhmann's communication theory proposes to understand meaning emergence as a set of distinctions that are aggregated. Communications have both systemic & structural properties. Systemic property allows to find systems codes, functions and operations composed by communications & meaning (scientific articles in our case). Structural property allows to draw maps of relations between communications & aggregation or disaggregation of meaning. Meaning networks mix both kind of analysis through distictions theory from second order cybernetics (Niklas Luhmann; George Spencer-Brown; Louis Kauffman) & structural analysis from exploratory SNA & Scientometrics (Loet Leydesdorff). From this mixture, it's proposed a concept called Components of Distinctions that mix the definition of weak component with overlapping emergent structures of co-word analysis, aggregated journal-journal references (Leydesdorff), Main-Path Analysis (Hummon & Doreian) and bi-component analysis. The evolution of social network concept is presented through 20 theoretical objects & 13 methodological procedures identified. Analysis is based on 487 texts from Social Networks, Redes Review, & random texts from JSTOR an Scielo databases.

Velikaya, Nataliya Michailovna (Department of Political Sociology, Russian State University for the Humanities, Moscow, Russian Federation, 125993 [tel: +7 910 4712686; fax: +7 495 2506621; e-mail: natalivelikaya@gmail.com]), **European Identity for Russian Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the context of globalization & common information space, the success of political solutions directed at cooperation between Europe & Russia will depend on socio-cultural grounds of interactions, on the identities of the Europeans & the Russians and peculiarities of political dialogue. During last two centuries the issue of Russia's belonging to Europe was one of the most polemical. Despite Russian politicians demonstrated pro-European rhetoric, both Russian mass opinion & political discourse demonstrate opposition of Russia & Europe & perception of them as two different worlds. There are two models of Russian identity in mass consciousness of Russians: Russia as a part of Europe and it would be closely connected with Europe & Russia as representative of unique (Eurasian) civilization. Majority of Russians believe that European culture & values differ significantly from values of Russians. On the other hand, the data of European Social Survey, World Values Survey show the affinity of Russians to Europeans. Psycho-semantic analysis of the public opinion shows that emotional attitudes of Russians towards Europe have even improved for the past 5 - 7 years. That is the sufficient potential for cooperation between Russia & European Union.

Veloso, Luísa, Freire, João, Lopes, Noémia & Oliveira, Luísa (CIES/ ISCTE-IUL, Ed. ISCTE Av. das Forças Armadas, 1649-026 Lisboa Portugal [tel: +351933252798; fax: +351217940074; e-mail: luiveloso@gmail.com]), **Regulation and Public Interest: The Portuguese Case of the Relationships Between the State, Science and Professions,** *International Sociological Association, Gothenburg, Sweden,*

¶ Taking as empirical support a research developed on the health sector and the main objectives of a future research project in this field as well as among engineers, the authors propose a critical reflection upon the role played by the State in the promotion of public interest & the delegation of this role to professional bodies & professions. The recent Portuguese law (the Law 6 of 13 February 2008) "establishes the legal framework on the creation, organisation & funding of new public professional associations" and demands "a study conducted by a research institution of recognised merit & independence" on the need to set up public professional associations a recognized by the State & having to work in agreement with public rules a particularly the need to answer two questions: "existence of public interest"; "their impact on the regulation of the occupation". This paper proposes a reflection & discussion on the need to deepen the research about the role of the public professional associations in defending public interest & the need of additional forms of regulation, taking into account the European reality of learning & working mobility. Therefore, it also focus on the analysis of the social conditions of knowledge production, stressing: the State's decision on assuring a "scientific" & "objective" study, sustaining part of the decision on scientific knowledge; & the role played by researchers in legitimating the professions' associations dynamics.

Vema, Smita & Chandra, V. (Isabella Thoburn College, Lucknow-226016, India [tel: +-522-2310803; e-mail: smittenULyeah@yahoo.com]), **Negotiating 'Terrorism' for 'Identity' in Globalized India: Towards a Youth Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ The globalized world has opened doors for development and modernization beyond the borders. This century has been a celebration of liberating ideas of the social sciences, rationalism, universal human rights & yet space for distinctiveness. However this has its intrinsic incongruity. On one hand it has provided platform for open dialogue between different languages & cultures both at the centre (the dominants) & the periphery (the marginalized) it has also lead to resurgence of revivalism (where identities often gets merged & therefore challenged) thus opening doors to conflict which results in violence & acts of terror. Terrorism manifests today in devastating ways. Though not a new phenomenon, what is new is its shifting in terms of impetus & magnitude circumscribing our life to the edge of a blade. Another new feature of terrorism has been the involvement of young adults - highly educated, techno savvy and professionals brimming with zest & zeal taking to guns. The question remains what takes them to terrorism & death than to opt for a normal peaceful life. The issue is more complex than described & calls for serious deliberation .This paper attempts to analyze the perception of youth to the issue of terrorism. The method of study is through collection of primary data through detailed interview schedules administered on youths in professional institutions in Lucknow, India & in the age group of 21-25 years. However the focus would be on qualitative analysis of the data. It would explore their experiences & self perceptions & empathy on the issue of violence, on the basis of ethnicity, gender & caste. The role of media, information technology & popular culture in glamorizing & creating subversive spaces for acts of terror would also be examined. The prime concern of the paper is not just to re-evaluate but also reflect on the "agency" of the youth, who are not only passive recipients but also active participants in the process of making a violent world. Their understanding of the issues which creates fractured & counter culture identities would help in not just strategizing the fight against extremism but also understanding the roots of injustice by identifying the multi- layered process of marginalization & exclusion that results in creating subaltern spaces & schism in social structures.

Vera Rojas, Daniel (Department of Sociology, Social Policy and Social Work, University of Fribuorg, Switzerland., Fribourg, Switzerland, 1700 [tel: +41 31 5582077; e-mail: williamdaniel.verarojas@unifr.ch]), **Subjective Factors in the Strategies of Well-Being in Households Living in Precarious Prosperity. A Comparative and Qualitative Case Study: Chile and Costa Rica,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ The paper focuses on the subjective factors present in the strategies of households in precarious prosperity (hereafter PPH) in two countries: Chile & Costa Rica. Specifically, this research tries to answer the questions: What are the perceptions of the PPH with respect to management strategies for their well-being? What are the differences & similarities between the perceptions of the PPH in both countries? How can these differences & similarities be understood in relation to the welfare regime of each country? 21 in-depth interviews were conducted in each country between April and July 2008. The data are being analyzed qualitatively, in intra and inter-group comparison. The similarities & differences found are discussed in relation to the welfare regime of each country. The preliminary results presented here are part of an ongoing doctoral research. The data have been provided by a research project in comparative social policy, conducted by the Department of Sociology, Social Policy & Social Work, University of Freiburg (Switzerland). The situation "precarious prosperity" specifies certain households in the social structure & is characterized by a paradoxical situation. Households in precarious prosperity have a certain leeway to manage their material well-being, but are at the same time precarious while there is a threat of loss of this safe position, of deterioration of material well-being & of risk of impoverishment. The PPH are located in an intermediate position between poverty & safe prosperity. There is no substantial difference between households that are immediately above or below the poverty line in terms of access to goods & services. Only those groups that are in the safe zone of prosperity seem to be distinctly different. The first part briefly reviews the welfare regime in both countries, by describing the historical background of the welfare regime & key socioeconomic indicators that characterize the spheres of state, market & family in recent years. With this information, it seeks to analyze & understand the structure of social opportunities in each country. A second part presents some of the findings from the analysis of in-depth interviews. It shows a brief profile of PPH, describing their key socioeconomic characteristics & their relationships with different spheres of the welfare regimen, based on an analysis of the strategies of the PPH. Then it analyzes the perceptions of well-being & describes some of the most significant household strategies. Finally we discuss these results, based on comparisons between PPH in both countries, taking the national social welfare regime as an analytical framework.

Verduzco, Gustavo M. & Winter, Jay (El Colegio de Mexico, Mexico city D.F. 01000 [tel: 52555554493000; e-mail: gverduz@colmex.mx]), **Ordinary Living as Illegal Residents: The Construction of an Undocumented Citizenship in the U.S.,** *International Sociological Association, Gothenburg, Sweden,*

¶ Our goal in this project has been twofold, one is to describe and understand how it is that ordinary living for undocumented Mexican migrants in the US takes place in the context of a country where there are laws that not only exclude them from being there but also exclude them from receiving some services & rights. Can we say from their experience and in spite of their legal status that they might be building up some sort of "undocumented citizenship" could we talk also of the building up of some sort of dual or binational citizenship? A second goal, but central to this project, has been the exploration of the role of the Catholic Church in the protection of human rights for migrants in spite of their legal status. One hypothesis is that the mediating role of the Catholic Church between the forces of the State & the migrants themselves makes clearer the attribution of some rights to migrants in spite of the denial of them by the state. At present, Gustavo Verduzco and Jay Winter have been doing research around these topics in Tlaxcala, Mexico & New Haven, Connecticut. Based on ethnographic research, we present some initial results of this project that might contend some common ideas about citizenship.

2010S02808

Veres, Valér (Babes-Bolyai University Cluj, Sociology Dpt., 400087 Cluj Napoca, Romania [tel: +40753094944; e-mail: veresv@kmei.ro]), **The Identity Representations about the Nation among Hungarian Minority from Romania,** *International Sociological Association, Gothenburg, Sweden,*

¶ The present paper analyzes the social representations of the identifications in the majority national community from Romania and the Hungarians from Hungary. The first aim is to study the effect of mobilization's (ambivalent) politics coming from Hungary in relation with the unity of the Hungarian ethnocultural nation. Secondly, we also aim to understand how citizenship & the relationship towards the state of residence is framed & reflected in the ethnonational identity of Hungarian minorities. Also we are interested if this is affecting majorityaminority relations and patterns. According to our hypothesis it can be noticed a kind of de-territorialization of national culture: to be Hungarian is deconnected from the affectual ties with Hungary. The empirical data sources are: 1. Aleatory survey (Karpat Panel), realised on a sample with 901 cases, representative for the Hungarian speaking population from Romania,. 2. Focus group interviews (12) selected from the same population like the survey, according to age, sex and educational level. According to the research results members of the Hungarian minority community in Romania, mostly share the representation about the existence & symbolical membership of the Hungarian ethnocultural nation in transborder sense. A significant part of our respondents also identify themselves with the Romanian civic nation, even if the formulation & the criteria of the notion of civic nation are not clear & coherent in Romania. However, it may be empirically grasped both at the level of the Hungarian community from the region as primary in-group & at the perception of social distances.

Verhaeghe, Pieter-Paul (Department of Sociology, Ghent University, Korte Meer 5, 9000 Gent, Belgium [tel: +32 9 264 84 72; e-mail: pieterpaul.verhaeghe@ugent.be]), **Testing the Validity and Reliability of the Position Generator: Does the Job Measure Matter?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The position generator is used to measure the resources embedded in social networks. A systematic list of 10-30 different occupations is given & respondents are asked whether they "know" anyone having this occupation. Subsequently, different position generator measures are constructed based on the assumption that the job prestige scores (SIOPS) of the accessed occupations reflect the resources embedded in social networks. This paper examines the validity & reliability of the position generator measures using job prestige scores. The question is whether position generator measures based on other job measures (like the EGP-classes or the ISEI-scores) are more valid & reliable. For this purpose, two lists of 30 occupations are chosen that for each job measure theoretically result in the same position generator measures. The validity & reliability of social capital measures based on these job measures is estimated among the students of Ghent University (N = 4005).

Verma, Manish Kumar (B.B Ambedkar University, Vidya Vihar, Rae Bareli Road, Lucknow, U.P., India, 226025 [tel: 0522-2995672; fax: 0522-2441888; e-mail: mkvbbau@gmail.com]), **Ecology, Environment and Tourism: Some Case Studies in Retrospect,** *International Sociological Association, Gothenburg, Sweden,*

¶ As a worldwide industry, tourism has grown so quickly & haphazardly a during the last quarter century, that it has become problem for both developed & developing nations. While the overall environmental impact of tourism is probably less than that of most other industries developed on a similar scale, the significance of its impact lies in the fact that it frequently impinges upon the most fragile, sensitive & interesting segment of an area's landscape. The environmental damage caused by tourism manifests itself in many different ways: polluted beaches & lakes, erosion of mountain paths, traffic jams, air pollution, unsympathetic architecture deforestation etc. are some of them. In this background, the paper is attempts to analyze the environmental impact of tourism in India vide mountain environment, forest reserves & sea beaches. The conclusion drawn suggests that the kind of tourism developed during last couple of decades is self destructive. It destroys the very environment, for which tourists visit a place. It is a classical case of killing the goose that lays the golden egg. In a way, tourism contains within its womb, the seeds of its own destruction & the annihilation of its surrounding ecology & environment.

Verma, Pratima (Assistant Professor in Teachers training Education, Dayanand Women's Training College, Kanpur [tel: 9839712828; fax: 0512 2525010; e-mail: pratimadwt@rediffmail.com]), **Transition of Qualitative Research among Indian Professionals in Higher Education,** *International Sociological Association, Gothenburg, Sweden,*

¶ ABSTRACT This paper is a part of research project was funded by University Grants Commission which explores the ground reality of academic standard of higher education & research. Data reveals that Indian higher education is critical to India's emergence in the global knowledge economy. Yet, it is believed that a crisis is plaguing the Indian higher education system. While, the National Knowledge Commission (NKC) set up by the Prime Minister calls it a "quiet crisis", the Human Resource Minister calls higher education "a sick child". Industries routinely point towards huge skill shortages & are of the opinion that growth momentum may not be sustained unless the problem of skill shortages is appear to be endless problems with the Indian higher education system. It has been resulted that the Indian higher education produces graduates that are unemployable, though there are mounting skill shortages in a number of sectors. The standards of academic research are low & declining.

Verpraet, Gilles (CNRS University Paris Ouest, FRANCE 92000 [tel: 33142512260; e-mail: verp@ehess.fr]), **University, Professions and Professionalization: Which Model of Reference in the University Professionalisation?,** *International Sociological Association, Gothenburg, Sweden,*

¶ We can question the change of reference models in the professionalization process inside the post modern university, with the current leading figures, such as the professional manager (cadre), the knowledge professions. We may also question the societal model envisioned inside these societal transformations, such a the social differentiation of university (between center and periphery). Parson (1958) & Jackson (1962) concieved the key figures of the professionalization processes (such as doctor and engineers) inside the rationalization of a social system. Professionalization was bounded in the achievement of a social system. The differentiation of the professionalization processes questions the completion of this analytical model. The changes of the university audience, the new student public & the trajectory management constitutes as key variables of content changes. In which way the corpus in the sociology of professions (Freidson, Abbot, Dubar) can address these questions. The socio historical approach in the change of educational system (Archer, 1988) make relevant contribution to model theses changes.

Vertigans, Stephen (Robert Gordon University, Aberdeen, UK [e-mail: s.vertigans@rgu.ac.uk]), **The Ins and Outs of Terrorism: Processes of Political Violence,** *International Sociological Association, Gothenburg, Sweden,*

¶ Studies of terrorism tend to concentrate on isolated "causes", experiences or events that are considered to be responsible for individuals becoming "terrorists". With the exception of a few psychological studies, subsequent processes within terror careers have been largely neglected. In this paper, a figurational approach is adopted to help address these weaknesses. Instead of focusing upon individuals or a particular stage, attention is placed upon social processes within shifting habitus & concomitant formation, continuation & demise of terror groups.

Verwiebe, Roland (University of Vienna, Department of Sociology, Vienna, Austria, 1090 [e-mail: roland.verwiebe@univie.ac.at]), **Gender Wage Inequality in Germany and Great Britain: Results from a Cross-National Comparison between 1991 and 2007,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper the changes in gender wage difference in Germany and Great Britain between 1991 & 2007 will be investigated. The starting point of the analysis is provided by the re-search on labour markets & welfare states, in which it is suggested that wage differences between man & women are based on the gender specific segmentation of labour markets. As welfare & labour market institutions can be expected not only to influence the extent of overall gender wage inequality but also the way changes in the wage distribution are socially structured, cross-national comparisons are needed to investigate the impact institutional arrangements exert on social inequality. A comparison of Germany and Great Britain is especially useful in this context, since these countries represent different labour market & welfare state regimes. In the empirical part of the paper, data from the German Socio-Economic-Panel & the British Labour Force Survey are used. The analyses are firstly based on descriptive measures of the development of gender wage inequality. In a second step we use regression & decomposition analyses of individual & structural determinants of wages for women & men in the years 1991 to 2007. First results show a very high level of the gender wage gap in Germany & Great Britain in the observational period. It is one of the highest in Europe & much higher than, for example, in Southern European welfare states or in Scandinavia. Moreover, we find a relatively clear decrease in gender wage inequality in Great Britain between the early 1990's & 2007, whereas in Germany the gender wage gap remained stable & even slightly increased starting in 2000. We will try to show that those different developments over time are due to different labour market dynamics (e.g. a high gender specific segmentation of the labour market in Germany) & specific regulatory features of the liberal and conservative welfare states in Great Britain & Germany (e.g. the low level of child care in Germany), which influence the earning chances of men & women in characteristic ways. Within-occupation stratification & the allocation of women to lowly paid jobs are important factors in that regard as well.

Veyrier, Clair-Antoine (Laboratoire Praxiling UMR 5267 (Université Montpellier 3 - CNRS), Montpellier, France [e-mail: clair-antoine.veyrier@univ-montp3.fr]), **Reconfiguration of Sequential Order in Webconferences,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper focus on the organization of social action in a specific setting of distant work meeting openings. Early Conversation Analysis studies focused on openings in landline telephone. Further developments found differences in mobile phone with specifics sequences. In distant meetings, findings focused on dispositive where the multimodality is more pregnant such as videoconference or telepresence. Yet, webconference, where a computer & a telephone are used, is a privileged place to analyze the emergence of new forms of social encounter, where the material resource & social configuration reshape sequential order. To that end, this presentation is based on a collection of video recordings of webconference openings produced during field work in two departments of a company based in different locations. A conversation analysis perspective is used here to show in detail the emergent collective accomplishment of openings taking into account the technological context. I will point out that in webconference openings the answerers from an opening adopt a greeting response to the summons that include a term of address (which is not a toponym like in multipoint video communication). As a multiparty conversation, I will show how the answer to the summons is not systematically made relevant by prior turn and depend on the sequential placement of the summons

in the course of action. Openings in webmeetings differ from landline telephone, mobile phone or video communication ones. Those new practices reflect how participants orient themselves to new configurations and affordances that technologies allow them.

2010S02818

Vezinat, Nadège, Vicarelli, Giovanna, Pavolini, Emmanuele & Neri, Stefano (EHESS Paris–Centre Maurice Halbwachs, 48 Bd Jourdan, 75014 PARIS [e-mail: nadege_vezinat@yahoo.fr]), **Regard Sur Une Professionnalisation Atypique : L'apport de la Sociologie des Groupes Professionnels: Is Decentralisation Good for your Health? Lessons from the Italian NHS** (An Insight On Atypical Professionalization: The contribution of), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ The paper analyses some of the impacts followed the transformations of the Italian NHS in the last 20 years, given the increasing process of decentralization & regionalization of its institutional structure. If in the 80s the Italian Regions had mostly implementation powers in health care (they were "rules takers"), in the 90s they reached a broader autonomy from the Central Government also in terms of policy making (becoming more "rules makers"). Using data & statistics from the mid 90s & the second part of the present decade, the aim of the paper is to evaluate how the single regional health care systems have performed since the 90s, trying to figure out if (strong) regional differentiations in the quality of care & in the functioning of the local health care system have widened, remained stable or decreased after the regionalization of the NHS. The hypothesis is that, given the institutional setting chosen for the regionalization process and the wide socio-cultural & socio-economic differences among regions, the level of health inequalities has arisen, especially those inequalities related to the territorial dimension.

Vianna, Claúudia P. & Ferretti, Celso J. (Faculdade de Educacao Universidade de Sao Paulo, Sao Paulo, SP, Brasil Av. da Universidade 308 CEP05508-040 [tel: 55-11-38150232; fax: 55-11-38150232; e-mail: cpvianna@usp.br]), **Neoliberal Policies, its Reinforcement or its Suppression: An Uncertain Future for the Brazilian Education?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The objective of this presentation is to examine two of the most important of the public educational policies that are going on Brazil since the 1990s. They refer to what we suppose that may be the basic trend in Brazilian education the next decade. We want to highlight the contradictory character of the Brazilian neoliberal educational policies since Fernando Henrique Cardoso's government, which has been continued with some slight changes under the government of Luis Inácio Lula da Silva. Such policies, on one hand, incorporates, in regard to the field of the relationship between education & work, recommendations of multilateral agencies that tend to transform school education in a instrument of the capitalistic accumulation, using discourses & procedures of a psychological & emotional order with the objective of producing docile & efficient workers with low critical capacities. On the other hand, regarding the policies of educational recognition related to racial relations, gender & sexual diversity, incorporates historical demands of social movements, especially those concerning to racism, homophobia & gender inequalities. The first ones, which have been incorporated in school practices under suspicions, were strongly criticized by progressive educators. The second ones, somehow became part of the school practices thanks to the incorporations of studies about gender & sexuality, are still on its embryonic stage concerning to teacher education. In this panel we intend to debate the future of such policies, which will be determined by the uncertain future of the presidential election in 2010. If the Lula government obtains success in its effort to elect the future president, exists the possibility of continuity of the demands & tends concerning the educational policies which have been practiced, a necessity to the country in order to achieve its cultural development. In the case that this not occurs on the political ground, it may be possible that the neoliberal logics of the educational policies be reinforced, since the strongest oppositional candidate has the same political ideology of Fernando Henrique Cardoso.

2010S02820

Vicentin, Diego J. (IFCH/Unicamp [tel: +55 19 35211614; fax: +55 19 32893327; e-mail: diego.vicentin@gmail.com]), **The Future of Mobile Media: A Study of Mobile Networks,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper intends to discuss the future possibilities created for mobile medias. Our work links the changes in the mobile medias to the data flow's acceleration process across the mobile networks. The increase of data flow (broadband) shapes the medias, creating new ways of technical development & strengthening the user's involvement with medias. New forms of gadget's function & uses emerge as the networks increase their bandwidth. To work on this idea, we will explore the historical & technical evolution of cellular networks since the first generation (1G) until the third generation (3G), linking this to the resulting changes in the shape and functions of mobile phones. The synergy between the network's evolution, the development & convergence of new gadgets, & the end-user's involvement results in a spiral of technical acceleration. In some way this spiraling evolution modulates the interaction's patterns between humans & mobile medias, bringing they closer & closer.

Victor, Christina, R., Martin, W. & Zubair, M. (School of Health Sciences and Social Care, Brunel University [e-mail: Christina.Victor@brunel.ac.uk]), **Growing Older in Bangladeshi and Pakistani Communities Living in the UK: Families, Social Networks, Space and Time,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction: Within the next 20 years the proportion of older people living in minority black & ethnic communities within the UK will significantly increase & this rise will be especially notable within Bangladeshi & Pakistani communities. However, we know little about growing older within these transnational communities. There is limited evidence documenting their lived experiences, family lives & social networks & we know little about how social identities & social relationships are experienced across national borders & changing configurations of time & space. Methods: We draw on data from our ESRC New Dynamics of Ageing project: Families & Caring in South Asian Communities to explore our participants' social networks & family relationships. Our study involved 110 semi-structured interviews & social network mapping with a diverse group of Bangladeshi & Pakistani men and women aged 50+ years. Interviews were recorded, translated and transcribed verbatim or extensive field notes taken. Thematic analysis using Atlas Ti was conducted Findings & Conclusions: The interconnection between semi-structured interviews & the drawing of social network maps renders visible the complex & geographical nature of family & social relationships. We will discuss themes underlying these issues including gender, time & space; the maintenance, separation & recreation of transnational & local relationships & networks (family & friends); & perceptions and meanings of intimacy & "place". We will conclude by highlighting the significance of these findings to meanings and experiences of care & support amongst Bangladeshi & Pakistani communities living in the UK.

Vidal De La Rosa, Godofredo (Universidad Autónma Metropolitana (AZC), AV. San Pablo 180, Col. Reynosa, Mexico D.F. [tel: 01-55-53189139, ext 103, 126; e-mail: gvdr@correo.azc.uam.mx]), **Democratic Inequality,** *International Sociological Association, Gothenburg, Sweden,*

¶ Democracy is spreading around the world is a very contradictory process. In fact, nearly of two thirds of adult population is living now under democratic political rules, & not in dictatorships. However, several critical traits of democracy are being degraded. The most visible in social & economical disparities. Inequality is the name of the game in the lives and deaths of most people. Equality was declared the cornerstone of solid democracies since Tocqueville. The receding quality of democracy has provoked the need to invoke for new adjetives tro this kind of degraded democrcies (iliberal democracies, managed democracies, pseudodemocracies, inverted totalitarisms, hybrid democratic regimes, etc). The fundametal question, however, is not if we need to create new brands but to ask for the political capabilities of this regimes to cope with the new world disorder (finantial, enviromental, energetic, geopolitical, demographical,). The precarious political efficiency of political institutions contrast with the growing pressures on the entire global social system. We can bet on the progessive, flexible atributtes of democracy to dealñ with big challennges, or the emergence of reppresive "democracies".

Vidales-Gonzáles, Carlos & Amozurrutia, José Antonio (Universidad de Guadalajara [e-mail: morocoi@yahoo.com]), **Modeling Semiotic Processes through a Complex System Approach,** *International Sociological Association, Gothenburg, Sweden,*

¶ Semiotics has been a useful tool for explaining the nature of sign processes & meaning production in society, & recently in nature at large. However, it was with the emergence of biosemiotics in the 1960s, an extension of Peirce's semiotics into biology, & with the Cybersemiotic framework proposed by Søren Brier, an integration of second order cybernetics & Peirce's semiotics, that the question concerning the nature of meaning emergence and the establishment of semiotic systems started to become a central issue. Nevertheless, in spite of the different attempts to integrate semiotics & cybernetics, there is something that has not been taken into account so far, & that is the translation of semiosis into a complex system, that is to say, not just the integration of semiotics & cybernetics at a theoretical or epistemological level, but its operationalization at the level of a computer system. That is the main goal of the work we are proposing here: an attempt to build a bridge between semiotics and cybernetics by modeling semiotic processes thorough a complex system approach, using texts as a study case.

Vidovicova, Lucie (Masaryk University & RILSA, Jostova 10 [tel: +420602515886; e-mail: lucie.vidovic@seznam.cz]), **Is Financial Literacy Pre-Requisite for Successful Preparation for Ageing? Some Thoughts for Welfare State Provisions,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction: Good standing finances are one of the most important predictors of well-being. As a result of recent reforms elsewhere, workers are expected to take on high responsibility for their retirement & financial situation. However, there are pre-requisites for an individual to be able to make informed decisions leading into financial security. In our paper we try to answer the question what is the level of financial literacy (FL) of people who are ten or less years before the retirement. Methods: We use survey Financial Literacy 2007 (carried out in Czech Republic with men aged 51 - 61 years & women aged 47 - 57 years (N = 1541)). We define FL as understanding of financial products, having the skills & confidence to be aware of financial risks and opportunities to make informed choices & effective actions. Results: We were looking for interconnections between abilities (ability to solve basic mathematical problems), values and attitudes towards money, savings, tendencies for risky financial behaviour (spending, debts, credits), & level of informedness about conditions of retirement provision. We also looked at these relationships in the context of heterogeneity of population in concern, with respect to different lifestyle preferences, which seems to play an important role. Conclusion: As the most important intervening factor on all levels seems to be level of previous education, we send strong supporting argument for life course approach to all policies in concern.

Vieta Maggi, Roxana M. (The Salvation Army, 1907 NW 38 St. Miami, FL, 33142 [tel: 305-637-6700; fax: 305-635-1123; e-mail: Roxana_vieta@uss.salvationarmy.org]), **The Role of Sociology in the Expansion of Human Rights in the United States,** *International Sociological Association, Gothenburg, Sweden,*

¶ By signing the Convention against Torture & Other Cruel, Inhuman or Degrading Treatment or Punishment, the closing down the Guantanamo Detention Facilities, & the Review of Detention Policy Options, the new U.S. Administration is moving towards a more consistent application of its constitutional values in the international arena. Furthermore, on the domestic front, the efforts being made by President Barack Obama aimed at implementing health care system reform as well as other initiatives in the field of education and social security all confirm the expansion of the concept of human rights. However, the transformation of values & norms, changes in political & legal structures and, in general, social awareness, are not spontaneous, but rather contradictory & difficult processes. Sociology has played an increasingly significant role in the promotion of welfare & social peace & is now called upon to contribute–together with other scientific disciplines–to the development & creation of effective transition mechanisms in a world context full of new dangers in which the prevention of violence, as well as the promotion of the universal values of peace and justice, cannot prosper without a multicultural perspective.

Vieten, Ulrike M. (Faculty of Social Science, Vrije Universiteit Amsterdam, 1081 HV Amsterdam [tel: ++31 2059 88639; fax: ++31 2059 88675; e-mail: UM.Vieten@fsw.vu.nl]), **Worlds Polar Apart–Speaking about and Doing Research on Race in the European Union,** *International Sociological Association, Gothenburg, Sweden,*

¶ According to Goldberg (2006) whiteness is incorporated in the figurative representation of Europe. In some Continental European EU Member States, for example Germany or the Netherlands, officialdom tends to equate minority ethnicity with "culture" creating new forms of racializing discourses. However, "race" and ethnicity represent distinctive racializing strategies, which are embedded in situated, nation state specific & historically constructed discriminating systems. Public debates might shift their voyeuristic attention to particular ethnicities & religious minorities sometimes, but seems to be relatively stable in terms of the power axis of "Whiteness/ Blackness". As it is argued in this paper; the globally & locally effective, but uneven colonial dimension is neglected in comparative research on EU anti-discrimination policy & further, also missing as a co-founding transnational moment to hybrid notions of 21st century European identities. To develop this argument, firstly some analytical problems arising through the frequent tendency to equate "race" with ethnicity in a European (public) discourse context are discussed. Secondly, more concrete questions are approached that matter to the improvement of comparative research into multi-dimensional anti-discrimination issues & institutional racism.

Vieth, Manuela (ICS/Sociologie, Utrecht University, Heidelberglaan 2, 3584 CS Utrecht, The Netherlands [tel: +31302534541; fax: +31302534405; e-mail: m.d.vieth@uu.nl]), **Revenge and Gratitude in Trust Situations Involving Promises and Threats. Experimental Evidence on Reciprocity by Intention-Based Sanctioning,** *International Sociological Association, Gothenburg, Sweden,*

¶ People are inclined to reward others' kindness & to retaliate for others' unkindness. Based on obligation feelings, indignation feelings, & self-consistency, the mere choice of an action without any change of objective outcomes can influence subsequent decisions. These influences have been studied in trust situations with sanctioning options for trustors. Some trust situations also involve announcement options for sanctions by trustors or for trustworthiness by trustees. Announcements are cheap-talk without a reply option. Sanctions are costly & not always effective in objective terms. The experiment is designed as within-subject sets of structurally identical (sub)games resulting from kind & unkind actual behavior in single encounters. This design allows effects of objective outcomes & of individual heterogeneity to be controlled. Sanctioning behavior is found to be strongly influenced by preceding behavior rather than by outcome-based motivations. Even cheap-talk announcements strongly increase actual rewarding and punishing decisions, except for kept promises of trustworthiness, which tend to be less rewarded.

Vila, Gemma & Gavalda, Jordi (University of Barcelona, Department of Sociological Theory, Philosophy of Law and Methodology of Social Sciences, Barcelona, Spain, 08034 [tel: +34934039855; e-mail: gvila@ub.edu]), **Social Sustainability in Relation to Urban Forms. Analysis of the Metropolitan Region of Barcelona,** *International Sociological Association, Gothenburg, Sweden,*

¶ Today, in the Metropolitan Region of Barcelona (MRB) two different models coexist: that of the compact city typical of the Mediterranean model juxtaposed against recent model of urban sprawl. The breakdown of the Ford System of production & the application of new technologies led to a change in the structure of the territory: the city boundaries extended, segmentation of space increased contributing to the expansion of urban sprawl. The current crisis has raised new questions on the limits and possibilities for this model. This is why in this paper we are trying to provide a response to various questions. In what way have these new dynamics exacerbated or, indeed, generated new forms of social inequality in the territory? How has all of this affected daily life, human relations & social cohesion? What effects have the recent territorial dynamics on sustainability from economic, ecological & social viewpoints? What limits, possibilities and challenges will this reality pose to a sustainable model? We believe as a hypothesis, that urban morphology is a fundamental variable for sustainability. There are three dynamics into which unsustainable space can be converted: from the compact city to the dispersal of urban activity; from the complex city to the functional specialization of space; from the integrated city to a greater potential segregation of social groups on the territory. Our objective is, firstly, to move forward in a support theory of the concept of social sustainability & its empirical conciseness. Secondly, to analyse the current situation of the MRB from the wider concept of sustainability putting emphasis on the social dimension.

Vilela, Elaine & Xavier, Flavia (Department of Sociology and Antropology–Federal University of Minas Gerais, Av. Antônio Carlos, 6627, Pampulha, Belo Horizonte, MG Brasil, 31270-901 [tel: 55 31 34095532; e-mail: emvilela@gmail.com]), **International Immigrants and Contradictory Locations of Classes,** *International Sociological Association, Gothenburg, Sweden,*

¶ The objective of this study is to test the hypothesis that international immigrants have better chances of finding themselves in "intermediary class" locations. This is in reference to the comparison to the location of other positions on the occupational structure, either at the top or base of the hierarchical pyramid of the Brazilian labor market. This hypothesis is based on Bonacich's (1973) discussion about immigrants in a middleman situation in the economic sector of society. We highlight that in order to test this hypothesis, we will use classifications of occupations based on the definition of Erik Olin Wright's (1994) contradictory locations. In other words, classes are simultaneously dominating or dominated. Or, as Bonicich (1973) states, contradictory locations mediate employers & employees & the elite & masses. This research uses data from the Brazilian demograpghic census & uses a subsample of men between the ages of 25 to 60. The focus of our study are Argentineans, Bolivians, Chileans, Paraguayans, Peruvians, Uruguayans, Chinese & Koreans, who have fixed residence in Brazil, after the 1970s.

Villa, Matteo & Tomei, Gabriele (University of Pisa–Department of Political and Social Science, 56126 Pisa, Italy [tel: +39 50 2211932; fax: +39 50 2211921; e-mail: matteo.villa@sp.unipi.it]), **Unveiling Rhetoric, Promoting Social Practices: The Problem of Participation in the New Tuscany Welfare System,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Tuscany Region (Italy) has put on the field an advanced attempt to promote a new integrated approach & structure at governing the Health & Assistance Systems at local level. Above the main issues at stake, one of the most intriguing is the attempt to build Participation Local Committees at promoting social participation in governing, delivering & evaluating local social policies. The paper aims at discussing the problems of participation implied in the experiment, where some contradictory issues are at stake. First, against a strong rhetoric discourse, not many are the methodological concerns really tackled by the responsible institutions. Second, the attempt at distinguishing the role of citizens & social rights groups, by the one of third sector organisations implied in the public services management, appears full of cultural & political constraints. Third, the contingency of the economic crisis are threatening the innovative process, claiming to find urgent answers to the daily problems & putting into a corner the participation issues & expectations, in so far these are often perceived as not-central or ephemeral ones. Methodologically, the paper discuss the different approaches on participation under way resorting to a logical-formal approach and considering evaluation as a focal point, stemming from the double hypothesis that, the way the evaluation is put in practice depicts an indicator of the kind & rate of possible participation and that it is a key-concept & mean to change the ordinary relations of mutual influence in a given context.

Villalon, Roberta (Sociology, St. John's University, 8000 Utopia Parkway, SJH 444L, Queens, NY 11439 [tel: (1) 347 537 7487; e-mail: villalor@stjohns.edu]), **The Invaluable Power of Resistance Art: From Tucumán to Texas,** *International Sociological Association, Gothenburg, Sweden,*

¶ The power that art has had as a means to resist oppression has been long recognized, yet kept in arguably a marginal position since art expressions alone cannot defy entrenched systems of inequality. However, their effects on the artists & public & particularly, their combination with broader social movements have been of significant relevance in the advancement of social & personal struggles of subversion and/or liberation. In this paper, I compare two seemingly disparate artistic movements with the aim of highlighting the invaluable potential of art in counteracting both structural & interpersonal violence. I look into two counter-hegemonic exhibitions: Tucumán Arde (Tucumán Burns) in 1968, Argentina, & Corazón Lastimado: Healing the Wounded Heart organized by Arte Sana in 2002 & 2003 in Texas, U.S. Both of these artistic creations were part of larger social movements (the former was part of the conceptual art movement during the agitated sixties of Argentina, & the latter of the battered women's & the Latina immigrants rights movements in the U.S.), and both of these exhibitions arguably had tremendous impact in the struggle to end oppression & violence. The differences, besides region & time, reside in their fame, scope & reach a all of which point to long-lasting debates in regard to social change: how can one evaluate the success of resistance art & social movements? Is durability of the artistic/socio-political movement a valid measure? Or is it popularity? Is "change at the personal level" enough or is "radical social transformation" the only one satisfactory result? A sociological analysis of these artistic mobilizations, including the thoughts of creators, organizers, and their publics may lead us to reassess their potential & overcome disciplinary barriers that have prevented the formation of powerful coalitions in the various struggles for justice.

Villarespe-Reyes, Verónica (IIEc-UNAM, Circuito Mario de la Cueva s/n, Ciudad Universitaria, 04510 Mexico, D. F. [tel: +52 55 56012197; fax: +52 55 56013098; e-mail: reyesvv@servidor.unam.mx]), **Mexico: Can a Programme like Progresa-Oportunidades Eradicate Poverty?,** *International Sociological Association, Gothenburg, Sweden,*

¶ At the present time, programmes against poverty, in terms of the State legitimation, play a very important role as a means to redistribute income. Programmes like these are known as programmes of Conditional Cash Transfers (CCT); in Mexico is the case of Progresa-Oportunidades. The CCT programmes based their policies on income-consumption, & these obey only to a particular conception of poverty. Consequently, these programmes try to raise the income, in order to raise consumption. Although in the short-term it is important for people to receive money to purchase food or to have scholarships for their children; in the long run it does not eradicate poverty. The CCT programmes invest in people as a human capital in order to secure the reproduction of the labour force. In these terms, programmes aim at people being trained or having better salaries, but do not create necessarily a better life for them. These programmes (like Progresa-Oportunidades) neither propose themselves & nor are able to transform the socio-economic structures. Poverty reproduces into the system, which generates it.

Villela, Bruno Pessoa (Universidade Federal Fluminense, Avenida Sete De Setembro N 204 APT 1302, ICARAÍ, NITERÓI, Rio [tel: 552127119201; e-mail: pessoaevillela@hotmail.com]), **Armed Forces Missions and the Strengthening of Democracy in the Latin America: The Civil-Military Relations for the 21st Century,** *International Sociological Association, Gothenburg, Sweden,*

¶ Besides the natural difficulty of interpreting & summarizing a Latin American perspective, the topic involves three additional challenges. The first is the enigmatic, symbolic & useless (since it only makes sense as an artificial time marker) expression "21st Century" In Latin America, the expression is even more symbolic: we love to write centuries in roman numerals, either Siglo XXI or SÃACOculo XXI. Anyway, the phrase "21st Century" gives the topic the obscure & mystic quality of the uncertain. And it gives us, the participants in this conference, the feeling that we are alchemists or apprentice wizards: we must speculate on the future and chase away the shadows of the past. Without the right to consult the oracles, we are invited to look into the 21st Century. The second challenge is the delicate issue of civil-military relations in Latin America. This topic has provoked mild debate among Latin American political scientists. However, when the subject is addressed in North, it seems to go beyond the political sciences & into the terrain of thermo-dynamics: if the issue is discussed in the North, it provokes heated reactions in the South. Finally, the subject involves the notion of the "Americas," observed from the standpoint of those interested in ensuring external security & democratic stability. Moreover, it involves–or implies–the idea that the military may be a threat to democracy. Regional security initiatives fuel different perceptions & stimulate different levels of sensitivity in the Americas. The combination of an extraordinary power asymmetry with the lack of serious threats to the region does not inspire Latin America to reach common security arrangements. Besides, when the suggestion for such arrangements originates in the United States it usually arouses reservations in Latin America. In sum, the mere fact that the United States is the one proposing the creation of a regional security system ignites traditional suspicions in Latin American countries. I will briefly deal with the first two challenges in order to define a referential framework for these ideas, & will concentrate more heavily on the last: the Americas within the context of both the initiative of this meeting & the U.S. strategy for the region.

Vinthagen, Stellan (Dept of Social and Behavioural Studies, University West, Trollhättan, Sweden, 461 86 [tel: +46 704763789;

e-mail: stellan.vinthagen@hv.se]), **Resisting Western Hegemony: Subaltern Cultural Articulations of the World Civil Society,** *International Sociological Association, Gothenburg, Sweden,*

¶ The globalization discourse discusses if the world is, in a cultural meaning, getting more connected & interdependent, or more fragmented & conflictual. Several thinkers (like e.g. Peter Singer or Mary Kaldor) forwarding concepts as "cosmopolitanism" or "global civil society" are assuming that the (future) world culture expresses the Western liberal paradigm, although, a tolerant & inclusive version of individualism, human rights, universalism, & progressive development. We have several conflicting views on the promise of globalization, one between the liberal world culture of the "global civil society" vs. "a world where there is room for many worlds" (Subcomandante Marcos). As Manuel Castells argue, the future of new "project identities" lies within the "resistance communities" that, although they do articulate reactionary sentiments, do experiment with new forms of life, values & societies. The aim is to find types of strategies, methods, social movements, projects & themes articulating a subaltern version of the world, in an opposition to the Western hegemony. Since all these expressions are too numerous, I make an overview of (i) the types of cultural resistance, (ii) their subjugated world views & (iii) dynamic mechanisms/processes between competing versions of world culture.

Viorela, Ducu (Department of Sociology and Social Work, The Babes-Bolyai University, Cluj Napoca, Romania [e-mail: fviorela@yahoo.com]), **Romanian Transnational Families: The Emerging Empowerment of Women,** *International Sociological Association, Gothenburg, Sweden,*

¶ The study illustrates the ways in which migrant women cope with their traditional caregiving role towards dependant persons in their families: children, the elderly, the sick. Their financial support, transnational communication, but most of all, the transfer of care towards another person fill in the gap created by their absence. By analyzing the transfer of care both from the stance of migrant women, especially transnational mothers, as well as from that of people providing direct care in their stead, I illustrate the re-definition of migrant women's roles within transnational families. Thus, the migration of women determines a change in the relationship among transnational family members. The study aims to show that non-migrant members, mostly women, who take over caregiving tasks play a role just as important in the life of transnational families as migrant women. My data tell that migrant mothers' children achieve school results that are not negatively influenced by the mothers' migration, but in the case of these children I notice an increased tendency to give up studying. This fact usually conflicts with the mothers' wish. The strategies of transnational communication that these women have developed, to be presented in this study, are essential with respect to the migrant mother a non-migrant children relationship. The voices of 34 persons (migrant women, transnational family members, key persons) who have been interviewed during field research, assert that by shifting positions, migrant women have not only managed to fulfill their responsibilities, but indeed they became the main breadwinners of their families. Moreover, the experience of migration is associated with the growth of self-esteem of these women, & leads to a development of their educational and professional status. In Romania, migrant women confront a stigmatizing public & political discourse accusing them of leaving & neglecting persons dependant of their care. This article wishes to be a documented & theoretically grounded reply to these accusations.

Vitovsky, Vladimir (Universidade de Coimbra–CES, Coimbra, Portugal [e-mail: vladimirvitovsky@ig.com.br]), **Partipatory Community Justice: Is that Possible to Imagine a Third Way for Civil Justice and Dispute Resolution in Brazil?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper discuss new ways of dispute resolution, with a new approach, the so-called "participatory community justice", which implies a new regard to dispute resolution, against the ethnocentrism of the traditional justice. In the context of sociology of law, and through the lenses of the studies of Boaventura de Sousa Santos, the aim of this paper is to critically analyze civil dispute resolution theories & its application in the Brazilian case, discussing participatory community justice as a third way in the performance of its functions. First I discuss modern legal systems problems & the reforms implemented. Then, I analyze the profile of positivist judge & its limitations for dispute resolution. So, I present the possibilities & limitations of Brazilian alternative law movement. Finally, I discuss the participatory justice as the most appropriate way of dispute resolution, illustrating with a case study in the State of Espirito Santo. I expose this experience of participatory community justice, placed in the context of this third way of acting, which got the Federal small claims Courts close to elderly. I conclude that way can bring a democratic justice & allows not only citizens closer to the judges, but, above all, judges closer to citizens.

2010S02838

Vogl, Susanne (Catholic University of Eichstaett-Ingolstadt, 85071 Eichstaett, Germany [tel: +49 8421 93 1278; e-mail: susanne.vogl@ku-eichstaett.de]), **Applicability of Semi-structured Telephone Interviews with Children Aged 5 to 11,** *International Sociological Association, Gothenburg, Sweden,*

¶ Children are increasingly seen as competent informants when their activities, views & needs are concerned. But the problem of how to (adequately) address them as a researcher remains. Interviewing children by an adult interviewer is common practice. Problematic is the generational & power relation between the two parties involved. A visual of the interviewer reminds the child throughout the interview of the differences in authority & can endanger data quality. One idea of fighting this problem is to conduct telephone interviews because visual cues are excluded/minimised. Since this limited a or more "focused" a communication also has drawbacks a direct comparison between face-to-face & telephone interviews is needed. In the study presented here the feasibility of semi-structured face-to-face & telephone interviews was tested. By looking at the children's verbal, cognitive and interactive skills in this interview setting we draw conclusions about the applicability of those interview types. Data basis are 112 qualitative face-to-face & telephone interviews with 56 German children where each child was interview twice, once on the telephone & once face-to-face. The analyses are subdivided into qualitative-descriptive as well as quantitative steps to reach a wider picture of each interview situation. Beside the interview mode, age, gender & different types of question formats are considered as variables that might have an impact on children's verbal, cognitive & interactive skills & therefore might determine the applicability of interviews. The results show that that telephone interviews can work better, but not for all age groups & not for the same reasons in different age groups.

2010S02839

Voicu, Malina & Bartolome, Edurne (The Research Institute for the Quality of Life, Romanian Academy, Bucharest, Romania, 050718 [tel: +40213182461; fax: +40213182462; e-mail: malina@iccv.ro]), **Socialization or Context? Patterns of Support for Democracy in Spain and Romania,** *International Sociological Association, Gothenburg, Sweden,*

¶ Europe experienced few waves of democratization after World War II, transition to democracy occurring in different social, economic and political contexts. The present paper focuses on the way in which pre-democratic situation & the socio-economic context during democratization influence learning of support for democracy and compares the dynamic of support for democracy in Spain & Romania, during the post-totalitarian period. The two countries belong to different waves of democratization & having a different totalitarian past (fascist for Spain & communist for Romania). We focus on two research topics: Is the social change in support for democracy the result of population turnover or of intra-cohort change? How successful are the two societies to build a reservoir of support for democracy? Using data provided by Eurobarometer for Spain (1985 -2008) & by Central & Eastern Eurobarometer, Candidate Countries Eurobarometer & Standard Eurobarometer for Romania (1990-2008) we decompose the social change in changes due to cohort replacements &

transformation produced by intracohort changes. The results indicate that political events, such as elections in the first democratic years play a relevant role in shaping attitudes towards democracy.

2010S02840

Voicu, Malina & Mihai, Ioana-Alexandra (Research Institute for the Quality of Life, Romanian Academy, Bucharest, Romania, 050718 [tel: +40213182461; fax: +40213182462; e-mail: malina@iccv.ro]), **Membership in Civic Associations in Spain: Why do Some Migrants Volunteer More than Others?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The study focuses on the level of membership in associations of the migrant population in Spain & tries to show how some characteristics of origin countries shape the involvement in associations in the host country. Previous researches show that volunteering in associations during the young adulthood determines higher involvement in civic association later in life, while democratic societies provide more opportunity for associational membership & for practicing civic skills. We expect to find a significant effect of the level of democratization & the membership in association from the country of origin on the civic involvement in the host country. We test our hypotheses on data coming from Spanish National Immigrant Survey, carried out in Spain, in 2007, on a sample of 15465 of immigrants, which provide information about membership in civic associations of the various migrant groups. We use World Values Survey data (2000/2005) that provides information about the membership in civic associations in the country of origin & Freedom House Civil Liberty index, as a proxy for the level of democratization in the country of origin. The results of multilevel regression analysis indicate a significant effect of the country of origin's characteristics on civic participation in the host country.

2010S02841

Volkov, Yuri (Southern Federal University, Rostov-on-Don, Russia 344006 [tel: +7 863 2641912; fax: +7 863 2641912; e-mail: info@ippk.rsu.ru]), **Regional Identity and Political Stability of Russian Society,** *International Sociological Association, Gothenburg, Sweden,*

¶ As a factor of political stability regional identity is not sufficiently explored & a rather "non-transparent" point for research. When exploring regional identity it is important to take not only social but also socio-territorial heterogeneity of Russian society into consideration. The difference of Russian regions by their positions in social capital requires special knowledge and analysis of both the quality of people life & the level of their social cohesion. Activization of Russian identity doesn't "cancel" difficulties concerned with dominating in life of Russian people the identities of social microlevel. Investigation of regional identity under instability of people identities according their criteria of social & property stratification, or in terms "winner & loser" as the result of reformation, affords an opportunity for detecting conditions & trends of long-term identification strategies that are able to strengthen the intensity of Russian society consolidation & consequently his political stability.

2010S02842

Von Wissel, Christian (CUCR/Goldsmiths, London, UK, SE14 6NW [e-mail: wissel@citambulos.net]), **Operations of Recognition in the Urbanized Landscape of Mexico City,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores the potential of psycho-geographical & visual mapping in order to recognize the meaning that inhabitants derive from the visual perception of their socio-spatial environment. It tries to contribute to the question of how the everyday physical surrounding, through its visual impact, constructs urban imaginary. Looking into the art practice of Robert Smithson, the paper discusses the scope & added value of "operations of recognition" as a tool for social research sensible to the texture of urban space. The fieldwork is conducted in the northern outer region of the Metropolitan Area of Mexico City, where both formal and informal growth have created an entropic patchwork-urbanized landscape which confronts inhabitants with a hybrid form of "rurbanity" difficult to bring together when constructing notions of local identity. The "operations of recognition" consist of a series of walks through this urbanized landscape, each linking together different spaces & spatial-temporal conceptions. The socio-visual results are set into dialogue with both the key literature on visual construction of urban imaginary & with an interdisciplinary body of theory related to Smithson's work & to visual & intervening practices as research methods.

2010S02843

Vorhölter, Julia (Institute of Social and Cultural Anthropology, University of Göttingen, 37073 Göttingen, Germany [tel: ++49 (0)551 397892; fax: ++49 (0)551 397359; e-mail: jvorhoe@gwdg.de]), **Perceptions, (Re)-Productions and Transformations of Gender Roles and Norms among Youth in Northern Uganda,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper is based on ongoing empirical research which deals with the effects of the armed conflict in the Acholi districts of Northern Uganda. It focuses on local gender relations & discourses from the perspective of youth who have grown up in a situation of permanent conflict in which "traditional" gender roles & norms could not be practiced. In the faltering post-conflict phase, different social actors try to "rebuild" society & normalize social life by either re-establishing old practices & conventions or by attempting to establish new "hegemonic" social structures. The presentation aims to provide first insights into biographical data collected in Northern Uganda. On an empirical level it will discuss life stories of youth. How have their experiences during the conflict affected their understanding of gender relations? On a methodological level, the presentation will raise questions of how to understand biographies with regard to wider processes of social change in the context of the conflict. Combining anthropological methods of ethnographic fieldwork with biographical research provides many benefits in order to explore how the individual constructs & positions him/herself in relation to hegemonic norms in society & how, by doing so, he/she contributes to reproducing or challenging these norms.

2010S02844

Vratusa, Vera (University of Belgrade Faculty of Philosophy Department of Sociology, Cika Ljubina 18-20, 11000 Beograd, Serbia [tel: + 38111 - 3282-141; fax: + 38111 - 2639 356; e-mail: vvratusa@sezampro.rs]), **Problems of Constructing the Common Core of Participation, Organizational Democracy and/or Self-Management Research Instrument,** *International Sociological Association, Gothenburg, Sweden,*

¶ Paper starts with the analysis of social causes of present lack of consistent, comparable, valid & reliable longitudinal data on participation, organizational democracy and/or self-management (p, o.d. &/or s.m. in future text) & proceeds to investigate the theoretical, methodological & practical-political problems of the common core of the relevant research instrument(s) construction. The main finding of the paper is that contradictory social interests of broad social groups having opposed places & roles in class division of labor, determine both whether the p, o.d. &/or s.m will be researched at all, & if researched, what aspects of these complex forms of social relations organization will be operationalized into the research instrument items & how. The aspects identified as the most often omitted are proposed to become more prominent in the content of the eventual future common research instrument of p, o.d. &/or s.m: 1) the attitude of citizens in the family, local community, school, workplace, nation state, regional & worldwide organizations, toward the basic value and normative-institutional principles of various types of p, o.d. &/or s.m.; 2) advantages & disadvantages, positive & negative experiences of the effects of existence or absence of p, o.d. &/or s.m., & 3) one's own readiness to take part in p, o.d. &/or s.m concerning transformation of existing ownership & decision-making relations from local to global levels of social existence. The main aim of the proposed construction of the common core of the relevant research instrument, is to contribute to the accumulation of the empirical basis for the critical reconstruction of the social relations' & ownership structure's transformation strategy whose implementation would increase the p, o.d. &/or s.m involvement of citizens in sustainable development of their human capacities, generating equitable solidary satisfaction of their needs, instead of the accumulation of private profits & power of financial oligarchy, generating social & ecological disasters.

2010S02845

Vratusa, Vera (University of Belgrade Faculty of Philosophy Department of Sociology, Cika Ljubina 18-20, 11000 Belgrade, Serbia [tel: + 38111 - 3282-141; fax: + 38111 - 2639 356; e-mail: vvratusa@sezampro.rs]), **Theoretico-Methodological Paradigms of 2008 Crisis Interpretation and Strategies of Getting Out of Crisis from the Sociology of Knowledge Angle,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper contains sociology of knowledge analysis of the three main types of paradigmatic theoretico-methodological approaches to explanation & understanding of the 2008 systemic crisis causes and effects, as well as the analysis of the three main types of practico-political strategies of coming out of the crisis closely related to these approaches. The main finding of the paper is that the ideological conflict of the partisans of these three paradigms, presents the expression of the class fight for the conserva-

tion, reform or overcoming of the existing social relations of exploitation & oppression. Partisans of the neo-Smithean liberal paradigm, as ideological representatives of transnational financial oligarchy, are perceiving the optimal exit from the disturbance of the market equilibrium in letting costs & wages settle down at the new corrected level. Realization of their strategy of strict monetarism & deregulation, however, only deepens the acute problem of insufficient demand & financial speculation. Neo-Keynesians, as ideological representatives of the national bourgeoisie, advocate for the measures of state intervention similar to those introduced in the 1930s & after the World War II. Realization of the strategy of etatization of investment, however, social democrats have abandoned in the 1970s due to the rise in the inflation rate & the simultaneous appearance of stagnation. Critical theoreticians of the neo-Marxist orientation as the potential ideological representatives of the wage labour force & unemployed, insist that the inherent contradiction of the capitalist mode of production between potentially unlimited development of social productive forces, on the one side, and private appropriation of profit or unpaid surplus labour as the aim of social reproduction, on the other side, can be resolved only through overcoming of capitalist mode of production. They advocate therefore for the using of the actual systemic crisis of the global accumulation of capital for the learning on the previous mistakes and for the continuation of the building of solidary self-management social relations that eliminate class division of labour & alienated exchange of commodities through the direct participation of associated producers & consumers in the decision-making concerning the organization of social production and reproduction of their own lives & the fullest development of the human capacities of every individual. Key words: neo-Adam Smithism, neo-Keynesism, neo-Marxism, systemic accumulation of capital crisis, participation, self-management

Vrocharidou, Anatoli & Efthymiou, Ilias (Business Administration, University of the Aegean, Chios, Greece, 82100 [tel: 00306945269675; e-mail: AnatoliULvro@yahoo.gr]), **Computer Mediated Communication for Social and Academic purposes: Profiles of Use and University Students' Gratifications,** *International Sociological Association, Gothenburg, Sweden,*

¶ University students make use of computer mediated communication (CMC) applications, i.e. e-mail, instant messaging & social network sites, in order to satisfy social & academic needs. Grounded in the "uses & gratifications" perspective, we investigated the various profiles of CMC use by students along with their perceptions about the social & academic usefulness of CMC applications. We also tested some hypotheses regarding the extent up to which these perceptions are related to (a) the students' prior experience with CMC applications, (b) the frequency of present use, (c) the hometown residence (d) the expressed feeling of loneliness. To this aim, we conducted an empirical research by sampling students from a Greek University which is settled in an island far away from the mainland. We have focused on university students, since they not only represent one of the most avid groups of CMC users but also because they are expected to carry their perceptions of media with them into the workplace & their social life. A self-report method of research was conducted by the mean of a questionnaire consisting of reliably adapted/constructed scales of measuring. The results support the implementation of further academic policies that will promote the effective use of CMC in Higher Education.

Vuolo, Mike, Mortimer, Jeylan T. & Staff, Jeremy (University of Minnesota, Department of Sociology, 909 Social Sciences Bldg, 267 19th Ave S, Minneapolis, MN, USA 55455 [tel: 1-203-988-2314; e-mail: vuol0001@umn.edu]), **Floundering During the School-to-Work Transition: A Latent Life Path Approach,** *International Sociological Association, Gothenburg, Sweden,*

¶ Whereas the term "school-to-work transition" (STW) implies a clear, discrete event, this increasingly prolonged transitional period is not always unidirectional & typically includes involvements in both school & work. The increasing destandardization in the STW transition makes it especially difficult to assess the extent to which young people today "flounder" during this period. Using data from the Youth Development Study & latent life path modeling, this paper examines the interplay of educational and career attainment. The findings show four distinct STW pathways: two groups that attain careers through postsecondary education (via a Bachelor's or Associates/Vocational degree) & two groups who do not. High socioeconomic status, academic promise, & steady investment in paid work during high school help youth avoid subsequent floundering during the STW transition.

Vyacheslavovna, Noskova Antonina & Igorevna, Kuzmina Elena (Moscow State Institute of International Relations (MGIMO-University), Moscow, Russia, 119454, Prospekt Vernadskogo, 76 [tel: 7 495 4349426 ; fax: 7 495 4349426; e-mail: avnoskova@mail.ru]), **Change of the Ethnocultural Situation under the Influence of the Migratory Processes in Russia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Subject of the study. Positive intensive ethnic migration flow in Russia complicates ethnographical picture of the Russian society. It results in many problems such as cultural, social, economical ones & puts a number of actual research questions, e.g.: What tendencies could be traced in relationships between ethnic migrants and aboriginal population? What influence has the complication of the ethnic structure on the Russian social stability? Description of the supporting data. We have used the data of the Nation-wide Monitoring Survey that is being carried out by the Russian State Social University every year from 2002 to 2009 & some current statistic documents. Conclusions. It has been found out that the social distance between the ethnic groups has considerably grown during last years. Ethnic migrants & aboriginal population are trying to stand apart & isolate from each other. They are creating their territorial, economic & sociocultural enclaves on the uniform space. Present financial-economical crisis contributes to aggravation of tension between the ethnogroups. Worsening situation on the labour market can provoke the transformation of the latent discontent to the evident ethnic confrontation, to the struggle for the own culture, resources & workplaces. The paper presents qualitative & quantitative analysis of these trends.

Wachtendorf, Tricia (University of Delaware, Newark, DE, USA, 19716 [tel: 1-302-831-6618; fax: 1-302-831-2091; e-mail: twachten@udel.edu]), **When Push Comes to Shove: The Framing of Need in Disaster Relief Efforts,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper focuses on the interplay between material & informational convergence during disaster events. In particular, the mass media plays a substantial role in 1) framing demand for relief supplies; and 2) directing the flow of relief supplies. While storyline, access, & timing may have significant impacts on the relief need narrative constructed by the mass media, the messages presented to the public impact the collective behavior phenomenon of convergence. That is, these frames generate specific relief supplies to specific populations in specific areas & at specific times. International relief, therefore, becomes less a function of responding to an objective social problem than responding to a framing of a subjective problem. Findings are based on field observation & newspaper content analysis following the 2001 World Trade Center attacks, the 2004 Indian Ocean tsunami, Hurricane Katrina in 2005, & the 2008 Wenchuan China earthquake.

Wagner, Claire (University of Pretoria, Pretoria, Lynnwood road, Brooklyn, 0181 [tel: +27 12 4202319; fax: +27 12 4202404; e-mail: claire.wagner@up.ac.za]), **The State of the Art of Teaching Research Methods: 2007 Onwards,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper follows on research that will be published in the journal Studies in Higher Education in an article entitled: "The state of the art of teaching research methods: towards a pedagogical culture". The study for the aforementioned article encompassed collecting literature published in academic journals between 1997 and 2007 on the topic of teaching research methods in the social sciences. An analysis of 195 articles published in 61 journals revealed three gaps in the literature on teaching research methods: (1) the role & desirable characteristics of an RM teacher, (2) the challenges of teaching & learning specific aspects of RM, and (3) commonalities & differences in RM between disciplines. Arguments for & against a general pedagogical culture for RM were also put forward. The aim of the current paper is to follow up on the findings of this study with regards to literature that has appeared in journals since the database for the study was completed. This may include some articles published in 2007 that were not yet available for inclusion in the previous database. Once all new articles have been accessed a new database will be generated & analysis of the literature will be performed. The analysis will entail exploring any new trends in the literature as well as determining if any of the gaps that were identified in the previous research have been addressed.

Wagner, Elke (Universität Mainz, Institut für Soziologie, Colonel-Kleinmann-Weg 2, 55099 Mainz [tel: 0049 6131 3922444; fax: 0049 6131 3924043; e-mail: wagnere@uni-mainz.de]), **Doing Critique as an Empirical Question. On the Potential of Systems Theory for the Concept of Emancipation,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper wants to show how the perspective of sociological Systems Theory on critique & enlightenment constitutes not a normative but an empirical view that is open for the question of how reason and critique is established. The paper reconstructs the change of the public sphere on the basis of ethnographic data from web-discussion-forums in which critical perspectives about the doctor-patient-relationship are negotiated. It can be shown that there is a critical public discourse about medicine that does not follow the framework suggested by Habermas. While Habermas limits his concept of critique to bourgeois debate about (the better) reason, alternative publics emerge that do not even need to give justified reasons to be able to speak in public: concernment suffices. The former paradigm of a bourgeois public now gets symmetrized to different forms of practices of critique. The paper links the empirical question of critique to the role of media that relates speakers & their public in specific forms & in doing so constitutes different possibilities of critique. Sociological Systems Theory strength lies in the empirical framework that opens the view for e.g. new constellations of speakers & their publics and how they generate the question of emancipation.

2010S02852

Wahab, Olukorede Elias (Lagos State University, Nigeria, lagos state, Nigeria [tel: 2348023054348; fax: 2348023054348; e-mail: eliasphd@yahoo.com]), **Health Seeking Behaviour and Accessibility-Affordability of Treatment amongst the Elderly in Suburban Areas of Lagos, Nigeria,** *International Sociological Association, Gothenburg, Sweden,*

¶ The number of persons aged 60 years or over is estimated to be 688 million in 2006 & is projected to grow to almost 2 billion by 2050. In Nigeria, even though only about 5% of the population are 60 years, the raw population of the elderly is assuming a significant dimension. This study aims at understanding the interface between accessibility-affordability & health seeking behavior amongst the Suburban elderly persons in Nigeria. The Sub-urban areas of Lagos are the preferring places of residence for most elderly persons due to lack of access to economic resource and unregulated housing structure. They also face neglect from health service providers who preferred urban settings. Data was collected through individual-based questionnaire & multi-stage sampling procedure was used to select elderly persons in Ikorodu LGA of Lagos State, Nigeria. In all, 210 respondents were interviewed. Logistic regression was used to determine the net effects of the explanatory factors on health seeking behaviour. This was complemented with several IDIs & FGDs. The study found out that the majority of the respondents have more access to traditional medicine & preferred self-medication as a result of un-affordability of modern medicine. A small proportion sought treatment, & care from public health care facilities. More than 80% believe that some illnesses of terminal & chronic nature required traditional medicine. The study believed that the elderly require support to strengthen the existing systems & make them more accessible & affordable in order to improve quality of care. Key words: Health seeking behaviour, Accessibility, Affordability, Treatment, Elderly, Nigeria

Wahlbeck, Östen R. (SSKH, University of Helsinki, P.O.Box 16, 00014 Helsinki, Finland [tel: +358-50-4154594; fax: +358-9-19128430; e-mail: osten.wahlbeck@helsinki.fi]), **Kurdish Diasporas Revisited: Local and Transnational Integration over a Period of 15 Years,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper discussed the usefulness of the concept of diaspora for empirical research of refugee & immigrant integration processes. The concept has become widely popular, but has also been critized for being too imprecise. The discussion in this paper is based on a follow-up study of Kurdish communities in Finland in 2009. In the 1990s, the author described the Kurdish refugee communities Finland and England as "diasporas" (Wahlbeck 1999). The paper looks at developments since the first study, & discusses how these relate to a diasporic framework. The paper discusses Kurdish associations in Finland, & how diaspora politics & transnationalism have adapted to the local requirements. Furthermore, Kurdish immigrants' position in the Finnish labour market is in focus. The initial results of the follow-up study suggest that the processes of social & economic integration have been directed into both local Finnish contexts & transnational relations, rather than a straightforward integration into a Finnish national social context. The paper suggests that the concept of diaspora still might be a useful concept for the analysis of the Kurdish communities. However, the concept provides a general analytical framework rather than being an exact descriptive concept.

Wahlström, Mattias (Dept. of Sociology, University of Gothenburg, Box 720, 405 30 Gothenburg, Sweden [e-mail: mattias.wahlstrom@sociology.gu.se]), **"The Gothenburg Events" 2001: The City as a Counter-Space,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this essay, published in the anthology "(Re)Searching Gothenburg" (Holgersson et al. 2010), a brief description is given of the violent conflicts in Gothenburg between police & protesters during the EU summit meeting in 2001. It is argued that the EU summit turned the public space of Gothenburg into a "truth-spot," a place particularly suited for demonstrating that certain assumptions about the world are true. In this case, various protests groups' aims to demonstrate the conflict between the people & the EU collided with local politicians' intentions to demonstrate the Gothenburgian spirit of mutual understanding and the need of the police to demonstrate professionalism and territorial control. Ironically, none of these intended demonstrations turned out to be very convincing; the police lost control over violent protesters that appeared to direct their aggression primarily towards the city of Gothenburg rather than towards the EU. Nevertheless, the case can exemplify the idea that political demonstrations can be the site of production of "counter-spaces," when the street is taken over in opposition against transformations of the city governed by market forces. Wahren, Juan (Instituto de Investigaciones Gino Germani, Facultad de Ciencias Sociales, Universidad de Buenos Aires, Uriburu 950 6º Piso, Buenos Aires, Argentina (1180) [tel: 005411-4861-8662; e-mail: juanwahren@yahoo.com.ar]), **Movimientos Sociales, territorios y recursos naturales en disputa El caso de la Asamblea del Pueblo Guaraní (APG) en el sureste de Bolivia** (Social Movements, territories and natural resources in disputed the case of the Assembly of the Guarani People (APG) in southeastern Bolivia), *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ The proposal of this paper it's to work around the collective actions of the Asamblea del Pueblo Guaraní (APG), the Guaraní People Assambly, around the territory & the natural resources. This organization begins in the end of the 80A's in the southest of Bolivia, in the "Chaco Boliviano", a very rich region for natural resources, mainly in oil & gas. Also, the APG maked a lot of collective actions for the reconogtion from the state of their ancestral lands & for the protection of natural resources exists in these territories. In these conflicts the APG has build a broad range of alliances with another indigenous, peasants & social movements in Bolivia that allowed to engage in various disputes with oil companies operating in the area In this sense, we inquire about the complex relationships that occur between the different actors that dispute the uses & meanings around the territory and the natural resources: the state, the social movements and transnational companies. Finally, we will establish the specific processes involving territorialization & disputes for the natural resources of this organization, constitute as a new analytical dimension to provide the theoretical discussion about social movements in Latin America.

Wahyuni, Ekawati Sri (Department of Communication and Community Development, Faculty of Human Ecology, Bogor Agricultural University, Gedung FEMA Wing 1, Level 5, Jl. Kamper, Kampus IPB Darmaga, Bogor 16680, Indonesia [tel: +62 251 8627793; fax: +62 251 8627793; e-mail: ekawatiwahyuni@gmail.com]), **Gender, Ethnicity And Elderly Care: Differences And Similarities Of Living Old Age In Indonesia, Malaysia And Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ Population ageing is an important phenomenon in the Asian continent in the last fifty years, & it has been influencing the human living conditions. Ageing has become a research interest in various field of study. Gender scholars insist that elderly welfare is also a gender issue. Gender issues & elderly welfare are culturally designed. This research focuses on describing the elderly care support system in Indonesia, Malaysia, & Japan

& explaining the consequences for family life & gender roles. Gender issues will be examined from both the caregivers' & care-receivers' point of view. It is employed qualitative approach & using triangulation method in data collection. Research subjects and informants were selected by using a convenience method. The ageing process in Indonesia & Malaysia are slower than that in Japan. The industrial development has creating jobs in urban areas for women, which are not compatible with domestic work including care-giving. In Indonesia & Malaysia, women employed housemaid to care for their elderly members, because it would bring shame to the family for putting the elderly in nursing home. In Japan, with longer experience in elderly care, the government has implemented a comprehensive long-term care insurance system.

2010S02857

Waismel-Manor, Ronit & Tolbert, Pamela, S. (Behavioral Sciences, Netanya Academic College, Netanya, Israel, 42365 [tel: 972-9-8607741; e-mail: ronitwm@gmail.com]), **The Impact of Relative Earnings among Dual-Earner Couples on Career Satisfaction and Family Satisfaction,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study examines the effects of family economic structure on both the family satisfaction & career satisfaction of men & women in dual earner couples, where both members are employed full-time. Using data from a two-panel survey of middle-class couples, we compare husbands & wives in equal-earner couples (where each member contributes between 40 & 60 percent of the total family income) with those in traditional dual-earner couples (where the husband earns more than 60 percent of the family income). Our results indicate that family economic structure has very different effects on both the family & career satisfaction of men and women. Women in equal earner couples have significantly lower family satisfaction than do women in traditional couples, but significantly higher levels of career satisfaction. In contrast, family economic structure has little effect on men's level of family satisfaction, but men in traditional couples have significantly higher career satisfaction than men in equal-earner couples.

Wakewich, Pamela A. (Depts. of Sociology and Women's Studies, Lakehead University, 955 Oliver Road, Thunder Bay, Ontario, Canada, P7B 5E1 [tel: +1 807 343-8353; fax: +1 807 346-7831; e-mail: pam.wakewich@lakeheadu.ca]), **Growing Comfortable in Our Own Skins: Transitions in Body Consciousness and Embodiment Over the Life Course,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores continuity & change in gendered & classed reflections on the body & embodiment over time. The research is based on in-depth oral history interviews with forty working- and middle-class Canadian women & men in their middle years. Growing older involved transitions in levels of body consciousness and experiences of embodiment for both women & men, but these were typically experienced at different stages of the life course and framed in relation to gendered regional ideals of masculinity and femininity. Differential access to physical, social & symbolic capital in the changing postindustrial northern work environment mediated gendered experiences of the body & whether body transitions over time were described as positive or negative. Learning to "grow comfortable in one's skin" was a goal expressed by many of the respondents. The findings from this case study suggest the value of incorporating intersectional & life course approaches in research on embodiment & aging.

2010S02859

Walby, Sylvia (Department of Sociology, Lancaster University, Lancaster, UK, LA1 4YT [e-mail: S.Walby@Lancaster.ac.uk]), **Theorizing Violence,** *International Sociological Association, Gothenburg, Sweden,*

¶ Violence should be integrated into the centre of social theory, rather than left on the margins. The paper draws on & goes beyond existing social theory. Following Durkheim, variations in the rate of violence are associated with variations in other social institutions. Reinterpreting Weber, a state is not yet modern when it does not have a monopoly over violence in its territory (e.g. when rape in marriage is not criminalised). Against Merton, criminal violence is not only from the disadvantaged. Going beyond Marx, violence is more than the instrument of the power of the state & proletariat. Challenging Foucault, brutal regulation by the state is not always replaced by discipline with modernity. Contradicting Bourdieu, the concept is not usefully broadened from the physical to the symbolic. Violence is constituted through its deployment & regulation by a set of inter-related social institutions, forming a fourth institutional domain alongside economy, polity & civil society. There are associations between homicide, militarization, imprisonment, & the death penalty; and between high rates of violence & social inequality. There are diverse paths of development of violence, rather than a single relationship to modernity, with tipping points between pathways, requiring complexity theory for their analysis.

2010S02860

Waldstein, Maxim (Helsinki Collegium, University of Helsinki, Fabianinkatu 24, 00014 University of Helsinki, Finland [e-mail: maxim.kupovykh@helsinki.fi]), **Dilemmas of Autonomy: Establishing the Independent "Auteur Film" Scene in Contemporary Russia,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper aims at placing contemporary Russian independent & elite film culture on the map of contemporary sociological research on cultural production & consumption of cultural products as both a practically unexplored comparative case & a source of far-reaching theoretical insights, especially with respect to the nature & limits of artistic autonomy in contemporary society. With these goals in mind, I examine the proliferation of "artfilm" (artkino) clubs & art houses, "auteur film" festivals & publications, & (primarily) arthouse-oriented production & distribution companies in contemporary Russia. Encouraged by new digital technologies & comparative economic prosperity of the 2000s, these processes have recently acquired the character of a social movement. Based on the results of social surveys, participant observations & personal interviews with the artfilm movement's activists & participants, I argue that their artistic & industrial strategies combine substantial emancipatory potential & considerable political ambiguity. In particular, by discursively & institutionally separating "film as art" from both "popular entertainment" & "state-sponsored patriotism", the Russian artfilm movement simultaneously contributes to the current national trend of depoliticizing the social life & turns itself into a key site of the public sphere at the time when the space for legitimate public debate is shrinking. Furthermore, by combining exclusivity & diversity, distinction & accessibility, "alternativity" & the ability to maximize attendance, the artfilm institutions not only capture previously untapped audiences but also shape emerging social distinctions & subjectivities. Thus, while challenging the leveling cultural effect of the advent of the marketplace to Russia, the movement introduces and legitimizes new cultural & social inequalities. At the same time, by partially commercializing its operations, the artfilm scene not only participates in the growing commercialization of the Russian cultural industries, but also acquires a degree of genuine artistic and institutional independence from both the state & dominant commercial conglomerates.

Walling, A. Wati (Indian Institute of Technology (IIT) Bombay, Dept. of Humanities and Social Sciences (HSS),Indian Institute of Technology (IIT) Bombay, Powai, Mumbai, Maharastra, India 400076 [tel: 09930 437 887; e-mail: watiwalling@iitb.ac.in]), **Land Alienation and Customary Laws: The Norm Practitioners, Land Bearers and the Commoners' Identity in a Tribal Community in the North-East India,** *International Sociological Association, Gothenburg, Sweden,*

¶ The value of land is priceless. It is more so, when it comes to an agrarian community whose existence solely centers on land a ownership & production. The systems of land holding in the earliest of times remain most intriguing. It is noted that the India's North-East hill area inhabitant- Naga tribe are the custodians of over eighty nine per cent (89%) of the total land mass. In a community such as this, significant insights need to be gathered to read how the norms evolved & got established? This study endeavors how a relationship is defined by being a practitioner of the customary laws vis-à-vis land bearer and the commoners? How far do the customary land ownership practices impact the identity formation across different categories within households, clans, & religious institutions–church organizations? Though attributed as private ownership, there are further four different kinds of private land ownership viz. community land, clan land, lineage land & individual land. The existing customary land holding pattern is perceived as an agent which has brought about land alienation & thus a massive out-migration in the case study village a Yimjenkimong (YKG) in the 1960s & division lately within a church in the early 1990s. Credibly, a sense of identity formation is created which bring about conflict & lack of co-operation between the categories it tends to create.

2010S02862

Walseth, Kristin (Oslo University College, p.b.4, St. Olavs Plass, 0130 Oslo, Norway [tel: + 47 97656556; e-mail: kristin.walseth@lui.hio.no]), **Sport Among Young Norwegian-**

Pakistani Women: The Role of Religion and Culture, *International Sociological Association, Gothenburg, Sweden,*

¶ During recent years, there has been a growing focus within sport research on ethnic minorities & their involvement in sports. Most research has focused on immigrants & their low level of participation in sports. Minority women have shown to have significant lower participation rate than men, & women from South Asian countries like Pakistan are particularly underrepresented in sport. The objective of this paper is to study the role culture and religion play for Norwegian-Pakistani young women's sport involvement? Method This paper is based on interviews with eight (8) young Pakistani-Norwegian women. The young women are second generation immigrants, aged between 17 & 23. Results The study shows that religion & culture plays an important role for Norwegian-Pakistani women's sport participation. At first glance, it seems difficult to split the role of religion from culture. This is first of all due to the finding that religion & culture are embodied praxis manifested in Norwegian-Pakistani women's participation in sport. Furthermore, the study addresses the manner in which domicile in a non-Muslim country promotes reflexivity concerning religious orientation among the second generation of immigrants & how this influence on Norwegian-Pakistani women's sport involvement.

2010S02863

Wang, Horng-luen (Institute of Sociology, Academia Sinica, Institute of Sociology, Academia Sinica, Taiwan [tel: +886 2 2652 5113; e-mail: hlwang@sinica.edu.tw]), **Commemorating War and Revolution: Red Tourism in China,** *International Sociological Association, Gothenburg, Sweden,*

¶ Organized mass violence such as war & revolution has had profound impacts on the formation & transformation of modern society, but the imprints & legacies it has left are yet to be fully explored by sociologists. For instance, how does society remember its past characterized by war & revolution? How does the nation account for the grieves, sufferings & death during its violent past, and how are the military legacies of war & revolution preserved and promoted to the level of national heritage through tourism? What are the moral implications & ethical debates behind such tourism? This paper analyzes the rise of so-called "Red Tourism" (hongse lüyou) in China that promotes tours to the "sacred places of revolution" of the Chinese Communist Party (CCP). "Red Tourism" emerged in the late 1990s & gained nationwide popularity through support from the state since the promulgation of the "Outline of the National Plan of Developing Red Tourism" in 2005. Promoted in an explicitly nationalistic tone & guided by different patriotic themes, Red Tourism organizes trips to historical sites related to the Communist revolution & wars in the modern era (such as the War of Resistance against Japan & the civil war between the CCP and the KMT [Kuomintang]) that are portrayed as "historico-cultural heritage of patriotic spirits" for the Chinese nation. Furthermore, the state also promotes Red Tourism to alleviate poverty in the "old revolutionary areas" which are mostly located in the remote countryside where economic development lags badly behind the urban & coastal regions. Thus viewed, Red Tourism should not be seen as merely part of the state's propaganda for patriotic ideology; rather, its development is intertwined with the trend of commodification under the impact of the market economy, on the one hand, & with the rise of consumer culture that highlights leisure & pleasure of the rapidly growing tourists, on the other hand. By commodifying such "historical heritage" of war & revolution to be consumed in the cultural market, the CCP is able to revive memories about the revolutionary past in the elder generations, while passing them onto the younger generations who have grown up in a relatively affluent society where such memories are fading away. Drawing upon theoretical insights in contemporary cultural theories as well as the literature on nationalism, this paper investigates how nationalist ideology, market economy & consumer culture converge to shape the developments of Red Tourism. In addition, the paper also analyzes the contradictions, paradoxes & ironies that emerge during this process in which political ideology, economic forces & cultural logics are at odds with each other from time to time. In the conclusion, the paper further explores the moral controversies and ethical implications concerning value-conflicts & regional reconciliations when memories about war & revolution are preserved as "historico-cultural heritage" of the nation.

2010S02864

Wang, Jenn Hwan (Grad. Inst. of Development Studies, National Chengchi University, Taipei, Taiwan 116 [tel: 886 2 29387525; fax: 886 2 29387526; e-mail: wangjh@nccu.edu.tw]), **Transnational Linkages and Industrial Clusters in East Asia: China' Zongguancun, Taiwan's Hsinchu, and Korea's Daedock's Science Parks Compared,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper aims to compare China's Zongguancun (Beijing), Taiwan's Hsinchu, & Korea's Daedock's science parks, as to investigate how global/local linkages affect these clusters pursuing for innovation. In the Korean Daedock case, the cluster was designed as a science town that was geographically & institutionally isolated from manufacturing firms. Although there have been improvement after the 1998 financial crisis, the tendency is still that Daedock tends to become an innovative island with little domestic or global manufacturing support. Similarly, although Beijing Zongguancun is located in China's most innovative areas that has strong global presence, the global & domestic R&D institutes & universities are institutionally isolated among themselves & with firms. Few significant improvements have been done until recently to amend this institutional isolation. The Hsinchu science park is the only cluster among the three that has built organic global/local linkages among universities, R&D institutes & firms that have been able to generate technological innovations to sustain the cluster's development. Nevertheless, I argue that Hsinchu's cluster still encounter challenges in generating frontier innovation. Finally, this paper will conclude that both the geographical and institutional linkages among R&D institutes & firms are the single most important factors that determine a cluster's sustainability.

Wang, Li (Social Research Department, Tampere Univ., Tampere, Finland, 33014 [tel: +358 401901542; e-mail: li.wang@uta.fi]), **Family Snapshot Sharing On Flickr: The Construction of Solidarity,** *International Sociological Association, Gothenburg, Sweden,*

¶ Abstract This research focuses on the emerging snapshot practices on photo-sharing website of Flickr.com, aiming to explore the changes of the online photo publishing from the earlier film-based photo sharing. A social semiotic investigation is conducted to reveal the interactive meaning of the images & the dialogue between the image-publishers & the viewers. Self-expressiveness is displayed from the images, in contrast to restoring memories or recording family relationship of the earlier film-based snapshot sharing practice. The way of story-telling in the texts attached to the images shows the influence from the traditional home mode snapshot communication to certain degree. By examining the organizational linguistic properties from the viewer's comments, it is reported how solidarity is constructed in the online interaction.

Wang, Weidong (Renmin University of China, Deparment of Sociology [e-mail: wwd@ruc.edu.cn]), **Globalization and Social Distance of East Asia,** *International Sociological Association, Gothenburg, Sweden,*

¶ A simplified Bogardus Social Distance Scale is tested in four East Asia societies. The 3-indicator-scale (colleague, neighbor, and marital kin) has good cross-cultural reliability & validity in China, Japan, South, & Taiwan. Using computed social distance score as relationship to separately construct four ego-centric networks, these four societies have totally different network pattern: China is the most far away from the world, Japan is closer to the West than Asian, South Korea is the closest to the world and is in the balance position, Taiwan is similar to Japan's pattern and Taiwanese have no significant distance to Japanese. Furthermore, using social distance as dependent variable, we cannot get a unified explanatory model in these four societies. But using social distance as an indicator to measure globalization, we could construct a very good measurement model with other indicators of globalization.

Waniek, Katarzyna (Department of European Culture Studies, University of Lodz, Lodz, Poland, 90-214 [tel: +48 694129790; e-mail: k.m.waniek@gmail.com]), **Escape to Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper will provide an insight into the dynamics of human mobility within the European borders. An attempt will be made to explore a neglected cause of migration: the escape motive & its positive consequences on individual biographical development. The findings to be presented are based on a detailed analysis of autobiographical narrative interviews with mobile individuals. The focus will be on these cases in which Europe provides a space for: individual expression & development, doing biographical and identity work, individuation, as well as a capacity for extricating oneself from predicaments at home (e.g. the traditional way of life of one's parents). A contrast between locality (suffocating conditions of living in one's own country) & Europe (conceived of as a place for

potential individual fulfillment) will be discussed. It will be argued that the process of Europeanization may have a positive impact on individual life course & collective identity development. The collected data suggest that Europe may be perceived as "a breath of fresh air" that enables to cope with difficulties, suffering & disorientation in one's life. Yet, it will be indicated that in the course of one's migration/ mobility career the (re) patriotization process may be initiated.

Warburg, Margit (Dept. of Cross-Cultural and Regional Studies, University of Copenhagen, 86 Artillerivej, 2300 Copenhagen S [e-mail: warburg@hum.ku.dk]), **Migration and the Confluence of Religious and National Identities,** *International Sociological Association, Gothenburg, Sweden,*

¶ When immigrants settle in their new host country they usually form religious associations along national or ethnic lines, & these boundaries are maintained for at least a generation or two. This pattern reflects most immigrants' need of establishing supportive social networks in their new country, & an immigrant religious association constitutes a common place of refuge. In many cases the result is a confluence of religious & national identities among at least first-generation immigrants. In order to analyse the particular ways, in which these identities are expressed empirically, I use three ideal types of "knowing", "doing" and "being", respectively. Applying fresh quantitative and qualitative data on expatriate Danes, including data from an internet-based survey with more than one thousand valid responses as well as comparative material on Danes in Denmark, I shall illustrate how association with the Danish Evangelical-Lutheran Church is part of Danish national identity also among non-believing expatriate Danes. Despite this confluence of identities abroad it is discernible that the Danish national identity is mainly expressed through a "doing" ideal type of identity, while its Protestant dimension is expressed as a "being" identity.

Warner, Uwe & Hoffmeyer-Zlotnik, Juergen H.P. (CEPS/ INSTEAD, Differdange, Luxembourg [e-mail: uwe. warner@ceps.lu]), **The Survey Questions for the Income Measurement in the European Social Survey –From Absolute Monetary Incomes to Relative Positions in Income Distributions,** *International Sociological Association, Gothenburg, Sweden,*

¶ Comparing the household income across European countries: the household definition & size; the respondent's family relation to the main income earner; the main source of income; the income composition; the respondent's capability to remember income element; & the national income distributions have obvious & visible impacts on the income information in the first round of the European Social Survey. The data collection of ESS did not consider the different national income distributions & did not take into account the various national concepts of income for the operationalization of the income questions & answer categories offered to the respondents. In the fourth round of the interviews for ESS, the survey question about "total net household income" was modified. The construction of answer categories took the national distributions of household income into account. We expect a significant improvement of the measurement quality. This presentation shows the modifications of the fieldwork instrument and illustrates the improvements for the quality of the income measure in a cross country comparative social survey. Key words: ESS, income, measurement, survey questionnaire

Warren, Lorna & Richards, Naomi (Sociological Studies Department; The University of Sheffield, Sheffield, United Kingdom, S10 2TU [tel: 00 44 114 2226468; e-mail: L.Warren@Sheffield.ac.uk]), **Look at Me! A Participatory Arts Project Working with Older Women in the UK to Create New and Alternative Images of Ageing,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Second World Assembly on Ageing (2003) recognised a need to challenge stereotyped images of ageing, particularly in relation to older women. Visual methods offer a means for older women to articulate their experiences of ageing. However, to date, "ordinary" older women have not had the opportunity to comment on, or create, their own images of ageing & old age. This paper presents preliminary findings from an innovative research project based in Sheffield, England that aims to: ac Enable older women from different community settings to create their own images of ageing using a variety of visual & textual methods; ac Explore the relationship between creative activity & later life well-being; ac Reflect upon the contribution of visual methods to participatory processes; ac Demonstrate the contribution of arts and humanities to critical gerontology; ac Enhance recognition, by policy makers & the wider public, of the authority, wisdom and productivity of older women. This paper presents findings from one of the projects in which an art therapist worked with a group of older women to facilitate discussion & produce new images. It captures a wide-ranging gaze on ageing, from relatively light-hearted feelings about hair-dying to fear of decrepitude, abandonment, lost sexuality & death.

2010S02871

Wasshede, Cathrin (Department of Sociology, University of Gothenburg, Box 720, 405 30 Göteborg, Sweden [tel: +46 31 7865830; e-mail: cathrin.wasshede@sociology.gu.se]), **Double-Edged Craving for Legitimacy: Urban Citizenship for Lesbian, Gay, Bi- and Transsexual People 1970-2010,** *International Sociological Association, Gothenburg, Sweden,*

¶ This text depart from Saskia Sassens idea about the partial dismantling of citizenship of today, which has given rise to questions about rights & subjects. Sassen argues that citizenship is a normative project & she distinguishes between two different subjects; one that has no formal rights, but is nevertheless recognized; one that has formal rights & are labelled "citizen", but are not fully recognized. In this last subject-model we find minority groups. New political practises, involving hitherto silence or silenced people, are taking place. Another point of departure for this article is Thomas Osborne's and Nikolas Rose's ideas about advanced liberalism, with a special interest in questions concerning the construction of the free, self-regulated, civilised & normal urban citizen. My empirical focus will be the lesbian, gay, bi- & transsexual (LGBT) urban citizenship. How has this changed over time since the 1970s? In what ways can we see the LGBT-citizens taking active part in their "own government", collectively & individually? How are they handling & using the (imaginary) boundary between the healthy, pure, safe, normal city & its so-called "dark side", with abnormalities, dangerous enticements & sexuality? The LGBT-subject is a subject with many formal rights, but not fully recognised. Instead it is often positioned in the dark, "bad places". What strategies do they use to gain legitimacy, recognition & full citizenship a or to oppose it? My idea is to focus on specific occasions from different phases & places, in Denmark & Sweden, from the 1970s up til now. Landsforeningen for bøsser, lesbiske, biseksuelle og transpersoner (a Danish organisation for LGBT-persons) was established 1948 & RFSL (the Swedish equivalent) was established 1950. In the free town Christiania in Copenhagen, Bøssehuset (the gay house) was established 1973, which means it has been part of Christiania almost from the beginning. It is still active & it is located in a very specific place; an alternative public space; a city in the city. In Gothenburg Röda bögar (Red Gays) were active 1976-1978. Lesbians often organized themselves in separatist groups and participated in the formation of Kvinnohuset (the Women's house) 1975, which led to the foundation of Swedens only women separatist folk high-school; Kvinnofolkhögskolan. Denmark was 1989 the first country in the world to legitimize registered partnership between same sex people. In Sweden this law came 1995, and in 2009 Sweden got so called gender-neutral marriage. Queer activists oppose the desire for this kind of legitimacy in order to resist assimilation & to create alternative spaces & ways of practising citizenship. Exclusion, citizenship, assimilation, recognition & separatism are central in the analysis, as is Judith Butlers discussion about the double-edged desire for the legitimacy & the state's monopoly of legitimacy/ recognition.

Watarai, Tomoko (University of Munich (LMU), Konradstr.6 80801 Muenchen, Germany [tel: 0081 3 3646 0430; e-mail: wchico54@hotmail.com]), **From "Integration" to "Multiple Inclusion": The Role of Migrant Associations in the Context of Contemporary Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper addresses the difficulty of migrants to utilize their political & social rights within the receiving society and considers how the obstacles can be minimized institutionally by referring to some recent attempts in the German city of Munich. After the Federal Republic of Germany had declared it is a migration country for the first time in 2005 & published the "national integration plan" in 2007, the number of projects promoting migrants' incorporation into the receiving society has increased sharply. Against the expectation of the government, however, some migrants refuse to engage in integration politics and/or to take advantage of the public support programs offered to them. It is partly because of their unwillingness to renounce their cultural identities, & partly because of their suspicion and resignation which arose from the perception that the government had until now done very little when they needed its help. Moreover, it is not easy

for migrants to access the complicated institutional structure in the receiving society at all. To address these problems, various groups started to take actions on the local level. Migrant associations in Munich increased cooperation with the local administration, so they can give initial help to migrants to contact public institutions in the receiving society. The local administration, on the other hand, increasingly supports migrants' self-organization to reduce their reluctance to visit an office for further guidance to public support programs. Based on my interviews with migrants, civil servants & representatives of some migrant associations in Munich I will show that the ongoing local attempts cannot be subordinate to the national interest of the social integration, but rather can be described as a "multiple inclusion" which doesn't presuppose full commitment to one national culture.

Waterstradt, Désirée ([e-mail: dw@waterstradt.com]), **Analysis of the Figurational Change and the Balance of Power of Parents in the 20th Century,** *International Sociological Association, Gothenburg, Sweden,*

¶ Norbert Elias has always picked out topics like family, marriage and parenthood as central themes in his theory of the civilization process: Due to the gradual process of state-formation the family itself & its notion are undergoing a permanent change; a lot of today's problems in the parent-child-relationship are problems of our civilisation. Elias' conclusions concerning parents in the civilization process, the parent-child-relationship, the parent-state-relationship, as well as the civilization of parents have been rarely used in family research. This paper analyses the concept of parents & family that can be deduced from the theory of the civilization process. It also analyses the question whether parents can be considered as the central & basic figuration of the social civilization process. Up to now the perspective of parents has hardly appeared neither in the public discussion nor in scientific research–the main interest seems to focus on the well-being of the child. Today's parents live under enormous pressure. In no generation before there was allocated to parents such an extent of responsibility & necessity of taking decisions for their children. It depends on the parents' resources available to them what the base is from which they can take this responsibility–resources such as, e.g., emotional competence, language, derivation, social class, milieu, gender, but also educational system or social security system. By investigating the displacement of resources within the civilization process in the 20th century & its governmental, technical, professional, social, and legal development, this study wants to find out the changes in the balance of power in the parental relationship networks.

Watkins, Karen (UPAEP, Puebla, Mexico [e-mail: karen.watkins.f@gmail.com]), **Health, Social Roles, and Life Cycle: A Gender Approach in the Tropics,** *International Sociological Association, Gothenburg, Sweden,*

¶ Gender is an important issue for studying health & medication use; up-to-date, most of the literature has identified significant health-related differences between men & women. These can be explained by biological factors, socioeconomic issues, and psychological features. The present study analyses in particular the effects of multiple roles & life cycle on female health. It is based on surveys on medication use, implemented in Costa Rica in June 2003, 2004, & 2005. Results show that generally the relationship between health & the number of roles follows a U shape. In this sense, having no roles is better for women's well-being than having three roles. However, those women with one or two roles possess worse health conditions than those with three roles. When controlling for life cycle, it appears that young women with preschool & elementary school children are most vulnerable. Their health perception, life, & economic satisfaction are significantly lower than for the rest of women.

Watson, Juliet (University of Melbourne, Victoria, Australia, 3010 [tel: 61 3 9381 4589; e-mail: j.watson8@pgrad.unimelb.edu.au]), **Narratives of Survival Sex: Young Women, Inequality and the Negotiation of Intimate Relationships,** *International Sociological Association, Gothenburg, Sweden,*

¶ The inequalities faced by young women who are homeless demands that they are exposed to situations in which survival is hindered or assisted by playing out specific gender roles. Poverty, marginalisation & deprivation all require the development of resources in order to survive and, for many young women, sex and intimate relationships may be their only available capital. In particular, survival sex, or the exchange of sex for basic necessities such as accommodation, food & protection, can be an important aspect of the homeless experience for young women. This qualitative research explores the impact of survival sex on young women's identities & how it contributes to a gendered experience of homelessness. Primary research consisted of semi-structured, face to face interviews with 15 homeless young women aged 18-25 living in Melbourne, Australia. Participants were asked about their experiences of intimate relationships & survival sex while homeless in order to provide a better understanding of the specific inequalities faced by young women. This research will assist in greater knowledge regarding the impact of homelessness on gender and how young women locate themselves within their narratives of inequality.

Watt, Paul (Department of Geography; Birkbeck, University of London, London, UK, WC1E 7HX [e-mail: p.watt@bbk.ac.uk]), **Elective Belonging and Selective Belonging in a London Suburb,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines processes of middle-class disaffiliation in London's eastern suburban periphery in relation to the related concepts of 'elective belonging' & 'selective belonging'. Elective belonging refers to processes of neighbourhood adoption by residential incomers (Savage et al., 2005). The empirical material is drawn from survey & interview research with the home-owning, middle-class, largely white incomers to the "Woodlands" private housing estate in Essex. By drawing upon Bourdieu's theoretical framework, the paper shows how the Woodlands incomers articulated notions of belonging in relation to the nearby deprived "Eastside" suburb. For its affluent residents, Woodlands dominant place image was that of an "oasis" within Eastside, an area dominated by a large council-built housing estate. Although the Woodlands incomers were physically resident in Eastside, they symbolically & practically disengaged from "local" places, notably shops, pubs & schools, with their lower-class as well as not-quite-white populations. The paper argues that the Woodlands incomers adhered to a spatially selective version of elective belonging. This is referred to as "selective belonging" a a spatially uneven sense of attachment rooted in residents' schizophrenic relationship to the suburban area, embracing the Woodlands oasis whilst abjuring the "other Eastside".

Watts, Jacqueline H. (Faculty of Health and Social Care, Open University, London, UK, NW1 8NP [tel: +44 207 556 6190; fax: +44 207 556 6189; e-mail: J.H.Watts@open.ac.uk]), **Voluntary Work as the New Leisure: Perspectives of Older Women Cancer Sufferers,** *International Sociological Association, Gothenburg, Sweden,*

¶ Voluntary work can be distinguished from paid employment in that it is freely undertaken & is often motivated by altruism. The application of specialist knowledge to some volunteering has prompted recognition of "skilled volunteering" as serious leisure, giving rise to the concept of the "leisure career". For retired people the attributes associated with employment, such as social utility, inform the role of volunteer. This paper discusses ethnographic participant observation research conducted at a cancer drop-in facility. Data revealed the importance of maintaining a congruent & socially useful "self"; for some this meant that retirement as a time of freedom & leisure had been traded for a set of obligations in volunteer roles. This paper focuses on the voluntary efforts of a number of older women in a range of settings and reveals how the value of "other-centredness", even in the face of deteriorating health, contributes to personal "wellness" and social inclusion. Although leisure in western scholarship has been defined as discretionary time that is free of obligation or duty, the research reported herein argues that a sense of duty to "the other" in the form of committed & regular voluntary activity contributes to personal well-being & enhances quality of life.

2010S02878

Wauters, Bram (University College Ghent & Ghent University, Voskenslaan 270, 9000 Ghent, Belgium [tel: +32 9 243 24 86; e-mail: bram.wauters@hogent.be]), **Substantive Representation of the Labour Class in a Changing Environment. Historical Evidence from Belgian Parliament,** *International Sociological Association, Gothenburg, Sweden,*

¶ The link between descriptive representation (being member of a disadvantaged social group) & substantive representation (defending the interests of that group) continues to be one of the most hotly disputed issues in social sciences. The political representation of social classes in this perspective has long time been neglected in research, as the main focus has been on women and ethnic minorities. It will be argued in this paper that class is still relevant in contemporary society & that due to the "catch-all"

approach of (social-democratic) parties & to the lower levels of recognition of blue-collar workers in the viewpoints of labour parties, the presence in Parliament of individuals of a particular social class (re)gains relevance The effect of these changes on the substantive representation of labour interests will be investigated during three periods in the history of the Belgian House of Representatives: a period when the main aspiration of social-democratic parties was still the defence of labourers' interests (1950s), a period when the "catch all" process had already widened the scope of these parties but when there were still blue collar MPs present in these parties (1980s) and a period when there were no longer blue collar MPs on the social-democratic benches in Parliament but when they started to appear in extreme right parliamentary parties (end of the 1990s).

2010S02879

Webb, Paul D., Bale, Tim P. & Taggart, Paul A. (University of Sussex, Falmer, Brighton BN1 9RJ, UK [e-mail: p.webb@sussex.ac.uk]), **Deliberative Versus Parliamentary Democracy in the UK: An Experimental Study,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper reports the results of new research funded by the Leverhulme Foundation, which employs experimental design to assess two hypotheses which are derived from the existing literature on popular alienation from politics & the potential for deliberative democracy to offer a solution to such alienation. The first hypothesis is that there are two quite different types of citizen who are "disaffected" with or "disconnected from" politics, but in distinctive ways: "Dissatisfied democrats" (middle class, educated, activist & articulate devotees of a vision of highly engaged citizens); & "Stealth democrats" (low socio-economic status, less educated, inactive, with little interest in politics, who are absorbed largely by private concerns). The second hypothesis is that deliberative-style participation would at best only be effective in respect of the former of these groups (the dissatisfied democrats), but would be counter-productive with respect to the latter (stealth democrats). While the former may chafe at the participatory limitations of traditional forms of representative democracy such as party & electoral politics, and have the confidence that they could thrive in the context of greater institutional opportunities for participation, the "stealth democrats" are actually more vulnerable to political marginalization, for they are less likely to thrive through or seek out direct & active engagement. The implications of the research findings into these issues should be important for the reforms that the political elites who attempt to respond to the problem of democratic disconnect devise.

2010S02880

Weber, Wolfgang G. (Institute of Psychology, University of Innsbruck, Innrain 52, A-6020 Innsbruck, Austria [tel: 0043 (0)512 5075549; fax: 0043 (0)512 5072835; e-mail: wolfgang.weber@uibk.ac.at]), **Has Organizational Democracy a Socialization Potential to Foster Prosocial Orientations and Organizational Commitment?,** *International Sociological Association, Gothenburg, Sweden,*

¶ If business organizations, according to Pateman (1970), offer their employees opportunities for democratic decision-making then the workers experience political efficacy & will transfer their readiness to act democratically to the larger society. Following, we investigated whether direct participation in democratic decision-making & the intensity of a socio-moral climate are associated with the workers' readiness to act towards the broader good of the organization & to support democratic & cosmopolitan goals (Weber et al., 2009). 325 employees from 22 small- and medium-sized companies (innovative engineering, industrial production, trade, handcraft, service sector) in three German-speaking countries were surveyed with a standardized questionnaire. The enterprise sample encompasses social partnership enterprises, workers' co-operatives, democratic reform enterprises, & employee-owned self-governed firms. The results of structural equation modeling (SEM) indicate that the extent employees participate in democratic organizational decision-making is strongly positively related to the firm's socio-moral climate as well as to employees' organizational commitment & prosocial and community-related orientations. Further, the results show that socio-moral climate is associated with the latter orientations, too. The effect of participation on organizational commitment is partially mediated by socio-moral climate. Furthermore. we compared these results with findings of problem-centered interviews conducted with 12 employees of three enterprises from the same sample. The participants' narrations corroborated most of the effects of the SEM study while they did not show an influence from sociomoral climate to organizational commitment. References Pateman, C. (1970). Participation & Democratic Theory. Cambridge: Cambridge Press. Weber, W. G., Unterrainer, C. & Schmid, B.E. (2009). The influence of organizational democracy on employees' socio-moral climate & prosocial behavioral orientations. Journal of Organizational Behavior, 30, 1127-1149.

2010S02881

Wehrli, Angelica (Department of Social Anthropology, University of Berne (Switzerland), Berne, Switzerland [tel: + 41 79 415 95 27 ; e-mail: wehrli@anthro.unibe.ch]), **Contested Norms and Values in the Realm of (Post-)Socialist Vietnam. Case Examples of the Red River Delta,** *International Sociological Association, Gothenburg, Sweden,*

¶ The launching of doi moi ("the process of renovation") which officially started in 1986, was a turning point in the history of Vietnam & implies outstanding changes from the former centrally planned economy to a "market economy with socialist direction". With the onset of doi moi Vietnam is undergoing complex processes of transformation which prove to be beneficial for some but disadvantageous for others. This paper starts from the observation that empirical data on socio-economic change occurring in urban Vietnam is scant. Therefore, I will present research data which I conducted in the Red River Delta in Hanoi & Nam Dinh City between 2004 & 2006. This multi-sited & longitudinal study investigates decision making strategies within the hô (household) and demonstrates how norms & values are being challenged. By comparing the local context of Nam Dinh City with national trends in Vietnam & by contrasting them with global development, I will link the local to the global & therefore enhance contextualisation & possible interdependences. For a better understanding of this complex situation I focus on households as they represent a link between the individual & the society as a whole which are both embedded in the supra-local. On the basis of this analysis both effects & adaptations of household livelihood strategies in the realm of processes of urbanisation and transformation will become evident. This research will serve the advancement of interdisciplinary studies as these complex processes of socio-economic change which take place worldwide challenge the cohabitation of generations on the one hand & the social cohesion between richer & poorer regions & their inhabitants on the other hand. Furthermore, I believe that this social anthropological research will provide the basis for valuable comparisons in sociology, & all studies trying to understand how norms and values are being contested in the realm of everyday life in (post-)socialist societies.

2010S02882

Weil, Joyce (University of Northern Colorado, Colorado, 80631 [tel: (970) 351-1583; e-mail: joyce.weil@unco.edu]), **"Because, Basically the Center Runs on Volunteers": The Role of Volunteerism in a Working-Class Senior Citizen's Center,** *International Sociological Association, Gothenburg, Sweden,*

¶ It is often assumed that older persons are the passive recipients of the voluntary labor of others. Such assumptions drive the dependency (or support) ratio and foster the compassionate stereotype of older persons as those in great need of help and protection. However, studies in the United States have found that volunteering and informal activities helping others in one's local community are commonly preformed simultaneously by those 60 and over with "[t]he market value of unpaid volunteer work by older Americans exceed[ing] /BFM2X4B|END60 billion in 2002" (Johnson and Schaner 2005 in Hinterlong, 2006: 156). An example of a national volunteer program is the Senior Corps, part of the Federal Corporation for National and Community Service, which matches the skills of those 55 years of and older to needs in their local communities.The paper will discuss the participants' reflections about how they see their role as volunteers & helpers to friends & other groups within the Center itself, & to larger groups in society. Initial interviews reveal that, in addition to feeling they are an integral part of the running & daily operations of the Center, center volunteers also see their role in helping a wide variety of groups from: local University students, religious groups & organizations, recipients of "Workfare" or public assistance, & many local politicians. The paper will also explore the role of social class and volunteerism, & the way attendees use their volunteering roles to construct & maintain social identities.(Abstract shortened by ProQuest)

2010S02883

Weiss, Anja (University of Duisburg-Essen, Institute for Sociology, Lotharstr. 63, 47057 Essen, Germany [tel: +49 203 183 1988; e-mail: anja.weiss@uni-due.de]), **Can "Global" Professional Fields Structure the Labor Market Access of Migratory Professionals or Does Legal Exclusion Prevail? A Comparative Analysis of Highly Skilled Migrants' Status Passages into the Labor Market in Germany, Turkey, and Canada,** *International Sociological Association, Gothenburg, Sweden,*

¶ Globalization is often represented in terms of global networks & flows which enable individuals to develop global trajectories. Critics have justly pointed out that globalization has also produced a mobility regime which contributes to global inequality by offering differential access to favored spaces. This is especially true for professions. While some newer vocational groups, e.g. in IT, have indeed gone global, many of the classical & more regulated professions remain restricted to natives of the respective country. This means that foreign professionals often are confronted with higher barriers to labor market integration than other highly skilled vocational groups. Access & barriers to professional practice are formally regulated but also structured by informal social closure. Migrants may e.g. be invited as highly skilled migrants & they may legally have access to professional practice, but at the same time most foreign professionals may fail the exams which supposedly test the adequacy of their foreign education. Therefore an empirical analysis of the impact of globalization on professional fields should put a focus on the actual labour market position of migratory professionals which may differ significantly from public discourse or institutional regulations. The paper presents results from the international study group "Cultural capital during migration. Towards the relevance of educational degrees and residence permits during the status passage into the labor market", headed by the authors & K. Schittenhelm (Siegen, Ger-many) & O. Schmidtke (Victoria, Canada) from 2005 through 2009. On the basis of narrative interviews with 206 skilled migrants in Germany, Turkey, Great Britain & Canada, status passages into the labour market were analyzed in depth & through multi-level comparison. Multiple comparisons between countries, between migrants with foreign & native degrees, between migrants with differing residence permits & between regulated professions and other highly skilled vocations in science, technology, health and business enable us to gain a comprehensive understanding of the labour market integration of migratory professionals. The empirical results presented in the paper focus on migrants in Germany, Turkey & Canada who were educated prior to migration. On the basis of 116 cases we have constructed a typology which captures different pathways into the labor market. It highlights the relative importance of (transnational) professional fields, of the transferability & recognition of cultural capital, of symbolic & legal in- & exclusion & of individual agency and orientations as structuring forces for the trajectories of migrant professionals.

2010S02884

Weiss, Dietmar (HCU Hamburg, Urban and Regional Sociology, Hamburg, Germany, 22305 [tel: +49(0)4042827-4554; e-mail: dietmar.weiss@hcu-hamburg.de]), **Street Markets in Hamburg: Potentials and Limitations of an Alternative System of Food Distribution,** *International Sociological Association, Gothenburg, Sweden,*

¶ Hamburg is one of Europe's most diverse street market cities, with more than 80 publically & privately operated street markets taking place in different parts of the town every day of the week. We can concede that the basic infrastructure that is necessary to establish street markets as one possible column of an alternative localised food system is remarkably present & highly dynamic. Surprisingly little, however, is being done to unlock the whole potential of street markets. The ideal of the classical full-time family entreprise is still perpetuated by many traditional actors within the system, & the idea of highly technicized, capital-intensive sales operations is promoted by a conglomerate of the trailer-building industry, the chambers of commerce, & the market traders' professional associations. Due to these circumstances, the street market system appears to be widely closed to outsiders & newcomers, a fact that may prevent structural adaption towards possible younger, engaged customers. In this paper, I intend to show the potentials & limitations of the current street market system in Hamburg in regard to the anticipated regime changes on the conventional food system's global and regional level. This paper draws from two sources: Firstly, I will present the results of a report commissioned by the municipal administration of Hamburg-Harburg, a traditional workers quarter that has been hit by de-industrialisation & widespread neglect of the public space in the recent decades. Secondly, I intend to use first material from my dissertation project, one of the first larger-scale research projects on German street markets, to embed the case study's results within the wider context.

Weiss, M. C. V., Souza, C. M. O. F. de, Santos, K. M. M. dos & Dias, P. H. A. (Universidade Federal de Mato Grosso, Cuiabá, Mato Grosso, Brazil [tel: + 55 65 3615-8881; fax: + 55 65 3615 8884; e-mail: mcweiss@ufmt.br]), **Identity and Gastronomy in the Community of Bom Sucesso, Várzea Grande, Mato Grosso, Brazil,** *International Sociological Association, Gothenburg, Sweden,*

¶ Our general objective in this work is to show, through the daily cooking practices, the identity aspects of the Community of Bom Sucesso (Mato Grosso–MT), since "every eating habits make up a tiny interlacement of history" (GIARD, 2003, p. 234). We conducted a qualitative study, having direct observation and interviews as a technique of research. Were interviewed the owner, employees, & customers of a restaurant, in addition to community residents & local leaders. We started from a perspective that values the appreciation of riverside community's gastronomy as a guardian of a way of life. In the same way we tried to understand the implications of environmental changes of the Cuiabá River, and the movement of tourism promoted by the establishment of the Fish Route in Varzea Grande (MT). The community of Bom Sucesso was chosen due to the existence of a reasonable number of restaurants (eleven), the commerce of sweets in the community, & particularly due to the presence of the fishing cooperative Coorimbata. The survey results indicate a strong convergence of customers to that site as a result of loyalty to the flavors & aromas of traditional riverside cuisine. Thus, we identified elements of local culture by culinary, since food is an indicator of a society, a group, & of one country, becoming a channel of communication and perpetuation of traditions (GIARD, 2003; LODY, 2008).

Wellard, Ian (Department of Sport Science, Tourism and Leisure. Canterbury Christ Church University, Canterbury, UK [tel: +44 (0) 1227 767700; e-mail: ian.wellard@canterbury.ac.uk]), **Sport, Gender and Embodied Reflexive Pleasures,** *International Sociological Association, Gothenburg, Sweden,*

¶ Although the body has increasingly been "read" through gender a or within "heterosexual hegemony" (Butler 1993), it could still be claimed that certain bodies have not escaped the limits or restrictions imposed by essentialist biological determinations of how they should be "moving" & occupying spaces. Within current sporting practice, there remain expectations of appropriate gendered bodily performance with the consequence that bodily pleasure in sport is assumed as relevant for (or only appreciated by) men who can play in the expected manner (Wellard 2009). Thus, important questions about gender & the physical body continue a which in turn highlights the need for explanations which incorporate multifaceted approaches to the complex ways in which the body is contemplated. This paper draws upon the concept of body-reflexive practices, as initially described by Connell (2005), in order to explore the notion of body reflexive pleasures which incorporate individual experiences as well as the social context. Empirical research (previous & current) which incorporates observations & interviews with a range of men who engage in sport at varying levels is included in order to explore how pleasurable, bodily experiences in sport need to be understood within a complex circuit of competing factors a where specific intersections between gender, class, age & geopolitics are incorporated. References Butler, J. (1993) Bodies that Matter. New York: Routledge. Connell, R.W. (2005) Masculinities, Cambridge: Polity. Wellard, I. (2009) Sport, Masculinities & the Body, New York: Routledge.

Wells, Cassandra ([e-mail: cassandra.wells@gmail.com]), **Chance or Cheating? The Canadian Track and Field Community Makes Sense of Caster Semenya,** *International Sociological Association, Gothenburg, Sweden,*

¶ The recent plight of South African athlete Caster Semenya has reignited long-standing scientific & ideological controversies associated with sex & gender testing in sport, opening explorations of what (and how) meanings & values are ascribed to bodies of various kinds. While theories regarding the biological and social construction of intersex bodies have been explored in academic circles, researchers have not examined how "grassroots" sport cultures (among others) make sense of the debates surrounding intersex athletes & gender testing. This is a significant gap, as the power of the IAAF & IOC to influence the treatment of girls and women in sport is unparalleled & will have profound impacts on the organization of competitive sport, & on the ways in which girls/women can express athleticism, body type, & gender. This paper begins to address this gap by examining the online discussion of Caster Semenya by Canadian athletes & fans of track & field that occurred as the controversy broke in August 2009. This presentation will discuss how narratives of fairness, doping, athletic advantage, & gender converge to position intersex athletes like Semenya as outside the rules of the game.

Wells, Morgan (University of California, Los Angeles (UCLA), 264 Haines Hall, 375 Portola Plaza, Los Angeles, CA 90095-1551 [tel: 323-302-3211; e-mail: morgan.wells@ucla.edu]), **Property Among Vandals,** *International Sociological Association, Gothenburg, Sweden,*

¶ Through legal & illegal claims of space in the urban environment, graffiti "writers" enact a system of informal property rights according to a context-specific set of social guidelines. The spatial organization of urban graffiti provides insight into the study of informal property rights specifically because of the observable effort that must be put forth by participants to enact and uphold the system, which parallels formal property rights but does not enjoy enforcement & adjudication by the state. Drawing from sociological, legal & economic literature, I explore the notion of property rights as socially constructed in order to set up discussion of my empirical study of space-claiming practices among graffiti practitioners in New York & Los Angeles. In this paper, I present an unlikely case study of informal property rights, employing ethnographic observation & interview data to illustrate the enactment of property rights within the urban graffiti subculture, providing a unique application of the concept to an unusual social situation.

Welschen, Saskia Irene (Department of Sociology, VU University Amsterdam, De Boelelaan 1081, 1081 HV Amsterdam The Netherlands [tel: +31 20 59 88922; fax: +31 20 59 86810; e-mail: si.welschen@fsw.vu.nl]), **Shared and Contextual at the Same Time: The Analysis of National Identity Construction in Talk,** *International Sociological Association, Gothenburg, Sweden,*

¶ Informed by critical discourse analysis, this paper presents a theoretical framework for analyzing the simultaneously shared and contextual character of national identity talk. Using the metaphor of a kaleidoscope, three levels of analysis are distinguished. The first is the level of the shared discursive repertoires people draw on in national identity talk: the coloured objects inside the kaleidoscope. But the composition of colours changes depending on our viewpoint: this is the second level. The versions of national identity people construct are co-constituted by intersecting (sub-national) identities & the ways in which these are negotiated within a conversational context. The third level examines how critical, national identity-invoking events impact on what people see when they look into the kaleidoscope. The second section reports on the application of the framework in the analysis of a large set of focus groups with young South Africans. The study identifies the shared repertoires the respondents draw on and analyzes how these intersect with other, sub-national identity repertoires. The first series of focus groups were held directly after South Africa's 2007 Rugby World Cup victory, the second after the wave of xenophobic violence in 2008. The study examines how these very different events impact on national identity talk.

Wen, Ming & Lin, Danhua (University of Utah, Department of Sociology, 380 S 1530 E Rm 301, Salt Lake City, UT 84112, USA [tel: 8015818041; fax: 8015853784; e-mail: ming.wen@soc.utah.edu]), **Child Development in Rural China: Children Left Behind by Their Migrant Parents and Children of Non-Migrant Families,** *International Sociological Association, Gothenburg, Sweden,*

¶ Using recently collected cross-sectional survey data from rural communities of the Hunan Province of China, this paper examines psychological, behavioral, & educational outcomes & the psychosocial contexts of these outcomes among children left behind by one or both of their rural-to-urban migrant parents compared to those living in non-migrant families in rural China. We found left-behind children were disadvantaged in health behavior and school engagement but not in perceived satisfaction. The child's psychosocial environment, captured by family socializing processes, social support in school, & psychological traits (i.e., self-efficacy & internal locus of control), were associated with, to varying extent, child developmental outcomes in rural China. These influences largely remain constant for children and adolescents regardless of their parents' migrant status.

Wen, Ming & Maloney, Thomas N. (Department of Sociology, University of Utah, 380 S 1530 E Rm 301 [tel: 8015818041; e-mail: ming.wen@soc.utah.edu]), **Body Mass Disparities and Neighborhood Residential Segregation in Utah, USA,** *International Sociological Association, Gothenburg, Sweden,*

¶ The prevalence of overweight & obesity has dramatically risen among nearly every segment of the U.S. population in the last decade. It is increasingly recognized that place-based environmental factors play an important yet under-researched role in the obesity epidemic net of individual characteristics. Given this background, this study examined whether neighborhood residential segregation is associated with individual weight status net of the impact of neighborhood socioeconomic status while exploring the interaction effects between racial/ethnic/immigrant/legal group membership and residential segregation. Data were from a unique database, the Utah Population Database (UPDB), linked to Utah Drivers License data which allows researchers to identify undocumented immigrants in Utah, then merged to the 2000 Census data. Gender-stratified multinomial regression models were fit to examine these research questions. Residential segregation was measured by the quartile of percent Hispanics within a census tract in Utah. After controlling for age, racial/ethnic/immigrant/legal group membership, and neighborhood SES, residential segregation was negatively associated with the likelihood of being overweight or obese among men. By contrast, for women, residential segregation was a strong risk factor of being overweight or obese. Moreover, the data revealed significant interactive effects between residential segregation and racial/ethnic/immigrant/legal status. Place does matter for individuals' weight status.

Wenz, Sebastian E. & Hoenig, Kerstin (NEPS, University of Bamberg [e-mail: sewenz@gmail.com]), **Discrimination in the Evaluation of Primary Schoolers' Performance? An Experimental Study with German Teachers,** *International Sociological Association, Gothenburg, Sweden,*

¶ Students' socioeconomic or ethnic background & their educational attainment are highly correlated in Germany even after controlling for measured competencies or abilities. Discrimination has been named as one possible explanation for this phenomenon, but the empirical evidence is inconclusive & contradictory. We suggest that this is partly due to the fact that these studies use survey data & thus cannot guarantee that all relevant covariates a especially ability measures a are held constant. To overcome these deficiencies, we conduct a field experiment in which teachers are asked to grade an essay supposedly written by students from different social & ethnic backgrounds. Our research question is whether these background characteristics affect German primary school teachers' evaluations of a specific performance. In an online study, we ask a random sample of fourth-grade German language teachers from the federal state of Baden Wuerttemberg to grade an essay written by a fourth-grader of whom they know only the name. Employing a 2A2A4 factorial design, we vary the essay's quality, gender, & ethnic & socioeconomic background (names typical for children from Italian, Turkish, & German upper- or lower-class background). After this task, teachers answer a short questionnaire. Results are still pending.

Wenzel, Melanie (Department of Sociology, TU Berlin, Franklinstrasse 28, 10587 Berlin, Germany [tel: 0049 30 314 73308; e-mail: mel.wenzel@gmail.com]), **Car Cultures: Online Communities in the Automotive Sector,** *International Sociological Association, Gothenburg, Sweden,*

¶ The emergence & growth of brand- & product-based communities constitute a significant sociocultural phenomenon, especially in the automotive sector. Due to innovative Web 2.0 social media and networking technologies, particularly online automobile communities have experienced an

enormous increase in quantity (and size) in recent years. Through an extensive quantitative study in 50 German online car communities, complexity & specificity of this phenomenon have been assessed. The focus is on both the occurrence and the social structure of post-traditional forms of communitisation, as well as on consumption behaviors, cultures, and lifestyles in the automotive context. In addition, activity and affinity of community members will be examined (Hellmann/Kenning 2007). Furthermore, practices, values, & meaning as well as signification patterns related to automobile consumption are revealed. Hence, the purpose is to identify & understand the characteristics & relevance of different car cultures. The examination is based on concepts such as "everyday aesthetic episodes" (Alltagsästhetische Schemata) formulated by Gerhard Schulze (2000), as well as on theories of social practices (Schatzki 1996, Schatzki et al. 2001, Reckwitz 2000, 2001, 2003).

Wernesjö, Ulrika (Department of Sociology, Uppsala University, Uppsala, Sweden, 75621 [tel: +46184717683; fax: +46184711180; e-mail: ulrika.wernesjo@soc.uu.se]), **Images of the Vulnerable Unaccompanied Asylum-seeking Child: A Research Overview,** *International Sociological Association, Gothenburg, Sweden,*

¶ In recent years, there has been increasing attention paid to the issue of unaccompanied asylum-seeking children in Sweden & Europe. At the same time, the number of unaccompanied minors seeking asylum in Sweden has steadily increased. The aim of this paper is to present an overview of research on unaccompanied children & bring attention to areas in research that need to be elaborated further. In order to do so, this paper will concentrate on focuses of concern in research & how unaccompanied children as a category are described. The overview suggests that in research, unaccompanied asylum-seeking children are described in terms of vulnerability. They are conceived as vulnerable; with regard to previous experiences, separations & in terms of being asylum-seekers. Furthermore, they are a risk category for developing various emotional & behavioral problems. Generally, research is focused on background experiences from their countries of origin & not as much on the conditions in the receiving-country. There is a serious absence in research of unaccompanied children's own perspectives. My paper argues for the need of more actor-centered sociological perspectives. Moreover, research needs to take into consideration the specific social and political context in which the lives of unaccompanied children are situated.

2010S02896

Wersig, Maria (Freie Universität Berlin, Berlin, Germany, 14195 [tel: +493036448964; e-mail: mariawersig@googlemail.com]), **Is Time money?: Visiting Rights, Custody and Child Maintenance,** *International Sociological Association, Gothenburg, Sweden,*

¶ Child maintenance & visiting rights are not legally connected in Germany & other jurisdictions. In other words: maintenance is not paid to spend time with the child & little or more time with the child usually does not allow cutbacks in maintenance payments. Because the needs provided for by maintenance payments exist independently from visiting hours or custody arrangements. Still the connection between one & the other is being made by politics and interest groups, especially separated fathers groups. For example it has been argued that joint custody will promote willingness to pay child maintenance. Separated fathers groups demand a right to half the time with the child & cutbacks on child maintenance. The question whether a single mother can demand an active engagement in childcare from the father is seldom raised. This paper explores the connections of time & money within child maintenance law & the politics surrounding this issue in Germany, while pointing out similarities & differences in other jurisdictions, drawing from legal & political sources.

Western, Mark C. (Institute for Social Science Research, The University of Queensland, St. Lucia, Queensland, Australia 4072 [tel: 61 7 33467344; e-mail: m.western@uq.edu.au]), **Adolescent Confidence in Social Aspirations: The Effects of Social Structure, Peer and School Characteristics,** *International Sociological Association, Gothenburg, Sweden,*

¶ Social stratification research has long recognized the importance of social psychological factors in shaping social & economic outcomes. More recently, economists have also recognized the importance of some of the same factors, "noncognitive skills", in predicting occupational outcomes. At the same time, sociologists, economists & others, also increasingly argue that wellbeing at the societal & individual levels needs to be assessed multidimensionally in ways that capture not only material economic outcomes but non-economic socially valued rewards such as good health, social participation, political voice, social connections and subjective happiness & life satisfaction. This paper attempts to contribute to these literatures by examining the factors associated with adolescents' degree of confidence in achieving three dimensions of social wellbeing: intrinsic rewards associated with a happy & meaningful life; positive social relationships with friends & family; & extrinsic material rewards associated with education & paid work. Using a longitudinal survey of 7000 secondary school students from 200 high schools in Queensland, Australia, the paper examines the relative effects of social structure & family background, school characteristics, peer characteristics & self-assessed cognitive ability on adolescents' confidence in achieving their aspirations in each of these three domains of social wellbeing.

Wetterberg, Anna (Research Triangle Institute (RTI International), Research Triangle Park, NC [e-mail: awetterberg@rti.org]), **Harder Soft Law: The Socially Regulated Model of Transnational Labor Standards,** *International Sociological Association, Gothenburg, Sweden,*

¶ With outsourcing to low-wage countries emerging as the dominant model of production in the global apparel industry, segments of the industry have adopted codes of conduct that commit suppliers to respecting a set of labor standards. The pre-dominant model of such private regulation depends on self-regulating buyers to take responsibility for labor standards by leveraging their control over the commodity chain. Power remains concentrated with the buyers who choose whether to self-regulate, as well as the content of codes. As a result, this model exemplifies the lack of precision, obligation, & delegation characterizing soft law. In this paper I outline a more stringent form of private regulation that balances the power of buyers with an interested intermediary who controls market access, conditions participation on adoption of uniform standards, & mediates between firms & activists. Examples of socially regulated niches include the American collegiate apparel market, ethical public procurement in the United States & Sweden, and the Better Factories Cambodia project. The institutional logic of socially regulated niches has been fundamentally transformed. Further transformation of niches into socially regulated markets holds promise for more stringent private labor standards in the global apparel industry.

Wheelahan, Elizabeth Leesa (L.H. Martin Institute for Higher Education Leadership and Management, University of Melbourne, Level 1/715 Swanston Street, Vic, Australia 3010 [tel: +61 3 9035 5547; e-mail: leesaw@unimelb.edu.au]), **The Expansion of Higher Education: Traversing Boundaries,** *International Sociological Association, Gothenburg, Sweden,*

¶ Higher education is on the cusp of its third major expansion since the Second World War in countries such as Australia & the United Kingdom & other countries with similar tertiary education systems. The first & second periods of expansion occurred through the growth of universities & HE systems. The third period of growth of HE is now occurring in the second, vocationally oriented sector of tertiary education, & not within the HE sector as in earlier periods. Accompanying this growth are meritocratic and human capital policy discourses that promise better access to HE for students from disadvantaged backgrounds, & a more highly skilled workforce through more "vocationally oriented" HE provision. This paper uses a social realist analysis to argue that unless the growth of HE is accompanied by a theory of knowledge that it will lead to the creation of new inequalities within both sectors of tertiary education. This theory of knowledge is predicated on recognising the distinction between theoretical and everyday knowledge as a key structuring principle of curriculum. It argues that sectoral boundaries cannot be wished away, & that students must be explicitly equipped with the knowledge & skills they need to traverse these boundaries.

Whillis, Daniel (Department of Sociology; University of Bristol, Bristol, BS8 1UQ, United Kingdom [tel: +44 117 9545589; e-mail: D.Whillis@bris.ac.uk]), **Western Buddhism: Symptom of Secularization or Desire For Postsecular Re-enchantment?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The status of Buddhism has long been a conundrum to scholars in the West– is it best understood as a religion, a form of gnostic mysticism, a pragmatic, atheistic philosophy, a secular psychotherapy? It is this fascinating liminality that makes Western Buddhism an especially interesting field in which to explore the vacillations of religiosity in late modernity.

My research focuses on one of the most overtly westernized of contemporary Buddhist movements. The Friends of the Western Buddhist Order (FWBO) is one of the largest in the UK, its stated aim to "communicate Buddhist truths in ways appropriate to the modern world." How does such appropriation affect understandings of Buddhism? What are people looking to the FWBO for? Is this phenomenon best understood in terms of a longing for religious transcendence & meaning, for spiritual re-enchantment, as part of an emergent postsecular turn, or as little more than a symptom of secularization or individualization? This paper will discuss preliminary findings from qualitative doctoral research currently being conducted with a range of people associated with the FWBO in Bristol, England, as well as reviewing crucial debates both within contemporary Western Buddhist scholarship & wider considerations of the meaning and significance of postsecularity.

Whitaker, Mark D. (Department of Sociology; Ewha Womans University, 11-1 Daehyun-dong, Seodaemun-gu, Seoul, Korea, 120-150 [tel: +82.2.3277-6642; fax: +82.2.3277-4010; e-mail: mwhitaker@ewha.ac.kr]), **Toward a Bioregional State: Green Constitutional Engineering Ideas for Adapting Enlightenment Political Theory and Formal Institutional Design for the Era of Sustainability,** *International Sociological Association, Gothenburg, Sweden,*

¶ A "bioregional state" or green constitutional engineering is a novel approach to development & to sustainability. Instead of sustainability being an issue of population scale, managerial economics, or technocratic planning, an overhaul of formal democratic institutions is required. This is because environmental degradation has more to do with the biased interactions of formal institutions & informal corruption. Because of corruption, we have environmental degradation. Current formal democratic institutions of states are forms of informal gatekeeping, & as such, intentionally maintain development as ecologically out of sync. I argue we are unable to reach sustainability without a host of additional ecological checks & balances. These ecological checks & balances would demote corrupt uses of formal institutions by removing capacities for gatekeeping against democratic feedback. Sustainability is a politics that is already here--only waiting to be formally organized. Over 60 additional ideas are in the book. The talk explains the origins of the concept in comparative historical analysis of environmental degradation; gives principles to check & balance against political processes of environmental degradation in development; discusses a few charismatic examples of institutional additions to 'half complete' formal democratic structures; & suggests strategies to start now, adaptable even to currently non-democratic countries.

2010S02902

White, Kate & Lloyd, Liz (School for Policy Studies, University of Bristol, Bristol, BS8 1TZ, UK [tel: +441179546755; fax: +441179546756; e-mail: kate.white@bristol.ac.uk]), **Researching Dignity in Later Life: Methodological and Ethical Challenges,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper considers the methodological & ethical challenges that have arisen in research on older people's experiences of receiving support & care. Becoming more dependent on others poses a challenge to older people's sense of identity & dignity. Dignity is a concept with objective & subjective dimensions that interact in complex ways & has particular salience at this stage of the life course. The research was designed to highlight older people's perspectives. Using a longitudinal qualitative methodology, the experiences of 34 participants were examined over three years, through in-depth face-to-face & telephone interviews. Participants were recruited through partner GPs. The research design was intended to ensure a strong ethical framework. Key methodological & ethical issues have been encountered: this paper discusses our approach to them & to the challenges faced in practice. These include the tension between the requirements of the research governance framework & the need for flexibility in research with this group of participants.

2010S02903

White, Kate, O'Connor, Pat & Neale, Jenny (Monash University, Australia [e-mail: Kate.White@monash.edu]), **Women and Men in Top University Management in Australia, Ireland, and New Zealand,** *International Sociological Association, Gothenburg, Sweden,*

¶ There is an accepted and continuing perception of a standard model of what an academic career in a University entails which is based on inbuilt formal and informal patriarchal support systems that benefit men (Bagilhole and Goode, 2001) and reflects gendered constructions of leadership. It is therefore not surprising that women remain under-represented in positions at senior levels. Drawing on interview data from Australia, Ireland and New Zealand, the paper analysed what senior 'manager-academics' (Deem, 2003) saw as a typical VC/President in their own university and the kinds of characteristics that are valued in senior management. It found that the kinds of characteristics valued in Ireland were managerial, whereas as those in Australia and New Zealand reflected the collegial model of management. The perception of the President/VC in the three countries was someone with considerable influence. Women were considered to behave differently to men in university management. And while there was appreciation of different styles of management, in the final analysis those in influential positions choose others like themselves. The traits associated with top positions in Ireland and New Zealand were those stereotypically ascribed to males and reinforced the status quo. However, in Australia there was evidence that senior managers had a broader perspective on who could occupy top university positions.

2010S02904

Whitham, Monica (University of Arizona, Tucson, Arizona 85721 [fax:; e-mail: mwhitham@email.arizona.edu]), **Symbolic Social Network Ties: Motivating Cooperation in Generalized Exchange,** *International Sociological Association, Gothenburg, Sweden,*

¶ Generalized exchange–a form of social exchange in which the benefits that an actor gives to another are repaid not by the recipient, but by a third party is a valuable resource for collectivities, such as communities and organizations. Individuals' cooperative participation in generalized exchange (e.g., giving a stranger directions or donating blood) can lead to a variety of benefits for the collectivity, such as greater solidarity and enhanced social capital. However, cooperative participation in generalized exchange involves greater uncertainty than participating in other forms of social exchange; because reciprocity is indirect, reciprocity is less assured-benefits given to others might not be repaid. This study examines the potential of symbolic social network ties to motivate cooperation in spite of this uncertainty. Symbolic social network ties, a new concept for the study of intragroup relations which is introduced in this study, are ties between members of a social entity based on a shared social identity. Using survey data from a study of 99 small towns in Iowa, I test the relation between symbolic social network ties and cooperative participation in generalized exchange in the context of communities of place. Findings suggest symbolic social network ties motivate cooperation in generalized exchange; the density of symbolic social network ties in a community is positively and significantly associated with resident participation in volunteer work as a form of generalized exchange.

2010S02905

Wiborg, Øyvind (Department of Sociology and Human Geo., University of Oslo, Postboks 1096 Blindern [tel: +47 22 85 52 57; e-mail: oyvindnw@gmail.com]), **The Causal Impact of Parental Income and Family Strategies to Prevent Downward Mobility and Social Disadvantage,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recent studies report that parental income has an increasingly important influence on child outcomes & life chances. Some explanations of inter-generational transmission emphasize the importance of family strategies based on social, cultural, or economic resources. Several studies question the causal impact of such resources on social disadvantage & advantage. Instead they argue that inter-generational inheritance of unobserved individual characteristics determines both the life chances of the parents and the children. Consequently, the relation between parental resources and the adult outcomes of their offspring is primarily considered to be spurious due to selection from different social layers. Using unique Norwegian administrative registers with complete records of individuals born during 1980-86, this study attempts to disentangle the causal impact of family economic resources from the impact of unobserved individual characteristics. Fixed effect regression models with longitudinal panel designs are used to examine whether variations in parental economy have direct bearing on the receipt of social welfare assistance during early adulthood. These models control for all stable individual characteristics. The results of this study support not only the selection story, based on observed and unobserved stable characteristics, but also the story of causation.

2010S02906

Wierenga, Ani (Australian Youth Research Centre, University of Melbourne, 234 Queensberry Street, University of Melbourne, Victoria, 3010, Australia [tel: +61 3 83449639; fax: +61 3 83449632; e-mail: wierenga@unimelb.edu.au]), **Action, Imagina-**

tion and Trust, *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper, I present an argument that trust is a precondition for action & imagination. Drawing on findings from my longitudinal research with young people, I track the ways in which trust shapes young people's lives. These patterns underpin individuals' practices for imagining possibilities & finding their way in the world, of opening up to new experiences & opportunities, or closing down. Yet this is not simply a reflection on the individual and their choices: the patterns can be tracked across axis of inequality, & are borne from years of lived experience. More broadly, & drawing on other research, the paper will explore the way in which trust, at many levels, comes to underpin people's abilities to act powerfully in, & on, the world. These stories emerge in a global context where some of the bigger challenges of our time revolve around trust: trust in government, trust of media, trust of neighbors, trust in the meta-narratives, & trust of self.

2010S02907

Wigger, Iris (Department of Social Sciences/Loughborough University, Loughborough LE113TU Great Britain [tel: 01509890078; e-mail: i.wigger@lboro.ac.uk]), **Constructing the 'Other' Representations of the Irish in Nineteenth Century British Academia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Representations of the Irish in British colonial history have been a subject of controversial scholarly debate. Attempts to analyse anti-Irish discrimination give an insight into the ideological complexity & vacillating character of British attitudes towards Irish people. Nineteenth-century British society widely referred to the Irish as a 'distinct race', stigmatized them as intellectually inferior & simianised them as the 'missing link'. The Irish were often labelled as 'savage', considered 'animal-like', 'wild and barbaric'. In the context of political conflict, the crisis of British rule in Ireland & the migration of Irish people to Britain they were also stigmatized as a dangerous & contaminating 'underclass'. With its focus on nineteenth century British academic representations, my research aims at broadening empirical research on the Irish in public discourses. This paper will focus on British anthropological & ethnological journals of this period to demonstrate how the idea of a 'natural' 'racial' hierarchy between the Irish & the Anglo-Saxons became at this time increasingly common in academic circles, & influenced the ways Irish people were perceived & treated in British society. It will show how British scholars constructed an 'Irish race' in direct opposition to what they considered as their own civilised & superior 'Anglo-Saxon race', & how academic perceptions of 'racial' and cultural Irish inferiority reinforced existing public stereotypes of Ireland & 'Irishness'. Central questions addressed will include: How were concepts of racial & cultural superiority and inferiority socially constructed with reference to 'Britishness' and 'Irishness'? What role do wider European scholarly discourses on 'race' play in academic representations of the Irish & how are 'racial elements' in the construction of the Irish related to other categories of difference, namely class, gender, nation, culture, and religion?

Wiktor-Mach, Dobroslawa (Jagiellonian University, Cracow, Poland [tel: (+48 12) 422-10-33; fax: (+48 12) 422-32-29; e-mail: dobroslawa.wiktor@gmail.com]), **Challenges of Religious Pluralism: The Case of Azerbaijan,** *International Sociological Association, Gothenburg, Sweden,*

¶ The break-up of the Soviet Union has brought new challenges in the field of religion. Facing the dynamic changes in the religious situation, state authorities of the former Soviet republics have developed various responses. In my presentation, I would like to focus on the case of Muslim Azerbaijan, where I have conducted field research on the topic of religion. On the one hand hand, Azerbaijan is similar to other republics of Eurasia, as it has witnessed a sudden revival of religion in the last decade, accompanied with an influx of foreing missionaries preaching their ideas. On the other hand, Azerbaijan has been considered as one of the most secular & tolerant of the Muslim coutries worldwide. Therefore, the state has to deal with many new problems. One of them is the spread of radical Islamic ideas, which threaten the stability of the country. To prevent this trend the state has taken some measures, which at the same time limit the religious freedoms guaranteed by the law. Using the slogan of "war with terrorism," the governments seeks to control religious symbols and institutions, & to monopolize the right to interpret Islam. The state-promoted "traditional religions" do not include groups that do not want to conform to state policies, such as Salafi Muslims. By using the label "Wahhabists," state authorities legitimize their activities, as struggle against "Wahhabi trend" is a common phenomenon is the Eurasia region.

Wilke, Thomas, Kleiber, Dieter & Drewes, Jochen (Berliner Aids-Hilfe e.V. [tel: +49 1577 57 44 23 0; e-mail: wilke.thomas@googlemail.com]), **Education As a Social Determinant of HIV-Vulnerability and Morbidity in Germany,** *International Sociological Association, Gothenburg, Sweden,* (GER)

¶ Background Since 2001 there has been an increasing incidence of HIV infections among MSM in Germany. The trend analysis published since have failed to show the precise impact of the social stratification on HIV-Morbidity. Method The quantitative research was carried out in 2008 as part of the evaluation of a nationwide campaign. The data was collected on various Internet sites for MSM. The questionnaire covered aspects such as condom use & risk management strategies, HIV-testing, drug use, communication about HIV, attitudes & other cognitive variables, for instance behaviour intentions, stigma, motivation to safer sex & other HIV-related vulnerabilities. In total 6339 respondents were used for the analysis. The data was divided into the three cohorts based on a combination of school & vocational education: MSM with low, middle & high education. Results Despite of the fact that MSM with low education predominantly live in rural & suburban areas, which generally have a lower HIV-prevalence, the overall HIV-morbidity in this population is much higher. This cannot be accounted for by risk exposure due to the number of sexual partners and sexual contacts both are significantly lower in this cohort. However, significant differences to the disadvantage of MSM with low education exist with regard to inconsistency of condom use and lack of communication about the serostatus with regular and non-regular partners, employment & deceptive assessment of unsafe risk management strategies, lack of social proximity to HIV, frequency of HIV-testing, the general health state & others. Conclusion The uneven distribution of HIV-vulnerability and morbidity stresses the need to take the social stratification into account when describing epidemiological trends. Prevention methods and messages must focus on the factors above & need to be tailored particularly for MSM with low education.

Willander, Erika & Sikström, Sverker (Department of Sociology, Uppsala University, Box 624, 751 26 Uppsala, Sweden [tel: 0046 (0) 18 471 7845; e-mail: Erika.Willander@soc.uu.se]), **Public Discussions on Religion and Spirituality: Defining Themes, Differences and Similarities,** *International Sociological Association, Gothenburg, Sweden,*

¶ Sociological research on religion & spirituality has mostly been based on theory-driven questions delivered by surveys. Although this has been useful in several contexts we argue that this method also has several problems; most importantly that the outcome of these studies inevitable depends on the theoretical position that the surveys are based on. To avoid this problem we propose a fundamentally different method where the understanding of religion and spirituality is directly extracted from the context that people use them in the language. This is done by applying statistical and computational methods to how words co-occur in texts. This data-driven approach allows for quantifying huge data-set of freely generated texts. To shed light on the ongoing "religion-spirituality debate" we studied an extensive material consisting of 220 000 public blog posts on religion and spirituality. Preliminary results indicate that "religion" is used in the context of belief systems (i.e. (a) Islam, Christianity, ideology, or (b) philosophy, theology). "Spirituality" is also used in a theme of (a) philosophy and ideology. In addition, "spirituality" is associated with the themes (b) meaning, inward, expression, & creativity, & (c) churches. In summary, "spirituality" is used in a wider range of themes than "religion" & includes both "holistic spirituality" & institutionalised religion.

Wiltshier, Peter (School of Culture & Lifestyle, University of Derby Buxton, 1 Dovonshire Road Buxton Derbyshire UK SK17 6RY [tel: 00447771923011; e-mail: p.wiltshier@derby.ac.uk]), **Project Workers in Tourism Management,** *International Sociological Association, Gothenburg, Sweden,*

¶ The project worker is the often the key resource & therefore the enabler of community-led regeneration. We know that this person is mobile & can leave the community without that community being able to manage the tools & knowledge required to repeat the project or re-design the project post-implementation (Forrester & Snell 2007; McCarthy, 2008; Richards & Wilson, 2007). Naturally enough, project workers come to work for & in communities by invitation & with costs. Upon completion of tourism projects could include a mechanism to impart the tacit as well as explicit knowledge created. The project worker can be conceived of as a charismatic & often charming enabler best described as a social and a serial entrepreneur. To be a social entrepreneur one also has a set of tools that rely upon a complete task leaving behind a process for the project as well as a blueprint for the aim and objectives of regeneration. A critical aspect of the project worker is the construct of trust. Embedding knowledge, blueprint, process and likely outcome is usually a matter of public record in communities. This is as a result of the funding source being obtained through public sources as opposed to private. An issue is the extent to which embedded knowledge, a blueprint, a process and implementation & outcome are seldom articulated in the public sector. One questions whether these are shared with funders. This paper examines the process & the outcomes to see whether technology enables access & dissemination of explicit & tacit knowledge about projects. It makes some recommendations to link project culture with organisational culture (in communities) using the World Wide Web. Keywords: project worker tourism community regeneration explicit tacit knowledge References Forrester, J. & Snell, C. Winclawski, Wlodzimierz (Institute of Sociology Nicolaus Copernicus University, Fosa Staromiejska 1, 87-100 Torun, Poland [e-mail: winc@umk.pl]), **The Reasons for the Success of Polish Sociology Between the Two World Wars (1918-1939),** *International Sociological Association, Gothenburg, Sweden,*

¶ The rebirth of the Polish state in 1918 took place after almost 150 years. Polish society had to organise a modern state with all its institutions, including sciences. This task was particularly difficult for those who wanted to develop sociology in Poland, because there were no academic sociological traditions or any non-academic research institutions. The occupying states (Russia, Prussia & Austria) were resistant to the development of science in Poland, especially of social studies, & in particular sociology. In spite of this sociological institutions were established at the dawn of the second Republic of Poland (1918). And, as it soon turned out, these institutions were not phoney. The accomplishments of Polish sociology in the period between the two World Wars are much appreciated. In the classical history of sociology "Masters of Sociological Thought" written by Lewis A. Coser we read, that in the first 30 years of the 20 century, there were three sociological schools: First there was "the group of sociologists Durkheim brought together in 1898", & who were to stay together & contribute to the "Année Sociologique" (aBB). The other two schools which have appeared so far in sociology included the Chicago school, created by Albion Small [and] the Polish school, founded by Florian Znaniecki (Coser 1971: 165). How was it possible for new sociological institutions to be created in a new state & how did Polish sociology became one of the three sociological schools of that time? Its founders Ludwik Krzywicki, Florian Znaniecki & Leon Petraycki, to name few, did not appear from nowhere. They represented a generation of Poles who had introduced the ideas of the new study of society into Polish culture about 50 years before Poland regained its sovereignty. At that time they studied & worked in circumstances their peers who built sociology in the West would not have known. The growth of sociology in Poland cannot be only explained by their enthusiasm, vitality & engagement that went along with rebuilding the state. I put forward a thesis that the success of Polish sociology in the years 1918-1939 was possible because of historical and sociological circumstances such as: 1. The early introduction of sociology into Polish culture 2. The relationship between Polish elites & the Western culture during the Partition 3. The heroic efforts of the elites in fighting the occupiers 4. The matching of the developing Polish sociology with the new world paradigm of this science

Winkel, Heidemarie (University of Potsdam, Gender Sociology, Potsdam, 14482 [tel: +493319776795; e-mail: heidemarie.winkel@uni-potsdam.de]), **Religion as a Knowledge Category in World Society: Religious Gender Arrangements and Women's Religious Practice in Arab Christianity,** *International Sociological Association, Gothenburg, Sweden,*

¶ Up to now, the sociological approach to religion was largely concerned with how religion is influenced by social change. Individualization, privatization & secularization were dominant features of analysis. More recently this approach was challenged by the "discovery" of seemingly new trends such as pluralization and the growth of different religions worldwide. The paper starts from the assumption that these perceptions are grounded in a Western-based understanding of the relation between religion, society & social change. It will begin by introducing Eisenstadt's notion of multiple modernities, which envisions multiple directions & forms of social change in different civilizations, each based on its particular cultural codes and knowledge structures. As a result, the conceptualization of religion is no longer overridden by secularization. It also leads to a growing awareness about the multiplicity of religious change itself, not least due to different social knowledge structures. This will be the second point of the paper. The overall aim, however, is to strengthen a perception of religion as a knowledge category a in the tradition of Berger & Luckmann. This will be exemplified by the Arab Christian context, based on the empirical results of a qualitative study about Christian women in Egypt, Palestine & Lebanon. It will show how the distinct forms of everyday knowledge are structuring their religious practice and their perception of religious gender arrangements.

Winkelmann, Markus, Defila, Rico, Di Guilio, Antonietta, Kaufmann-Hayoz, Ruth, Kobel, Peter & Mordasini, Andrea Gian (Interdisciplinary Centre for General Ecology, University of Bern, Bern, Switzerland, CH-3001 [tel: +41 31 631 39 24; e-mail: winkelmann@ikaoe.unibe.ch]), **Sustainable Consumption in the Private Sector: Development of a Comprehensive Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ The possibilities & restrictions for sustainable consumption patterns within the various fields of everyday life can be observed and analyzed from different perspectives advocating specific focal points but at the same time neglecting or at least underestimating other aspects. Depending on the methodological, disciplinary and problem specific approaches various ways to deal with the practicability of sustainable consumption within the private sector can be addressed. The paper will present results of a research project integrating the concepts, results & conclusions from various ongoing projects within the focal topic section of the German BMBF (Federal Ministry of Education & Research) "From Knowledge to Action a New Paths towards Sustainable Consumption" (2008- 2012) into a comprehensive framework. The goal is to locate and describe the chances, cooperation possibilities between actors and further research demand. To achieve such a conjoint perspective a structured communication process among the projects to adjust the specific viewpoints is necessary to avoid disciplinary and consumption area specific biases. The ongoing work of the accompanying research group to develop such an inter- and transdisciplinary synthesis for the field of sustainable consumption within the private sector focusing on the German context will be presented. Results of various proj-

ect specific and cross-project workshops of the 10 research networks serve as research base.

Winslow, Nicole Thualagant (Department of Exercise and Sport Sciences, University of Copengahen, Nørre Allé 55, 2200 Kbh. N [tel: +45 35 32 08 26; e-mail: ntwinslow@ifi.ku.dk]), **Body and Performance Enhancement in Fitness Centers of Danish Sport Clubs,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper will examine body projects of users of "club based" fitness centers in Denmark. This new concept offers fitness activities to members of sports for all clubs. The users are of both sexes & all ages. Current research on "fitness doping" has set focus on the young men's use of performance & appearance enhancing means & methods & has emphasized their adherence to hegemonic conceptualizations of masculinities. However having focus on doping as a matter of gender & society, a crucial question becomes what kind of attitudes do users of fitness centres in a "sport for all" context develop towards performance and appearance enhancing means & methods? I emphasize the many body projects in "club based" fitness centers by examining the willingness to use performance & appearance enhancing means and methods in order to optimize the corporeal capital. I define body projects as bodywork where a primary goal is to approach a healthier & better body. This paper will, based on preliminary analyses, illustrate the many body projects & suggest how these individual body projects can be regarded as entrepreneurial citizens' efforts to achieve the right body.

Winter, Fabian, Rauhut, Heiko & Helbing, Dirk (Max-Planck-Institute of Economics, Jena, Germany [tel: +49 3641 686 673; e-mail: winter@econ.mpg.de]), **How Norms can Generate Conflict,** *International Sociological Association, Gothenburg, Sweden,* (GER)

¶ The measurement of social norms plays a pivotal role in many social sciences. While economists predominantly conduct experiments, sociologists rather employ (factorial) surveys. Both methods, however, suffer from distinct weaknesses. Experiments, on the one hand, often fall short in the measurement of more complex elements, such as the conditionality or the level of consensus of social norms. Surveys, on the other, lack the ability to measure actual behavior. This paper argues that the so-called "strategy method" compensates for these weaknesses by combining the observational characteristic of experiments with the conditionality of factorial surveys. We can demonstrate the applicability of the strategy method for the measurement of conditional bargaining norms in the case of ultimatum games. To substantiate our claim, we conduct a methodological experiment in which we compare results for the strategy ultimatum game with those from a "conventional" ultimatum game. We find that offers do not differ, but the acceptance rate is substantially lower in the strategy method experiment compared to the conventional one. This confirms our theoretical expectations that strategy method experiments rather measure normative principles people adhere to, whereas the "conventional" method the willingness to sacrifice own profits to adhere to these principles. Our results are consistent with previous comparative research between factorial surveys and observational data.

Wise, Amanda Y. (Macquarie University, NSW Australia 2109 [tel: +61 2 9850-8835; e-mail: amanda.wise@mq.edu.au]), **Moving Food: Gustatory Commensality and Disjuncture in Everyday Multiculturalism,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores everyday inter-ethnic relations of affinity and disjuncture through the lenses of food in multicultural Australia. The paper is based upon several ethnographic/ qualitative research projects exploring the quotidian experience of "inhabiting diversity" in multicultural cities with a particular focus on exchange, interaction, place sharing, & embodied experiences of everyday difference. The first project looked at how long term Anglo-Celtic residents of a Sydney neighbourhood were coping with changes brought about by Chinese migration to the area; the second looked at modes & experiences of interaction & intercultural exchange between both dominant culture & migrant communities, and between minority communities from a range of backgrounds. The third project looked at everyday forms of affinity & disjuncture between Muslim & non-Muslim Australians. The paper will explore food & multicultural place making where I argue we need to understand the places, spaces, & social situations of intercultural food consumption in order to fully comprehend how food articulates with inter-ethnic relations in urban settings. I highlight how food can be seen as a central mediating agent in the transversal identities that emerge when we live side by side in super-diverse urban spaces.

Wisselgren, Per (Department of Sociology, Umea University, SE-901 87 Umea, Sweden [e-mail: per.wisselgren@soc.umu.se]), **Social Reform Collaborations and Gendered Academisation: Three Swedish Social Science Couples at the Turn of the Twentieth Century,** *International Sociological Association, Gothenburg, Sweden,*

¶ When the modern social sciences were established as academic disciplines in Sweden at the turn of the twentieth century, one of the most important collective actors in the preceding historical process was the domestic social reform movement. This movement a discursively centred round the "social question" & the basic idea of social reforms based on social research a gathered men and women alike. In the end, however, it was the men only who became the formal representatives of the new social sciences. How should we understand & analyze this strikingly gendered pattern? In this paper it is suggested that one way to do it, is by paying attention to the many marital cross-gender collaborations within the social reform movement. The paper analyzes three such couples–the Wicksells, the Steffens & the Cassels–of which the men became pioneering professors of academic sociology & economics in Sweden. It is shown that the wives were actively involved in the careers & research of their husbands, but to different degress and in different ways. A general argument developed is that the perspective highlights the importance of the marital collaborations, but also problematizes the paradoxical functions of the reform movement in this context.

Witt, Ann-Katrin, Nelson, Anders & Björk, Peter (Halmstad University, Helath and society, Box 823, 30118 Halmstad Sweden [tel: +4635167265; e-mail: ann-katrin.wtt@hh.se]), **Durable and Increasing Gender Segregation in Higher Education: Students' Motives for Applying to University Degree Programs,** *International Sociological Association, Gothenburg, Sweden,*

¶ Higher education (HE) has changed from elite to mass education (HSV 2006:26R, Leathwood & Read 2009). In the last few decades, the number of women in higher education has increased substantially in most OECD countries. Sweden's reform of HE in 1993 encourages university institutions to develop new degree programs (SFS 1993:100). This opened opportunities for the development of programs designed to attract women & men in equal numbers but the result was disappointing. According to a Swedish study, an increasing number of new degree programs attract almost exclusively one gender (Witt 2009, Nelson et al 2009). It is a well-established fact that technical educations are male-dominated while care-related educations are predominantly chosen by women. This paper investigates the motivations for choice reported by 620 students in 17 programs. We have categorized these motives as follows: knowledge seeking; working life orientation; shoulder responsibility for society; program design; second choice and "follow the map". Moreover, the paper discusses how gender-segregated educational choices may affect the future opportunities of student in terms of professional careers, income development and, consequently, social standing & life styles. To study gender segregation within HE is like looking at a three dimensional picture. We can focus at different parts or images a one image shows the gender division among the students, another show the genderized division between program choices, while the third image is about the vertical gender division among teachers and researchers & their career opportunities. This paper deals with the first two. Key words: degree programs, durable inequality, gender segregation, gendered habitus, higher education

Witte, Nicole (Faculty of Social Sciences, University of Goettingen, Goettingen, Germany, 37073 [tel: 00495513914206; e-mail: nwitte@gwdg.de]), **Why Do We use the Camcorder? Don't We Trust our Senses or Memory?,** *International Sociological Association, Gothenburg, Sweden,*

¶ In my paper, I would like to answer the question if & how visual methods (i.e. especially video analyses) add value to sociological research in general & especially to the findings based on participant observations. Therefore I will present a design for a combination or triangulation of interpretive methods within an ethnographic field study on present-day social relations and dynamics of interaction between minority & majority groupings within society in Israel & the Palestinian Authority. In this proj-

ect we use participant observations, biographical case reconstructions & also video analyses. Besides the question of how to combine these different methods concerning different case levels (interaction units, groups or biographies) & using different kinds of data in a methodological & methodic adequate way, we asked ourselves, if the work we have to do in collecting and analyzing the abundance of information within videotaped data is appropriate to the findings that result from that work. This question becomes even more relevant, because we are conducting participant observations, too, which also focus interactions between individuals or within groups & provide us with results on the same case level like the video analyses.

Wittrock, Björn (Swedish Collegium for Advanced Study (SCAS), Linneanum, Thunbergsvägen 2, 75238 Uppsala, Sweden [tel: +46 18 557085; e-mail: bjorn.wittrock@swedishcollegium.se]), **Axial Civilizations and the Renaissance of Historical Thought in Social Theory,** *International Sociological Association, Gothenburg, Sweden,*

¶ Contestations about the Axial Age & Axial Civilizations constitute one of the most pervasive intellectual debates of the twentieth and twenty-first centuries. It has been a starting point for sustained efforts at formulating alternatives to standard theories of modernization & differentiation but also to much of globalization research. It has also provided an increasingly lively meeting ground for research in social theory & historical social science. It is no longer possible to engage in research in either of those fields without taking a stance to questions of the multiplicity of civilizational forms but also to questions of the nature of historical transformations that have shaped macro-societal institutions. The presentation will focus on three key periods of cultural crystallization in world history & criticize tacit assumptions of linear progression in historical social science. An alternative will be outlined for the historical & sociological analysis of major societal transformation.

2010S02924

Wobbe, Theresa (Sociology, Potsdam University, Germany, August Bebel Str. 89, D-14482 Potsdam, Germany [tel: +49 (0) 331-977-3558 ; fax: +49 (0) 331-977-3308; e-mail: theresa.wobbe@uni-erfurt.de]), **Creating the Woman Worker: Sociology's Contribution to the Making of a Social and Statistical Category in Late 19th Century Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since sociology contributes to an understanding of our world by defining new objects of research & re-evaluating its rich heritage, the history of empirical research is of prominent interest. The contribution will discuss this history with respect to the German sociology context through a gender lens. (1) In the first step the gender dimension of the discourses on the social question & the woman's question will be sketched as developed during the 19th century in Germany. (2) Then, the feminist discourse & that of the Verein für Socialpolitik will be elaborated regarding women's paid work. (3) Against this background the formalization of the category of the Arbeiterin/woman worker will be traced. The presumption is that sociology contributed to the creation of this social & statistical category by gendering the meaning of work.

2010S02925

Wöhler, Karlheinz (Institut für Stadt- und Kulturraumforschung, Universität Lüneburg, Lüneburg, Germany, 21335 [tel: +49 4131 677-5543; e-mail: woehler@uni-lueneburg.de]), **Tourists as Post-Traditional Communities?,** *International Sociological Association, Gothenburg, Sweden,*

¶ When spaces & places of tourism become less & less significant for tourists ("atopical tourism"), the question is what takes their place: Where do tourists travel? They travel to brands & themes. Brands stand for places/spaces that communicate continuous and stable messages to tourists. Tourists understand brands "in the right way" relate them to benefits & identify with them. Mallorca & Tuscany are examples from a variety of places/regions that ascribe & inscribe certain qualities & values to/in their offers through branding. This does not only render the offerings unique, but a stay is qualified as more or less unique compared to other alternatives as well. Individualized actors voluntarily commit themselves to a temporary membership that is stabilized by a collective self-awareness & a distinctive sense of cohesiveness. Themes do not hold this immediate frame of reference. Themes are issues in the sense that something is taken out of the local and/or regional offerings & highlighted as special feature. "Gaudi's buildings in Barcelona" is an example just like a class in "cooking with local products". Although both social formations are commercialized goods, both have the potential to induce identification & the development of a sense of community (Vergemeinschaftung).

2010S02926

Wöhler, Thomas & Melzer, Silvia (Fachbereich Soziologie Arbeitsbereich empirische Sozialforschung/ Universität Konstanz, Universitätsstr. 10, Postfach D, 40 D-78457 Konstanz [tel: 0049-7721-88-3345; fax: 0049-7531-88-4085; e-mail: thomas.woehler@uni-konstanz.de]), **Do They Really Choose or Are They Chosen? Educational Decision-Making and Institutional Constrains in Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ Educational inequality is the result of two distinct sets of effects. Primary effects on educational achievements are inherited differences between children, e.g. their intelligence, which are important for schooling success. Secondary effects are by definition the different rational choices students make when acting in the educational system. Whereas the former effects have received a lot of attention in the literature, analyses of the latter are rare & face several problems, e.g. the disregard of institutional constraints or the attribution of the residual variance to individual decisions. Using PISA-data for the German federal states as a test case, we are able to compare educational decisions in different institutional settings & thus test theoretical predictions derived from the Breen-Goldthorpe model. The two variations are firstly between decisions with very high & very low degrees of freedom & secondly between school systems with three & four school tracks. Our results confirm the Breen-Goldthorpe model. We show that higher independence in the individual's educational decision goes along with more social inequality in schooling. Comprehensive schools result in lower attendance of lower school tracks. Thus, more liberal school systems lead to more conservative outcomes, i.e. a stronger effect of familiar background.

2010S02927

Wolbers, Maarten H.J. (Department of Sociology, Radboud University Nijmegen, P.O. Box 9104, 6500 HE Nijmegen, Netherlands [tel: +31 24 3612029; fax: +31 24 3612399; e-mail: m.wolbers@maw.ru.nl]), **The Dynamics of Overeducation in the Dutch Labour Market, 1990-2004,** *International Sociological Association, Gothenburg, Sweden,*

¶ There is a growing literature on the incidence & consequences of overeducation. Most sociological research dealing with this topic adopts the structural explanation of job competition theory and focuses on long-term developments in the occupational returns to educational credentials. The general result of these studies is that the returns to credentials decreased over time due to the fact that the skills upgrading of jobs could not compensate the enormous educational expansion that took place simultaneously. Therefore, it is concluded that there is persistent educational overinvestment and crowding out with a structural cause. Among labor economists, however, this conclusion is strongly contested. They argue that the static view sociologists have about the labor market does not render justice to its supposed dynamics. They claim that the labor market is flexible enough to adjust (wages) to temporal unbalances between labor supply & demand, although not completely as is predicted by human capital theory (due to minimum wage regulations). Instead, they often refer to job matching theory that can be considered as a combination of human capital & job competition theory. Job matching theory states that the quality of a job match, that is, the degree of fit between required and acquired educational qualifications, determines the productivity level & earnings in a job. If a worker is overqualified, then his or her acquired skills are underutilized. This imposes a limitation on an individual's labor productivity, resulting in lower wages. And indeed, empirical evidence suggests that individuals working in a job for which a lower level of education is required than actually obtained (that is, overeducated workers) earn less than equally educated individuals with fitting employment, but more than individuals working in the same job with the level of education actually required. So, overeducation has a positive return in the labor market, but a lower one than required education. In sum then, the crucial question is whether overeducation for individuals is a temporary phenomenon, particularly occurring in times of high unemployment, or that it is a persistent state, reflecting a structural effect. In this paper, I therefore study overeducation dynamics. By using data from the OSA Labour Supply Panel, the longest existing labour market panel in the Netherlands, entry into & exit from overeducation of individuals in the Dutch labour market for the period 1990-2004 is studied. Discrete time event history models are applied to estimate these transitions. In addition to individual background characteristics, macro-economic factors are investigated to determine their

impact on the individual likelihood of becoming & remaining overeducated.

Wolf, Steven A. & Potter, Clive (Centre for Environmental Policy, Imperial College & Cornell University, London SW7 2AZ UK [e-mail: s.wolf@imperial.ac.uk]), **Payments for Ecosystem Services in Agri-Environmental Policy in US and EU: A Brave New World?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Agriculture & food lie at the heart of contemporary policy and scholarly debates on environment & development. Scholars are interested in the way issues such as trade liberalization, food security, climate change, biofuels, environmental degradation, and rural development combine & interact in novel ways to create new challenges for policymaking. Focusing on the jurisdictions of the US & the EU, we identify new policy tensions & contradictions resulting from attempts to fashion an agriculture capable of responding to contemporary pressures. On the one hand, tremendous pressure on agriculture to respond to concerns about scarcity manifests itself through heightened demand for food security and biofuels. On the other hand, there is intense interest in configuring agriculture & agricultural policy in ways that respond to demand for environmental quality & climate change mitigation. The former driver suggests an intensification of agriculture, & the latter suggests movement toward multifunctionality. The ways in which tensions between these trajectories are addressed or elided shape the evolution of agri-environmental policy & informs our understanding of contemporary political economy. We focus our analysis on ecosystem services as a technical concept & a policy vehicle that reflects impulses toward both rationalization (liberalization) & social controls (intervention) in agrifood systems. Specifically, by situating current policy proposals regarding payments for ecosystem services into an historical context, we identify the implications and contradictions of emerging agri-environmental policy schemes in the US & the EU.

Wong, Lloyd L. & Trumper, Ricardo (Department of Sociology; University of Calgary, 2500 University Drive N.W., Calgary, Alberta, Canada T2N 1N4 [tel: 1-403-2206504; fax: 1-403-2829298; e-mail: lloyd.wong@ucalgary.ca]), **Global Temporary Migrant Athletes in Professional Sports,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines through several theoretical lenses the temporary international migration of athletes who play for professional sports teams & the nature of those professional sports as a business. Primary examples to be examined include Canadian hockey players playing in Europe for professional hockey teams & Chilean fútbol players playing in Europe. The macro theoretical foundation for this examination will be the political economy of sport where notions of a global division of labour are examined including notions of difference & disjuncture (Appadurai) in the global cultural economy. Building upon this macro-level foundation, where flexible sources of labour continue to have relevance, & in this case of highly-skilled labour, other meso-level and micro-level theories will be examined including structuration theory, figurational sociology, & postmodern theories in order to try to synthesize the various approaches into a singular theoretical perspective or framework that would guide future empirical research on specific cases.

Wong, Raymond (Hong Kong University of Science & Technology, Division of Social Science, Clear Water Bay, Kowloon, Hong Kong [tel: +852 23587782; fax: +852 23350014; e-mail: sorwong@ust.hk]), **Comparative Social Mobility in Three Chinese Societies: China, Hong Kong, and Taiwan,** *International Sociological Association, Gothenburg, Sweden,*

¶ Most of the recent sociological literatures on China & its neighboring East Asian societies have focused almost exclusively on its phenomenal economic growth & development since the mid-1990s. Relatively little attention has been made to understand its impact on the social mobility structure; let alone systematic comparisons across different Chinese societies in East Asia. Through the use of national and/or citywide representative probability samples from China, Hong Kong, & Taiwan collected in the mid-2000s and standardized coding of social classes (the CASMIN schema), the current study compares the relative social mobility regimes in these societies. Although they share similar social & cultural heritage, the three societies differ from each other in terms of political, economic, & social development (though the gaps between them have narrowed over time). In addition to cross-societal comparisons, the study also examines gender differences in social mobility. Finally, using similar representative samples collected in the mid-1990s, the study will also explore & compare temporal changes of social mobility in China & Taiwan. The empirical findings from the present study provide additional insights to existing comparative social mobility research, particularly the constant relative mobility thesis advanced by Featherman, Jones & Hasuer (1975) & the constant flux thesis advanced by Erikson & Goldthorpe (1992).

Wood, Bronwyn Elisabeth (Victoria University of Wellington, New Zealand, PO Box 17-310, Karori Campus, Wellington 6147, NEW ZEALAND [tel: +6449341237; e-mail: Bronwyn.wood@vuw.ac.nz]), **The 21st Century Learner: Emerging Curricular Narratives of a 'Knowledge Age' in New Zealand,** *International Sociological Association, Gothenburg, Sweden,*

¶ The arrival of "21st century learner" narratives have followed hot of the heels of a new curriculum for New Zealand in 2007. The concept of "21st Century learners" employs a model of rapid social change & a construction of young people that are "tribal" (James, Jenks & Prout, 1998). These "Net generation" learners are perceived as markedly different from previous learners in the way they live & learn & require significant changes to pedagogical approaches & relationships between students and teachers. At the heart of these debates are sociological issues about continuity & change, & the construction of young people in society. Drawing on examples from the 21st Century learners constructed within the recent New Zealand Curriculum, & from emerging research in this area, I question some of the implications these ideas may have on the nature of learning & the role of the teacher in the learning process & the subsequent impact on relational pedagogy.

2010S02932

Woodman, Dan (Sociology, Australian National University, Canberra, ACT, 0200 [e-mail: dan.woodman@anu.edu.au]), **The Post Secondary School Transition and the Desynchronisation of Everyday Life,** *International Sociological Association, Gothenburg, Sweden,*

¶ Two questions of time have been central to youth sociology's attempts to understand social change, shifts in the timing of transitions (delayed, extended, non-linear), & changes in young people's orientation to the future (choice biographies, planning projects, deferred futures). The focus here is on third, so far peripheral, question of time, the temporal structuring of day-to-day life. Underpinned by the notion that people's orientations in time emerge through collective processes, & based on the analysis of interviews with 50 participants & survey data from 929 (all aged 19-20), this paper explores what happens to interactions with significant others during the first stages of the post secondary school transition in Australia. I show that as the participants left the relatively collective temporal structure provided by secondary school, shared time with significant others becomes more difficult to maintain due of a "desynchronisation" of everyday life. The participants moved into new courses of study or paid work that structured their lives to a timetable out of synch with their pre-existing group of friends. I suggest this desynchronisation can be thought of as a "generational" tension widely, if unequally, faced by young people in Australia.

2010S02933

Woolfson, Charles Alexander (REMESO, Linköping University, Campus Norrköping, Holmentorget 10, Norrköping, SE-601 74, Sweden [tel: +46 11 36 32 43 ; e-mail: charles.woolfson@liu.se]), **Economic Crisis and Migration: Exploring the Failed Trajectory Neo-Liberal Post-Communism in Terms of 'Exit', 'Voice' and 'Loyalty',** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper analyses the intersection of global recession with fundamental social imbalances in neo-liberal post-communist society. Drawing on an empirical analysis of Baltic Lithuania, a new EU member state & former Soviet republic, it is suggested that the social & economic "shock" of global crisis is on a scale possibly equal to that of the transition from socialist to market economy. Expectations concerning the benefits of the market economy for its citizens have been profoundly undermined by the crisis as living standards & working conditions have deteriorated. The inability of established institutions of "social dialogue" between labour & capital to moderate the impact of the crisis on working people, & the (non)response of elites to popular social protests amounts to a failure of "voice". Using Albert Hirschman's theoretical paradigm of "exit", "voice" and "loyalty", a surge of crisis-driven out-migration is foreseen, particularly as economic recovery lags in the Baltic States. A related scenario sug-

gests that internal "exit" in the form of heightened xenophobia, populism & racism may also intensify.

2010S02934

Wouters, Cas ([e-mail: c.wouters@uu.nl]), **'No Sex Under My Own Roof': Comparing the USA and the Netherlands,** *International Sociological Association, Gothenburg, Sweden,*

¶ "No sex under my own roof" is a one-liner used by American fathers to address their teenage children, reinforcing the rule that teenagers who want to begin a sexual relationship must move out of the parental home. This paper raises the possibility that the sociogenesis of this rule has a strong connection to another American expression, "Go West, young man, & live with the land", to the rise in the custom of young people leaving their parental home to live in co-educational colleges, & also to the emergence of a complicated sexual morality. This was a tripartite double-morality: the first between men & women, the second between (college) youngsters & adults, & the third between women & men at work & when dating. The American parents' precept of "No sex under my own roof" is contrasted to the Dutch (and other European) parents who, between the late 1960s & the mid 1970s, developed a rule that allowed their teenage children to have sex, provided they "feel strongly for each other". Since the 1970s, this rule has spread, & a steadily increasing number of parents also allow their teenagers to sleep together under "their own roof". The paper elaborates upon this contrast between the USA and the Netherlands.

Wrede, Sirpa H. (Swedish School of Social Science, University of Helsinki, Helsinki, Finland, Box 16, FIN-00014 [tel: +358-50-3270954; e-mail: sirpa.wrede@helsinki.fi]), **Nurse Migration and the Moral Boundaries of Nursing Professionalism: Nationalist Legacies and Emerging Global Orders,** *International Sociological Association, Gothenburg, Sweden,*

¶ Historically, the ideology of nursing professionalism, with roots in the 19th century nursing in Britain, helped to produce a segregated healthcare workforce with deep internal hierarchies. The rank-and-file nurses were cast as flexible & caring female workers, whereas nursing leaders embodied maternal female leadership that is white, middle-class & Western. This paper examines how deep-seated moral boundaries that construct true professionalism condition the globalization of nursing in the context of international nurse migration. Globalization of nursing refers here to the intertwined cultural & socioeconomic dynamics that reorganize both professional ideologies & social orders among nurses. The analysis considers the social shaping of the nursing profession, employing the UK, Finland & the Philippines as critical points of reference. The paper highlights the ideological relevance of macro-societal movements & developments a such as early 20th century nationalism & Western imperialism, post-war welfare state expansion & neoliberal welfare state restructuring–for workforce dynamics in different national contexts. The analysis considers nursing in the reference countries, demonstrating the complex interconnectedness of national settings as well as the transformative potential globalization holds for the socio-cultural boundaries of nursing as a profession. More generally, the analysis of nursing also sheds light on the gendering of globalization.

2010S02936

Wright, Erik Olin (University of Wisconsin, Madison, Wisconsin 53706 USA [tel: 608-262-0068; e-mail: wright@ssc.wsic.edu]), **Envisioning Real Utopias: Introduction,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the introduction to this panel I will stress three central themes: (1) The idea of "real utopias" as a way of thinking simultaneously about emancipatory visions & the practical problems of how institutions function. (2) A particular model of transcending the inequality of power & conditions of life of capitalism that is rooted in a multidimensional notion of "pathways of social empowerment". This model involves specifying different trajectories through which economic activity can become subordinated to democratic processes rooted in civil society. I identify seven of these pathways: Statist socialism; social democratic statist regulation; associational democracy; social capitalism; cooperative market economy; social economy; participatory socialism. (3) Different logics of transformation through which movement along these pathways can occur a Ruptural transformation, interstitial transformation, & symbiotic transformation.

Wright, Wynne (Michigan State University, East Lansing, MI 48824, USA [tel: 517-884-1372; fax: 517-353-8994; e-mail: wrightwy@anr.msu.edu]), **Got Raw Milk?: New Forms of Associationalism in Response to Regularity Failure in the U.S. Case of Unpasteurized Milk,** *International Sociological Association, Gothenburg, Sweden,*

¶ In late 2006, Michigan, U.S. authorities confiscated the raw unprocessed milk of a man in route to make deliveries to consumers. The response by the Michigan Department of Agriculture has been to stress that unpasteurized milk presents unnecessary risks to human health due to the potential for E. coli, Salmonella, & Listeria. It is illegal to transport unprocessed milk across U.S. state lines just as it is illegal to sell raw milk in 23 states. The milk confiscation "sting" operation prompted a negative backlash among whole milk drinkers. This, along with general unrest in the whole milk drinking community, mobilized citizens to press for legal means of accessing unprocessed milk. A working group of stakeholders representing the diversity of the milk system was organized to bridge the divides between state actors & farmers and raw milk consumers. This strategy reflects what historian Ellis Hawley has labeled "associationalism." This approach does not exclude a role for the state in food safety & access problems, rather advocates contend that the state can still play a positive role. Food safety can be advanced by fostering partnerships between public & private sectors to tackle social problems. Using interviews & observation, this paper examines the utility of such forms of associationalism for regulating food safety concerns.

2010S02938

Wu, Chia-Ling (Department of Sociology, National Taiwan University, Taipei, Taiwan 10612 [tel: 886-2-33661225; fax: 886-2-23683531; e-mail: clwu@ntu.edu.tw]), **Local Professional Dominance and Global Regulation Politics: The Multiple Embryo Implantation Controversy in Taiwan,** *International Sociological Association, Gothenburg, Sweden,*

¶ Regulating the number of embryo transferred in IVF has become an important debate among the international world of reproductive medicine. While in the Nordic countries, one or two embryo transfers have been the norm since late 1990s, in Taiwan the average of embryo transferred is 4.07 & 66% of IVF cycles involve four or more embryos in 1998, ranked the highest globally, followed by the US & South Korea. This paper examines why Taiwan reaches such a controversial practice in IVF for the past 20 years. In the late 1980s, practitioners of IVF in Taiwan defined risk in terms of pregnancy rates & live birth rates, rather than health risk to mothers & fetus in the late 1980s & early 1990s. Although the international debates on regulating number of embryo transfers brought sporadic academic discussion since mid-1990s in Taiwan, Taiwanese practitioners tend to individualize IVF centers and customize users, disclaiming a universal practice & the need to limit the number. Women who suffer from having under-weight multipletes occasionally revealed complaints to the media. However, it is their stories published in the newsletter of Premature Baby Foundation that lay people's form of defining risk began to gain credibility, & hence started a debate outside the social world of reproductive medicine, augmenting discussion among patients groups, pediatricians, & obgyns. Nevertheless, using US guideline–one of the most lenient one internationally a as a model example of scientific risk governance, Taiwanese Society for Reproductive Medicine lobbied for the five or less transfer policy in Human Reproduction Act in 2006, possibly the most permissive regulation in the world. Through this case study, I argue that medical professionals in Taiwan employ multiple resources of framing risk to sustain the efficacy of achieving pregnancy through multiple embryo implantation, select certain international standard during policy transfer, & thus transform little of their practice even facing international debates & local pressure for regulation.

2010S02939

Wuermli, Silvia (Military Academy at ETH Zurich, Birmensdorf, Switzerland [tel: 0447398272; fax: 0447398200; e-mail: silvia.wuermli@milak.ethz.ch]), **Globalization, Nation State and Swiss Public Opinion Towards Swiss Security Policies,** *International Sociological Association, Gothenburg, Sweden,*

¶ The rise of conscript armies in Europe was closely linked to the birth of nation states. As globalization has increased, the concept of citizenship has changed & the relationship between the citizen and the nation has loosened. The importance of citizenship as a constitutive element of personal identity has decreased; citizenship is no longer tightly linked to doing military service: thus the armed forces are losing their role as a national symbol. At the same time borders are becoming increasingly porous: the opposition between inside & outside is disappearing; classical military defense of the territory has lost its raison d'être; new tasks in terms of multinational cooperation are becoming more and more of a priority. Do these assump-

tions also apply to such a small state as Switzerland, a country which has long claimed that its sovereignty is based on its idiosyncratic way of defending its land, on an alpine safe haven & its national policy of neutrality? Findings will be presented based on representative surveys.

2010S02940

Wujung, Vukenkeng Andrew (Economics and Management, University of Buea, P.O.Box 63, Buea Cameroon [tel: (237)77948904; e-mail: Vukenkeng@yahoo.com]), **The Role of School Environmental Clubs in Environmental Protection in Cameroon,** *International Sociological Association, Gothenburg, Sweden,*

¶ Governments around the world have recognized indigenous and international organizations as partners in natural resource management & development. The challenge has been for these organizations to perform efficiently in realizing local, regional, national & global environmental plans. This calls for adequate capacity, & resources for these organizations. School environmental clubs which fall in this category of organizations have witnessed a steady growth in Cameroon. It is therefore important to appraise the financial means & sustainability goals of these school based initiatives, the cooperation between them and school authorities in meeting environmental sustainability goals with a focus on the youth, their degree of participation & the range of activities of these cluster groups. This paper surveys school environmental clubs & appraises their input in environmental protection with aim to establish a base for cooperation between them & the local/international organizations with the same vocation & to elaborate strategies in achieving sustainability through local resource mobilization, organizational strengthening, & institutional development. An analysis of the field survey shows that these initiatives operate under different appellations & their activities center on raising awareness and nurturing friendly environmental attitudes amongst the youth. The clubs studied indicate they suffer from difficulties financing their activities, bottlenecks from some school authorities, congested school time table, inadequate interest from members/students as well as limited professional environmental literature. These initiatives also suffer from management problems. The paper then concludes that, as these initiatives continue to grow, they are required to develop new systems of sourcing for funds, management & accountability so as to be effective.

Wundrak, Rixta (Faculty of Social Sciences, University of Goettingen, Goettingen, Germany, 37083 [tel: 0049 551 3912207; e-mail: rixta.w@gmx.de]), **Bucharest's Chinatown: Ethnicization and the Performance of Capitalism,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper shed light on a new transnational migrant community in Eastern Europe. It traces the story of Chinese migration to Bucharest during the early "wild years" of transition in the 1990s & the emergence of Chinese markets in Romania, resulting in an urban project called "Bucharest's Chinatown". The paper discusses two faces of ethnicization: the images of, & the discourses about these networks on the one side & the way in which people deal with these images & discourses on the other. From the 1990s until Romanians accession to the European Union in 2007 & in the course of the changing role & power of China in a global context, Chinese migrants in Bucharest have been permanently confronted with different attributions. The prototype of a migrant as a "parasite" or a "criminal" has been changed to a "person in transit" & then transformed to the type of "modern capitalist" a as a business man or woman & rich investor. This image fits exactly into the general image of a modern and capitalistic habitus; the adequate symbols of this habitus are "flexibility" & "mobility". In order to incorporate into European societies, Chinese in Eastern Europe display a high degree of willingness to change social rules. Through their active performance in daily routines, the representation of this habitus has been "successful" in a global-transnational context, in the current Western European labor market as well as in transition-societies, where capitalistic principles have gained power. With a critical view on the ethnicization of migrants by political, medial as well as scientific discourses, I will reconstruct the migrant's intended "assimilation" in every-day live, which implicates both the challenge to immerse oneself into the unknown while continually reinventing oneself in this process.

2010S02942

Wynveen, Christopher J., Kyle, Gerard T. & Sutton, Stephen G. (Baylor University–Department of Health Human Performance and Recreation, Waco, TX 76798 [tel: 254-710-4003; fax: 254-710-3527; e-mail: cwynveen@msn.com]), **Environmental World View, Place Attachment, and Attitudes Toward Environmental Impacts,** *International Sociological Association, Gothenburg, Sweden,*

¶ Stern, Kalof, Dietz, & Gugnano (1995) hypothesized, in their Value-Belief-Norm Theory of Environmentalism (VBN), that an individual's Environmental World View (EWV)influences his/her attitudes toward place-specific environmental impacts. However, Schultz, Shriver, Tabanico, & Khazian (2004) suggested that one limitations of VBN is that EWV measures general environmental attitudes, but VBN does not include a construct that represents the relationship between the individual & a specific setting. This criticism of VBN is important because it suggests that the VBN model may be improved by including an additional construct in the model that indicates an individual's thoughts concerning a specific setting. Hence, we proposed that the concept of place attachment may be useful in bridging the gap between EWV & attitudes toward impacts on specific settings in the environment. To investigate this relationship we conducted covariance structural analysis, using data collected data via a survey instrument designed to elicit the thoughts, feelings, & attitudes Australian residents (n=324; response rate=49%) held toward the Great Barrier Reef Marine Park (GBRMP). The results, regarding the effect of EWV via place attachment, indicated individuals who held a more biocentric EWV had an increased attachment to the setting, which resulted in a greater sensitivity toward impacts.

2010S02943

Xavier, Beatriz O. (Nursing School of Coimbra, Rua 5 de Outubro ou Av. Bissaya Barreto Apartado 55 3001-901 Coimbra Portugal [tel: +351 239 802831; fax: +351 239 442648; e-mail: bxavier@esenfc.pt]), **Society, Health and Public Space: From Anti-Smoking public Policies to Controversies,** *International Sociological Association, Gothenburg, Sweden,*

¶ The smoking issue is related to the contemporary history of public health. Public health policies have become increasingly more focused on scrutinizing habits, as well as controlling and regulating the public space. What is the new role of the public in public health & in the definition of the policies? How is this political space of health built (Fassin, 1996)? The role of the State as protector & promoter of the citizens health requires the governance of human conduct in the health area. But the political space of health cannot be reduced to health policies. Thus, we consider as a political emergency in society all the issues & actions which convey the public character of practices, the orientation towards the interest of the group as a whole, and the power differential between group members. The notion of public domain & the limit between public & private are essential criteria for distinguishing their political character. For these reasons, in 1990 the commercial slogan from the portuguese tobacco company stated: "We are adults. Inform us & let us decide", referring the issue of tobacco consumption to the private domain, led to the political reaction of the then Secretary of State for the Environment, who "declared war" on the tobacco company, presenting the problem as a public issue and, therefore, in need of regulative political measures. Fassin, Didier 1996 l'espace politique de la santé. Essai de généalogie. Presses Universitaires de France (PUF). Paris

Xerez, Romana & Fonseca, Jaime R. S. (Institute for Social and Political Sciences CAPP–Centre for Public Administration & Policies Technical University of Lisbon, Rua Almerindo Lessa 1300-663 Lisbon [e-mail: rxerez@iscsp.utl.pt]), **Villa Alvalade: How Social Capital Shapes the Community in a Lisbon Neighbourhood?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Why do social capital & community matter to (re)conceptualize neighbourhood? We propose that the embeddedness of resources in social networks is determinant to the social construction of a community. This paper aims to bridge the gap between social network analysis & the theoretical & empirical dimensions of neighbourhood. The "Villa Alvalade" is a report of neighbouring, which is situated in Lisbon's inner city. The landscape was planned in the late forties. Designed in response to a massive housing program; located in a land of farms of the upper upper classes and suburban industrial working class living in villas & patios. The bairro became a magnet for the less affluent people in the mid-twentieth century, as well as for the white collars and cultural elites. Fifty years after it is dealing with new challenges of gentrification, depopulation, aging, immigration and more recently the turbulence in the housing credit markets. This article presents results from mix methods: survey (N= 402) & 15 in-depth interviews with urban planners, residents' perception of social networks & community engagement, as well as ethnographic observation. The results confirm that the social capital components: network structure; trust & reciprocity & resources bonding & bridging neighbours' networks.

Xhumari, Merita Vaso (Faculty of Social Sciences, University of Tirana, Myslym Shyri, Pall.12, Shk.3, Tirana, Albania [tel: +355 68 2218010; e-mail: mxhumari@icc-al.org]), **The Need for Using Open Method of Coordination on Pensions in Balkans,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction: This paper aims to present the challenges facing the Western Balkan countries, mainly Albania, Kosovo & FYROM (Macedonia). Methods: The question in my research is: How these Balkan countries, in their process of EU Integration can benefits from the European experience in using the Open Method of Coordination for pension policy? Analysis of studies, legislation, statistical reports, & interviews with the main actors are some tools used in this research, supported by ERSTE Foundation in 2008-2009. Results: This research is arguing that Albanian reform of pension system is based on the typical Bismarckian model; the Kosovo pension system is built as a quite new pro-market, liberal model; the FYROM is developing a mixed pension system. Along with economic cooperation, the visa liberalization process, & free movement of Balkan citizens, the social policies need to be integrated to guarantee the social rights of their citizens, wherever they decide to live. Conclusion: Consequently, the respective Governments & other actors involved in pension policy need to identify & use the best practices & innovative approaches in the best of their citizens' interest.

2010S02946

Xiang, Xiaoling (Department of Social Work, The Chinese University of Hong Kong, Shatin,N.T.,Hong Kong [tel: +852 63564933; e-mail: fateornot@gmail.com]), **A Review of School-to-Work Transition Research and a Call for Attention on Disadvantaged Youth,** *International Sociological Association, Gothenburg, Sweden,*

¶ Faced with economic restructuring & globalization, the school-to-work transition is likely to be more complicated for many young people, especially Asian youth. Effective policies and programs are needed to help the young generation prepare and complete the transition successfully. Thus, a comprehensive review of relevant research & programs is needed to guide future policies & programs. The present paper aims to provide ideas for service providers, policy makers, & youth researchers to enhance positive school-to-work transition by a comprehensive review of relevant research in the last 15 years. Following themes will be covered: 1) Challenges & problems faced by youth during school-to-work transition. Considering cultural differences as one determinant factor for the transition & the theme of this conference, this paper will focus on the experiences of Asian youth and related research findings. 2) Indicators & measurement of positive school-to-work transition. The conceptualization and measurement of positive school-to-work transition is essential for promoting relevant research & program evaluation. 3) Risk and protective factors affecting the transition process & outcome. Individual, relational & contextual factors will be included. Leading research in western countries will also be covered in this theme for theoretical concerns. 4) Challenges & opportunities for economically disadvantaged youth during school-to-work transition will be presented in more detail, mainly for a call of attention on disadvantaged youth. 5) Key characteristics of successful programs aiming to promote school-to-work transition will also be explored. A theoretical framework for future research will be suggested in the paper.

2010S02947

Xu, Bin (Northwestern University, Sociology Department, 1810 Chicago Avenue, Evanston, IL 60208 [e-mail: binxu2008@u.northwestern.edu]), **"Grandpa Wen": Scene and Agent in Political Dramas of Disasters,** *International Sociological Association, Gothenburg, Sweden,*

¶ Chinese Premier Wen Jiabao comforted the victims of the 2008 Sichuan earthquake. His small interactions successfully triggered a wave of condolence & enhanced the government's legitimacy at least temporarily. Yet, this kind of co-presence of leaders with victims is not rare in the wake of other disasters & mass emergencies in China. Why was Wen's performance effective in this disaster? While previous theories emphasize impression management & cultural script of political performance, I foreground the elements that are usually in the background of political performance: when, where, and with whom leaders interact. I use Mill's method of difference to compare Wen's earthquake performance with five other cases of political leaders' performance in disasters & crises in China. The analysis demonstrates that: 1) media's explicit depiction of disastrous scenes & victims' display of feelings are critical elements in creating an emotionally intense situation & charging the leaders' interactions with emotions; 2) the quicker the leader moves to the disaster zone & being part of the depicted disaster scene, the more effective the leader's performance will be. Therefore, Wen's successful performance can be explained by his speedy presence in the disaster zone, the official media's explicit depiction of tragedies & devastations, & his frequent bodily interactions with the emotion-charged human objects, especially children. In contrast, his & other leaders' performance in other disasters lack one or more of these elements & therefore resulted in less effectiveness. This analysis is built on Burke's dramatism, interaction ritual theory, & a content analysis of textual and visual data.

2010S02948

Yadav, Gyanendra (Department of Sociology, College of Commerce, Magadh University., Kankerbagh,Patna-800020, Bihar, India. [tel: 09334335466; e-mail: gyanendray@yahoo.co.in]), **Sex Tourism: A Darker Side of the Global Phenomena: A Critical Analysis in Context of India,** *International Sociological Association, Gothenburg, Sweden,*

¶ As we know tourism is the World's biggest industries indeed the biggest the planet has ever seen and it is growing rapidly. The number of international tourists world-wide grew from 170 million in 1971 to 635 million in 1998, while the amount they spent soared from US/BFM2X4B|END21 billion to US/BFM2X4B|END 439 billion. By 2020 the World Tourism Organization predicts,1.5 billion of them will be spending /BFM2X4B|END2 trillion a year or over 5 billion everyday. Tourism is a big sometimes dominant contributor to the G.D.P's of many nations. Tourism, Leisure & Recreation are very close concept related to each other & sometimes one overlapping the other.As we well aware, "the temporary movement of people to destinations outside their normal places of work & residence. The activities undertaken during their stay in those destinations & facilities created cater their needs." Mathieson & Wall, 1982). It is often difficult to distinguish between tuorism & recreation as they are inter-related. "Tourism involves travelling a distance from home, while recreation is defined as the activities under taken during leisure time. "(Mac Intosh & Goeldner, 1990.) Outdoor recreation is even more closely related to Tourism. The extent of the overlap depends in part on the length of time of the activity & location. Today a world of tourism faces a biggest problem as Sex Tourism particularly child sex tourism. The third world developing countries & South Asian Countries are very much affected by this dimension of tourism. Sex Tourism is the darker side of the global phenomena of tourism. Everyday we read about the benefits of tourism its income & employment potential to the gap between the rich & poor, its potential to overcome uneven development in the backward regions of the world. Above all, its contribution of the balance of payments & foreign exchange earnings for the decoloniged & Third World countries that must enter the capitalist mainstream if they are to make the transition of the 21st century. The Indian tourism industry has earned /BFM2X4B|END12 billion as foreign exchange for the country, but its growth in India is also making skeptics set up & take close at its darker side–Sex Tourism & particularly Child Sex Tourism. Sex tourism has been flourishing very fast in the main tourist areas like Goa, Kerala, Pondicherry, Agra, Jaipur, New Delhi, Banglore etc., all these tourist main visiting places in India, sex tourism is developing very fast. In fact, the Ministry of Women & Child Development has commissioned a study on sex tourism in India. Taking a serious note of the rise in sex tourism in the country the Government is also looking into some of the casesin the recent past. Director of the Center for Social Research Ranjana Kumari opines that "It is very important study. One has to study the effect of a Fledging industriy in the country." This discussion paper focuses primarily on sex tourism as a new scenario, selected sex recreational activities & their socio-cultural impacts are considered as well.

Yadav, Sarvendra (Department of Humanities & Social Sciences, Indian Institute of Technology Kanpur, India, Department of Humanities & Social Sciences, Indian Institute of Technology Kanpur, INDIA-208016 [tel: +91-512-2597073; fax: +91-512-2597510; e-mail: sarvend@iitk.ac.in]), **Equality as an Educational Ideal: A Comparative Study of Technical and Social Science Students in Indian Higher Education,** *International Sociological Association, Gothenburg, Sweden,*

¶ Defining educational ideals is the most critical part of any state policy. Equality is one of the central democratic educational ideals & it is envisioned in two levels. First, equality as right and secondly equality as practice. Equality as right is realised through the Constitution & equality as practice through state apparatuses & institutions like schools & universities where political socialization of students take place. In contrast to this educational ideal human capital approach gives more priority to build

human resource for knowledge economy. The recent trend of the growth of technical education & relative marginalization of social sciences can be seen as evidence of the latest neo-liberal thrust in higher education. In this light, the present paper tries to explore perceptions of equality among the undergraduate technical & social science students in Indian higher education. It focuses on two major questions. How do students understand this educational ideal of state policy? Do disciplines like the social sciences inculcate the abilities of emancipatory & critical thinking in students? These questions have implications in understanding & evaluating the role of ideological state apparatuses against the neo-liberal developments. 100 students from engineering background & 100 from humanities & social sciences background from India's top two elite institutions & two middle-ranking educational institutions were interviewed by asking them open ended questions about equality. Individual interviews as well as focused group discussions were conducted among students who were in the third year of their college education. Major findings show that most of the students believe in natural inequality and think it reflects in social inequalities. Findings will be discussed in detail for both groups.

Yamada, Nobuyuki (Komazawa University, 1-23-1, Komazawa, Setagaya, Tokyo, JAPAN, 154-8525 [tel: +81-3-3418-9293; fax: +81-3-3418-9293; e-mail: jogoaya@ruby.plala.or.jp]), **Double Movement through the Commodification of Labor: the Implication and Effects of Organizing Immigrant Workers in the Core,** *International Sociological Association, Gothenburg, Sweden,*

¶ In Karl Polanyi's theory of double movement it is asserted that the prevalence of market relations will necessarily give rise to various counter movements seeking the restriction of extension of market relations, or the embeddedness of them in society. In this theory one of counter movements is also supposed to take the shape of the regulation of labor market & the decommodification of labor. However, given that such regulatory policies by the capitalist state are usually predicated on the interests of the working class, they are originated from the labor movement. Therefore, when double movement is considered, various social movements & their effects are required to take into account. Furthermore, while the decommodification of labor force surely emerges, for example, in practicing various social policies, on the other hand, it seems that the commodification can just be thought to construct one of counter movements, if the concept of the commodification & decommodification of labor is reconsidered, and revised or extended. Taking an example of organizing activities for immigrant workers in social movement unionism (SMU) in the core of the world-system, this paper tries to assert that such organizing activities can be regarded as completing the commodification of labor force & as a part of double movement through it. In a word, this paper clarifies that double movement consists of both commodification & decommodification of labor force on the basis of the author's field work in the San Francisco Bay Area, and confirms that SMU, in which primary organizations are not only unions but worker centers & NGOs, affects the extent of the decommodification of labor force through institutionalizing various social benefits. This paper consists of following sections. First, after taking a glimpse of Polanyi's double movement theory, the concept of commodification & decommodification of labor force is theoretically reconsidered & revised. The commodification of labor force does not only mean economic wage relations. Commodification virtually includes three relationships: economic, political, & cultural/ideological relationships. Political relations mean power relations, & they are supposed to have non-personalistic & bureaucratic nature in capitalism. And also cultural/ideological relations are conscious relations, & they are supposed to have meritocratic & conflictive nature in capitalism. In other words, the complete commodification of labor force means the subordination of labor force in capitalist social relationships, & also the partial commodification means insufficient subordination, in which the replacement of some capitalist relationships with pre-capitalist ones could often occur. In short, the concept of the decommodification can also be divided into two subcategories–one is pre-capitalist & the other is post-capitalist. Second, this paper indicates that the partial commodification or pre-capitalist decommodification of labor force positively affects capital accumulation because it can realize low wages through connecting workers with means of production economically, repressive labor control through practicing personalistic & authoritative labor control politically, & legitimatize these wages & controls cultural/ideologically through grasping class relations paternalistically & obscuring conflicts. The places where such partial commodification of labor force emerges in core regions are, for example, sweatshops, in most of which immigrant workers are usually employed. This paper ends up confirming that double movement consists of interplay between the commodification & decommodification of labor force & that SMU as a type of the emergence of double movement can decommodify labor force & re-regulate the labor market. (Abstract shortened by Proquest.)

Yamaguchi, Tomiko (International Christian University, 3-10-2 Osawa, Mitaka, Tokyo, 181-8585 JAPAN [tel: +81-422-33-3716; fax: +81-422-33-3716; e-mail: tyamaguc@icu.ac.jp]), **Greater Control or No Control of Nutritional Choices: Food Safety Debates on Functional Foods,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines a recent incident in which technological advances which offered consumers greater control over their nutritional choices are now perceived by many as resulting in a betrayal of the implicit promises to consumers. Functional foods were held in high regard by consumers who wanted to make intelligent, healthful food choices & who believed that scientific advances in nutrition and food technology could contribute to their well-being. However, a recent incident may cause consumers to rethink their assumptions about functional foods: Kao Corp., has temporarily suspended sales of its Econa brand products, including its cooking oil, salad dressings, & mayonnaise, because the fatty acid glycidyl esters in them could be carcinogenic. At present, a great deal of controversy is erupting & stakeholders are revisiting the food safety issues surrounding functional foods. Adding to the potential sense of betrayal felt by consumers is the fact that the products carried the food labels FOSHU indicating that they had been tested and approved for safety by the government. Against this background, this paper identifies the key stakeholders in the functional food debates, their interpretation of the incident, & critical changes in the tenor of discussion before & after the incident.

Yamanoi, Rie (Meisei University, HIno-city, Tokyo, Japan, 191-8506 [tel: 81-42-591-5413; fax: 81-42-591-5413; e-mail: qzd11275@nifty.com]), **Is It Effective for the National Government's Policies to Maintain the Quality of Care Management under the Long-Term Care Insurance System?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since the enforcement of Long-Term Care Insurance (LTCI), the national government has changed its policies in order to maintain and improve the quality of care management. The purpose of this study is to discuss what effects these amendments have had on care management. First, changes in the government's policies to maintain and improve care management since the enforcement of LTCI will be reviewed. Next, effects that these changes had on care management, especially care managers' activities & their working conditions, will be discussed. The national government's policies were; 1) Establishing the requirement of national certification for care managers & the continuous training system to renew their certification. 2) Raising the care management payments per one user and providing additional payments for hard-to support users. 3) Checking whether care managers carry out their duties through local government inspections. 4) Organizing the consultation system in the comprehensive community support centers. Care managers cannot fulfill their duties at their own discretion because the LTCI system has become inflexible. Therefore, many of them suffer so much stress that they quit their jobs, & users cannot choose as large a pool of competent care managers.

Yamazaki, Yoshihiko, Inoue, Yoji, Ito, Mikiko, Omura, Kayoko, Omiya, Tomoko, Yokoyama, Yukari & Park, Minjeong (Department of Health Sociology, Graduate School of Medicine, The University of Tokyo, Bunkyo-ku, Tokyo, Japan, 113-0033 [tel: +81-3-5841-3513; fax: +81-3-5684-6083; e-mail: yyamazak-tky@umin.ac.jp]), **Twenty Years of Survival with Iatrogenic HIV Infection in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the mid-1980's, about one third of the people with hemophilia in Japan became infected with the human immunodeficiency virus (HIV). There were more than 1400 such patients, & they became infected mainly via imported unheated blood products. Most of them also had the hepatitis C virus (HCV). The approximately 800 survivors now live not only with hemophilia, but also with HIV & HCV infection, and with other complications & comorbid conditions. Using information from two questionnaire surveys done in 1998 & in 2005, we examined the health & life circumstances of surviving patients with HIV, & how the quality of their lives (QOL) had changed during 10 years starting in the mid-1990's. We found that during the 10 years, the patients' physical symptoms, health-related feelings of insecurity, & sense of uncertainty did not change, while their

mental health deteriorated. The social and economic aspects of their QOL also worsened. Despite those difficulties, some patients' health & living conditions were maintained or had even improved over those 10 years. Quite a few of the patients perceived positive changes & experienced adversarial growth & stress-related growth in the 20 years since they first became victims of iatrogenic HIV infection.

Yan, Ruogu & Yan, Xiaopei (Sun Set-sen university, Guangzhou city, China,510275 [tel: +86 13751813094; e-mail: yanruogu@163.com]), **Social Equity Issues in the Context of Shenzhen Urban Renewal,** *International Sociological Association, Gothenburg, Sweden,*

¶ After three decades of reform & opening up, Shenzhen, as the first special economic zone in China, got rapid development & achieved great economic success. While experienced the rapid process of urbanization, especially after the global financial crisis in 2008, the new round of urban construction in Shenzhen face a severe situation, such as available land for construction declining, the increasing divide between rich & poor, congestion as well as an international city competition. The Shenzhen Municipal Government has implemented urban renewal policy, based on the reconstruction of the old industrial areas & the old Village (village in the downtown), with a view to achieve the "double shift" of industrial and social in Shenzhen, to achieve industrial upgrading, functional replacement purposes. And in a specific implementation of the urban renewal units & other innovative models to achieve urban redevelopment, the access of the private developers' building activities must with construction of a certain percentage of public service (e.g. public housing). This policy has effectively mitigated the negative impact of urban renewal, such as breaking the old social networks, social isolation & depriving of the low-skilled persons' employment opportunities. According to offering a case study, this paper comments how the government to achieve the objects of making the urban renewal results to benefit the wider public.

Yanfeng, Gu (Devision of Social Science, the Hong Kong University of Science and Technology [tel: (852)63502198; e-mail: sogyf@ust.hk]), **What Affected Peasant's Nonfarm Jobs Opportunity under Institutional Change, 1950-1996? Evidences from Event History Analysis,** *International Sociological Association, Gothenburg, Sweden,*

¶ Using a national representative sample of life histories & social change in contemporary China, this research finds that the determinants of peasant's capturing nonfarm job during 1950-1996 varied with institutional changes, & further that the effect of political capital did not change in step. Specifically, the effects of party membership & cadre declined since Cultural Revolution, not market reform as market transition theory argued; family's class status only did its work in Cultural Revolution period; however the effect of military experience only began to decline since 1978. Besides, the effect of education also declined during Cultural Revolution period & reform era, but their mechanisms differed from each other.These finds testify that the decrease of power's effect in reform period did not simply stem from market transition but the relaxing of political environment.

Yang, Chia-Ling (Department of Sociology, Lund University, Box 114 22100 Lund Sweden [tel: +46462228874; fax: +46462224100; e-mail: Chia-Ling.Yang@soc.lu.se]), **Encounters between the 'Oppressed' and the 'Oppressor': Rethinking Paulo Freire in Anti-Racist Feminist Education in Sweden,** *International Sociological Association, Gothenburg, Sweden,*

¶ In his theories, Paulo Freire highlights the importance of the teachers' role in educational practices to freedom. From Freire's point of view, "solidarity requires true communication", critical reflection on action & trust in the oppressed & their ability to reason. Together with a "rigorous ethical grounding" for teachers & a "conscientization" of students this allows for education to become a practice of freedom. My reading of Freire's theory actualized a number of questions: Is there a clear distinction between the oppressor & the oppressed? Are they fixed categories & do they have certain unchangeable qualities? Who can be teachers of the oppressed & who can educate the teacher to be critical & conscious of power relationships & inequalities in the society? What are the experiences of the oppressed? Aren't there differences among the oppressed that make alliances difficult? I would like to create a dialogue with Freire and possibly contribute to a rethinking of Freire's theories, with the help of research carried out at a feminist adult educational institution in Sweden. I will do this in two ways: Firstly, I will focus on migrant students & show the complexities among the "oppressed"–different forms of subordination & talking back; secondly, I will shift the focus to feminist teachers and discuss the possibilities in transversal politics & anti-racist education in feminist teaching.

Yang, Juhua (Renmin University of China, 59 Zhongguancun Street [tel: +86 10 62516213; e-mail: Juhua_Yang@yahoo.com]), **Fertility Policy, Sex Ratio at Birth and Gender Dimensions in China,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper aims to examine gender inequality manifested through highly skewed SRB with a focus on the independent relationship between fertility policy (particularly the 1.5-child policy) & SRB in China, a context where fertility decline is much faster than the erosion of son proclivity. Drawing on direct measures of policy at prefecture level & exploring its relationship to multiple-level SRB, this paper addresses the following issues: how couples respond to the policy & balance their desires between ideal sex of offspring & permitted number of births, & how public policy perpetuates male supremacy in the Chinese context. Preliminary analytical results indicate that fertility policy affects SRB by limiting the number of births & by tolerating son proclivity: a loser policy reduces SRB, but the 1.5-child policy relates to a higher SRB. Such results call attention to be paid to the policy institution in studying SRB & the reassessment of its role in generating the imbalanced population sex structure, & promote gender equality in general.

Yang, Myungji (Brown University, PO Box 1916, Brown university, Providence, RI, 02912 [tel: 4018622693; e-mail: Myung_ji_yang@brown.edu]), **The Making of the Urban Middle Class in South Korea: Discipline, Nation-Building, and the Creation of Ideal National Subjects,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the process through which the state nurtured urban middle class formation during the economic take-off period (the 1960-80s) in South Korea. While existing studies have focused on the size & characteristics of the middle class, few studies explore the political process or mechanisms through which the middle class was on the rise as a mainstream force. This paper argues that middle class formation was the key for the authoritarian state to showcase rapid economic growth and strengthen political legitimacy. This paper pays attention to how the authoritarian state attempted to nurture the urban middle class as an ideal nation that symbolized successful national modernization & thus produce strong societal support for state policies. By linking the urban professionals & white-collar workers with desirable citizens that would realize modernized and consumerist dreams, which the whole nation had long aspired, the state & mass media cautiously addressed the importance of the middle class in the making of economic development. The making of the new social group was relevant to new nation-building that would overcome the sufferings from the past & bring about national revival. Through closely reading the discourses disseminated by the government & mass media, I will trace how middle class formation in Korea was intertwined with consumerism & nationalism.

Yang, Xue (Graduate School of Human Relations(Sociology), Keio University [tel: 81-45-349-5465; e-mail: onlykoyuki0120@yahoo.co.jp]), **Gender and Intergenerational Support in Later Life in Urban China and Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ In traditional Chinese & Japanese societies, the elderly tend to be supported by their sons. Meanwhile, assistance from the elderly parents tends to be conferred to sons as well. Nevertheless, with socio-economic & demographic changes, changes in intergenerational support in later life can be observed in contemporary urban China & Japan. In this paper I focused on a gender view to clarify the features of intergenerational support in later life in urban China & Japan. I conducted in-depth interviews in Shenyang & Tokyo/Yokohama. The interviewees consist of 15 elderly & 12 middle-aged citizens in each region. I used the narratives of the interviewees for a qualitative analysis. From the narratives of the interviewees in Shenyang, it is observed that there is no specific role allocation based on gender among adult children in supporting their elderly parents. However, some elderly interviewees in Shenyang consciously favor their sons in their support to their children, especially in the case of inheritance. On the other hand in Tokyo/Yokohama, female family members tend to provide most

of the elderly care. Different gender role allocation in these two societies is considered to be related to women's status in the labor market.

Yani, Li (Women's Studies Institute of China, No.15 Jian Guo Men Nei Dajie, Beijing, P.R.China, 100730 [tel: 86-10-65103465; fax: 86-10-65256630; e-mail: lynxcq@wsic.ac.cn]), **Struggling in the Midst of Tradition and Modernity-Women's Self-Identification and Conflict During Parenting through Network Field Investigations,** *International Sociological Association, Gothenburg, Sweden,*

¶ Some rural girl received higher education & then immigrated into city. Their economic status & life style has changed greatly. In the new contemporary circumstances, women formed new self-identity on urban community & their own career. At one time, the relationship between mother-in-law & daughter-in-law is no longer the principal contradiction of the family-relationship. However, facing the arrival of the next generation, relationship problems re-surfaced. This phase of contradictions –mainly concentrated in the changing concept of maternity, parental responsibility and parental & cost-sharing ideas & different ways, & so on. This paper found that in the processes of the conflict on mother-in-law and daughter-in-law, young mother (daughter-in-law) still has been restricted to the identity of traditional patriarchy & not completely out of the concept of limit.

2010S02961

Yanitsky, Oleg & Usacheva, Olga (Department of socio-ecological researches, The Institute of Sociology Russian Academy of Sciences, 117218, Russia, Moscow, Krzhizhanovskogo street, h. 24/35, build. 5, office 524 [tel: +7 499 128 86 76; fax: +7 499 719 07 40; e-mail: yanitsky@mtu-net.ru]), **Twenty Five Years of Russia's Environmental Reforms,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper aims at theoretical comprehension of institutional, organizational & agency aspects of Russia's environmental reforms in the period of 1985-2009. Basing on works of Western & Russian theorists of eco-modernization, we divided the paper into four parts. Firstly, a general (paradigmatic) view concerning the shift from post-totalitarian socialist to "new capitalist" mode of (re)production of society will be offered focusing on the phenomena of "energy of collapse" emission & the boomerang effect produced by exceeding an environment's carrying capacity. Then the way in which the above reforms were affected by the long-term echo of the collapse of the USSR, Russia's "opening" to the outer world, & its specific resource-oriented integration into this world are analyzed. Using the case of conflict around the lake Baikal, the interplay between & shift in the disposition of forces involved in environmental conflict, both domestic and international, is demonstrated. Methods of case-study, building chronicle, of participant observation & of in-dept interviews were used. In sum, the Russia's environmental reform is still at the very beginning.

Yanyan, Chen & Ngan-Pun, Ngai (Social Work Department, The Chinese University of Hong Kong, Hong Kong, China [tel: 00852-26097973; e-mail: rebamili@gmail.com]), **The Strengths in Coping with Poverty: A Qualitative Study of the Urban Aged Poor in Beijing, China,** *International Sociological Association, Gothenburg, Sweden,*

¶ Nowadays, the aged poor in Urban China attract greater attention. According to the Chinese Ministry of Civil Affairs, there are more than 3.16 million old people living in poverty in 2008. However, there is unclear about how they survive, particularly how they cope with scarcity of resources in their daily life. From the strength perspective, this study explores the strengths embedded in the urban aged poor in China & identifies their coping strategies with poverty & the factors that foster the strengths. Based on the constructionism paradigm, this study uses purposive sampling method to select 16 elder participants with diverse experiences of poverty to participate in the in-depth interviews & provide data for the research. The findings suggest that, the aged poor develop various kinds of strengths at their times of powerless situation. The strengths include: a) making use of various resources; b) updating knowledge of social policies; c) trying various ways to increase income; d) maintaining supportive relationship; & e) trying to live independently. The factors relating to the fostering of strengths include experiencing hardship during young, supportive relationships, the help of NGOs & caring social policies. Finally, implications for social policy are discussed & concrete intervention strategies are provided.

2010S02963

Yarskaya-Smirnova, Valentina Nikolaevna (Dept of Social Antropology&SW, Saratov State Technical Uni, Saratov Russian Federation 410600 [tel: +78452279911; fax: +78452998527; e-mail: jarskaja@mail.ru]), **Inclusion as a Strategy of the Youth Policy,** *International Sociological Association, Gothenburg, Sweden,*

¶ The strategies of Russia youth policy has significant gaps, determined by the fragmented and stereotyped knowledge about the youngsters as well as interaction between youth & the state. Youth policy is reduced to the thematic plans of activities directed to young people as objects of action. To understand youth as a subject of social change it is important to integrate micro- & macro approach to issues of individualization & risk, prevention & inclusion. Youth subcultures in official discourse are presented as a source of danger with an alternative of dominant culture, manifest identity. Semantic of social risks is evolving within cultural-historical contexts, & it is associated with danger to life or well-being, falls under the Penal Code. Social exclusion is promoted through deprivation of many young people of the accessible facilities, services & respect. Subcultures indicate the existing or emerging moods, problems & crises. The members of subcultures receive a certain status, building a cultural self-identity. It is a message to us about their unique system of values & norms, behavior practices, consumption identities. Code switching of youth policy is required on the way towards the principle of inclusion of groups that differ by social status, education, health.

Yarskaya-Smirnova, Valentina N. & Iarskaia-Smirnova, Elena R. (Saratov State Technical University, Dept. of Social Anthropology and Social Work, Saratov, Russia, 410054 [tel: +7 8452 50774; fax: +7 8452 507740; e-mail: jarskaja@mail.ru]), **Public Discourse and Social Work Language in Today's Russia,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper focuses on everyday experience as an important condition of knowledge formation in social work. The "theory" of social work is interpreted from the point of view of social constructivism. For theoretization of practice a researcher is required to have access to the experience of practitioners & service users. In order to cope with uncertainty in everyday practice a social worker builds practice theories on the ground of common sense with available concepts, values & emotions. The authors consider the role the social work language as well as official rhetoric play in the creation of the "welfare clients" identity in Russia. Social work practice discourse is analysed using the empirical data collected between 1996-2006 in Saratov, Russia, as well as on the critical discourse analysis of textbooks & relevant publications. The areas of agency jargon intersect with public discourse on social welfare issues & include definitions of the clients, functions of agency & self-definitions of social workers. Everyday knowledge–"tacit knowledge" that is not necessarily expressed verbally but must be experienced–plays an important role in practitioners' work. It is "practical wisdom", implicitly included in everyday practical action & tacitly implied directions in social work routine.

Yasuko, Tama (Department of Humanities and Social Studies, Osaka Prefecture University, Gakuen-cho, Naka-ku, Sakai City, Osaka, Japan,599-8531 [tel: +81-072-254-9883; fax: +81-072-254-9883; e-mail: tama@hs.osakafu-u.ac.jp]), **A Vacant Area of Obstetric Facilities in the Middle of a Developed Country: The Case of Nara Prefecture, Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ This report is based on the prefecture-wide sociological survey for women. It is a fact-finding research, & its aims are to compare areas & generations in their experiences & needs, & to consider the results in the context of privatization of medical services. I asked of their maternal experiences, healthcare complying with "Care in Normal Birth: a practical guide" (WHO, 1996), midwifery services, supportive relationships, & their needs. 1300 data were collected through public offices & other private snowball samplings in 2009. The main findings with 1109 data are: (1) "21C" (861 women who gave their first birth after 2001) tends to have their maternal experiences more with their families & midwives than "76-00" (248 women who did in 1976-2000)($p<.01$). (2)Referred to WHO guide, some practices in Category A as well increased as some in Category B & D in "21C" ($p<.001$). Other some in Category B decreased in "21C" ($p<.001$), though 25-30% of "21C" still experienced them with "well-informed consent". (3)The women in the southern rural area are more conscious of shortage of medical facilities, where they have no obstetrician

& 5 midwives. (4) Nevertheless, doctor-centred "risk approach" with "well-informed consent" is preferred by "21C" in all areas.

Yazawa, Shujiro (Faculty of Social Innovation, Seijo University, Saitama-shi, Japan, 330-0061 [tel: +81-3-3482-9461; fax: +81-3-3482-5866; e-mail: syazawa@seijo.ac.jp]), **Media, Culture and Globalization,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Japanese industrial society has been reached to its peak during 1980s. Until then, the majority of the Japanese people have been discussing about the internationalization of the society (the Japanese national society in the world). Since 1990s, they have been talking about the globalization of the Japanese society (individuation in the global society). The author will analyze the process of transition from internationalization to globalization of the Japanese society. In the midst of globalization, there have been two interpretations of the cultural gene or organizational principle of the Japanese society. "is the Japanese cultural gene or organizational principle suitable, adequate, sufficient & good enough for globalization of the society?" The first answer to this question is yes with several elaborations. The second answer is no. It is necessary for the Japanese society to make a radical change of the cultural gene or organizational principle. The author will discuss about these two interpretations in addition to the concept of Japanese cultural gene or organizational principle. Finally, by analyzing the Japanese media's news, articles & blogs on G8 Summit in Hokkaido, the author describes the media's positions on the internationalization, globalization & the above question. pleating

Yazicioglu, Yahsi (Siirt Üniversitesi Turkey, Siirt Üniversitesi Turkey [tel: 00905327786272; e-mail: yyahsi@gmail.com]), **A LDV Project on the "Innovative Vocational Training Approaches in Social Economy Small and Micro Enterprises" (TSESME).,** *International Sociological Association, Gothenburg, Sweden,*

¶ Social economy refers to a third sector in economies between the private sector & business or, the public sector & government. It includes organisations such as cooperatives, non-governmental organisations & charities. In a world growing ever more complex and diverse, governments are increasingly turning to community-based processes & initiatives to address local problems with local solutions. The European Union includes the social economy in its entrepreneurship pillar. Social Economy represents, through its four large families a major activity sector. Quantitatively, the sector is important as to its economic weight: 8% of the European enterprises & 10% of the European employment and covers a wide range of activities: social protection, health-social services, banking, insurance, agricultural growth, crafts, employee ownership, supplying, proximity services, education & training, cultural, sport & leisure activities, insertion through work of disabled persons, etc. Moving from this point a LDV project has been executing in the title "Innovative Vocational Training Approaches in Social Economy Small & Micro Enterprises". The acronym is of this project is TSESME. In the framework of the Project TSESME a new training toolkit will be developed & organisations of social economy & small & micro social enterprises have to gather & to strengthen. TSESME project will be discussed in this presentation.

Yeandle, Sue M. (Sociology & Social Policy, University of Leeds, Leeds, West Yorkshire, LS2 9JT [tel: +44 (0)113 343 4442; fax: +44 (0)113 343 3771; e-mail: s.m.yeandle@leeds.ac.uk]), **The Role of Telecare in Supporting Work and Care,** *International Sociological Association, Gothenburg, Sweden,*

¶ Topic The study explored how having telecare technology in place affects unpaid carers of working age. Methods CIRCLE's 2009 exploratory study (43 carers with telecare in place in Scotland) examined how telecare affected them as carers, & how they felt it impacted upon those they supported. Data was collected in focus groups & telephone interviews, & contextualised in a literature/policy review (Yeandle, 2009). Results Carers in the study were overwhelmingly positive about the benefits of telecare, noting benefits for their health/wellbeing and, for some, an enhanced ability to combine work & care. Drawing on the report for Carers Scotland/Scottish Government (Jarrold & Yeandle 2009) the paper also considers wider implications for policy development, noting contemporary challenges affecting the UK's system of care and support. It discusses the potential role of technology in delivering a sustainable system which can promote carers' wellbeing & participation in everyday life without compromising their commitment to their caring role. Conclusions The paper concludes that significant investment in telecare, supported by effective engagement with carers & users, & a programme of awareness-raising among employers & health & social care professionals, is needed.

Yeganeh, Cyrus (Department of Art Studies, Graduate Faculty, University of Art, Tehran 11368, Iran [tel: +98 21 2202 3625; fax: +98 21 2202 3625; e-mail: cyeganeh@hotmail.com]), **Auction Houses, Galleries, and Artists Facing the Economic Crisis: From the Middle East to New York,** *International Sociological Association, Gothenburg, Sweden,*

¶ The downturn in the art market concomitant with the economic crisis of 2007 saw the waning of an era when the newly rich outside the traditional Western clientele fueled the art market. Since the downturn, dealers & collectors from the United States, Asia, Eastern Europe & Middle East have been cautiously driving a slow to recover art market in the past year, as seen at the auction houses. Collectors are finding opportunities to enter new niches in this market. Ironically, some of the very investment bankers and hedge fund managers who are now (in 2010) implicated in civil and criminal financial fraud cases were among those who fueled the art market with their extravagant purchases before & after the downturn. Damien Hirst's "Investment Banker in Formaldehyde (/BFM2X4B|END400 billion!)" of 2008 now appears prophetic.

Yeh, Kuang-Hui, Yi, Chin-Chun & Tsao, Wei-Chun (Institute of Ethnology, Academia Sinica, Taipei, Taiwan, 115 [tel: +886-2-26523409; fax: +886-2-27855836; e-mail: ykh01@gate.sinica.edu.tw]), **A Cross-Strait Comparison of Operating Mechanisms of Filial Piety in Contemporary Chinese Societies,** *International Sociological Association, Gothenburg, Sweden,*

¶ Purpose: Based on the Dual Filial Piety Model (DFPM, Yeh, 2003), to better understand the value of filial piety, its fundamental dimensions should be identified. This study aimed to look into the underlying mechanism of filial piety in contemporary Chinese societies in a cross-national context. Methods: The nationally representative sample was composed of adult population aged 20 to 69 years both in Taiwan (N=1821) & Mainland China (3110) from the data of the East Asian Social Survey (EASS) conducted in 2006. The six items used to assessed personal filial beliefs in the EASS data were adapted from the original short-from Dual Filial Piety Scale with 9 items. The exploratory factor analysis was conducted to compare the underlying factor structures of the filial piety in Taiwan & Mainland China. Various demographic variables, including gender, age, education level, family size, & marriage state, were used as predictors of personal filial beliefs in the regression model to ensure the specific contextual factors relevant to personal filial belief in each nation. Conclusions: The operating mechanisms of filial piety in contemporary Taiwan society could be represented in terms of two fundamental dimensions, reciprocal and authoritarian, proposed by DFPM. In addition, the higher agreement on the reciprocal aspect than authoritarian aspect of filial piety also corresponded to the shift in social value accompanying the modernization process in Taiwan. In contrast, the underlying mechanisms that influenced the formation of the two-factor structure of filial piety in Mainland China seemed to be more political & policy-related. Further, the difference between the agreements on these two filial factors in Mainland China could not reflect the expected social or cultural change corresponding to the modernization process. In sum, although the cross-strait Chinese societies were rooted in the same cultural tradition of Confucianism, the contemporary values of filial piety in each nation have been transformed with both the actual socio-cultural adaptation process to the modernization in each nation & other nation-specific factors such as social security/welfare policy. Finally, the limitations of the study were discussed.

Yifat, Gutman (New School for Social Research, 6 East 16th Street, 9th Floor, New York, NY 10003 [tel: 212.229.5737, x 3125; e-mail: gutmy472@newschool.edu]), **Past Before Future: Memory Activism in Israel,** *International Sociological Association, Gothenburg, Sweden,*

¶ From the establishment of the state of Israel in 1948 (if not before), collective memory & historiography have composed a cultural arena for the constitution of its conflict with the Palestinians as rooted in ancient & recent historical circumstances. This arena has become central in the 2000s, as hopes for a peaceful future weakened, violence increased & official efforts to end the conflict have been stalled. This paper examines three groups of peace activists in Israel who in this period have centered their activities in this arena, after seeing some of the more traditional forms of

peace activism, such as co-existence models, fail to bring reconciliation in this context. These groups, of Jewish Israelis and Arab-Palestinian with Israeli citizenship, turn to the past as a central means for their end: equality, reconciliation and conflict resolution in the future. By producing & distributing knowledge about the traumatic Palestinian experience of 1948, the groups hope to bring recognition & reconciliation outside state channels. A severe struggle on the representation of 1948, which stems from the high stakes of its implications for the present construction of the conflict, limits the application of the activists' knowledge-based model for political change. However, in the absence of any other available language for political intervention outside of the zero-sum game of opposing national narratives, Israeli & Palestinian, the model & especially the memory practices the activists engage in have an interesting potential.

Yildirim, Engin (Sakarya University IIBF, Sakarya University IIBF Esentepe Kampusu 54187 AdapazarA- TURKEY [tel: +90 264 295 6231; fax: +90 264 295 6233; e-mail: yildirim@sakarya.edu.tr]), **Managerialism and the Bologna Process in the Turkish Higher Education,** *International Sociological Association, Gothenburg, Sweden,*

¶ It has been claimed that growing market orientation & managerialism has transformed the traditional basic principles of academic work (May 2005, Olsen 2005, Ylijoki & Mantyla 2003; Barry et al. 2001; Trowler 2001, Slaughter & Leslie 1997). Managerialism in higher education involves policies emphasizing accountability, competition, deregulation, external evaluation & performance based funding standards. This paper aims at analyzing changing patterns of higher education governance by throwing some light on to what extent & in what ways managerialism has an effect on higher education systems through the prism of Turkish experience. Turkish higher education system has recently experienced rapid growth in terms of student enrolments & number of universities. These developments have strained the whole system. Introduction of mandatory strategic planning in the public sector associated with the rhetoric of accountability, the establishment of the Higher Education Evaluation Council (YODEK) & quality initiatives by various universities are the more visible signs that managerialism has begun to penetrate the Turkish higher education system. The Bologna process has often been used as a justification of managerialist initiatives. We explore how main stakeholders (the state, the Council of Higher Education-YOK, universities and academics, interpret & give meaning to managerialism, the Bologna process & related discourse. What kinds of subjectivities are being planned as a result of these changes? How are these new subjectivities being reconciled with the former subjectivities? We suggest that managerial values & principles have not been inculcated in the Turkish academia. References Barry, J., Chandler, J & Clark H. Yilmaz, Erbil, Zielonka, Markus & Birnbaum, Nicole (University of Bamberg, Chair of Sociology I, Wilhelmsplatz 3, 96047 Bamberg, Germany [tel: +49 951 863 3121; fax: +49 951 863 2597; e-mail: erbil.yilmaz@uni-bamberg.de]), **Educational Decisions as a Rational Calculus? Testing Models of Educational Decision Making with a Mixed Methods Approach,** *International Sociological Association, Gothenburg, Sweden,*

¶ Rational choice models explain inequality of educational opportunity by differences in academic performance of children (primary effects) as well as differences in educational decisions (secondary effects)–both depending on parents' social background. Framing educational decisions as a calculus of costs, benefits and probabilities is the core premise of rational choice models. In order to link these general concepts with specific empirical data bridge hypotheses are introduced. This paper presents a mixed methods approach developed to evaluate the appropriateness of established bridge hypotheses used in rational choice models of educational decision-making. Furthermore the scope of this perspective is assessed against alternative explanations. First we discuss central methodological requirements for a mixed method approach. We then illustrate the practical implementation of this method using data from repeated guided & standardized interviews with parents of German & Turkish origin at the end of primary school in two German federal states. As a result, we can find necessary specifications complementary to the bridge hypotheses when modeling educational decisions & argue for a cautious general use of these common models.

Yip, Ngai-ming & Wu, Ying (Department of Public and Social Administration, City University of Hong Kong, 83 Tat Chee Avenue, Kowloon, Hong Kong [tel: (852) 3442 5783; fax: (852) 2788 8926; e-mail: yingwu@cityu.edu.hk]), **Neighborhood Activism: The Emergence of a New Homeowner Class in Urban China?,** *International Sociological Association, Gothenburg, Sweden,*

¶ With the progress of homeowners in China, resistance launched by homeowners is also on the increase. Nearly all of such collective action, the majority of which were organized by their homeowner association, displays a strong desire in protecting their property rights. Conventional class analysis perceives homeownership as a conservative factor in homeowners' political movement but other empirical studies instead show homeowners' active involvement in community activities. There is an apparent appeal for the concept of housing class in explaining homeowners' positivity in local affairs that homeowners have a common material interest (property ownership), social organisation (homeowner associations), interaction with the state & capitalist agents, as well as the arena for action in forming a new class. Yet, other studies also show the importance of other factors, such as transaction cost, length of residence & subjective agenda of homeowners, on neighborhood activism. Hence, to what extent homeownership offers basis for class formation & determine neighborhood activism is at best unclear. By exploring the neighborhood actions in several Chinese metropolises, this paper attempts to further the understanding of homeowners' involvement in neighborhood activism by revealing the social & political dimensions of neighborhood activism besides the apparent pecuniary interest & evaluate the thesis of housing class from different theoretical perspectives, which include Marxian, Weberian & Bourdiueian. With a portrayal of nuanced pictures of grass-root movement, the paper intends to enrich our understanding of homeowners' organization and mobilization, & its impact on the development of civic society in China.

Ylönen, Marja Katariina (University of Jyväskylä, dept. of Social Sciences, Jyväskylä, Finland, P.O. Box 35, 40014 [tel: +358 14 2602 930; e-mail: Marja.k.ylonen@jyu.fi]), **Co-Production and Actor Network Theory–Limitations and New Opportunities,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recent interest in networks & flows within environmental sociology and governance has made it important to examine the idiom of co-production & actor-network theory. Originally developed within the sociology of science, ANT was soon adopted to environmental sociology because of its ability to transcend the nature-society and actor-structure dichotomies. ANT is still widely applied in empirical research. Via ANT has been told fascinating stories about how environmentally sustainable practices & technologies have been taken into use & how the nature & society are co-produced. While ANT illuminated nature-society interface, it also included weaknesses, such as lack of tools to confine the network or compare different networks with one another. It was able to describe the outcome of hybrid networks, but it did not contribute to the understanding why something did not happen. Furthermore, it was criticized for failing to explain how actants were connected with one another. Therefore, there arises a need to study causal mechanisms which links actants together. This paper examines the possibility to complement ANT with the approaches that derives from different ontological sources, such as critical realism or dialectical materialism. Paper shows through some empirical examples how the suggested approach would work in practice.

Yngvesson, Barbara & Marre, Diana (School of Social Science, Hampshire College, Amherst, MA, USA 01002 [tel: +1-413-559-5578; fax: +1-413-559-5620; e-mail: byngvesson@hampshire.edu]), **Rethinking Abandonment, Adoption, and the "Needs" of the Adopted Child,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recent research on international adoption points to the dominance of particular discourses & understandings that constitute the symbolic &

explicative environment in which the adoption process is understood. These include the concepts of "abandonment" by a birth parent, the "orphan status" of the child, & exclusive concepts of family & parenting that are assumed to underpin the development of adoptive identities. In this paper we interrogate these understandings, drawing on recent research on orphanages and abandonment in nations that send children in adoption, on adoptive parent-child relations in receiving nations, & on adopted adults who return to their nations of birth to investigate the conditions that led to their placement. We conclude with a discussion of alternative frameworks for conceptualizing the "needs" of adoptable (or potentially adoptable) children & for reconfiguring adoptive family relations in ways that are attentive to the discontinuities that shape the lived experiences of birth parent, adoptive parent & the adopted child.

Yogev, Abraham (Tel Aviv University, Tel Aviv 69978, Israel [tel: +35405633; fax: +35473305; e-mail: yogev@post.tau.ac.il]), **Academic Capitalism and the Sociology of Higher Education,** *International Sociological Association, Gothenburg, Sweden,*

¶ Academic capitalism, or the market & market-like conduct of universities regarding teaching, research and administration, prevails in many countries & should be incorporated into the sociology of higher education. I concentrate on two major domains in the sociology of higher education–the study of inequality & the study of students' values–to show how the concept of academic capitalism could benefit recent research. The study of inequality in university access assumes that individual differences mainly determine inequality. Since universities have changed in the direction of the neo liberal economy, inequality trends may well result from the rising costs of university education, cuts in socially-based scholarships, and shifts in students' loans. We need a longitudinal study of the effects of changing financing strategies to balance the more traditional approaches. Similarly, students' values have been mainly studied from the viewpoint of university socialization, while the entrance of new groups of students into universities (such as executive graduate students) requires studying the values they bring into the university–as examplified by my own recent research. In sum, I do not claim that the incorporation of the concept of academic capitalism should replace our traditional research, but rather that the new critical approach may add new and relevant dimensions to our research.

2010S02978

Yokoyama, Keiko (Center for Studies in Higher Education, University of California, Berkeley, Berkeley, CA, USA, 94720-4650 [tel: +1-510-643-2595; fax: +1-510-643-6845; e-mail: kyokoyama.net@googlemail.com]), **The Different Definitions of Autonomy and Accountability Between the Global and Local Contexts: The Case of Quality Assurance of the University of the State of New York,** *International Sociological Association, Gothenburg, Sweden,*

¶ There is a substantial amount of literature concerning the quality assurance of higher education institutions' cross-boarder activities & supranational institutions' efforts to maintain quality. However, there is relatively little literature dealing with the issue around the ideas of autonomy & accountability in the international context. The purpose of this study is, therefore, to identify how the meaning of autonomy & accountability changes between domestic & overseas campuses of the University of the State of New York (USNY). The paper examines the shift of the quality assurance mechanism between domestic & overseas contexts. The paper is based upon not only logic & observation but also analysis & interpretation of data collected through documentation and semi-structured interviews to agents involved in quality assurance. The paper argues that the meanings of autonomy and accountability differ between the USNY's home & overseas branch campuses. Home campuses highlight substantial autonomy, and managerial, professional & market accountability which are mainly shaped by the market, the State's regulatory mode, & the accreditation scheme of a regional accrediting body. On the other hand, the meanings of autonomy & accountability of the USNY's overseas campuses are far more complex & hybrid than those within the US territory.

Yonekura, Tatiana, Soares, Cássia Baldini, Minuci, Elaine Garcia, Campos, Célia Maria Sivalli & Trapé, Carla Andréa (School of Nursing of University of Sao Paulo, Sao Paulo, SP, Brazil, 05403-000 [tel: 55 11 3061-7652; e-mail: tatyonekura@gmail.com]), **Youth Map of Santo André, Brazil: Instrument to Read Social Inequalities,** *International Sociological Association, Gothenburg, Sweden,*

¶ Critical epidemiology has the inequalities in health as its subject. Assuming that mapping social inequalities constitutes a useful instrument to plan public policies & to identify health inequalities, this study aimed to analyze social inequalities of young adults by mapping socioeconomic data. Methods: Socioeconomic variables of young adults aged from 15 to 24 years, living in the city of Santo André, Southeastern Brazil, were collected and distributed among 43 areas, corresponding to a division of the region into smaller districts. Factorial & cluster analysis of areas were performed, resulting in four social groups. Results: The area that concentrated young adults with higher access to wealth was classified as central & that including individuals with lower access to wealth was classified as peripheral. Two intermediate areas could be identified, one closer to the highest access to wealth ("almost central") & another close to the lowest access to wealth ("almost peripheral"). Discriminating variables were associated with work, migration, level of education, fertility, adolescent's position in the household, presence of spouse or partner, living conditions & assets owned. Conclusion: Differences among social groups revealed important inequalities among young adults, which will contribute to the planning of public social policies aimed at these groups.

2010S02980

Yoshida, Akiko (Department of Sociology, University of Oklahoma [e-mail: akiko@ou.edu]), **Economic and Cultural Impacts on Singlehood in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study examines the causes of increased singlehood in Japan. Japan's marriage rates began to decline rapidly in the 1980s when Japan's economy boomed, & rates continued to decline after the economic recession. Applying the life course perspective and Ogburn's hypothesis of cultural lag, this study predicts that causes of non-marriage differ by cohort. In-depth, open-ended interviews were conducted on 40 never-married & married women aged 25 to 46 in the Tokyo area. The research findings are that women who spent their young adulthood during the economic boom tend to accept traditional gender roles as proper, find employment and motherhood incompatible, & hold ambivalent views toward the possibility of a happy marriage. Women who spent their young adulthood after the recession also see mother's stay-at-home role as an ideal, yet expect to remain employed after marriage & hold more positive views toward marriage than women of the economic boom cohort. This study suggests that marital behavior is shaped by both changing employment opportunities & cultural expectations that tend to lag behind such economic changes.

2010S02981

Yoshino, Satomi & Fast, Janet (University of Alberta, Edmonton, Alberta, Canada, T6G 2N1 [tel: (780) 492-2865 ; fax: (780)492-4821; e-mail: syoshino@ualberta.ca]), **Care Networks of Older Adults and Receipt of Family/Friend Care across Ethnic Groups in Canada,** *International Sociological Association, Gothenburg, Sweden,*

¶ Along with population aging, increasing globalization has made the issue of ethnic variations in caregiving an important topic for countries comprised of immigrants. Canada is one such country where multiple cultural perspectives on caregiving coexist. Previous studies demonstrate ethnic differences in beliefs & attitudes about family caregiving & point to assumptions about ethnic minority seniors having strong family ties & supportive care networks, which tend to result in lower utilization of formal care services. However, there is a lack of evidence confirming ethnic variations in actual caregiving behaviors. Using a nationally representative Canadian sample, this study examines ethnic variations in family/friend caregiving networks of older adults and their receipt of care from these networks. Multivariate regressions were performed using a sub-sample of 2407 respondents aged 65+ from Statistics Canada's 2002 General Social Survey on Aging & Social Support & the 2001 Canadian Community Health Survey. Hours of care per week & number of tasks with which older adults received help from their family & friends were the dependent variables. For both men & women, seniors with lower health status & larger care networks received more care. Marital status influenced the hours of care received from the care networks for women but not for men. With respect to ethnicity, while Asian older adults received help with more tasks, ethnicity appeared to have no influence on hours of care. Results provide information for the further development of long-term care policy & practice, in Canada as well as in other multicultural countries.

Young, Christopher A. (Sociology, Social Policy and Social Work, University of Fribourg, Fribourg, Switzerland, CH-1700 [e-mail: christopher.young@unifr.ch]), **Prison Regimes in Swit-**

zerland Since 1970 Rehabilitation and Security in Organizational Discourse, *International Sociological Association, Gothenburg, Sweden,*

¶ Security & punitiveness have become defining features of many Western criminal justice systems since the 1970s, accompanied in many cases by a weakening of the rehabilitative ideal and simultaneously by a somewhat contradictory rational management approach. In Switzerland too, similar demands for increased punitiveness & security have repeatedly received popular support at the ballot box in recent years, e.g. the introduction of mandatory life-long imprisonment for very dangerous offenders in 2004. However, more severe sentencing & punitive sentiments expressed in the media do not necessarily or automatically translate into greater punitiveness within the correctional system. The question to be asked is how & due to which factors the organizational culture or more precisely the "organizational discourse" of prisons changes. This paper asks how organizational discourse has changed over the last four decades within one Swiss correctional institution with a particular focus on the topics of rehabilitation, security & the justifications of punishment. This discourse is then related to media discourse & to relevant changes in legislation throughout the period. Organizational discourse is reconstructed using internal documents from across the period such as disciplinary reports & rules of conduct.

Yu, Jae Eon (Korea University Business School, Anam-Dong, Seongbuk-Gu, Seoul 136-701, Korea [tel: +82-2-3290-5271; fax: +82-2-922-7220; e-mail: yu9070@korea.ac.kr]), **Deleuze's Theory of Assemblage: A Way of Overcoming the Dualism of Individualism and Collectivism,** *International Sociological Association, Gothenburg, Sweden,*

¶ Abstract This paper seeks to appreciate the novelty of Gilles Deleuze's theory of assemblages, & to propose the development of what we call rhizomatic systems approach for understanding an immanent ethics that is created by "minorities". To understand Deleuze's vision of creating new "modes of existence", we acknowledge "science of becoming", which has developed from the Deleuze's notion of the "haecceity". Becoming "haecceity" means that immanent "modes of existence" are possible by means of transforming virtual assemblages into actual assemblages that come into an existence in social field. Our proposition that the complex process of creative involution is possible in the form of Deleuze's notion of "problems" that take place by means of "becoming" "haecceity". It refers to the process of generating a series of events in the problematising fields. In such complex process, there are conceptual or virtual assemblages of the singularities, that is the differential events which Deleuze & Guattari (1988: 261-263) calls "haecceity" in relation to Spinoza's Ethics. Put differently, we search for a way of appreciating an immanent ethics that is actually created by "minority" in the Deleuzian sense or the aestheticized existence of the "free man" (in the Focauldian sense of this term). In this proposal of a "transcendental empiricism", the subject no longer treats as a transcendental instance or the Kantian subject, but a plurality of heterogeneous processes of subjectivization that could function as a basis for creating immanent "modes of existence" rather than an appeal to a transcendental subject. Based upon this proposition, we will briefly consider the nature of an immanent ethics by posing three questions as follows. How can a mode of existence be possible? How are modes of existence to be appreciated? What are the conditions for the creation of new modes of existence by means of transforming virtual assemblages into actual assemblages or creating new assemblages in social field? This paper claims that creative "involution" is possible through the use of rhizomatic systems thinking in order to change the existing actual assemblages and/or create new assemblages that are caused by the appreciation of new modes of existence. Keywords Deleuze' theory of assemblages; rhizomatic systems approach; an immanent ethics; creative involution.

Yufu, Sawako & Nakazawa, Wataru (Graduate School of Teacher Education, Waseda University, 1-6-1, Nishi-Waseda,Shinjuku-ku,Tokyo, Japan [tel: +81 3 5286 1848; fax: +81 3 5286 1848; e-mail: sawakoy@waseda.jp]), **The Working Conditions and Attitudes of Teachers in the Age of Educational Reform in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the last decade, the working conditions of Japanese teachers have radically changed as a result of an educational reform led by neoliberal & quasi-market ideas. Through the conduction of a questionnaire, we examined the influence of educational reform on teachers' working conditions & their attitudes toward their daily activities. We used a questionnaire survey conducted in Japan in January 2010. The sample size was 2,049, constituting 1,190 elementary school teachers & 859 lower secondary school teachers. As a result of analyzing the data with a multi-level regression analysis, the following aspects were clarified. Firstly, the principals & teachers who are strongly influenced by the educational reform hold achievement-oriented attitudes. Secondly, as a variety of people come to be employed as teachers & the number of part-time teachers increases, it is difficult for teachers to share the various problems encountered while carrying out daily activities. Thirdly, the bureaucratic character of the school organization becomes increasingly stronger.

Yui, Kiyomitsu (Department of Sociology, Graduate School of Humanities, Kobe University, 1-1 Rokkodai-cho, Nada-ku, Kobe, Japan, 657-8501 [tel: 81-78-412-7681; fax: 81-78-412-7681; e-mail: yui@lit.kobe-u.ac.jp]), **Social Construction and Awareness of Risks in Second Modernity, Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ The year 1995 was a turning point in Japan in many ways in which one of the most important aspects was that of awareness for risks. Because of the two shocking events that drew wide public attention in Japan, the Great Hanshin Awaji Earthquake & Sarin Gas Case in subway Tokyo by the radical new religious cult called Omu Shinrikyo, people in Japan suddenly faced new era in the risk society (U. Beck). As Hannigan put it (Hannigan, J. A., 1995, Environmental Sociology: A Social Construction Perspective), some scandalous / shocking events can be a point of breakthrough in the social construction process of risks. It is worth mentioned that the turn of this people's consciousness was occurred in the settings of the second modernity (in U. Beck's sense) in Japan. In addition to the factors of the second modernity in general & the process of social construction of risks, we also have distinctive factors as to Japanese second modernity as well. In the paper I will combine the theory of social risks with the first-hand data concerning the volunteers & NOP activities took place just after the quake in considering the "sub-politics" movements in contemporary context.

2010S02986

Yun, Sun-Jin (Seoul National University, 599 Gwanak-ro, Gwanak-gu, Seoul 151-742 [tel: +82-2-880-9391; fax: +82-2-871-8847; e-mail: ecodemo@snu.ac.kr]), **The Possibility of Sustainable Consumption in an Era of Climate Change in Korea,** *International Sociological Association, Gothenburg, Sweden,*

¶ Sustainable development requires sustainable consumption as well as sustainable production. Increasing production stimulates increasing consumption and, reversely, increasing consumption stimulates increasing production. Therefore, not only production-side but also consumption-side needs to draw our attention in order to realize sustainable development by avoiding environmental pollution and destruction. Especially, since climate change, the most serious environmental problem in the 21st century, has been caused by increasing accumulation of greenhouse gases emissions at the atmosphere largely resulting from socio-economic activities of human-beings, including increasing consumption of energy and resources, it is critical to change the current energy- and resource-intensive life-style toward sustainable consumption. However, there has been little discussion about sustainable consumption in Korea. This paper explores the current state of the environment-friendly propensity to consume & possibility of sustainable consumption in Korea. The environment-friendly consumption depends not only on consumers' conscious behaviors but also on institutional support. Thus, this paper examines the trend of environment-friendly consumption with statistical data and institutional arrangement to support it in Korea. Especially, this paper is concerned about consumption pattern related to energy appliances, main sources of climate change & air pollution in cities, & the propensity to consume organic foods as representative cases of environmentally friendly consumption. This paper finds the fact that energy consumption in residential sector has been growing because of improvement of the standard of living. Consumers prefer to large-scale electric appliances & cars. Although relatively low electricity charge in Korea is one of the reasons, strong inclination to position goods contributes to the current energy consumption patterns. Furthermore, pollutants resulting from energy consumption activities are not directly experienced by consumers and, therefore, meaningful changes in consumers' energy consumption patterns are not detected. However, increasing purchase of environment-friendly foods has been witnessed in Korea. Recently, concerns about healthful foods have increased because well-being is the rage in Korean society. Most people are worried about contamination of foods by agricultural chemicals. Around 40.4% of adults are concerned about safety of domestic agricul-

tural products & 87.0% about imported ones. Different from environmental problems of increasing consumption of large scale of cars & electric appliances, agricultural foods give direct impacts on consumers' health. Therefore, consumers are willing to pay more for safe foods like organic ones. The impact of foods on consumers' health is more direct. These phenomena show that depending on individual behavior changes toward sustainable consumption is not enough. Consumers are reluctant to change their consumption pattern with regard to energy consuming goods, which have indirect impact on consumers' health. There is strong inclination to free ridership. This phenomenon is contrary to environment-friendly foods. Therefore, it is necessary to have institutional change such as introduction of carbon taxes, adjustment of efficiency level of energy appliances, rationalization of electricity charge, & so on in order to induce climate-friendly consumption. Although willingness to pay for the benign environment has been increasing, many Koreans have reservations or do not agree to internalization of environmental externalities into prices. Consequently, more active two-way communication is required.

Yunzhu, Jia (Women's Studies Institute of China, No. 15, Jian Guo Men Nei Da Jie,Beijing, 100730, P.R. China [tel: 0086-010-65274078; fax: 0086-010-65274078; e-mail: jiayunzhu@wsic.ac.cn]), **Open-Minded Elderly Women vs. Close-Minded Elderly Men: An Qualitative Research on Gender Imbalance of Elderly Educational Activates in China,** *International Sociological Association, Gothenburg, Sweden,* (CHI)

¶ During the past two decades, as the number of participators in elderly education grows, the gender imbalance of participators in China turns from one extreme to another. The paper, which is part of the doctoral thesis of the author, trying to explore why elderly women are more absorbed in elderly education activities while elderly men are absent from those activities observably in current era through gender lens based on the information of in-depth interview of 17 Chinese older persons & two focus group interviews which carried out in Beijing & Xian cities, during 2007-2008. It appears that women are interesting in organized activities outside home while men are apt to go their own way wherever. Women are easy to correlate with their classmates & open-minded to learn what they interested in while men are antisocial in their later life and close-minded to learn from other persons. It concludes that gender role do play an important role in elderly persons participation in elderly educational activities. Participation in elderly educational activities is a positive strategy for elderly women who have low educational attainment & more housework at home to meet their cognitive interesting & leisure needs. The masculinity of elderly men hamper them to enjoy learning activities.

Yurchenko, Olesya & Mansurov, Valery (Department of Sociology of Professions and Professional Groups, Institute of Sociology of the Russian Academy of Sciences, Moscow, Russian Federation [tel: +7-495-719-09-71; fax: +7-495-719-07-40; e-mail: olesya@mail.ru]), **Policies of Incorporation of Alternative Medicine in Russian Health Care,** *International Sociological Association, Gothenburg, Sweden,*

¶ Nowadays the attitudes of European doctors towards alternative medicine vary widely, ranging from hostility to an all-accepting embracing of alternative medicine. Our research highlighted that while there are extreme positions, most Russian doctors adopted an intermediate stance, with a growing willingness of medical practitioners to work closely with at least some alternative practitioners. On average a sizeable proportion of orthodox practitioners had referred patients for some alternative treatment. They were ready to cooperate with alternative practitioners & saw alternative medicine as helpful in the treatment of chronic illnesses & health promotion. The incorporationist strategy of the Russian medical profession can be related to the threat to its interests posed by outsiders. Orthodox medical practitioners prefer to have the ownership of alternative medical knowledge. In fact, alternative medicine gives increased opportunities for private practice to Russian doctors, even if it happens on an unofficial, informal base. At the same time, the incorporationist strategy of Russian doctors can be explained by shortages in state medicine, where many doctors have had to turn to "cheaper" therapies, especially in the case of chronically ill patients.

Yusuf, Farhat & Siedlecky, Stefania (Faculty of Business & Economics, Macquarie University, Sydney, NSW 2109, Australia [tel: +61 2 98786979; fax: +61 2 98506065; e-mail: farhat.yusuf@mq.edu.au]), **Demography of Muslims in China,** *International Sociological Association, Gothenburg, Sweden,*

¶ Objective The main objective of this paper is to study the demographic and socio-economic characteristics of Muslim minorities in China. Data The 200 census of China recognizes 52 ethnic minorities in China. Although the question of religion was not asked in the census, ten of these ethnic minorities are known to be Muslims. Census provides detailed information about the social, economic and demographic characteristics. Results Growth rates of Muslims have declined between 1990 & 2000, but much less than the national average. There were large variations within the ten sub-groups, many of whom, including Uygur, the second largest, group, live in Xinjiang. The largest group, Hui, closely resembles the Han majority in ethnographic terms & is also spread throughout China. The Hui people had a fertility rate nearly 38 percent above the Han average & the Uygur 60 percent higher. These rates represent not only a more relaxed attitude to the one-child policy but also other socio-cultural factors such as poor education & access to information & health services, & lower levels of economic development which characterise the remote areas. The current economic boom in China will hopefully bring changes to Muslims and others living in remote communities.

Yusupov, Musa Movlievich (Law Faculty, Chechen State University, Grozny, Chechnya, Russia,3640907 [tel: +7(8712) 21-20-04; e-mail: Musa_y17@hotmail.com]), **Polylingualism in the North Caucasus: Condition, Problems, Tendencies,** *International Sociological Association, Gothenburg, Sweden,*

¶ The North Caucasus is a unique region of the world, characterised by polyethnicity & multilingualism. It causes the necessity of studying of objective tendencies of development of languages and their historical prospect. Method: In research the functional approach, principles of historicism, comparison, methods of the sociological analysis were applied. Subject of the study a a language situation. Results of research. In the history of the North Caucasus different periods of development of culture and languages emerged a favourable & unfavourable. In Russia the language policy has not yet formed, but the constitutional and legislative bases of development of official & regional, national (ethnic) languages are created. Following the results of the All-Russia census 2002 the prevailing majority of the people of the North Caucasus know regional & ethnic languages, & over 80-90 %, the official Russian. However the level of knowledge of regional and ethnic languages in Dagestan, Chechnya, Ossetia & in other republics is various. This indicator correlates with an educational level & place of residence of people. The characteristic feature of all territories is the use of regional languages mainly in the family-household sphere. The existing objective language contradictions reflect the adherence of the one to social values, others a to ethno cultural values. The conclusion. The historical prospect of regional languages directly depends on the language policy of the state & value attitudes aims of the population.

Yusupova, Tatiana (St. Petersburg Branch of the Institute for the History of Science & Technology, RAS, St. Petersburg, Russia, 199034 [tel: +7 812 328 47 12; fax: +7 812 328 46 67; e-mail: tiyusupova@mail.ru]), **Features and Tendencies of Scientific Cooperation between Russia and Mongolia,** *International Sociological Association, Gothenburg, Sweden,*

¶ The geographical neighborhood & deep historical links between Russia and Mongolia determine mutual interest & interconnection for both countries, including close scientific cooperation. Academic contacts play a vital part in the framework of the Russian-Mongolian relations. Strategy of communication in scientific cooperation changed for both countries at the end of XX century. This process was connected with a new stage in the Russian-Mongolian relations: once again Mongolia became one of the most important international partners for Russia & the Russian Government actively encouraged the development of scientific communications with Mongolia. Scientific & technical cooperation between Russia & Mongolia became much more intense, various organizational forms developed & participants from both countries worked in new geopolitical conditions. The report will consider reasons, mechanisms & characteristics of the Russian-Mongolian scientific interaction, its dynamics & the expansion directions.

Zaaiman, Johan (North-West University, Potchefstroom, South Africa [tel: +27 18 2991627; fax: +27 18 2994254; e-mail: Johan.Zaaiman@nwu.ac.za]), **Local Power, Space and Change,** *International Sociological Association, Gothenburg, Sweden,*

¶ After 16 years of democracy South African cities are still characterised by population groups living largely in separate areas. Although national government encouraged city integration the successes were limited. This study focuses on a middle size city, Potchefstroom, & looks at how power, economic & cultural variables support or weaken suburb homogeneity It indicates that economic & cultural factors play a very important role in defining specific areas. This correlates with some of the findings of the recently developed scenes theory & it is briefly touched on. But it also points to the fact that the power base of the majority party in the local government is largely determined by space. Integration will change the political landscape and therefore it was not strongly promoted by the majority party. This confirms the importance in power of the manipulation of the possibilities of change. The paper ends by reflecting on this relationship between power & the possibility of change with regard to space & comments on its theoretical relevance.

Zabielska, Janina Marta (Institute of Sociology, The John Paul II Catholic University of Lublin [e-mail: jmzabielska@kul.lublin.pl]), **The Parity in Poland in a Public Debate,** *International Sociological Association, Gothenburg, Sweden,*

¶ In most European countries the problem of gender equality is solved already long ago, in Poland we are discussing over it from recent. In June 2009 took place Polish Women's Congress. The meeting discussed the problems of inequalities in different areas of social and public life. The main demands of the Congress were: an introduction to the Polish reality social parity which will enlarge equality between women & men, next postulate was to strengthen mechanisms for gender equality policy in the social life, as well as change of legal regulations relating women in the labor market, etc. Extremely interesting is that this proposal has caused much controversy & is the part from women's side. Appeared statements that parity will harm women, because they will not be treated as a serious partner, but as someone who "must" occupy a position at government, business, university etc. It seems to me that for the sociologist is interesting what in Poland should be changed, but also provide the public reaction & public debate to the planned changes. I want to write about discussions regarding the introduction of parity which took place in the press, & show who and why is afraid of gender equality.

Zabirova, Aigul Tleubaevna (Sociology Department Eurasian National University, Astana, Kazakhstan, 010000 [tel: 7-7172-215347; fax: no; e-mail: zabirova@hotmail.com]), **New Urban Forms in Astana as a Post Soviet City,** *International Sociological Association, Gothenburg, Sweden,*

¶ In my Paper I am going to test M. Castells's concept [1] that two segregated & separate life-worlds coexist in city. This concept will be tested through analysis of urban spaces & places in Astana as a capital of post soviet Kazakhstan. Rapid urbanization, urban development in Astana has led to growing social polarization and "the break of communication between the life-worlds of the two categories of city resident". Statistical data, small scale survey & visual analysis were used to obtain of the supporting data. Our data brings out the coexistence of two segregated life-worlds in Astana at one level. But a deeper examination of the issue indicates that the rich are not a single category. Similarly, the poor too are not a single category. Among the rich there are different categories of people who live in relatively different type of houses & "consume" different type of urban spaces. Similarly, the poor too include various categories of people who live in different types of houses & "consume" "old" urban places. In final I suggest that each of these two life-worlds pursuing a variety of life-styles internally. 1. Castells, Manuel. 1989. The Informational City. Oxford, UK: Blackwell.

Zaccai, Edwin (Université Libre de Bruxelles (ULB-Brussels University, IGEAT CP130/02, 50 av. F. Roosevelt, 1050 Brussels, Belgium [tel: +3226504323; e-mail: ezaccai@ulb.ac.be]), **"Greening the Crisis": The Place of Environmental Factors in its Story and Aftermath,** *International Sociological Association, Gothenburg, Sweden,*

¶ Among the characteristics of the year 2009, coexisting with the economic crisis & its hard-sought "remedies", one can include the relatively strong presence of "green" issues within the discourses, the media & the policies. This contribution assesses the influence of environmental factors (in particular climate change policies, & the role of the energy prices) in the recent economic crisis & its aftermath. It focuses on Western countries, though some conclusions are also made for Southern countries. The paper is divided in three topics. 1) The role of environmental factors among the characteristics of the crisis; 2) Their inclusion within strategies elaborated in order to overcome the crisis, and the social effects of these strategies; 3) A prospective approach dealing with the social effects, especially on low-income categories, of what can be expected from strong climate policies (or high energy prices). For each of these three steps we articulate policy & social observation, with the analysis of discourses. We use empirical research, either specific to our center or coming from the literature, & formulate more general analyses & conclusions, in order to try to assess the shapes of the configuration of the crisis by environmental issues.

Zachou, Chryssanthi (American College of Greece, Athens, Greece, 15342 [tel: 0030 210 600 9800/9; e-mail: czachou@acg.edu]), **Transcultural Challenges : The Women's Movement in Greece,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper aims to study the current state of women's movement in Greece. It focuses on the various factors influencing, through transnational (and global) processes, its relatively slow but steady growth within the country's broader socio-cultural terrain. Given the impact of social changes that have occurred during the last few decades & reshaped a formerly homogeneous society–from Greece's integration in the EU to the massive flow of immigrants–feminist thought & action has been particularly influential. Not only in raising awareness on gender inequalities, but also through its powerful presence in the public sphere. My research focuses on five specific causes that have shaped women's activism in Greece: (a) The role of EU in implementing gender mainstreaming policies (b) The institutionalization of a feminist agenda by newly established governmental agencies & NGOs (c) The role of women's organizations interactive networks (d) The co-operative efforts with other progressive social movements (i.e. human rights, ecological) (e) The continuous impact of female (social) scientists and transnational epistemic networks. These factors will be analyzed in view of the recently intensified transcultural exchanges due to the presence of numerous women immigrants, tourism, the use of information & communication technologies and the rise of women's educational level. The theoretical objective of my sociological analysis is to synthesize them in a model that explains the present state of the women's movement in Greece.

Zachou, Chryssanthi & Kerpaci, Kalie (Sociology, American College of Greece (Deree College), 6 Gravias St, Athens, Greece, 15342 [tel: 0030210 600-9800/9; e-mail: czachou@acg.edu]), **God's "Second Coming": Youth and New Religious Movements in Post-Communist Albania,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since the early 1990s, Albania has moved from the stage of indoctrination into atheism to a period of religious revival. The end of the Communist era discredited Hoxja's ideology of "Albanism" as the "state's official religion" & brought about a series of rapid political & broader social changes, which activated a radical reorientation in people's lives individually and collectively. As a result, many Albanians (re)discovered religion. In a cultural terrain formerly dominated by Islam and Orthodox & Catholic Christianity as the main transcendental axes of a traditional society, new religious movements & especially protestant organizations (i.e. Campus Crusaders, Adventists, Baptists) mushroomed in Albania. They established foundations and Christian Colleges & over one hundred congregations, in cities and remote villages, in an effort to "evangelize" the former "Muslim" segments of the population. Protestant missionaries from USA & Europe engaged in "church planting", targeting the recruitment of youth. Special programs & events, activities and performances, radio broadcasts & concerts, magazines and pamphlets were used as strategies to attract young Albanians. This research-based paper explores the reasons for the success of protestant organizations & their appeal to Albanian youth in relation to (a) the contrasted political & socio-cultural frames of the old & new Albania, & (b) the context of modernity and globalization.

Zadkowska, Magdalena (University of Gdansk, Department of Social Sciences, Institute of Philosophy, Sociology and Journalism, Gdansk, ul. Nazynskiego 1a PL80952 [tel: 0048504284751; e-mail: magda.zadkowska@wp.pl]), **Leisure Time and Space and Its Influence on Family During Holidays Abroad,** *International Sociological Association, Gothenburg, Sweden,*

¶ The journey is a product. We can choose it, order it & buy it. We feel a big social pressure that we must have one, at least once a year. Our expectations grow, we look for higher quality of service and stronger intensity of experience. The demand of extreme journey grows too. It should give us more, meet our big expectations, make our holidays intense. Extreme sports become ordinary & the reality of everyday-life relations becomes extreme. Sometimes it is far easier to go heli-skiing or to kite surf than to talk with husband/wife about cleaning a common kitchen in the apartment. Especially being watched & judged (we–the protagonists of wonderful sport sessions on photos & films) by our friends and roommates. Children do also disturb the relation. Some families leave children at home with their grandparents, some families take child/children & spent 24 hours a day with them for the first time in their life. As a sociologist & owner of a travel agency dealing with active tourism & extreme journey I decided to answer some questions: What happens to a family on holidays? Why it is often unsatisfied? Why does it go on holidays? Why it comes back tired? Is the presence of friends & other families, crucial when measuring the satisfaction & researching behaviors? How the new image of a family on holidays is being created? Having as a scientific pattern of couple description two books of Jean-Claude Kaufmann La trame conjugale. Analyse du couple par son linge and Familles a table sous le regard de Jean-Claude Kaufmann I decided to show the functioning of husband-wife relationships, the variety of gests & behaviors when the "we" is in danger, when the private sphere is limited, when the "I - I" negotiations meet relations with roommates. And with the extreme journey in between. I have analyzed ten married & not married couples; belonging to middle class, with income over 6 000 PLN a month, living in big cities (Warsaw & Tri-City), in the age of 30 - 35, with one, two or without children, going on holidays two to six times a year. The observation took place between 2006 & 2008, during eight one-week travels to: Spain (Tarifa, Fuerteventura) & France (Leucate, Tignes, Val Thorens).

Zagato, Alessandro (National University of Ireland Maynooth, NIRSA, Sociology, Maynooth, Co. Kildare, Ireland [tel: +353879848555; e-mail: alessandro.zagato@gmail.com]), **Normalizing youth. Unstructured Antagonism and Depoliticization in Dublin's Underprivileged Neighbourhoods,** *International Sociological Association, Gothenburg, Sweden,*

¶ This working paper presents some preliminary results of an ongoing doctoral research project. The basic idea is to articulate two very distinct but nevertheless convergent phenomena, which deeply mark the actual social/political landscape in Europe & worldwide. On one hand there is a rampant depoliticization that seems to relegate the present to a limbo of political immobility. On the other hand, while "modern" political organizations head toward their total obsolescence, the widespread sense of frustration affecting urban youth frequently explodes in outbursts of hostility that can take the shape of proper insurrections. Among all aspects of the phenomenon that I define as "unstructured youth antagonism", the most perplexing one is the total absence of both an ideological background & explicit claims. Through the lens of an empirical study that I am developing in underprivileged areas of Dublin inner city –Ireland, this paper aims to illustrate the way so-called "community development" organizations, when confronted with exceptional events involving underprivileged youth, unequivocally show their level of depoliticization. Indeed, for being incapable to explore the politicizing possibilities those erratic events carry with them, they end up supporting a repressive police management of the situation.

Zagorski, Krzysztof (Kozminski University, Warsaw, Poland, 03-301 [tel: +48 22 8221734; fax: +48 22 8141156; e-mail: zagorski@kozminski.edu.pl]), **Modernization, Income and Satisfaction,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper analyses the relations between economic development, family income, income satisfaction & psychological well-being in Poland from the point of view of Inglehart's theory of modernization. The hypotheses is tested & proved to be true that the economic development reduces the strength of the relations between income and satisfaction as well as between income & psychological well-being in Poland. This may be explained by the changes in the value system from collectivist/materialist to individualist/post-materialist, though these values are mot measured & analyzed in the paper, & their changes are only theoretically assumed. The analysis concerns the results of a series of the surveys conducted in Poland during political and economic transformation period, i.e. between 1989 & 2008. Official statistical data on Polish economic development during the same period are used as a background for survey results. Contrary to the evidence from some other countries like Japan & the USA, the investigated relations change in Poland in a way consistent with Inglehart's theory, though it concerns more life satisfaction and psychological well-being than income satisfaction. The latter is growing even faster than the income.

Zahra, Mohamadi, Sanagoo, Akram & Jouybari, Leila (Golestan, Iran [tel: 00989122083295; e-mail: mimina_13@yahoo.com]), **The Golestan University's Faculty Members and Students Perspectives on in Civil Behaviors in Educational Setting,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction: In civil behaviors strongly influence on teaching learning environments & may create conflicts & tension between student & teacher. Methods: In this analytical descriptive (2008) study the data gathered using Clark's questionnaire. The validity and reliability of the tool confirmed by experts of panel. The questionnaire was reliable with Cronbach's alpha coefficient: 0.9. 150 medical, paramedical, nursing & midwifery students & 50 faculty members participated in the study. The data analyzed with Spss software & descriptive, analytical tests such as T-test, Chi-Square & ANOVA. Results: 42% of the faculty members and 44% of students were from Medical School. 62.5% of faculties stated they never observed in civil behavior of students during last year. Only 30.2% of the students stated they never observed in civil behaviors of faculty members. The relationships among faculty members & disruptive behaviors with ethnicity, age & work experience were significant (P/BFM1XC8|END0.05). Conclusion: The faculty members had more positive perspectives than students. Unlike international studies, some of the in civil behaviors such as sending junk email, physical threatening. Although, the frequency of in civil behaviors were not significant, however, due to deep disruptive impacts applying strategies to create healthier teaching learning environment is necessary.

Zaidi, Yasmin (Sociology & Social Policy, Brandeis Univ, 415 South St. MS-035, Waltham, MA 02453 USA [tel: 13109081811; e-mail: yzaidi@brandeis.edu]), **Gender & Globalization: Women Negotiating Change in Pakistan,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores the impact of globalization on gender relations in Pakistan, specifically how young, often first generation female labor force participants, negotiate their identities as workers within a society that appears resistant to change. As "pink collar" workers in international call centers–that global workplace where information technology, media, & international finance is vividly juxtaposed with the local–young women work alongside male colleagues, frequently at night, experiencing the time-space compression typical of globalization, & interacting with clients, usually in a foreign language, across different cultural contexts, while their own physical location remains fixed in their own country & social context. In-depth interviews with such employees (ages 18-30, at least 10

years of school, urban based) & participant observation at two sites in Pakistan reveals the strategies they adopt to tread a delicate balance, crafting identities that are accepted in a complex social context that constrains their autonomy & mobility & stigmatizes their work status. The possibility of conflict between the new identities being shaped by the globalized workplace & the social stigma associated with work, is avoided by doing gender & class in ways that reinforce social gender norms even as they are transgressed.

Zakharov, Nikolay & Rezaev, Andrey V. (Sociology Uppsala University [e-mail: nikolay.zakharov@sh.se]), **Does the Theory of Race Matter for Understanding Migration Processes in Contemporary Russia?,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study suggests that the analysis of the migration processes in Russia can be advanced by the critical application of some arguments formulated in the context of racialization studies. The analysis we offer of racialization of migrants in post-Soviet Russia demonstrates, firstly, that Western modernity remains the only frame of reference, but only in the sense that its antinomies become a challenge which is taken up by alternative modernities. The internal contradictions of modernity are also characteristic of such a key concept of modernity as race. This concept holds the social fabric together, organizing our perception of the "Other", at the same time as undermining the unity of society, thus operating in a dialectical fashion. Secondly, in this paper we argue that racialization processes in contemporary Russia cannot be considered to be either false modernization, or traditionalization. Rather, they are a compromise between modernizing imperatives and the constraints of the communist legacy, between a striving towards global unity & ethnic-centred particularism, a compromise which consists of indigenous Russian traditions, containing pro-modernization themes. Race-thinking in Russia is a component of a new nationhood-project, a component which is contradictory in its functions of both responding to the traumatic challenges of the imagined West & naturalizing social differences at home. Key words: racialization, Russia, migration, social theory, modernity

Zamora, Gerardo, Laskibar, Iker, Yanguas, Javier, Cuartango, Izaskun, Montejo, Manuel, San Sebastián, Laida & Urdaneta, E. (Fundacion Ingema R&D, U Sandizaga, 6 20002 San Sebastian Spain [e-mail: gerardo.zamora@ingema.es]), **Strengthening the Assistive Technology Sector in San Sebastián, Spain, to Foster Citizens' Quality of Life and Improve the City's Socioeconomic Development,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction: In San Sebastian, one of Spain's most aged cities, 20% of its population is 65+ & people with disabilities represent 8.3%. There is a need to provide these two population groups with well-structured socioeconomic, local policies. Meanwhile, there is a booming economic sector around ageing & disability, with a strong R&D component. Local authorities, private companies and research organisations, are exploring the feasibility of Assistive Technology (AT) as an economic booster in the frame of FP7-funded project called Tecforlife. Objective: To identify the conditions to set up a new research-driven cluster on AT in San Sebastian as a means to improve the coordination of the local stakeholders, make best use of existing infrastructures & further regional socioeconomic development. Methods: (1) Literature review and analysis of the policy implications of the AT sector in the city; (2) analysis of state-of the-art AT at European & national level; (3) mentoring from international Expert; (4) 20 in-depth interviews & 2 focus groups with key stakeholders; (5) definition of a cluster scope, a regional agenda & an implementation plan. Results: (1) A report on the economic & health-related policy implications of supporting AT in San Sebastian; (2) mobilisation of key stakeholders (3) participatory-built roadmap to set up a Cluster on AT; (4) a new space for local participation.

2010S03006

Zamora, Gerardo, Sancho, Mayte, del Barrio, Elena & Yanguas, Javier (Fundacion Ingema R&D, U Sandizaga, 6 20002 San Sebastian [e-mail: gerardo.zamora@ingema.es]), **Housing with Care in Spain: Early Findings from a Qualitative Study,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction: In Spain, 2.2 million people aged 80+ represent 4.7% of the country's population, 65% are women. Most elderly people state their willing to age in place, but residential settings are growing. While the caring culture is rapidly changing there is no structured public policy regarding housing with care schemes (HwC) for the elderly. Objective: We aim to analyse different stakeholders' discourses on housing-related issues & housing policies for the elderly in Spain as a means to provide policy makers with evidence-based recommendations. Methods: Four stakeholders were identified: (S1) care givers aged 55-65 caring for 80+ people; (S2) 80+ people living in their own home; (S3) 65+ and 80+ people living in residential settings; (S4) health practitioners, professionals, policy makers & researchers. The research method was threefold: (M1) literature review of housing models in Europe & North America; (M2) a qualitative analysis of the stakeholders' discourses via focus groups with S1, S2 & S3; and 30 in-depth interviews with S3; (M3) material was analysed using Atlas.Ti. Results: (1) Participant preferred housing schemes integrated in their usual built environment so as to not sharply change their lifestyle; (2) there is a need for cross-cutting policies integrating housing, health & social caring policies; (3) a set of recommendations for policy makers is provided based on the analysis of the stakeholders' discourses.

Zanatta, Anna Laura ([tel: 00390635347441; e-mail: al.zanatta@mclink.it]), **Child Poverty in Italy, Spain and Poland,** *International Sociological Association, Gothenburg, Sweden,*

¶ Italy, Spain & Poland present similar high levels of child poverty, according to EU-SILC data. The aim of the paper is to point out the key determinants of child poverty, focusing on household characteristics, employment situation of the parents & welfare provisions. As regards Italy and Spain, my hypothesis is that the main determinant of child poverty is the model of welfare, defined by most of the scholars as "Familism" typical of Southern Europe. Poland presents characteristics similar to the Mediterranean countries as regards religious tradition, family structures & family solidarity, but it seemed to have a more friendly welfare system, partly inherited by the past socialist regime. According to some scholars, Poland belongs to the "subsidiarity" model of welfare state, similar to the "familistic" one, but characterized by a stronger support to families. However, according to the most recent data, we can assume that Poland resembles more & more the "familistic" pattern.

Zapata, Patrik (Patrik Zapata; School of Public Administration, Gothenburg University, Göteborg, Sweden, 40530 Göteborg [e-mail: patrik.zapata@spa.gu.se]), **What Management-Speak Does,** *International Sociological Association, Gothenburg, Sweden,*

¶ Management-speak is the language managers speak among themselves. More interesting is that not only managers use management-speak, but more & more people use it in more & more contexts & often with great success. The one who speaks it the best wins the argument. Many other languages are no longer used outside their professions–the language of the church, officialese, or, to some extent, the language of engineers. That the old languages of domination no longer work as well is not really a cause for grievance. But management-speak is spreading & is being used by many, in many parts of our societies. With a language come not only words & expressions, but ways of thinking, values & views of things a & they matter. There is a difference between socializing for pleasure & mingling because one wants to invest in a social network. This paper is about what Management-Speak does and makes possible. I deconstruct & reconstruct a text written in Management-Speak to find what it does & makes possible. The conclusion is that management-speak neutralizes, it enlarges, makes the general special, many can use it, it facilitates organizational hypocrisy, it overcomes time & space, makes texts economic & it offers solutions to problems

Zapata-Campos, María José (Gothenburg Research Institute, University of Gothenburg, Gothenburg 411 28 Sweden [tel: +46 31 7865626; e-mail: Mj.Zapata@gri.gu.se]), **Hybridisation and Publicness in Public-Private Collaboration,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper aims to make a contribution to the understanding of public-private collaboration processes. In order to do that, the paper focuses on public-private partnerships (PPP) dealing with tourism destination management & development in Spain. The paper addresses three specific sub-questions inspired in the new institutional theory & the resource dependence theory: i) what is the organisational structure & behaviour of these partnerships (what?), ii) why are these partnerships structured the way they are (why?), & iii) how have these partnerships evolved? (how?). A surveyed questionnaire to local tourism partnerships was carried out in the first place to produce a descriptive analysis of their organisational structure

& behaviour (what?). The statistical analysis confirmed the growth of PPP, the trend towards the institutionalisation & hybridisation of the organisational field and how the PPP had turned out to be the rational myth for destination management. A cluster analysis confirmed the co-existence of four types of partnerships over the basis of who funded, created, founded & participated in these PPP: public partnerships, private partnerships, & the emergence of two hybrids, quasi-public & quasi-private partnerships; both with predominant public funding. Over the basis of these results the Alicante Tourism Partnership & the Mar Menor Nautical Station were selected as case studies to understand the institutional constituents behind these organisational structures (why) & their evolution (how) since they represented the emergent quasi-public and quasi-private hybrid models, respectively. Personal interviews were carried out with members of both partnerships. The content analysis of these interviews helped to identify the institutional constituents behind these hybrid organisations (why): the processes of publicness & the hidden entrepreneur role of the government in a predominant network governance; the complex & fragmented environments & the institutional constituents where PPP are inserted; & the institutionalisation of the organisational field where PPP were balancing legitimacy in detriment of effectiveness. The emergence of these hybrid organisations was the result of diverse processes as the institutionalisation of the national, regional & thematic tourism organisational fields; the institutionalisation of organisational labels (symbolic isomorphism); & simultaneous processes of company-isation and politicisation. The inconsistencies & tensions in these hybrid organisations were interpreted as the result of the organisational hypocrisy whereby discourse was decoupled from action, and partnerships continuity & survival was guaranteed by strategies of publicness.

Zapp, Mike G. (State Agency for Political Education Saar [fax:; e-mail: m.zapp@gmx.net]), **Theorizing Global Social Policy: A Research Agenda,** *International Sociological Association, Gothenburg, Sweden,*

¶ Over the last 20 years processes of internationalization, supranationalization & transnationalization have changed the fundamentals of social policy formation. Theorization of these developments, however, lags behind. This paper argues that further theoretical underpinning of the hitherto predominantly descriptive global social policy studies (GSPS) is essential if this burgeoning field of research is to provide academics & policy makers with orientational knowledge. The paper considers three analytical departures: 1) conflict theory. Recent contributions sought to relocate cleavages between labor vs. capital & universalistic vs. liberal welfare regimes into the global context. 2) research on global governance which has attracted growing attention mostly among political scientists. Only with delay, however, scholars pay heed to social policy issues. 3) John Meyer's world polity approach focusing on cultural patterns, their global diffusion and institutional impact. Although the neoinstitutionalist approach relies on a strong body of empirical work, the diffusion of social policy has not yet been thoroughly analyzed. However, much indicates that policy learning & transfer play a significant role in the making of social policy worldwide. The paper concludes that particularly neoinstitutionalism can sustainably enrich GSPS if researchers extend its theoretical grounds & spur further empirical work in the field of social policy.

Zarei, Ali & Ayoubi, Parisa (Azad University, Tehran Central Branch,Physical Education and Sport Sciences, Tehran, Iran [tel: 0009802144252092; e-mail: Dr_alizarei@yahoo.com]), **Amount of Leisure Time Activities of Male and Female Students at Guidance Schools of Tehran and its Relationship with BMI,** *International Sociological Association, Gothenburg, Sweden,*

¶ The purpose of this study is to specify the amount of leisure time activities of male & female students at Guidance school level in Tehran, & its relation with BMI. For this purpose, after dividing Tehran into 5 regions, 549 students were chosen by random cluster sampling. Subjects' leisure time activities were evaluated through a researcher-made questionnaire. Through the alpha reliability of the questionnaire Krvnbakh 89 percent respectively. Their BMI level was calculated by BMI formula, that is dividing their weight(kg) on the square of their height(m). Descriptive (tables & diagrams) and deductive (U Mann a Whittney, Chi a Square, Kroscal Walis) Statistical methods were used for data analysis. The findings of this study indicated that type of leisure activities of students, respectively, include: watching TV, using computers, listening to music, sport, study Non-tuition. The amount of leisure time activities of male & female students during school days are about one to three hours per day & night (24 hours) & this goes up to 7 hours in summer. No meaningful difference observed between male and female students for watching TV, but in using computer, reading materials other than study Non-tuition & sportive activities there was a meaningful difference between the two groups. About 4 percent of obese male & female students, 14 percent overweight, 52 percent of normal weight & 30 percent were weight deficient. No meaningful correlation observed between leisure time activities of male & female students & their BMI.

Zartler, Ulrike & Richter, Rudolf (University of Vienna, Institute of Sociology [e-mail: ulrike.zartler@univie.ac.at]), **Zooms on my Family: Photo Interviews with Children,** *International Sociological Association, Gothenburg, Sweden,*

¶ Although interviews are frequently used in qualitative research with children, they do have disadvantages: children grow tired quickly during interviews, it might be difficult to keep their interest for a longer time, & it is challenging for children to verbalize memories without any visualization. In our paper, we introduce an interview type that might overcome some of these difficulties by combining semi-structured interviews based on topic guides with photo interviews. This kind of data collection was used within an empirical study on children's views of their families. 10-year-old children (n = 50) were asked to take photos with disposable cameras, according to a specific schedule. The interviews were then structured according to the photos, always bearing in mind the topic guide covering the principle themes of the study, namely children's perception of their own families, reflections on family forms, family time, & children's participation in family decisions. This combined method turned out to be able to compensate a major part of the difficulties described above. We reflect on the method of photo interviewing & explore its advantages, challenges and potentials within the frame of qualitative childhood research. We conclude that visual methods have a useful potential & are able to generate substantial benefits in this research area.

Zebrowski, Michal (Faculty of Sociology, Department of Philosophy, Jagiellonian University, Krakow, Poland [tel: (+48)609843407; e-mail: michal.zebrowski@uj.edu.pl]), **Polish Religious Economy - A Case of Pluralistic Monopoly? Endogenous Pluralism, Tension and Existential Security in Cracow,** *International Sociological Association, Gothenburg, Sweden,*

¶ The claim of rational choice theory of religion is that pluralism, not religious monopoly, leads to higher religiosity. Interesting question in respect to this thesis could be related to Poland, treated by most sociologists of religion as a Catholic monopoly with high levels of religiosity. Advocates of secularization thesis treat it as an effect of low existential security. Proponents of rational choice theory treat this anomaly as an effect of historical circumstances. This paper gives another explanation a endogenous (internal) pluralism. Proposed presentation is based on a research that tries to verify whether Poland can be treated as a pluralistic religious market, & if so, how it affects religious economy. Rational choice approach is used in order to check whether organizations inside Catholic Church, in Polish city Cracow, differ in means of tension with environment. Also the correlations between tension, engagement in religious activities of members & their existential security are examined.

2010S03014

Zendron-Miola, Iagê (Università degli Studi di Milano, Via Festa del Perdono, 7 [tel: 39-3347009283; e-mail: iagezm@gmail.com]), **Paper Law: The Contradictory Legal Responses of the North and South to the Pulp and Paper Industry Globalization,** *International Sociological Association, Gothenburg, Sweden,*

¶ The article discusses the impacts of the pulp & paper industry's globalization under a socio-legal perspective. The central hypothesis investigated is that legal frameworks in the global North & South are unevenly mobilized by this sector. Evidences were found through empirical research. The tensions generated by the European Union's Integrated Pollution Prevention & Control Directive are discussed as an illustration of the increasing strictness of the environmental regulation in the global North. Contrarily to this trend, it is argued through a case study on the production of the environmental zoning for the plantation of eucalyptus in Brazil, that the global South faces the flexibilization of environmental regulation. Against the discourses sustaining the global convergence of legal responses to transnational capital, the data collected suggests that law is a dynamic source of contradictions, reflecting structural differences between the contexts where it is produced.

Zeybek, Sezai Ozan (The Open University, Milton Keynes, United Kingdom, MK7 6AA [e-mail: s.o.zeybek@open.ac.uk]), **The Medium is the Message: Political Campaigning for Municipal Elections in Turkey,** *International Sociological Association, Gothenburg, Sweden,*

¶ What is left to politics in a place where the true location of politics appears to be somewhere else? The paper investigates municipal elections held in 2009 in a small provincial town in Turkey. However, the inhabitants of the town have little influence in local politics, let alone in national or global agendas. Starting with jingles & flags used in the election campaigns, almost everything, including candidates' projects, are sent from the headquarters in the capital. As a result, particularities of the town are taken over by mainstream political discourses and "major issues". In a sense, the local is eliminated from "local politics". What does politics mean, then, if the playground is severely restricted for all groups in the town, albeit in different degrees? How does being stuck in somebody else's politics choke the very mundane particularities of the location? While addressing these questions, the paper attempts to foreground possibilities of a "minor politics" in the town.

Zhang, Qian Forrest & Donaldson, John A. (Singapore Management University, 90 Stamford Road, Level 4, Singapore 178903 [tel: +65 68280294; e-mail: forrestzhang@smu.edu.sg]), **From Peasants to Farmers: Peasant Differentiation, Labor Regimes, Land-Rights Institutions in China's Agrarian Transition,** *International Sociological Association, Gothenburg, Sweden,*

¶ The development of factor markets has opened Chinese agriculture for the penetration of capitalism. This new round of rural transformation a China's agrarian transition a raises the agrarian question in the Chinese context. This study investigates how capitalist forms & relations of production transform agricultural production & the peasantry class in rural China. We identify six forms of non-peasant agricultural production, compare the labor regimes & direct producers' socioeconomic statuses across these forms, & evaluate the role of China's land-rights institution in shaping these forms. Our empirical investigation presents three main findings. 1. Peasant differentiation: Capitalist forms of agricultural production differentiate peasants into a variety of new class positions. 2. Market-based stratification: Producers in capitalist agriculture are primarily stratified by their positions in labor & land markets; their socioeconomic statuses are linked with their varying degrees of proletarianization. 3. Institutional mediation: Rural China's dual-track land system plays a crucial role in shaping the diverse and unique forms of capitalist production.

Zhong, Hua (The Chinese University of Hong Kong, Shatin, NT, Hong Kong [tel: 85226096613; e-mail: sarazhong@cuhk.edu.hk]), **Coping with Victimization: Legal Help, Self-Help or Other Options?: A Study of Migrant Workers in Urban-Villages of Guangzhou, China,** *International Sociological Association, Gothenburg, Sweden,*

¶ According to Donald Black (1983), besides seeking for help from our legal system, victims may choose to commit crime for the sake of self-help. Such self-help still exists in modern societies & is not largely displaced by formal social control. If this theory can be applied to current China, migrant workers–almost the most disadvantaged social group–are very likely to use self-help or other options instead of legal help since law protection is rarely available to this group with grievance. By drawing upon in-depth interviews with migrants living in five urban-villages (similar to slums) of Guangzhou & relevant legal practitioners in those districts, this study explores the patterns & mechanisms of self-help among migrant workers in contemporary China, together with their interactions with & attitudes toward Chinese legal system. Admittedly, majority of criminal offenders in contemporary urban China are migrant workers from rural area, especially in the Southeastern coastal cities like Guangzhou. However, scholars and the public have neglected for a long time that migrants are also a group of people who often have victimization experience. To help themselves, they may use illegal ways to compensate their lost from the victimization. In other words, they are usually considered as offenders by mainstream society partially because they are victimized first & at the same time lack legitimate means for coping. This study is helpful to test Black's self-help theory (1983) which has been criticized for a long time due to its problematic measures & weak empirical support in Western societies. It might also make policy implications about the legal reform in China. Finally, this study is enlightening for future collaborations between Chinese legal system & other social systems since they need to work together to improve migrant workers' quality of life.

2010S03019

Zhong, Hua (The Chinese University of Hong Kong, Shatin, NT, Hong Kong [tel: 85226096613; fax: 85226035213; e-mail: sarazhong@cuhk.edu.hk]), **Migration and Victimization: A Study of Migrant Workers in Urban-Villages of Guangzhou, China,** *International Sociological Association, Gothenburg, Sweden,*

¶ In current mainland China, migrant workers are almost the most disadvantaged social group. Due to blocked opportunities, feeling of relative deprivation, living in a disorganized community, and/or other structural reasons, some of them may commit crime after they move into the cities. Admittedly, majority of criminal offenders in contemporary urban China are rural migrants, especially in the Southeastern coastal cities like Guangzhou. However, scholars and the public have neglected for a long time that migrants are also a group of people who often have victimization experience. This study explores the patterns & risk factors of victimization among migrant workers in contemporary China by drawing upon in-depth interviews with 30 migrants living in urban-villages of Guangzhou. The findings indicate that migrant workers tend to normalize their victimization experience & have relatively high level of perceived safety in a very dangerous community. After victimization, they blame migrants from other provinces/counties or younger generation migrants instead of blaming government officials. This study might make policy implications about the renovation of such urban-villages by identifying the preventive strategies to avoid or reduce victimizations among these migrant residents.

Zhou, Y. Rachel (McMaster University, 1280 Main Street West, Hamilton, Ontario, Canada, L8S 4M4 [tel: 1-905-525-9140 ext. 23787; fax: 1-905-577-4667; e-mail: zhoura@mcmaster.ca]), **Generational Redistribution within Chinese Immigrant Families: Unpaid Transnational Caregiving and its Implications for Global Social Policy,** *International Sociological Association, Gothenburg, Sweden,*

¶ Global social policy (GSP), as an emerging research area, has focused on the development of the institutional mechanisms of social provision & protection & on the role of the market in redistributing resources (e.g., income, social insurance, and commercialized care) that are key to quality of living on a global scale. When government & the market are not yet adequate to accomplish such tasks, however, it is not clear how resources, especially those outside institutional contexts, have been mobilized, organized & allocated at familial & social levels. Drawing upon the data in a study of the transnational care-giving experiences of Chinese seniors in Canada, this paper explores the generational redistribution of care resources (e.g., emotion, time, and cultural knowledge) within Chinese immigrant families & its complex impacts on the well-being of these families. Shedding light on the intersections among skilled immigration, shrinking childcare provision & transnational familial networks, this study reveals a contrast between the increasing reliance of these immigrant families on unpaid transnational caregivers & its invisibility in institutional discourses on GSP. I argue that the domestic government should play a proactive role in addressing the spillover of policy effects beyond the national border so as to reduce the inequalities (e.g., ones based on age, immigration status, and access to welfare) experienced by these transnational families.

Zhu, Yujing (Anthropology Department, The Chinese University of Hong Kong, Rm401, Humanities Building, CUHK, Shatin, N.T. Hong Kong [tel: 852-63595992; fax: 852-26035218; e-mail: jachiezhu@hotmail.com]), **Religious Freedom and Religious Rights in China after 1949: From Borrowed Idea to Main Discourse,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recently, there is a growing awareness that religious freedom and religious rights do not bear trans-historical essence & we should understand them in specific socio-cultural context. In this paper, I intend to discuss how the concept "religious freedom and rights" were historically constructed in China since 20th Century by the study of the relationship between the state & Christianity in Wenzhou which is known as "Chinese Jerusalem". "Basic human Right of Religious freedom" was first introduced to China by Christian missionaries in the beginning of 20 Century to ask for the tolerance in the anti-Christianity movements. Chinese government has recognized that "citizens of the People's Republic of China enjoy freedom of religious belief" in 1954 Constitution. But it was rather a borrowed idea & not reified & soon other social & political movements were privileged to deny & dismiss this basic human right. In the post-socialist period, the idea of religious freedom are revisited, but the state & religious converts embrace different understanding on "freedom" & the conflict originated from the endless debate of "private vs. public". Furthermore, what should be included in the concept of "religion" has been under change. On the other side, "religious freedom & rights" became popular discourses employed by religious converts to gain sympathy from the rest of world & pose pressure to the Chinese government. The negotiation between state and church, however, does not focus on the issue how to make "freedom" operational & feasible & the problems between them were always solved by motivating personal relationship between officials & converts.

2010S03022

Ziebarth, Ann C. (Housing Studies Program, University of Minnesota, St. Paul, MN 55113 [tel: 612-625-8795; e-mail: aziebart@umn.edu]), **Discourse, Discrimination, & Domicide: A Midwest USA Case Study,** *International Sociological Association, Gothenburg, Sweden,*

¶ The discourse on small towns & rural places persistently emphasizes an idyllic myth of common interests, shared histories, uniform values & priorities, & perceived preference as a place to raise children & grow old. Yet, as the population has changed with the influx of immigrants into the United States Midwestern region there is evidence of increasing conflict within communities. Using selected case studies, this paper illustrates how the conflicting discourse of the rural small town & the reality of discrimination have evolved into public policies that promote domicide, the deliberate destruction of targeted dwellings designed to exclude selected groups. The case study is situated within the context of contentious dynamics linking the community development trends of local cities & global economies. The connections between the persistent discourse, experienced inequalities & exclusion, and the public policy responses are highlighted. The conclusion offers suggestions for an alterative response that provides a transformative approach to building a common community respecting diversity & inclusion.

2010S03023

Zilinskaite, Viktorija (Lithuanian Social Research Centre, Vilnius, Lithuania, LT08105 [tel: +37061177745; e-mail: viktorija.zilinskaite@gmail.com]), **Artistic Research: Rationalization of Intuition and Attempts of Institutionalisation in Lithuania,** *International Sociological Association, Gothenburg, Sweden,*

¶ The presentation will analyse shift in attitudes of artists towards their creations & society. Romantic paradigm of art and postmodern understanding about place of art in society have different notions of "artistic research". Although rationalization of arts & transition of social sciences and humanities from "science for science's sake" have a lot in common, there are differences emerging from different functions of arts & sciences in society. Growing of importance of social reflection in art, doesn't diminish decorative & entertaining function, art remains very visible form of cultural capital and usually is addressed to broader audiences than sciences. Another difference emerges from comparatively new notion of artistic research that has a lot of variations. While social sciences and humanities have established methodologies, artistic research raises not only the question, whether a particular creation of art is based on reflective or intuitive research, but which of the research models, categorised under the notion, was used too. The transition from "Art for Art's sake" is different within fields of conceptual arts & design. It is interesting to notice that Lithuanian conceptual artists in their understanding about connections between art & society much more distant from Romantic Paradigm of Art than designers.

2010S03024

Zillien, Nicole & Haake, Gianna (University of Trier, Trier, Germany, 54296 [tel: +49 651 4178; e-mail: nicole.zillien@uni-trier.de]), **Internet Use of Infertile Couples,** *International Sociological Association, Gothenburg, Sweden,*

¶ In Germany there are about two million women & men who are involuntarily childless. A systematic review of the literature shows that many childless couples satisfy their strong need for information in the Internet. Focusing on online infertility forums, the aim of the project "Intro" is a broader understanding of the reception & communication of scientific knowledge by laymen. The research is based on theories of the information-society & sociological Internet studies. We apply several research methods: (1) Qualitative interviews, (2) a standardized online survey & (3) a content analysis. The analysis of our semi-structured interviews with over thirty infertility patients indicates that many of them appropriate specific medical knowledge throughout their treatment & often pass it on to other patients in online forums, acting as "experts on their own behalves". But not only feelings of assurance may emerge from this exchange, also doubts & uncertainty can be the results. The fragile & sometimes conflicting character of scientific knowledge complicates the information exchange between laymen & results in the development of different strategies of coping with contradictory information. These findings are confirmed and supplemented by the outcomes of our online survey with more than 1,000 members of infertility forums.

2010S03025

Zinn, Jens Oliver (School of Social and Political Sciences, University of Melbourne, Melbourne, Victoria/Australia, 3010 [tel: +61 3 83443533; e-mail: jzinn@unimelb.edu.au]), **An International Risk Data Base for Social Sciences,** *International Sociological Association, Gothenburg, Sweden,*

¶ Ulrich Beck (2002, 2008) claims that ongoing globalisation processes would urge different nations to cooperate to master new risks such as climate change, international terrorism, & financial crisis. The proposed cosmopolitan worldview might not only refer to political cooperation but a need for cross-national capacity building such as new independent knowledge sources to learn and understand national & transnational perceptions & responses to risk. This presentation reports from the attempt to establish such a knowledge source at the University of Melbourne (Scholarly Information Innovation Grant 2010). The International Social Science Risk Database (ISSRD) would fill a major gap in the resources available to social scientists to support academic and practical research as no comparable database currently exists in this field. It will make information available & will enable systematic cross-cultural comparisons of risk profiles in different national contexts. Moreover, an international risk database will provide public & private decision-makers with valuable knowledge to govern & manage risk in national contexts & on a global scale. The presentation will outline the structure of the ISSRD by the example of the recent swine flu.

2010S03026

Zokaei, Mohammad Saeed (University of Allameh Tabatabai, Tehran-Iran [tel: 0098 21 22223001-5; fax: 0098 21 22227075; e-mail: saeed.zokaei@gmail.com]), **Academic and Educational Culture amongst Iranian University Students,** *International Sociological Association, Gothenburg, Sweden,*

¶ Many of empirical studies on academic culture in Iran suggest students' passive & inefficient acculturation & socialization and their alienation from the desired academic structure, process and culture. A sense of powerlessness, normlessness, social isolation & in general alienation from educational process, university atmosphere & also from other students has increasingly developed amongst some layers of humanities & social science students. Drawing on a mixed methodology & deign(grounded theory and survey)and elaborating on students lived experience and narratives the present paper aims to clarify the phenomenology of academic & educational alienation & to present a typology on both its prevalence & its types. The findings suggest that the principal components of alienation experience while being directly influenced by the culture politics, pose important social, economic and psychological consequences for their lives. The necessities of real & practical life, force students to choose a range of de-alienating strategies according to which some achieve their desired aims & objectives & some only think to maneuver it strategically.

2010S03027

Zoltan, Lippenyi (Utrecht University, Utrecht, the Netherlands, 3584CS [tel: 0302532101; e-mail: z.lippenyi@uu.nl]), **The Effects of Modernization on Intergenerational Mobility in Hungary between 1850 and 1950. Comparing Municipalities and Periods Before and During Industrialization,** *International Sociological Association, Gothenburg, Sweden,*

¶ An important question in social mobility research is whether intergenerational mobility increases with modernization. This question has primarily been studied using contemporary social surveys in a cross-country comparative method. Although this research is impressive, there are also theoretical and methodological problems connected to this method. From these studies little is known about changes in intergenerational mobility in the periods before & during industrialization which are theoretically interesting eras for changes in social mobility. The influence of local contexts such as regions & municipalities on social mobility is often neglected, although there were large differences in modernization between sub-country units. Explanatory analyses of the influence of autonomous modernization processes on mobility are also scarce. This paper presents a design for intergenerational mobility research which addresses these drawbacks. The paper compares several municipalities within a single country, Hungary, from the beginning of industrialization and institutional modernization, & explains the variation in social fluidity across municipalities & over time using municipal-level indicators of development in economy, education, transport, & communication. Preliminary results are presented based on Hungarian data between 1850 & 1950. The dataset is part of a larger data gathering project collecting individual-level intergenerational occupational mobility information from church marriage registers. Multinominal logistic regression model used by Ganzeboom & Hendrikx (1998) are applied to incorporate macro-level covariates into the mobility analysis.

Zottarelli, Lisa K., Kwon, Junehee, Ryu, Dojin, Rider, Erin & Deane, Amber (Texas Woman's University, Denton, Texas 76204 [tel: 940-368-6787; fax: 940-898-2067; e-mail: LZottarelli@mail.twu.edu]), **Shelter in the Storm: A Sociopolitical Ecology Analysis of Faith-Based Organizations Providing Food and Shelter during Large Scale Evacuations of the United States Gulf Coast,** *International Sociological Association, Gothenburg, Sweden,*

¶ Faith-based organizations (FBOs) have a critical role supporting disaster response & recovery, yet little research has been conducted on FBO response during evacuations. The purpose of this paper is to examine FBO response in providing food & shelter during large-scale hurricane evacuations in the United States Gulf Coast region during the 2005, 2007, & 2008 hurricane seasons. The data are from telephone surveys, mail surveys, & focus groups conducted with FBO leaders & volunteers. Using a sociopolitical ecology approach, the FBOs are examined as actors within an ecological field moving in & out of exchange with systems of organized formal disaster response networks. Hurricane Katrina was a catalyst for many FBOs to become directly involved in disaster response through the provision of food & shelter to evacuees, and many provided aid without formal networks & support. Repeated FBO evacuation shelter experiences resulted in contingent networks being established between the FBO & other FBOs & disaster response organizations. These relationships tend to be transitory, changing from evacuation event to evacuation event without consistent development of permanent formal linkages. The experiences of FBO leaders & volunteers with evacuees and professional disaster response organizations influenced subsequent networking, as well as the breaking ties.

Zubair, Maria, Martin, Wendy & Victor, Christina (School of Health and Social Care, University of Reading, Reading, UK. RG6 1HY [tel: (+44) 07883079336; e-mail: maria.zubair@reading.ac.uk]), **Learning to be Pakistani, the Female Way: Issues of Identity, Trust and Recruitment when Researching Older Pakistani Muslims in the UK,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction: There has often been an assumption within the methodological literature that a researcher from an ethnic minority group will experience an "insider" position when researching on their co-ethnics. Such an assumption obscures the complex nature of ethnic identifications & the interactions between people's age, social class, gender & ethnic identities. In this paper, we draw on the experiences of our young Pakistani Muslim female researcher doing qualitative fieldwork with older Pakistani Muslims in the UK* to explore the significance of gender, age & ethnicity to fieldwork processes & "field" relationships. METHOD: With a reflexive approach, & using examples from our fieldwork, we examine our young Pakistani Muslim female researcher's particular use of her ethnic identity in "the field" as a means of building rapport & trust among our older Pakistani participants. Results: Our fieldwork examples illustrate that an "insider" relationship needs to be continuously & actively negotiated in "the field" through particular presentations of the embodied ethnic "self". In particular, we reflect on the gendered nature of Pakistani ethnicity & show how this, along with the age differentials between our researcher & participants, makes it important for our researcher to adopt a gendered female Pakistani ethnic identity in "the field". Conclusions: We highlight the significance of our young Pakistani researcher's adoption of an ethnic identity which is embodied & gendered, to the actual development of trusting and comfortable research relationships with our older Pakistani participants. * Our research project "Families & Caring in South Asian Communities" is funded by the ESRC New Dynamics of Ageing programme.

Zubieta, Judith & Rocha, Nora P. (Instituto de Investigaciones Sociales, UNAM, Cto Mtro Mario de la Cueva s/n; Ciudad Universitaria, D.F. Mexico 04510 [tel: 52-55-5622-7416; fax: 52-55-5622-7513; e-mail: zubieta@servidor.unam.mx]), **Gender Digital Divide among Professors: Are Universities Showing a Path for an Equitable Knowledge Society?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Several studies have proven gender differences in terms of knowledge and use of ICT. Some of them explore explanations in terms of ICT access differentials (Jolly & Narayanaswamy, 2004), as well as elements concerning their design & development in mostly masculine domains. In our study of university professors we found gender differences not only in terms of knowledge & usage but also in the degree of complexity of the technological tools available to faculty for teaching purposes. If ICTs are meant to improve & expand education to population sectors which have been deprived from it, efforts ought to be made in order to overcome the gap that is simultaneously hampering the path towards the Knowledge Society.

Zune, Marc, Demaziere, Didier & Horn, François (University of Louvain, Louvain-la-Neuve, Belgium, 1348 [tel: 0032 10 48 42 01; e-mail: marc.zune@uclouvain.be]), **Free Software Development and the Construction of Professional Identities,** *International Sociological Association, Gothenburg, Sweden,*

¶ The development of free software is characterized by a great heterogeneity of the individual & collective identities, whereas the requirements of the software production suppose close co-operations necessary for the making of a coherent & effective product. It is this paradox that we will explore by focusing our attention on the construction of the legitimate figures of involvement in the development of free software. Based on results of ethnographic investigation carried out since 2005 about four cases we firstly show how the history of the projects generates a normative identity of project which fixes the sense & aims of action, which is not only the simple solving of technical problems. Far from being stabilized, this identity is constantly renewed by interactions, the flow of participants & contributions, the controversies & conflicts. So that the direction & the sense given to the project is interpreted according to the variety of the modes of implication & the proximities & distances maintained by the developers compared to these collective norms. This allows us, thereafter, to understand the way in which, through interactions & transactions within the group, legitimate figures of engagement are defined. More generally, our contribution address how the professional identities are defined in these virtual environments still little explored by the sociology of professional groups.

2010S03032

Zwerman, Gilda & Steinhoff, Patricia G. (Sociology Department, SUNY Old Westbury [e-mail: gzwerman@aol.com]), **Identity, Movement Networks and the State: Exit Strategies of Armed Activists in the U.S. and Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study examines the exit paths of former members of armed, clandestine groups. Using long-term qualitative data on 75 individuals associated with several different organizations in the U.S. & Japan during the 1970s & 1980s, we show how interactions with movement networks continue to shape identity in the context of varying conditions of repression,

even after their organizations have dissolved. By connecting individual reconstructions of identity to movement networks under varying conditions of incarceration, exile or underground life, this study contributes to the dialogue concerning patterns of disengagement from social movements & terrorism (Crenshaw 1991; Klandermans 2003; Bandura 2004 ; Cronin 2006; Miller 2007; Horgan & Bjorgo 2009) & the role of state intervention in the process.
