XVII ISA World Congress of Sociology

Sociology on the Move

Gothenburg, Sweden

11 - 17 July, 2010

Conference Abstracts

Prepared in Cooperation with CSA Sociological Abstracts

sociological abstracts from CSA

FOUNDING EDITOR: Leo P. Chall

SUPERVISING EDITOR: Tyrone Nagai
EDITORS: Laurel Conly, Edwin Fontanilla, David Miller, Matthew Ruben, Karen Stevens

OPERATIONS MANAGER: Lynette Hunter
ADVERTISING COORDINATOR: Britt Sieger

EDITORIAL OFFICE: P.O. Box 22206, San Diego, CA 92192-0206, USA

This publication is presented to all registrants of the XVII International Sociological Association Forum of Sociology with the compliments of Sociological Abstracts (sa), and the ISA.

As you will notice, the abstracts are not numbered solely for this publication. Accession numbers have been assigned on the basis of a continuing system used by sa for abstracts of conference papers. For example, the first abstract, that of a paper by Abdullah, Noorman is numbered 2010S00001. The first four digits, representing the year of publication in sa, are followed by the letter S, identifying it as a Supplement abstract. The five-digit number (00001) identifies its sequential position among all Supplement abstracts published by sa in 2010

15 June, 2010

Dear ISA Conference Participants,

ProQuest is proud to partner with the International Sociological Association in preparing abstracts of papers being presented at the XVIIth World Congress of Sociology.

The response to the call for abstracts of papers to be presented met all expectations. CSA Sociological Abstracts received 3,032 abstracts from registered presenters by the 4 May 2010 deadline, included herein. These abstracts have also been included in the electronic version of the database and are available to the wider sociological community via CSA Illumina.

An additional 110 abstracts have been received to date and will be made available to CSA Sociological Abstracts users in December 2010. Abstracts will continue to be accepted from registered presenters at the CSA Sociological Abstracts Conference Abstracts Submission Web site (http://md1.csa.com/socioabs/submit.php) until 1 October 2010 for the year-end update.

CSA Sociological Abstracts is proud to have partnered with the International Sociological Association since 1970 in incorporating abstracts of World Congress presentations in the database. To date 19,000 abstracts from previous World Congress presenters have been included in CSA Sociological Abstracts, helping to provide a permanent record of the proceedings.

We hope that this publication and the broader dissemination of the presentations via CSA Sociological Abstracts will help to facilitate sociological research and discovery.
Best wishes for fruitful intellectual encounters throughout the Congress and beyond.

Cordially,

Tyrone Nagai
ProQuest Supervising Editor

Terral, Philippe & Collinet, Cécile (University of Toulouse, UFRSTAPS 118 route de Narbonne 31062 Toulouse Cedex 9 [tel: 0033667674580; e-mail: terral@cict.fr]), Technological Transformation of French Leisure in the 1990s: The Controversy over Electric Stimulation to Increase Muscle Strength in the Sport Science Field, International Sociological Association, Barcelona, Spain, (ENG)

title of paper

notice of availability of complete paper

Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (858) 571-8979. Fax: (858) 571-8694. E-mail: info@csa.com

¶ This paper aims at presenting a scientific controversy in the world of sport sciences. It focuses upon electrical stimulation, a technique used to increase muscle with an electrical device sending electric impulses into the muscle. This technique was the subject of many scientific research studies, but the results stemming from them are contradictory, & thus create a typical controversy. This controversy involves several categories of actors, which this paper identifies while studying the type of arguments developed to impose one's point of view. Through the analysis of 50 scientific papers and 15 interviews of the main researchers involved in the controversy, this paper studies the social processes at work in the construction & resolution of the controversy. The latter engages various conceptions of scientific research, & particularly enhances the conflicts between fundamental & applied science. The controversy is also grounded upon axiological positions & values, notably various conceptions of competitive sport, or the relationship between research & the sport industry. In addition, this paper shows how the conflicts can be better understood if one considers the researchers' social stances in the sport science field & the interests associated with these stances.

Urbano, Nathalia (Pontificia Universidad Javeriana, Bogotá, Colombia, Cr. 5 # 39 - 00 Tercer Piso, Bogotá, Colombia [tel: 57 + 1 + 3208320 Ext. 5916; fax: 57 + 1 + 2182183; e-mail: nurbanoc@gmail.com]), Efectos De La Implementación Del Modelo Colombiano De Acreditación De Programas Académicos (Effects of the Implementation of the Colombian Model of Accreditation of Academic Programs), International Sociological Association, Barcelona, Spain, (SPA)

title in original language

language in which paper is written

¶ This paper presents the results of an investigation that had as its objective an evaluation of the proposal & the effectiveness of the Colombian Model of Accreditation of Academic Programs, through the analysis of its foundations & the results of submission to the process in technological programs. For collection of information, a qualitative methodology was used & four techniques were applied: structured & open interviews, a focus group, & review of documents. A qualitative focus was selected given the absence of studies & of data that would give an account beyond the quantitative, of results of the accreditation in institutional dynamics, in the perceptions of members of the academic community, & in its task. Based on the findings, a proposal is presented for improving the model of accreditation in the following aspects: increasing the participation of the members of the institutions in the evaluation, the design of a model of outside evaluation that would facilitate communication between evaluators & the evaluated program; additions to the process of institutional improvement; diversification of the organisms & models of accreditation; & external evaluation, as a mechanism of surrender of accounts of the National Council of Accreditation.

Abdullah, Noorman (University of Bielefeld [e-mail: noorman.abdullah@gmail.com]), **Raves, Drugs, and 'Resistance': Youth and Popular Culture in Singapore and Beyond,** *International Sociological Association, Gothenburg, Sweden,*

¶ Drug use & its close affiliation to rave subcultures have for the most part been overlooked in Singapore & beyond, in spite of the fact that raves have received extensive attention in British cultural studies. I thereby seek in my study to understand such motivations that underlie drug use as well as the rave & club scenes. These are grouped into three broad & usually interconnected categories, namely connectivity, including its link to sensuality; "altered" states of consciousness; & lastly, "resistance". The consumption of these meaningful & symbolic experiences provides possibilities for participants who broadly react to many of the dominant discourses which the state employs in its attempt to eliminate drug use associated with youth popular culture. In this regard, these practices are responses to the escalating magnitude of social change in an increasingly global context which they face in everyday life. I show how young people in contemporary Singapore are thus located in a more difficult and demanding journey in which they must cope with the concomitant uncertainty & disenchantment characterising a more complex society in which structural arrangements place new strains on young people.

Abergel, Elisabeth A. (Department of International Studies/ Glendon College, York University, 2275 Bayview Avenue, Toronto, Ontario M4N 3M6, Canada [tel: 416-466-4937; e-mail: eabergel@glendon.yorku.ca]), **Engineering the Environmental Crisis through Agricultural Biotechnology and the Life Industries,** *International Sociological Association, Gothenburg, Sweden,*

¶ Technology has often been developed to substitute for natural processes or to adapt existing natural processes to mechanized industrial & productivist demands, especially in the field of agriculture. In the case of agricultural biotechnology, transgenic crops are being created that are specifically designed to survive and thrive, even overcome polluted & depleted environments. Research has focused on resistance to chemical herbicides and pesticides. However, new "climate ready" genes have been isolated and patented that will help crops survive drought, flooding, saltwater incursions, high temperatures & increased ultraviolet radiation -- all threats to food security. It is the intent of this paper to explore the theoretical, technological & practical contours of the various mechanisms of adaptation transgenic organisms represent. Referring to concepts taken from evolutionary theory & biological adaptation the paper attempts to address some of the social & ecological consequences that result from a commitment to agricultural biotechnology. What kind of nature are these new life forms adapting to? What does adaptation to a depleted & toxic, industrial nature & extreme climate changes signify for the future? How does nature & life in turn adapt to transgenic organisms? What kind of nature & food are we engineering in the process?

Abioye, Taiwo Olubunmi (Dept of Languages, Covenant University, Km 10, Idiroko Rd, Ota-Nigeria [tel: 2348065503508; e-mail: taye4laide@yahoo.com]), **Stylistic Symmetry in Short Messaging Systems in Nigeria,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines Short Messaging Systems (SMS) in Nigeria where many people are functionally literate in English & interest in the use of SMS is high, but where little attention is paid to texters' ability to exploit the stylistic resources of English. Texting is a relatively unstandardized & new variety of language that highlights the linguistic individuality of the texter. The corpus for the study is based on texts purposively gathered from the mobile phones of 185 Nigerian English speakers & 65 Nigerian Pidgin users in order to ascertain whether or not innovative stylistic features are predominant in the Nigerian context. Using coinages, metaphor, repetition & abbreviations, the paper observed how these messages encourage linguistic creativity and enable texters to adapt language to suit demands in diverse socio-cultural situations. Results revealed that there is stylistic symmetry between some of the texts. The implications of this for language users in Nigeria are discussed.

Aboushadi, Rami Adel (Communication and information technology center - Mansoura University - Egypt, Mansoura - Egypt [tel: 0020108919371; fax: 0020502223693; e-mail: ramyadel75@yahoo.com]), **Communication Technology and Developing Countries,** *International Sociological Association, Gothenburg, Sweden,*

¶ Information & communication technologies (ICT) have been growing rapidly in developed countries over the last five decades. - In contrast to the developed countries that have been steadily capitalizing on the rapid pace of ICT, a large number of developing countries, particularly low-income countries have failed in the adaptation of these technologies thus contributing to the "digital-divide" between the developed & developing countries. - Emphasis is now placed on educational institutions to produce skilled IT/IS professionals to meet the demands of the changing world. Thus the aspirations & requisite capabilities of any advancement would only be possible with the continuing drive to develop IT/IS professionals, not only in terms of quantity, but also quality Skill sets change because there is continued change in industry perspectives & demand due to the rapid changes in technology & the current shift towards globalization. - New information & communication technologies manifested today in the Internet emerge as a new challenge for developing countries. This challenge has been perceived in two related ways. - The rapid expansion of ICTs has been often wrongfully associated with an automatic improvement on the levels & quality of education. High expectations on the potential impact of ICT tools like the Internet have led many to believe in them as magic solutions for the wide range of problems that characterize the education sector in developing countries. -- Co-ordinated management at both national and local levels is seen as very important for development towards an information society. This paper based on academic research 1- Research area - Communication & information technology Challenges - Economic role of ICT in developing countries - Reduce the digital divide between developing & developed countries - Examples and results 2- research methods - field research - Statistics of international & local ICT Organizations - UN annual reports 3- Search Results - The visibility of the local & international organizations in bridging the digital divide. - Successful examples of developing countries

Abraham, Ibrahim (Dept of Sociology, University of Bristol, UK, 12 Woodland Rd, Bristol, BS8 1UQ, United Kingdom [tel: +44 117 954 5588; e-mail: soiba@bristol.ac.uk]), **Christian Punk And Youth Subculture Theory,** *International Sociological Association, Gothenburg, Sweden,*

¶ Drawing on content analysis & in-depth interviews, this paper presents a mixed-methods sociological study of the Christian punk subculture in the UK & its settler colonies including the USA and Australia. The development of punk rock in the mid-1970s coincided with Birmingham University's Centre for Contemporary Cultural Studies' radical reorientation of youth subcultural theory away from generational differences & towards class analysis. The Birmingham School's critical approach was largely neglected in North America & repudiated by liberal scholars in Europe in the 1990s. However, drawing on empirical data from an ongoing study of Christian punk, this paper argues that the Marxist approach of the Birmingham School is highly relevant in studying creative youth cultures in late capitalism. Christian punk presents a curious case study of resistance to the hegemonic norms of late capitalism. Although far from uniformly progressive, Christian punk nevertheless presents an abidingly & coherently anti-liberal capitalist ideology, as this paper illustrates with data from interviews & Christian punk music. This paper also considers the broader applications of Marxist subcultural theory within the sociology of religion & the relevance of the issues raised in this study for the broader field of the study of religion and youth.

Abraham, Margaret (Department of Sociology, Hofstra University, 202 Davison Hall, Hempstead, NY 11549, USA [tel: 516-463-5641; fax: 516-463-6250; e-mail: margaret.abraham@hofstra.edu]), **Cyber Migrant Labor: Women and Call Centre Work in the Global Economy,** *International Sociological Association, Gothenburg, Sweden,*

¶ Globalization of service work, new communication technologies and investments in telecommunication infrastructure has changed the social, economic, cultural & political environment of global interaction. It has also reconfigured aspects of labor migration and created new forms of migrant labor. The objectives of this paper are two-fold: The first is to suggest the concept of cyber migrant labor as potentially useful in understanding the complexity of service work in a global economy & its linkages to new forms of labor migration. The second objective is to use the case study of call centre workers in India as an example of cyber migrant labor. Aspects of cyber migration such as time zone relocation, concealment of national identity, cultural relocation, routinization of work, racialization

& unequal power relations, nature of knowledge production & consumption, & the ongoing global hierarchy of states will be discussed. This paper demonstrates how cyber migrant labor frequently involves jobs migrating transnationally to locations of cheap labour without necessarily creating movements of people with different consequences & implications for the "migrant" workers" sense of belonging & identity-formation processes. It also points to the kinds of tensions, pitfalls & possibilities, contradictions and contestations, associated with cyber migrant labor for women, work, and migration in the global economy.

Abraham, Margaret & Purkayastha, Bandana (Department of Sociology, Hofstra University, 202F Davison Hall, Hempstead, NY 11549. USA [tel: 516-463-5641; fax: 516-463-6250; e-mail: margaret.abraham@hofstra.edu]), **From Addressing Personal Problems to Claiming Human Rights: Reflections on Anti-Domestic Violence Activism,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the past twenty five years, South Asian Women's Organizations (SAWOs) have shifted domestic violence in the South Asian community in the United States from a private problem to a public issue. As they have reframed & claimed the right of women to be free from violence, these SAWOs have moved the discussion towards a human rights frame where issues of political, civil, social, economic and cultural rights become intertwined in keeping women safe from violence. Drawing upon multiple data sources, we provide the socio-historical context to the emergence & growth of SAWOs in the United States as a way of situating the minority women's organizations within a context where human rights frameworks are not often recognized. We discuss the organizations' goals, strategies, & activities that SAWOs engage in to enhance the efficacy of the larger effort to end violence against women. We show the shifts in conceptual frameworks & activism. Finally, we discuss some of the major challenges & successes of these SAWOs in addressing violence against women as a human rights issue at the local, national, & transnational levels. Through this paper we hope to highlight some of the implications of such human rights activism for a progressive transformational politic.

Abrantes, Manuel (SOCIUS: Research Centre in Economic and Organizational Sociology / School of Economics and Management, Technical University of Lisbon, Rua Miguel Lupi, 20. 1249-078 Lisboa, Portugal [tel: 00351916147810; e-mail: manuelabrantes@gmail.com]), **Sociology, Domestic Work and Gender: A Critical Insight,** *International Sociological Association, Gothenburg, Sweden,*

¶ The main goal of this paper is to present a critical assessment of the situation I find myself in: a person conducting a sociological study on domestic work & domestic workers. Based on a review of inputs from labour sociology, gender studies & history of occupations, I start by digging out various ways in which work has become a matter of interest for social science. The border between paid & unpaid work is a difficult though promising departure point for discussion. I shall not focus on a single, specific modality of domestic work, but rather on how domestic chores are organized in different settings: private houses, corporate premises, public spaces & society as a whole. By taking this step, the leading roles of gender & health are asserted. I argue that only empirical, exploratory research can generate satisfactory answers in both respects. Afterwards, I elaborate on the connection between the position of domestic work at the lower end of work value hierarchies & the political dynamics of a "knowledge society". Scientific research is located at the top of the knowledge society project, & most sociological studies on domestic work have reflected this unspoken incovenience by developing normative top-down approaches to the subject. Conclusions: research, including methodological construction and data analysis, must be incorporated into the object of study; and gender, often used as an easy tool to describe the organization of domestic work in the family unit & the labour market, should be questioned as to where it is actually being decided & challenged. This brings us in full force to the distribution of fatigue and indignity in western contemporary society.

2010S00009

Abreu, Alice R. de P. (ICSU International Council for Science and Federal University of Rio de Janeiro, Rio de Janeiro, RJ, Brazil, 22410050 [tel: 5521 2274-3641; e-mail: alicepabreu@gmail.com]), **Science and Society: Consensuses, Controversies and the Role of International Cooperation,** *International Sociological Association, Gothenburg, Sweden,*

¶ Among the deep transformations of contemporary society, one of the most important has been the unprecedented progress in science and scientific knowledge. Science & its products are changing the world that we live in. At the same time, some of its advances are raising fundamental questions about complex issues with significant implications for the values & beliefs that are held by large sectors of society. A degree of uncertainty & risk is inherent in the scientific research & development process & new cooperative understandings between science & society are now required to ensure that scientific discovery is valued & that scientific knowledge is used for the maximum benefit of society. Increasingly, therefore, it is important to harness the potential of science to address societal needs. It also means being able to identify these needs as they already exist or newly arise & formulate them into scientific questions. It is in this context that the collaboration between Social & Natural Sciences is increasingly needed. This paper will discuss the relation between science & society, with a focus on the relation between the natural sciences & the social sciences & humanities, & how this relationship has been the focus of much controversy. It will also look at new institutionalities, especially related to international collaboration, that face this issue & propose new models that include interdisciplinarity & social relevance in their core.

2010S00010

Accorssi, Aline, Scarparo, Helena & Guareschi, Pedrinho (Pós Graduação em Psicologia, Pontifícia Universidade Católica do Rio Grande do Sul - PUCRS, Av. Ipiranga 6681, Porto Alegre, Rio Grande do Sul, Brasil, CEP 90619-900 [tel: 33 (51) 3320.3550; fax: 33 (51) 3320.3614; e-mail: psicologia@pucrs.br]), **Images de la pauvreté dans les médias brésiliens** (Images of Poverty in the Brazilian Media), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Dans ce travail, on examine comment les médias de masse au Brésil contribue à la formation de la pensée sociale contemporaine en matière de ce qui concerne la structure socio-économique brésilienne. A cette fin, nous cherchons à analyser et à faire une réflexion critique sur des thèmes présents dans les médias imprimés, tels que le concept de la pauvreté, la survalorisation de la pratique du volontariat, du marché autour de la souffrance humaine avec l'expansion du secteur tertiaire, parmi d'autres. Bien que dans les dernières décennies le champ d'étude et d'intervention sur la pauvreté et son impact aient été amplifiés par l'État et la société civile, une des hypothèses soutenues est que nombre de ces discours, traitant apparemment de la réduction des inégalités sociales, tendent à légitimer le maintien de la faible mobilité sociale. Par conséquent l'acceptation et la naturalisation de la pauvreté dans la vie quotidienne gère des effets subjectifs importants, par exemple, la discrimination et la fragmentation de la société.

2010S00011

Achatz, Juliane & Trappmann, Mark (Institute for Employment Research, 90478 Nuremberg, Germany [tel: +49 911 179 2527; e-mail: juliane.achatz@iab.de]), **Exits to Work among Recipients of Basic Income Support in Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper we analyse labor market transitions of recipients of basic income support for needy job-seekers in Germany. To date very little is known about implications of the "activating" labour market policies. As the basic income support for needy job-seekers is a social benefit granted at the household level, the situation of benefit recipients has to be analysed in a household context. A question that can hardly be answered without recourse to the internal social & economic structures of households is the significance of wives' & husbands' work for overcoming the need to rely on benefits. In our research we focus on opportunities and constraints of labour supply due to labour market resources, gender, experience of migration & general living conditions. We use the first two waves of the panel study "Labour Market and Social Security" (PASS), established by the Institute for Employment Research (IAB). This is a new dataset for labour market, welfare state & poverty research in Germany, creating a new empirical basis for the scientific community & political consulting. The panel collects detailed information on relevant characteristics such as employment potential or job-seeking behaviour.

2010S00012

Adami, Roberta & Gough, Orla (University of Westminster, 35 Marylebone Road London NW1 5lS [tel: +44 207 911 5000; e-mail: r.adami@wmin.ac.uk]), **The Role of Labour Earnings in Determining Post Retirement Income: Evidence from British Households Panel Survey,** *International Sociological Association, Gothenburg, Sweden,*

¶ The distribution of wages has undergone serious transformation during the last few decades in the UK. Major changes in the labour market can have long lasting effects on pension income distribution of retired cohorts. Within our study we aim to determine how changes in earnings inequality affect post-retirement income inequality. We are looking at the impact of labour income distribution on the distribution of pensions. We estimate a PROBIT model using data from the British Household Panel Survey & assess the effects of changes in the earning distributions through a counterfactual simulation. This will show how pension distributions change assuming different scenarios for wage distribution

2010S00013

Adamsone-Fiskovica, Anda (Centre for Science and Technology Studies, Latvian Academy of Sciences, Akademijas laukums 1, Riga, LV1050, LATVIA [tel: + 371 67225175; fax: + 371 67821153; e-mail: anda@lza.lv]), **What Public Understanding of Science-in-Particular Can Tell Us about Public Perception of Science-in-General?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper aims to identify & analyse selected elements of the public perception of science-in-general based on two particular cases of topical science-related matters, namely, climate change and biomedicine (xenotransplantation). The two realms–environment and medicine–represent two domains that are easier grasped by laymen since these can be directly associated with & related to one's own existing or assumed experience. The analysis is based on two national thematic focus group discussions carried out in Latvia in 2008-2009. The analysis seeks for common structures of argumentation put forward by laymen in reflecting int. al. more generally on the role of science & scientists in modern society as well as trust in the scientific institution & expertise. The notions of social accountability, decision-making power, and control, stakeholder involvement, individual & public good are just a few uniting categories in the laymen's discourse. Both cases also strongly touch upon the fundamental question of the human-nature relations that are highly illustrative of the broader social contextualisation of the complex issues involving science. The common reasoning structures that transcend the specific topic irrespective of the particular science-related matter is telling not only of the lay attitudes towards a narrowly defined question which is often framed in a technical manner but also of the more far-reaching reflections on the range of side-issues seen relevant by the public.

2010S00014

Adelman, Miriam & Costa De Souza, Milena (Universidade Federal do Paraná, R General Carneiro 460 Curitiba Paraná Brazil 82130160 [tel: +554133605093; fax: +554133605093; e-mail: miriamad@ufpr.br]), **Travelers and (Im)Migrants: Women's Subjectivities and Experiences in a Post-Colonial World,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper presents preliminary results from research on gender and subjectivities within the context of contemporary "globalized" societies, through a focus on the experiences of Brazilian women living & working in Spain. Our main theoretical sources are drawn from feminist post-colonial perspectives & current sociological literature on women's participation & protagonism within international migratory circuits. Our own research takes off from the contributions of Brazilian research on gender and migration, & particularly from recent discussions on the relationship between some common discourses that circulate today about "Brazilian women" (a rather disconcerting combination of conventional Western–"orientalist"–tropes on women with historical forms of representing "women" within hegemonic cultural texts in Brazil) & the reality/experiences of Brazilian women who emigrate to Europe & the United States (Piscitelli, 2008, 2009; Assis, 2003; Pontes, 2004 among others). We join these researchers in a shared emphasis on the voices of women who are participants in such migratory movements. Beginning with an inquiry into the circumstances that induce our informants to leave Brazil and what their objectives in going abroad are, we attempt to access both subjective experiences & the concrete strategies that these women develop in dealing with the ups & downs, gains & losses of a new–& often very difficult & trying–situation. We understand that the women who participate in this international "circulation of persons" constitute an internally diversified group, & one which in several ways poses challenges to stereotypes that have emerged in a hegemonic global "imaginary" regarding Brazilian women. Our sample is therefore a heterogeneous one, constructed through personal contacts & using a "snowball sampling" technique employed during several months of field work in Barcelona. It includes highly -qualified professional women, women with lesser education who seek employment in domestic service, as well as women belonging to the stigmatized group of those involved in the sex industry. Our informants are also from different parts of Brazil, of different social class origin and race/ethnicity & vary also in terms of generation, migratory situation, marital/family situation, etc–with a single exclusive requirement of at least three years residence in Spain or European Union countries. Interviews are based on a life-history method. Through analysis of taped & transcribed narratives, we attempt to understand how our informants mobilize the different types/levels of "capital" they possess–cultural, educational (cf. Bourdieu) "marital" & "body capitals" (Goldemberg, 2008) & to reconstruct the migratory projects & trajectories that they have built. Thus, a picture emerges of how, through the paths the women have taken & chosen, they become participants in the contemporary world of intense cultural exchange & diaspora.

2010S00015

Adeniyi, Musa (Obafemi Awolowo University, Department of Religious Studies [tel: +234-803 35880-105; e-mail: madeniyi@oauife.edu.ng]), **Religious Integration and Religious Freedom among the Yorubas of South Western Nigeria,** *International Sociological Association, Gothenburg, Sweden,*

¶ Yorubaland located in South Western Nigeria can be described as a melting pot of different religions. It is a place where traditional religious practices co-exist with Islam & Christianity, the two world dominant religions. Being a people fiercely committed to their culture, what many Yorubas who have accepted "foreign" religious faiths like Islam & Christianity do is to syncretise their new religions with aspects of indigenous ritual & even occultic practices. While this has so far worked quite well as the South Western part of Nigeria is well-known for religious tolerance, it is also a fact that there still exists some areas of tension especially at the exact points where two or three faiths intersect. This paper will explore patterns of religious syncretism and instances of religious tension among the Yorubas of different faiths.

2010S00016

Adesina, Jimi O. (Department of Sociology, Rhodes University, Grahamstown-eRhini 6140 [tel: +27466038172; fax: +27865170557; e-mail: J.Adesina@ru.ac.za]), **Sociology and the Promise of Transformative Social Policy: Theory and Lessons from Africa,** *International Sociological Association, Gothenburg, Sweden,*

¶ The current crisis of neoliberal capitalism requires us to rethink Social Policy beyond the conventional "welfare state regime" paradigm & the linkages between Sociology & Social Policy. Central to this is the need to re-read the "classical" literature on Social Policy, categories such as "social citizenship", & the vision behind the variety of social policy instruments. In the context in which "social protection" (and non-contributory "cash transfer" in the developing countries) has dominated the policy and research agenda such return to the original visions of Social Policy is important for the sociological project of advancing knowledge & policy choices. The paper explores some of the foundational 20th century texts & debates on Social Policy. A common strand was the conception of social policy was conceived as transformative of initial conditions of economic development and social relations; they involved an expansive imagination of the social: in conceptual & policy terms. The last 25 years witnessed the ascendance of a brand of economic thinking that is widely disreputable for its aversion for social complexity, with Sociology on the retreat. The relevance of an expansive sociological imagination, in the post-neoliberal global environment, requires a return to this wider vision of social policy.

2010S00017

Agartan, Kaan (Social Science Program, Providence College, 549 River Avenue Providence, Rhode Island 02918-0001, U.S.A. [tel: 401-865-2728; fax: 401-865-2232; e-mail: kagartan@providence.edu]), **Resisting the Global Capital: Privatization in Steel Industry in Turkey,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper aims to demonstrate how privatization in steel industry in the developing world intensifies the polarization within different segments of the national industrial bourgeoisie, & how it becomes a site of struggle between national & global interests of the steel capital. The paper first identifies major structural transformation & reorganization in the steel industry in the past decades, which accelerated the concentration of steel capital in the hands of few multinational companies at the global level. Then, by focusing on the privatization of Turkey's largest state-owned iron & steel plant (ERDEMIR), the paper analyzes privatization in the developing world as a troubled process of the penetration of global steel capital into national economies, which sparks polarization between different frac-

tions of the national industrial bourgeoisie: between those whose interests lay in the continuation of inward-oriented national capitalism, & those who aspire for deeper integration into the global economy. By highlighting various dimensions of this struggle in ERDEMIR's privatization, the paper concludes that by resorting to a strong, historically-rooted nationalist discourse, the rigorous opposition from some elements of the national industrial bourgeoisie in the developing world can significantly hamper the globalization of steel capital.

Agartan, Tuba I. (Providence College, 1 Cunningham Square, Providence, Rhode Island, USA, 02918 [tel: 1-401-8651262; fax: 1-401- 8652978; e-mail: tagartan@providence.edu]), **Health Care Reform and Shifts in Modes of Governance: Turkish Experience,** *International Sociological Association, Gothenburg, Sweden,*

¶ Health reform initiatives in developing countries seem to follow a different path than those in the advanced industrial world. Reform packages introduced recently by many developing country governments combine formalization & universalization efforts with market incentives in quite innovative ways. The recent reform initiative in Turkey, "Transformation in Health Program", presents a very good example of this mix. This paper examines the kinds of governance arrangements that emerge from the reform program and discusses the prospects of a comprehensive change in the governance of the health care system. It argues that major changes recently introduced in provision & financing necessitate creation of new forms of governance which represent a significant departure from the semi-corporatist, state-led governance that characterized the Turkish health care system. While the particular policy choices in remuneration of service providers or hospital administration suggests a move towards regulation by market mechanisms, the Turkish state does not exhibit any tendency to share responsibilities with major interest groups such as the Turkish Medical Association or unions. The strong state tradition in Turkey remains an important impediment in the establishment of a market-driven and/or corporate-governed regulatory structure.

2010S00019

Agartan, Tuba I. (Providence College, 1 Cunningham Square, Providence, Rhode Island, USA, 02918 [tel: 1-401-8651262; fax: 1-401- 8652978; e-mail: tagartan@providence.edu]), **Unbounded Commercialization?: Lessons from the Turkish Health Reform Experience,** *International Sociological Association, Gothenburg, Sweden,*

¶ Health care systems all around the world have witnessed some reform initiative in the last three decades. Almost without exception, these reforms involved a significant redefinition of the boundaries between the public & the private sectors whereby markets were seen as a panacea to many problems, framed mostly in terms of efficiency or costs, & public sector was denigrated as corrupt and inefficient. This paper focuses on a recent reform initiative in Turkey, the Transformation in Health Program, which is very much in line with this global reform framework. The paper examines the implementation of the reform program in the last seven years and demonstrates how well the reform program combines elements of universalism with a market-based approach: it aims to universalize access while at the same time increasing the role of the markets in the provision of health services. However, an interesting feature of the Turkish case is the recent emphasis on developing the regulatory capacity of the Ministry of Health & establishing autonomous regulatory agencies. The paper argues that such a comprehensive approach to reform involving changes in all three functions of the health care system–financing, provision and regulation - is very important because, if crafted carefully, such a regulatory capacity can shape the expansion of markets in provision & commercialization effectively & minimize its detrimental effects.

Agevall, Ola (School of Social Sciences, Linnaeus University, Växjö, Sweden, SE-35195 [e-mail: ola.agevall@lnu.se]), **The Demands of Demand: The Professional Fate of Swedish Music Education in the Postwar Era,** *International Sociological Association, Gothenburg, Sweden,*

¶ If monopoly of recognized skill is anything to go by, then, prima facie, musicians & music teachers are in a poor position to claim professional status. But while laymen cannot be effectively excluded from music making they can be barred from entering certain positions, occupations, & organizations. Swedish music education is an example of a successful monopolization, which later became precarious: the Swedish Royal Academy of Music provided the only educational route to the title of director musices, which in turn was a requisite for admission to a number of positions and occupations. After WWII, a sharply increasing demand for music education created a need for the mass production of music teachers, unsettling the topology of tasks in the field. The aim of this paper is to examine the historical case of Swedish music education, and to theoretically explore the demands raised by a sudden rise in demand upon a precarious monopoly of recognized skill.

Aggarwal, Anju (Maharaja Agrasen College, University of Delhi, University of Delhi, Delhi-110007, India [tel: 011 47015162; e-mail: dr.anjuaggarwal@yahoo.co.in]), **Women's Movement In India,** *International Sociological Association, Gothenburg, Sweden,*

¶ Social movements of the 19th century India were largely led by the men of upper class strata. It was in 1920's that women started taking initiatives. This paper examines how Gender as an issue formed the basis of India's women's movement & remained a core issue in India's socio-politico-cultural sphere. It argues that under the impact of British rule position of Indian women underwent a decisive transformation leading to feminist assertion of power in the 20th century. This paper reviews the extent to which Women's participation in the national movement accentuated the spirit of liberalism & egalitarianism. It reveals that in the post independent period women came forward for creative self expression, a search for new identities. The paper notes that while in the 50's and 60's the Indian women's movement remained stagnant, the 70's was a period of reawakening. With the advent of the 80's it adopted more holistic approach by forming autonomous organizations, alliances and coalitions shedding its focus on social justice. It moved ahead in the 20th century by demanding the right to self determination and equality with men. It has ushered in the 21st century with a remarkable achievement of passing of Domestic violence Act. The paper concludes that complex, rich & vibrant, contemporary women's movement in India, though was not cohesive yet is a strong and plural force which took to legislation instead of agitation to bring social change. It is still in transitional phase. It has to fight against broader issues like communalism, distributive justice etc. To be meaningful it has to correlate with diversity & other socio-politico movements in India.

Agirdag, Orhan (Ghent University, Department of Sociology, Ghent, Belgium, 9000 [tel: +32485487220; e-mail: orhan.agirdag@ugent.be]), **The Impact of Ethnic School Composition on Pupils' (Sub)-National Identifications,** *International Sociological Association, Gothenburg, Sweden,*

¶ In many European countries there is a growing concern about ethnic school segregation. The latter is not only considered as unfavorable for educational achievement, but it is also seen as an obstruction for the national identities of pupils. However, little is known about how attending school in a segregated or integrated context affects pupils' national identifications. In this paper we investigate the impact of school ethnic composition–in terms of ethnic concentration & ethnic heterogeneity/diversity at school level–on national & sub-national identifications of 2845 pupils in 68 elementary schools in Flanders (Belgium). Drawing upon multilevel analysis, we found that schools' ethnic composition have an impact on both pupils national & sub national identifications. Moreover, we found that the effects were different for native and non-native pupils, while the amount of interethnic friendship explained or moderated the impact of ethnic school composition. We discuss these results as they relate to policy-makers and sociologist of education.

Aguiar, Fernando & de Francisco, Andres (IESA-CSIC, Cordoba, Spain, 14005 [tel: 00349577602255; fax:; e-mail: faguiar@iesa.csic.es]), **Social Identity and Rational Choice: Self-Categorization or Beliefs about Oneself?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The influence of Turner's self-categorization theory has been pervasive in the scope of social identity studies. As soon as some rational choice theorists or economists have tried to introduce social identity problems into the rational choice framework, they have had to make clear their position on the issue of self-categorization. But, unfortunately, there is no real criticism of Turner's theory from the rational choice camp, despite the flaws of that theory. For Turner, "The central hypothesis for group behavior is that, as shared social identity becomes salient, individual self-perception tends to become depersonalized… individuals tend to define & see themselves less as differing individual persons & more as the interchangeable representatives of some shared social category membership." However, in

our opinion things do not work that way. Putting aside the abuse of perceptual terms that function as mere metaphors ("self-perception", "see themselves", "perceptually"), we think that understanding the process of "self-categorization" implies looking for the "micro-foundations" of that process, that is, for the complex set of individual beliefs (most of them socially shaped) that, mediated by desires, defines what the individual is, or permits individuals to define themselves. So we will try to do a rational choice reinterpretation of self-categorization theory.

Aguiar, Neuma F. (Federal University of Minas Gerais, Belo Horizonte, MG- Brazil 31270-901 [tel: +5521-2521-3734; e-mail: neuma.aguiar@gmail.com]), **Transnational Feminism and Cultural Boundaries in the Developing South,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper discusses the emergence of a transnational feminist movement in the developing South. This movement focused on poor families and on propositions on how to put poor women at the center of development concerns. In spite of a unified platform, two different perspectives emerged: (1) providing economic opportunities for women in poverty as opposed to an overall development strategy at the national or regional level; (2) searching for political strategies that would put women at the center of the fight against poverty. The paper discusses the challenges of coping with these two different perspectives, their distinctness, commonalities and outcomes.

2010S00025

Agyeman, Julian ([e-mail: julian.agyeman@tufts.edu]), **Toward a 'Just' Sustainability,** *International Sociological Association, Gothenburg, Sweden,*

¶ The predominant orientation of sustainability among high income nations is environmental. The environmental sustainability discourse is dominant in environmental organizations, businesses and in governments. This discourse is exclusive rather than inclusive & focuses only on intergenerational, not intra-generational equity, or social justice in the present generation. It perpetuates what I call the "equity deficit" of environmental sustainability. My paper will focus on "just sustainability": improving the quality of human life now, & into the future, in a just & equitable manner, while living within the limits of supporting ecosystems. Just sustainability balances environmental protection with an equal commitment to social and spatial justice, thereby overcoming the equity deficit of the current orientation & discourse of sustainability.

2010S00026

Ahedo, Manuel (University Rovira Virgili, Tarragona, Catalonia, Spain [tel: 0034 977 55 83 50; fax: 0034 977 55 83 86; e-mail: manuel.ahedo@urv.es]), **Comparing Self-Comparing Societies. Challenge to Comparative Analysis in the Globalization Era,** *International Sociological Association, Gothenburg, Sweden,*

¶ The article looks at the effects of external factors into social change through processes based on systemic & increasing self-comparison mechanisms within a more or less stratified society. Comparative sociology has still not integrated several recent developments & issues, such as globalization with the growing inter-dependence of societies, the increasing performative character of social science, & the new dynamics of social change. In a globalizing world we increasingly compare societies that compare themselves between them, & that somehow change according to the results of that comparison. Thus an important external factor for contemporary social change is related to the process and outcomes of cross-society mutual comparisons. Inspired by a broad social science literature such as comparative methodology, diffusion analysis, international relations, institutionalist isomorphism, social & institutional change, & policy learning, the article aims to advance a more comparative sociology argument about the importance of cross-society mutual comparison for social and institutional change. The argument is illustrated with several examples both within sub-national societies (at municipal level in Denmark & at regional level in Spain), & between national societies at world regional level (European Union & Latin America).

Ahmadnia, Shirin, Towfigh, Ebrahim & Shahrokni, Nazanin (Sociology, Allameh-Tabataba'i University, Tehran, Iran, [tel: 00982122223001; fax: 00982122227075; e-mail: shirin.ahmadnia@gmail.com]), **Are Iranian Social Sciences in Crisis?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Many scholars have examined the situation of social sciences in Iran. Despite the differences in their works, they all converge on one point- that the social sciences in Iran are in crisis. But, are Iranian social sciences in crisis? The authors of this paper believe that to answer this question one must study the socio-political situation/atmosphere in which modern (social) science was imported to Iran. It is important to figure out the (socio-political) issues/questions in response to which social sciences were originally formed. According to the findings of this research, one could conclude that the social sciences in Iran (as a system of knowledge) are not in crisis. They are in fact performing the way they were originally set to perform. The non-production of social scientific knowledge & its irrelevance to social facts, it seems, are not evidence to the system's malfunctionality but to its functionality. The non-production of social knowledge seems to be the very function of this system. The authors also intend to highlight those cases that have emerged in confrontation or in parallel to the academic system, which have within them the potential & the capacity to produce relevant social scientific knowledge.

Ahmed Ouamar, Madjid (Universite Boumerdes, Boumerdes 35000 Algerie [tel: 0552042027; e-mail: ahmedULouamar@yahoo.fr]), **Impact De L'investissement Sur Le Developpement** (Impact of Investments on Development), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ L'Algerie a réalisé d'énormes investissements gaziers. Si ces investissement Capital- intensiv'ont permis au pays d'accumuler près de 150 milliards de dollars, l'impact de ses investissements sur le développement économique et social est moins évident. Le taux de chomage reste très élevè avec plus de 15%de la population active. Chaque année près de 300. 000 jeunes arrivent sur un marché de l'emploi déjà saturé, dont 150.000 diplomés.

2010S00029

Ahmed, Ghyasuddin (Department of Sociology, SW & CJ, Virginia State University, P. O. Box 9036, Petersburg, VA 23806, USA [tel: 804 320 1427; e-mail: gahmed@vsu.edu]), **Islam's Other Face,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since the heinous & tragic events of September 11, 2001 Islam is being demonized & its followers dehumanized around the world. It is depicted in such a manner that to many now it has become a 'cult' rather than a religion. After the above events Islam now stands alone against all other religions & is considered as the most violent religion of the world. There are deviants and criminals in all background, including religions & those should be treated that way but after the tragic events of 911 instead of blaming the criminals the whole Muslim population is being blamed. Contrary to the common belief the Muslim Bible–the Quran divides human beings into two groups–the righteous & the wrong doers. There are many positives words in the Quran for the Christians and the Jews that most people do not know or read. When the Quran is talking negatively about the Christians & the Jews it is referring to the wrong doers of those religions. The Quran clearly asks the Muslims not to fight the Christians & the Jews on small matters. It asks it followers only to fight back those who oppress and suppress the Muslims or those who are thrown out their homes. It also asks the Muslims to stop fighting when the other side stops. The same way it asks its followers to accept peace when its enemy offers it. Fighting other people cannot be pre-emptive. It also calls the Christians & Jews as the people of the Book that were sent by the same One & Only God & those who follow those original Books are also believers (or Muslims). It considers hypocritic Muslim worst of all human beings or most wrong doers. Islam is the only religion that gave equal rights to women that very few people know & recognize. It also give freedom to practice any religion or no religion. Freedom is an article of faith in Islam. Problems come when people provide information out of context or when people do not follow the ideal ways for their personal aims, goals & objective. The paper will provide actual reference & quotation from the English translation of the Quran that help will remove lots of confusion & contradiction that people have on Islam.

Ahponen, Pirkkoliisa (Department of Social Sciences, University of Eastern Finland, Box 111, 80101 Joensuu, Finland [tel: 358-13-2514215; e-mail: pirkkoliisa.ahponen@uef.fi]), **Poor or Golden Karelia–Interpreting Travellers' Identities and Otherness,** *International Sociological Association, Gothenburg, Sweden,*

¶ Forty first-year students from the University of Joensuu in Finland went on an excursion to a Russian town Sortavala in March 2007. These two border towns are situated in different sides of a peripheral region Karelia. During this social political excursion of two days the students were

instructed to make notes on everything that they saw & experienced. The notes about this excursion give us a snapshot of what it's like to travel by crossing a border between the familiar & the unfamiliar. The young people met a confusing reality which led them to see things differently than what they were used to. The students began their voyage with great curiosity, talking about how their minds were open & anticipating or how they had mixed feelings. Some of them had imagined what to expect & some tell that they had no expectations at all. A phenomenological interpretation on their experiences will tell how the students carried their previous knowledge as well as all their assumptions & prejudices with them. We can see also how the knowledge of young people is reformed even during a short border-crossing experience.

Aigner, Petra I. (Danube University Krems, Dr. Karl Dorrek Str. 30 [tel: 004369910887925; e-mail: petra.aigner@donau-uni.ac.at]), **Comparative Perspectives of Austrian Political Parties across Time,** *International Sociological Association, Gothenburg, Sweden,*

¶ Research Committee on Political Sociology RC18 In Austria the political landscape is presently dominated by Social Democratic Party (SPÖ), Christian Democrats/People's Party (ÖVP), Freedom Party (FPÖ), Green Party, & some smaller parties, e.g. BZÖ (Alliance for the Future of Austria). The political system has been relatively unstable for over a decade, following a period of stability up to the late 1990s based on a functioning proportionate system. A shift occurred when in 1999 the FPÖ run by Jörg Haider achieved a sudden dramatic increase in votes, which initiated a period of continuing instability. In 2005, Haider himself founded a new party, BZÖ & a number of new small parties have emerged alongside since. In the past decade several early re-elections were initiated & governmental alliances broke frequently. As argued in my book, Migration & Politics (2008) Austrian party political discourses are tightly structured. In Weberian terms the Socialist Party, & also the Green Party, express a bureaucratic & legal rational strategy, while the ÖVP maintains a traditionalist stance. The FPÖ, led by Jörg Haider, & continued by his successor J.C. Stracher, has articulated a charismatic discourse, focused particularly on migration issues. The instability which Max Weber highlighted in charismatic leadership is fully confirmed by the FPÖ's trajectory in the past decade. On the other hand, as much as the Weberian types are pursued by the Austrian political parties and their members, in turn those are also legitimated by their respective followers. Since 2000, alliances between old parties have changed, & new parties have emerged. This paper aims to explore whether the main party agendas & the discourses expressed by party members continue to reflect the Weberian model, or whether they have shifted, so that the model no longer applies. This issue will be explored by utilizing previously collected data (1998-2001), together with newly collected data (2008-2009) from parliamentary debates & political party manifestos, with a focus on the theme of migration, in all the parliamentary parties of contemporary Austria.

2010S00032

Ailon, Galit (Bar-Ilan University, Ramat-Gan, Israel [tel: +97235711554; e-mail: ailonsg@mail.biu.ac.il]), **Reflexivity after the Enron Scandal: A Discourse Analysis of a Neoliberal Self-Reflection,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper analyzes a reflexive discourse sparked by the Enron scandal. Once a prime icon of "New Economy" (NE) rigor and innovation & an exemplary prototype of post-deregulation entrepreneurship, Enron was a fast growing American energy trading firm that thrived alongside the American public faith in the free-market. It collapsed in 2001 after a number of its accounting maneuvers were revealed as questionable. Its bankruptcy, the largest in history up to that time, was the first of this century's series of dramatic corporate financial scandals. The paper offers an empirically grounded analysis of all Enron-related articles published in the popular American BusinessWeek magazine in 1997-2007. The analysis explores the rise & fall of the Enron icon & examines the sense-making process that followed its bankruptcy. It indicates that the neoliberal self-reflection sparked by the scandal had an underlying cultural grammar that parallels that pertaining to the management of money. Its four primary principles were: minimizing "costs" entailing loss of discursive status or persuasive effect; maximizing the use value of a core truism; quantitatively cueing morality; & conducting discursive competitions. This account challenges the existing theoretical image of reflexivity as a discourse representing a look from an abstract or disembedded 'outside' upon conventional ways of conceiving the provisions & practices of the contemporary capitalist world.

2010S00033

Ainsaar, Mare (University of Tartu, Tartu, Estonia [tel: + 372 51 78 132; e-mail: mare.ainsaar@ut.ee]), **Early and Very Early Sexual Initiation among Adolescents and Attitudes towards Sexuality in Estonia,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of the analyses is to investigate the timing & selectivity of sexual initiation before age 15. Data of the Baltic See Regional Study of Adolescents' are used for analyses. The Baltic Sea Regional Study on Adolescent Sexuality survey was carried out as a class-room survey among children attending schools with secondary school level curriculum in 2003-2004 in six Baltic Sea countries. The total number of 17-18-year-old Estonian students in the survey was 1338. Results: Estonia belongs to the same group with Nordic countries characterised by a comparatively early start of sexual life. Only 3% of the students in Poland, 4% in Lithuania had experience of sexual intercourse before age 15 while in Estonia and in Norway it was 9 & 14% in Sweden. Empirical results demonstrate that although the absolute majority of sexual initiations before the age of 15 took place in a consenting environment & without any pressure, an early sex experience seems to be related to a risk of violence, both against the adolescents & from adolescents, a greater acceptance of sexual relations with children & a tolerance of commercial sex, stronger attitudes towards sexual freedom & less one partner commitment.

2010S00034

Aitikulova, Burulai Junusovna (Aga Khan Foundation in Kyrgyz Republic, Bishkek, Kyrgyzstan, 720021 [tel: +996 312 38 80 22; fax: +996 312 38 92 31; e-mail: burulai.aitikulova@akdn.org]), **Quality Early Learning Opportunities for All in Remote Areas–Rich and Poor Alike,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction & Context The deterioration of the education system in Kyrgyzstan is having its most profound effect on the country's rural population. Faced with low public spending, crumbling infrastructure, outdated curricula, & poorly trained and under-motivated teachers, rural areas in Kyrgyzstan are increasingly characterized by poor socio-economic conditions, massive out-migration, & on the whole, limited economic opportunity. Over the long-term, reversing these negative trends will require robust partnerships among government, donors, and civil society to meet the triple challenge of expanding access, improving quality, & ensuring equity across the education spectrum. The Aga Khan Foundation (AKF) is part of the Aga Khan Development Network (AKDN). Founded & guided by His Highness the Aga Khan, the AKDN brings together a number of international development agencies, institutions, & programmes that work primarily in the poorest parts of South & Central Asia, Africa and the Middle East. All AKDN agencies conduct their programmes without regard to faith, origin or gender. Drawing on more than forty years of experience in the education sector, the AKDN is convinced that lifelong learning–from early childhood development through to retirement–is critical to lifting communities out of poverty & underwriting social & economic progress. AKDN's experience in the sector covers a range and diversity of approaches (from urban to rural, single-grade to multi-grade, & community-led interventions to public-private partnerships) that have resulted in sizeable investments throughout the education spectrum, including, but not limited to: Early childhood development programming; School improvement programmes (both primary & secondary); The management and servicing of nearly 350 private schools which have educated more than 300,000 children & trained more than 10,000 teachers; A network of Aga Khan Academies which offer international standards of excellence; ac Teacher & school management capacity through professional development centers; & The establishment of the Aga Khan University & the University of Central Asia. In Kyrgyzstan, the Aga Khan Foundation works through its local partner, the Mountain Societies Development Support Programme (MSDSP KG), to improve the living conditions & socio-economic status of selected communities in the country. Recognising the interconnectedness of development challenges in remote and mountainous communities, MSDSP KG employs an area-based approach in Osh & Naryn Oblasts where complementary interventions in education, health, livestock development, horticulture, infrastructure, income generation, & social mobilization converge in villages. In doing so, MSDSP KG partners with government authorities, community organizations, & local civil society groups to implement projects that raise the standard of living in rural communities. In education, MSDSP KG has established four objectives: 1) to develop & promote alternative ECD models to increase their coverage, affordability, & inclusiveness; 2) to enhance the quality of learning environments for young children; 3) to support the transition of children from kindergarten to Grade 1 and strengthen interactive teaching-learning

processes in primary schools; & 4) to influence ECD policy & practice in Kyrgyzstan through on-going dialogue & collaboration with communities, government, international agencies & other stakeholders. (Abstract shortened by ProQuest.)

Aizawa, Shinichi (the University of Tokyo, 7-3-1 Hongo, Bunkyo, Tokyo, Japan, 113-0033 [tel: 81358414926; fax: 81358414907; e-mail: isaac@classic.email.ne.jp]), **New Discrepancy between the Meaning of Schooling in Individual Perceptions and the Function of Diplomas in the Japanese Society,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper, we examine how have the personal status attainment changed in the Japanese society, especially focus on the effect on educational aspiration (Desired educational level) & occupational aspiration (Desired occupation). From 1950s to 1970s, Japan had experienced the expansion of secondary & post-secondary education. During this period, the rate of high school enrollment exceeded 90% & college reached 30%. People at that time had wanted to receive higher education than the former generation. People had also wished to obtain the jobs such as white collar or prestigious ones more than ever. According to datasets in 2000s, we figure out the new trends of personal status attainment: Japanese people still hope to obtain prestigious or attractive job, nevertheless their educational aspiration have not changed in younger cohorts. These facts show that young generation pays little attention to the college schooling in order to achieve their individual attainment. As a result, occupational aspiration becomes less significant factor to personal status attainment than educational aspiration. This change makes new discrepancy between the meaning of schooling in individual perceptions & the function of diplomas in the society.

2010S00036

Ajisaka, Manabu (Doshisha University, kyoto JAPAN 606-0841 [tel: 81 75 203 6484; fax: 81 75 203 6484; e-mail: majisaka@mail.doshisha.ac.jp]), **Urban Migrants and Their Associations in Japan's Urbanization,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the process of Japan's urbanization due to industrialization & modernization since the 1880's, large amounts of the population moved from rural areas to the cities. 1. The periods of migration from rural to the urban areas –1890s –1930s –1950s-1960s (These two decades mark the period of the most migration: 20million) 2.Points of migration Mainly to the three metropolitan areas of Tokyo, Keihanshin (Kyoto, Osaka, Kobe), and Nagoya, as well as local prefectural capitals. 3.Patterns of migration according to social class. The social classes of these emigrants from the rural areas all differed. (1)Upper class and upper middle class migrants(-children of landowners & farmers) first obtaining educational opportunities & then finding urban employment. (2)Lower middle class & lower class migrants(children of small farmers & peasants) moving to the city to directly obtain employment. Migrants in the upper class & the upper middle class moved to the city for educational opportunities at colleges and universities. They obtained white collar jobs & became bureaucrats or other specialists. In order to survive in urban areas, it was important to have university, large company or government connections. People from the lower middle class & the lower class moved to the cities in order to escape from poverty in the rural areas. They became blue collar workers or small shop owners. When those the lower middle class & the lower class migrants looked for employment & housing or needed help, they had social networks of people from the same hometown, as well as getting help from family & relatives. People in the lower middle class & the lower class, especially people from villages, made associations of people from the same hometown (Hometown- Based Associations, called "Dokyo-Kai" in Japanese) & helped and supported one another. 4.Four types of Hometown Based Associations. Hometown Associations can be classified into four types according to their settlement patterns(concentrated and dispersed) & occupation (the same or different occupation). (1) Concentrated settlements with different occupations (factory workers, the self-employed & employees of the self-employed) (2) Concentrated settlements with the same occupation (i.e. engaging in local industry & living in the immediate area) (3) Scattered settlements with the same occupation (the public bathhouse and using the same shop name in food & restaurant industry (ex. main house/branch associations)) (4) Dispersed settlements with different occupations (Those from concentrated settlements would later disperse & those of the same occupation began to change their occupations.) Type 1 was often formed in towns where manual labor was the center of industry. (ex. seaside areas such as Tokyo, Yokohama, Kawasaki, Osaka & Kobe) Type 2 was formed in areas of varied & less common types of commerce & industry.(ex. Kyoto's Nishijin & Tokyo's Nihonbashi) The example of Type 3 was public bathhouse(Sento). These public baths were collective consumption and formed the public space("living space") for those who were too poor to afford a bathroom where they lived in the inner-city areas and the suburbs. These public baths were usually family owned establishments. The employees were usually the management's relatives from the countryside or from the same hometown. (Abstract shortened by ProQuest.)

Akagawa, Manabu (Graduate School of Humanities and Sociology / University of Tokyo, Tokyo, Japan, 113-0033 [tel: 011-81-3-5841-3809; fax: 011-81-3-5841-3809; e-mail: akagawa@l.u-tokyo.ac.jp]), **Can a Foucauldian Analysis on Sexuality Be Applied to Non-Western Societies?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Michel Foucault in "The History of Sexuality" (1976) argued that sexuality in modern West belonged to civilization of 'scientia sexualis' & that in non-western societies to "ars erotica". He also said disciplinary power has been working through Western sexuality. His analysis can provide an essential view for sociology of sexuality. This paper, however, poses a question, 'can his thesis easily applied to non-Western societies?'. I tried applying his thesis to modern Japan in "The Historical Sociology of Sexuality" (1999) & found several limits. First, Foucault assumed that confession of one's inner sexuality was closely connected with scientific objectification. But Japanese sexual culture lacked the tradition of confession although it accepted many sexual knowledge from the West. Second, Foucault argued that ban on child masturbation by adults was linked with disciplinary power. Surely, medical ban on masturbation were prevalent in modern Japan, but the medical discourses were transformed following its unique historical contexts. I suggest that ban on masturbation can be classified into three different phases & they were closely connected with change of meanings the Japanese gave to sexuality. Third, I suggest sociology of sexuality should be focused not only on disciplinary power but also on meanings we give to sexuality.

Akahori, Saburo (Department of Sociology, Tokyo Woman's Christian University, 2-6-1 Zempukuji, Suginami-ku, Tokyo, Japan, 167-8585 [tel: +81 3 5382 6355; fax: +81 3 5382 4924; e-mail: akahori@lab.twcu.ac.jp]), **The Self-Description of Society in East Asia,** *International Sociological Association, Gothenburg, Sweden,*

¶ It is often said that society is a Western concept & it does not exist in the non-Western world. We examine whether such an opinion is valid or not by using Niklas Luhmann's theory of society. In his theory, the society is redefined as the self-description (of society). Based on such a viewpoint, we explore how society has been described in East Asia. In the late 19th century, intellectuals in Japan tried to translate the concept of society into various expressions. But in the end the word shakai was adopted. The Japanese word shakai consists of two Chinese characters, & the character "sha" implies the nature & "the Holy". It is quite different from what "society" or "Gesellschaft" indicates. The word shakai as a translation of the word society was then imported to China, Korea, & Viet Nam. As demonstrated by the adoption of the word shakai, we see that in the East the concept of society contains the nature or the integration by "the Holy" in itself. We conclude that, the society does exist in the East as the self-description (of society), & it differs between the West & the East (especially East Asia).

Akinyemi, Ibrahim Olayinka ([tel: +2348062135487; e-mail: akinyemibrahim@yahoo.com]), **Knowledge, Attitude and Perception of Undergraduate Students towards Female Participation in Sports,** *International Sociological Association, Gothenburg, Sweden,*

¶ Sports which is a universal phenomenon is more often than not seen as an activity meant for the men alone with culture being the most responsible factor. This has contributed to the high rate of poverty among women who perhaps could have been empowered through sporting professions. This study tried to understand the views of undergraduates towards female participation in sports; the hiderance and the solution to increasing their participation as well as its effects of the society. The study carried out among undergraduates in Obafemi Awolowo University, Nigeria made use of quota and convenient sampling techniques in selecting 110 samples which had equal representation of both gender & all the 11 faculties. Questionnaires & SPSS were used as the research instrument & data analysis tech-

niques respectively. The findings showed that the undergraduates had a good knowledge, attitude and perception towards female participation in sports acquired through the media with 96.4% supporting its encouragement; they identified marital responsibilities & cultural values as the major hindrance; recommended the school, government & media as the key agents in promoting female participation in sports with the conclusion that the process will enhance societal development through job creation & reduction in social vices.

Akiyama, Akiko, Hanabusa, Hiroo & Mikami, Hiroshi (Division of Heath Sciences, Osaka University Graduate School of Medicine, 1-7 Yamadaoka, Suita city, 565-0871, Japan [tel: +81-6-6879-2551; fax: +81-6-6879-2551; e-mail: mikami@sahs.med.osaka-u.ac.jp]), **Factors Enabling Home Care for Frail Elderly Persons Living Alone (EPLA)–A Study of Institutions Specializing In-Home Medical Care in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ Aim: The aim of this study was to examine the characteristics of home care supporting clinics providing home care for frail elderly persons living alone. Methods: This study was an anonymous mailed survey of 998 institutions specializing in home medical care in 23 ward of Tokyo, Japan. A self-administered questionnaire was mailed to each institution between July & August 2009. Results: Out of 998 clinics 183 responded (response rate: 16.7%). Those clinics providing home care for the frail EPLA significantly collaborated with 4 or more home visit nursing stations (42.5%) & 4 or more care managers (58.7%) & had sufficient medical care equipment, such as an oxygen inhaler, ventilator, & intravenous hyperalimentation. Sixty-one percent of the clinics which provided care for the 18 patients who died at home collaborated with 4 or more care managers. Characteristics of frail elderly persons living alone were as follows: 85.0± 8.9 years (mean age), female (65.4%), & suffering from cancer (22.4%), heart disease (20.6%), cerebrovascular disease (20.6%), or dementia (30.8%). Conclusions: Our findings suggest that the factors enabling home care for frail EPLA are as follows: 1) collaboration with care managers, 2) collaboration with home visit nursing stations, 3) sufficient medical care equipment.

Akram, Mohammad (Department of Sociology, Aligarh Muslim University, Aligarh, (U.P.) PIN 202002, India [tel: + 91 9411983487; e-mail: m.akram.so@amu.ac.in]), **Development of Sociology of Health in India: Phases, Paradigms and Future,** *International Sociological Association, Gothenburg, Sweden,*

¶ Sociology of health in India passed through several phases and incorporated discourses often identified as medical sociology and sociology of medicine. Parsonian system theory, interactionist perspective, conflict approach & phenomenological approach have lasting impact on various paradigms developed in this course. This paper is analytical in nature & focuses on three aspects: (i) phases of development; (ii) emerging paradigms; & (iii) future course of action. The proposed phases are tentative. The first phase (from independence to emergency), influenced by contexts like lack of proper health infra-structure & limited interaction between sociologist & health institutions, discussed concepts like health-culture, hospital system, doctor-patient relations, modern as well as ethnic/indigenous medicines, etc. The second phase (between Alma-Ata declaration & arrival of AIDS) was dominated by paradigms of health for all, family planning, poverty and malnutrition, medical pluralism & alternative medicine. Studies related to spread of AIDS, reproductive & adolescent health, Millennium Development Goals, marginalized groups, health inequalities etc constitute the third phase. The paper concludes that the future of this discipline in India lies in its capacity to develop its own contextual paradigms to address various national and global issues.

Al-Badayneh, Diab M. (Department of Sociology, AHU, Maan, Jordan [tel: +962-79555-2202; fax: +962-4611-138; e-mail: dbadayneh@yahoo.com]), **Good Governance, Corruption, and Terrorism in the Arab World,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study aims at exploring the relationship between good governance, corruption & terrorism incidents in the Arab society. Data of this study is based on reliable international databases that cover twenty two Arab countries. Findings show a relationship between terrorism rate & governance components (voice & accountability, r = 0.311, political stability, r = -0.361, government effectiveness, r = -0.-04, regulatory quality, r = 0.38, rule of law r = -109, control of corruption, r= -0.121, & average intuitional quality, r=-0.10). Findings show that all measures of corruption: freedom from corruption (r =- 0.31; -0.26, &-0.30, respectively); control of corruption (r =- 0.40; -0.39, & -0.38, respectively), & corruption perception index (r =- 0.376; -0.38, & -0.37, respectively) were significantly correlated with the total number of terrorists; incidents & fatalities. Significant differences have been found in freedom from corruption; control corruption, & corruption perception according to human development levels (F=4.89; 15.47, & 10.51, respectively I- = 0.04; 0.00 & 0.001, respectively). Moreover, a relationship is found between terrorists rate & freedom (Press freedom, r= 0.295, economic freedom, r=0.034, business freedom, r=-0.023, trade freedom, 0.146, fiscal freedom, r=0.162, government size, r =-0.25, monetary freedom, r=0.224, investment freedom, r =-0.257, finance freedom, r=0.312, property freedom, r=-0.09, freedom from corruption, r=-0.139, & labor freedom, r=.034).

Al-Rozzi, Emad (Faculty of Social Sciences/Oslo University College, Postboks 4, St. Olav plass, 0130 Oslo, Norway [tel: +4748155154; fax: +4722453600; e-mail: Emad.Al-Rozzi@sam.hio.no]), **Unaccompanied Asylum Seeking Children at Care Centers in Norway: Researching Care in Transition,** *International Sociological Association, Gothenburg, Sweden,*

¶ This research project is exploring the systems of care in Norway that are designed to provide care for unaccompanied asylum seekers under the age of 15. Norwegian child welfare services have been given the responsibility for a new & vulnerable group of children and adolescents. Since the organization of care-provision at the Care Centers is rather new, systematic knowledge about the situation of the children who reside in these centers & for professional care-givers is sparse. My research focus is how care in transition is practiced, experienced & interpreted in a transitional period which is supposed to last for less than a year. Here I will present the methodological approach that is designed to unfold & explore this care in transition. A series of three time-based Life-form interviews with the children during their residence at the care centers are used, as well as single life-form interviews with professional care-givers. In addition, observations in various settings & of daily activities as they unfold the organization, practice, experience, & understanding of care-receivers and care-givers at two care centers are also used. Primary findings, fieldwork challenges, limitation & delimitation will also be presented.

Alamgir, Alena K. (Rutgers University, Piscataway, NJ 08854, USA [tel: ; fax ; e-mail: akalamgir@gmail.com]), **Contesting Class Consciousness: Resistance Strategies of Vietnamese Temporary Migrant Workers in 1980s State-Socialist Czechoslovakia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Labor migration organized by Central European state-socialist governments in the 1970s-1980s is usually thought to have rested upon harsh surveillance of foreign workers both by their own states and the host states. Concomitantly, the consensus in the literature is that foreign workers were rather hapless victims of the respective states' ideological cynicism & economic voraciousness, even qualified as "slave labor." Vietnamese workers especially tend to be described as docile. Based upon ongoing archival research, I argue that Vietnamese workers in the 1980s Czechoslovakia were far from unassertive workforce. Letters sent to the Labor Ministry by frustrated socialist factories' managers show that Vietnamese workers deployed a number of collective resistance strategies, including strikes (a form of dissent essentially unheard of in 1982 Czechoslovakia). Vietnamese workers protested most often against low wages & the compulsory transfer of parts of these wages to Vietnam; they also objected against the types of work assigned to them & tight control of their private lives. Czech socialist managers & bureaucrats found it hard to respond to these protests, which essentially utilized means straight out of the class-struggle toolkit. They were further vexed by what they perceived as Vietnamese Embassy officials' "unresponsiveness" to their pleas for disciplining help.

Alarcon, Amado (Universitat Rovira i Virgili, Av. de la Universitat, 1 [tel: 34 666 25 71 65; e-mail: amado.alarcon@urv.es]), **Spanglish as a Private Language, Liberalized and Deregulated. The Case of the City of El Paso (Texas),** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper focuses on the question of how free-market & globalism ideology affects on the extend & legitimation of code-switching. In order to achieve this purpose, we examine the linguistic policies & practices in private-owned business in the City of El Paso (Texas). On the border between

Mexico & the United States, English, Spanish & the so called Spanglish combine elements of utmost interest from a sociological point of view, because the prestige, recognition & functions of each language are socially unequal. The interest of the City of El Paso for the purposes of our research arises from the facts that: 1) Spanish is the language spoken at home of 69% of inhabitants of the City of El Paso (29% English only) (US Census 2000 Data) & 2) English is the prestige language in the local & national political context. Our main objectives were: a) Identify, by qualitative methods (45 in-depth interviews), the principal types of linguistic policies in private owned-business; b) Observe the extend & legitimacy of "English-only work rules" as part of a political movement; c) Analyze the effects of linguistic criteria (knowledge of English and Spanish) on selection & promotion of personnel; d) Observe the process of the deregulation & liberalisation of the business world over the deregulation of languages. In order to explain this polices & practices we have chosen three main independent variables: a) the degree of linguistic intensity in job performance, as an indicator of the degree of importance of information management & knowledge production in the productive activity; b) the linguistic origin & characteristics of the owners of the firms & customers; c) the degree of internationalization of the companies. This variables allowed us to observe: 1) The extend in which recruitment & promotion, when based on linguistic criteria, involve forms of occupational stratification that affect the different linguistic groups; 2) Conflicts between economic & political forces regarding languages. On the latter point, the lack of legitimacy of the "English only" movement in El Paso, the increasing role of cross-border economy & the economic ideology of globalism leads to increased extension of code-switching as a form of private language, liberalized & deregulated.

Alario, Margarita V. & Freudenburg, William R. (University of Wisconsin, Whitewater, WI, Whitewater, Wisconsin, USA, 53190 [tel: 262 472 1133; fax: 262 472 2803; e-mail: alario9@aol.com]), **Water: Changing the Course of the Titanic?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Although some of the most provocative sociological thinking about risks is associated with Anthony Giddens & Ulrich Beck, past assessments have judged the more nuanced views of authors such as Short & Erikson as being sociologically superior, both as theory and as guides to empirical interpretations. The key difference is that, while Giddens & Beck see the risks of "The Risk Society" as transcending all social boundaries, the world we inhabit is one of what we have called Titanic Risks. As was the case for the ill-fated ocean liner, the entire ship may have sunk, but the actual risks were strongly related to victims' positions in society and in space. Still, past assessments have focused on highly specialized, "advanced" technologies, such as those involving nuclear materials; the question is whether similar conclusions would emerge from analyzing older or more basic technologies. To answer that question, we turn to what may be the most fundamental of all human resource needs–water. International organizations began devoting serious attention to the significance of water, including potential conflicts over access, during the 1980s, leading eventually to the 2003 United Nations Report, Water for People, Water for Life. Natural resources in general, & water in particular, have been the focus of growing significance for the systematic study of environmental risks, & the end of the Cold War has intensified the search for appropriate social scientific models for understanding their relevance for new constellations of world conflict. In this examination, we find that insufficient or degraded water access often serves as a proxy variable for global environmental conflicts linked to poverty & gender inequality. For water as well as weapons, sociological approaches to risk, exemplified by Short & Kai Erikson, prove to be superior to the emphasis on technological mega-risks typified by Giddens & Beck. Far from "transcending" social boundaries, the risks of the 21st century wind up reinforcing & exacerbating them.

Alasuutari, Maarit & Alasuutari, Pertti (University of Jyväskylä, Jyväskylä, Finland, 40014 [tel: +358405321674; e-mail: maarit.alasuutari@jyu.fi]), **Your Child is Not Yours: Governing the Family Life through the Child's Educational Plan,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper deals with the implementation of the practice according to which in Finnish daycare, an individual educational plan is drawn up for each child in collaboration with the child's parents. The practice is informed by the National Curriculum Guidelines on Early Childhood Education & Care, which have been influenced by the research & development projects of the OECD. In the guidelines the planning practice is framed by the idea of parent-teacher partnership. By juxtaposing the international context & the official goals of the new practice with what eventually takes place in the parent-practitioner discussions, the paper shows that the outcome is quite different from the initial ideas & plans. Instead of actually drawing up individual plans for the children, the focus is on how well a child adapts to the practices of the institution. The practitioners use the discussion also as a means to get information about the family life of the child as a potential source of problems related to the child's adaptability. In addition to documents related to the new practice, the data consist of 32 audio-taped parent-practitioner meetings, analyzed by using discourse analysis.

Alber, Ina (Center of Methods in Social Sciences, University of Goettingen, Germany [e-mail: ialber@uni-goettingen.de]), **Biographical Meanings of 'European identity' among Polish Civil Society Activists,** *International Sociological Association, Gothenburg, Sweden,*

¶ Research on "European identity" often refers to static concepts of identity & to a homogeneous image of a single unified Europe not taking into account the different biographical experiences people from various historical, cultural & political backgrounds in different parts of this "artificial" geographic & political unit may have. Furthermore, researchers generally focus on Western ideas of Europe, sometimes neglecting, for instance, post-socialist countries. As researchers, we need to consider the various aspects of people's biographies & to reconstruct the genesis of their today's presentation & narration within a certain historical and social context in order to understand the meaning of Europe & a European community for the actors creating it. When examining this, the example of people born & socialised in Poland is especially interesting due to the historical framework as Polish history has always been strongly intertwined with the question of Europe & a concept of the "European identity". But does this political framework of an interconnection become salient in civil society activists' recent engagement for Europe? I would like to be given the opportunity to provide insight into the different ways of dealing with Europe in "Polish biographies" presenting some cases from my PhD research sample. It is based on biographical case reconstructions (see Rosenthal 1995, 2004) of people engaged in civil society organisations in Poland after the 1989 transformations as well as on discourse analysis on the concept of civil society. I will discuss different types of biographical narrations & experiences of Europe in a society under transformation, & ways of acting on it. I want to show that the biographers use the concept of Europe & "European identity" (also determining if this concept exists) in various & fluid ways according to their biographical experiences & their established patterns of acting.

Alberth, Lars, Bode, Ingo & Bühler-Niederberger, Doris (University of Wuppertal, Wuppertal, Germany, 42119 [tel: ; e-mail: alberth@uni-wuppertal.de]), **The Professional Divide in the Societal Response to Child Maltreatment. Observations from Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ Internationally, maltreatment of small children is increasingly viewed as a severe challenge to social professionalism. Concern is widespread about imperfections of existing patterns of intervention, regarding the use of organisational resources and resistance to interprofessional collaboration. However, this debate has shortcomings concerning the way it addresses professional divides in the societal response to child maltreatment. Firstly, more awareness is needed towards the professions' intrusion in the families' life world as it is subject to a bargaining between parents & professions. Secondly, a crucial problem seems to be the invisibility of the child in a professional perspective. Thirdly, multi-party interventions are widespread, with the simultaneous involvement of different professions, each following a distinctive approach of how to intervene. Particular trajectories of professional interference emerge which entail case-specific (chains of) reactions. Drawing on a review of the international literature dealing with the field, & referring to the institutional setting in Germany, the paper sets out a theoretical framework for an in-depth enquiry currently carried out. It argues that the sociology of professions should pay greater attention to both the entanglement of multiple professional identities during social interventions & the way of how professions conceptualize their role vis-à-vis the private sphere of their clients.

Albertini, Marco & Zucchelli, Eugenio (University of Bologna, Bologna, Italy, 40126 [fax:; e-mail: marco.albertini2@unibo.it]), **Unequal Inequalities. The Impact of Income, Wealth and Edu-**

cational Inequalities on the (Formal and Informal) Support Package of the Elderly: A European Comparison, *International Sociological Association, Gothenburg, Sweden,*

¶ In recent decades increasing numbers of elderly individuals, decreasing availability of unpaid care givers, & increasing pressure on the financial sustainability of public welfare spending have contributed to put the issue of long term care needs of the elderly at the center of public debate & scholars' interest. Although differently organized, all western European countries (WECs) grants elderly people universalistic access, based on the principle of residency, to basic health care services. However, there are major differences between WECs in the public provision of those services that are not included in the narrow area of basic health care services. In particular, large differences exists between WECs as for what regards the provision of long term care services to the elderly. Here, not only models of organization of services vary widely across WECs, but there are also relevant differences as for what regard the amount of support which is granted by the state or, on the contrary, it is assumed to be delivered by the family or the not-for-profit sector. Therefore, we expect 'support packages' for the elderly in need of long term care to vary markedly across different countries, both from the qualitative & quantitative point of view. Eventually, differences in the design of both health & social care services, should not only generate differences between needy elderly people who live in different countries, but also should significantly affect the within-country inequality of non-basic-health care utilization and "long term social care packages" according to the following respondent's characteristics: income, wealth, education, immigrant status, family composition. In this paper, we analyze existing inequalities in formal & informal support for the frail elderly using data from the first two waves of the Survey of Ageing, Health and Retirement in Europe (SHARE).

Alegre, Miquel Angel & Benito, Ricard (Institut de Govern i Polítiques Públiques, Universitat Autònoma de Barcelona, Bellaterra, Spain [tel: +34 93 5868810; fax:; e-mail: miguelangel.alegre@uab.cat]), **Explaining Early School Leaving in Europe. The Role of Vocational Education in the Frame of Other Contextual Factors,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper aims to examine the impacts of certain contextual factors on the levels of school dropout, assessing at the same time the margin for intervention which educational policies still have to tackle this problem, particularly those policies aiming to promote vocational education. Using simple regression analysis, we investigate the existing relation between a number of contextual indicators & two measures of school dropout (early school leaving, & level of non-participation in education of youth aged 18) in 30 European countries. We take into consideration factors of socioeconomic, labour & education contexts, as well as variables of public expenditure on education & configuration of the school system. Using multivariate analysis, we assess the net effect of those more relevant factors on the levels of non-participation in education of youth aged 18. Results point to three focuses of attention: low-skilled occupation, the structure of public investment in education, & the configuration of the school network. In terms of educational policy implications, it appears that certain strategies of financial aid to students can have positive impacts on reducing such levels. Likewise, results suggest that vocational education can favour the school continuity of a significant group of students beyond compulsory education.

Alexis, Gwendolyn Yvonne (Monmouth University, Management & Marketing Department, West Long Branch, NJ 07764 [tel: 908 879-8028; fax: 908 879-9601; e-mail: galexis@monmouth.edu]), **Youth and Religion: The Second Generation in the Diaspora,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper deals with second generation youth in the Diaspora and religion. The focus is the children of the non-Western, non-Christian emigrants who arrived in Western predominantly Christian immigrant host lands during the last quartile of the 20th Century. I explore how Muslim youth in Europe & Muslim, Sikh, and Hindu youth in the U.S. are integrating religious identity with the various other sources of identity (e.g., status as college student, ethnic identity as a non-white, & ascribed hyphenated identity based upon the national origin of one's parents) to eke out social space in predominantly Christian immigrant host nations. The paper explores the extent to which their first generation parents have been "racialized" on the basis of ethnicity, religion, or national origin & the impact this has had on the second generation. I analyze evidence that negative stereotyping on the basis of "looking foreign & non-Christian" has made it tempting for second generation youth to distance themselves from their religio-cultural heritage. However, I argue that the loss of social-capital that results from "passing" makes it a strategically unsound move even for the second generation. Although the field research for this project was carried out in Sweden and the U.S., I draw upon data collected from Canada to advance the central argument.

2010S00054

Alexius, Susanna (Score/Stockholm School of Economics, SE-10691 Stockholm, Sweden [tel: +4886747417; fax: -; e-mail: susanna.alexius@hhs.se]), **Responsibility For Sale! Responsible Gaming from State Morality to Market Commodity: Processes of Consumer Responsibilization in the Swedish Gambling Market,** *International Sociological Association, Gothenburg, Sweden,*

¶ How is responsibility (re)constructed & (re)distributed amongst market actors? This paper contributes to our understanding of processes of responsibilization in contested markets by discussing the recent commodification of responsibility in the Swedish gambling market. Based on some 40 interviews with key informants, extensive document studies & a dozen participant observations, the paper tells the tale of how the Swedish state & the state owned gambling firm Svenska Spel [Swedish Games] has managed to redistribute responsibility for gambling related harm during the past two decades. The paper describes how 'responsible gaming' has been reconstructed from being a state morality to being a market commodity: how the Swedish state has reformulated its role and responsibility, from acting as a moral guide & restrictive market regulator to being not only a producer of an increasing number of games but also a 'responsibility entrepreneur' in a growing niche market of responsible gaming services. The implications of this shift from state morality to market commodity are analyzed in terms of a successful responsibilization of the individual gambling consumer.

Alieva, Aigul & Hartung, Anne (CEPS/INSTEAD, 44, Rue Emile Mark, Differdange, Luxembourg, L-4620 [tel: +352-585855621; e-mail: aigul.alieva@ceps.lu]), **Assortative Mating Within and Between Native and Immigrant Groups in Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ We are interested in two particular aspects of union formation. First, we examine native & immigrant-subpopulation groups separately exploring the diversity in partner choices based on the socio-economic & educational background. We focus on the probability of having a partner with similar characteristics and analyse under which conditions heterogeneous partnerships occur. Secondly, we are interested in degree of inter-ethnic partnering. Focusing now on the ethnic background, we expect to find a generation effect in line with the literature on inter-generational assimilation, which argues that the second generation shows higher rates of inter-ethnic marriage or cohabitation (assimilation hypothesis). We will, however, also

test competing hypotheses such as the "pioneering" hypothesis, which argues that it is the first generation who more frequently finds partners outside of their group. The analysis will draw on the Generations & Gender Survey (UNECE) data for Germany (N=10,079) & France (N=10,013), the countries with a sufficiently high share of respondents with direct or indirect migration background (approx. 15-20%). The data offers rich information about the respondent background, parents and partner/spouse, as well as various aspects of work life, educational history, & etc.

2010S00056

Alistair, John & Jackson, Steve (School of Sport, Tourism and the Outdoors, University of Central Lancashire, Preston, UK, PR1 2HE [e-mail: ajohn1@uclan.ac.uk]), **Sailing Away: Corporate Nationalism in New Zealand America's Cup Campaigns 1987-2007,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study examines the relationship between sport, globalization and national identity. Specifically, the paper focuses on how the Royal New Zealand Yacht Squadron's America's Cup campaigns from 1987-2007 represent & reproduce the concept of corporate nationalism. Located within a critical cultural studies perspective the analysis uses a multi-method approach including textual & contextual analysis & semi-structured interviews with key media cultural intermediaries to examine a unique global-local nexus involving corporate sponsors, state owned enterprises & private individual investors whose elective affinity set about to unite the New Zealand nation. The findings reveal that: (a) both local and multinational corporations (MNC's) use sport as a vehicle through which to articulate their brands with national identity as part of a process of localization; (b) the promotional culture of major sporting events such as the America's Cup provides a platform for MNC's to (re)present, (re)produce & (re)construct national identity; and, (c) despite their strategic attempts to appropriate national icons & themes multinational corporations face resistance & national identity remains a contested domain. Key words: Globalization, Nationalism, New Zealand, Media, Sport

Alkan-Zeybek, Hilal (The Open University, Walton Hall Milton Keynes MK7 6AA UK [tel: +44 (0)1908 654882; e-mail: h.zeybek@open.ac.uk]), **Cultivating an Embodied Religious Ethics of Care: Workers of Islamic Charities in Turkey,** *International Sociological Association, Gothenburg, Sweden,*

¶ Religious ethics, with all its bodily comportments, rituals & keen eye on minute details poses an important challenge to the conceptions of ethics in Kantian philosophical traditions. The salience of the positive aspects of ethics in these traditions urges for an attention paid to the visceral, practical and affectual processes that help to form & transform religious bodies. This paper aims to focus on these processes in one particular location, with an ethnographic reliance on detail. In Kayseri, a large Central Anatolian town in Turkey, where I have conducted my fieldwork, a core divide between the benefactors and workers of charities lies in their bodily attitudes towards the beneficiaries of their charitable organizations. For charity workers a religious ethics of care find its expression & its content in cultivating compassionate attitudes, establishing physical contact with the persons in need & overcoming well established dispositions regarding dirt, filth, disgust, affection and care. It is the formation of an ethical being through the never-ending processes transfiguring actions, donning new stances and meticulously working on behavior.

Alkerman, Silvina Verónica (UTDT - Universidad Torcuato Di Tella, Buenos Aires, Argentina [e-mail: silalk@gmail.com]), **Gramscian Manifestation Social Movements,** *International Sociological Association, Gothenburg, Sweden,*

¶ The present paper analyzes Gramsci's "hegemony" and "counter-hegemony" concepts & discusses its usefulness to understand the emergence of new social movements that pronounce themselves as civil society's resistance to the neoliberal globalization, through renewed methods of struggle against the dominant order & the integration mechanisms, both perceived as subordination & exploitation procedures. The first section describes & examines the gramscian conceptions on which this study pretends to guide the reflection. The following section approaches the globalization matter & recognizes the alternative voice of new political actors organized by way of resistance movements. Finally, the work concludes with some general thoughts on how can the gramscian concept of counter-hegemony be interpreted in the current context.

Allen, Jodie Toni (University of Cambridge, Department of Sociology, Faculty of PPSIS, Free School Lane, Cambridge, CB2 3RQ [tel: +44 7780 818845; fax:; e-mail: jta26@cam.ac.uk]), **Remembering Illness, Constructing Recovery: How Individuals Use ED Memoirs to Interpret their Eating Disorder Experience,** *International Sociological Association, Gothenburg, Sweden,*

¶ The reading of eating disorder (ED) memoirs is a popular past-time among those with eating disorders. These personal accounts of illness are discussed in the online eating disorder community on blogs, Internet forums, & in the discussion sections of author's websites. As a collection of illness narratives, ED memoirs may be viewed as a cultural reference library which individuals draw upon in order to construct their own illness story. Using a discourse analytic approach, this study uses data from discussion forum postings & semi-structured interviews to examine how readers use ED memoirs as a resource to interpret & express their own eating disorder experience. More specifically, it explores how these texts are used by readers to negotiate what it means to be "ill", in "recovery" or "recovered" & how this definitional work impacts their perception of self & affects their eating behaviours.

Almaguer-Kalixto, Patricia Eugenia (CEIICH, Universidad Nacional Autonoma de Mexico (UNAM), Ciudad de Mexico, (Mexico) [tel: (52-55) 24571622; e-mail: palmaguer@labcomplex.net]), **An Empiric Approach to Sociocybernetics: Linking Cibercultur@ and Environmental Knowledge,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper contributes to strength the link between sociocybernetics and cybercultur@, from a theoretical perspective & empirical approach. The main objective is to discuss the potential contributions of this relation to the field of environmental knowledge & natural resource management. In the first part, the paper discusses the potential link between sociocybernetics and environmental knowledge from a social development perspective and identify some conceptual challenges. The second part refers to the context of an empirical research about Cybercultur@ & local knowledge communities where these concepts are applied in a participatory action research developed by LabCOMplex (CEIICH, UNAM) in San Luis Potosi, Mexico. I will refer the progress of the research process, where we are analyzing local perceptions of the environment, aiming to identify information structures and knowledge constructions that local actors use to base their opinions, actions & decisions regarding issues of vulnerability, risk perception & adaptability. With this work we aim to identify relevant observables for the construction of an environmental information system for local use which will be complemented with historical, geographical & biophysical information of the location selected. This will be useful to analyze information and knowledge gap & identify new type of questions that can emerge from collective reflection in the context of this participatory research.

Almås, Reidar, Bjørkhaug, Hilde, Campbell, Hugh & Rønningen, Katrina (Centre for Rural Research, 7491 Trondheim, Norway [tel: 004792485399; fax: 004773591275; e-mail: reidar.almas@bygdeforskning.no]), **Comparative Perspective on the New Productivism in Agriculture,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the late-1980s & 1990s a common view was emerging amongst farmers, policy-makers & academics that a new world agricultural order was upon us. The post-war "productivist years" appeared to be over, as the problem with global agriculture switched from under-supply to over-supply, & public sentiment from food security & prices to environment, animal welfare & health. European governments reacted by partly decoupling the link between production & subsidies & promoting alternative income sources often oriented towards the consumption of the countryside. This turn has been of significance politically, ideologically and practically, & also with some environmental benefits. Multifunctionality has been an important consideration in WTO agricultural negotiations, & even those countries who dismiss it as "disguised protectionism", have developed agri-environment programmes of their own. Even avowed free trading food exporting countries like New Zealand, have undergone a significant shift towards a "greening" strategy in some key export industries. However, the past two-three years have introduced some serious doubts. Rising incomes in countries like India & China have increased demand for food. Increasingly pessimistic predictions concerning the impact of global warming on agriculture, coupled with major climate change events, have led to doubt about the capability of the current agricultural system to pro-

vide a reliable supply of food in the future. Rising crude oil prices have resulted in major cost increases for agricultural inputs resulting in prices rises for key commodities. Further, attempts to promote biofuels have seen huge areas of grain producing land converted to crops for fuel production. Food market speculation is another factor pushing up commodity prices. Recently food prices have fallen again, showing a more unstable & fluctuating pattern. In response to this shift from stable rural development premised on post-productivism, to a global food economy increasingly influenced by shocks & surprise events, do agricultural policies need to regain a strengthened production focus in First World countries? Will the recent respite in productivist approaches turn out to be a temporary shift and, if so, is a neo-productivist regime emerging? Or is this set of responses just one of many strategies emerging in the face of new shocks to the world food economy? Do these changes amount to the advent of a new "bioeconomy"? Are we seeing a new technological imperative in agriculture? How do responses differ between countries & between different agricultural policy regimes? What are the consequences for rural, environmental and socio-cultural sustainability? What are the implications for rural diversification strategies & for the inclusion of previously excluded social groups (such as women) that they have encouraged? Is there a decisive shift in the balance of power occurring in rural areas between production, consumption & environmental interests? And does the new focus on climate, food & energy production challenge conceptualisations & (theoretical) approaches within rural studies? The mini-conference will be organized as a roundtable discussion. Three short presentations will inspire attendants to take part in the discussion of impacts of the new situation for national & global agricultural systems and climate change policies.

Almas, Reidar & Brobakk, Jostein (Centre for Rural Research, 7491 Trondheim, Norway [tel: ; e-mail: reidar.almas@bygdeforskning.no]), **Increasing Food and Energy Prices: What are the Causes and Who is to Blame?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since early 2006 food prices have increased dramatically, creating social unrest, political protests & a debate on causes & cures. Number of people getting less than necessary food has passed 1 billion, according to FAO. After late 2008, world market food prices have fallen, but not to the low pre 2006 level. In fact the food basket of the "world consumer" is twice as expensive in late 2009, compared to January 2006. Increasing food prices have different & complex causes throughout the value chain, because of technological development, climate changes, trade distortion, and globalisation. We live in times in which food & energy comes from the same basket: Technologically "everything may be concerted to everything, everywhere". Four problems of investigation will be discussed: 1. What are the causes of increasing food prices 2006-2008? 2. What are the links between energy & climate policies & food prices? 3. What are the consequences: Who are winners & who are the losers? 4. What can be done in order to develop an international sustainable food & energy system? International food & energy price data will be used in regression analysis in order to address those problems.

Almeida, Joana (Royal Holloway University of London, Egham, United Kingdom [tel: 00447923834485; e-mail: j.r.s.almeida@rhul.ac.uk]), **The Variation of Institutional Medical Response to Complementary and Alternative (CAM) Therapies: The Case of Acupuncture and Homeopathy in Portugal,** *International Sociological Association, Gothenburg, Sweden,*

¶ Portugal is in the process of regulating six CAM therapies. Among them, acupuncture & homeopathy have been the ones generating the least & the most controversy, respectively. While the former has been the only one accepted by the Medical Council & formally practiced by medical doctors alongside traditional acupuncturists, the later still remains banned institutionally, yet it has been practiced by medical doctors alongside traditional homeopaths. Drawing on a qualitative analysis of 31 in-depth interviews to medical & traditional acupuncturists & homeopaths, this paper intends to analyse why acupuncture has been accepted by the Portuguese medical establishment while homeopathy has not. As both therapies have been increasingly practiced by individual medical doctors, what has made acupuncture different from homeopathy for having been accepted by the Medical Council? The findings suggest that acupuncture has apparently gained from having more scientific evidence than homeopathy. Homeopathy remains thus very associated to charlatanism. Interestingly, acupuncture's use of needles, in contrast to homeopathy's pharmaceutical nature, was also addressed. Homeopathy's pharmaceutical nature was seen as a threat to the powerful relationship between the pharmaceutical industry & the medical profession. Thirdly, media influence & medical sponsor of acupuncture in Western society, or the dissemination of a positive image of acupuncture through the media & the individual doctors, was also indicated. This paper argues that reasons that go far beyond the strategic medical claim of lack of scientific basis of CAM & that extend to occupational status & power issues should be taken into account when explaining the variation of institutional response to these two therapies.

Almeida, Rachel de C. & Chaves, Miguel (Puc Minas, Belo Horizonte, MG, Brazil [tel: 556181294000; e-mail: rachel@aiec.br]), **Transition from School to Work: The Values in the Sphere of Work and Education in the Perspective of Brazilian Youth,** *International Sociological Association, Gothenburg, Sweden,*

¶ The process of transition to adulthood & their recent changes constitute an important conceptual framework within sociology. This phase of transition to adult life reveals itself through a series of interrelated events that nowadays are transformed as a process both with regard to the sequence once & want to expect. Some recent changes in the transition to adulthood are present in different societies & reveal structural changes such as longer school careers, unstable professional inserts, homologies in gender roles & time dilation of gaining financial independence. A common feature in today's transitions to adulthood, which generates a tension, is that young people have more years of schooling than the previous generation, however, face more difficulties in entering the labor market. This tension reflects the expansion of access to various levels of education & the retraction of the labor market and generates impact in the assessment that young people produce on the level of "satisfaction or dissatisfaction with the level of educational attainment", "value assigned to a university degree" and the "importance they attach to the continuation of studies". The research that leads to this article aims to examine how a group of young Brazilians, in the process of completing the Course in Business Administration, faced with the work at the time to transition from school to work. The analysis revealed aspects that allowed comparisons with other studies conducted in South American and European contexts.

Almqvist, Anna-Lena, Sandberg, Anette & Dahlgren, Lars (School of Health, Care and Social Welfare, Mälardalen University, P.O Box 325, SE-631 05 Eskilstuna, Sweden [tel: +46 16 153725; e-mail: anna-lena.almqvist@mdh.se]), **Paid Parental Leave in Sweden. Motives, Experiences and Gender Equality among Parents–Focusing Fathers,** *International Sociological Association, Gothenburg, Sweden,*

¶ The purpose was to explore similarities & differences in motives, experiences & gender equality between parents in two municipalities (one smaller than the other) in each of the two counties in Sweden with the largest difference in paid parental leave among fathers. Data were drawn from interviews in 2008 with 16 heterosexual couples with a child born 2005 or 2006. The semi-structured interviews were analyzed inspired by grounded theory. A positive similarity was that couples experienced that they got to know the child better. Negative similarities were that mothers & fathers occasionally felt alone & restricted, fathers emphasized lack of male networks. Traditional division of household labor is a stronger pattern among couples in the southern county compared with couples in the northern county. Tendencies are towards increased child-orientation among fathers, which could connect to change in hegemonic masculinity, not necessarily related to increased gender equality in household labor. Differences may depend on that changes in values tend to first occur in heterogeneous social environments, such as the larger municipalities. In the northern county, extensive campaigns have been held during the 1990s to encourage men's use of paid parental leave, which may have contributed to regional difference.

Alqashan, Humoud (Kuwait University, P.O. Box, 17972 [tel: +96599410872; fax: +96524844120; e-mail: hq1965@yahoo.com]), **Attitudes of Kuwaiti Young Adults toward Marriage and Divorce:,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study investigates whether parental marital status affects young adult's attitudes toward marriage & divorce. There exists a vast amount of literature on the impact of divorce on young adults in Western cultures; however, no previous empirical studies have been conducted on the attitudes of young adults from intact & divorced families in the Gulf region or in Arab countries in the Middle East. The sample of the study consisted of 661 young adults from Kuwait University (from divorced & intact fami-

lies). The findings revealed that adults whose parents divorced showed fewer positive attitudes toward marriage than did those individuals from intact marriages. The study also suggested that adults whose parents were divorced carry more attitudes toward divorce compared with individuals from intact marriages. Furthermore, gender was found to be an important factor in shaping attitudes toward marriage & divorce. A longitudinal study is recommended to look at the changes in young adults' attitudes toward marriage & divorce over time, which will help to identify the influence of other factors of attitudes toward marriage and divorce.

Altinyelken, Hulya (University of Amsterdam, Nieuwe Prinsengracht 130, 1018VZ, Amsterdam, The Netherlands [tel: 00 31 20 525 14 73; fax: 00 31 20 525 40 51; e-mail: H.K. Altinyelken@uva.nl]), **Reforming Pedagogical Practices in Sub-Saharan Africa: A Critical Analysis of the Case of Uganda,** *International Sociological Association, Gothenburg, Sweden,*

¶ There has been unprecedented interest in reforming pedagogical practices in sub-Saharan Africa in the past two decades. The reform efforts are often characterized by a move away from teacher-centered instruction to child-centered pedagogy (CCP). The international development agencies have been influential in the diffusion of CCP within the continent, as many have advised CCP as a prescription through educational projects & consultancies that were funded by them. Uganda has been no exception to this trend since the new curriculum for primary schools adopted the principles of CCP. The so-called "thematic curriculum" has been recently developed & after a one-year pilot phase, launched nationwide in February 2007. Based on a fieldwork study in selected schools in Kampala, this paper seeks to investigate the emergence of CCP in Ugandan primary schools & examine the patterns of practice in response to reforms introduced by "thematic curriculum". The paper suggests that the implementation of CCP in Ugandan classrooms has not occurred in the ways intended by policy-makers & offers some explanations for the discrepancy between policy & practice. The paper also raises questions with regard to the appropriateness of CCP as the most suitable pedagogy in African classrooms, especially at a time when CCP is contested in some of its countries of origin in the West. The paper confirms that despite global convergence of education reform agendas, divergences persist at national, regional & local level as educational policies are adapted & re-contextualized through multiple processes.

Alvarez-Gonzalez, M. Rosario & Aracil-Rodriguez, Encarnacion (Faculty of Political Sciences and Sociology, Complutense University of Madrid, Campus de Somosaguas [tel: 34+91 553 26 82; fax:; e-mail: enaracil@cps.ucm.es]), **Los elementos característicos de la Interrupción Voluntaria del Embarazo entre las jóvenes en España: elementos de desigualdad?** (Characteristic Elements of the Voluntary Interruption of Pregnancy between Youth in Spain: Elements of Inequality?), *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ En España, una de las circunstancias más relevantes en el estudio de la salud de la mujer se produce respecto a la Interrupción Voluntaria del Embarazo. Concretamente, la que se refiere al aumento de los abortos voluntarios entre las menores de 25 años. Una de las posibles explicaciones señaladas es el incremento de la inmigración (Informe del Ministerio de Sanidad, 2007; Delgado y Barrios, 2007). Las diferentes culturas y características sociodemográficas se adelantan como factores explicativos en este caso. En esta comunicación se reflexiona sobre estos factores, considerándolos elementos de desigualdad presentes entre las mujeres autóctonas e inmigrantes.

Alves Filho, Eloy, Salcides, Arlete & Freitas, Gilmar, Fialho (Universidade Federal de Viaosa, Departamento de Economia, Viaosa, Minas Gerais, Brasil, 36.570-000 [tel: 00 55 31 3899 1551; fax: 00 55 31 3899 2775; e-mail: eafilho@ufv.br]), **Is It Possible to Be Happy after Imposed Migration?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The concept of Quality of Life has deserved special attention of the international academic community. In this study, this concept involves objective & subjective dimensions that constitute the welfare & happiness of people. Inspiration was sought in studies focusing on the empirical determinants of happiness, such as the World Values Survey and research works conducted by the Center for Bhutan Studies for the accomplishment of the present study, which aimed at identifying the degrees of happiness of families resettled in new rural areas of five municipalities of Minas Gerais, Brazil, due to the construction of the President JK Power Plant. A form with 34 indicators was developed & applied to 61 participants, who valued (in a 1 to 4 scale) those indicators according to their living condition. The study revealed significant differences in the levels of happiness of the resettled people in five municipalities, especially regarding the lack of new schools, kindergartens, recreational areas, health centers, roads, bridges & water availability. This work will provide support to the formulation of public policies aiming at reducing the impacts that have negatively affected the lives of rural workers in Minas Gerais. Keywords: Social Indicators; well-being; happiness; quality of life

2010S00070

Alves, Humberto P. (Unifesp Guarulhos, Estrada do Caminho Velho, 333 Bairro dos Pimentas - Guarulhos-SP, Brazil [tel: 55 19 32560399; e-mail: humbiro@yahoo.com.br]), **Urban Sprawl and Socio-Environmental Vulnerability in the Context of Climate Change: An Analysis of Urbanization Dynamics in the Hyper-Periphery of São Paulo Metropolis,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the context of climate change, with scenarios of increasing intensity & frequency of extreme events such as storms, hurricanes, floods & droughts, situations of socio-environmental vulnerability in towns & cities tend to increase significantly, especially in poor & developing countries. Addressing this issue, the paper's objective is to make an analysis, at intra-urban scale, of the interrelationships between the processes of urban sprawl & the situations of socio-environmental vulnerability in a hyper-peripheral region of São Paulo Metropolis, Brazil, in recent years (2000 to 2009). This region encompasses the District of Cidade Tiradentes at the farthest eastern portion of São Paulo municipality. Thus, we analyze the ways in which these two phenomena are linked, particularly how the processes of urban sprawl & growth of peripheral areas can create new situations of socio-environmental vulnerability, by promoting the presence of low-income population in areas without infrastructure & urban services & with exposure to environmental risks & degradation. The general methodology of the study involves the mapping of land use & of urban sprawl areas, through satellite images, & the identification & characterization of situations (areas) of socio-environmental vulnerability, through the construction and analysis of socio-demographic & environmental indicators at the level of the census tracts of the Brazilian National Census (2000), integrating socioeconomic, demographic & environmental data. The results show a significant association between the processes of urban sprawl & growth of slums & squatter settlements & the situations of socio-environmental vulnerability. Moreover, the results show that there are major overlaps between environmental and social vulnerabilities, with a strong concentration of social and environmental risks in certain areas. These areas have high levels of irregularity in land use, with a strong presence of slums and squatter settlements, & offer extremely unfavorable socioeconomic conditions, with low levels of income, education and sanitation.

Alves, Nuno de Almeida (CIES-IUL, Lisbon, Portugal, 1649-026 [tel: +351 217 941 404 ; fax: +351 217 940 074; e-mail: nalmeidaalves@iscte.pt]), **The Use of ICT in the Teaching and Learning Processes,** *International Sociological Association, Gothenburg, Sweden,*

¶ The opposition between "digital natives" & "digital immigrants" has gained momentum in the past few years. Nowadays, students are perceived as substantially different learners due to their interaction with technologies almost since birth. There is also a common notion that the volume & range of skills needed for the 21 century are somehow substantially different than the ones that are currently taught & learned. Educational systems throughout the world are coping with this challenge: investing in fast internet connections, reducing the ratio between students & computers, developing educational content & software, training teachers and narrowing digital divides. Previous research has identified a weak articulation between ICT & teaching & learning processes. IT is still aimed at training students to operate computers & the internet & less frequently applied in the teaching of core subjects: such as mathematics, languages or history. However, an almost permanent appraisal of this process is needed, after the substantial investments already made or under planning. In this panel session, I intend to discuss more specifically the integration of ICTs in the teaching & learning processes, based on the exam of the available literature & empirical data.

2010S00073

Amacker, Michèle & Keim, Wiebke (Department of Sociology, Social Work and Social Policy, University of Fribourg, 1700 Fribourg, Switzerland [e-mail: michele.amacker@unifr.ch]), **"Es ist eine sehr unsichere Situation, aber ich habe keine Angst"–"No andamos con penurias pero tampoco podemos andar con Florituras". Feelings and Perception of Insecurity in Two Countries,** *International Sociological Association, Gothenburg, Sweden,*

¶ In recent years, the concept of "precariousness" has become very prominent within research on social inequality. "Precariousness" can be characterized by fundamental uncertainty. In fact, households forming part of the lower middle classes are "in-between": a further social decline, a persistence in this insecurity or even a (re-)advancement into a secure social position are possible. Hübinger (1996) defined this intermediate social position as "precarious prosperity". Previous studies have mainly focused on material aspects of precariousness. Due to latest research results, not only objective factors (e.g. low income) have an influence on the choice of coping strategies, but also do subjective factors play an essential role. Our current research focuses on households in precarious prosperity in two countries: Switzerland & Spain. The interviews represent qualitative, in-depth conversations with household members about their wellbeing and household strategies with regard to limited budgets. This is how a woman in Switzerland describes her situation: "Realistically speaking, it is a very insecure situation. But I am not afraid. You can't be really poor in Switzerland", whereas an interviewee in Spain states that: "No, no, man, we are not really in penury, but we can't afford much embellishment either". The two statements highlight the typical "in-between"-situation of households in precarious prosperity as well as different perceptions thereof. We will analyse the interviews with regard to the fact that household strategies are embedded in the countries' welfare regimes. Switzerland & Spain differ considerably with respect to their public support structures for families, their health systems, social security mechanisms & labour markets, among others. We will show in how far these differences are reflected in the realities & strategies of the interviewed households.

Amancio, Julia Moretto (University of Campinas / CEBRAP, São Paulo, SP, Brazil, 04015-090 [tel: +55 11 81275647; fax: +55 11 55740399; e-mail: jumorettoamancio@gmail.com]), **Public Policy Process, Social Action and Participatory Democracy: A Street Level Point of View,** *International Sociological Association, Gothenburg, Sweden,*

¶ The most recent Latin-American democratic governance experience has demonstrated the importance of interaction between public power and civil society in the process of formulation & implementation of public policies. This article departs from that assumption and intends to analyze public policy beyond legal & institutional boundaries, comprehending it as a result of daily meetings between social actors & State agencies. The specific literature about participatory democracy, especially in Brazil, has observed this phenomenon by watching relationships that occur at municipal and national levels. This investigation means to explore these interactions from a local or micro point of view to analyze how they occur from meetings between collective actors organized around neighborhood demands & street level bureaucracy & what are its effects on the public policies production. Simultaneously, intends to observe this process as a two-way street, which means that at the same time these meetings consolidate identities, struggle strategies & certain forms of collective actors' organization. This work has been based in a data analysis collected of São Paulo city, being part of the research "Public Service Reform: The Role of Collective Action & Social Accountability" funded by IDS/UK & carried out in partnership with CEBRAP/Brazil.

Amandio, Sofia (École Normale Supérieure de Lyon, GRS (UMR 5040 CNRS), 15 parvis René Descartes, BP7000, 69342 Lyon Cedex, Bureau R 103 [tel: 00 33 4 37 37 62 90; e-mail: ana.amandio@ens-lsh.fr]), **Young Managers: Positions, Practices, Dispositions,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper I will present an empirical reflection on the professional socialisation of young Portuguese managers. First, I will present the positions young managers occupy in the social space & their professional practices, drawing on the results of a national e-survey on the professional insertion of young managers (21-35 years old), applied to individuals with a higher education management diploma. The survey allows us to identify statistical trends related to diploma-profession correspondence issue, & to analyse the way young management graduates deal with the problems of professional. After having identified the positions managers occupy in the management's labour market, we analyse the dispositions required by managerial professions. For this we will present the results of the analysis of in-depth interviews which deal with the values enacted by people's dispositions (incorporated ways of thinking, feeling & acting) required to perform the profession: sacrifice, loyalty, risk, practical theory or pure practice, evaluations, authority & persuasion.

2010S00076

Amara, Mahfoud & Henry, Ian (School of Sport, Exercise and Health Sciences, Loughborough University, Loughborough, Leicestershire, LE11 3TU, UK [tel: +44 (0) 1509 226370; fax: +44 (0)1509 226301; e-mail: M.Amara@lboro.ac.uk]), **Sport, Muslim Identities and Cultures in the UK: Case Studies of Leicester and Birmingham,** *International Sociological Association, Gothenburg, Sweden,*

¶ The focus of this research is an evaluation of how Muslims in two specific local contexts in the UK (Leicester in the East Midlands; Birmingham in the West Midlands) make sense of the relationship between their religious (Islamic) identities & sporting interests. Leicester in the East Midlands & Birmingham in the West Midlands have been selected because they represent respectively one of the most ethnically diverse areas in Britain and a domicile of one third of the Muslim population in Britain, according to (Office of National Statistic) 2002 census figures. The aim of the investigation is three fold: 1. To examine how the meanings & the practices of sport are negotiated (based on the fundamentals of Islamic belief) by Islamic associations/mosques centres (representing different traditions: Sunni, Shi'aa) in a western milieu in general & in Leicester & Birmingham in particular. 2. Obstacles & challenges for participation in sport and how access to funds & facilities are being negotiated by Islamic associations (to accommodate religious positions with mainstream sport practice in western societies)? 3. The roles of sport in cross & intercultural dialogues within Muslim communities & between Muslims & non-Muslims in the UK.

Ambroisine, Joel (Sorbonne University, Paris, France, 75005 [tel: 0033 1 49 85 34 16; e-mail: j.ambroisine@hotmail.fr]), **Management in a Specific Social Economy Structures: EMMAÜS Communuties,** *International Sociological Association, Gothenburg, Sweden,*

¶ Our Paper treats about Management & Economy of EMMAÜS that is an International NGO. This Organization created Specific Social and Solidarity Structures to homeless people: The Emmaus Communities. They

enable people to move on from homelessness, providing work and a home. It is based on Empowerment: They supported themselves by recycling & selling old furniture. These workers are called Companions of Emmaus & get in France since October 2008 a specific Status as 'solidarity Workers'. The Community does not need to pay any salary to the 'solidarity workers', because they provide them social security. We expose (1) how these Community House represent a self sufficient & alternative to both the Market Economy & the Political Economy variants. (2) We study the based-on Empowerment management & how different types of workers manage to collaborate together with different status & work conditions: there are salaried people, volunteers & the Companions. (3)Finally, we will wonder if that specific structure on the fringe of the Market & Social Economy is creating a new model of Work flexibility or if it is increasing precariousness? Actually, it is a European overview & Comparative analysis based on Empirical investigation in Spanish, French & British Emmaus Communities.

Ambrosini, Maurizio (Department of Social and Political Studies, University of Milano, via del Conservatorio 7, Milano (Italy) 20122 [tel: +39 0250321286; fax: +39 0250321240; e-mail: maurizio.ambrosini@unimi.it]), **Undocumented Migrants and Invisible Welfare: After the Rhetoric,** *International Sociological Association, Gothenburg, Sweden,*

¶ Although irregular migrants are the object of an increasingly hostile rhetoric & restrictive policies, they are widely accepted by families in many countries throughout the world, since they perform the role of caregivers towards children & elderly. In many cases, as in southern Europe, the regularization process recover the balance between migrants de facto established in the country and legal migrants, who are authorized to live & work in the receiving society . The communication, based on research carried out in the Italian context, is going to develop the analysis of the phenomenon at three levels: - the adjustment of immigration policies, where the rhetoric of emergency goes with frequent interventions to legalize undocumented migrants - the relation between welfare systems based on the family, the increased participation of women in the labour market & the employment of immigrants, especially women: in this system undocumented immigrants manage to survive, employed & protected by Italian families. - The interactions established at the micro level between Italian families & foreign workers, characterized by a mix of exploitation & protection, which reminds the pre-modern work relationships. The following processes of regularization & family reunification are thus going to jeopardize these precarious balance, producing an exit from live-in work arrangements. It is in this way produced a further need of new waves of immigration, generally undocumented, to answer the live-in job needs (especially in the case of elderly & very young children) expressed by Italian families. In this way the circuit starts again, between declared criminalization, casual repression, tolerance de facto and concrete use of foreign work.

Amelina, Anna (Bielefeld University, Faculty of Sociology, Bielefeld, Germany, 300131 [tel: +49(0)521 1064649; e-mail: anna.amelina@uni-bielefeld.de]), **'Doing Inequality' beyond Nation State. Transnational Migration and Inequality Dynamics within the New Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ Analyzing transnational migration from the European periphery to its centre the paper addresses mechanisms of inequality formation. On the one hand it describes how transnational migration creates new cross-border frames, which interconnect political & economical settings of emigration & immigration countries. On the, other it makes use of intersectionality concept, which takes a closer look at the relevance of ethnicity, gender, & class to the formation of unequal social positions. In doing so the presentation analyzes three empiric examples, which refer a) to transnational circulation of remittances; b) to transnational circulation of care services; and, c) to transnational circulation of (professional) knowledge. By addressing these three topics I point out, under which conditions & by which social mechanisms transnational social practices simultaneously transform the inequality formation in both, sending & receiving countries & create new scales of inequality.

Amer, Joan (University of the Balearic Islands, Campus Universitat Illes Balears 07122 Palma (SPAIN) [e-mail: joan.amer@uib.cat]), **Business Interest Groups and Mediterranean Mass Tourism Policies,** *International Sociological Association, Gothenburg, Sweden,*

¶ Political configurations of tourist entrepreneurs in the Mediterranean islands have only been described, despite the central role played by them in the politics of the islands. Furthermore, an analysis of these entrepreneurs political impact enables a better understanding of the islands' society & economy, especially for those whose economic development is reliant upon the success of tourism. This is particularly true in the case of Mallorca, Malta & Cyprus, sharing similar developments within the international expansion of global beaches/pleasure peripheries. They have also been shown to present analogous policies debates & discourses impinging on the tourist process. Given the established importance of the isle of Mallorca in the international mass tourism development from the 1960s onwards, both in historic & quantitative terms, Majorcan hoteliers constitute a paradigmatic case in the region. Framed within a political sociology perspective, this paper analyses Majorcan hoteliers as a pressure group & evaluates their fundamental role in the tourism & land policies debate. Conflicts of interests & contradictions emerge in the arena of tourism policies between the hotelier pressure group & other tourism business groups, mostly property-developers, especially where land policies are concerned. Such conflicts determine in decisive ways the future tourist models of these islands. In comparison to the Mediterranean islands of Malta & Cyprus, one finds that similar processes take place, in the sense that hotel representatives constitute also central actors in the public policies debate. Furthermore, parallelisms within the entrepreneur sector are shown, since interest-conflicts happen between hotel pressure groups and the remaining business pressure groups. On the whole, Mediterranean mass tourism not only has severely transformed those prevalently agrarian societies, but has also structured an economic model where hotel accommodation is central, & their owners/managers play defining roles in the political/economical debates of tourism.

Amini, Saeedeh (University of Allameh Tabatabaei, Social Sciences Faculty, Zarabkhaneh, Shariati, Tehran, Iran [tel: 00982144237741; fax: 00982144237741; e-mail: saeedeh.amini@gmail.com]), **Cultural Consequences of Modernization in Iran,** *International Sociological Association, Gothenburg, Sweden,*

¶ Modernization is a Dialectic between construction & destruction–the type of modernization effects on its consequences. In earlier times it seemed modernization set aside the cultural antecedent completely but the passage of time displayed something else. Modernization in Iran was from "up to down" & first it was accomplished by Pahlavi state in 1921. This type of modernization made difficulties in Iran. Cultural resistance against the first Pahlavi(1921-1941) and second Pahlavi (1941-1979) states led to religious a social movement & emergence of new social agencies. In other words, the Islamic revolution (1979) of Iran is the token of cultural resistance against modernization. Modernization didn't have adaptation to the cultural context in Iran, so it was not only led to secularization but also led to Islamic revolution. Modernization is the process that modifies material & non material culture but in Iran it seems most of the modifications have occurred in material culture rather than nonmaterial; hence Iranian society is faced with the cultural cleavage that had a significant influence on Iran. This article tries to show the impact of modernization on the cultural cleavage & its effect upon the Islamic revolution of Iran.

Amozurrutia, Jose A. (LabCOMplex.-CEIICH-Universidad Nacional Autonoma de México, Torre de humanidades II Ciudad Universitaria, Mexico DF [tel: 56-23-04-49; e-mail: amoz@labcomplex.net]), **Social Representations Through Time: An Approach from Cibercultur@l System Construction,** *International Sociological Association, Gothenburg, Sweden,*

¶ Social Representations deals with an interiorizated forms of life activities, cultural experiences & a rich process of symbolic construction. The main challenge consist not only in designing conceptual schemes but to offer new forms of structural transformations & a better understanding of Social Representations process development through time. Social Representations may be applied also in old documents. It implies different point of observation & elements in the analysis, i.e. their seals, types of paper of letters, signs & its contents. This information may be related with cultural experiences and linked with present documents or transcriptions on a diachronic dimension. A Cybercultur@l approach to the analysis of Social Representations conjugates three dimensions of knowledge. Informational dimension is constructed from organization and transformation of categories in Documentary & Oral History. In the communication

dimension forms of connectivity, interaction and coordination of actions between exchange codes are categorized, and in the epistemological dimension basic cognitive operations are extracted from the text in order to rearrange them & have a better understanding of their transformations. Through this lens of observation at LabCOMplex there is an ongoing research project in the Altiplano Potosino i.e. a vast region in the north center in México. In this paper I present the system construction process that let us make powerful reflection on the empirical data and documents. The analysis of Oral History that complements the historical perspective is based on Grounded Theory & is oriented with the cibercultura@l approach to select category levels & the structuration of Social Representational processes by means of cibercultura@l dimensions.

Ampudia de Haro, Fernando (Instituto de História Contemporânea-Universidade Nova de Lisboa, Av. de Berna, 26-C, 1069-061, Lisbon [tel: + 351 91 5546124; e-mail: fernandoampudia@gmail.com]), **Re-Civilising Spain and Portugal: Social Codes of Behaviour and Emotions during Franco's (1939-1975) and Salazar's Dictatorships (1926-1974),** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this paper is to offer a general perspective on the social codes of behaviour & management of emotions during Franco's dictatorship (1939-1975) in Spain & Salazar's dictatorship (1926-1974) in Portugal. This analysis is carried out in the framework of the civilization process theory developed by Norbert Elias. These social codes are reconstructed using good manners, courtesy, & civic education handbooks as empirical sources. The analysis of the codes involves a) a presentation of its content as well as a statement of the arguments used to support advice and precepts regarding the regulation of conduct & the emotions, and b) a presentation of their relationships with major trends and changes occurred at a macrosociological level. The codes were an essential part of the re-civilizing project undertaken by the two regimes, & an intentional & planned project with the goal to create a specific form of "national citizen" alongside with new patterns of social integration. Thus, it will be possible to establish the difference between the sociological concept of civilization advanced by Norbert Elias as an unintended social process with a detectable direction & the Spanish & Portuguese re-civilizing projects, intentionally designed & planned as a means of guiding & controlling the national social change.

Anand, Harjit S. (Centre for the Study of Administration of Relief, X-A5, Sahavikas Society, I.P. Extension, Patparganj, New Delhi–110091 INDIA [tel: +91-9818112427; e-mail: harjitanand@gmail.com]), **Sociology of the Indian Informal Sector,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Paper seeks to define the Indian Informal Sector in terms of two baskets: the first basket contains small, low-capital-intensive enterprises run by self-employed persons drawing on family support and sometimes employing a few hired workers (excluding daily wage workers or piece rated workers). The second basket consists of casual, daily wage workers available at street-corner labour markets or offered by labour agents in sectors like mines, brick kilns & construction; piece-rated workers employed in sectors like carpet weaving, appliqué work & garment making; home based workers like cooks, maids & drivers; minimum daily/weekly payments' based Taxi or Scooter rickshaw drivers who make the said payments to their owners after meeting POL costs; & commission based selling agents who sell an assortment of goods & services from door-to-door. Further, the Paper examines the features of the Indian Informal Sector in terms of its structure, function, range and volatility. It also dwells on the nature of the relationship between the formal, Organized Sector & the informal, Unorganized Sector in India. Thereafter, the Paper focuses the spotlight on four empirical Case Studies: Study of Handicrafts Workers in the Golden Triangle Region of Orissa; Study of Construction Workers, Street Corners Markets & Micro Enterprises in the national Capital Region of Delhi along with experimental interventions; Study of Brick Kiln Workers, Petty Contractors & Women Labourers in the NCR of Delhi; & Study of Scrap Collectors, Traders & Recycling Industries in Pune. Finally, the Paper seeks to highlight some of the common features as well as the striking differences between different sub-sectors of the Informal Sector with a view to evolving an understanding of "the Sociology of the Informal Sector in India." Author Profile Dr. Harjit S. Anand is currently Professor at the Centre for the Study of Administration of Relief and Co-President of the EuroIndia Centre with its headquarters at La Rochelle, France. He has guided India's policy & programmes relating to urban poverty alleviation & nurturing the Informal Sector through several public assignments culminating with serving as Secretary, Ministry of Housing & Urban Poverty Alleviation of the Government of India. He has several publications to his credit in the areas of socio-economic development, poverty alleviation, promotion of SMEs for employment generation & development of the Informal Sector as an engine of economic growth. To mention a few: "Nature of the Informal Economy & Three Sectoral Studies," ILO (2001); "Construction Sector Workers, Street Corner Markets, Micro-Enterprises & Demonstration Initiatives in Delhi," ILO (2001); & Chapter on "Linkages between Informal & Formal Sectors–Some findings from Micro-level Studies" in the book titled "Informal Sector in India–Perspectives & Policies" Ed. Sharma & Kundu, IHD & IAMR (2001).

Anbacken, Els-Marie (School of Human Welfare Studies, Kwansei Gakuin University, Nishinomiya, 662-8502 Japan [tel: +81 (0)798 54-6414; fax: +81 (0)798 54-6845; e-mail: Elsmarie@kwansei.ac.jp]), **Aging and Existential Issues; Thinking from a Swedish Case Study on Short Term Stay in Late Life,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction: What do people in late life experience as they cross the threshold of "institutional" care, when they become short term guests at care homes for older adults? In particular, what feelings & thoughts does this process evoke for them? What are the existential issues they (wish to) deal with? And what are the staff's views & actions? Methods: To answer the questions above a research & development project was carried out in a middle-sized Swedish town in 2006-2007. Qualitative interviews were done with eight staff & six guests/residents and a limited extent of (participant) observations were carried out. Two seminars with staff concluded the project. Results: Existential needs were expressed in various ways by the guests/residents, ranging from the deep meaning of faith & trust in God to the overwhelming grief of losing one's beloved spouse. One's being was the core issue for the existential quest that was disclosed. While some staff expressed insecurity to handle tears, the theme of death etc, others felt ready to encounter such expressions/emotions from the guests/residents. Routines were found as a common hindrance. Conclusion: The study exposed the need to regard existential issues as part of the care, for staff to make room for life's big questions such as death, in the flow of daily work. Often it just takes the staff persons to "be there" for the guests/residents or to listen to their needs. A communicative environment & routines that facilitate such needs are called for. The paper concludes with a proposal for a Japanese-Swedish comparative study.

Ancelovici, Marcos (McGill University [e-mail: marcos.ancelovici@mcgill.ca]), **Field Overlap and the Dynamic of Antisweatshop Campaigns: The Case of the Clean Clothes Campaign in France,** *International Sociological Association, Gothenburg, Sweden,*

¶ Why do antisweatshop campaigns grow in certain countries rather than others? How can we account for their dynamic & trajectory? In order to address these questions, this paper draws upon Pierre Bourdieu & neo-institutionalism (particularly Evans & Kay 2008) and claims that the main actors involved in antisweatshop campaigns are driven by different goals & endowed with different forms of capital because they are located in distinct but overlapping fields. Rather than stress multilayered political opportunities and boomerang patterns à la Keck & Sikkink (1998), this paper argues that the dynamic of antisweatshop campaigns stems from conflicts & struggles between these actors as they pursue their respective goals. It posits that the main lines of division within these campaigns reflect the trajectory, habitus, & capital endowment–in other words, the field location–of their constitutive actors. To substantiate this claim, this paper studies the evolution of the French branch of the Clean Clothes Campaign (CCC) since the mid-1990s & shows how conflicts between unions and NGOs generated by field effects contributed to the stagnation of the campaign. This paper is based on documentary sources and semi-structured interviews with French NGO & labor activists, and relies primarily on a process-tracing method.

2010S00087

Andersen, Nina Blom (Roskilde University, Roskilde, DK-4000, Denmark [tel: 0045 46 74 37 81; e-mail: ninablom@ruc.dk]), **Situational Analysis of Crisis Communication and Warnings,** *International Sociological Association, Gothenburg, Sweden,*

¶ A part of the literature in the field of disaster research recommends the authorities to inform the public about their entire assessments of the potential implications of a hazard, but this is seldom done. It is often stated that the lack of information on the risk assessments during a crisis is brought about by the authorities' beliefs in the ability to control large groups of

people by withholding their assessments in the situation. However, it can as well be argued, that communication processes during incidents with disastrous potential are complicated by the fact that the emergency management actors are not able to foresee how the incident evolve. These two viewpoints will be elaborated & discussed in the paper. It is suggested that the theoretical & analytical approaches offered in writings on 'situational analysis' (Clarke 2005) present tools to understand what constitutes the crisis communication in case of incidents with disastrous potentials. This is an approach not only concerned with the power relations between actors in the field studied. It also shed light on the relationships between subjects & objects, on how materiality is enacted, & through the integration of "non-human actants" in the analysis (Law 2004, Mol 2002). The approach is discussed in relation to two Danish technological incidents. The first case discussed is the explosion of a warehouse storing fireworks, where the emergency management carried out an evacuation within less than four hours. The second case is an incident, where an extended fire in a waste deposit was suspected to be generating dioxin. The fire lasted for 11 days. Clarke, Adele (2005): Situational Analysis. Grounded Theory After the Postmodern Turn. SAGE. Law, John (2004): After Method: Mess In Social Science Research. Routledge. Mol, Annemarie (2002): The Body Multiple: Ontology in Medical Practice. Andersen, Svein S. & Hanstad, Dag V. (Norwegian School of Management, Nydalsveien 37, Oslo, 0844 Norway [tel: +47 46410703; e-mail: svein.andersen@bi.no]), **Organizing for Optimal Performance. Norway's Participation in Vancouver Olympics,** *International Sociological Association, Gothenburg, Sweden,*

¶ The focus for this paper is how the Norwegian Olympic Top Sports program prepared for & organized Norway's participation in the Vancouver Olympics in 2010. The key objective was to exploit opportunities & ensure that all risk factors that can threaten optimal performance were eliminated or reduced as much as possible. It is based on in dept interviews with key actors in the project. A key question is how the Top sports Program develops competence and learns from earlier experiences. Modern elite sport is knowledge intensive. Reliable experience-based learning is essential. With small margins, marginal improvement may be the key to big success. The study therefore also contributes to general insights about how mechanisms for learning can be linked to characteristics of mindful organizations (Weick & Sutcliffe 2001). Producing an optimal setting for Norwegian athletes in Vancouver requires a high degree of integrated knowledge, expectations & behavior under different contingencies. A key question is how, & in which ways, the culture & capacities of the Norwegian Olympic Top Sports program as a mindful organization influences such processes.

Anderson, Stephen, Autry, Cari & Lusby, Carolin (School of Human Performance and Leisure Sciences, Barry University, Miami Shores, Florida, USA 33161-6695 [tel: 305-899-3447; fax: 305-899-4809; e-mail: sanderson@mail.barry.edu]), **Ocean Cruising: A Pathway to Health and Happiness,** *International Sociological Association, Gothenburg, Sweden,*

¶ Members of an international cruising (boating) association were sent electronic or hard copy newsletters asking them to complete (via SurveyMonkey) a questionnaire that was posted on the association's website. Eighty six percent of the 243 respondents were white, 82% of the crew consisted of the captain & one crew member, the average age was 58, & 68% were retired. Thirty six percent held a bachelor's degree & 48% had a graduate or professional degree. Fifty four percent reported an annual household income of /BFM2X4B|END90,000 and above, while 28% spent up to /BFM2X4B|END20,000 annually on boating. Eighteen percent represented 10 countries other than the US. Thirty five percent were currently cruising world wide; however, 48% lived aboard. Forty five percent claimed cruising was very central to their lifestyle & 43% stated it was their lifestyle. Regarding satisfaction of life, 93% were satisfied with their lives with 34% being extremely satisfied. Regarding motivation, novelty and self-development were reported as the two highest motivating factors for cruising. According to the Brief Sensation Seeking Scale, 85% were experience seekers & only 7% were thrill seekers. The Sense of Community Index 2 reported reinforcement of needs as their most important category (96%), followed by shared emotional connection (85%), membership (79%), & influence (75%). For those not currently cruising, the top constraints were job (25%), responsibilities (18%), cost (13%), & health (12%). In summary, cruisers were well educated & retired, with substantial discretionary money to sustain their preferred lifestyle. They were highly satisfied with their life, motivated by exploring strange places; although, they were not thrill seekers. Cruisers appreciated the social capital cruising afforded; however, independence was also important. The number one reason, for those (30%) not currently cruising but preparing to, was employment. It is clear ocean cruising provides a pathway to health & happiness.

Andersson, Ewa (Mid Sweden University, 851 70 Sundsvall, Sweden [tel: +46 60 148626; e-mail: ewa.andersson@miun.se]), **The Rationalization of Cultural Value–A Study of Independent Record Labels in Sweden,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper studies independent record labels ('indies') in Sweden. Although the major record labels hold around 90 percent of the market share, there are over 200 active Swedish indies on the market. This paper discusses how indies talk about their position in the field of cultural production & what aspects they find important in order to achieve success. Data has been collected through a smaller set of interviews with label directors as well as a survey distributed to all members of a Swedish organization of independent music producers. With a theoretical base in Bourdieu's field theory, capital forms & habitus, the paper discusses the indies way of acting within the field & what is considered important for the indies. It is shown that habitus affects the label director's view on success. The way the directors think and act can be described as rational & focused on obtaining cultural capital. It is considered more important to release music and artists that are consider having artistic credibility than to release music that leads to a large economic capital. Also, the director's personal satisfaction is valued higher than commercial success.

Andersson, Janicke (ISV, 601 74 Norrköping [tel: +4611363144; e-mail: janicke.andersson@liu.se]), **The Genealogy of the Ageing Body,** *International Sociological Association, Gothenburg, Sweden,*

¶ The genealogy of the ageing body Introduction This text focus on the aging body, on its biology & its social representation. I want to highlight that the process of biological & physiological ageing are interesting to interpret on the basis of social, historical and cultural context. Aging is, after all, a twinning of many different dimensions in a complex structure of biology, culture, gender and social conditions. The biological aging would not be perceived as biological aging if we did not have an frame of understanding to interpret these bodily changes in relation to. But we also use the body to express something about ourselves. This makes the body an agent that may be of larger or smaller value depending on how it relates to the prevailing norms about what is productive and aesthetically desirable or acceptable. Methods & results The text provides a historical outlook at how the aging body is described in counselling materials from 1700s to contemporary material. The study is based on discourse analytic traditions with a focus on genealogy. As a result I will show examples of how the ageing body has been interpreted through different ages in time. I will show how ideals are created & on what perceptions they are built. Conclusions The conclusion is that today's notions of the aging body is surrounded by myths & misconceptions that can be traced back several centuries. I intend to show how this heritage characterizes today's notions of the aging body.

2010S00092

Ando, Kiwamu (Nagoya City University, 1, Yamanohata, Mizuho-cho, Mizuho-ku, Nagoya, Japan, 467-8501 [tel: +81 52 872 5777; fax: +81 52 872 1531; e-mail: ando@hum.nagoya-cu.ac.jp]), **Grandparenthood in Japan: Crossroads between Gender and Aging,** *International Sociological Association, Gothenburg, Sweden,*

Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (858) 571-8979. Fax: (858) 571-8694. E-mail: info@csa.com

¶ This paper attempts to examine the factors affecting the significance of grandparenthood & grandparent behaviors in Japan. The study pays specific attention to the interplay of gender & aging, notably the mixture of maintenance & transformation of gendered family life from middle age to later life. The data analyzed in this study are from a random sample aged between 60 & 75, containing 322 grandparents (146 grandfathers, 176 grandmothers). Results indicate a complicated mechanism of aging & gender operating in the construction of grandparenthood. Analyses show that continuity & transformation of gendered family life are mainly reflected in the significance of grandparenthood rather than grandparent behaviors. The significance of grandparenthood for females, with less dynamic changes in later life, could be a product of the long-standing & cumulative effects of gendered midlife. On the contrary, grandparenthood could

become increasingly important for males with advancing age, implying a dynamic transformation of masculinity or male identity with family in later life. This increasing significance of grandfatherhood is discussed with respect to possible structural changes of the personal networks of Japanese male during the transition to later life.

2010S00093

Andrade, Claudia (Faculty of Psychology and Education, University of Porto, Rua Dr Manuel Pereira da Silva [tel: +351226079700; fax: +351226079725; e-mail: perdigao.claudia@gmail.com]), **Women's Earnings, Social Comparisons and Evaluations of Justice and Conflicts in the Division of Domestic Work,** *International Sociological Association, Gothenburg, Sweden,*

¶ Research addressing women's difficulties in coping with work-family demands often claims that part of the problem results from division of familial work among partners based on gender ideologies that ascribes the familial work as women's work. This unbalanced division of labor has proved to have important consequences on how women feel & behave in marriages affecting their perceptions of justice in the division of familial labor with negative impact in the relationship satisfaction & well-being. Despite the fact that women tend to compare themselves with other women in what concerns the division of domestic work, research suggests that women's earnings can influence comparisons standards in marriages–compare themselves with their partners–& consequently have an impact in the perceptions of justice on how the familial work is divided. The aim of this study is to examine how women's earning affect their social comparisons (frequency of comparison of women and their partners) & their perceptions of justice in the division of familial work (household chores & childcare) & how it affect women's relationship satisfaction. The data were obtained from EU FamWork Project Questionnaire with a sample of 618 full-time employed women, divided into three groups (Women that out earn their partners; women that earn less than their partners and women with equal earnings to their partners). Path analyses were used to test the hypothetical models. Results showed that The relationship between felt justice & relationship satisfaction presents a non-significant path when women's earnings >men's earnings. Additionally, Women-Men social comparisons never (in all groups) show a significant path to relationship satisfaction & Women-Men social comparisons influences directly, in all groups, felt justice & conflicts. However the division of domestic work is an antecedent of Women-Men social comparisons only when women's earnings >men's earnings. Overall results support the assumption that women's earnings have an influence–women-men social comparisons–and affect perceptions of justice in the division labor bringing to the debate the importance of the resources bargaining theory to analysis of justice in the division of familial labor.

Andrade, Daniel Pereira (FFLCH/USP e EAESP/FGV, São Paulo, Brazil 01313092 [tel: +55 11 32099392; e-mail: eudanielandrade@yahoo.com.br]), **Le pouvoir émotionnel et la gestion du sujet néoliberal** (Emotional Capacity and the Management of Neoliberal Subjects), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ À partir des annés 1980, plusieurs spécialistes du monde corporatif présentent les émotions comme l'élément fondamental dans la competition des entreprises et annoncent que les compétences émotionnelles sont le différenciel capable de définir le succès ou l'échec d'une carrière professionnelle. Cette prise en compte de la vie affective des travailleurs et des consommateurs se produit au moment même où le gouvernement néolibéral élargit la conception de l'homme économique aux divers domaines de la vie et pense les rapports humains selon le modèle du marché. Pour comprendre ce mouvement apparemment paradoxal de problematisation des émotions dans le modèle de l'homme économique intéressé et calculateur, l'analyse passe pour deux moments historiques distincts. D'abord, par une archéologie de la "vie émotionnelle" au moment de l'émergence de l'homme économique. Aux XVIIe et XVIIIe siècle, les thémes distinctes des passions et des sentiments moraux sont centrals pour comprendre, d'un côté, le principe active du calcul des avantages personelles, et, de l'autre, la critique qui veut limiter la conception de société basée seulement sur les liens des intérêts. Le deuxième moment historique renvoie au dernier tiers du XXème siècle, quand le discours du management, dans un contexte néolibéral, prend l'homme économique comme un être émotionnel. On fait la généalogie de la conception d'émotion dans le management pour comprendre l'introduction des nouvelles téchniques de gestion des sentiments au coeur même d'une forme de pouvoir qui traditionnellement gère les passions par l'intérêt. Dans cette fusion, le pouvoir émotionnel ou le patho-pouvoir devient un élément stratégique de la constitution du nouveau ordre fléxible du monde corporatif.

Andres, Manon D. ([e-mail: md.andres@nlda.nl]), **Behind Family Lines. A Longitudinal Study into Family Members' Adaptations to Military-Induced Separations,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper serves to provide more insight into family members' adaptations to military-induced separations, capturing multiple family members' perspectives (partners, children, service members, couples, & service members' parents) & different aspects of (family) life (e.g., work & family conflict, well-being, social support, quality of family relationships, children's reactions to parent-child separation & reunion, parents' experiences in the course of their son's or daughters' deployments, & service members' turnover intentions). Qualitative & quantitative data have been collected among service members & their partners (before, during, & after deployment) as well as service members' parents. Generally, military families seem to adapt quite well to the separation & reunion: service members' partners are fairly resilient, the greater majority of the children are doing quite well, & relationships seem fairly stable. For a quarter of the families, the deployment is rather difficult. The adaptation (or maladaptation) of families can not be explained by merely one single factor, rather it is the interrelations between various factors. Social support (from family, friends, fellow military families, the military, & others) has important beneficial effects.

Andrews, Hazel (Liverpool John Moores University, Faculty of Education, Community and Leisure, IM Marsh, Barkhill Road, Aigburth, Liverpool L17 6BD [tel: 0515 231 5234; e-mail: h.j.andrews@ljmu.ac.uk]), **Tourism and Violence: Examples from Charter Tourism,** *International Sociological Association, Gothenburg, Sweden,*

¶ Violence is a 'slippery concept' that defies easy categorisation (Scheper-Hughes & Bourgois, 2009). Symbolic violence can constitute attacks on a sense of personhood & identity and, by corollary, inform constructions of self feeding into & from understandings of habitus (Bourdieu, 1991). These non-explicit forms of violence both reflect & inform power relations within society, often serving to legitimise those relations. The fact of their lack of physicality means that such violent acts often go unremarked upon, instilling a sense of insidiousness and everydayness. This paper explores intersections of violence and tourism with examples drawn from two charter tourism resorts in the Balearics. It is based on ethnographic fieldwork. The first example based on Mallorca provides examples of the ways in which elements of touristic practice are underwritten by violence & serve to legitimate the continuation of violence in the tourists' home world. The second example taken from Menorca examines the way in which a particular representation of gendered relations serves to inform constructions of those relations, trivialise acts of violence towards women & endorse their role as belonging to the domestic sphere. Bourdieu, P (1991) Language & Symbolic Power. Cambridge: Polity. Scheper-Hughes, N & Bourgois, P (2004) eds Violence in War & Peace. An Anthology. Oxford: Blackwell

Andrews, Matthew T. M. (University of Michigan [e-mail: mmdrews@umich.edu]), **Interracial Intimacy, Narrativity, and the Meanings of Social (Inter)Action,** *International Sociological Association, Gothenburg, Sweden,*

¶ Over the past decade, the study of interracial intimacy has come to occupy an increasingly prominent place within the sociology of racial & ethnic relations. Yet, despite this ascendance, racial difference as "concept" has remained under-theorized, resulting in insufficient frameworks in understanding interracial intimacy's implications on contemporary racial meaning. This paper addresses this gap. That is, first, it contends that prevailing approaches to interracial intimacy–assimilation & structural–fundamentally are making claims about the relationship between "action" & "order," specifically the meaning of social (inter)action & the place of race in it. While the assimilation approach discerns the meaning of social (inter)action by its relative freedom from racial order (i.e. racial exteriorization), in structural approaches, social (inter)action's meaning is determined by it (i.e. racial determinism). Second, an alternative, narrative approach is proposed that in combining robust conceptions of both race & meaning enables a mapping of how cultural and racial structures interact to produce particular racial meanings. Finally, this paper ends with an empirical application of the proposed approach in a case study of how

those born to Filipino/non-Filipino interracial relationships make meaning of racial difference in their lives & concludes with suggestions for its application in future research on contemporary interracial intimacy.

Anosike, Nwabueze & Mosaku, Tim (School of Environmental Sciences, CST, Covenant University, Ota, Ogun State, Nigeria. Postal Code: NGA [tel: +234 8037 044 559; fax: Nil; e-mail: anomyk@yahoo.com]), **Promotion of Home Ownership in Nigeria: Promises and Pitfalls,** *International Sociological Association, Gothenburg, Sweden,*

¶ Housing defined as "the process of providing functional shelter in a proper neighborhood setting supported by sustainable maintenance of the built environment for the day-to-day living & other activities of individuals & families within the community" has been universally accepted as the second most important essential human need after food (NHP, 2006). Over 90% of Nigeria's population requiring houses belongs to the poor & low-income group thus necessitating the review of the various periods of Nigeria's Housing Policies Programmes post-independence to-date with a view to identifying its adequacy or otherwise among these groups. Significant housing shortfall was revealed due to some identified problems requiring urgent attention as acute shortage of total housing stock, corrupt practices leading to high cost of construction, poor quality of designs & construction, inadequacy of infrastructural services, lack of access to housing finance and practical difficulties in land acquisition. The undisputable conclusion is that housing is very low on the scale of priority list of successive Nigerian governments, although the approach to the housing problems may be well intended by the government but it has been very casual & non-proactive implying that it has been full of unfulfilled promises with numerous pitfalls. Key words: Housing, Infrastructure, Development Plan

Anser, Layachi (Department of Social Sciences, Qatar University, Doha, Qatar [tel: +9745749382; fax: +9744852928; e-mail: LULanser@yahoo.fr]), **Women's Empowerment in Qatar: New Perceptions of Women's Status and Role,** *International Sociological Association, Gothenburg, Sweden,*

¶ Women's empowerment is a critical dimension for any real breakthrough in the development of the emerging societies. In Qatar, Education and employment seem to be the real driving forces behind important changes in the status & role of women. In this paper we make use of both secondary data provided by Qatar Statistical Authority on education & employment & survey data carried among Qatar University students. Primary data included socio-demographic characteristics as well as opinions & perceptions of students on this issue. Survey data were analyzed using SPSS package to reveal correlations between socio-demographic characteristics & opinions on a battery of questions dealing with women's status & role in society. Results revealed a general positive perception regarding women's involvement in society. Despite the general consensus among the sample, gender seems to significantly differentiate opinions on the empowerment of women in Qatar. Key words: Women, Empowerment, Education, Employment, Perceptions, Social Change.

Anthias, Penelope (Department of Geography, University of Cambridge, Cambridge, UK. CB2 3EN [tel: +44 (0)1223 - 333399; e-mail: pa320@cam.ac.uk]), **Navigating the "Proceso de Cambio": Opportunities and Threats for Lowland Indigenous Organisations under the Morales Government,** *International Sociological Association, Gothenburg, Sweden,*

¶ In 2003-5, growing social movement mobilisation precipitated a crisis of neoliberal governance in Bolivia, leading to the election of the country's first indigenous President. This paper examines the opportunities & challenges that lowland indigenous organisations face under the current government, which is rapidly reconfiguring state power & reshaping possibilities for political agency. Drawing on preliminary ethnographic fieldwork in the Department of Tarija, it argues that, although new political spaces are opening up for lowland indigenous organisations, optimism is tempered by fears of co-option & division, as well as continuing state failure to safeguard indigenous rights enshrined in national and international law. Tensions run particularly high over the titling of indigenous ancestral lands, some of which contain Bolivia's most important reserves of natural gas–the resource at the heart of the MAS government's "post-neoliberal" development model. As boundaries between state & social movements become increasingly blurred, indigenous leaders & activists in Tarija find themselves both part of, & in tension with, the "proceso de cambio", contemplating political spaces that are simultaneously empowering and disciplining. Their ambiguous positioning problematises accounts of an emancipatory "post-multicultural" order, highlighting how political agency continues to be shaped by multi-scalar discourses & practices within the current model of resource nationalism.

Anton, Mihail (Human Resources Management Department–National Defence University, Bucharest, Romania, 050662 [tel: +40 722 564677; fax: +40 21 3195764; e-mail: mihailanton@yahoo.com]), **The Promotion and Recruitment System of the Romanian Armed Forces in the New Framework of the Professionalization Process. The Analysis of Socio-Cultural Profile of Youngster Related to the Military Profession,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is related to one ongoing research project (2007-2010) regarding the training needs & intercultural competency of military personnel in order to facilitate integration of them into different multicultural environments during their operational mission abroad. One of the various dimensions of analysis is oriented to find out what are thinking new recruits about the military profession, what are their value orientations in order not just to find a proper way of professional socialization & to determine them to properly integrate themselves into new foreign environment during different military operations besides other foreign comrades or being in contact with local population but also to adapt the promotion strategy of recruiting to the new thinking of youngsters. The paper highlights the impact of new changes of professional, social & cultural values from the Romanian civil society on the attractiveness of military profession among youngster. The main findings emphasize a strong support of military institution & new changes of the traditional conscription model are not quite well accepted by the population.

Antonioni, Stefania (Department of Media Studies–University of Urbino "Carlo Bo", Urbino (PU), Italy, 61029 [tel: +390722305726; fax: +390722305727; e-mail: stefania.antonioni@uniurb.it]), **Publics at Work: Creativity, Self Expression and Value in the Strategy of Crowdsourcing,** *International Sociological Association, Gothenburg, Sweden,*

¶ Contemporary audiences can be described as more & more active or, to be more precise, performative & diffused (Abercrombie & Longhurst). Nonetheless nowadays we have to address to audiences as to networked publics (Ito), facing social, cultural & technological shifts leading us to a different amount of involvement by digital media. So networked publics broadened their possibility of create, post & share all type of contents (video, images, texts, etc.) in a new wider public space that witness the creation of a convergence culture (Jenkins). In this sense the amount of user generated contents, but also the time spent in producing them, arises the "new" character of the prosumer, an hybrid of productive consumer of material & immaterial goods. Considering the new shape & way of feeling of these creative publics, more & more enterprises, brands, companies & corporations are taking benefits of this new frame, especially using the strategy of crowdsourcing. This practice allows them to call contests, involving these kind of publics, to re-style logos, improve products, redesign graphics, or create advertisements, all for free. In this sense, this kind of user generated advertising is a grassroots practice that forces to rethink the concepts of work & leisure, showing blurred boundaries. So the aim of this paper is to give its contribution to the analysis & thinking on this topic, starting with several examples of these practices collected all around the world.

2010S00104

Anttila, Erkko T (Finnish Institute of Occupational Health, Topeliuksenkatu 41-A, FI-00250, Helsinki, Finland [tel: +358 30 474 2425; e-mail: erkko.anttila@ttl.fi]), **Ideals, Realities and Stress: A Socio-Historical Analysis of the Teacher's Profession,** *International Sociological Association, Gothenburg, Sweden,*

¶ This presentation discusses the historical changes that have occurred in schoolteachers' professional ideals in Finland over the last 80 years. It also discusses how these ideal-level changes relate to the changing demands & conditions of the actual teaching job, and the changing social position of the schoolteacher. Furthermore, the presentation highlights, how dominant professional ideals have contributed to the work-related stress & well-being experienced by teachers. The methodological approach of the study is historical-qualitative, & we examine two distinct sets of data. Firstly, the historical changes in teacher ideals are traced by analysing relevant discourses in Finnish pedagogical literature and schoolteachers' professional journals from the 1930s onwards. The second set of data consists of teachers' autobiographies, which provide a rich, versatile picture of the professional lives of past and present teacher generations–including, for instance, depictions of teachers' class-room work, their personal fears and ambitions, & their relationships with their local community. The analysis is also linked to the rapid societal changes that Finland underwent during the period under study, as it changed from an agricultural to an industrial society, & later to a post-industrial information society.

Anuradha, Parasar (NIIT University, Neemrana, Rajasthan, India, NIIT University, Neemrana, Rajasthan, India [tel: +91-9911330136; e-mail: anuradha.parasar@gmail.com]), **Internal Migration in India and Inter-State Migrant Workmen Act, 1976–An Analysis,** *International Sociological Association, Gothenburg, Sweden,*

¶ Internal migration has been a necessity in India since time immemorial. In present context internal migration is increasing at an exponential rate due to different drivers & accelerators of migrations there by leading in pronouncing various migrant workers issues to be given priority amongst social problems. However the Inter-state Migrant Workmen Act has been in force in India since 1976 to redress Migrant workers problem. The present paper aims at holistically analysing the Internal Migration Scenario in India with reference to migration–nature, types, pattern, magnitude & condition of migrant workers. The paper also examines the effectiveness and efficacy of the Inter-State Migrant Workmen Act. The paper suggests ways & means to address migrant worker problems. The paper suggests & recommends further how to make the Inter-State Migrant Workmen Act to achieve its objective in true nature & spirit to resolve migrant worker's issues.

2010S00106

Apelmo, Elisabet (Department of Sociology, Lund University, Lund, Sweden, 221 00 [tel: +46462223133; fax: +46 46 222 41 00; e-mail: Elisabet.Apelmo@soc.lu.se]), **(Dis)ability, Gender and Citizenship in the Swedish sports Movement,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper I will use discourse analysis to explore how (dis)ability, gender & citizenship are constructed in "Disability Sports Policy Programme", the policy programme for the Swedish Sports Organization for the Disabled. As a comparison I will use The Swedish Sport Confederation's 'sport wills', a joint policy document for all Swedish sports federations & clubs. Swedish sport is a product & an effect of the social democratic hegemony, focusing on fostering societal inclusion & equality. It is organized as a "folkrörelse" (popular movement), based on voluntarily work & public financial support. Paradoxically, earlier researchers argue, there is a discrepancy in the Swedish sports movement between association & competition fosterage. Association fosterage aims to foster to democratic forms of social intercourse, grounded in respect, equality & openness. Inherent in the logic of sport is competition fosterage, striving towards selection, ranking & elitism. However, the original aims of disability sports were rehabilitation & recreation for soldiers and civilians being injured in the war. Within media a medicalized view of disability sports is still prevalent, & in the "Disability Sports Policy Programme", rehabilitation & social integration is presented as main goals.

2010S00107

Apitzsch, Birgit (University of Duisburg-Essen, Duisburg, 47057 Germany [tel: ; e-mail: birgit.apitzsch@uni-due.de]), **Too Transient to Organize? Risk Coping Strategies and Processes of De-Commodification in the German Media Industry,** *International Sociological Association, Gothenburg, Sweden,*

¶ Today we witness an increase of flexibility demands & uncertainty of employment perspectives for a growing part of the working population. These developments challenge both workers strategies to cope with risks & uncertainties & collective actors' attempts to regulate labor markets. Therefore, this paper aims to further our understanding of the ramifications of processes of flexibilization on labor relations by illuminating the conditions under which we can expect a re-regulation of commodified labor, and the forms that processes of de-commodification can take. On the basis of qualitative interviews with 33 project workers & 17 labor market experts in the German media industry, this paper first explores workers' ways of coping with market risks and uncertainties. Second, these findings are related to the forms of collective action that can be observed. It is discussed why interest representation remains fragmented, & often ineffective in the most flexible segments of the labor market, such as the German media industry which has been studied by the author.

2010S00108

Apitzsch, Ursula (Goethe-University of Frankfurt am Main, 60054 Frankfurt am Main [tel: +49-69-798-23787; fax: +49-69-798-22539; e-mail: apitzsch@soz.uni-frankfurt.de]), **Ethnic Groups Without Ethnic Individuals,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper relies on the analysis of empirical case studies of multiple ethno-cultural belongings. It refers to the EU project "The chances of the second generation of families of ethnic entrepreneurs" (Acronym: "Ethno-generation"), coordinated by the author in cooperation with research teams in six European countries, studying various migrant groups who were able to start successful "ethnic" entrepreneurial work. Especially in Germany, children of immigrants from the second or third generation typically were found as not only being able to speak two standard languages, but also to speak one or more dialects to the same standard, i.e. as native languages. Without doubt, they belong to a cultural structure formed in a specific regional context & can participate in this structure just as they participate in one or more national cultures from the country of their parents' origin. In biographical research on migrant groups we have observed various forms of skillful switching between linguistic & cultural "ethnic" codes, but there is no way of identifying a migrant person unambiguously with one particular ethnic belonging. The factor that unifies the diverse affiliations is the biographical work of each individual, while referring to the existence of various ethnic groups. In her paper, Ursula Apitzsch argues that for current sociology it is necessary to find a way of going beyond the mere deconstruction of ethnicity. Her effort is not just to show that ethnicity is constructed; it is also an attempt to show how the dynamics of ethnicity work & to identify, in particular, their consequences for the possibility of societal participation & exclusion. Ethnicity may–as Apitzsch argues–also be consciously appropriated in a positive way in order to pay tribute to the historical positioning & achievement of marginalized & migrant groups. Also, there are groups and individuals who succeed in reversing ethnicizing processes of identification & stratification, giving them their own meaning, and so reinterpreting them biographically. Migrants often have to live through different ethnic regimes in order to reorganize their and their families' biographies through biographical work and through coping with different group identifications throughout their lives. This means that they have to exercise different ethnic positions in face of dominating or dominated social powers, but that as individuals they are never defined by just one ethnicity. In conclusion, Apitzsch argues that, instead of speaking about ethnicity without groups (as Rogers Brubaker does), one should speak about ethnic groups without ethnic individuals.

Appay, Beatrice (CNRS, Cerlis, Université Paris Descartes, 45 rue des Saints Pères [tel: 0681408229; e-mail: beatrice.appay@wanadoo.fr]), **Contradictions at Work,** *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Can the "wave" of suicides at France-Telecom, help us to understand some of the contradictions in the new organization of work? The contemporary work culture appears to be characterized by faster changes & flexibility, greater individual autonomy and responsibility. It seems to be replacing the traditional blue-collar work culture characterized by low levels of autonomy and tight hierarchical supervision, both counterbalanced by a certain degree of control over corporate decisions through unionism. The changing model of work implemented at France-Telecom with its rising levels of productivity & performance does not necessarily enhance employee satisfaction & morale. The analysis of the suicide phenomenon at work can help us to understand better the radical limits of a

new model of work which stimulates workers' commitment whilst controlling the workers themselves though a set of management tools amongst which the new information and communication technologies plays a central role. This analysis will test the theory of "controlled autonomy" to see if it applies to this particular case.

Aracil-Rodriguez, Encarnacion (Faculty of Political Sciences and Sociology, Complutense University of Madrid, Campus de Somosaguas [tel: 34+91 553 26 82; fax:; e-mail: enaracil@cps.ucm.es]), **Transnational Adoption in Spain: An Ethnographic Insight,** *International Sociological Association, Gothenburg, Sweden,*

¶ Transnational adoption is flourishing as a global phenomenon. The sharp decline in infants available for adoption in Western societies has resulted in an increasing demand for children born in less developed countries or economies in transition & who are suitable to be adopted by involuntarily childless couples in Western Europe & North America wishing to create or enlarge a family. The aim of this paper is to locate transnational adoption within the context of contemporary Western life, especially values concerning family, children & meaningful relatedness, & to explore some ambiguities & paradoxes that the practice entails. Based on ethnographic research carried out in Madrid, Spain, the author identifies some topics which deserve an analysis. Firstly, the notion of kinning, a dominant cultural feature based on biological relatedness & how adoptive parents face the difficulties to kin a foreign child. Secondly, the role of expert knowledge in facilitating or hampering the practice of transnational adoption. Thirdly, how adoptive parents deal with ethnicity, biological & health conditions concerning the child and the challenge of accepting her/his backpack which entails some radical changes in both personal & family circumstances.

Araujo, Emilia (University of Minho–Dep Sociology, Gualtar–4710-057 Braga [tel: 253 604212; e-mail: emiliararaujo@gmail.com]), **Future in Politics: Between Legitimation, Justification and Uncertainty,** *International Sociological Association, Gothenburg, Sweden,*

¶ This presentation seeks to explore the concept of future as well as the relation between politics & future. It is grounded on a research comprehending a discourse analysis based on speeches of several European political leaders who claim for the "construction of an European common future". Drawing on social theory developments concerning social change, power of politics and democratization processes, data analysis provides an overview about the level of diversity within each discourses & between them. So, they show that, despite the economical & financial crises had anticipate the increase centrality on present, future still is assumability a discursive resource in which political leaders entangle, in a linear & Promethean manner, the possibility "of all European states" succeed in stepping towards a future which is increasingly open. Though, detached from its rhetorics vein, this horizon of action lacks substance in terms of concrete processes and actions carried out in present time of each society. Subsequently, it also shows the intense processes of legitimation which uncover different & somehow unequal modes of dealing with present time. This is mostly noticed in what concerns the way political systems approach the effective & the potential use of technology & science. The communication discusses the main reasons which may explain that.

2010S00113

Arbaci, Sonia & Rae, Ian (Bartlett School of Planning - University College London, Wates House, 22 Gordon Street, London, UK, WC1H 0QB [tel: +44 (0)207 679 4943; fax: +44 (0)207 679 7502; e-mail: s.arbaci@ucl.ac.uk]), **Mixed Tenure Neighbourhoods in London: Policy Myth or Effective Device for Social Mobility?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Social mixing in urban policy is recurrently used as a means to alleviate urban deprivation & reduce social inequalities on both sides of the Atlantic. However, despite government rhetoric on the alleged benefits of housing tenure mixing, there is little evidence that such an area-based approach facilitates upward social mobility within the neighbourhood, & often results in gentrification, social polarisation, or dispersal towards peripheral & isolated areas. In the UK it remains prominent through mixed tenure policy with concentrations of social housing perceived as problematic. This paper tests the extent to which housing tenure diversification is a device for social mobility in terms of socio-economic opportunities (production) & access to resources (consumption), and contributes to the wider theoretical & political debate entwining neighbourhood re-commodification, ethnic segregation, concentration of poverty & the neighbourhood effect. By focusing on Greater London (both urban & suburban), it explores whether there are greater opportunities for social mobility amongst social tenants in ten mixed tenure neighbourhoods, than those in ten concentrations of social housing. Changes in deprivation levels (IMD) across the neighbourhoods are compared & unpacked, thus investigating the correlations between tenure, ethnicity, income, location, neighbourhood affordability & deprivation. Further analysis of the four most statistically significant neighbourhoods demonstrates that social tenants do experience differing socio-economic opportunities & access to resources, but these are not dependent on, or improved by, the level of tenure mix within the neighbourhood. Instead, integration of area-based and people-based policy, as well as de-commodified access to welfare services, such as education, training & employment opportunities, is crucial. Furthermore, the IMD as an evidence-base for policy formulation is contested & the neighbourhood effect challenged.

Arber, Sara, Venn, Susan, Eyers, Ingrid & Luff, Rebekah (Department of Sociology, University of Surrey, Guildford, Surrey, GU2 7XH, UK [tel: 0044-1483-686973; fax: 0044-1483-689551; e-mail: S.Arber@surrey.ac.uk]), **Sleep and Quality of Life: The Impact of Social and Contextual Factors on Older People's Sleep and Quality of Life,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction: Sleep is essential for health, well-being & quality of life. Poor sleep among older people increases likelihood of falls, confusion & inhibits recovery following illness. Hitherto, there has been little research on how social & contextual factors influence quality of sleep in later life in developed or developing countries. Method: The paper uses data from a multi-disciplinary study, SomnIA1 (Sleep in Ageing), which employed quantitative and qualitative methods to better understand what factors influence quality of sleep among British older people living in the community and in care homes, as well as the ways in which poor sleep is associated with reduced quality of life. In-depth interviews were conducted with 62 community-dwelling people (aged 65-92) with poor sleep. In 10 care homes, two week diaries were used to record aspects of everyday life & sleep patterns for 125 residents, and interviews with residents & staff were undertaken. Results and Conclusions We illustrate how social & contextual factors influence the quality of older people's sleep, & in turn, how poor sleep is associated with diminished quality of life. Family context, caregiving roles, health, worries & social circumstances influence older people's sleep quality, with poor sleep associated with less energy for everyday household, social & leisure activities. Older people living in care homes are particularly vulnerable to poor sleep because of organisational constraints and care home routines. Residents spend on average 11 hours in bed, are often "put to bed" very early & "got up" too early by staff fulfilling their care duties. Their night-time sleep is disturbed by routine checks by care home staff, & other aspects of the care home environment. 1 The research is supported by the New Dynamics of Ageing initiative, a multidisciplinary research programme supported by AHRC, BBSRC, EPSRC, ESRC & MRC (RES-339-25-0009).

Archibald, W. Peter (Department of Sociology, McMaster University, Hamilton, Ontario, Canada L8S4M4 [tel: (905) 627-9450; e-mail: archbld@mcaster.ca]), **Marx in the Labour Market: The (de facto) Appropriation of Alienation by Management Consultants and Career Coaches,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recently, Stewart (2009) & Ehrenrich (2009) have savaged "management consultants" & "career consultants" for being pseudo-scientific opportunists, offering high-level managers at best questionable advice & "bright-siding" workers who have been direct & indirect victims of downsizing into accepting these injustices, & perhaps even blaming themselves. However, our own examination of the publications of several large for-profit and not-for-profit organizations & the observations & advice of many individual consultants & coaches reported in the Toronto Globe & Mail, Canada's "national newspaper," suggests much internal variation. Some advisors have done their own or appealed to others' systematic empirical research. Understandably, given their primarily non-academic, liberal audiences, there has not been much explicit theory or calls for a genuinely socialist transformation of industrial relations. Yet, the current, widespread popularity of the terms "empowerment" & intrinsic "engagement" in work in consultants' advice to management and coaches' advice to (in effect) "exit" from disengaging work and/or "voice" their concerns & influence their bosses signifies a major (de facto) shift from relying upon Durkheim's "egoism" & "anomie" to Marx's accounts of "alienation." Although this trend is further confirmation of the validity and utility of the latter, the new material from practitioners "on the ground" in the here & now may also help us fill many of the lacunae left by Marx & his followers in academic sociology.

2010S00116

Arcimowicz, Jolanta (Warsaw University, Krakowskie PrzedmieAcie 26, Warsaw [tel: ; e-mail: jarcimow@wp.pl]), **ADR in Polish Legal System–Opportunities and Challenges,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the last decade Alternative Dispute Resolution (ADR) began to play an important role in Polish legal & judicial system. ADR seeks to provide cheap, simple, quick & accessible justice. It gives people an opportunity to resolve their disputes in a way which often is not possible in public & formal justice (dominated by the abstruse procedure & recondite language of law). ADR offers choice of methods, procedures & costs. This paper shall attempt to give a definition to ADR, analyze its evolution in Poland and discuss why ADR can be opportunity & challenge for NGO & court based procedure.

Arenas Conejo, Míriam (Dep. of Sociological Theory, Philosophy of Law and Methodology of the Social Sciences. Faculty of Economics and Business. University of Barcelona., Barcelona, Spain, 08034 [tel: +34 934034896; e-mail: miriamarenas@ub.edu]), **Vulnerability and Interdependency: Sociological and Philosophical Approaches,** *International Sociological Association, Gothenburg, Sweden,*

¶ Some contemporary feminist theorists are revisiting classical definitions of citizenship that rest on presumptions of rationality and independence of every individual. By replacing those ideas with the premises of vulnerability & interdependency as the real defining traits of all human beings, they try to unveil a new political paradigm that is more effective in the universal protection of human rights. At the same time, these ideas are also inspiring current discourses of some social movements regarding the rights' defence of women, children & people with disabilities. This paper is aimed at exploring those ideas & discourses as well as their implications for contemporary social theory. The discussion is based on the philosophical approaches of thinkers such as Martha Nussbaum or Judith Butler & the sociological developments undertaken by authors like Bryan Turner, Ruth Lister or Angharad Beckett. While traditionally related with human weaknesses, & therefore to be eluded in political thinking, the recognition of vulnerability along with interdependence as universal human characteristics could be a powerful driving force for new political outlines, as different social groups are already pointing out.

2010S00118

Argueta, Beatriz Veliz (University of Freiburg (Germany)/ Goldsmiths, University of London (UK), Germany [e-mail: beaveliz@ufm.edu]), **Multimedia Projects in Social Research: Exploring Alternatives,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores the increasing need of innovating research methodologies in social science considering that we live in a world dominated by images. The paper focuses on multimedia projects as storytelling mechanisms & final products integral to the research process of making sense of the world & hence strengthening the experience of place, of "being there". The structure of the paper is as follows: in the first section I will briefly discuss the challenges in visually documenting social change & the role of the researcher as "image maker". The following section deals with the core idea: exploring multimedia as an alternative narrating mechanism in the effort of overcoming the supremacy of the written text & taking advantage of the fluidity the medium offers. A case study will be used to illustrate this point: Wind & land: a visual biography of the San people. This project aims to start a process of questioning the relationship of individuals and communities to landscape & time. In the effort of integrating the sound of wind, people talking & singing to the experience of landscape & space this has been conceived as a multimedia project. The final section concludes highlighting the need of improving the quality & conventions regarding the visual in social sciences & exploring future research directions in visual sociology. Drawing from my experience visually documenting globalization in emerging economies this paper invites to re-think research methodologies in social sciences & suggest integrating images in the effort of better understanding society.

Arias, Luis Miguel (Universidad Nacional Hayacucho, Perù, Lima, Perú [tel: ; e-mail: lariasmartinez@yahoo.es]), **La articulación de redes colaborativas y el fomento de la apropiación de competencias TIC por estudiantes de Sociología** (The Articulation of Collaborative Networks and the Promotion of the Appropriation of ICT Competencies by Sociology Students), *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ En referencia a las TIC, la situación en Perú es paradójica, ambivalente. Se pueden apreciar situaciones que nos permiten hablar de la existencia de propuestas muy diferenciadas en el ambiente universitario, de vehículos que avanzan a diferentes velocidades, sin embargo, incluso en aquellas universidades donde la apuesta por las TIC es consistente, no hay un norte definido. Esencialmente el verticalismo implícito en los modelos de implementación ha truncado en muchos casos el desarrollo de iniciativas interesantes que de alguna manera podrían ser una alternativa a los modelos más extendidos fundados en el control institucional pero contribuir igualmente al desarrollo consistente en este campo de actividades. La tensión entre verticalismo y horizontalismo se he hecho manifiesta en reiteradas oportunidades. En algunos de los contextos, la inexistencia de planes institucionales, ha generado la aparición de iniciativas particulares que de alguna forma han venido paliando las más que evidentes deficiencias. A pesar de ello, esas iniciativas interesantes, no se consolidan por la falta de apoyo de las autoridades, o bien porque sus protagonistas, encontraron en su momento algo más urgente que hacer o desarrollar, algo más productivo en términos personales o bien se fueron al extranjero. A todo ello es necesario añadir que en nuestro contexto iberoamericano, estas estrategias se pueden ver reforzadas por la aparición y consolidación de las TIC que como herramientas de soporte, constituyen un instrumento invalorable para fortalecer los procesos de colaboración interinstitucional, la articulación de grupos de trabajo, la conformación de redes, el acceso a fuentes documentales imprescindibles, puesto que permiten una "operación" con amplios márgenes de autonomía, generando y potenciando en muchos casos procesos sinérgicos que fortalecen de diferentes formas el devenir institucional. Es en ese contexto que desde marzo de 2005, desarrollamos con la concurrencia de estudiantes de Sociología del Trabajo de la Escuela de Sociología de la Universidad Nacional José Faustino Sánchez Carrión experiencias encaminadas a fomentar la apropiación por los alumnos de las herramientas correspondientes a las TIC. Nuestros ensayos sin duda, se han visto afectados por las dinámicas institucionales y sin embargo, hemos logrado mantener en marcha estas iniciativas y disponemos en la actualidad de recursos suficientes como para poder darle continuidad a las experiencias. Lo que aquí se presenta, son algunas consideraciones a tener en cuenta para el desarrollo de procesos de apropiación de TIC, la definición de políticas públicas consistentes y vinculantes para la implantación de la llamada Sociedad de la Información, identificando algunos cuellos de botella que en ambientes académicos y comunitarios, dificultan su desarrollo y expansión.

Arjomand, Said A. (Sociology Department, Stony Brook University, Stony Brook, NY 11794-4356 [tel: 631-632-7746; fax: 631-632-8203; e-mail: said.arjomand@stonybrook.edu]), **Multiple**

Modernities and Promise of Comparative Sociologies, *International Sociological Association, Gothenburg, Sweden,*

¶ Surveying three generations of comparative sociology, the conclusion is reached that the promise that set the first generation of comparative sociology in motion a century ago remains largely unfulfilled. This is attributed to the inordinate attention to the emergence of modern industrial society in the West in subsequent metropolitan theory, & its relative if not complete neglect of developmental patterns in other civilizations. It will then be argued that the work of the third generation on civilizational analysis & multiple modernity can redeem the promise of comparative sociology by recovering the fundamental relevance of the periphery. Consideration of multiple modernities can revive theorizing in comparative sociology, thus constituting its third and current phase, & pave the way for rectifying the erasure of the historical experience of a very sizeable portion of humankind from the foundation of social theory. This argument will be illustrated by highly selective reference to concepts of the state, nation, civil society & tradition, & differences in civilizational processes & developmental patterns, alternative modernities & patterns of secularization & public religion.

Arlikatti, Sudha S. & Andrew, Simon (Department of Public Administration, University of North Texas, Denton, Texas, U.S.A. -76207 [tel: 979-575-2453; fax: 940-565-4466; e-mail: Sudha.Arlikatti@unt.edu]), **Patterns of Post-Tsunami Sheltering and Housing in Southern India,** *International Sociological Association, Gothenburg, Sweden,*

¶ Temporary shelters are a critical component of the disaster response function. Although they can take multiple forms, few studies have directly explored the patterns of their usage in developing nations. This paper examines factors explaining the usage of temporary shelters by households affected by the 2004 tsunami, as a function of their socio-economic characteristics, family-unit, and severity of damage to their primary dwellings. Using a multinomial logit analysis, we analyzed survey data collected from 1000 randomly selected households in 15 villages along the Nagapattinam coastline in southern India. Findings suggest female-headed households to be 1.7 times more likely to take refuge in permanent public buildings or religious/community buildings rather than emergency shelters provided by the government/NGOs. Moreover, the severity of damage to permanent homes explained much of the reasoning behind households taking refuge in shelters provided by the government/NGOs. Additionally, households that split-up immediately after the disaster tended to take refuge in permanent public buildings, community/religious buildings, or private homes rather than in government/NGO emergency shelters. This suggests a need to take into account a broader perspective on the types of temporary shelters to function as 'hubs' or 'sub-hubs' for the coordination & distribution of food, clothing, & medicine.

Armano, Emiliana (Dept of Welfare and Labour Studies State University of Milan, Milan Italy 20122 [tel: 0039 339 3967622; e-mail: emiULarmano@yahoo.it]), **Knowledge Workers in the Age of Precarity,** *International Sociological Association, Gothenburg, Sweden,*

Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (858) 571-8979. Fax: (858) 571-8694. E-mail: info@csa.com

¶ The world of knowledge work is transformed in the aftermath of economic crisis with impacts on work organization & work contents. This empirical research casts a critical eye over experience & subjectivity within the field of knowledge work in Turin, a city in transition to a new cycle of productions tied to knowledge & events economy. The aim is to outline a qualitative analysis on subjectivity in knowledge workers placing it within the broader debate on the subject. The analysis takes as its main methodological references Bourdieu's "Practical Reason" & the Italian tradition of social enquiry & co-research. With the development of the knowledge society, the crisis of fordist regulation & the de-institutionalisation of careers, the inevitable accompaniment to the growth of risk is the emergence of quite new forms & perceptions of precariousness. It is subjectivity more than conformity to procedures which draws career paths. The network & informality typify these professional worlds where the paths of experience can no longer be drawn up ex ante. The informal nature of the relations means networking & liquid norms that demand commitment to work, accountability to clients, and reciprocity among colleagues and, therefore, expose to informal sanctions.

Arminen, Ilkka & Mälkiä, Tiina (University of Helsinki, 00014 University of Helsinki [tel: +358 50 3018636; e-mail: ilkka.arminen@uta.fi]), **The Domestication of Institutional Reforms in Higher Education and Research,** *International Sociological Association, Gothenburg, Sweden,*

¶ The study on the domestication of higher education & research reforms focuses on recent reorganization processes & reforms of management in universities & public research organizations. By analyzing the domestication of reorganization & reform we can discover & elaborate the ways the processes are planned, introduced, implemented & applied. We will analyze in detail the reformulation of reform ideals & models in the management meetings & explore how these ideals are translated into statements directed to the personnel. The translation of ideals and models will be traced through examining videotaped meeting interactions, & the material artefacts such as planning documents and directives from ministries. The domestication is further analyzed by interviewing employees. The study on the domestication of higher education & research reforms will be carried out in collaboration with the Technical University of Tampere, the Aalto University, the National Institute of Health & Welfare, & the Finnish Environment Institute. The aims are to 1) identify patterns how ideals & models are domesticated in reforms, 2) elaborate the practices & instruments by which the domestication takes place, and 3) analyze the translation of ideas & discourses into social practices. In this paper, we report the part of the study that concerns situated practices in the management meetings. We explore the interplay of multimodal communicative modes–language and other semiotic resources (gesture, gaze, material objects, models, instructions & technical artifacts) in the discussion of the reforms that are to be carried out in the institutions in question. The focus of CA has traditionally been on sequence organization concerning conversational courses of action (Schegloff 2007). We develop a detailed analysis of a broader sequential order in a socio-material context (Bruegger & Knorr-Cetina 2002). Our approach concerns the fundamentals of social action, including the contextual & structural organization that allows the disclosure of the sequential flow of human activities in their material context including models & rules as material forces. The approach synthesizes ethnomethodology (Garfinkel 1967; Heritage 1984; Arminen 2008a), conversation analysis (Sacks 1992) ethnography (Heath & Luff 2000), & material social science (MacKenzie 2009) allowing an interdisciplinary focus on the material social practices. The data on the domestication of higher education and research reforms is collected at the collaborating institutes by 1) videotaping the Rectors' meetings & other management meetings of Technical University of Tampere, & the management board of National Institute of Health & Welfare, 2) interviewing management, administration & other staff, & 3) collecting documents, instruction manuals & other material artefacts connected with the organizational restructuring & coordination processes. The data collection, including videotaping of meetings, at the Technical University of Tampere & the National Institute of Health & Welfare has started in 2009 & will continue in 2010.

Armstrong, Jo Elisabeth (Department of Sociology, Lancaster University, Lancaster, UK, LA1 4YT [e-mail: j.e.armstrong@lancaster.ac.uk]), **Gender and the Financial Crisis: Policies on Employment and Violence against Women in the UK,** *International Sociological Association, Gothenburg, Sweden,*

¶ The financial crisis has had, & will continue to have, multiple implications for gender equality. This paper explores the impact of the crisis on policies on Violence Against Women & employment in the UK. Developments in these policies since 1997 under a Labour Government have had generally positive implications for gender equality. However, in the aftermath of the crisis, political parties on the left & right are announcing forthcoming cuts in public spending to recover an economic deficit. This situation results in a dilemma: reduce funding to vital services to cut the deficit; or protect spending on these services that work to the benefit of all. The paper investigates this tension through an analysis of recent policies on gender-based violence & women's employment to address whether measures to increase gender equality are for the "good times" only & the first to suffer during periods of economic pressure.

2010S00125

Armstrong, Natalie & James, Veronica (Department of Health Sciences, University of Leicester [tel: ; e-mail: na144@le.ac.uk]), **Embodiment and Cervical Cancer Screening,** *International Sociological Association, Gothenburg, Sweden,*

¶ The reach of population-based medical screening is ever-growing and developing, but screening programmes are social interventions as much as

they are medical interventions, & they pose challenging ethical, legal & social dilemmas. Population-based screening programmes are based upon the premise that individuals will routinely present their bodies for regular investigation or inspection, & the assumption tends to be that this will be relatively unproblematic for the individuals concerned. Cervical cancer screening is an excellent example of such a population-based programme. During the procedure a speculum is used to open the vagina & a sample of cells is taken from the cervix, therefore making cervical screening an invasive & intimate procedure. This paper draws on the accounts of women invited to attend for cervical cancer screening in the United Kingdom in order to problematise how this requirement or obligation to present one's body may be experienced & managed. We outline the issues that are particularly problematic for women & the work they undertake to prepare & present their bodies & prepare for intimacy. We also focus attention on how & why this bodily presentation is perceived as "risky" by many (although by no means all) women in terms of potential bodily transgressions. The paper concludes by arguing that, far from being an unproblematic encounter, there is much at stake for many women in presenting their body for cervical screening.

2010S00126

Aro, Jari (Department of Social Research, University of Tampere, FI-33014 University of Tampere, Finland [e-mail: jari.aro@uta.fi]), **Domestication of Online Music Services,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper studies social practices & affordances of using online music service. The analysis is based on qualitative interview data with young adults in Finland. Analysis is focused on the level of individual practices & social relations. The conceptual framework comes from the theory of domestication of technology. This case adds some new perspectives to this approach by studying the domestication of a computer application. In online services the music is distributed in immaterial digital formats, which has an important affect to practices of consuming music. In recent research great attention has been given to the ways how portable music players are used to give proximity & experience of privacy in public places. This paper focuses to the use of computer as a means to consume music in private. Although people listen to music usually alone in their homes this activity is situated in a context of social relations & social interaction. People share music and their experiences & opinions of it with significant others and they search information & recommendations of new music. This happens in a mixed network of interpersonal relations, forms of mass communication & the social use of online services.

Arora, Vibha (Indian Institute of Technology Delhi, Hauz Khas, New Delhi 110016 [tel: 0091-09289552877; e-mail: aurora@hss.iitd.ac.in]), **Brand IIT and the Evolution of India's Technocratic Elite,** *International Sociological Association, Gothenburg, Sweden,*

¶ Undoubtedly as a nation, India has travelled a long way since 1947 and surely realized Pt. Nehru's vision of becoming not only self-reliant in science & technological education, but also progressed into educating professionals for working & meeting global needs. The Indian Institutes of Technology (IITs) established by an act of the Indian Parliament in 1956 have played an important role in this journey by effectively responding to the challenges of national development & economic growth. More than fifty years have passed since the IITs were established, & the review committee reports highlight their evolution into becoming internationally comparable centres of science & technological excellence. Until the 1990s, getting into the IIT was the realization of the middle class dream of socio-economic mobility as career options were limited & liberalization had not yet occurred in India. In this scenario, educational degrees from the IITs became escalators enabling educated Indian youth either to immigrate to the US for higher education or be employed within India in industry, laboratories, & scientific educations or evolve into technological entrepreneurs or join civil service. IIT education has enabled bright futures for many Indian youth by facilitating economic prosperity, a professionally challenging life, social mobility, access to positions of power and responsibility along with an enviable opportunity to make a difference to own & others life. The societal expectation and national need is for the IITs to multiply geometrically and diversify their research thrusts to consolidate India's position in the knowledge economy. This explains the precipitous decision of the Indian government to establish eight more IITs in 2007-8 and introduce reservation for the marginalized groups. Brand IIT has evolved with the success of IIT's unique education system, the professional achievement of its alumni, the socio-economic contribution of the alum to business & economy, & the public recognition of this within India & abroad including the US. Based on my ongoing sociological research on the IITs & drawing upon participant observation (since 2006), numerous interviews with alumni & case studies, I argue that the IITs have incubated modern India's technocratic elite.

Arosio, Laura (Department of Sociology and Social Research, University of Milano Bicocca, via Bicocca degli Arcimboldi 8, 20126 Milano, Italy [tel: ; e-mail: laura.arosio@unimib.it]), **The Heterogamy Effect: Does It Really Exist? A Study on Partner Selection and Marital Breakdown in Contemporary Italy,** *International Sociological Association, Gothenburg, Sweden,*

¶ The heterogamy effect: does it really exist? A study on partner selection & marital breakdown in contemporary Italy Laura Arosio (University of Milan Bicocca) The paper deals with the effect of assortative mating on the risk of marital breakdown. According to the heterogamy hypothesis, socio-economic differences between spouses (in terms of social origins, employment status, education, age, religion…) are linked to higher levels of marital instability (a higher risk of separation or divorce). Most studies adopt a dual perspective (comparing homogamous & heterogamous couples) & do not consider that the effect of heterogamy may change during the different phases of the marriage. In this paper I intend to test the heterogamy hypothesis by focusing on these two aspects that risk being neglected. First of all, I will use a more extended classification, by comparing the marital stability of hypergamous, hypogamous & homogamous couples. My hypothesis is that this conceptual schema can better capture the real essence of the phenomenon under analysis (and will lead me to change the heterogamy effect theory into the anomogamy effect theory, i.e. couples that do not respect social norms present a higher risk of marital disruption). Second, I will try to analyse the effect of socioeconomic differences between spouses over the marital life-course. Are there some time points in the marriage history that can be considered more vulnerable regarding the heterogamy effect? And why? I will conduct an empirical analysis by applying event history models on longitudinal data regarding marriages in contemporary Italy. The variables taken into account to investigate homogamy are the social class of origin & educational level of the partners

Arteaga-Botello, Nelson & Fuentes-Rionda, Roberto (Facultad Ciencias Políticas y Sociales; Universidad Autonoma del Estado de Mexico, Cerro de Coatepec S/N, Toluca, México, 50110 [tel: +527222175550; fax: + 527222131607; e-mail: arbnelson@yahoo.com]), **Swine Flu Surveillance Systems in Mexico: An Approach from Biopolitical and Cultural Studies,** *International Sociological Association, Gothenburg, Sweden,*

¶ During the last two decades, there has been a significant increase in the use of surveillance technologies in Mexico, which would respond to a certain social demand for security; being accepted almost without problems or criticism. The media (mainly television & the press), in this sense, has contributed more to the promotion of the mechanisms & protocols of social sorting & monitoring than to public debate. In this context, in April of 2009, the Mexican State set in motion a series of surveillance strategies, whose objective was set in the containment of the swine flu outbreak. The sanitary policy of the Mexican government consisted, in this way, on the strengthening of an organism in charge of the surveillance and control of the epidemic, forming a database obtained through the registration of probable cases & swine flu diagnosis. Simultaneously, a decree was enacted which granted the president of the nation full capacity to make decisions over the control and containment of probable cases of this sickness. The pertinence of these two strategies was consented to & spread by the media, accepting them as a security measure. For this, the information about the swine flu outbreak captured the attention of the population, provoking expressions in everyday life: the use of surgical masks, the securing of homes, avoiding open spaces, as well as the interruption of large meetings. These expressions caused, certain social sensitivity of the possible sick, as well as permitting the denunciation based on suspicion. In this sense, this document analyzes the relationship between the expressions of everyday life & the health regulation policies in Mexico; a situation mediated by the high representation of the disease in the media.

Arun-Kumar, Duru (NSIT, Department of Humanities And Social Sciences, Delhi University, NSIT, Sector 3, Dwarka, New Delhi 110078, India [tel: +91 11 26512415; e-mail: duruarun@rediffmail.com]), **Impact of Globalization and Informa-**

tion Technology on Teaching Profession in Higher Education, *International Sociological Association, Gothenburg, Sweden,*

¶ Widespread access & use of information technology has been an important feature of modern globalization process. On the one hand there has been a significant increase in the number of people involved in developing, producing & maintaining such technologies, on the other hand direct dependence on people for certain types of jobs has reduced, such as people carrying massages in conventional postal services. Teachers are the most essential part of the formal education system. Information technology has affected the education system in the most fundamental way, in information generation, storage, replication, dissemination as well as in its analysis & application. How has it affected the teacher's role as a mediator of knowledge generation and dissemination? Has technology given a new dimension to the teaching profession by providing additional tools or has it made teachers' role redundant? The present study enquires into the role of teacher as a knowledge facilitator based on the perception & demand among the students & use of information technology for accessing study material. The study is based on the data collected from the students & teachers of an engineering college based in Delhi, India, using questionnaires & interviews. It was found that the expectations of students from the teachers are mainly of receiving refined & ready to use capsules of knowledge & information. Easy & faster availability of printed, photocopied & electronic versions of literature & wide gap between curriculum & industry demands has diluted the importance of classroom teaching.

2010S00131

Arvidsson, Markus & Henriksson, Andreas (Department of Social Studies, Karlstad University, Karlstad 656 37 Sweden [tel: +46547002388; e-mail: markus.arvidsson@kau.se]), **The Seduction Community: Negotiating Masculinity Through Social Techniques,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the last two decades, a new international community of men has emerged in the West, as unscientifically but entertainingly documented in the book The Game by Neil Strauss. It calls itself the seduction community & claims to posses powerful techniques for seducing women. It has created web forums & a common language that allows its members to test, share & discuss different seduction techniques. Each member is enrolled in a collective experimental undertaking where they are asked to observe & report their interactions with women. Working from within the tensions that exist between goffmanian social psychology & Michel Foucault, we investigate the Swedish seduction community in order to work out relations between knowledge, technology & masculine identity. In particular, we wish to understand how members use the language & techniques of the movement to negotiate their masculinity in practice. The study is carried out using qualitative content analysis on two Swedish seduction community web forums. We conclude that the practices embraced by the seduction community are deeply rooted in the history & the ongoing changes of masculine identities. Not least, the practices can be seen as means of constructing strictures in a time when heterosexual courtship rituals are dissolving & when men are called for to redefine themselves & their relation to women.

2010S00132

Arza, Camila ([e-mail: camilaarza@hotmail.com]), **Path Departure in Mature Welfare Systems: Crisis, policy Failure and Ideas in Argentine Pension Reform,** *International Sociological Association, Gothenburg, Sweden,*

¶ In 1994 Argentina was one of the first countries in Latin America to structurally reform a mature pension system embracing the so-called "three pillar model". Private pension funds were set up to administer the contributions of workers in individual accounts and pension rights started to depend on market outcomes. In 2008, after 14 years of operation, the pension system has been structurally reformed, once again, returning to a public pay-as-you-go model similar the one abandoned in the early 1990s. While some of the most influential literature on welfare policy emphasises the severe political constrains for reform in mature pension system, Argentine politicians have been able to radically change pension policy twice in 15 years. How was this possible? The paper analyses three factors which can contribute to understand cases of structural policy reform beyond the constraints of institutional path-dependence: (1) economic & political crises & the windows of opportunity they create, (2) policy failure & negative feedbacks, & (3) ideas & discourse.

Asada, Yoshitaka (Department of Letters, Kyoto University, Kyoto, Japan, 606 8501 [tel: +81 75 753 2758; fax: +81 75 753 2836; e-mail: asada@socio.kyoto-u.ac.jp]), **Neo-Liberalism and Communality,** *International Sociological Association, Gothenburg, Sweden,*

¶ This research focuses on the surveillance cameras that are shrouded in dust & spider webs at a farm stand in Japan. By explaining why these were once installed but not thought to be necessary after that, I would like to show the possibility of everyday practices which manage the uncertainty that emerged from the neo-liberal policy behind these cameras. The stage is Konogi district, in Mie prefecture, Japan. 634 people live there & the main industry is agriculture. I conducted fieldwork & interviews with the residents & members of the farm stand to examine 1) the process of installing the surveillance cameras, 2) the background of this process & 3) the reaction of people after the installation. Since the end of the last century, the government has strongly demanded that local people act as a subject to revitalize their own regions by distributing subsidies only to locals who are active. This policy reorganized the region, forming an anonymous market-like sphere that needs to create & manage roads, institutions and prevent crime. However, the people's cooperation & daily interactions got more & more important. This decreased the uncertainty in the farm stand & the cameras were gradually forgotten & abandoned.

2010S00134

Asadollahi, Abdolrahim, Kiwi, Mahin, Ahmad, Nobaya & Mohseni Tabrizi, Alireza (Inst. Gerontology, University of Putra Malaysia, Serdang, Selangor DE, Malaysia, 43400 [tel: 0060173004435; e-mail: assadollahi.ashkan@gmail.com]), **Factor Analysis of Reduction in Social Participation of Peasant Elders within Immigrant Family (Case Study: Seniors in Peripheral Areas of Ilam County in Southwest of Iran),** *International Sociological Association, Gothenburg, Sweden,*

¶ The findings & literatures mentioned to reduction of participation in whole section of society within immigrants and peripheral areas. This study are conducted for evaluation of factors that effect on declining of social participation of seniors in peripheral areas of Ilam county in southwest of Iran; & so finding the obstacles of it. Community of paper is all of gray citizens who have immigrated to Ilam County into third illegal settlements called Ban Bour, Ban Charmag, & Kamarbandi on first biannual of 2008; which was sampled 119 elders. According literature review collected sextet factors are socioeconomic discrimination between rural/urban, rural economic poverty, personal/individual factors, cultural non-solidarity with new context, cultural intolerance of urban citizens, & education factors as first independent variables that were evaluated by multiple regression & path analysis; whereas social welfare of rural family was as second independent variable are collected with health status, children's literacy, family members, & income. Findings show the second variable Seam has most beta score (0.52) and regularly after that were first factor has beta 0.48 (socioeconomic discrimination between rural/urban), personal/individual factors 0.28, cultural non-solidarity with new context 0.42, cultural intolerance of urban citizens 0.37, and education factors 0.34. However the cultural & social aspects of emigrant seniors are more important but collected economic and discriminated/ intolerance attitudes of urbanities were most preferable. It mention to undertaken & especial role of these elders as reference member of emigrant & passage family from rural area to new urban context. Key words: Peasant Elders, Rural Gerontology, Social Participation, Reduction, Factor Analysis, Immigrant Families, Illegal Settlements, Ilam, Iran

2010S00135

Asakitikpi, Aretha Oluwakemi (Mass Communication, Covenant University, Ota, Ogun State, Nigeria [tel: 234-805-276-1922; e-mail: drasakitikpi@yahoo.com]), **Transformation of Leisure: An Analysis of Mass Media Presentations of Pre-Colonial and Post Colonial African Societies,** *International Sociological Association, Gothenburg, Sweden,*

¶ Leisure is an integral part of many African societies & a major aspect in its definition is food. In pre-colonial societies food did not only serve as a biological function but it was also a means of intense social interaction. The close affinity of food with leisure has undergone significant transformation in post-colonial urban societies in consonance with foreign colonial experience. This paper considers the consequences of the transformation of work and leisure in relation to food. To contextualize the transforming relationship between food & leisure, this study uses data from a major cable channel namely African Magic & ethnographic reports to analyze contemporary African urbanites lifestyle. Preliminary analysis suggests a significant transformation in the definition of leisure & work as they relate to gender relations, food consumption & communal associations. The discussion of the results explores the intricate relationship of

social transformation & changing dietary pattern in urban centers and how all this has a bearing on health status & well-being in Africa.

2010S00136

Asakura, Takashi & Nakazawa, Chie (Tokyo Gakugei University, Department of Health and Social Behavior, 4-1-1, Nukuikita, Koganei, Tokyo, Japan, 184-8501 [tel: +81-42-329-7624; fax: +81-42-329-7624; e-mail: asakurat@u-gakugei.ac.jp]), **Neighborhood Environments, Individual Social Capital, and Depressive Symptoms among Adolescents in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study investigates health effects of neighborhood and individuals' social capital among adolescents. Whether an association between social capital & mental health differs according to the quality of the neighborhood is examined. We recruited 2,002 eighth graders & asked for responses to a self-administered questionnaire. The analytic sample was 1,782 because of missing data. After developing scales to measure features of neighborhood environments & individuals' social capital, we performed multiple regression analyses to test associations between neighborhoods, social capital, & depression as measured by the CES-D, controlling for demographics. We also examined interaction between neighborhoods & social capital. Seven subscales were developed to measure features of neighborhood environments with examination of validity & reliability: "availability of services," "good neighborhood relations," "spaces for recreation," "safety," "dirty look, unclean," "civic communities," & "aesthetic look." "Individual social capital" consisted of "trust," "reciprocal support," and "social norms." We found "good neighborhood relations", "spaces for recreation", "civic communities", & "aesthetic look" are conducive to fostering individuals' social capital, & might thereby affect adolescents' mental health. There was a significant interaction between "safety" & social capital with respect to mental health. Improvement of neighborhood environments in terms of safety can mitigate the depressed mood of adolescents.

Asano, Tomohiko, Iwata, Koh & Habuchi, Ichiyo (Tokyo Gakugei University, Nukui-Kitamachi 4-1-1 Koganei City, Tokyo, Japan [tel: 81+423297423; fax: 81+423297429; e-mail: tasano@u-gakugei.ac.jp]), **Social Capital and Civic Engagement among Japanese Youth,** *International Sociological Association, Gothenburg, Sweden,*

¶ In Japan today how to promote civic engagement among youth is one of the most important issues . In this presentation, we are examining if & how, two kinds of social networks contribute to encourage young people to participate in various civic activities, using the framework of social capital theory. The first is secondary associations, particularly those related to leisure activities and the second is the personal networks, particularly the friend network & dating relationships. According to some survey, those two have been increasing their importance for Japanese youth since the 1980s. Our research questions are; 1) Do secondary associations contribute to the youth's civic engagement as is expected in Putnamean theories, & if they do, how? 2) Do personal networks contribute to the youth's civic engagement, instead of just bonding themselves, & if it does, how? The dataset which we will use in our presentation was collected from randomly sampled respondents whose age ranges from 16 to 29. The research was conducted in Tokyo in September 2007. Up to today, there are very few studies which use social capital theory to analyze the youth in Japan, even though there is a huge amount of research which, based on Putnamean thesis, attempts to analyze general population in Japan. Therefore, this presentation could provide new findings.

Asbjørnslett, Mona, Rappana Olsen, Bennedichte & Opsahl, Kari (Høgskolen i Oslo, Pilestredet 48, 0167 Oslo [tel: +46 22 45 24 62; e-mail: mona.asbjornslett@hf.hio.no]), **"Ordinary Kids"– Children with Defined Disabilities Experiencing and Expressing about Ordinary Lives,** *International Sociological Association, Gothenburg, Sweden,*

¶ The subject of this study focuses on how children with defined disabilities experience being an ordinary & "normal" child. Eleven children with defined disabilities, parents and teachers are supporting data material. The design is qualitative, using lifehood interviews as a main method. Theoretically phenomenology with reference to Expressive selfhood & self construction are used to underline the children's expressions through talk, also including bodily expressions from first and third perspectives. Interpretive method is used to analyze data. The results enlighten the children's expectations concerning the transition from primary to secondary school. In this transition friendship, getting grades/bad/good marks etc are mentioned at important for them. Preparing for secondary school also include the growth of the body, change of appearance & values in clothing, makeup for the girls & also a change of orientation towards the opposite sex change from friendship to a more flirting behavior. Some children also bring up questions around work. The conclusion suggest that understanding how children with a disability also can be viewed as normal or ordinary could promote a central perspective to the debate of disability & life situation.

Aschauer, Wolfgang (Department of Political Science and Sociology, University of Salzburg, Rudolfskai 42, A-5020 Salzburg [e-mail: wolfgang.aschauer@sbg.ac.at]), **New Approaches in the Research on Terrorist Attacks Affecting Tourism Demand,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since September 11, 2001, & the numerous further terrorist attacks, epidemics & natural disasters, areas representing the dark sides of travelling are taken up more often in tourism research. The loss of tourism demand after terrorist attacks is documented quite clearly in several publications (Aly & Strazicich, 2001; Pizam and Smith, 2000; Pizam & Fleischer, 2002; Frey, Luechinger & Stutzer, 2005; Aschauer, 2008). However, quantitative data relating to the flow of tourists allow only speculative assumptions with respect to the causes of spatiotemporal fluctuations in tourism. Further potentially influential factors like psychological factors (tourist mentality), economic-societal factors (crisis management, media) and political-cultural factors (travel alerts, cultural distance to locals) are hardly examined in tourism research. A deeper analysis of effects on tourism demand should not be limited to tourism statistics; it should include the destination image of travelers (on location & in several source markets). The subject of this empirical study is to compare a survey of 132 inhabitants of the city of Salzburg (Austria) on the destination image of Bali & the Sinai region (conducted in the year 2007) with a former survey with travelers on location (Aschauer, 2006). The study integrates new approaches on the research of tourism demand which can be ascribed to tourism mentality. In summary, important implications for crisis management are offered: It is measured with T-tests which differences in the destination image occur between travelers on location & in source markets & with multiple regressions which psychological requirements lead to a persistent motivation to travel despite terrorism threats. In summary, tourists with a higher risk propensity, a higher travel experience & higher information needs demonstrate lower fears of terrorism & have, in general, a better image of terrorism-affected destinations.

Asheulova, Nadia & Lomovitskaya, Valentina (Centre for Sociological and Science-Studies Research, Institute for the History of Science and Technology, St Petersburg Branch, Russian Academy of Sciences, Saint-Petersburg, Russia, 199034, 5 Universitetskaya nab., [tel: +7 812 328 59 24; fax: +7 812 328 46 67; e-mail: simar@bk.ru]), **International Mobility as a Mechanism for Reproducing the Scientific Elite,** *International Sociological Association, Gothenburg, Sweden,*

¶ The existence of elite scholars is a necessary condition for the functioning of science. In Soviet-Russia, the emergence and reproduction of the scientific elite was inextricably connected with a significant self-organizing element of the scientific community, known as a "school of thought" (nauchnaya skola). Schools of thought played a major role in Soviet science. The elite not only matured in a particular school of thought, but this was how scientific work itself, as a scientist's free activity, could be done. The post-Soviet social & economic transformations have led to significant changes in Russian science. The idea of a "school of thought" as a self-organizing form in the scientific community was destroyed when claims to the rights of intellectual property began to emerge. The collapse of the various schools of thought implied that an important tool for reproducing the scientific elite was broken. Old mechanisms are being replaced by new ones. The "international mobility" of scholars proves to be a significant new instrument for reproducing the scientific elite. During Soviet times, Russian scientists had very weak links with the world scientific community, whereas in the 1990s they acquired a new quality & new opportunities for collaboration. International mobility is crucial for integrating Russian science into the global scientific community. The participation of Russian scientists in the world division of labor can help to solve difficult problems for post-Soviet science as the generations change. Today, many young people are unwilling to work as scientists. There are several explanations for this situation: low starting salaries, poor equipment & facilities for research, uncertainties about their future career, & so on. However, a number of problems facing young researchers might be

resolved with Russia's integration into global science. Involvement in joint projects & international scientific events, publication of research results in prestigious journals, internships at prominent scientific centers in Europe, America & Asia, receiving grants from foreign foundations–all of this helps to broaden the experience & to raise the status of young specialists. And it also helps to provide them with new opportunities in their own country through cooperative scientific development. The paper will look at the processes of liberalization that are a condition for stronger mobility among Russian scientists. The author will present results of a sociological study "Mechanisms for Reproducing the Scientific Elite in Russia" conducted by the Center for Sociology of Science & Science Studies Research, Research Institute for the History of Science & Technology, St. Petersburg Branch, Russian Academy of Sciences.

Asiyanbola, Raimi Abidemi (Olabisi Onabanjo University, Ago-Iwoye, Ogun State, Nigeria, 234 [tel: +2348056206690; fax: ; e-mail: siyraimi@yahoo.com]), **Gender, Housing Stressors and Physical Well-Being in Africa,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper examines gender differences & intra-urban variations in the effects of housing stressors on the physical well-being of women & men in an African city–Ibadan, Nigeria. The data used is from a larger household survey on gender & housing carried out by the author in Ibadan, Nigeria. Information was collected on women's (and their spouses if any) physical well-being & housing stressors variables which are some housing attributes that could be stress-inducing. Such variables include high rent/cost, lack of space, housing discomfort, physical housing condition and dissatisfaction with housing,. Multiple regression & analysis of variance (ANOVA) statistical techniques were used to analyze the data. The result shows that in all the housing stressor variables used in the analysis, only the impact of the high rent/cost is found to be higher for men than for women. In all the other housing stressor variables, the impacts are found to be greater for women than for men. In the case of the women living with their husbands and the female-headed households, the result shows comparatively that each of the housing stressors has more impact on the female-headed households than on the married women living in the male-headed households. The analysis of variance (ANOVA) result shows that there is significant intra-urban variation in the effects of housing stressors on the physical well-being of women and men. Housing & urban development planning & policy implications are discussed in the paper.

Asiyanbola, Udoka N. (University of Ibadan, Ibadan, Oyo State, Nigeria, 234 [tel: 2348030781405; fax: ; e-mail: udokaoozim@yahoo.com]), **A Study on the Acquisition of English Consonant Sounds by Yoruba Children between 1-2 years old,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study is a phonological inquiry into the acquisition of English consonant sounds by Yoruba children aged between one & half; and two years. It provides answers to the order of acquisition of English consonant sounds, the reason(s) for this order & the relationship between the acquisition order & that already existing knowledge, especially with regards to environmental influence & the second Language (L2) situation. The data used for the study were repeated utterances of eighteen Yoruba children within their school environment. The recording exercise was carried out within a period of two months, at irregular intervals. The work is divided into five sections. Section one contains the general introduction & the background to the study. Section two is the review of related literature. Section three deals with the phonemic analysis of a Yoruba child's consonants while section four treats the phonological processes identified in the data. Section five is the conclusion, where the findings are highlighted, the limitations stated & recommendations given.

Aslam, Rabbia (Allama Iqbal Open University-Islamabad, H-9 Sector, Block, 11. Room no. 108. AIOU-Islamabad [tel: +92-051-9057247; e-mail: rabbiaaslam@yahoo.com]), **Sociological Analysis of the War on Terror: The Role of Media and Education,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper attempts to explain the disturbed condition of Pakistani society from sociological perspective. This further explains the interconnectedness of socio-political, socio-religious & socio-cultural phenomena. This will also highlight the consequences Pakistan received for being an allay on the war & Terror. In Pakistan, there is a social, cultural, political, & economic turmoil. Our structure is based on simple & complex groups. They are not only the victim of big powers globally, but also the victim of the structural alteration in the society. This paper will also highlight the structure individualism of Pakistani society & to pinpoint the individual anomie state of the Pakistani citizens. The war on terror is a global issue. The government of Pakistan besets by one political crisis after another & split between a traditionally autonomous military & assertive but irritable elected leaders, has been unable to control of its own territory and population. Pakistan had to pay a very heavy price for leaving her non-aligned policy & becoming a client state of the United States in its very early period of state constructive. The findings highlighted that the current tendency to cal all wars of liberation against occupation & repression, terrorism is a gross misunderstanding of history, Society & State. Terror cannot be countered by more & intensified terror. Civilians die as much as in war as they do in terrorist attacks, the only way to counter terrorism is to address the fundamental grievances that produced it in the first place. Moreover, the media & education can play the role of social reorganization for the Pakistani citizens. This paper consist of two parts, part first will deal with secondary information in review of literature, part second will be debate and discussion with suggestions regarding the social reconstruction of Pakistani society.

Aspers, Patrik & Krempel, Lothar (Department of Sociology and SCORE, Stockholm University, Stockholm University 106 91 Stockholm [tel: +468163164; e-mail: patrik.aspers@sociology.su.se]), **From Game to Entertainment in the Football Industry: The Economy of Sport,** *International Sociological Association, Gothenburg, Sweden,*

¶ How come that only a few clubs tend to win the trophies in European club football? To address this question we make use of an economic sociological perspective & focus on competition between actors in markets. Our hypothesis is that the stability among the successful teams is due to incomes generated in the different markets they operate. Football is today big business reflected in high transfer sums paid for players & football's growing share of GDP. Players are the largest assets of the clubs, to attract fans, TV, and sponsors, as well as to win games on the pitch. We show that competition in football has diminished & that the players' market has over time stabilized as a pyramid of supply chains segmented in three tiers of clubs. This situation is explained by looking the revenues clubs generate in different markets: match tickets, broadcasting rights, sponsors, & from taking part in large pan-European tournaments. It is argued that the revenues structure the purchasing power the clubs have in the key market of this industry: the market for players. The paper concludes that clubs compete with one another by establishing niches on the market for "football entertainment".

2010S00145

Astor, Avi (University of Michigan, Department of Sociology, Ann Arbor, MI [e-mail: aastor@umich.edu]), **Conceptions of Place and Mosque Opposition in Spain,** *International Sociological Association, Gothenburg, Sweden,*

¶ In recent years, a significant amount of literature has been devoted to illuminating the origins of ethnic conflict. This literature, however, has given little attention to the role of place in shaping relations between ethnic majorities & immigrant minorities. The attachments that residents have to the places they inhabit, their perceptions of whether their neighborhoods are improving or declining, & their awareness of urban privilege play a profound role in shaping how they respond to immigrant newcomers. This paper examines how these distinct dimensions of place have influenced reactions to mosques in Spain. Particular attention is given to the metropolitan areas of Barcelona, where mosque opposition has been most visible & intense, & Madrid, where opposition has been strikingly absent. It is argued that distinct patterns of urban development in the two areas have given rise to different forms of local identity & neighborhood attachment, which in turn have led to distinct reactions to the entry of immigrant newcomers & their communal structures. Specifically, a higher degree of inframunicipal inequality, stronger neighborhood attachments, and a greater awareness of urban privilege in Barcelona have complicated the reception of mosques & the populations they serve.

Astoyants, Margarita (South Federal University Teacher's Training Institute, Rostov-on-Don, 344082, Russia [tel: +78 632 726750; fax: +78 632 404158; e-mail: AstoyancMS@yandex.ru]), **Social Exclusion & Inclusion of Orphans in Russian Society: Discourse-Analysis of Mass Media Publications,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of the of the paper is to analyze the changes in political discourse on orphanhood in Soviet & modern Russia & define the directions of its shifting towards orphans' 'social inclusion'/'social exclusion'. In this work we consider it important to review the changes that occurred in the ideology of overcoming orphanhood in the critical periods of Russian history in 20-21st centuries. We'll define three starting points, traditionally viewed in literature & public discourse as the periods of "orphan burst". These are October revolution & civil war, The Great Patriotic war & "perestroika" with the following period. The choice of political discourse (and not eg. professional or scientific) is motivated by the fact that in a totalitarian state, like USSR, it's the discourse of power that is considered absolutely true & has the unlimited influence in different spheres. In our case exclusion or integration will be the consequence of definite knowledge passed on through the texts. There are distinguished both the types of discourse which lead to the social exclusion of children-orphans & those which contribute to their social integration. The discourse of social disaster which examine the orphans as a threat for the stability of the society turned to be very steady. Positive from the viewpoint of the integration of the children-orphans into the society are the discourses of the social profit, of the social unity, of the social partnership. The most perspective for modern Russia is the discourse of the social partnership, which initializes the evolution of the institutes of civil society during the decision of a concrete social problem (children's orphanage).

Atsushi, Nozawa (Meiji university, Department of Arts and Letters [fax:; e-mail: ats.nozawa@gmail.com]), **Another Aspect of Damage from the Disease Caused by Environmental Disruption in Japan–A Case Study of Minamata Disease,** *International Sociological Association, Gothenburg, Sweden,*

¶ Minamata Disease is the most massive pollution problem that has struck Japan in the post-Second World War period. This issue has not yet been solved & one reason is that the guidelines issued by the Environment Agency in 1977 made certification standards stricter. As a result, the number of uncertified patients has increased while it is also believed that there are many more unregistered patients. This presentation focuses on the central & complicating factor of this issue, the definition of certification, & analyzes social movements concerned with issues of certification & compensation for patients. The analytical method is mostly social constructionism. This presentation concludes that, in the near future, permanent & community-based compensation systems will become more important. One reason is that the number of aged patients has increased & therefore we need to discuss compensation systems in terms of social damage caused by Minamata Disease: divisions between patients & destruction of solidarity among citizens. In order to facilitate these discussions, I conclude that it has become more important for social movements concerned with Minamata Disease to have strategies that aim to achieve participation of patients & citizens in the processes of design, decision making & implementation of compensation systems.

Aubert, Adriana, Ramis, Mimar & Redondo, Gisela (CREA, University of Barcelona, Barcelona, Spain, 08028 [tel: +34 93 403 45 48; e-mail: adriana.aubert@ub.edu]), **Scientific Research for Educational Success for All: Differences among Mixture, Streaming and Inclusion,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Includ-ed Project: Strategies for inclusion & social cohesion in Europe from education (2006-2011) belongs to the 6th Framework Program of the EU & analyses educational strategies that contribute to overcome inequalities & promote social cohesion, and educational strategies that generate social exclusion. It focuses on the effects upon vulnerable groups. The findings obtained during the first year of work–a thorough review of European educational systems–allow for the identification of three different ways of organizing the students & the available human resources in schools: mixture, streaming & inclusion. European educational systems need to respond to the increasing diversity of European societies. New challenges are arising for teachers in schools with diverse students. The models developed for the organization of students & of human resources have not always been inclusive. This paper tackles these models & their different effects in schools. Mixture refers to the traditional organization of the classroom based on mixed ability & one only teacher which can't respond to students' diverse needs. Consequently, streaming was introduced; it implies the increasing of human resources–as additional teachers- & the separation of students according to ability. It produces negative effects on instrumental areas of learning for all students, among others. Inclusion on the other hand, is the organization of students in heterogeneous groups with additional resources drawing from those available. Different experiences of this model will be provided. Inclusive measures are presented as an alternative model for mixture & streaming, to achieve educational success for all students.

2010S00149

Augustin-Jean, Louis, Sekine, Kae & Boutonnet, Jean-Pierre (University of Tsukuba, Graduate School of IPP, University of Tsukuba [tel: +81(0)90 3604 0386; e-mail: auyeungULly@yahoo.fr]), **Geographical Indications and Local Development,** *International Sociological Association, Gothenburg, Sweden,*

¶ Products of origin, such as those protected by geographical indications (GIs), are currently at a centre of numerous debates, in particular in relation to their intrinsic, supposed or imagined quality. In South European countries (e.g. France, Italy or Spain), GIs are traditionally associated with traditional products embedded in a terroir. On the opposite, in the United States, GIs are often perceived as giving unjustified premiums to local producers–premiums that competitors located in other areas are unable to capture. At best, the GIs are thus assimilated to a trademark possessed collectively by some actors within the supply chain (the emphasis is then on the intrinsic quality of the product, mainly defined by its technical criteria). Although these positions are slightly evolving (possibly after the tough international negotiations on wine), the two lines of argumentation are still central in international negotiations, in particular within the framework of the WTO. In a more theoretical way, the difficulties to harmonize the two positions are justified by the fact that they are based on radically different conceptions of quality (Boltanski et Thévenot, 2006; Eymard-Duvernay, 1995). The definition adopted for quality has therefore important implications for the recognition of GIs & terroirs in the international arena, and, eventually, for their future existence. It is also clear that this definition influences the competition regime, between producers and between territories, at the national & international levels–and this is obviously a major reason why negotiations are at a low point. The question of GIs as a property right versus a legal mean of defence of local specificity is posed (Ilbert & Petit, 2009). As a result, it is interesting to study how the definition of quality impacts the (re-)organization of the market (Coriat and Weinstein, 2005; Fligstein, 1998) & its consequences for producers. In this context, the Japanese system is of special interest. On one hand, products of origins appeal to Japanese consumers, & many of them are nationally famous (Kobe beef, Kyoto "traditional" vegetables, etc.). This consumer's interest obviously stimulates farmers to further market these products not only domestically, but also internationally (which is a new phenomenon). On the other hand, the Japanese government hesitates between a strategy of developing recognized regional brands & a more global strategy of international protection. This pending attitude, which causes prejudice to both consumers & producers, was not fundamentally altered by the enactment of the regionally-based collective trademark law (April 2006). The French system, formerly based on users rights linked to geographical situation & a collective definition of the product, guaranteed by the State, is now regulated by Regulation (EC) No 510/2006 "on the protection of geographical indications & designations of origin for agricultural products & foodstuffs". Under this new system, GIs are managed as a new property right, with third party certification under ISO standards. In this period of construction and/or consolidation of protections of products of origins, it is then important to assess the signification of GIs in Japan and France: collective movement for the development of a territory or defence of geographical trademarks? What are the principles of justifications for the development of these two systems & what are the consequences? In order to answer these questions, the paper presents two case studies in France & in Japan. These case studies are for the same basic commodity (beef), which nevertheless delineated into two emblematic products of origin (and, therefore, into two differentiated goods): "Limousin beef," in France, and "Kobe beef," in Japan. The role of quality in the definition of the products–including in its geographical dimension–and the need to maintain this quality is highly recognized by actors of both side, & exchanges of experiences between actors of both countries have taken place in order to maintain the necessary high quality. The differences between, on one hand, the well-defined "Limousin beef" and, on the other, the world-wide famous Kobe beef (despite the fact that is it not exported) illustrate how products of origins are managed in the two countries, how collective action impacts on the development of the market & what are the consequences for territorial development. The data are based on fieldwork conducted in Kobe in March 2009, & in Limousin in January 2010. In this paper, (1) we present the regulations and current discussions about the protection of products of origins, in Japan & in France; (2) the components that define the quality of Kobe & Limousin beef are presented. The focus is on the similarities

& differences of the two differentiated goods, and on the reasons for these differences. In this context, the role of the main actors (government, producers, meat industry companies, agricultural cooperatives, butchers, restaurants, consumers, associations, etc.) in changing or maintaining the existing system needs to be assessed. This analyse leads us to address the difficulty to delimit the concept of GI & to question the pertinence & the sustainability of the two systems, in the context of international negotiations related to quality.

Aurich, Patrizia (University of Hamburg, Hamburg, Germany, 20146 [tel: 004940428386396; e-mail: patrizia.aurich@uni-hamburg.de]), **Levels, Directions and Divisions of Change Towards Activation in Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ One of the continuously disputed issues of welfare state research is the question of convergence or divergence. In the fight against unemployment powerful ideas, such as activating the supply-side of labour, emerged in the 1990s & informed reform efforts in a number of different welfare states. However, the literature contends that convergence remains limited to the general idea, from which different strategies of how to do so have been developed (workfare/enabling etc.). This paper theoretically advances these conceptions allowing for an analysis of real policies, which are always mixed, not pre-assuming ideal types from empirical observation. The empirical analysis adds a time dimension to the analysis of diversity analysing developments in three European countries: Denmark, Germany & the United Kingdom. Changes are traced for programmes of unemployment insurance & social assistance over the last 15 years, comparing policies for insiders with policies for outsiders of the labour market at different points of time. An attempt is made to explain these developments in the light of different contexts referring especially to programme-specific policy settings for the non-active and socio-cultural backgrounds. It is argued that symbolic convergence is contrasted by different ways of ascribing responsibility.

2010S00151

Auspurg, Katrin & Hinz, Thomas (Universität Konstanz, Universitätsstr. 10, 78464 Konstanz [e-mail: Katrin.Auspurg@uni-konstanz.de]), **What Difference Makes a Bias? Gender Specific Success Rates in Research Funding by the German Science Foundation,** *International Sociological Association, Gothenburg, Sweden,*

¶ Compared to other EU countries, the representation of female scientists in the German scientific system is with 16 percent female professors at the very bottom although the gender composition among students & graduates meanwhile is even. As possible explanations for this inequality, different access to research funding & different chances of grant approval by gender are discussed. Our research analyzes the problem of gender specific chances by using process produced data of the German Science Foundation (DFG) on applications for single grants from 1991 to 2008. These data enable investigations by scientific disciplines as they are informative for testing theoretically motivated propositions. We analyze seven hypotheses on chances of grant approval, sex of applicants & gender composition of scientific discipline. We find small, but systematic disadvantage of female scientists. Furthermore, there is evidence of a lower participation of female scientists in applying for research funding.

2010S00152

Avrahampour, Yally (London School of Economics & Political Science, Kingsway [tel: 44 207 106 1208; e-mail: y.avrahampour@lse.ac.uk]), **Managerial Agency: A Relational Account,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper provides an account of the rise & decline of UK defined benefit pension provision over the past eighty years. A relational model of managerial agency is introduced in which the agent; the profit center manager uses ambiguity to mediate between shareholders & customers; two principals with conflicting objectives. This model is extended to explain the role of the pension fund manager (PFM). Drawing on analysis of fourteen archives of professional associations & pension funds, eighty eight interviews with actuaries, consultants, pension fund managers and others, & technical accounting & financial texts, the paper explains the rise & decline of defined benefit pension funds by examining the impact of financial accounting standards on the PFM's autonomy. The three inflection points in the rise & decline of defined benefit pension provision are related to the three UK pension fund financial accounting standards promulgated over the past sixty years. The rise of defined benefit pension provision in the mid-twentieth century was the consequence, paradoxically, of greater opacity in financial accounting & increasingly discretionary actuarial practices. Its decline was the consequence of greater transparency in financial accounting & standardized actuarial practices.

2010S00153

Axelsson, Tobias (Centre for Feminist Social Studies (CFS), School of Humanities, Education and Social Sciences (HumES), Örebro University, 701 82 Örebro, Sweden [tel: +46 19 30 12 69; e-mail: tobias.axelsson@oru.se]), **'Fathers' Groups': Confirming or Contesting Gendered Patterns in Parenthood?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Compared to men in many other contemporary welfare states, fathers in Sweden have the same parental social rights as mothers. For example, paid parental leave encompasses both mothers & fathers. Despite gender neutral parental legislation, fathers are in some occasions sorted out as male parents. This is visible in state-founded meeting places for parents, where parents can get in contact with each other during parental leave. Due to the under-representation of men in these places, state-sponsored "fathers' groups" have been started. This study explores how fathers are doing gender & parenthood in one "fathers' group". My objective is to discuss whether & how gendered patterns in parenthood are confirmed or contested in this "fathers' group". Data has been obtained by observations & by individual in-depth interviews. Theoretically, the study is carried out within a doing gender perspective, in which parenthood is analysed as a gendered, situated & relational process. My findings indicate that patterns of gender inequalities & male privileges in parenthood are challenged & reproduced, often unintentionally. Situated activities produce child-centeredness & promote caring practices, but also result in mobilising collective masculinities. Finally, "fathers' groups" are offering men a social setting where they are doing parenthood their own way.

2010S00154

Ayass, Ruth (University of Klagenfurt, Klagenfurt, Austria, 9020 [tel: 0043-463-2700-2016; e-mail: ruth.ayass@uni-klu.ac.at]), **Black and White: Visual Constructions of the Stranger,** *International Sociological Association, Gothenburg, Sweden,*

¶ There is a strong tradition in sociology in discussing the role of the stranger for society. We have Georg Simmel, who described the stranger as "the man who comes today & stays tomorrow–the potential wanderer". We have further Robert Park, who illuminated the hybrid situation of the "marginal man", & Alfred Schutz who focused the irritations in the migrant's stock of knowledge. I will show how insider & stranger form, in terms of conversation analysis & ethnomethodology, a standard relational pair. The strange-ness of the stranger is mostly produced via an allocation of so called "category bound activities" (Harvey Sacks)–"they" do this & that sort of things (compared to "us"). This "membership categorization" is a complex, on-going, interactive accomplishment that has a strong impact on the organization of society. I will have a look on representations of the standard relational pair insider/stranger on an empirical basis. Up to now, sociology analyzed the members' production of an orderly structure mainly on the basis of verbal data. My presentation will add to this approach the analysis of visual representations of the stranger & visual reconfigurations of 'us' & 'them', showing the construction of strange-ness as a complex procedure. I will show how specific types of strangers are initially shown as a demon or exotic (i.e. a lack of 'orderliness' in the beginning), and then are domesticated in visual & verbal presentation. The data consists of visual presentations mainly in posters (propaganda, campaigns, & other forms of political communication from several countries).

2010S00155

Aydin, Kemal, Gülglu, Tuncay & Azevedo, Priscila Gomes de (Kocaeli University, Umuttepe Yerleşkesi, 41380 [tel: Kocaeli, Turkey; fax: 90-262 454 4350; e-mail: kaydin709@gmail.com]), **Social Status and Book Readings in Turkey "Adoption à la Brazilians": The Fostered-Children Case,** *International Sociological Association, Gothenburg, Sweden,*

¶ As remnant of recent past, it is usual to find in the inner part of some states in Brazil a social status called "fostered-children", who are individuals given away, when babies, to another family by their biological family, usually very poor & originally from the rural areas, being the fostering family located in an urban area. But those are not cases of adoption, nothing happens under law. The fostering family holds them as their own "children" before society, no difference from their biological children. However, the fostered-children are only educated to take household tasks, kept away from school & from any other participation beyond the family envi-

ronment. Nothing is either explicitly imposed by the fostering family or seen as unfair by the fostered-children, who confirm they feel just as biological children, regardless of the iniquitous treatment. There is no specific literature addressing precisely that relationship. By not having means of objective comparisons, it is possible to figure fostering parents/fostered-children relationship out as abiding the borders of those relationships involving adoptive parents/children, bosses/servants and masters/slaves, even though none of them can exactly depict the situation; once there is neither the equity which permeates adoption cases nor the financial terms & working rights, present in the employment cases. The classification "slave" could exactly define that relationship, except for a structural subject: slaves do know their status, the fostered-children do not. That is symbolic violence, apt to transform exploitation & submission into affection. The research purpose was that of accessing the practical/moral line that leads the actions, the "habitus", by the fostered-children so as to understand the voluntary submission. As a consequence of that, the research was based upon the methodology developed by Bernard Lahire.

2010S00156

Aydin, Kemal & Guloglu, Tuncay (Kocaeli University, Umuttepe yerleskesi, Kocaeli, Turkey [tel: 41380; fax: 90 262 454 1070; e-mail: kaydin709@gmail.com]), **Cultural Consumption and Social Status: Context of Book Reading,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper analyzes book reading & purchasing behaviors as a leisure time activity in Turkey with respect to socio-economic and demographic characteristics of households. The study used the raw data of "Household Budget Survey" questionnaires conducted with 17,310 households by the Turkish Statistical Institute in 2005 and 2006.Eleven percent of the respondents declared reading and purchasing books as a leisure time activity. The most statistically significant factors in book expenditures, in order of significance, are income, postgraduate, college education & gender. In order of importance, income level is the most, education is the second and gender variable is the third most important determinant of leisure time book reading & purchasing.

2010S00157

Aydingun, Aysegul (Middle East Technical University, Ankara, Turkey, 06531 [Tel: +90 312 2105978; fax: +90 312 2107972; e-mail: aydingun@metu.edu.tr]), **Identity, Security, Conflict and Interests: What Self-Reflexive Sociology Can Do for Meskhetian Turks and Crimean Tatars?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Meskhetian Turks & Crimean Tatars are two communities that have experienced wars, Stalin's deportations, grave discriminations, forced migrations, ethnic pogroms & severe human rights violations. Neither community, since their deportations from their homelands in 1944, obtained the right to return until quite recently. Their repatriation remains a sensitive issue for Ukraine and Georgia. Due to growing instability which threatens the territorial integrity in these societies, limited progress has been achieved in the repatriation process. Based on the fieldwork and interviews carried out in Crimea, Kazakhstan, Kyrgyzstan, Uzbekistan, Georgia & Turkey at different times since 1992, this paper aims to comparatively study both communities, focusing on their ethnic identification & global dynamics. It is argued that these two communities may become a source of conflict for strategic reasons, as a result of the manipulations of regional & global actors striving for influence in the enlarged Black Sea, a region in shaping. The paper attempts to think globally with a sociological imagination & uses interdisciplinary knowledge aiming at developing a self-reflexive approach. Such reflexivity will free the sociologist & increase his authority in the field of politics entailing the efficient use of sociological knowledge, and rendering prediction & warnings about the future possible.

2010S00158

Azadarmaki, Taghi (The University of Tehran, Tehran, Iran, 14773/126 [tel: 0098-21-22806131; fax: 0098-21-88012524; e-mail: tazad@ut.ac.ir]), **Iranian Youth and Religious Behaviors,** *International Sociological Association, Gothenburg, Sweden,*

¶ The main object of the paper is to show how much Iranian youth are religious. It is very important topic, because even the Iranian society is religious & the state has been run by religious leaders, clergyman, but we can see that there are many religious challenges among people & particularly the youth. I have used Weberian perspective to know how & in which leveles (ideas, knowledge, behaviour or rituals) the youth in Iran care about their religion. We have launched a survey in Tehran with 640 sample size. We have found out that the youth in Iran are religious in terms of ideas & believe more than 90 percent, & they care in their religion less in their behaviour & rituals (35 percent). Hence, we can say that the Iranian youth believe to God & other word, but they are not religious in their behaviour. On the other hand, they do their religious practices less than their parents & they believe to God as they do.

Azevedo, Rodrigo Ghiringhelli de & Abbatecola, Emanuela (Programa de Pós-Graduação em Ciências Sociais da PUCRS, Porto Alegre, Brazil, 90619-900 [tel: 55-51-98085573; fax:; e-mail: rgaUL2006@hotmail.com]), **The Crime Control Field in Brazil–Human Rights and Public Safety to Police Officers, Public Prosecutors and Judges: The Neglected Side of Segregation; Men in "Female" Jobs,** *International Sociological Association, Gothenburg, Sweden,* (POR)

¶ Over the last 20 years, after the democracy came back, with the promulgation of the 1988 Constitution, the debate on crime control in Brazil is still permeated by the opposition between human rights and fight against crime. It is intended in this study to identify how this opposition is expressed in the members of three institutions of criminal justice discourse: police officers, public prosecutors, & judges. Starting from Bourdieu's studies on the legal field & their internal disputes, as well as Garland's proposition on the characteristics of the control of crime field, the analysis of the discourses made by members of these three institutions allowed us to understand the precarious incorporation of constitutional civil rights in the setting of rules of action and decision making of police officers, prosecutors & judges, as well as identify the extent to the demand for criminalization and fight against crime ends up identifying this set of legal rights and procedures to follow an obstacle to the accomplishment of the state-owned response against crime. Sociologists usually neglect relationship between men & the labour market. Work is the main dimension of male social identity, & men are clearly favored in their careers. Therefore, it seems there's no need to talk about work & masculinity, & this connection is always taken for granted. In fact, masculinity could be in a certain sense as much constraining as femininity, even if consequences are qualitative different. How masculinity could be constraining? Forcing men to work for the labour market & making their access to non-masculine jobs difficult. As Williams (1992) states: "… men are less likely to enter female sex-typed occupations than women are to enter male dominated jobs" (p. 253). Therefore, there's also a male segregation, seldom taken into account, which mainly acts in two ways: (1) labelling all male workers in such female occupations, who suffers from prejudices and suspects concerning their masculinity and/or sexuality–that is the case of kindergarten & elementary school teachers who are likely to be labelled as gay and/or paedophile (Priegert Coulter R. and McNay M., 1993); (2) forcing them to chose upper positions (glass elevator), even if promotion implies less desirable tasks, at least from the worker point of you. The paper will present and discuss the main results of a qualitative field research in Genoa (Italy) implying life stories of men in female dominated occupations, such as nursing, kindergarten & elementary school teaching & social work; that is to say, all kind of occupations not coherent with a traditional representation of masculinity.

Aziri, Etem & Matevski, Zoran (SEE University, Tetovo, R. Macedonia, 1200 [tel: ++389 70 263 342; fax: ++389 3071 737; e-mail: e.aziri@seeu.edu.mk]), **Influence of the Religious Education on the Youth Moral Norms in R. Macedonia,** *International Sociological Association, Gothenburg, Sweden,*

¶ In R. Macedonia, until the fall of communism, in force was the so-called socialistic moral. After, the fall of communism, the socialistic moral with all its ideology took a plunge. Accordingly, the successor of the socialistic moral was to be the so-called civil moral that was based on civil humanistic rights & freedoms. The establishment of civil moral in a yang democratic society such as Macedonia proved to be quite difficult. The principal reason for that, however, was the fact that Macedonia did not possess democratic tradition. As a consequence, a vacuum of moral values which had terrible consequences on Macedonian youth, took place. Simply put, in a situation where the socialistic moral values were abandoned & the civil moral values were still not created, the youth started to feel lost & disoriented regarding their moral norms. This represented an ideal chance for promotion of the idea of return to religious moral, which, with help of its moral norms, based on the Holly Books, should be able to save the moral deterioration of the Macedonian society. The idea was: religious education in no way can hurt the children. With this has to prevent "moral panic" which spread among the young people in Macedonia. With that has to fill the moral vacuum that occurs in so called transitional period in R. Macedo-

nia, thru rejection of the values characteristic for socialistic moral & slowly establishment of civic values.

Baas, Meike (Soziologisches Forschungsinstitut (SOFI), Göttingen, Germany, 37085 [tel: +49-551-52205-33; fax: +49-551-52205-88; e-mail: meike.baas@sofi.uni-goettingen.de]), **Unintended Outcomes of Vocational Training in Germany–Patterns of Sex Segregation in the German Training System,** *International Sociological Association, Gothenburg, Sweden,*

¶ Particularly in international comparisons the German vocational training system is often applied to show how to establish successful training & labour market integration alongside the "university track". However, this perception neglects two main institutional characteristics of the system: First, the German system has always been set on two pillars: the apprenticeship and the school-based training which has made the system particularly gender segregated because woman are mostly trained within the less standardized school-based training. This part of the training requires often higher entry qualification but does not provide better labour market chances. In this regard, the "amortisation costs" of educational investments are higher for women than for men. Second, there in recent years an increasing sector of schemes providing vocational preparation has been established–the so-called transition system. In fact these schemes often replace occupational training within well established parts of the training system & turn out to be a new pillar of vocational training regime in Germany. In this paper these often neglected characteristics of the German training system are discussed in context. It is argued that the patterns of sex stratification found in the traditional parts of the German training system can also be found in the rather new pillar of the transition system. Women attending schemes of the so called transition system tend to posses higher entry qualifications but seem to have lower chances to convert these qualifications into positive outcomes with regard to a quick integration into employment or regular training. It is shown that patterns of segregation can not only found between vocational & university education but also within the system of vocational education.

Babaitsev, Andrei ([e-mail: we20041@yandex.ru]), **The Symbols of the Olympic Games in the Context of Socio-Political Communication,** *International Sociological Association, Gothenburg, Sweden,*

¶ By the end of the 20th century, the Olympic Games exclusively broke through the framework of a sporty appearance & acquired a global character. The ideas of world coexistence, togetherness, etc. are expressed in the Olympic Games. The Olympic Games are used by governments for the formulation or support of its positive international image. To this extent, the symbols promoted, which are used in the opening & closing ceremonies, are based on the particular culture, history & state politics of the city, which is hosting the Games. The intentionally distorted Olympic symbols are often applied by various political organizations. As such, on the eve of the XXIX Olympiad, the organization Reporters without Borders distributed the poster that was aimed against the organizing the Olympic Games in Beijing. The Olympic rings were represented as handcuffs in the picture. Political characters use the Olympic Games to express their position, which is usually expressed in a symbolic form. With this, different symbols are used that are conventionally decrypted in any semiotic system and understandable to anyone without needing a thorough explanation.

Babenko, Svitlana (Social Structures and Social Relations Department, Kyiv National Taras Shevchenko University, Kyiv, Ukhaine, 01601 [tel: 38 050 1921496; e-mail: svetULok@mail.ru]), **Social Inequalities Shifts in Post-Communist Capitalism: Ukraine in East European Social Space 1989-2009,** *International Sociological Association, Gothenburg, Sweden,*

¶ Varieties of capitalisms developed in post-communist societies after 1989 produced new types of social inequalities & transformed existed forms of inequalities in societies of former Soviet Union and CEE. Inequalities became more visible & countable, as well as more sharp & deep in former soviet societies. The dynamics of social inequalities is analyzed through not only objective indexes comparison (Gini, GDP per capita, etc) but also via structural changes & social perception of these shifts. Dynamics of social systems with changing social order lead to transformation of the inequalities structure & attitudes toward them from the population. In terms of constructivist approach to study of inequalities we analyze the questions: how do attitudes toward social inequalities being forming in public opinion; how does perception of social & economic inequalities reproduce structural features of the society. There are three dimensions of the social inequalities analyzed in the current research: 1) socio-economic inequalities dynamics during two decades of post-communist transformation; 2) social perception of inequalities; 3) attitudes toward coping behavior & life success through inequalities of resources. The research is based on the comparative databases of European Social Survey (2002-2008) & monitoring of public opinion in Ukraine (1992-2009), as well as comparative statistics from World Bank reports & Bertelsmann transformation reports. Comparison of the dynamics of social & economic stratification (measured by Gini coefficient) with perception of this dynamics by the people in Ukraine based on the data of Monitoring done by IS NAS of Ukraine 1992-2008 lead to the conclusion about difference between "objective" & "subjective" factors of social inequalities' dynamics in Ukraine in 1990th-2000th as well as typological variance within East European societies.

Babones, Salvatore (Department of Sociology & Social Policy, The University of Sydney, SSPS Bldg A-26, Univ of Sydney NSW 2006 [tel: +61 2 8003 6853; e-mail: sbabones@inbox.com]), **Entropy Modeling of the Global Income Distribution,** *International Sociological Association, Gothenburg, Sweden,*

¶ The literature on income inequality has to date focused on the study of summary measures of inequality (such as the Gini coefficient). Overall inequality, however, is only one of many relevant structures in the global distribution of income. The existence of patterns or structures in a distribution is well-captured mathematically by the concept of entropy. Entropy is a lack of patterns, structure, order, or differentiation. Obviously, global income does not lack structure; it has low entropy (high structure). Some countries, regions, & even entire economic zones of the world have long been rich while others have long been poor. Entropy modeling of the global income distribution will highlight the degree to which it is structured according to national borders, regional groupings, & core-periphery hierarchies. This presentation presents methods for quantifying the extent of these structures & how the structure of the global income distribution has changed over time.

2010S00165

Bach, Rebecca L. & Weinzimmer, Julianne (Department of Sociology Duke University, Durham, NC 27705 USA [tel: 919 660-5606; fax: 919 660-5623; e-mail: rbach@soc.duke.edu]), **"Can't Nobody Take That Away from Me:" Motherhood in the Context of Domestic Violence,** *International Sociological Association, Gothenburg, Sweden,*

¶ To more fully understand the meaning & experiences of mothering among battered women, in-depth interviews were conducted with women residing in a local domestic violence shelter. The majority of interviewees were women of color who primarily came from poor or working class backgrounds. The interview included a complete reproductive history & details of the domestic violence experienced, but focused primarily on the women's experiences as mothers, their feelings about motherhood, their relationship with their children, & the effects of domestic violence on their children. Interviewees were likely to identify their children as one of few positives in their lives & a core part of their identity. Relationships with their children allowed these women to feel "normal" & "worthwhile" in ways that their intimate partnerships did not. In fact, some women described their children as a source of love & support that helped to fill a void not being met by their abusive partners.

Bachika, Reimon (Bukkyo University, Kyoto, Japan 603.8301 [tel: 81-78-271.3276; fax: 81-78-252.1337; e-mail: r.bac05@w7.dion.ne.jp]), **Values and Agency in the Sociology of Culture,** *International Sociological Association, Gothenburg, Sweden,*

¶ Based on Anthony Giddens' theory of societal structuration that links agency & structure, this paper discusses the possibility of conceptualizing values as "resources," enabling the adoption of the notion of agency in the sociology of culture. According to Giddens, "structural properties," i.e., the rules & resources of social practices are at the same time medium & outcome of those practices ("the duality of structure") & therefore constitute the basic mechanism of the structuration of societies & their reproduction. By connecting values with agency, the paper argues that values, commonly analyzed as components of culture, may turn into a dynamic concept seen as resources–a notion related to power ("vehicles of power"), or, to use a current if weaker term, related to social capital that individuals & collectivities rely on in their social practices.

Bacigalupo, Anita (University of Milano-Bicocca, Milan, Italy, 20126 [tel: ; e-mail: anita.bacigalupo@googlemail.com]), **The Interplay of Cultures and Politics in Mobility Futures,** *International Sociological Association, Gothenburg, Sweden,*

¶ Mobility is obviously an important issue for the future of cities. The "ethics of mobility" concern problems of social inequality, environmental justice, risk & gender issues. This is especially expressed in the context of transport, which is one of the most important sources of carbon emissions, while the current global levels of circulation of goods & people constitute a dependence on fossil fuel. This paper explores how the way of being mobile is not only a means of transportation, but can be interpreted & used in many different ways by different people at different times (as lifestyles, sports, everyday practices, political artifacts or just leisure). The cultural meanings & politics of different systems of mobility are crucial, contemporary sociological questions. Based on empirical, qualitative studies within driving schools in the city of Milan, this paper analyses the main cultural dimensions of automobility. Cultures & identities are recursively (re-)produced through–& embodied in–the way people learn to drive. In the context of public policy, driving practices & knowledge of driving are central concerns that need to be addressed in a move toward more sustainable & egalitarian mobility futures, and toward optimised interrelations between different systems of mobility.

2010S00168

Backman, Christel (Department of Sociology, University of Gothenburg, Box 720, SE40530 Gothenburg, Sweden [e-mail: christel.backman@sociology.gu.se]), **Liberal Rights Within a Welfare Discourse: The Swedish Criminal Records Act and International Policy,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper I discuss how international agreements such as recommendations from the Council of Europe have had influence over the Swedish Criminal Records Act, & how items set up internationally to protect individuals have had a contradictory effect in the national Swedish context. I particularly analyze how a liberal perspective with a focus on protecting the individual against the state is dealt with within a discourse driven by welfare ideology. I analyze how the construction of "risk of harm" to individuals changes in relation to a greater influence from international policies & EU-legislation, & the shifting rationalities within the welfare state. Ever since the Swedish Criminal Records Register was set up in 1901, it has been viewed as potentially harmful to individuals if used by the wrong actors. The possibility of others, e.g. employers, taking advantage of subject's right to access served for a long time as a reason to only allow individuals limited access to the record. When Sweden introduced full subject's access in 1987, as a result of recommendations from the Council of Europe, the perception of the risk of harm to individuals had to be reformulated & downplayed. This new focus on individual's rights resulted in a limited space to account for the protection of individuals with previously used methods such as denying subject's access. The results of this turned out to be a dramatic increase in "enforced subject access" during the last decade, i.e. employers demanding a copy of employment-seekers criminal record. However, the new 'rights discourse' set restrictions for how this problem can be dealt with.

2010S00169

Baert, Patrick (University of Cambridge, Sociology Dept, Free School Lane, CB2 3RQ. UK [tel: + 44 1223 334520; fax: + 44 1223 334540; e-mail: pjnb100@cam.ac.uk]), **The Rise of French Existentialism,** *International Sociological Association, Gothenburg, Sweden,*

¶ This talk aims to provide a sociological explanation for the sudden rise to public prominence of French existentialism as an intellectual movement in the 1940s. It will focus on Jean-Paul Sartre since he is, together with Simone de Beauvoir & Albert Camus, widely regarded as one of the main proponents of this philosophical & literary current, & the one who attained the highest & most durable public profile. Existentialism is traditionally associated with the post-war era in Paris. But closer scrutiny shows that the popularity of this school, & of the people associated with it, rose dramatically in a remarkably short space of time, between 1944 & 1947. This raises the following question: why did this intellectual movement become so popular at this time, especially given that its philosophical origins were indebted to the work of Martin Heidegger (who had been tainted by his closeness to the Nazi regime during the 1930s) & given the opacity of the writings within this tradition ?

2010S00170

Baeta Neves, Clarissa Eckert (Department of Sociology, Federal University of Rio Grande do Sul, Porto Alegre, Brazil, 90 630 090 [tel: 55/51/ 3333 5563; fax: 55/51/3308 6905; e-mail: clarissa.neves@yahoo.com.br]), **Social Inclusion Policies in Brazil's Higher Education: Are They Equal Opportunity Policies?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Social Inclusion policies in Brazil's higher education: are they equal opportunity policies? Higher professional qualification has been considered a differential for insertion into the job market, and investment in higher education, as strategic to drive the social rise of individuals & potentiate the economic growth of society. Based on these premises, this paper analyzes the impact of two social inclusion policies in Brazilian higher education on the life of students who benefit from these policies. The first part discusses the policies, one of them institutional, the affirmative policies implemented since 2001 by public HEIs, federal and state-level, for students from public schools and/or those who declare themselves black or indigenous; the other, a government policy of 2005, the University for All Program/ProUni, granting scholarships to low income students & minorities at private fee-paying institutions of higher education that enjoy tax exemptions. The second part examines concepts such as equity; social & economic capital; inequality; mobility & trajectory that are essential for the theoretical debate. Finally, the last part deals with results: through qualitative research and interviews with students who benefit from both policies, in two HEIs, one public & one private, it was sought to analyze the trajectory, their motivations & expectations at accessing higher education. As to the beneficiaries: most of them are the first generation to have access to higher education; at the beginning students are stigmatized & face financial problems involving staying in the course. Even so, they perceive these policies as equal opportunity policies to reinforce self-esteem; improving their chances of access to the job market; & motivating to face the "monopolistic barriers" in higher education. Access to a course in higher education is related to enhanced opportunities in professional life.

Bahna, Miloslav (Institute for Sociology, Slovak Academy of Sciences, Bratislava, Slovakia [tel: +421 2 52964355; e-mail: miloslav.bahna@savba.sk]), **Migration from the New EU member States: Two Economic Rationales for Labor Migration–The Case of Labor Migration from Slovakia,** *International Sociological Association, Gothenburg, Sweden,*

¶ The enlargement of the European Union in 2004 & the related suspension of labor market restrictions in United Kingdom, Ireland and Sweden presented an unprecedented natural experiment in migration research. We had the possibility to observe migration from a group of poorer countries ('new" EU countries) which simultaneously gained free access to labor markets in the rich "old" EU countries. In this situation where migration networks are un-established the general validity of economic migration theories is confirmed as the negative correlation between the sending country's wages & its migration level per capita to the "old" EU countries with no labor market restrictions is nearly perfect. Building on this finding, we evaluate the neoclassical and new economy of migration theories. Using labor force survey data, we establish that the two strategies described by those theories coexist in labor migration from Slovakia. Different motivations of the neoclassical & new economy migration posit different settings in the temporary a permanent migration dichotomy. We find both migration types in migration to the UK & argue that "new economy migrants' have a higher propensity to seek stable jobs as they are providing income for dependent family members but at the same time they are interested only in integration to the economic system. Individual migration following the neoclassical rationale is pursuit mainly by the young & leaves both possibilities open–a full integration into the host society as well as a painless return to the home country.

2010S00172

Bain, Carmen M. (Iowa State University, Ames, Iowa, USA 50011 [fax:; e-mail: cbain@iastate.edu]), **Biofuels, Climate Change, and Local Environmental Vulnerabilities,** *International Sociological Association, Gothenburg, Sweden,*

¶ In response to U.S. Federal & state level policy initiatives, ethanol production has expanded rapidly especially across the country's Midwest region. Based on in-depth interviews in the Midwest state of Iowa–the national leader in ethanol production–this paper examines the specific environmental vulnerabilities that the intensification of corn production for ethanol has created in the state. The paper then assesses responses by key political, economic, & environmental actors to these local vulnerabili-

ties. I find that that while much of the discourse at the national & state level concerning ethanol & the environment has focused on climate change, debate & action over ethanol's impact on local environmental vulnerabilities, such as water quality, is largely absent. I conclude that productionist agricultural interests continue then to shape the political economy of place, while debate over climate change overshadows the risks that "large-scale energy plantations" (Mol, 2007) pose to local environment sustainabilities.

Baiocchi, Arturo, Duke, Naomi, Kim, Minzee & Mortimer, Jeylan T. (University of Minnesota, Minneapolis, MN 55455 USA [tel: 612 270 7549; e-mail: baioc001@umn.edu]), **Socioeconomic Health Disparities and the Transition to Adulthood,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study examines pathways of transition to adulthood as mediators of the link between socio-economic background & adult health. Although socioeconomic disparities in health are well documented throughout the life course, the transition to adulthood may be particularly important in understanding how cumulative health disadvantages are transferred across generations. An extensive sociological literature on age grading & age norms argues that those who are off time suffer difficulties in life circumstances that may have negative consequences for health. Precocious transitions, particularly with respect to parenthood, may indicate heighted levels of stressors. Moreover, disadvantage in the family of origin may accentuate the difficulties young adults experience in mobilizing sufficient support & resources to adequately address these stressors. Building on Eliason & colleagues' (2009) prior work, we assess the role of five pathways to adulthood in mediating the effects of socioeconomic origin on health. These pathways are based on a latent class analysis of the timing of leaving home, finishing school, establishment in work, marriage, and parenthood. Incorporating these latent life paths into our analysis of data from the longitudinal Youth Development Study suggests that patterns of transition to adulthood mediate emergent SES disparities in mental & physical health at age 30.

Bajard, Flora (EMC2-LSG - UPMF Grenoble 2, Bât. BSHM 1251 Avenue centrale Domaine universitaire BP 47 - 38040 Grenoble Cédex 9 [tel: +33613232991; e-mail: flora.bajard@gmail.com]), **Le Métier de Céramiste: Changements et Résistances des Formes d'Organisation du Travail Artistique** (The Ceramists Craft: Changes and Resistance against Forms of Organization of Artistic Work), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ At the crossroads of the sociology of arts & the sociology of work, analyzing the occupation of contemporary ceramists in France (ceramic artist) enables us to think about the way certain professional groups have to face & deal with the reasoning that influences & holds over the artistic field. This influence works in several ways, especially through the values on which its "belief" is based on (Bourdieu), as well as through their institutions & cultural policies. In light of these two elements, we may wonder how an ambivalent work (based, at the same time, on artistry and handcrafted know-how) with little artistic legitimacy (depreciated art & outclassed craft) creates & invents ways of existing, defining & maintaining itself? In other words, how do ceramists carry out the organisation of their work, & what are its effects on developing the satisfaction/quality of work? By using a qualitative & ethnographic approach, as well as taking into account both structural data & the interactionist perspective (Schwartz), we may highlight two sides of this organisation of artistic work, that contribute to personal experiences characterized by free activity & "self-fulfillment": a new conception of the creative work, in which are valued the "gesture" & "true craft" (Zarca); a "craft culture" stemming from the edges of the art worlds & their official forms of institutional existence, that is yet establishing ways of showing one's work & existing as a ceramist.

2010S00175

Bajic-Hajdukovic, Ivana (European University Institute, Florence, Italy [tel: +390554685656; fax: +390554685804; e-mail: ivana.bajic@gmail.com]), **The Lost Matriarch: The Impact of Remittances on Mother-Child Relationships in Urban Serbia,** *International Sociological Association, Gothenburg, Sweden,*

¶ This article examines the consequences of remittances on kinship dynamics, especially on mother-child relationship in a specific, post-conflict & post-communist context of urban Serbia. By framing remittances in a particular historical & social context, we will see how for ex-Yugoslav urban middle-class remittances have become "polluting" & "dangerous" gift which threatens to change the power within mother-child relationship. This article is based on a twelve-month ethnographic research that took place in London & Belgrade in 2005-2006. The methods used for collecting data were participant observation, semi-structured interviews and material culture studies approach. One of the most important results of this research was that instead of bringing financial relief & security to elderly mothers, remittances cause them to make tremendous sacrifices to compensate for this gift & to affirm their social status & their identity as mothers.

2010S00176

Baker, Sally & Brown, Brian B. (School of Social Sciences, Bangor University, Bangor, Gwynedd, LL57 2DG [tel: 01248 382222; e-mail: sos806@bangor.ac.uk]), **Cultural Capital, Educational Aspirations and Social Transformation: Rural Wales in the Twentieth Century,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper will explore the accumulation, transmission & conversion of cultural capital & examine how this shaped the process of social change in rural Wales. Based on an ongoing project eliciting biographical narratives from older adults, we will examine how their recollections disclose a distinctive culture, such that great value was attached to learning, piety & a sense of cultural tradition, expressed through chapel, Sunday school and Eisteddfodau. During the mid-twentieth century, declines in farming and quarrying exacerbated the region's economic disadvantage. In the face of these economic shifts, participants' life stories suggest corresponding changes in the strategies of cultural capital accumulation & conversion. Declining opportunities in farming or quarrying & a growing sense that the rising generation should avoid "dirty" or hazardous work, yielded enhanced commitment to the acquisition of cultural capital via the education system. Thus, cultural capital accumulated & transmitted through family, chapel and Sunday school could be transubstantiated into more symbolically powerful professional credentials, facilitated by the high status attributed to education by religious nonconformity. Yet at the same time, participants, their families & communities were able to reconcile education with local culture, so as to strengthen the latter rather than erode or Anglicise it.

2010S00177

Bakouris, George (Hatzikiriakio Child Care Institution, 18, Kleisovis Str. Piraeus, Greece 18538 [tel: 00306944623636; fax: 00302104121857; e-mail: gbakouris@gmail.com]), **Expressing Social Sensitivity and Responsibility: An Example of Active Citizen and Corporate Participation in a Social Organization,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper describes & analyzes some major acts of social sensitivity and responsibility re. citizen & corporate active participation and involvement, contributing thus substantially to the survival of a social organization & the realization of its ultimate goals. The Hatzikiriakio Child Care Institution constitutes a remarkable case of a NGO which depends to a great extent on voluntary work and social support from citizens & corporations for its very existence & realization of its goals & targets. This paper attempts to present & evaluate some specific acts of benevolent contribution of individuals, groups & corporations in covering important parts of management, economic survival & attainment of basic social & educational goals of this institution.

Balaev, Mikhail (Northern Michigan University, Marquette, MI 49855 [tel: 906-227-2706; e-mail: mbalaev@nmu.edu]), **Separating Economic Interests from Politics: A New Political Organization Model,** *International Sociological Association, Gothenburg, Sweden,*

¶ One of the central problems of modern capitalism has been a shift from a competitive form of economy to monopoly or oligopoly capitalist model. While such shift has multiple economic implications, my paper examines the political implications of monopolizing capitalist economy. Drawing on the writings of C. Wright Mills, Baran & Sweezy, Erik Olin Wright, & other contemporary authors, in the first part of the paper I conclude that there has developed a new social class of political-economic elite that, regardless of the functioning democratic political system, retains the control of the political, economic, & military power in the United States and beyond. I identify modern political system as the main mechanism that preserves & expands the domination of the new social class. The second part of the paper proposes a new theoretical model of political organization of a modern capitalist society based on the example of the United States. I examine the corporate influence in the legislative & executive branches

of the US government & propose a number of policies that would lead to the reduction of corporate interests, separation of economic interest groups from politics, & potential elimination of economic elite in modern politics. In addition, I examine the role of corporate capital in the media. Since active & informed public debate is an essential part of the healthy functioning of democratic political system, I outline the need for information channels that would be independent from the control of the economic interest groups, as well as the government. I propose that such information mechanisms have to be a de facto "fourth branch" of modern political organization to limit & eliminate corporate economic influence in politics. Finally, I present a new theoretical political organization model that moves beyond traditional democratic system.

Balan, P. P. (Professor-cum-Director, Centre for Research and Industrial Development (CRRID), Sector- 19-A, Madhya Marg, Chandigarh (India) [tel: 91-172-272-5406, 91-172-272-4010; fax: 91-172-272-5215; e-mail: balanpp25@gmail.com]), **"Government to People",** *International Sociological Association, Gothenburg, Sweden,*

¶ From Government to "Government to People"–India's Experiments in Decentralisation: Problems & Prospects The 73rd & 74th Constitutional Amendment Acts in India, mandated democratic decentralization, central government being the key facilitator and the state governments endowed with the empowering of the rural and urban local bodies by devolving functions, functionaries and finances. Local self government in India, in terms of the size of the electorate, the number of grassroots institutions (about .24 million), the number of persons elected- (3.6 million) in the Panchayats & Nagarpalikas is the greatest experiment in democracy. The position of the state governments are critical to the success of democratic decentralization. Across the country, we see more & more local bodies moving away from the stereotype of being passive recipients of power devolved from above. Local bodies have also begun to challenge the fetters, real or imaginary, which prevents them from realizing their full potential. Those that have succeeded have grabbed with both hands the opportunity to make a difference. Local bodies have become "government" where they have worked like governments. The people participation is ensured through Gram Sabhas & ward Sabhas. It is the only forum that ensures direct, participative democracy. Which offers equal opportunity to all criticize, approve or reject proposals of the local governments & also assess its performance. It is the platform for effective social audit, which lies at the core of ensuring transparency & accountability in the functioning of the system. In this experiment some states have gone ahead whereas some are lagging behind. States like Kerala with the slogan "Power to the People" & its "Big Bang" approach have strengthened decentralized governance which has become a model to other states to emulate. An experiment of this scale is bound to have shortcoming & setbacks which need course correction. Note: Both primary & secondary sources have been used for the preparation of the paper.

Baldet, Bertrand (University of Toulouse 1, 31 000 Toulouse, France [tel: ; e-mail: Bertrand.Baldet@univ-tlse1.fr]), **The Public Policies for Flood Risk Management: System of Actors, Threat and Decision,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study aims to explore the dynamics that are at work within the systems of actors dealing with state policies for flood risk management. We will be addressing the case of the "Touch" river located at the outskirts of Toulouse (France). For a few years now, the state policy for flood risk management is changing & is acknowledging the irreducibility of the threat. The incertainties due to climate change, the troubles to identify the hazards, the multiplicity of representations about the stakes that have to be protected are a lot of factors which make the flood risk management more complex & lead the system of actors to regular adaptations. It involves the emergence of single stakes & new actors engaged in decision-making. We therefore hope to propose an analysis to describe the institutional mechanisms as well as the set of technical & social mediations encountered by flood risk within the framework of state action. The hypothesis suggests that the natural risk–both its identification as well as its management–is subject to a range of procedures & mediations. We are therefore putting forward the idea that flood risk is created and is formed in the heart of a set of games that guide & control the actors.

Ballesteros Leiner, Arturo (Universidad Pedagógica Nacional, Carretera al Ajusco 24 Col Heroes de Padierna México DF CP 14200 [tel: 5255 58495337; fax:; e-mail: aballesl@hotmail.com]), **Professions and the Welfare State: The Social Educator and the Social Graduate,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ En el texto se intenta demostrar, como las políticas sociales y educativas en el Estado de Bienestar de sociedades en transición democrática (como la del caso español), orientadas a la constitución de la ciudadanía y la inclusión social, tienen su intermediación en profesiones como las de Graduado Social y el Educador Social. El Estado de Bienestar se concibe como un Estado social, que se propone como actividad primordial coadyuvar en el proceso de racionalización social, representando así la forma más acabada del proyecto de modernidad. Este tipo de Estado se rige por el principio de universalidad, de ahí que le otorgue posibilidad y viabilidad al concepto de ciudadanía, tanto en la dimensión política como en la social. Por ello, la tesis principal a desarrollar es, que el proceso de racionalización social requiere de agentes sociales transmisores del bienestar. De ahí que se considere como objeto de investigación, a la participación de algunas profesiones en ese complejo proceso. El tema se aborda a partir de la tesis sobre las profesiones modernas y su papel crucial en la administración del Estado de Bienestar, lo que me ha permitido estudiar en el caso español, el papel específico que han jugado, como ejemplo de ello, dos profesiones: el Educador Social y el Graduado Social. Los educadores sociales, ayudan en la decodificación de los complejos procesos de gestión y acercan en esa medida a los ciudadanos, la posibilidad de educarse en el conocimiento del derecho social y sus consecuencias cohesionadoras.

Baloglu, Burhan & Baloglu, Filiz (Faculty of Economics Department of Economic Sociology Istanbul University, eyazit, Istanbul, Turkey, 34452 [tel: +90 212 4400000; fax:; e-mail: burhan.baloglu@gmail.com]), **Are Contradictory Tendencies of Taxpayers Transformed into Social Rationality?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Taxpayers usually act to protect or increase their interest not paying their taxes. On the one hand, this kind of actions could be rational since they may be directed by economic, familial, religious or political interests which in emerged in structure. On the other hand, they are not rational since taxpayers do not comply with tax codes. Even if these actions seem chaotic, there may be possibility to combine them through some changes in the tax code. This paper tries to understand this chaotic issue & the chance of transformation taxpayers' action (micro level) into positive aggregate outcomes (macro level). The data used in this paper derived from a survey on 3220 taxpayers in Turkey. According to obtained data they believe that taxing is a very crucial element for the state & citizens should pay their taxes properly. Nevertheless, at the same time, they avoid to pay taxes because they do not get public services in exchange which are worth paying for. In this context, the decisions taxpayers make especially considering their economic interest on paying tax reconcile with a "new tax" approach, optional tax. Therefore, the state can collect more tax from different regions, social classes, ethnic, religious & politic groups. This new approach will be explicated with rational choice theory.

Baltatescu, Sergiu M. (University of Oradea, Oradea, Romania, 410087 [tel: +40745323931; fax: +40359800243; e-mail: bsergiu2@gmail.com]), **Transition to Happiness? Changes in Levels and Correlates of Subjective Well-Being in Post-Communist Romania,** *International Sociological Association, Gothenburg, Sweden,*

¶ After the fall of the communism, Romania faced a difficult transition towards democracy & market economy. While the objective of entering EU was accomplished & GDP rose to unprecedented levels, the outcomes where not always positive: social inequality increased, associated with high poverty & criminality rates. The purpose of this paper is to answer to questions such as: in which way the economic & social transformations affected the happiness of Romanian citizens? How the average happiness levels varied? And how the structure of correlates of subjective well-being changed throughout these years? For this purpose I analyzed the economic and social indicators trends in this country, in conjunction with subjective data obtained by national (Diagnosis of Quality of Life) and European (EQOLS, Eurobarometer) surveys. Trends in happiness in the nineties were U-shaped, with a minimum in 1999, following relatively close those in GDP. In 2003, the happiness mounted back to those in 1990. However, the inequality in happiness continued to rise, together with social stratification in this country. Rankings in average happiness of socio-economic groups varied substantially throughout the studied period, reflecting significant changes in the structure of social determinants of happiness. These

findings are compared with those in other Eastern European countries, suggesting that Romania reproduces the main patterns of variation of happiness in post-communist countries. Results are also discussed with reference to the main theories on the relationship between socio-economic context & happiness.

Baltatescu, Sergiu M. & Osvat, Claudia (Department of Sociology and Social Work, University of Oradea, Oradea, Romania, 410087 [tel: +40745323931; fax: +40359800243; e-mail: bsergiu2@gmail.com]), **Measuring Child Well-Being in Romania,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the last 30 years, we faced an increasing preoccupation for the child quality of life at global level. While the particular issues in child protection such as child abuse & neglect, children rights, children poverty were addressed separately by policies, "child well-being" emerged as a more comprehensive framework that encompass all the aspects of child development & policies. Several indexes & indicators systems were elaborated by researchers at European as well as national levels, but very few were developed for the post-communist states, confronted with the most difficult problems in the domain of child protection. Romania, especially, faces huge problems such as children poverty, the protection of abandoned children in residential care or substitute families, & also the protection of neglected or abused children. Despite the fact that the numbers of children in need decreased dramatically during the last years, it is still high. This paper presents the preliminary activities for the construction of an indicators system for measuring child well-being in Romania. Our approach addresses the most critical domains of child indicators: economic, health, psychological, educational, social and relational, measured with objective as well as subjective indicators. Results of a survey recently conducted, within a sample of 350 families with children & substitute families are presented, & statistical data at municipal level were comparatively analyzed. These results are discussed with reference to the known problems of child well-being in Romania, & the challenges of surveying the quality of life of the children in this country. Finally, conclusions on the choice of appropriate indicators for child well-being in Romania are drawn.

Bandelj, Nina (University of California, Irvine, Irvine, CA 92697, USA [tel: ; e-mail: nbandelj@uci.edu]), **Liabilities of Neoliberalism in Postsocialist Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ Between 1989 & 2008 Central & East European countries have experienced tremendous socio-economic transformations. Many of these countries have adopted neoliberal development strategies and fully privatized, liberalized & opened widely to foreign capital. Some countries have kept some strategic assets in national hands and were more reluctant to welcome foreign investors. This paper examines the similarities & divergences in socio-economic trajectories in postsocialist European countries & current socio-economic challenges faced by these countries. In particular, the paper attempts to evaluate the possible liabilities of the neoliberal strategies exposed by the global economic crisis starting in 2008 that hurt the Central & East European countries to varying degrees.

Bang, Juwol, Kawanishi, Masashi, Kitamura, Takahiro & Yamada, Rie (Ph.D. course of Physical Education, National Institute of Fitness and Sports in Kanoya, Kanoya, Kagoshima, Japan [tel: 81-994-46-5311; fax: 81-994-46-5311; e-mail: m097010@sky.nifs-k.ac.jp]), **Social Significance of the New-Style Sport in School Physical Education,** *International Sociological Association, Gothenburg, Sweden,*

¶ The purpose of this study is to clarify the social significance of New-Style Sport of physical education class in school special reference to the value of playing, image & enjoyment of New-Style Sport. In generally, the New-Style Sport is defined as a simple and easy rule for activity & everybody anytime will be able to participate in this activity. For an example, they were Net-ball, Kin-ball, T-ball & Flying Disk etc. In this study, the subjects were gathered from the teachers (n=80) who participated in a workshop of New-Style Sport & the students (n=355) of grade 2nd and 3rd of C Junior High School in Korea, 2008. The survey contents were divided into two major contents; one is the effective evaluation of teacher in physical education; another is the enjoyable & image evaluation of New-Style Sports for students used by the PACES & image. From the results, the teachers positively evaluated the characteristics as enjoyable & easy applying & teaching to physical education program. There were significant differences of score of PACES among the level of physical ability groups in students. However, there were no significant differences of activity image among the levels of physical ability group among students.

Banja, Madalitso Khulupirika (University of Zambia, Box 32379 [tel: +260 978 077 989; fax:; e-mail: madalitsobanja@yahoo.co.uk]), **Challenges of a Zambian Teacher,** *International Sociological Association, Gothenburg, Sweden,*

¶ The essence of this paper is to examine & analyse the challenges that teachers face in Zambia. The paper opens by exploring the state of the teaching profession in Zambia relative to the established criteria for a profession. Numerous shortcomings mean that by & large teaching in Zambia is far from attaining the coveted status of a profession. This paper argues that the many challenges that Zambian teachers face are a result of three reasons. These are firstly, the failure of the teaching fraternity to ensure professionalism within its ranks. Secondly, unfavourable societal attitudes & thirdly indifferent government policies and practices. The challenges include heavy teaching loads, large classes which result in overcrowding & lack of materials, books, equipment & supplies, shortage of furniture & poor training. Lastly this paper concludes that these teacher challenges negatively impact on the quality & effectiveness of Zambian teachers & ultimately affects the quality & effectiveness of the Zambian education system.

Barben, Daniel (Institute of Political Science, RWTH Aachen University, 52074 Aachen, Germany [tel: +49 241 80 26123; fax: +49 241 80 22162; e-mail: barben@ipw.rwth-aachen.de]), **Anticipatory Governance of "Future Technologies": Challenges, Opportunities, and Limits,** *International Sociological Association, Gothenburg, Sweden,*

¶ New & emerging fields of science & technology (S&T) pose manifold challenges, both to the actors dealing with S&T in predominantly practical ways & to those mostly concerned with analyzing the configuration of S&T in society. Key questions are, among others: What is the particular new quality of an emerging field of S&T; and does this field contribute to key technologies of the future? With which important social, political, legal, & ethical issues is an emerging field of S&T associated; & do these issues require new institutional & individual responses? How shall we (as practitioners and/or analysts) best engage with the uncertainties, indeterminacies, & ambiguities that characterize an emerging field of S&T? First, I will outline some of the fundamental challenges associated with emerging technologies, suggesting that approaches to anticipatory governance of S&T might help prepare for coping with issues that are currently already known or might arise in the future. Second, I will show how emerging technologies have become subject to processes of governance at multiple levels concerning innovation, risk & security, intellectual property, ethics, & public acceptance. I will hereby highlight those elements that can be characterized as contributing to anticipatory governance. Third, I will present approaches to technology assessment (TA) that are dedicated to anticipatorily govern innovation–i.e., attempts that pursue opportunities provided by recent policy shifts particularly in the fields of biotechnology/genomics & nanotechnology. Fourth, I will discuss limits inherent in such approaches (e.g., Constructive TA, Real-Time TA) in light of the broader societal & global challenges pertaining to the generation, regulation, and enculturation of emerging & future S&T.

Barbier, Jean Claude (CNRS Université Paris 1 Panthéon Sorbonne, CES 106 Boulevard de l'Hopital [tel: 33 1 44 07 81 56; fax: 33 1 44 07 83 36; e-mail: jean-claude.barbier@univ-paris1.fr]), **Aktivering, Précarité, Flexicurity, the Surface Europeanization of Employment,** *International Sociological Association, Gothenburg, Sweden,*

¶ At a certain level of abstraction, all things are the same, and, as G. Sartori once wrote, the world will be populated with "grey cows". Employment contracts, their qualities, & the normative frameworks into which they are embedded have been increasingly compared across Europe, especially in the wake of the European Employment Strategy. Functional comparisons abound. European political discourses, finely worded in international English travel all the time. However, the norms of employment, the industrial relations systems through which they are determined, as well as the social protection systems they are intrinsically associated with, have remained extremely diverse across the countries of Europe. Aktivering, the original programme launched in Denmark in the early 1990s has kept many distinctive features while the international discourse was talking

about "activation". Précarité de l'emploi was invented in France back in the late 1970's but other countries which did not understand the concept, outside the Latin countries of Europe, have finally been aware of new phenomena concerning "atypical" jobs. Finally, "flexicurity" is another example that shows that Europeanization has not yet bitten very deeply into the national systems. The paper is based on extensive qualitative research in France, Germany, the UK & Denmark.

2010S00190

Barbut, Clélia (Université Sorbonne Nouvelle Paris 3, 13, rue de Santeuil, 75005, [tel: +33684170283; e-mail: clelia.barbut@univ-paris3.fr]), **Interaction Processes at Work in 70s Performances,** *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ This submission aims to discuss an ongoing research on 60s and 70s happenings and performances, focusing on the great majority of them who did incessantly elicit the public's moves. Most of Allan Kaprow's works for instance, as well as Martha Rosler's, Vito Acconci's, Marina Abramovic's, and so on, depended on their audience participation. At that time, the audience of avant-garde art was probably more used to participate in artistic actions, or at least easily agreed to play the game. As a result, lots of representations were absolutely suspended on random human knuckles, between bodies (the artists' and the visitors' ones), space (galleries, museums, streets) objects (surrounding the bodies) and time (the length of the piece). I suggest the sociological meaningfulness of the "audience-piece-artist" settings they displayed. A comparative analysis based on a corpus of works, therefore enables to draw different sequences, or types, of actions and reactions: indifference or touch, encounter or rejection, gathering, confrontation, etc. Starting from the artist expressions, his or her attitude, on can look towards the audience, its statement, and in return, question the visitors gazes, gestures, behaviours. Such bodily settings may therefore be taken in consideration insofar as they offer closeups on both parties' moves. It finally appears that more than random encounters, such embodied processes may be taken in consideration as relevant evidences for a goffmanian perspective on face-to-face rituals, and interactions. Some artists, being absolutely passive, gave free rein to the spectator's imagination, and gestures; some other, on the contrary, used the audience simple presence, attention and sensibility, in order to display the "territories of their selves" (Goffman, 1971). When Dan Graham (Performer/ Audience/Mirror, 1975) for instance, happens to unfold the territories of his self into the visitor's attention; or when Valie Export's (Tapp und Taskino, 1968) withdrawal attitude allows the audience to consciously drop out every "deference and demeanor" (Goffman, 1956). This went even further with other feminist artists, who provoked a radical participation of the publics, gave particular glimpses of subject's reactions, when a body is offered as an object (Marina Abramovic, Yoko Ono among others). Balances of power therefore appear as absolutely determining the performances sequences, forcing the analysis to consider the bodily interactions processes every work of art rests upon: individuation and subjectivation, embodiment, empowerment (of the creator, the artist, or of the viewer), but also objectivation, appropriation and sometimes, alienation (of the represented body). With other works taking place in public spaces, as the first happenings, the staged interactions sometimes lead to simple socialisation acts, as taking care of, or paying attention to, people in presence. All these pieces finally allow to point out that this "copresence" (Goffman, 1974) is probably the essence of the very social moment every artwork is.

2010S00191

Bardhan Roy, Maitreyee (Basanti Devi College, Principal Basanti Devi College,147B Rash Behari Avenue, Kolkata-700029 [tel: 033-24630845/24641012/919433060084; fax: 033-24649967; e-mail: Maitreyee25@rediffmail.com]), **Crisis Prone Employment Policies–UGC and the Department of Higher Education. Government of India,** *International Sociological Association, Gothenburg, Sweden,*

¶ The present research evaluates the employment policies of the Higher Education Department of the Government of India at the tune of University Grants Commission (UGC) under stressful world economic scenario. The societal reaction towards the teaching professionals in India is negative. They are looked up as the highly privileged section in the society least affected by the world economic crisis. The present paper aims to unveil the real scenario by citing the negative impact of 6th pay commission report as compared to 4th, 5th) pay commission report indicates how far the Government of India's employment policies are remodeled to respond to the stressful world economic scenario through a negative but tactful package .The implications of the present paper is to indicate: 1. The negative & the positive policies evolved in the service conditions of the existing faculties. 2. Stumbling employment policies of UGC from 2002 to 2009. 3. The increased age of entry from 25 to 35 years with no change in retirement age .and thereby to avoid full length service benefits. 4. Hike in pay of Part-time and contractual faculties (6th pay commission 2006), to encourage slow replacement of whole time faculties. 4. The service security of new entrants (Post 2006 period) skid. 5. Replacement of General Provident fund scheme by Contributory Provident fund,. 6. No Pension benefit 7. By offering teaching status to the laboratory Instructors the position permanently abolished & replaced by unskilled laboratory attendants (Group D). 8. Embargo on employment and creation of new position. 9. Privatization in education as a new trend. 10. Recognition of the University status without financial support etc. 11. Concluding remarks.

2010S00192

Bardhan Roy, Subir Kumar (Centre for Strategic Studies, AE697 Salt Lake City Kolkata 700064, India [tel: 91-33-2337-1098/ 919433148982; fax: 9133-24649967; e-mail: subirkumar11@rediffmail.com]), **Adoption Potential and Consumers Acceptance of Biofortified Rice in West Bengal,** *International Sociological Association, Gothenburg, Sweden,*

¶ Agriculture & food production has undergone significant changes over past decades. The global economy & open market increased demand of good quality & nutritious food among health consensus urban riches. At the same time, rural households, producer of agricultural commodities in developing & under developed countries; suffer from nutrition deficiencies owing to economic constraint & unavailability of quality food in rural market. As such an interface is developing between consumer & producer on the issue of" adoption potential of biofortified crops in rural households in terms of sustaining & improving their livelihoods and acceptance of it by urban consumer. West Bengal stands among top three rice producing states in India. Rice is the staple food for the state & cultivated annually in 5.8 million hectare. However the state registered an average of 32% households live below poverty line (BPL) who can not meet the minimum daily requirement of 2400 calories for their maintenance. The percentage is much higher in rural areas. Present study was undertaken during 2005-06 in selected villages of West Bengal "on the nutritional status of farm households & the adoption potential of biofortified rices" to address prevailing nutrient deficiencies . The study dealt physical (like rice production & marketing systems) & social (like daily consumption pattern, health hazards, sanitation etc) issues responsible related adoption potential for these rice. Simultaneously the study also looked into the possible role of "corporate sector" in the production, marketing of "enriched" rice & bring the nutritional benefit to urban masses too.

2010S00193

Bargheer, Stefan (Department of Sociology, University of Chicago, 1126 E. 59th Street, Chicago, IL 60637 USA [e-mail: bargheer@uchicago.edu]), **Toward a Taxonomy of Taste: A Comparative Study of the Food Service Industry in Berlin,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper investigates the food service industry in the city of Berlin in an effort to challenge the dominant logic of inquiry into cultures of taste. Such cultures are frequently described as either regionally homogenous or as attaining heterogeneity by diversification along the lines of class, gender, ethnicity and similar group characteristics. The currently dominant insights in the field have been produced by studying predominantly those cultures of taste that are affiliated with particular group identities. In order to escape this focus on group cultures the paper assembles a taxonomy of the food service industry in Berlin by analyzing the hand selected menus of 223 out of a total of 8,600 officially registered restaurants, taverns, & snack-bars in the city. The analysis displays a seamless web of continuous variation in taste mixing elements of different group cultures that range from Bavarian Pizza parlors to Turkish Big Mac joints. The overall range of variation & the fine gradations within this range cast doubt on the possibility to discern the logic of taste formation based on single ethnographic case studies that focus on discrete group characteristics or based on statistical survey research that organizes data into previously established categories. The food service industry in Berlin is chosen as a particularly visible and easily accessible empirical example for the more general phenomenon of continuous variation in culture. The paper aims to contribute to the discussion of the applicability of the taxonomic method developed in the study of nature in the life sciences to the study of culture in the social sciences.

2010S00194

Barik, Bishnu Charan (School of Social Sciences, S R T M Uni-

versity, Nanded-431 606, INDIA [tel: 919422872936; fax: 912462-229245; e-mail: bishnuULbarik@rediffmail.com]), **Agriculture and Production Process: A Comparative Study of Three Villages of Marathwada Region of Maharasthra,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is based on an intensive study of three villages of the Marathwada region of the Maharasthra state of India.. The selected villages differ from each other on the basis of irrigation facility and development of agriculture. The first village is selected amongst the villages having canal irrigation facility where as the second village is selected from the ground water irrigated villages category. The third village is selected amongst the dry villages which completely depend upon the monsoon for its sustenance agriculture. The data collected from the field reflects wide variation in the production process of the village agriculture. The canal irrigated village cultivators are more tempted to go for cash crops like, Sugarcane, Soybean, Wheat & other staple food crops because of assured irrigation facility, where as the ground water irrigated village cultivators are cultivating crops like, vegetables, cotton, Turmeric & other staple food crops. The Ground water is costly & not available so easily. In the Canal and Groundwater irrigated villages, cultivators apply more fertilizers, pesticides, & use modern agricultural implements and depend upon hired labourers in the production process. The third, dry village cultivators are cultivating the crops like, Cotton, Soybean & other staple food crops completely depending upon monsoon. The production process in the dry village reveals that the agriculture still depends upon monsoon & the practice is traditional. The above study reveals that assured irrigation facility has a definite impact on the production process. It has diversified agricultural economy by encouraging farmers to go for cash crops which are having market demand. Productivity of crops have increased many fold & there by helped in increasing net income of the farmers. This scenario is not visible in dry village, as the agriculture is still dependent on vagaries of nature.

2010S00195

Barlet, Blandine (INRS / Université de Versailles [tel: 0033 621 601593; e-mail: blandine.barlet@inrs.fr]), **The Definition and Prevention of "Psychosocial Risks": A New Stake for Company Doctors,** *International Sociological Association, Gothenburg, Sweden,*

¶ The 2002 implementation of a multidisciplinary system in France enlarged the definition of occupational health to a global representation of care (physical as well as mental). The recent "waves" of suicides in the workplace have triggered strong social and media interest in mental health at work. More & more professions & actors involve themselves in the process of preventing workers' health from deteriorating. The collective prevention of mental problems at work brings doctors to redefine their position in the prevention system. Our qualitative methodology relies on unstructured interviews–mainly with company doctors, but also with nurses & other professionals in charge of preventing "psycho-social risks"–& observation of conferences & training sessions on the topic. Dealing with mental health pushes occupational doctors to adopt a specific professional standpoint. Choices made in terms of vocabulary & practice, namely the differentiation between "medical" & non-medical tasks, help define the profession & its limitations. Whether they consider elements of psychology, psychiatry, ergonomics, law or management to be part of their job or not strongly determines the differences in professional practice & representation.

2010S00196

Barmark, Mimmi (Department of sociology, Lund university, Sweden [tel: +46-(0)46-2228872; e-mail: mimmi.barmark@soc.lu.se]), **Social Determinants of Health and Illness - Exploring the Interrelatedness of Explanatory Models,** *International Sociological Association, Gothenburg, Sweden,*

¶ There is a large & growing body of evidence that social factors are important determinants of health & illness in general & of mental & "psychosomatic" illness in particular. There is also wide consensus around the fact that interdisciplinary approaches are needed in order to achieve a comprehensive understanding of the aetiology underlying these complex illness phenomena. In spite of this, the results of sociological studies within this area have to a large extent been overlooked outside the sociological camp, within the scientific community as well as on the policy level. The social world continues to be regarded mainly as a "passive context" to illness, rather than as the origin of powerful causal mechanisms. One reason for this could be that sociological studies often fail to adequately integrate research findings emerging from other disciplines into their own models. We also have different traditions & perspectives within the sociological realm (the realist-constructionist division being the most prominent) between which there is limited interchange. The premise motivating this paper is that in order to improve intra- & interdisciplinary communication, we need to take a "metatheoretical grip" on social explanatory models in general & their relationship to those of other disciplines. If social factors are going to be acknowledged as important determinants of health & illness we need to be clearer about how social structure affects the health status of individuals. I will in this paper discuss the interdisciplinary context of social explanatory models & also make a tentative attempt at providing a general model that illustrates & summates the interconnections of these. By making explicit possible causal mechanisms between social structure & individual bodily experience, such a model can hopefully contribute to a wider recognition of the influence of social factors on illness in general, & mental & psychosomatic illness in particular.

Barnartt, Sharon (Gallaudet University, Washington, DC, USA 20002 [tel: 202-448-7162; e-mail: sharon.barnartt@gallaudet.edu]), **Disability Protests 1970-2005: Localized or a Globalized Social Movement?,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines over 700 instances of protests related to disability issues which occurred outside of the US & over 1200 which occurred within the US. Data come from media & other reports & are analyzed quantitatively. Results show that the rate of US protests increased after 1984 while that of non-US protests increased substantially since 1989. The largest numbers of non US protests occurred in the UK & Canada. US protests are proportionally more likely than non-US protests to be cross-disability or to relate to mobility impairments, while disability-specific protests, especially those related to blindness and deafness, are more frequently found outside of the US. American protests are more likely to make demands related to rights, while non-US protests are more likely to make demands related to services and to target governments as opposed to non-governmental bodies. These & other results show that mobilization around disability issues clearly IS increasing across the globe, but most of that is around local (i.e. within country) issues rather than trans-national issues, & there appear to be few, if any trans-national organizations involved in protests. The importance of social structural, cultural, & social policy factors in explaining these differences argues for these protests being seen as being part of localized social movements which have some similarities but which are not part of a process of globalization.

Barnes, Marian & Harrison, Elizabeth (School of Applied Social Science, University of Brighton, Falmer, Brighton, England BN1 9PH [tel: 01273 643960; e-mail: Marian.Barnes@brighton.ac.uk]), **Ageing Activists? Who Takes Part in Older People's Forums,** *International Sociological Association, Gothenburg, Sweden,*

¶ Research concerned with older people's participation in action to influence public policy & service delivery focuses on older people as active citizens; as service users; as activists within campaigning organisations, voters & participants in citizen centred governance; & as researchers. Key questions associated with such action are: which older people get involved, why do they do so & what is their relationship with "non-participants". Here we examine biographies & motivations of older people in two older people's forums in England. We relate individual histories and social circumstances to people's relationships to the places in which they live to explore their reasons for taking part. We consider how they reflect on their "representativeness", how they construct their relationships to "other older people" who are not involved, & what their participation means in terms of personal responses to ageing well. We identify different relationships with place & suggest these intersect with socio-economic factors more usually considered in addressing "who takes part." We consider whether such forums might be spaces in which what it means to be old is constituted as well as expressed & represented. The paper is based on qualitative interviews with forum members undertaken by the authors.

Barré, Philippe (École de relations industrielles/Université de Montréal, CP 6128, succursalle centre-ville / Montreal (QC) H3C 3J7 \\ Canada [tel: +1.514.343.6111 # 1035; e-mail: philippe.barre@umontreal.ca]), **The Leading Role of Academics in the Emergence of Trilateral Organizational Forms of Technology Transfer. Empirical Evidence from a European Science Park,** *International Sociological Association, Gothenburg, Sweden,*

¶ Trilateral forms of collaboration between universities, enterprises and public agencies in the field of technology development appear now to be

common practice. If certain types of collaborations between the academic, industrial & governmental spheres were already observable in the past decades, the hypothesis underlying the "Mode 2" & "Triple-Helix" thesis suggest that these practices are now institutionalized & transformed into a new organizational paradigm for these actors. Universities, in this process, have been restructured around a new "third mission" based on their role in the socio-economic development. In this perspective, numerous universities starting at the end of the 1990's founded spin-offs companies, set up incubators and investment funds, changed their rules of intellectual property, etc. In this paper, we will argue that this process, initially, has been characterized by a high level of resistance & conflict among and into the three collective actors concerned: universities, industry & government. For example, the first technology transfers operated from within the universities in the form of spin-off companies were unfold as both marginal experiences, involving only individual actors, but also as conflicting experiences, opposite to the academic rules of this period. In the same way, governments, some industries & financial companies, observed these experiences either with skepticism or with adversity. Based on a longitudinal survey conducted between 1998 and today, we will present the process of transformation undergone in this regard by some individual academic actors in the context of one of the oldest science park in western Europe. This park, founded in 1970 around an objective of technology transfer between the university labs & large foreign companies established on this park, doesn't actually reach this objective until the mid 1980's. At this time, an academic were lead to set up a company in order to build a prototype of a new cyclotron that he designed. This academic venture has been received very negatively both by the university executives who considered this project as "prostitution" of research public funds as well as the industry related to this technology & the local government who were also unsupportive of this project. From a theoretical framework anchored in the sociology of innovation we will highlight the process, conflicting & discontinued, of changing the norms previously regulating the interactions between university, industry & local government. The action of some academics, in the context of this spin-off creation, will progressively built an network which will couple these three organizational spheres & transform their rules of functioning. The action of these individuals & the technological & commercial success of this company will directly contribute to implement, in the sphere of the university, new rules supporting spin-off creation & new institutions to promote them (incubator, investment fund, business center, academic program of entrepreneurship) and, in the public sphere, new politics to enhance the entrepreneurial role of the universities.

Barreira, Irlys Alencar Firmo (Departamento de Ciências Sociais; Universidade Federal Do Ceará, Fortaleza, Ceará, Brazil 60160250 [fax: 558532444450; e-mail: ialencar21@uol.com.br]),
Interventions in the City: Languages of the Past and Present, *International Sociological Association, Gothenburg, Sweden,*

¶ The research which I have been conducting in Fortaleza (Northeastern Brazil) indicates that discourses about patrimônio histórico (historic places) are guided by a search to recuperate something that has been lost. This is a field where, par excellence, social forces & discourses meet & where negotiations between the present & the past occur. The nostalgic discourse & the discourse of planning & revitalization allude to the past in two pragmatic ways, both of which are committed to a mythological vision of the 'search for origins'. The discourses and practices surrounding planning & revitalization (the so-called "degraded" central city areas) correspond to the interests of different social actors at different moments. The paper will show how negotiations about what should be preserved or modified indicate the establishment of "dialogues" that acquire differentiated nuances depending on the historical period & the actors in question. It is in this context that the possibilities of participation & the intervention of different social actors, including social movements, appears & have a strong impact on urban planning policies.

Barreyro, Gladys Beatriz & Rothen, José Carlos (Universidade de São Paulo, São Paulo, Brasil [tel: 55-11-3873-7387; e-mail: gladysb@usp.br]),
Policies for Evaluation and Regulation of Higher Education in Brazil (1995-2006), *International Sociological Association, Gothenburg, Sweden,*

¶ This paper analyzes the routes of the evaluation of higher education in Brazil, from 1995 until 2008. In 1995, during Fernando Henrique Cardoso's administration, the higher education began a process of expansion through private enterprise. At that moment, evaluation had a key role. The focus was the evaluation of courses by the application of an assessment test to measure the quality of the system. With the results of this test, a ranking of institutions was created. Since 2003, after Luiz Inácio Lula da Silva assumed the Presidency of the Brazilian Republic, the evaluation of higher education has been revised and institutionalized with the establishment of the National Higher Education Evaluation System (SINAES). This system displays a shift in the focus of evaluation, from an institutional competition to a quality improvement. However, since Lula's second administration, evaluation has had extra features: new indices have been created and the rankings have arisen again. This paper examines the role of evaluation at those different moments, in Brazil, according to the context of changes resulting from globalization processes. Key words: HIGHER EDUCATION, ASSESSMENT OF HIGHER EDUCATION, REGULATION OF HIGHER EDUCATION, BRAZIL.

Barros Geraldo, Pedro Heitor (CEPEL UM1 - CAPES Researcher [tel: 0668086703; e-mail: pedroheitorbg@yahoo.com.br]),
Learning to Judge: A Comparative Study about Judges in France, *International Sociological Association, Gothenburg, Sweden,*

¶ The creation's history of the magistrates & the organisation of the professional justice in France pointed to the development of negative expectation about the capacity of magistrates to accomplish the judges' work. This paper aims to understand how magistrates learned their work & to develop a praxeological comprehension about the skills of judges to accomplish the work. I did the fieldwork during several months observing hearings in the courts of Southern France. The interviews were done during the spring 2008 with fifteen magistrates ("juges de proximité"), two professional judges & three Clerks. The membership categorization analysis was based on the use of the comparison between the categories meanings employed for judges & magistrates to render a description of their work. The different meanings of membership categorizations are due to the different interpretive activity used by them. The professional environment is characterized by very practical demands during the accomplishment of the work. The interpretation about what-they-do and what-they-should-do are not structured in the same way. The difference indicates that members are rather concerned to practical everyday constraints of the work, than the magistrates who want to show their capacities to be better accepted.

Barros, Edonilce da R., Macedo, Odomaria Rosa B. & Moreira, Elane S. (Universidade do Estado da Bahia, Juazeiro, Bahia, Brazil, 48.900-000 [tel: (74) 3611-6860; e-mail: edobarros@uol.com.br]),
Historical Configurations of School Education in the Region of Juazeiro, State of Bahia (Brazil): School Curriculum and Culture, *International Sociological Association, Gothenburg, Sweden,*

¶ This paper presents the results of a study about the history and memory of education in the region of Juazeiro in the state of Bahia, Brazil. The approach has an anthropological & sociological perspective. The paper discusses the relations between school curriculum & popular culture. The research was carried out in the archives that belonged to Maria Franca Pires, a teacher at a public primary school. The data found in these archives evidence how specific the school culture is & consequentially its contribution to the development of teaching & of student learning. The existence, at the time, of diverse school cultures was identified, as for example activities with children's songs & poetry; parent teacher conferences; strong presence of the Catholic religion; a rigorous preparation of teachers for teaching, which applied intuitive methods. It has been concluded that the school culture reflects the events in society. Therefore, school appears as an ideal of identity production of the individual inserted into it. In the trajectory of this history of education, school culture has been & is still part of the educational environment as it provides at each time a specific development within the process of teaching & learning. It was observed that the emphasis given to school culture wasn't the same as the one given to popular culture. Keywords: Education, History & Memory, School Curriculum, Culture.

Barros, Edonilce, da R. (Empresa Baiana de Desenvolvimento Agrícola, Juazeiro-Bahia, Brazil [tel: (74) 3611-7666; fax: (74) 3611-7233; e-mail: edobarros@uol.com.br]),
Educational Action and Learning Experiences for the Sustainable Development in the Brazilian Semi Arid Region, *International Sociological Association, Gothenburg, Sweden,*

¶ This paper presents main results of an educational action & the learning experiences of family farmers in the Brazilian semi arid region. Historically, the semi arid region of Brazil has been the target of public policies

for a development which has caused further social exclusion of family agriculture. In the study area family farmers that produce for consumption are predominant. Their income generally results from selling agricultural surpluses & livestock, as well as from temporary rural wage labor. Nowadays rural retirement pensions constitute another main income source for this population. In 2008 the "National Counsel of Technological & Scientific Development" (CNPq) funded a project for action research, coordinated by EBDA, intended for developing technologies for the family farmers' sustainable living with the semi arid. The focus for the project actions has been the process of formation of local social actors, who are chosen by community associations of the municipalities where the project operates. They are identified as Sustainable Rural Development Actors (ADRS). Taking the educational actions as a starting point, it is now already possible to notice the strengthening of local civil associations, an environment of trust among the community members, an improvement in the interactions with public managers on diverse levels, as well as the implementation of innovative projects for a sustainable development in the Brazilian semi arid region. Keywords: Formation, Sustainable Development, Family Agriculture, Semi Arid

Barros, Flavia L. (Ceppac / University of Brasilia, Campus Darcy Ribeiro, Brasilia–DF, 71680-030 [tel: (61)33646287; e-mail: flaviabarros@unb.br]), **International Cooperation's Market-Oriented Civil Society Perspectives and Strategies,** *International Sociological Association, Gothenburg, Sweden,*

¶ I discuss the influence of international cooperation on the resignification of the notion of "civil society" & on its approximation to the private sector, in Brazil & other Latin American countries. This process is related to a wider tendency, since the last decades, involving new arrangements among State, society & market, for the promotion of development, which has been mediated by several kinds of aid agencies (multilateral, bilateral & non-governmental). I consider some of the main impacts, trends & challenges resulting from this process, with an emphasis on the depolitization & neoliberalization of civil society organizations, movements & individuals. Such process implies the attenuation of conflicts over models of development supported by the international cooperation as well as the emergence of new political paradigms, connecting local, national & global levels. The visions, discourses & practices I refer to are the result of field research with leaders & staff of aid agencies and civil society organizations & movements. I explore some similarities & differences among study cases in order to contribute for the advance of the theory related to this subject.

Barth, Pascal ([tel: 0049 176 6002 6000; e-mail: pascalULbarth@gmx.de]), **Social Exclusion of Family Carers in Different Welfare State Regimes. A Comparison Between Germany And Sweden.,** *International Sociological Association, Gothenburg, Sweden,*

¶ The general framework of informal care differs significantly between Germany & Sweden. The present paper analyses these differences and their impact on family carers situation based on the multidimensional concept of social exclusion. Elder care in Germany is provided within the framework of a Bismarkian, conservative corporatist welfare state. The design of the German supplemental care benefits results in familialism, particularly for carers of lower socio economic classes. Its strong male bread winner model and strong traditional gender role expectations constitute a high risk of marginalisation for women. The Swedish welfare system is considered to be social democratic. De-familializing strategies, comparatively weak traditional gender role expectations, a weak male breadwinner model & comprehensive public care provision minimizes the risk of marginalisation for carers. The results of recent European surveys support the hypothesis of a lower risk of marginalisation for carers in Sweden: Swedish carers face a far lower risk of exclusion from the labour market, a lower risk of financial marginalisation, are less likely affected by health impairments & face a lower risk of social isolation compared to German carers.

Bartlett, Ruth (University of Bradford, Trinity Road, Bradford, BD5 0BP [tel: 44 1274 236468; e-mail: r.l.bartlett@bradford.ac.uk]), **"We're Not Individuals, We're a Group": An Ethnographic Description and Analysis of the Scottish Dementia Working Group (SDWG)–An Independent Campaign Group for People with Dementia in Scotland,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction: After decades of being marginalised & discriminated against, people with dementia are beginning to join forces and campaign for social change. This paper reports selected findings from a UK study that aimed to discover why & how people campaign, and the impact it has on individuals, particularly in regard to their sense of social identity & citizenship. Active campaigners (with dementia) were recruited from the Scottish Dementia Working Group (SDWG) & Alzheimer's Society in England. This paper focuses primarily on the political agenda, cultural dynamics, & working practices of SDWG, describing how the group works & presenting an analysis of the meanings individual members give to it. Comparisons are made with campaign practices in England. Methods: the study used mixed qualitative methods. Data were collected using: written, photo & audio diaries; pre & post diary interviews; ethnographic observations & field notes, & analysed using a combination of content & narrative analysis. Sociological ideas of citizenship as a practice informed data analysis. Results: the study found the SDWG to be an effective campaign group in that it nurtured a strong sense of political purpose, solidarity, equality, and trust amongst its male & female members. The nature of campaigning in England is arguably more individualistic. Conclusion: the paper draws conclusions about the nature & impact of cultural & gender differences in Scotland & England.

Bartoletti, Roberta (University of Urbino Carlo Bo, Via Saffi 15–61029 Urbino (PU)–Italy [tel: +39 0722 305726; e-mail: roberta.bartoletti@uniurb.it]), **Memory and Social Media: New Forms of Remembering and Forgetting,** *International Sociological Association, Gothenburg, Sweden,*

¶ Technologies shape human memory & human forms of remembering and forgetting. At the same time, the users are able to shape technologies of memory in order to construct a meaningful world. The presentation focuses on the relation between individual and collective memory & social media: social media are not just communication realm but also memory places, where individuals can construct their memories, where they select what should be remembered & what should be cancelled. Furthermore, in social media memories can be constructed in a more participated way, thank to connection & contents sharing technologies. The presentation intend reflect on potential & actual capacities of social technologies to generate a creative use among individuals or groups in relation to remembering & forgetting. I discuss this topic through some case studies. We can indeed observe many new technologies of memory at work: Wikipedia as an objectification of a participate cultural memory, the weblogs as places of individual memory & identity construction, Flickr as a shared private archive, new forms of participate social archive about historical events & so on. The aim is to design a phenomenology of grassroots memories in connection to social media.

2010S00209

Bartoluci, Suncica & Gruic, Igor (Faculty of Kinesiology University of Zagreb, Zagreb, Croatia, 10000 [tel: +38513658608; fax: +3853634146; e-mail: suncica.bartoluci@kif.hr]), **Sport and Politics in Croatia: Reinterpretation of Nationalism–Case Study,** *International Sociological Association, Gothenburg, Sweden,*

¶ Sport & sports achievements have frequently been tools used by the political elites for achieving their own goals both within their state borders & on the international level. In the 1990s, the fall of communism & the disintegration of major multinational countries, such as Yugoslavia, brought the changes on the world geopolitical map which has redefined nationalism. Newly formed nations-states have used the advantage of sport to seek recognition on the international political scene. Having a reputation of a small & politically insignificant but powerful & sport winning nation, sport has played an important role in the constitution of national identity in Croatia & simultaneously became a tool for political abuse & manipulation. This work will illustrate the role of sport in the transformation process of national identity into nationalism–a form of intolerance towards others. The aim of this paper is to present the paradox of the nationalist identity reduction in two cases in which the protagonists belonged to two different social & cultural worlds (member of the dominant political elite–the President of the Croatian Olympic Committee, and Milos Milosevic–swimmer, top-level athlete). Contemporary sport does not necessarily imply a categorical identity (Calhoun, 1993; Katunaric, 2007) as a prescriptive (primordial, that man limited to one box identification), but favors the plurality and multiculturalism.

Barus-Michel, Jacqueline & Basak, Tanulku (Université Paris 7–LCS, Paris–75013–France [tel: +33 (0)1 48 93 18 31; e-mail:

j.barus@orange.fr]), **Sociologie clinique et psychosociologie au regard des systèmes économiques et politiques** (Honest Villagers and Unspoilt Village Life: How Is Belonging Established in Gated Communities?), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ In this paper, I will explain how residents in gated communities belong to the "local" in terms of the place they live in & the local people whom they interact with. For this purpose, I examined everyday life of the residents in two gated communities in different locations of suburban Istanbul, Turkey. I conducted semi-structured in-depth interviews with residents in the two communities. Residents in the first community consist of a population with an average of 35, most of whom are young couples with small children working in finance & service sectors. Its average household income level is described as "upper middle". Residents in the second community consist of a population with an average age of 45 & an average household income level described as "high". They consist of both young couples with small children and retired empty nesters. Residents in both communities use local shops, buy fresh vegetables & fruits & know local men. They also help local people via volunteer charity work, which provide a source of "honour" for them. In this respect, village life and local people change residents' material & symbolic lives by contrast to the greedy, artificial & cheating urban life.

2010S00211

Basavarajapp, K. M. (Navodaya Institution, 'Kayaka', H.No.–1-11-153, M.R. Bheemayya Layout, Raichur–584 101, Karnataka, INDIA [tel: 00 91 8472 245839; fax: 00 91 8472 263206; e-mail: basukalasa@gmail.com]), **Academics and Industry Interactions for Technology Inputs,** *International Sociological Association, Gothenburg, Sweden,*

¶ The fact that there is symbiotic interaction & interfacing between education & economy as two basic social institutions has since long been acknowledged in both theoretical & empirical literature in Sociology. Such interfacing has become more marked & complex with the emergence of post industrial society & in the wake of education in post modern social context. The relevance of education is measured in terms of its compatibility with the needs and requirements of the industry & the economic development engineered by industrial growth is viewed as being in turn dependent & in proportion to the strength & quality of its educational institutions. It is also acknowledged that the course and pace of development in education depend to a considerable extent on the demands & requisitions placed on it by the industry. Thus, education & industry could be viewed as being mutually dependent & supportive representing an organic and symbiotic interface. Further, educational institutions which are known to offer technical & professional education could be viewed as having greater functional implications for industry & its requirements than the others rendering them of greater consequence for industry. Hence, the academic institutions are viewed as being at the centre of industrial development. The present paper seeks to investigate empirically into the interactions & interfacing between the educational institutions & industry in Indian context focusing particularly on the changing priorities & emphasis in the course & curricula in academic institutions & the extent to which the requirements of the industries are being met by these institutions. The study was undertaken in a sample of Indian academic institutions to ascertain the recent trends of specializations & introduction of new courses in response to the demands of the industry during the last fifteen years on the one hand & the dependence of industries on educational institutions for its manpower requirements & the degree to which such demands are being met on the other. The findings reveal that there has been a considerable change in the content & nature of courses being offered by the academic institutions in commensuration with the changing requirements of the industries & the major trends towards industrialization in the recent past. Courses which are professional & technical in nature catering to the needs particularly of secondary & tertiary industries are more frequently & numerously being offered with pure & basic sciences being relegated to the secondary status. It could be observed that the academic courses that are viewed as qualifications in IT, computing & managerial positions in the industries are on the rise both in frequency & in demand obviously owing to the prominence of service industry in the recent past. On the other hand, industries are found to be increasingly dependent on these institutions for their manpower requirements though there appears to be a gap between their expectations & the kind of human resources that are being offered from the academic institutions. The industries feel that the human resources generated by educational institutions tend to be lacking to some extent in the practical orientation & exposure. However, the interface between the two appears to be getting stronger with each having significant inputs for the development & progress of the other.

2010S00212

Bassetti, Chiara (Department of Sociology and Social Research, University of Trento, Via Verdi nº 26, 38122 Trento, Italy [fax:; e-mail: chiara.bassetti@gmail.com]), **Gendered Bodies and Dance Profession. Social Representations, Cultural Norms, (Art)Work Opportunities and Lived Experience,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of the paper is to untie some of the knots linking together body, gender & work in dance field. I consider how sex, gender, dance style, body 'type', kind of gender performance, cultural representations of gender & the (gendered) body interact in shaping dancers' artistic-professional path & everyday experience. The paper derives from the extensively ethnographic research I have been carrying out on the professional world of dancers. The material on which it is based includes, first, the basic structural data concerning the quantitative dimensions of the field; secondly, a series of in-depth interviews with dance professional; and, finally, the field notes & video recordings of the everyday activities of two Italian dance companies & related schools. Moreover, in order to better understand the ways in which dance training affects the (sense of one's) body, I enrolled for the first time in courses & stages. "Dance is a queers' stuff!", a sentence we all have heard at least once. It is not surprising, given the extreme involvement of corporeality and nonverbal communicative resources in dance, that this art form is theatre of a symbolic struggle–of classification–in which the possibility of inscribing one's own values & tacit norms on those bodies that will be then publicly exhibited is at stake. As various scholars [Butler, 1990; Garfinkel, 1967; Goffman, 1977, 1979] underlined, gender–and, with it, sexual orientation–is performed in everyday interaction. No doubt that its performance during the social ritual of theatrical performance [Goffman, 1974] is very useful to sustain & maintain (or challenge & change) social norms. But this is not only about representations: dancers' artistic, professional, and, more generally, biographic paths (and their narratives of them), as well as their everyday lived experience, are affected by the cultural norms of both dance community & the broader society, until reaching the very relation of dancers with their own body. The paper explores dance labour market stratification on the basis of sex, aesthetic appearance, gender performance & implied sexual orientation. It then shows how elements such as professional level & dance style interfere with the previous ones. In particular, I describe through a semiotic square a gender-style continuum based on sex, other corporeal properties, & body-related actions (movement, gestures, body techniques, habitus, clothing, etc.). Finally, I discuss how the representations & norms of both dance occupational community and broader society affect dancers' self-representation of their embodied corporeal self as well as their embodied artistic-professional self.

Bastin, Gilles & Belot, Céline (Institut d'Etudes Politiques de Grenoble, BP 48–38040 Grenoble cedex 9 [tel: +33 4 76 82 61 04; e-mail: gilles.bastin@iep-grenoble.fr]), **Framing Terror in France and the United States during the Preparation of the Iraq War (2002-2003),** *International Sociological Association, Gothenburg, Sweden,*

¶ The Iraq war of 2003 has been prepared & fought under very intense communicative activity & mass media scrutiny in most societies. Terror frames produced by governments & broadcasted by the media have played a key role in justifying the war & obtaining public support for it, as the American example clearly shows. These frames shared common understandings from a country to the other but they were not uniform & diverged as the conflict went along. This paper aims at a) providing a methodology based on co-word analysis and quali-quanti data mining for the extraction of such frames in newspaper articles in the US & in France just before the beginning of the war; b) describing those frames & the way they evolved in the two countries & across audience lines as far as the French case is concerned; c) correlating framing activity in the printed media to government position taking & public support for the war. This paper is part of a broader research on the construction of order & disorder in international relations at times of war.

Batocabe, Jan Wendell C. (Southeast Asian Studies Programme, National University of Singapore, Singapore, Singapore, 117570 [tel: +65 83170089; e-mail: wbatocabe@nus.edu.sg]), **When Queers Go Marching In: A Comparative Study of the Gay and Lesbian Social Movement in the Philippines and Singapore,** *International Sociological Association, Gothenburg, Sweden,*

¶ According to the Political Process Model (PPM), activists do not choose goals, strategies, & tactics in a vacuum. Rather, the political environment, conceptualized fairly broadly, sets the grievances around which activists mobilize, advantaging some claims and disadvantaging others (Mayer 2004). The wisdom, creativity, and outcomes of activists' choices, briefly their agency, can only be understood & evaluated by looking at the political environment and the rules of the games in which those choices are made. Taking this into consideration, this research will explore how exactly the political environment affects the emergence & development of the gay & lesbian social movement in the Philippines & Singapore. But at the same time, it will also unpack the different "institutions" that influence the sets of values, ideologies, and structures that hold this particular political environment. This will delve into this inquiry by tracing & comparing the emergence and development of the gay & lesbian social movement in the two countries mentioned.

Bauer, Gerrit, Ruland, Michael & Jacob, Marita (University of Mannheim, 68161 Mannheim, Germany [fax:; e-mail: gerrit.bauer@mzes.uni-mannheim.de]), **A Life Course Perspective on Education and Fertility,** *International Sociological Association, Gothenburg, Sweden,*

¶ Reviewing sociological literature on the relation between educational attainment & fertility reveals that most empirical studies focus on characteristics of women. We claim that besides each individual's education the characteristics of the partner have to be considered simultaneously. We therefore model family formation looking at individuals & couples using different time axes: (1) We start with looking at age differences in first births between several educational groups for both men & women. (2) According to the so-called "institutional effect of education" childbirth is postponed until having left the educational system. Therefore in a second step we do not use age as the relevant axis of time but timing of first births after having left education. (3) Taking into account that a partnership is a prerequisite for conception one may argue that the relevant "time at risk" starts with partnership formation. Accordingly, in a third step we use partnership's duration as time axis. Finally, our paper will compare educational effects on family formation against the background of these 3 different time axis. Our empirical analysis is based on data of the project "Work & Learning in a Changing World" (ALWA), recently collected data by the Institute for Employment Research (IAB, Nuremberg).

Baumann, Jochen & Mika, Tatjana (Technical University Braunschweig, Institute of Social Sciences, 38106 Braunschweig, Germany [tel: ++49-(0)531-391-8947; fax:; e-mail: Jochen.Baumann@tu-bs.de]), **Return Migration from Germany: Social Rights and Legal Obstacles,** *International Sociological Association, Gothenburg, Sweden,*

¶ Germany hosts a multitude of international migrants. Their return migration behaviour differs greatly. The migratory decision is embedded in a broader context of legal & institutional settings of migration policy in which the institutions of social policy play a key role. They are able to encourage or discourage such migratory decisions. The process of taking a decision about one's future center of living comprises a complex set of factors like social, economic & civil integration in the country of residence and expectations on those in the country of origin. Institutions of social policy play a key role in this decision. We use full sample data from the German pension fund including all pensioners irrespective of their place of residence from the year 2008. We include in addition longitudinal data from 2007 from one retirement cohort. The paper describes & discusses the amount of return migration after a prolonged stay & explains it using logistic regression. Return migration of the former working migrants of the 1960's & 1970's from Germany to their countries of origin ranges between nearby 0% & about 90%. The countries of origin are apparently the most important factor to explain return migration behaviour. Additional explanatory factors are the legal status as ethnically privileged migrant, length of stay, mid career unemployment & pension benefits.

Baumann, Michèle, Lurbe I Puerto, Katia, Le Bihan, Etienne & Leandro, Maria-Engracia (University of Luxembourg, INSIDE, L-7201 Walferdange and University of Minho, Faculty of Social Sciences, Braga (Portugal) [tel: + 352 46 66 44 9224; e-mail: michele.baumann@uni.lu]), **Social and Psychological Repercussions within Two Years Post-Stroke, Patient-Caregiver in Luxembourg and Portugal: A Couples' Approach Study,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study aims to improve our understanding of the impact of stroke on the lives of patients & principal caregivers (PCs). The objective was to analyse agreement within patient-caregiver couples in responses to statements concerning the psychological & social repercussions of stroke. Two years post-stroke, 97 patient-PC couples were administered questionnaires at home. Logistic regression was used to analyse data on 50 couples of questionnaires from Luxembourg (Lux) & 47 from Portugal (Por); 60% of patients were men, with average ages of 65 years in Luxembourg & 71 years in Portugal; 75% of carers were women aged on average 61.5 years (Lux) & 61 years (Por). Responses to the question "Are you happy or not?" were more correlated with concordance within patient-caregiver couples" statements concerning the psychological and social repercussions of stroke than were the socioeconomic characteristics (nationality, age, having finished elementary school or not). Patients who considered themselves happy were more likely to give answers close to those of their caregivers. This was true particularly in the domain of stroke repercussions on relationships with friends: "sympathy shown by friends and relations", "loss of friends", "friends bothered by the handicap" & "ties maintained & even strengthened". Conversely, PCs who described themselves as happy were less likely to agree with the patient they cared for. Patient-PC couples emphasised the consequences of a stroke on self-image in the face of the "loss of many friends" & the fact that "the patient feels devalued". Family & social life is disrupted by stroke, and friendly relationships are put under stress. Patient-caregiver coherence is central, not least in its effect on quality of life. Do couples' feelings about life have a decisive role in the reconstruction of the identities of patients & caregivers? What part trust will play in that process?

Bayatrizi, Zohreh (Department of Sociology, University of Alberta, Edmonton, Canada, T6G 2H4 [e-mail: bayatriz@ualberta.ca]), **Agenda Setting and Steering Mechanisms in Iranian Sociology,** *International Sociological Association, Gothenburg, Sweden,*

¶ The academic discipline of sociology was created in Iran five decades ago as a technocratic field; that is, as an instrument to help solve state problems. The 1979 Revolution does not appear to have altered this course in any significant way. Today the state remains the main sponsor & client of sociological research. The absence of independent sources of research funding outside the government has left sociology dependent on state agencies & organizations. This situation has significant effects both on sociology & on the direction of policy making in Iran. State-sponsored research is almost exclusively quantitative, narrowly problem-oriented, often secretive, & unable to offer concrete policy solutions. Furthermore it does not lead to theoretical & conceptual advances. Independent sociology has survived but it is in need of greater support. The situation in Iran is not unique: it reflects, in a magnified way, problems faced by sociologists everywhere in the world as they come under increasing pressures to undertake applied & policy-relevant research. My paper investigates the

origins of sociology in Iran & the extent to which state preferences have influenced the direction of research in Iranian sociology. It will also briefly discuss sociological research undertaken outside the boundaries of state policy interests.

Bayatrizi, Zohreh (Department of Sociology, University of Alberta, Edmonton, Canada, T6G 2H4 [e-mail: bayatriz@ualberta.ca]), **Ordering Not Denying: A New Theoretical Perspective on the Social Management of Death with Particular Attention to Euthanasia,** *International Sociological Association, Gothenburg, Sweden,*

¶ In 1973 Ernest Becker's The Denial of Death was published, an influential book that argued modern societies deal with death by trying to deny its existence. Much evidence can be cited to support Becker's theory. In the same year, a criminal court in the Netherlands passed a ruling in the "Postma Case," which led to the eventual legalization of euthanasia in the Netherlands. This raises the question, if modern culture is obsessed with prolonging life & denying death, as is often charged, why does it allow and even institutionalize certain forms of voluntary death, such as euthanasia & assisted-suicide? My paper argues that perhaps the answer will be found if we move away from the denial of death thesis & instead adopt a new theoretical perspective in which "ordering & taming" death rather denying it are central to the modern experience of managing death. Such ordering consists of all efforts to tame, discipline, postpone, prohibit, incorporate, allow, or deny death within socially sanctioned institutional frameworks. The driving force behind the social need to order death is not the fear of death as such but a fear of its unruly and disorderly manifestations. Death is not in itself an object of control or prohibition. Rather, only in its unruly, disorderly, and "messy" aspects does death have to be prohibited or discouraged.

Beasley, Chris (Politics, University of Adelaide, North Terrace, Adelaide, South Australia 5005 [tel: +64+8+83035065; e-mail: christine.beasley@adelaide.edu.au]), **The Question of "Transgression": (Hetero)normativity, Heterosexuality, and Hetero-Masculinity,** *International Sociological Association, Gothenburg, Sweden,*

¶ Heterosexuality is simply rarely examined nowadays in Gender/Sexuality scholarship. It is largely taken to be of little critical interest, as simply to be equated with heteronormativity. The present conflation of heterosexuality with heteronormativity presents dominant practices as monolithic & unchanging. In other words, the conflation over-determines this sexual mode as a source of domination & under-theorises it as a site for social dissonance. The over-determination of heterosexuality as singular, fixed and oppressive has implications for understandings of hetero-masculinity. This paper, by contrast, considers the term transgression in relation to heterosexuality–in particular to heterosex–and hetero-masculinity. It is asserted that transgression might be intrinsic within dominant practices like heterosexuality & hetero-masculinity (rather than necessarily always external to them). In the process the potential of the term transgression, is compared with other terms like subversion/dissent/protest. This discussion leads to the question of what might transgression in the realm of the dominant look like. How might a transgressive heterosexuality and, more specifically, a transgressive hetero-masculinity, be conceptualised? Attention to acts as well as identities suggests some productive directions. Such considerations complicate our understandings of self, gender, sexuality & social change & thus open up hopeful possibilities, with attendant implications for hetero-masculinity.

Becker, Birgit (Mannheim Centre for European Social Research, University of Mannheim, 68131 Mannheim, Germany [tel: +49 621 1812817; fax: +49 621 1812803; e-mail: Birgit.Becker@mzes.uni-mannheim.de]), **How Often Do You Play with Your Child? Parental Investments at an Early Age and Their Influence on Children's Language and Cognitive Development,** *International Sociological Association, Gothenburg, Sweden,*

¶ Many studies have demonstrated a positive association between familial activities (e.g. reading to the child) & children's development in different domains. With reference to the human capital theory, such familial activities are interpreted as parental investments in their children & are assumed to depend on parental resources. This paper analyses the determinants of familial activities at two points in time, starting with parents of 3-4-year-old children who are followed-up for one year. In a second step, the influence of these investments on children's language & cognitive development during this one-year-period is examined. Using the data from the German project 'Preschool education & educational careers among migrant children', large inequalities in parental investments are detected. Immigrants & lower educated parents tend to invest less than natives & higher educated parents. Parents' cultural resources turn out to be the single most important determinant of familial activities & completely mediate the effect of mother's education. The social & ethnic origin predicts familial activities at age 3-4 better than at age 4-5. Thus, especially the very early investments seem to be subject to selectivity. Using fixed effects models, further analyses demonstrate that a higher frequency of familial activities leads to a significant improvement of children's language & cognitive skills between the two panel waves.

2010S00225

Becker, Dominik & Birkelbach, Klaus (University of Cologne, Cologne Graduate School in Management, Economics and Social Sciences, Richard-Strauss-Str. 2, D-50931 Cologne [tel: +49(0)221/470-1221; e-mail: dominik.becker@wiso.uni-koeln.de]), **The Impact of Teachers' Expectations on Students' Educational Opportunities in the Life Course–An Ignored Inequality?,** *International Sociological Association, Gothenburg, Sweden,*

¶ On the one hand, the theoretical framework of inequalities in educational opportunities as it has been provided by rational-choice theory (Goldthorpe 1996; Breen/Goldthorpe 1997) is formally rigorous & facilitates both the comparison of different hypotheses & their operationalization into empirical models. On the other hand, social psychologists have impressively revealed how teachers' expectations can influence students' future performance. This phenomenon has been labeled the "Pygmalion effect" of self-fulfilling under-estimations & the "Golem effect" of self-fulfilling over-estimations (Rosenthal/Jacobson 1968; Jussim/Harber 2005). Our substantial aim is to integrate the main idea of 'Pygmalion' into the rational-choice framework of inequalities in educational opportunities & to provide an empirical test of this new model. Based on panel data of former 10th class German high school students we can first show that teachers' prognostic claims with regard to students' academic ability may influence students' educational decisions–even when controlling for students' 10th class background variables like intelligence, school grades, social class, aspiration and motivation. Second, we find out that teachers' evaluations still may affect the former students' occupational prestige at the age of 43 via life course path dependencies.

2010S00226

Becker, Rolf (Dept. Sociology of Education, University of Bern [fax:; e-mail: rolf.becker@edu.unibe.ch]), **Experimental Simulation of IEO in Switzerland,** *International Sociological Association, Gothenburg, Sweden,*

¶ From the perspective of the individuals' educational career, it is assumed that–additionally to the structure of the educational system–the primary effect of social origin (i.e. effect of socioeconomic parental background on individual's achievement and motivation) & the secondary effects of social origin (i.e. effect of the individual's class origin on educational decision) are responsible for that children from less educated parents are underrepresented at the Swiss universities. Since the institutional supply of vocational training seems to be less risky & costly for both the working class-children & the children from lower middle classes, they are diverted from the higher education at early transitions in the Swiss educational system already. Employing the TREE (transition from education to employment) longitudinal data set, it is possible to simulate the effects of educational policies which seek to neutralize the effects of social origin on individuals' opportunity of education. How does the neutralization of

social origin on the individuals' educational career work? Is the neutralization of the secondary effects more important than the neutralization of primary effects? Is it possible to increase the lower classes enrolment in university if the impact of expected benefits & costs has been dissolved?

Beckers, Tilo (Institute for Social Sciences, University of Düsseldorf, Düsseldorf, Germany, 40225 [tel: +49 541 - 969-4608; fax: +49 541 - 969- 4600; e-mail: tilo.beckers@uni-duesseldorf.de]), **Intermediate Cohort Levels in Cross-National Three-Level Hierarchical Linear Models: Replacing Proper Names by Variables while Analyzing Cohorts and Social Change,** *International Sociological Association, Gothenburg, Sweden,*

¶ There are different approaches in analyzing social change when cross-sectional cross-national data are used. A conventional approach uses dummy variables for time indicators (years) to assess change. This paper proposes a different strategy by following Przeworski's & Teune's notion of replacing proper names by variables. This is now often done in cross-national multi-level research designs when country names are replaced by meaningful aggregate level variables. "Time" can also be replaced when the generality of statements is investigated. This paper uses focuses on the cross-sectional analysis of 75 country time-points & 300 country cohorts which have been surveyed in the World Values Survey (waves 4 & 5: 1999-2003, 2005-2007) to follow the strategy of a most-dissimilar systems design & a variable oriented approach. The applied multilevel analyses (hierarchical linear models) are also based on substantive contextual data & prove the importance of influences on all three levels but especially point at the importance of both contextual levels. Moral attitudes serve as an example for this methodological strategy. Besides the first level of individual influences, we additionally introduce two levels of contextual influence: The second level are formed by the country-cohorts as units of analysis which are operationalized by cohort-specific values of relevant variables. The third level is constituted by the countries & operationalized by different normative & structural variables.

2010S00228

Beckfield, Jason, Alderson, Arthur & Sprague-Jones, Jessica (Department of Sociology, Harvard University, Cambridge, Massachusetts 02138 [tel: 617-495-3895; e-mail: jbeckfie@wjh.harvard.edu]), **Cities in Global Systems,** *International Sociological Association, Gothenburg, Sweden,*

¶ Current empirical research on less-global & more-global cities has taken a relational turn, as scholars complement evidence on the multidimensional attributes of global cities with evidence on networks of cities. In relational frameworks, cities are conceptualized as occupying positions that are more or less favorable, more or less powerful, & more or less prestigious, as a function of the volume & quality of connections to other cities. However, such research has been generally limited to cross-sectional investigations of economic networks, leaving questions about the evolution & multidimensional character of urban networks unresolved. We argue that connections among cities occur in multiple fields & create multiple systems of cities that may evolve in distinct ways. We take a step toward situating cities in multiple global systems by investigating two questions. First, how has the multinational-corporate system of cities evolved during the era of economic globalization that began in the 1970s and intensified until the recent global financial crisis? Second, how has the international-political system of cities evolved during a period of political globalization since the establishment of the UN system in the 1940s? We analyze economic & political systems of cities using data on the locations of headquarters & subsidiaries of the world's 500 largest multinational corporations in 1981, 2000, & 2007, & on the locations of intergovernmental organizations (IGOs) & the capital cities of their member states since 1950. Using techniques developed for the analysis of network data (e.g., centrality, blockmodeling, & cluster analysis), we generate fresh evidence to advance multi-disciplinary debates surrounding the changing structures of global systems of cities. In particular, our evidence sheds new light on the role of globalization in generating new urban hierarchies vs. reinforcing established patterns of inequality among cities, the emergence of global vs. regional systems of economic control & political association, & the role of economic vs. political networks in generating clusters of less-global & more-global cities.

2010S00229

Beckner, Roswitha (University of Vienna, Institute of Sociology, Rooseveltplatz 2, A-1090 Vienna [tel: +43 4277 48217; e-mail: roswitha.breckner@univie.ac.at]), **Pictured Bodies. The In/Visibility of Cultural Diversity in Public Space,** *International Sociological Association, Gothenburg, Sweden,*

¶ Cultural diversity in cursory encounters of urban everyday life is associated with the visible appearance of men, women, & children. Clothing, hair styles, skins, gestures, faces, motions–in short: bodies–are performed & ascribed as being part of a specific group or population (Goffman). When comparing the everyday life diversity in a city like Vienna, which in itself appears as a "picture" of multicultural social life, with the many poster-pictures attracting our attention, one can immediately notice that the lived urban cultural diversity remains either invisible in the world of public poster-advertisement, or is performed as pattern of alien "strangers" in a colonial gaze. Based on picture analyses of photographs taken at tramway stations in the city of Vienna focussing passers-by as well as surrounding posters the paper aims to show that cultural diversity remains either completely invisible in the realm of public pictures or appears as images of "strangers" in contrast to "ourselves", created by specific pictorial strategies of depiction. Against this background it becomes a challenge to make cultural diversity visible, which will be discussed in the conclusion of the paper.

2010S00230

Belanger, Roxanne, M (Études françaises, Université Laurentienne, 935, chemin Ramsey [tel: (705) 675-1151; e-mail: rmULbelanger@laurentian.ca]), **Prématurité, langage et suivis neurodéveloppementaux** (Prematurity, Language and Neurodevelopmental Follow-ups), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Grâce aux avancées dans le domaine de la médecine, le taux de survie de la population de bébés nés aux Soins intensifs pour une population néonatale s'est de beaucoup amélioré. Malgré ce succès, la prévention des retards neurodéveloppementaux de cette population durant la petite enfance demeure un défi. Si l'on considère la population prématurée comme étant à risque, la population prématurée francophone l'est d'encore plus. Il a été démontré que, en Ontario, les francophones sont moins en santé que leurs concitoyens anglophones. De plus, il existe des écarts importants en ce qui concerne l'accessibilité aux services de santé. Cette présentation portera sur une population à risque qui se présente donc en deux entités: en raison de sa prématurité et en raison de sa situation linguistique minoritaire. l'étude entend identifier les pronostics neurodéveloppementaux des Franco-Ontariens dans les domaines suivants: motricité globale, motricité fine et langage. Les données recueillies permettront de décrire le développement langagier de l'enfant prématuré francophone; les conclusions rendront utile l'élaboration de preuves sur lesquels on peut fonder des politiques et des procédures quant aux soins qu'il faut prodiguer à l'enfant prématuré. Ce devis oblige l'adoption d'un encadrement interdisciplinaire afin d'approfondir les connaissances sur les enjeux sociaux, culturels et environnementaux qui agissent sur l'état de la santé de l'enfant prématuré. La sociocybernétique jouera un rôle prééminent dans l'analyse et dans l'unification des systèmes impliqués, car elle prend en compte de la complexité des relations humaines.

Belhassen, Yaniv & Caton, Kellee (Hotel & Tourism Management, Ben Gurion University of the Negev, Beer Sheva, Israel 84105 [tel: 972-8-6404517; fax: 972-8-6304538; e-mail: yanivbel@bgu.ac.il]), **How Do We Know Whether Research Has Advanced?: An Epistemological Enquiry into Tourism Studies,** *International Sociological Association, Gothenburg, Sweden,*

¶ In line with approaches that view the study of tourism as interdisciplinary, this essay seeks to create a framework for gauging progress that cuts across disciplinary & paradigmatic boundaries. Following in the discursive, relational, power-referenced philosophical traditions to knowledge production of scholars such as Nietzsche, Durkheim, Mannheim, Bourdieu and Foucault, this paper advocates for the consideration of tourism scholarship not as a linear search for truth, in keeping with any particular foundationalist scheme of evaluating knowledge progression, but as an institutionalized, norm-governed site of conversation in which interdisciplinary discourses about tourism are developed. As opposed to foundationalist or objectivist epistemologies, which presume that knowledge is trustworthy and legitimate only when based on concrete foundations, this paper embraces the post-foundational view that there is no secure agreement about what can be considered as a valid foundation for a knowledge claim in tourism studies because the field consists of heterogeneous philosophical perspectives. Arguing that the act of assessing progress in knowledge production in tourism studies should reflect this conversational, human-based view of knowledge production, this paper proposes a linguistic approach to understanding research progress that includes three guiding

dimensions: tourism morphology, or the creation & adjustment of terms, concepts, metaphors, & models by tourism scholars; the production & promotion of new interpretations & understandings regarding tourism-related phenomena; & the employment of such interpretations for the purpose of practical problem solving oriented to the needs of practitioners & policy-makers. The paper concludes that scholars should analyze progress in the field not only to comprehend the development of ideas & interpretations with regard to specific areas of subject matter & their utilizations in the real world, but also as an exercise in epistemological reflexivity regarding the influence of academic forces & trends that govern the process of knowledge production.

Bell, Susan E. & Figert, Anne E. (Sociology and Anthropology, Bowdoin College, Brunswick, ME 04011-8470 [tel: 207-725-3292; fax: 207-725-3023; e-mail: sbell@bowdoin.edu]), **Re-Imagining Medicalization in a Postmodern World,** *International Sociological Association, Gothenburg, Sweden,*

¶ "Medicalization" is a key concept of modernity, ubiquitously used in the social & medical sciences since the 1970s. It wields cultural authority among scholars & publics & has explained how control over medical phenomena is produced, resisted, & transformed. Most early work focused on the process by which conditions were defined and treated from a top down perspective, & gave attention to Anglo-American settings. Today, the connection of medicalization with modernity & modern processes make its reach & impact partial. In a world where postmodern forms of knowledge & power circulate, medicalization as process is too simple & as concept is too narrow for capturing the gendered circulation of pharmaceuticals, genetics, & technoscience in an increasingly postmodern & global world. We argue that although there is a fair amount of overlap among these terms & processes, medicalization does not adequately capture what is going on in the globalizing 21st century precisely because it is rooted in modernity and categorical thinking. At the same time, the concept of medicalization is worth holding on to. We illustrate our argument with examples from gender & sexuality studies.

2010S00233

Belova, Natalia (Department of sociology; RSU for the Humanities, Moscow, Russian Federation, 125993 [tel: +7-910-470-34-22; fax: +7-499-9734212; e-mail: n.i.belova@mail.ru]), **Institutional Peculiarities of Russian and European Healthcare System in Access to High-Technology Medical Cervices,** *International Sociological Association, Gothenburg, Sweden,*

¶ Common features of health systems in Europe & Russia are that they are based on many common principles, in particular the principles of solidarity & universal access to health care. Before the health systems of different European countries & Russia are the same main objectives: to ensure accessibility & high efficiency of medical care. The development of high-tech medicine requires states to additional budgetary resources, which leads from one side to the growing financial crisis, on the other hand, the impossibility of maintaining universal equality of access to health services. At present, Russia is formed by a high-tech sector health services. The State guarantees its citizens a certain amount of high-tech medical care, financial security is at the expense of budgetary funds. However, the number of allocated quota is limited, therefore not all those in need have access to this kind of medical services.

2010S00234

Beltrán Llavador, José (Department of Sociology and Social Anthropology, University of Valencia, Valencia, Spain, 46022 [tel: + 34 963828454; fax: + 34 963828450; e-mail: jose.beltran@uv.es]), **Rethinking the Aims of Education: Some Trends on Higher Education and Global Reforms,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ Some important thinkers of the past century (such as Alfred North Whitehead, or John Dewey) left seminal writings where they conveyed their thoughts on the aims of education. The time has come to rethink, within a new context that poses unprecedented challenges, what kind of education we deem relevant for today's citizenship. The trends of Higher Education & Global Reforms need to be assessed from a broad social perspective, & in depth. Thus, both the European Qualifications Framework & the Higher Education Space offer us a chance to review the set of indicators used as well as the perceived import of these indicators while we simultaneously question some basic assumptions behind the so called knowledge society. An accurate knowledge of the methods of analysis and a thorough understanding of the social change in the educational arena are needed if we want to avoid the potential ill effects of determinism that characterize the international agenda. It is, therefore, once more, required to honestly make Lenin's question–what can we do?–our main concern

2010S00235

Beltran Llavador, José & Hernàndez i Dobon, Francesc Jesus (Department of Sociology and Social Anthropology, University of Valencia, Valencia, Spain, 46022 [tel: +34 963828454; fax: +34 963828450; e-mail: jose.beltran@uv.es]), **Recent Trends on Educational Policies: Problems, Perceptions and Perplexities,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ The recent studies with the greatest impact on educational policies in the space of the European Union use performance indicators that hinder the perception of educational processes. Amendments to the European training systems, which are organized around skills, are holistically oriented, which is inconsistent with the analytical dynamics of the usual indicators. The European Qualifications Framework & Higher Education Space offers a chance to review the set of indicators, introducing studies of process, horizontal and self-assessment & allowing inventory of valuable learning experiences beyond the trends of the international agenda.

2010S00236

Ben-David, Mina (Tel-Aviv University, Tel-Aviv, Israel 69978 [tel: 972 9 7495004; e-mail: minab@post.tau.ac.il]), **Estimating the Joint Labor Supply of Couples: A Comparative Analysis,** *International Sociological Association, Gothenburg, Sweden,*

¶ This research provides a comparative examination of labor supply decision-making by couples using a panel data set in several European Union countries for 2000-2001. The focus is on estimating the impact of wages & work hours on the labor supply of spouses within different institutional contexts in order to examine the effect of policies targeted at increasing employment. This study's findings suggest that men tend to make their labor supply decisions without taking into account their spouse' labor behavior, nor do they consider a division of labor between the spouses that might contribute to the family's welfare–as in the case when the earning ability of the female is higher than that of the male. Women's labor supply decisions are affected by their spouse's earnings, but have no reciprocal impact on their spouse's decisions. The evidence from this research suggests that governmental family policies do not have much of an influence on couples' labor supply decisions. The fact that women have a greater tendency to adapt their labor supply to their spouses' behavior suggests that women bear most of the burden for household responsibilities, supporting the notion that gender division of household tasks has remained essentially unchanged over the years.

2010S00237

Ben-Rafael, Eliezer & Ben-Rafael, Miriam (Dept of Sociology, Tel-Aviv University, Tel-Aviv, Israel 69978 [tel: +972-3-5402697; fax: +972-3-5402291; e-mail: saba@post.tau.ac.il]), **Multiculturalism, Nationalisms and Globalization Confronted: Belgium's Linguistic Landscape and the Paradoxes of Linguistic Policies,** *International Sociological Association, Gothenburg, Sweden,*

¶ Flemish, French & German, are Belgium's official languages of which the first two only are viewed as of primary importance. Institutionally, the country has adopted a system of territorial monolingualism. Flemish is the only official language of the Flemish region, French of the Walloon region, & German of the German-speaking region. The region of Brussels is the only area where French-Flemish bilingualism is officially implemented. These definitions, however, ignore the influence of globalization & the importance of English that have implanted the presence of this language on the public scene–like elsewhere. This presence confuses the clarity of the linguistic practices sustained by institutions. Moreover, in the context of Belgian plurilingualism–when viewed as a whole–many other languages spoken in diverse communities of immigrants tend to express themselves in the open and to assert themselves in their neighborhoods' LL. This contributes more than any other factor to the trans-global character of a metropolitan city like Brussels. Hence, the plurality of official languages, the presence of English & the multiple community languages bring about a most extreme chaotic LL. Starting from a sociological approach & by analyzing a set of data collected in Belgium's four regions (Leuven /Fl; Waterloo/Fr; Bruxelles/Fr et Fl; Eupen, St Vith et Malmedy/Al), we aspire to reveal, behind the chaos illustrated by Belgian LL, lines de convergence that are not less real & endow it some degree of coherence.

Benedita Melo, Maria (Lisbon University - Institute of Education, Lisbon - Portugal [tel: 00351 21 7500049; fax: 00351 217 500 346;

e-mail: bpm@fc.ul.pt]), **The Influence of The Media on the Schooling Choices of the Students,** *International Sociological Association, Gothenburg, Sweden,*

¶ The acknowledgement of the preponderance of the internet as an information resource & of the television as an important socialization agency with effects on the behaviors & social representations of individuals in their schooling years (Cf Vala et al, 2000) allows us to admit that the interaction developed by students since their early years of life with these media will have impacts on the way they will configure & envisage their educational & professional future. Based on data from 1080 questionnaires & twenty interviews next to secondary school students we will analyze, in this presentation, to what extent beliefs conveyed by the media –incorporated by social actors as norms, values, models, & ideals a (Lahire, 2005)–limit the schooling choices & professional aspirations of the students. We will show that the influence of the media on the schooling choices of the students is frankly less significant than that of family, peer groups, teachers, & school psychologists/ vocational supervisors. Unlike these socialization agencies, which play a part of actual persuasion sources, traditional mass media & the internet appear to hold mainly an information function complementary to the range of previously held knowledge regarding degrees, professional classifications and/ or job opportunities. Nevertheless, in some cases, they may also contribute to the identification of some schooling choices that had not been previously considered when they convey new information that coincides with the interests previously held by students regarding certain job opportunities. The role of media in the schooling choices of the students only appears to be actually relevant a working as "surrogate" information sources a when the latter do not count on the support of their families, peer groups, and teachers, which is especially true for students coming from less privileged class fractions.

Bengtsson, Beatrice (Research Policy Institute, Lund university, Box 117, 221 00 LUND, Sweden [tel: +46(0) 739 - 58 96 68 ; fax: +46 46 146986; e-mail: Beatrice.Bengtsson@fpi.lu.se]), **Stakeholders' battle for Epistemic Authority and the Reform of GMO Governance in the EU,** *International Sociological Association, Gothenburg, Sweden,*

¶ The EU regulatory framework for GM food & feed has been fiercely debated & contested since it was implemented in 2004. The authorization procedure appears dysfunctional & some member states challenge openly the authority of both the European Food Safety Authority & the European Commission, which hampers the policy & compliance effectiveness of the regulatory system. The purpose of this paper is to analyze how stakeholders co-produce knowledge for reforming the governance of GMO in Europe. Co-production is here understood as participation & framing: Stakeholders' participation in advisory groups & their framing of reform proposals. Empirically, the paper focuses on two interrelated & highly timely GMO issues, namely asynchronous/asymmetric authorization & the EU zero tolerance policy. The analysis carried out will primarily rely on theoretical concepts such as boundary-framing & frame extension. The paper is based on extensive research of documentary sources (official EU documents, material from stakeholders & press stories) & a series of interviews with central stakeholders & policy-makers. The analysis provides an overview of the most prominent frames held by stakeholders, groups of similar frames, their main characteristics & dividing lines.

Benighaus, Christina (DIALOGIK, Lerchenstrasse 22, 70176 Stuttgart, Germany [tel: ; e-mail: benighaus@dialogik-expert.de]), **Public Participation and Stakeholder Involvement in Debate of Chemical Regulation,** *International Sociological Association, Gothenburg, Sweden,*

¶ Statement: Public participation & involvement of stakeholder should be an integrated part of any research process. Public participation gives feedback about methods, risks & benefits, & enhances the acceptance of foreseen results. Step-by-step outline: The comprehensive data requirements of European regulation REACH requires a "paradigm shift" of the current risk assessment regime for industrial chemicals from a extensive hazard testing to a risk-driven approach (van Leeuwen et al. 2007). Therefore the EU financed project OSIRIS aims at developing & applying ITSs for several human health & environmental endpoints. These enable to significantly increase the use of non-testing information for regulatory decision making, & thus to minimise the need for animal testing. To ensure optimal uptake of the results obtained in this project, end-users in industry & regulatory authorities (EU-stakeholders) have been invited to participate in the project. A central component of the stakeholder involvement strategy is the organisation of four workshops along the basic research steps (Benighaus 2009). The first workshop aimed at receiving feedback from the participants on the overall scientific approach & the main framing of the research. This consultation was organized in the form of a Group Delphi. The following workshops were designed to highlight the different approaches & collect feedback to the developed strategies from the key-stakeholders. Results: The three workshops gave a valuable input for the project & showed the useful & weak points. The results were continously disseminated to the stakeholders. This turned out to have positive effects on acceptance of the project & the testing strategies. The project is funded by the European Commission within in the 6th Framework Programme under the theme "Global Change & Eco-systems", coordinated by Prof. Dr. Gerrit Schüürmann at the Helmholtz Centre for Environmental Research (UFZ) in Leipzig. 2010S00241

Benighaus, Christina & Renn, Ortwin (DIALOGIK, Lerchenstrasse 22, 70176 Stuttgart, Germany [e-mail: benighaus@dialogik-expert.de]), **Communication Needs of Chemical Risks–A Consumer/Public Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ The public has different risk communication needs which depends on various factors as the type & source of information, and the trustworthiness of the sender. The consumers' perception of risks in everyday life differs from experts' views & their judgement. The views on risks also differ among the consumers. What drives the perceptions of chemical risks & how can communication be designed to address the heterogeneous concerns of different consumers? The crucial question of communication, concerning the what, how, through which channels & by whom still await systematic & scientifically valid answers (Benighaus/Renn 2008; OECD 2002). Description of the methods: In order to gain knowledge about the communication of chemical risks & combined risks, we organised & conducted three focus groups, two with engineering students & one with mothers with young children. As main objectives the focus groups demonstrates the variability of the consumers' behaviour & needs. We explored the mechanisms of coping with complexity, uncertainty & ambiguity. Results: The results confirmed the variability of answers & provided rich empirical data of which aspects should be taken into consideration when communicating chemical risks. All participants expressed awareness that they are exposed to chemicals every day, but they are not overly concerned about these risks. Risk is a part of life seemed to be the predominant attitude. All agreed that the communication should be focused on relevant information & limited to the amount that is necessary for consumers to make prudent choices. Trust is a critical issue. Although the governmental agencies & research institutes received a high degree of trustworthiness most students & several participants from the mothers group expressed a clear preference for information from both sides. They want to know the pros & cons from those who represent them in their views. Risk communication should therefore include information about benefits & risks of a product, preferably citing those actors who have taken stances in the debate. For risk communication to be effective one should place more emphasis on developing informal networks that can act as catalysts for adequate information transfer. It would be important to educate opinion leaders in different communities such as in kindergarten, the community centre & others. The support for this work from EU Integrated Project Novel Methods for Integrated Risk Assessment of Cumulative Stressors in Europe (NoMiracle, contract No 003956). Benítez Ramos, Javier (Universidad de La Laguna, La Laguna,

Tenerife, España. [tel: 34 922317094; fax: 34 922317204; e-mail: jrramos@ull.es]), **The Construction Social of Political Discourse through the Political Message in the Street,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper that we present is interested in the study of the identity political expression of some groups produced by political graffiti. These written expressions are made on walls or any another available space in the street. The message produced by street political graffiti take us face to face with groups which decide to choose an identity process of construction thus amplifying their voice by a communication channel that we could designate as unconventional. We have considered those political messages as vehicles of identity. The political expression graffiti are vehicles & embodiments of political meaning. The empirical work that we have done is focused in a peripheral region in the European Union area. We have focused in the case of Canary Islands. And, we have gone into the issue of its collective local identity & of an expression of strong nationalist tendencies as well.

2010S00243

Benkő, Zsuzsanna, Tarkó, Klára, Lippai, László & Erdei, Katalin (University of Szeged, Juhász Gyula Faculty of Education, Institute of Applied Health Sciences and Health Promotion, Szeged, Hungary, 6720 [tel: 00 36 62 544 737; fax: 00 36 62 544 737; e-mail: benko@jgypk.u-szeged.hu]), **Tradition and Modernity in the Gender-Based Distribution of Household Work in Hungary,** *International Sociological Association, Gothenburg, Sweden,*

¶ The present research wished to reveal if tradition or modernity exercises more influence when the gender-based distribution of work within a family is in question. To study the above issue the Institute of Applied Health Sciences and Health Promotion at the University of Szeged has performed a structured assisted questionnaire interview among 458 families/ households. Our analysis has underlined that along traditional values the role of women is stronger in case of doing the washing up (w: 85,31%), ironing (w: 89,27%), washing the clothes (w: 93,03%), cooking (w: 91,93%) and cleaning (w: 90,33%); while men participate more in activities like taking out the garbage (m: 44,10%), dealing with official matters (m: 37,67%), paying the bills (m: 41,28%) or doing the shopping (m: 21,57%). The distribution of tasks is more even in case of "specific" activities, like gardening (w: 56,9%), taking care of pets/domestic animals (w: 68,3%), but women's responsibility is still overwhelming in case of childcare, while there are again traditionally male tasks like mowing the lawn (m: 78,4%) and doing smaller household mending (m: 83,4%). We can conclude that modernity has not made considerable changes into the household obligations of women, which should be considered when women are targeted by leisure-related programmes.

Benski, Tova (College of Management, Rishon Lezion Israel [tel: 97235442471; fax: 97239634173; e-mail: tovabenski@gmail.com]), **Breaching Events as Embodied Breaching Spaces: The Case of WIB in Israel,** *International Sociological Association, Gothenburg, Sweden,*

¶ Protest acts are embodied acts in both the sense of the individual acting body & in the sense of collective acting bodies forming embodied spaces. Yet, these practices rarely received attention from social movements' scholars. The present paper attempts to address this bias & confront the theoretical questions of the bodily practices of social protest. It is focused on a longitudinal case study of "Women In Black" in Israel (a network of women's peace vigils). Combining insights from feminist, social movements & political philosophy scholarship, I suggest that analysis of the protesting body, its symbolic materialization in the public space & the public's reactions can be located at the intersection of three socially constructed practices: the appropriate practices assigned to the "normalized" female body in patriarchal society, the time-space dimension along which this body is constructed to move and function, & the meaning of the "body politic" & public spaces. I suggest that the vigil breaches all these accepted practices, forming a "breaching event" (Benski 2005), and 'Embodied Breaching Space'. All these defy Western binary modes of thinking, challenge & extend the boundaries assigned to the female body & the female voice in Western society.

Berdet, Marc (CETCOPRA, University of Paris 1, 17, rue de la Sorbonne, 75005 Paris [tel: 00 33 1 40 46 28 37; e-mail: marcberdet@free.fr]), **The Sociologist as a Ragpicker. Walter Benjamin between Phantasmagoria, Social Movement and Anthropological Materialism,** *International Sociological Association, Gothenburg, Sweden,*

¶ Walter Benjamin's historical-sociological reasoning in The Arcades Project–this "book which is not a book"–is not that of the flâneur, but of the ragpicker. The ragpicker incorporates the heretic model of the scholar, he collects the junk of the dream life of the community from the first socialist utopias to the last bourgeois phantasmagorias, from the beginning to the end of the 19th century relating them by means of assembling without interpretation to the economic structure of capitalism & to the burgeoning social movement. He assembles the disjoint elements of a real historical experience, expressed through worker's speech rather than in bourgeois imagery. Still both (the workers speech and the bourgeois imagery) encompass something that Benjamin calls "anthropological materialism". This "anthropological materialism" was brought back to life by the mechanization of modern times, circulated in all different kinds of discourses in the 19th century, supported the social movement (1830, 1848, …) and then was enclosed into phantasmagorias of the interior (1830-1848), phantasmagorias of the market (World exhibitions from 1851 to 1867) or phantasmagorias of the civilisation (Haussmann's Paris). Fascinated by theses phantasmagorical elements, the ragpicker could be mystified by them, caught in the trap of magic; or he could simply translate them into theory & get caught in the trap of positivism. In the two cases, he would be surrounded by magical facts instead of interpreting them. He instead sees elected affinities between them & connects them directly, & precisely where he could succumb to either magic or positivism, this helps him to reveal a real historical experience & detect the false continuity of an enchanted world as well as a narcotic positivism.

2010S00246

Berdychevsky, Liza, Poria, Yaniv & Uriely, Natan (Tourism, Recreation and Sport Management, University of Florida, 300 Florida Gym, PO Box 118208, Gainesville, FL, USA, 32611-8208 [tel: +1-352-392-4042, Ext. 1311; fax: +1-352-392-7588; e-mail: liza@hhp.ufl.edu]), **A Taxonomy of Sexual Experiences in Tourism: The Case of Israeli Travelling Women,** *International Sociological Association, Gothenburg, Sweden,*

¶ In line with the contemporary tendency in the sociology of tourism to focus on the senses & practices that construct the tourist experience, the current paper addresses the phenomenon of "sex in tourism". Note that unlike the extensively researched issue of commercial "sex tourism", the non-commercial sexual experiences of tourists receive little attention in the literature. To fill this gap, the study explores the sexual experiences of Israeli women who engage in various sorts of travel. Based on 21 in-depth interviews with these women, the study sheds light on four types of sexual experiences: sex as pleasure, sex as an adventure, sex as an obligation & sex as a controlled desire. These experiences appear to be respectively associated with the following types of tourism: recreational rest & relaxation vacation, backpacking, city sightseeing & business trip. The study findings are interpreted in light of various conceptual approaches, including social control theory, the concept of liminoid, existential authenticity and performativity.

Bergamasco, Sonia, Maria Pessoa Pereira, Almeida, Luiz Manoel, Brosler, Taísa Marotta & Fidelis, Lourival Moraes (School of Agricultural Engineering–UNICAMP, Campinas, São Paulo, Brazil, 13083-875 [tel: +55 19 35211066; fax: +55 19 35211066; e-mail: sonia@feagri.unicamp.br]), **Food Security Policies in Brazil: An Analysis from the Rural Settlements,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper analyzes the new policies of Brazilian government Food Security such as the Food Acquisition Program (PAA) & the School Feeding Program, which are based on the one hand in the overcoming the lack of food and, secondly, the strengthening of family farming. The process of analysis occurred to based on observations about the family farmers' network in the local context, using for this, a case of a township of São Paulo, Araraquara. The subject of reflection is presented through the action capacity of local actors, in the public policies for food security & the processes of generating new alternatives of regional development. The research was carried out by participatory activities, a set of techniques that allowed comprehensive interaction among researchers and actors involved. The results show that in this township, 80 small family farmers make up an organizational arrangement that has as a means of the promotion the PAA & an effective liaison with the Food Bank & the Popular Restaurant, involving a wide range of individual & collective actors of the locality. Moreover, this research shows the importance of family farming in the generation of food to overcome the food insecurity in the township.

Berger, Roger (Sociology, University of Leipzig, Leipzig, Germany, 04107 [e-mail: berger@sozio.uni-leipzig.de]), **Wherein Lies the Power of Reciprocity? Experimental Evidence from Experiments with Physically Induced Losses,** *International Sociological Association, Gothenburg, Sweden,*

¶ Empirical testing of the non-iterated dictator & ultimatum game in the laboratory with anonymous play frequently leads to fair shares instead of subgame-perfect strategic Nash equilibria. In return, it is often observed that human beings show a propensity towards reciprocal behaviour. This "power of reciprocity" (Diekmann 2004) is assumed to promote cooperative behaviour in many situations in experiments, as in the real world. Thereby the exact mechanism of reciprocity remains undetermined. With Gintis' the mechanism could assumed as "strong reciprocity" (2000) a completely internalised or even genetically hardwired behaviour, & therefore unconditionally effective. Viz. any action of ego towards alter, will trigger similar action of alter towards ego even at some costs for alter. From a more sociological point of view, reciprocity is a (widely known) norm that is activated by social control. Only when the target actor of the norm of reciprocity expects positive or negative sanctions he will comply with it. Whereas the first explanation allows for rather optimistic predictions about human cooperation, this not the case for the second explanation.

2010S00249

Berggren Torell, Viveka (School of Sport Science at the faculty of Education, University of Gothenburg, Box 300 S-405 30 Göteborg Sweden [tel: +46(0)317862467; e-mail: viveka.berggrentorell@ped.gu.se]), **"It Must Be a Little More Close-Fitting…" On Clothes' Contributions to Constructions of Femininity within Football,** *International Sociological Association, Gothenburg, Sweden,*

¶ Footballers often live up to ideals coded as masculine, like muscular strength & good staying power. But research on clothes in connection with football has shown that male players also can be "new men", interested in fashion-consumption, some willing to show off their well-trained bodies in rather sexualizing advertising photos. No similar studies on how football clothes and everyday clothes contribute to female footballers constructions of femininity have been made though. But the aim of this paper is to discuss that theme. In the project "Football & clothing–Connections in consumer culture" Swedish players at elite level have been interviewed about experiences of football clothes and about their opinions on connections between football & the fashion-industry today. The paper will bring up how constructions of femininity have been touched upon in the interviews. Both what is thought of as feminine design & female players' experiences of their bodies, trained for football just like male players' bodies, in relation to the fashion of today will be discussed. Also constructions of femininity in pictures & texts on a few clubs' home-pages, in news paper articles regarding female players & in ads for football clothing & shoes will be discussed.

2010S00250

Berggren, Caroline & Lauster, Nathanael, T. (University of Gothenburg, PO Box 300, 405 30 Göteborg, Sweden [tel: 46 (0)31 786 20 61; e-mail: caroline.berggren@ped.gu.se]), **School to Work Transitions as Status Processes,** *International Sociological Association, Gothenburg, Sweden,*

¶ School-to-work transitions constitute a distinct set of situations where inequality becomes manifest due to different status characteristics. This paper reports on the transitions to the labour market of Swedish university graduates. It analyzes whether or not graduates with child care responsibilities are more likely to be employed in the public sector, which is known to apply a more transparent form of employment compared to the private sector. According to Status Construction Theory (Ridgeway, 2006) we expect that diffuse status characteristics (such as gender, graduates family background & current family situation) will be less operative in the public sector & more operative in the private sector. The salience of more specific status characteristics, like credentials, will reduce the influence of more diffuse status characteristics within the public sector. The study population consists of university graduates born between 1974 & 1976. Data are derived from national registers. Implications of results will be discussed. In particular, we argue that the bureaucratization and resulting credentialization of the public sector has potential benefits for the cause of equality.

2010S00251

Bergmann, Michael ([e-mail: michael.bergmann@uni-mannheim.de]), **Conditioning Effects in a Short-Term Campaign Panel,** *International Sociological Association, Gothenburg, Sweden,*

¶ While longitudinal surveys provide substantial information about intra-individual change, they also present several methodological difficulties. Among these, the question […] whether repeated interviews are likely, in themselves, to influence a respondent's opinions' (Lazarsfeld 1940: 128) still lacks a thorough understanding. To analyse the phenomenon of panel conditioning, survey data of the German Longitudinal Election Study is used, which contains a seven-wave campaign panel & parallel cross-sectional samples. By implementing a propensity score weighting scheme, it is ensured that treatment (panel respondents) and control group (cross-section respondents) have a similar distribution of relevant characteristics. Under this directive the cross-section samples serve as a baseline to explore whether the responses given by a person who has already taken part in the panel study, differ from the responses that the person would have given without previous participation. Thereby particular attention is directed to the psychological mechanisms of attitude formation and change underlying conditioning effects. It is assumed that the respondents' cognitive structure as well as the frequency of being interviewed has a significant impact. References: Lazarsfeld, Paul F. (1940). "Panel" Studies. Public Opinion Quarterly 4, 122-128.

2010S00252

Berheide, Catherine White (Skidmore College, Saratoga Springs, NY 12866 USA [tel: 518-580-5411; fax: 518-580-5429; e-mail: cberheid@skidmore.edu]), **Warming the Chilly Climate for Women Faculty at Small Private Liberal Arts Colleges in the United States,** *International Sociological Association, Gothenburg, Sweden,*

¶ College & university faculty engage in both the production and dissemination of knowledge as well as in training new generations of knowledge workers. An equal distribution of women across disciplines should contribute to more inclusive forms of knowledge creation. Unfortunately, the academic labor market in the United States remains segregated with women underrepresented in some fields, such as engineering, & overrepresented in others, such as sociology. Women faculty experience a different workplace climate than men do, one which reduces their chances of success & affects seemingly objective measures of performance, such as hiring, retention, promotion, & pay. This paper analyzes survey data from 237 tenured & tenure-track faculty at two liberal arts colleges in the United States on three different dimensions of organizational Climate–affective, cognitive, and instrumental–to ascertain how department climate affects the work experience of women faculty, particularly in the sciences. Women faculty feel more isolated, report lower levels of confidence, and experience more of a time bind. Promoting the careers of women faculty may require warming the chilly climate by reducing their feelings of isolation, increasing their sense of competence, and making it easier to manage their work & family lives.

Bernardino-Costa, Joaze (Department of Sociology–University of Brasília, Campus Universitário–ICC Centro–Asa Norte–CEP. 70910-900–Brasília - DF–Brazil [tel: +55 61 33072738; fax: +55 61 33473663; e-mail: joazebernardino@uol.com.br]), **Intersec-**

tionality between Race, Class and Gender and the Formation of Female Domestic Workers Union in Brazil, *International Sociological Association, Gothenburg, Sweden,*

¶ The paper utilizes the concept of intersectionality to think the centrality of some categories such as race, class & gender to understand & to explain the biographies of female domestic workers in Brazil. On the one hand the paper shows how these categories are important to explain inequalities and subalternization experiences of these actors. On the other hand, the paper shows how these categories have been appropriated by female domestic workers in order to articulate the political movement of this professional class. In this second part, from a historical point of view, we will show the formation of a public agenda of female domestic workers' union & its negotiation with Labour, Feminist & Black movements in Brazil. It is important to say that the paper will bring some important facts about the historical formation of female domestic workers union in Brazil since its first political organization founded in 1936.

Bernstein, Julia (Institute for Cultural Anthropology and European Ethnology J.W. Goethe University of Frankfurt, Grüneburgplatz 1 60323 Frankfurt am Main Germany [tel: 0049-1744124309; e-mail: juliaber@soz.uni-frankfurt.de]), **Contested Affiliations of Russian-Speaking Jewish Migrants,** *International Sociological Association, Gothenburg, Sweden,*

¶ How do people interact in a situation in which different bodies of knowledge, different political narratives, & different constructions of social worlds, usually taken-for-granted, meet and clash in the inner phenomenological domain as well as in the transnational biographic experiences of migrants? What happens, when through migration & intercultural interactions, the same events are remembered, understood, & interpreted in a completely different manner not only by different groups in CIS, Israel, and Germany, but also by different Jewish groups in these countries? What individual strategies do migrants in Israel & Germany develop in order to cope with different contested affiliations? Viewed through the transnational perspectives of migrants as active, creative social agents, this paper investigates contested concepts & everyday conflicts connected with settling process, lives, & affiliations of Russian-speaking Jewish immigrants in Israel & Germany, as reflected in different areas of everyday migrants' life. Conducted by means of extensive periods of participant-observation & open interviews, this cultural anthropological, ethnographic work sought to reveal key issues, concepts, & multiple affiliations as perceived, interpreted, performed by participants as central research actors in their everyday practice, verbal expressions, & food consumption in Russian food stores. The conjunctions of different affiliations, narratives, ideas, & imagined referential groups were the particular foci of the study. This enabled us to scrutinize different aspects of migrants' self-definitions & identities in both contexts. Collectively, the study investigated the rich, complex, contested, & contradictory world that lies behind the excessively used, one-dimensional, stereotypic Outsider view of migrants as "Russians."

2010S00256

Berrebi-Hoffmann, Isabelle & Lallement, Michel (Lise-CNRS-Cnam, 2, rue Conté 75003 Paris, France [tel: 00 33 1 58 80 88 24 ; e-mail: isabelle.berrebi-hoffmann@lise.cnrs.fr]), **Durkheim, the Durkheimien School and the Woman Question,** *International Sociological Association, Gothenburg, Sweden,*

¶ Contrary to the social question, relations between sociology & the woman question were not extensively debated in the Durkheimian studies. However, the woman question was central in the third Republic political & academic debates. In a 1973 seminal article in the Revue Française de Sociologie, P. Besnard was instrumental in introducing the debate. This contribution wishes to offer a similar lecture of a selection of Durkheim's works & of the less known Durkheimien works. One result we would like to defend is that the generally assumed conservative position of Durkheim on women has to be partly revised. The Durkheim's publications on divorce & sexual education will be used to provide evidence for this argument. Building on the ambiguities of Durkheim positions, the Durkheimien school's works show two different positions toward the woman question. One group of scholars (including M. Mauss) analyses the women/men relations in a fundamental anthropological approach. Others (D. Parodi, C. Bouglé, G. Richard) show an interest in the question itself, addressing the "culture/nature debate" for instance in books and conferences.

Berti, Natalia T. (FSU-Jena, Carl-Zeiss-Strasse 2 [tel: +49 (0)3641 9-45520; fax: +49 (0)3641 9-45522; e-mail: natalia.berti@uni-jena.de]), **Limits to Unionizing. The Case of the Software and Informatics Services in Argentina,** *International Sociological Association, Gothenburg, Sweden,*

¶ Transformations of production models (Piore & Sabel 1990; Castells, 1995; Sassen et al., 2002) and in the world of labour (Castel, 1997; Friedmann & Naville, 1997; De la Garza Toledo, 2000) have brought particular attention to the responses not only of typical workers & their traditional unions, but also to the reactions of a growing number of atypical and precarious workers -such as the unregistered & subcontracted workers- & unemployed workers movements (Auyero, 2002). In this context, software & informatics services (SIS) gain importance not only because they affect traditional industrial sectors by the introduction of technological changes that permit a flexible production system, but because they constitute a novel production field to rehearse labour power. Thus, a particular case study arises with the development of SIS in peripheral economies, where as in the case of Argentina governmental support for the IT sector is combined with the localization of transnational companies & a growing number of local SMEs. The IT sector in Argentina presents a heterogeneous field that, in consonance with the national labour market, shows a large diversity of registered & unregistered labour relations. There are 56.700 software employees (Calello, 2009) & 18 attempts to create unions that compete for their representation, but only 5300 have unionized. This lack of associational power is manifested in the absence of shared criteria to define occupational status & salary scales. It also visible in the fact that working conditions are not among the main subjects in IT promotion programmes, where a clear domination of transnational firms' demands can be observed (Berti, 2007). In this sense, the concepts of structural & associational power (Wright, 1997; Wright, 2000 & Silver, 2003) are very useful to understand limits to unionizing. Thus, this article explores a possible application of these concepts in the study of SIS in Cordoba, Argentina. In order to do this the following elements must be considered: Argentina's position in the international division of labour in the IT field & SIS structure in terms of firms' size & origin of investments; the Argentinean system of labour relations & the concrete forms in which they take place; & the constellation of local & transnational actors involved in resent developments of the SIS in the context of a post-convertibility model & present international crisis. Key words: Structural power, Associational power, Software, Postconvertibility, Competitiveness.

Bertone, Giulia & Giachello, Silvia (Politecnico di Torino–DICAS, Department of Housing and City, Corso Duca degli Abruzzi, 24–10129 Torino, ITALY [tel: +39 328 9666935; e-mail: giulia.bertone@polito.it]), **Practiced Spaces: Locative Approach to Cultural Heritage,** *International Sociological Association, Gothenburg, Sweden,*

¶ Our paper aims at outlining a theoretical framework for the interpretation of some recent ICT projects in the field of cultural heritage. The role of computing & digital technologies in order to enhance cultural heritage may be very diversified: on one side, new media allow traditional ways of heritage representation, management & communication to be supported & enriched with sophisticated technologic virtuosities; but, on the other, they can also be used in cultural projects which aim at profoundly reconfiguring the way we think to & we experience the heritage itself. Our reflection moves from the belief that cultural heritage is formed by the encounter of tangible & intangible aspects, whose strict connection can be observed in the dialectic between architecture of space (as social organization project) & place (as site of identity construction & development); &

that its value must be constructed through an active social involvement of, and a continuative confrontation between, all the actors who interpret it, contributing meanings in a daily sense-making process: local communities, tourists, experts & researchers, scholars, common people… Our attention is therefore focused on those proposals which re-mediate the relationship between heritage (as cultural space), contexts & people in embodied & located ways. In this paper we set out these proposals in a theoretical framework that we consider opaque, which exploits features that most common logic of transparency in media representation undervalue & overshadow. In particular, this opaque technological and cultural paradigm recovers & underlines the notion of embodiment, as a reference to a central position of the body and therefore to located & situated knowledges, which take people's everyday experiences into account & give value to their different tactics of appropriation of space & places.

Besio, Cristina & Pronzini, Andrea ([e-mail: cristina.besio@tu-berlin.de]), **Innovation as a Modern Panacea in the Political Discourse on Climate Change,** *International Sociological Association, Gothenburg, Sweden,*

¶ When looking at the core concepts of society's semantics, sooner or later sociologists encounter "innovation". While the positive connotation of the "new" has been a steady feature of the development of the functional differentiated society, the trend of insisting on innovation is quite recent. Society has found its modern panacea: striving for innovation is a must for researchers, for the strategic plans of enterprises & for the daily business of R&D departments. Interesting enough, innovation is now a growing concern for politics to an extent that it allows us to assert that it has become a political value on its own in addition to older values such as equality, justice, peace & so on. This holds true in particular when the political system is asked to solve problems which threaten society as a whole such as global warming. Starting from these considerations we ask: 1. Which implications does innovation have in political discourses? 2. Why is "innovation" so appealing for politics? 3. What risks does the discourse on innovation entail? In order to answer these questions, we refer to the case study of political reactions to climate change in Switzerland. We rely on a content analysis of parliamentary debates and other political documents related to climate change. 1. When looking at the political elaboration of the risk of climate change in Switzerland, after more than a decade of hopes and disappointments, one observes that innovation has been a key element in the effort of reducing emissions. Now, while interest is turning more to adaptive strategies, which are often technically based, the discourse on innovation is intensified. Innovation is considered a way to solve the problem of climate change without losses for the economy & for people: on the contrary it opens the gates to more economic revenue. Innovation is semantically charged with positive expectations. The political discourse on innovation seldom reflects on the fact that innovation can be for some industries dangerous (e.g. menace existing competencies) and encompass unforeseeable risks. It also does not consider that innovation can not guarantee the solution of the problem. As a matter of fact, when a new technology is available the behavior of people can change in a way which make advances futile. 2. Innovation is appealing for politics because innovation strategies are more likely to be approved than CO2 taxes or regulations of emission limits. That is because innovation seems to conciliate different interests in a win-win solution. Moreover, politics can show action by asking others (science & economy) to solve problems through innovation. 3. On the one hand, combining the problem of climate change with innovation can be fruitful. It can sustain risky projects & create niches for technologies not yet ready for the market. On the other hand, planning innovation is not an easy task. E.g., innovation is often related to renewable technologies, however it is questionable if this is the right strategy. Moreover, innovation unleashes a hypertrophy of the new: as soon as it actualized, innovation loses its innovativeness and additional innovation is requested. As a consequence, the imperative of being innovative may reduce the chance to improve older technologies & to imitate or adopt standards by reforming themselves.

Besser, Terry L. (Sociology, Iowa State University, Ames, IA, USA, 50011 [tel: 515-294-6508; e-mail: tbesser@iastate.edu]), **Small Business Owners and Civic Participation in Small U.S. Towns,** *International Sociological Association, Gothenburg, Sweden,*

¶ Research on civil society & business has paid scant attention to small towns & small business owners. This is unfortunate since the vast majority of businesses are small (fewer than 500 employees) & a significant portion of the world's population live in small towns & rural areas. This paper focuses on this under researched subject. I present the position that small town civil society is largely composed of volunteers, a significant portion of whom are small business owners & managers. Involvement in public leadership & civic society provides both great benefits and serious costs for the businesses of engaged owners, & for themselves personally. In depth interviews with 60 civic leaders and small business owners in 4 small U.S. towns in 2000 & with 20 small business owners in 2010 provide the empirical basis for this analysis.

Bessudnov, Alexey (Department of Sociology, Oxford University, Manor Road Building, Manor Road, Oxford OX1 3UQ UK [e-mail: bessudnov@gmail.com]), **'No Country for Old Men': Age and Earnings in Post-Soviet Russia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Objective: The association between age & earnings in Russia differs dramatically from Western countries. In Russia men's earnings do not increase steeply with age & peak earlier. This paper describes the association between age & earnings in the course of market transition in Russia & explains the unusual shape of age-earnings profiles. Data & methods: I used the data from the nationally representative panel Russian Longitudinal Monitoring Survey for 1994-2006 (n=28650). Age-earnings profiles were modelled and analyzed with nonparametric & semiparametric regression. Main results: The association between age & earnings for Russian men was affected by age segregation in the labour market that emerged as a consequence of the structural economic change. Younger men tended to be employed in new sectors of economy with higher pay. For women the effect was weaker. Preliminary findings suggest that the same mechanism was at work in other post-socialist countries. Conclusion: Age is often used as a control variable in social stratification models, but researchers rarely focus on the effects of age by itself. Age & cohort inequalities were important in the course of market transition & should be given more attention in the literature.

Best, Henning, Bauer, Gerrit & Steinkopf, Leander (University of Mannheim, School of Social Sciences, 68131 Mannheim, Germany [e-mail: best@uni-mannheim.de]), **Nonresponse in Telefon Surveys: Empirical Analyses on the Impact of Interviewers' Voices,** *International Sociological Association, Gothenburg, Sweden,*

¶ Telephone interviewing has gained great importance in empirical social research, as it enables fast & cost effective data-gathering as well as the use of random samples (in contrast to online surveys). Compared to face-to-face interviews, however, the response rates are relatively low. To gain extended understanding of the mechanisms behind unit nonresponse, this study relates response rates to interviewers' voice characteristics. We use contact data generated in a survey with 78 interviewers & 606 respondents (gross sample N=2227) & supplement these data with information interviewers' voices. The survey was conducted during 2007 & 2008 at the University of Mannheim, Germany. To obtain metadata, we recorded the interviewers' voices & analyzed the recordings using praat, a software for acoustic analysis. In a second step, each voice was evaluated on a number of subjective dimensions by 20 raters each (n=156). Using this combined dataset, we study the determinants of interviewer effectiveness with a special focus on objective voice characteristics (e.g. pitch, loudness etc). Additionally, we account for gender, local & foreign accent as well as a variety of subjective voice attributes (friendliness, trustworthiness etc). First results show that (a) objective voice characteristics have greater explanatory power than subjective indicators & (b) a differentiation by gender is indispensable to obtain valid results. (c) the relation between pitch & and interviewer effectiveness is non-linear (reversly U-shaped).

Besussi, Elena (The Bartlett School of Planning, UCL, London, UK, WC1H 0QB [e-mail: e.besussi@ucl.ac.uk]), **The Contribution of Urban Development to Local Public Finance: Risks and Opportunities under the Economic Crisis,** *International Sociological Association, Gothenburg, Sweden,*

¶ The fiscal policies through which local governments finance their expenditures are reported to be increasingly dependent on different practices of socio-spatial & economic manipulation of urban space which aim to alter the local tax-base in favour of an increase in local fiscal revenues. However these "manipulations" of urban space can leave a city & its public finances worse off in terms of actual revenues raised & the additional public expenditures associated with the provision of physical & social infrastructures required by (re)developments. The dependence of local

public finances on landed assets can also put local budget's sustainability & stability at risk in cases where the economic or urban cycle makes it more difficult to have sufficient development to raise revenues & cover for public spending. Moreover different fiscal arrangements can significantly alter the share of costs and benefits that are bore & acquired by local governments through urban developments & affect their overall capacity to spend for local welfare. This paper explores the relationship between fiscal policies & urban development with the intent to speculate on the impacts of the current economic crisis on the stability of local public budgets. The paper first builds qualitative accounts of the different taxation structures in four European countries (UK, Italy, Netherlands & Sweden) & of the role of urban development and property assets to budget formation & sustainability. It then analyses these findings in lights of concepts & lessons drawn from the assessments of the fiscal impacts of past economic recessions starting from the 1970's fiscal crisis in the US. It concludes with some critical thinking about current proposals for increased devolution of fiscal powers in the UK & the risks associated with increased property based local taxation.

Betz, Tanja (Goethe Universität, Fachbereich Erziehungswissenschaften, Fach 113, Frankfurt/Main, Germany, 60054 [tel: 0049-6979823754; fax:; e-mail: betz@em.uni-frankfurt.de]), **A Good Childhood? Challenges of Measuring Children's Well-Being and Living Conditions,** *International Sociological Association, Gothenburg, Sweden,*

¶ Social monitoring on children arouses increasing public interest; the results are of value for practitioners within the educational system, the priorities of children have come to the forefront of political agendas. Especially in children's surveys referring to the "perspective of children", children are at first sight conceptualized like in the valued paradigm of the new childhood studies: as "persons in their own right", "full members of society" & "competent actors in the here & now"–in separation from an old-fashioned view on children as "future adults", above all in focusing their "well-becoming". There is some evidence that the dominant approach to the data & indicators is still not concept-driven in a social scientific way. Rather, the approach is mostly data- & policy-driven. The data & surveys primarily generate well-known forms of knowledge: Caring knowledge–which practitioners & policy makers need for an optimum support of children's development & the protection of children at risk. The interest is an early & continuous identification of opportunities for "growing up successfully" as well as identifying the risk factors & threats for a "good childhood" from the perspective of adults. To become a promising tool for childhood research & to generate knowledge of children from a generational perspective, social monitoring on children, especially children's surveys, have to strengthen their concept-driven approach as a social scientific one.

2010S00266

Bhadra, Bula (Dept. of Sociology, university of Calcutta, Kolkata, w. Bengal, India, 700027 [tel: 919433253561; e-mail: bulabhadra@gmail.com]), **Fetal Containers and Fated to Be Mothers: Gendered Education and Reproductive Technology as Partners in Surveillant Assemblages in India,** *International Sociological Association, Gothenburg, Sweden,*

¶ Even now, marriage and motherhood are the two most significant markers of "Master Status" in India for the majority of Indian women. Education has often been justified traditionally, though not exclusively, by the notion of freeing people from the authority of others, i.e. to be in control of one's own self & destiny. But, unfortunately, formal education in India along with its gendered curricula & other entourage reinforced in a new-fangled way the importance of marriage & the ideology of motherhood as women's two best allies in their endeavors to do something worthwhile or to become somebody in life. With the education system as a faithful partner, the huge growth in the ART methods has acquired legitimacy for recognition of the fact that infertility is a huge impediment in the overall well-being of couples & cannot be overlooked especially in a patriarchal society like India. India, furtively, during last two decades has become a booming centre of a fertility market with its "reproductive tourism" industry reportedly estimated currently at Rs. 25,000 crores along with an estimated 200,000 clinics across the country offering artificial insemination, IVF, surrogacy and other ART instrumentalities. India has become the world's top destination for commercial surrogacy & all set to be the only country in the world to legalize surrogacy commodity market. This paper demonstrates how the perpetuation of the gendered educational apparatus, along with new reproductive technologies in present-day India, structure a surveillant assemblage that disciplines, monitors, & distributes information about women, pregnant or otherwise. A focus on the body, the magnitude of information networks, the importance of complicated machinery, & the role of centers of calculation are all obvious in reproductive technologies. Furthermore, a surveillant assemblage of education system & reproductive technologies include not only technologies proper but also their supports, services, & networks, viz. electronic fetal monitoring, fetoscopy, amniocentesis, and ultrasound technology combined with information gleaned in clinical trips, welfare agency inquiries, & social workers' visits. The iniquitous "marriage of computers & optics", with the help of networks & other technologies, results in a state where even before birth, human life can be seen as a "flesh-technology-information amalgam". The women, here, are not agencies in any real sense of the term but primarily are fetal containers & fated to be mothers.

2010S00267

Bhadra, Bula (Dept. of Sociology, university of Calcutta, Kolkata, w. Bengal, India, 700027 [tel: 919433253561; e-mail: bulabhadra@gmail.com]), **Reproductive Rights or Gendered Reproductive Rights: The Indian Saga,** *International Sociological Association, Gothenburg, Sweden,*

¶ Control over reproduction is a basic need & a basic right for all women. Both United Nations Population Fund (UNFPA) & the World Health Organization (WHO) advocate for reproductive rights with a primary emphasis on women's rights. Unfortunately, in India, women's health & reproductive rights often are explained in gendered terms, i.e. in tuning with pro-natalist patriarchal conception of family. A 2007 Supreme Court judgment is unwelcome & regressive for the women's movement, especially for reproductive rights. When hearing an appeal in the Ghosh vs Ghosh divorce case, the court ruled on March 26, 2007: "If a husband submits himself for an operation of sterilization without medical reasons & without the consent or knowledge of his wife & similarly if the wife undergoes vasectomy (read tubectomy) or abortion without medical reason or without the consent or knowledge of her husband, such an act of the spouse may lead to mental cruelty." (http://judis.nic.in/supremecourt/chejudis.asp). The court also ruled that a refusal to have sex with one's spouse & a unilateral decision to not have a child would also amount to mental cruelty. The judgment has serious implications for reproductive health services in India, because it mandates spousal consent for induced abortion & sterilization. The other dimension of this state of affairs imply unmistakably that women's health per se or other concerns are not that vital but only her reproductive capacity needs to be taken care of. The primary objective of this paper is to demonstrate that most women's reproductive right is still a pipedream in terms of her autonomy & empowerment. They are generally still considered as "reproductive machines" couched in the novel vocabulary of new reproductive technologies' promise of choice & freedom, with almost least concern for their general health status. Women's health needs are still getting the least priority in the family & within the overall context of most patriarchal ensemble of relations & structures. In this context the paper also endeavors to focus the gap that still exists between women's formal & actual achievement as a full-fledged citizen of independent India & the complex reality that lies behind liberal patriarchal reform practices of Indian state.

Bhambra, Gurminder K. (Department of Sociology, University of Warwick, Coventry, CV4 7AL, United Kingdom [tel: +4407811335415; e-mail: g.k.bhambra@warwick.ac.uk]), **Contesting Canonical Knowledge Production: The Place of African American Sociology,** *International Sociological Association, Gothenburg, Sweden,*

¶ The silence of the Black experience within canonical sociological texts is amplified by the silence of Black authored texts within the canon. For intellectuals like James Baldwin, this insider/outsider perspective was one that had to be acknowledged and exploited in engaging with the prevailing manifestations of culture whereas for others, such as Richard Wright, cultural estrangement was more problematic. In their writings, both, however, addressed the "Western tradition" and, like Du Bois before them, were insistent that Blacks did not compromise the scholarly, humanist tradition through their inclusion but, rather, their engagement humanised America. Yet, it is unlikely that Baldwin & Wright, or the struggles for emancipation that they discuss, would make it into the canonical sociological curriculum. More worryingly still, it is rare to find WEB DuBois, E. Franklin Frazier, Oliver Cromwell Cox, or other "African American Pioneers of Sociology" represented as core sociological voices. This, I argue, is a consequence of resistance to the universalisation of the canon by those who otherwise argue for its universality. This paper addresses the relative

neglect of African American sociology and argues for it to be understood as core to the discipline, not peripheral to it.

Bhargava, Rajeev (Wissenschafts Kolleg, Berlin; CSDS, Delhi, Wallot strasse 19 Berlin 14193 [tel: 00493089001343; e-mail: rbhargav4@gmail.com]), **Forms of Secularity before Modern Indian Secularism,** *International Sociological Association, Gothenburg, Sweden,*

¶ In my presentation I explore the conceptual spaces opened up in the past that formed part of the background conditions that made possible the emergence of a distinctive normative conception of the relationship between 'religion' & political power in India. I illustrate this with two examples. One from Ashoka that illustrates the relationship of state power & faiths & the other from the Veer shaivite movement in 12th century Karnataka that potentially challenges both religious orthodoxy & its links with state power. To speak a little more on just one of these: The Ashokan edicts acknowledge the presence of different religions as natural. All religions are seen to be worthy recipients of respect & support. Non-Buddhist faiths are seen not as errors but as a "constructive part of reality in a morally productive society". The praja is advised to "avoid extolling one's own faith & disparaging the faith of others improperly or, when the occasion is appropriate, immoderately". It follows that a proper and, moderate critique of other faiths is justified & may find one's own faith at least marginally superior to others. Ashoka himself must have believed so about Buddha's teachings. So, according to Ashokan edicts all religions are expected to share a space within which they can respect & dialogue with one another. Yet acknowledging and respecting other religions is not the same thing as according them equal respect. Ashoka's edicts appear to articulate something more than toleration but somewhat less than equal respect for all religions. Clearly, we are here on to a concept that does not easily fit neat categories of western political theory. Articulating what this, the paper, contends, is a challenge to both political theory & social history of concepts.

Bhoi, Dhaneswar (Centre for Studies in Sociology of Education (School of Social Sciences)/ Tata Institute of Social Sciences, Deemed University, Mumbai, India, Tata Institute of Social Sciences, Deonar, P.O. Box 8313, Mumbai, Maharashtra, India-400088. [tel: +91-22-25525000 ; fax: +91-22-25525050; e-mail: dhaneswar.bhoi@gmail.com]), **Globalization and Socio-Educational Inequalities at Higher Education Level in India,** *International Sociological Association, Gothenburg, Sweden,*

¶ The preamble of the constitution enshrines the values of a socialist, secular & equality. The aim was to create a society, based on fair distribution & equitable distribution of resources and bringing the weaker sections to the main stream of the society. It has been a decade & half since the liberalisation, privatisation and globalisation phase was ushered in. Subsequently, privatisation of education is rampant in each part of education system of India. In this regard, I seek to explore how the privatisations of education affect the norms of democratisation of education in field of higher education of Orissa (INDIA)? The main objective of this paper is to find out educational inequality at higher education level & to explore the educational attainment & performance of scheduled castes in higher education level. Basically, this study is empirical & exploratory. Scheduled caste students are the primary source, while journal, books & government reports are the secondary sources for data collection. Data triangulation technique is the data analysis method for this research. In the finding of this study, democratisation of higher education is affected by the privatisation which influences the greater majority mercilessly. Key Word: Globalisation, Higher Educational Inequality, Scheduled Caste & Education.

2010S00271

Bhupal, Patil Rajendra (Dept. of Sociology,Shivaji University,, Kolhapur India 416004 [tel: +91 231 2609368; fax: + 91 231 2691533; e-mail: patilsuk@gmail.com]), **Female Feticide in Kolhapur District, India: An Overview,** *International Sociological Association, Gothenburg, Sweden,*

¶ Female feticides are rampant in many parts of India which is evident from India's sex ratio that shows declining trend which was 976 (1961), 964 (1971), 962 (1981), 945 (1991) & 927 (2001). Maharashtra is the first state to constitute a special committee to keep a check on the violation of pre-natal and Pre-conception Diagnostic Techniques (PCPNDT).The male female ratio in Kolhapur district in Maharashtra was 970 (1951), 967 (1961), 965 (1971), 967 (1981), 961 (1991) & 949 (2001). Sex- selection has become a rampant phenomenon & the technologies that are misused for this very purpose are becoming increasingly sophisticated. The selective elimination of women even before birth is a breach of their right to equality & existence. Aadhar Multipurpose Non-Government Organisation, Dalit Women Development Council & some other NGOs are trying to create awareness about female feticide. The attempt has been made to take an overview on the basis of secondary data of female feticide in Kolhapur district, the factors responsible, implementation of the Act and the role of GOs & NGOs to create awareness about female feticide.

Bialakowsky, Alejandro (Gino Germani Institute–University of Buenos Aires, Uriburu 950 6–Buenos Aires–Argentina [tel: 00541145083815; e-mail: alejbialakowsk@gmail.com]), **Meaning and Alienation in the Theoretical Perspectives of J. Habermas, A. Giddens and N. Luhmann,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since 1970, in the field of sociological theory, a decisive turn of perspectives has emerged. Within this multiple conceptual innovations & reformulations of "classical questions", the problem of meaning has become a key issue of discussion. In this theoretical context, deeply interrelated with the matters of ordinary social life, practical & active interactions, complexity & the social conditions of late modernity, the diagnosis of pathologies, tensions & disruptions of contemporary societies were a main topic of debate. For that reason, the concept of alienation can be regarded as a extremely useful tool for interrogating the central notions of these theories & the connections with their analysis of our times. In this direction, we will focus the present work on the postulations of three of the main important authors of this generation: J. Habermas, A. Giddens and N. Luhmann. Despite the classical term alienation was "underrated" & neglected for several reasons–essencialism, lack of rigurosity, & others–it can be consider vital when is linked to the concepts of lifeworld & its pathologies (Habermas); mutual knowledge & the radical questioning of ontological security (Giddens); & meaning, functional differentiation and exclusion (Luhmann). The diverse definitions of meaning as lifeworld–with an emphasis in linguistic communicative action–mutual knowledge–stressing the practical consciousness and skills of agency–& meaning–the formal medium of autopoietic operations in processed complexity, describe it as the substratum of social existence–at least in the modern life in the view of Habermas. This tacit & fragmentary background can be point out as the singular notion to comprehend the specificity of social actions & systems. Then, it is in the analysis of the pathologies and disruptions within this implicit social tie of meaning where the production & reproduction of alienation can be traced. In this paper we will research how these three conceptions about meaning are related to the study of modern alienation–or its impossibility in the case of Luhmann. Two main theoretical perspectives can be observed about these questions: On one hand, Habermas & Giddens assert that the colonization of lifeworld by the teleological system imperatives & its desertification for the specialization of the cultural spheres–Habermas- & the strong difficulties for an autonomous agency & a reflexive ontological security in a context of globalization & undermined traditions–Giddens–generate a big gap between individuals–with its own self & the others–& social institutions. Legitimation crisis, anomie, psychopathologies –Habermas–& compulsions and addictions–Giddens–are profoundly related to alienation processes in the different levels of the lifeworld & the mutual knowledge. For Habermas, the lack of rational communicative action in the constitution of a public sphere, anchored in communicative social self-understanding & normative coordination of social life, produce emergent distorted ideological representations that must be criticized in its subjective, social & cultural dimensions. In the view of Giddens, for the other side, the social uncertainty of time & space distance of nowadays social agencies produces a radical loss of ontological security. Only the new type of mutual knowledge & ontological security in the pure, intimate relationships–the reflexive communities–that are based on trust, openness to the alterity & a reflexive–not rational–self, can modify these pathologies. On the other hand, however, Luhmann is very critic with these perspectives. He denies the possibility of describing pathologies in social processes because, in the conceptual definition of meaning, it is a basal substratum that cannot be damaged. It is a formal medium that allows, with the distinction between the actual & the potential, to recursive operations of communication & conscience. Alienation is a semantic of the functional differentiation of modern society. It is a consequence of its acentric characteristic & it has to be abandoned because it does not describe it correctly. Despite his rejection of a critical theory, Luhmann observes that functional differentiation causes an exclusion of a large population of any subsystem of the world society–economy, politics, education, health, et cetera. This situation can produce in the long term a fundamental crisis of modern world system & can be

theoretical related to the concept of alienation. But, for this author, there is no possible intervention over it & only the contingency of operations of communication will define its course.

Bian, Yanjie, Li, Lulu & Yang, Juhua (Renmin University of China, 59 Zhongguancun Street [tel: +86 10 62514984; e-mail: JuhuaULYang@yahoo.com]), **Societal Context and Division of Household Work in East Asia,** *International Sociological Association, Gothenburg, Sweden,*

¶ East Asia has been known for the persistence in a gendered division of housework even if there has been a tremendous modernization throughout the region. This paper examines the extent to which such persistence varies across four East Asian societies: China, Japan, Korea, & Taiwan. While the four societies share a common cultural heritage and Confucian values, they vary in important structural dimensions, namely industrialization, marketization, political ideology, & feminist movement. We conceptualize these under a broad notion of "societal context." Analyzing the family module data from the 2006 East Asian Social Survey, we observe a consistent pattern of spousal relative resources, negotiating power, & division of housework that vary along with the dimensions of societal context across the four East Asian societies. In an ongoing analysis, we attempt to model these contextual effects on individual behaviors & seek to demonstrate that changes in individual-level factors may not be sufficient to achieve the goal of gender equalization at home without large-scale changes at societal levels.

2010S00274

Bichir, Renata (IUPERJ, Rio de Janeiro, RJ, Brazil [tel: +55-21 2266-8300; e-mail: renatambichir@yahoo.com.br]), **New Policies against Poverty in Brazil: Analyzing Access to CCT in Metropolitan Areas,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper discusses new actions against poverty & inequality in Brazil through the analysis of the conditional cash transfer program (CCT) known as Bolsa Família (Family Grant). The Bolsa Família Program is nowadays one of the largest CCTs in the world, & in 2007 it benefited 11.1 million of families or 46 million people. Using data from a survey carried out by the Center for Metropolitan Studies (CEM-CEBRAP) in the city of São Paulo in 2004 & another one carried out in Salvador in 2006, this paper analyzes the main determinants of poor people's access to the Bolsa Família program in these two important urban areas. These data are analyzed using the multivariate model known as "CHAID tree". Preliminary results show good targeting of the program in both cities & the importance of eligibility criteria in determining access, besides highlighting the importance of poor people's political preferences in São Paulo & Salvador. In this sense, this work intends to contribute for understanding the role the program play in the mitigation of poverty & inequality in Brazil, focusing on local dynamics that might change national goals.

Biegert, Thomas (Mannheim Centre for European Social Research (MZES), 68131 Mannheim, Germany [e-mail: tbiegert@mzes.uni-mannheim.de]), **Patterns of Nonemployment: Institutional Effects on the Labor Market Activity of Different Social Groups,** *International Sociological Association, Gothenburg, Sweden,*

¶ While most research analyzing the determinants of national employment performance focuses on the unemployed, this study argues that inactive persons need to be included. Members of both groups are potential employees, tax payers, & social security contributors. Moreover, many of them are entitled to welfare benefits. Analyzing nonemployment as a whole also precludes statistical issues with the distinction of the two groups. Labor market institutions provide opportunities & restrictions for individuals thereby shaping labor supply & demand. Furthermore, these institutions interact with personal characteristics & resources & therefore affect individuals in distinct ways. Thus, not only the absolute level of national nonemployment but also its social composition is formed by the labor market regime. This study uncovers how institutions affect the labor market activity of specific social groups. Standard macro-level approaches to institutional effects on labor market performance are enhanced by using the European Labor Force Survey as a source for micro-level information. Institutional regimes are modeled by including macroeconomic indicators into pooled cross-sectional models with country & year fixed-effects. Thus, the analysis enables a distinctive mapping of the relationships between institutions of national labor markets and patterns of nonemployment. Since labor market policies increasingly aim at all nonemployed persons, this study also provides valid policy recommendations.

Biggart, Laura & O'Brien, Margaret (Centre for Research on the Child and Family, University of East Anglia, Norwich, NR4 7TJ, UK [tel: +441603592068; e-mail: l.biggart@uea.ac.uk]), **UK Fathers' Long Work Hours: Career Stage or Fatherhood?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Using nationally representative data from the UK's Third Work-Life Balance Employee Survey WLB3 (2006) this paper explores whether long working hours, characteristic of British fathers, is best explained by men's career stage or their parental status. Fathers' working hours are compared to similar men without children. The paper is guided by the theoretical concepts "father as breadwinner" & "father as carer". The "breadwinner" model implies that fathers will work long hours to fulfil an economic provider role & a "caring father" model which suggests that fathers will work less hours in order to be more involved in the family. Men without dependent children are assumed to have lesser economic & caring demands or motivations. Using OLS regression the results show that being a father, rather than career stage, is the stronger predictor of working longer hours, after controls for earnings, education & partner's work status. However, being in a professional occupation predicted working longer hours for all men, irrespective of parental status.

Biin, Helen (Institute of Sociology and Social Policy, University of Tartu, Tiigi 78, 50410 Tartu, Estonia [tel: (+372) 56 614 707; e-mail: helen.biin@ut.ee]), **I Can't Explain Myself, I'm Afraid, Sir, because I'm Not Myself You See. Estonian Female Parliamentarians Narrating the Professional Self,** *International Sociological Association, Gothenburg, Sweden,*

¶ Politics is considered a male space that is dominated by men's interests & needs, & was until late inaccessible for women. Albeit formal barriers that prevented women from entering parliaments have by now been removed, the norms & expectations attached to the political practice have remained masculine and patriarchal. Hence the traits & identities that women and politicians are expected to represent are conflicting, leaving female politicians with the need to negotiate contradictory expectations & contest the borders of accepted gender roles to prove their acceptability & accountability as politicians & as women. In this paper I analyze how female politicians tackle the balancing act between contradictory requirements & construct their professional identities in narratives. The analysis is based on three in-depth interviews which were conducted with female members of Estonian parliament. The topics that offered sites for identity constructions & will be discussed here include the stories of 'becoming a politician', meanings that are attached to politics, political profession & success in politics, and experiences of being a woman in the parliament. The analysis shows that the conflicting discourses of the 'proper woman' & 'proper politician' are evident & oriented to in the ways the interviewees work towards the construction of successful, accountable & determined professional self.

Bijaoui, Sylvie F. (College of Management, Behavioral Science Department, Rishon LeZion, Israel [tel: 972-52-6589517; fax: 972-3-6411893; e-mail: sylvieb@colman.ac.il]), **NGOization, Substantive Representation and Women's Human Rights in Israel,** *International Sociological Association, Gothenburg, Sweden,*

¶ From the nineties on, one the issues raised on the feminist agenda is the impact ngoization on the women's movement. Current literature is divided on the issue. On the one hand, it is assumed the ngoization process, intersecting with neo-liberal hegemony, has divided women on the basis of race, class, religion, citizenship etc, leading to the weakening of the women's movement. On the other hand, it is assumed that the ngoization process has been central to women's empowerment, giving women access to different resources and enabling them to promote their human rights. This paper analyses the ngoization process of the Israeli feminist movement, in the last two decades . It suggests that in order to capture the issue, two other factors are to be taken into account: state feminism and women's substantive representation . Accordingly, it argues that in the nineties, due to women's political substantive representation and active state feminism machinery, the ngoization of the feminist movement, did promote Israeli women's human rights. It also argues that in the first decade of the twenty-first century, ngoization did not have the same impact, due to "more compliant" state feminism machinery & to a decline in women's substantive representation.

Bijl, Robert (Netherlands Institute for Social Research / SCP, P.O. Box 16164 [tel: (+)31703407141; e-mail: r.bijl@scp.nl]), **Monitoring Immigrants' Integration in 17 EU Countries,** *International Sociological Association, Gothenburg, Sweden,*

¶ The current efforts by the EC to develop a European monitoring system on integration raises many questions about the international comparability of concepts & data. Since 2006 in many European countries there have been new efforts to improve the knowledge about the state of the immigrants' integration. Furthermore, the enlargement of the European Union raised new challenges regarding integration. With the increase of available quantitative data and indicators on more structural aspects of integration (labour, education, housing), in many countries a shift towards more empirical support to migration & integration policies can be recognised. This presentation will give a first overview of a new book (to be published end 2010) on measuring & monitoring immigrants' integration in 17 European countries. In this book we want to have an updated overview of monitoring systems in EU member states, the choices that have been made about the relevant domains for integration, the opportunities & pitfalls in measuring integration, the political restrictions & taboos regarding (monitoring) immigrants, the data sources that are available and the future directions in the member states.

Bilge, Sirma (Universite de Montreal, Sociology, Montreal, Quebec, Canada [e-mail: sirma.bilge@umontreal.ca]), **Boundary-Patrolling Through Gender Justice in a Sovereignty Seeking 'Nation',** *International Sociological Association, Gothenburg, Sweden,*

¶ Gender equality & sexual freedoms have become pivotal to western debates on citizenship & immigration, which tend to construe women's rights & gay rights as endangered by minority rights, particularly by Muslim claims, & thereby justify the move from multiculturalism to coercive cultural conformity with majority. My presentation will examine, via recent Quebecois debate over religious accommodation, the ways in which the gender-equality-and-sexual-freedoms frame is articulated to the nation to draw civilisational boundaries between "us" and "not-us". Exploring the workings of gender & sexual normativities in the Quebecois religious accommodation debate, precisely through press coverage & readers' letters, reveals that gender equality argument is often articulated to other concerns and anxieties, involving national identity, past feminist struggles and Quebec's own history of "religious oppression". The deployment of gender not only discredits religious accommodation & pluralistic ideals, but also constructs Quebec, a self-proclaimed latecomer into modernity, as the privileged site of freedoms that must be protected against religious others.

Binner, Kristina, Kubicek, Bettina & Weber, Lena (Department for Theoretical Sociology, Institute of Sociology, Johannes Kepler University, 4040 Linz, Austria [tel: 0043/73224688151; e-mail: Kristina.Binner@jku.at]), **Entrepreneurship, Gender Equality, Diversity–Models of Academic Labour at German and Austrian Universities,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the context of the economical shift in the public sector & its organisations. Models of entrepreneurship & gender equality are implemented by instruments such as New Public Management & Gender Mainstreaming in many European universities. Organisational models come into effect by setting agendas & deciding which topics are discussed & which voices are heard in organisations. They are thus powerful projections & therefore of special interest for analysing how universities are currently modified. Our research focuses on German & Austrian universities; these countries share similar traditions in national regulations of academic labour by simultaneously differing in their interpretation of employment relations. We examine the demands on & requirements of academic work that are included in these models & we are interested in the way how gender is affected. Data basis are self-presentations of universities which are found on their web pages. Qualitative content analysis were conducted to analyse the universities' self-presentations. In both countries our results indicate, that models of entrepreneurship are getting more important & often conflict with norms of gender equality.

Bircan, Tuba & Hooghe, Marc (Centre for Political Research, Catholic University of Leuven, Parkstraat 45 Bus 3602 3000 Leuven Belgium [tel: 00 32 485 590 799; fax:; e-mail: Tuba.Bircan@soc.kuleuven.be]), **Ethnic Diversity and Crime. An Analysis of Belgian National Crime Records, 2001-2006,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this article is to investigate the occurrence of criminal acts at the community level in Belgium for the 2001-2006 period. Multivariate analysis shows that specific immigrant concentrations have a significant effect on the occurrence of property crime and violent crime. While stock of migrants has a stronger effect on property crime, especially the African nationals' concentration has a significant impact on recorded property crime of a standardized regression (at the community level) of 0.71. Impact of inflow migration is stronger for violent crime & further analyses suggest that African population in the community is significantly associated with violent crime occurrence with a standardized regression coefficient (at the community level) over 0.50. We end with some theoretical & policy considerations on the relation between diversity & crime also considering the substantial impact of unemployment.

Bisig, Esther (Military Academy at ETH Zurich, Birmensdorf, Switzerland [tel: +41 44 739 82 71 ; fax: +41 44 739 82 00; e-mail: esther.bisig@vtg.admin.ch]), **Organisational Effectiveness of Coalition Operations' Headquarters–A Theoretical Concept,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the last twenty years, the number of multinational peace support operations has increased steadily. The multinational composition of their headquarters implicates many cultural & political challenges and, therefore, affects their organisational effectiveness. This article describes a theoretical model that allows to understand, explain & measure the perceived organisational effectiveness of coalition operations' headquarters. To explain organisational effectiveness, influences from various organisational areas are factored into the explanation; namely: structure, processes, people, & culture. Hence, this comprehensive model provides a solid basis for (a) capturing the perceived effectiveness of people deployed in such headquarters, (b) for determining influencing factors in order to identify barriers and, if required, (c) for deducing improvement opportunities for organisational effectiveness of these coalition operations' headquarters.

Bisig, Nidia Elinor (UNC–CONICET, Córdoba, Argentina, 5000 [tel: 54 351 4682024; e-mail: elinorbisig@arnet.com.ar]), **The Social-Juridical Construction of the Poor Childhood. Critical Social-Historical Analysis of the Discriminatory Imaginary of Poverty on the Juridical-Academic and Welfare Discourse of Córdoba, Argentina,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ We propose to realize an analysis of the academic production of the National University of Cordoba since the end of the XIX century until the mid XX century that treat the problematic of infancy named "illegitimate", "abandoned", "delinquent"…, on a critical approximation from the racism theory. One of the displacements that suffers this category during the past century is that exceeds the field of race & widens to women, young… In this line is placed the discrimination of poor children, which have remain imprisoned in the place of the "other". It is possible to track the racist's characters in discursive-politic practices that have constructed the infancy category, being plausible to productively face this work taking as object of analysis the thesis, papers… that tackle this thematic in Cordoba. On them, will try to reconstruct the voices that, for social pertinence of the actors, refer to a certain class ideology; which provides a study of the constitution of the argentine ruling elite, when the problem of social control, or the "social matter", is placed on the center of speculations. Studying both the characteristics of discursive racism of the argentine elite, as their complex application to infancy, will allow us to establish categories for an analysis of modern racism. In this way, elements will be taken to counteract the practices of domination, for it is necessary to historize them, reconstructing the discourses that sustain them and allow their continuity, & functionality.

Biskupovic, Consuelo (Doctorat en anthropologie sociale et ethnologie, EHESS-IRIS, 105 bd Raspail 75006 Paris [tel: 0033173706026; e-mail: cbiskupovic@gmail.com]), **Who Protects What? Analysis of the "Environmental Protection" in the Transitional "Risk Zone" of the Andean Piedmont in Santiago, Chile,** *International Sociological Association, Gothenburg, Sweden,*

¶ This presentation discusses my current Ph.D research centered in what it means to "protect the environment" today in vulnerable & at risk natural area, such as the piedmont of the Cordillera de los Andes in the periphery

of Santiago, Chile. In a first instance, this paper provides an analysis on social perception and representation of the environment in socially unequal neighborhoods, focusing on a particular neighbors network engaged to protect & preserve the piedmont. Secondly, the strong real estate pressure that has seized this area for the last thirty years is analyzed as part of a process in which the government and private actors neglect the natural risk in the piedmont, like the catastrophe produced by a landslide in 1993. Finally, the paper seeks to understand the collective actions & the public arenas emerging from this protection & defense. Using an ethnographic approach, I argue that the distinct conceptions & appropriations of the idea of what is environment are a source of conflict since it is where opposing interests clash. Therefore, it is necessary to examine them with microsociological methods to understand the experience, the actions & the context in which it all develops.

Biswas, Chinmay (Anthropology, Habra Sree Chaitanya College, North 24 Parganas, West Bengal, India [tel: 9933155981; fax: NILL; e-mail: chinmaybiswas333@yahoo.com]), **Social Structure in the Modern Concept,** *International Sociological Association, Gothenburg, Sweden,*

¶ Social Structure Through the role analysis it can be illustrated that every person in the society geometrically simplified as a point. From the Sociometric point of view every individual's status and role are followed by a vector. The initial point & terminal point of an individual show one's Role. If every arch is centered in a circle, it would look like an earth. That is evaluated in cognition of world view. In this theory, central dogma of the circle would represent the point. In this connection the interaction among the status hold the actual form of social structure. The individual in the World (society) is a point & from it any social phenomenon is originated.

Bitkeeva, Aysa (Research Center on Ethnic and Language Relations, Institute of Linguistics of Russian Academy of Sciences, Moscow, Russian Federation 125009 [tel: (495) 6905268; e-mail: aisaULbitkeeva@yahoo.com]), **Language Community and Regional Language Policy Initiatives in the Present Day Russian Federation,** *International Sociological Association, Gothenburg, Sweden,*

¶ Language of each ethnos, even the smallest one, is of a unique cultural value that must be an object of protection and preservation. No doubt that the majority of languages are in danger of disappearance within several generations. Nowadays great attention is given to maintenance, preservation of language diversity, rebirth of minority & lesser-used languages. Linguists are of different points of view on the ways of managing the problem of linguistic endangerment. Some linguists are sure of possibility of saving endangered languages by active measures along with proper decision-making, other linguists are of pessimistic points of view and consider this endangerment linguistic problem as an inevitable natural evolution of languages & in the world there will be a single dominant language, for example English. There is a point of view that linguistic diversity can be better safeguarded in the countries build on empire model. It comprises several ethnic groups, speaking several different languages. The dominant language of an empire does not have to exterminate the other minority languages of the country. In this context the Russian Federation is given a special role as it is a multiethnic state whose basis is formed by 176 national groups & a similar number of languages. In the present-day Russian Federation great attention is given to maintenance, preservation of language variety, revival of minority languages. The languages functioning in Russia are on different levels of development, they belong to different language families–Slavic, Turkic, Finno-Ugric, Caucasian, Mongolian & others. The paper considers language policy initiatives in Russian Federation, data of recent sociolinguistic study of one of lesser-used languages of Russian Federation–Kalmyk language, role of Kalmyk language community in revitalization process of the native language, prospects of the Kalmyk language vitality & problems it faces in its current revitalization process.

Bizzarri, Carlotta (University of Florence, Department of Political Science and Sociology, Firenze, Via delle Pandette 32, 50100, Firenze [tel: 00393336454166; fax: 0039055577401; e-mail: bizzarricarlotta@gmail.com]), **Under Construction. The Encounter between New Technologies and Education in the Construction of Children Identity. A Case Study of Media Education through Robotics in Italian Primary and Secondary Schools,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the "information" society the internet & new technologies are creating a new system of knowledge, relations & learning with which the classic system of education has to face already from the primary schools. Integrating the use of new media in the current didactic programs should be a priority for the educational system, even if in a lot of cases it's a challenge yet. This paper aims to describe research on the relations among: children, teachers and new technologies (pc, internet) leading in the context of the project "Projecting & constructing a robot", one of the few Italian cases of use NXT Lego for educational purposes. The project, sponsored by Civic Council of the city of Florence and Ente Cassa di Risparmio Foundation, has involved three elementary and three middle schools & the research, leaded by university of Florence, has been conducted on 200 students & 20 teachers. The main questions from which the analysis has started is: What is the role of children identity when the school system encounters new technologies? Does the use of new technologies in learning process contribute to the definition of children identity? Moving from a sociological perspective we have tried to answer these questions, using some methodological tools: participating observation of the class activities during the project, long interviews to children and teachers, realization of works about the identity by students (a ID card of my robot at primary schools & an interview with the robot of the future at middle schools). The qualitative analysis of all these data shows how emerges a worthy circuit among children, new technologies /robot, teachers that permits an important reflexion on the construction of identity from different point of views. The students have reflected about the difference between themselves & machines; the teachers about the awareness that new technologies play an important role in the students' learning processes; the researchers about the necessity to observe the fast integration between technologies & people, starting from the educational field to understand the future developments. In conclusion we can say that the role of identity is central and fundamental to reflect on the possibility of the real integration between new technologies & educational system, in fact only starting from the single identities (of children but also of teachers) that are hubs "under construction", it's possible to see the implications of a project in socialization & learning processes. Topics: Education new trends & experiences in primary and secondary education with new technologies.

2010S00289

Bizzarri, Carlotta (Department of Political Science and Sociology, University of Florence Italy, Via delle Pandette n.32, D5,, 50110 Florence, Italy [tel: 00393336454166; fax: 0039055577401; e-mail: bizzarricarlotta@gmail.com]), **Under Construction: The Encounter between New Technologies and Education in the Construction of Children Identity. A Case Study of Media Education through Robotics in Italian Primary and Secondary Schools,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the "information" society the internet & new technologies are creating a new circuit between knowledge, relations & learning that the traditional system of education has to face. Integrating the use of new media & technologies in the current didactic programs should be a priority for the educational systems throughout the world, even if, in many cases, it is still a challenge to develop innovative "media education" paths. Beginning with a reflection upon knowledge level constructivism (Luhmann) & learning level constructionism (Papert), this paper aims to describe an empirical study into the relations among children, teachers & new technologies (computers, Internet, robots, & so on). The study has been conducted on the project "Projecting & constructing a robot" 2008/9 & 2009/2010, one of the few Italian cases of using robots (NXT Lego Mindstorms) for educational purposes. This project, sponsored by Civic Council of the city of Florence & Ente Cassa di Risparmio di Firenze Foundation (Portaleragazzi www.portaleragazzi.it), & monitored by the University of Florence (Dept. of Political Sciences and Sociology), represents the result of the fruitful collaboration between public & private institutions, in which each institution becomes an "observing system" on the role of the others in the integration of new technologies in schools. In fact, the Civil Council has introduced the project as a curriculum choice for primary & secondary schools; the Foundation has financed and supported the activity (specifically, providing Lego kits & web resources); the University has monitored the participating schools (3 primary & 5 secondary), conducting the research on 200 pupils and 20 teachers. The first-stage analysis has been based on two main research questions: -What is the role of children's identity when the school system encounters new technologies? -Does the use of new technologies in the learning process contribute to the definition of children's identity? Moving from a sociological perspective, we have tried to answer these questions, using the following methodological tools: participant observation of the class activities during the project; structured

interviews to children & teachers; creative assignments, conducted by pupils, regarding identity (an ID card of "my robot" at primary schools, and an interview with "the robot of the future" at middle schools). The qualitative analysis of all the collected data shows how a relevant synergy emerges among children, their teachers, and new technologies. This permits an important reflection, from various point of view, on the construction of identity. The pupils were encouraged to think about the difference between themselves and machines; the teachers about the awareness that new technologies play an important role in learning processes; the researchers about the necessity to observe the ever-accelerating integration between technologies & people, specifically in the field of education. In conclusion, we can say that the role of identity is central & fundamental for reflecting upon the possibility of an effective integration between new technologies and the educational system. In fact, starting from the single identities (of either children or teachers), which we can consider as hubs "under construction", it's possible to see how knowledge acquisition in the learning process is deeply related to the socialization of people with machines, especially for the younger generations. Topics: Education, new trends & experiences in primary & secondary education, new technologies, Constructionism and Constructivism.

2010S00290

Bjørkhaug, Hilde & Almås, Reidar (Centre for rural research, 7491 Trondheim, Norway [tel: +4772591781; e-mail: hilde.bjorkhaug@bygdeforskning.no]), **The Challenge of Climate Change and New Policy Responses: Sustainable Development for Norwegian Agriculture?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Agriculture is an important part of the climate solution, the Norwegian minister of agriculture & food states when the Government is about to agree on the new white paper on the climate change challenges & the role of agriculture in Norway December 2009; While agriculture will contribute to a climate compromise through reduction of GHG emissions from agriculture, agriculture might also contribute with production of renewable energy and environmental friendly wood. This paper will discuss in what way the new climate policy for agriculture demonstrates a shift in agricultural policy in Norway & in what way farmers on the one hand expect this shift to come & on the other how it might affect their farm positively or negatively. Discussions draw on analyses of the new white paper, hearings of the document, & media discussions in the wake of the implementation of the paper and analyses of fresh survey data from Norwegian farmers on their responses on questions of climate change, claims of reductions of GHG emissions & potential growth in the market for agriculture based renewable energy. The paper also takes up for discussion the potential effects of a climate change driven shift in policy for the sustainability of agriculture & rural communities in Norway?

2010S00291

Björnberg, Ulla M. (Department of Sociology, Gothenburg University, Box 720 Gothenburg 405 30 Gothenburg Sweden [tel: +46317864789; fax: +46317864764; e-mail: Ulla.Bjornberg@sociology.gu.se]), **Resilience and Social Capital in Asylum Seeking Families in Sweden,** *International Sociological Association, Gothenburg, Sweden,*

¶ The objective is to identify factors that are important for resilience and well being of children seeking asylum & to study how they cope with their experiences as asylum seekers. Special attention has been paid to social relationships with families in the countries of origin & in the host country. Theoretical concepts of resilience, social capital with a focus on trust & social recognition are used in the analysis of well-being of children and their families. The empirical data are based on qualitative interviews with children from 9 years & with one parent for each child. Results suggest that parents & children are socially isolated. Social networking is hard to accomplish due to constraints linked to social & legal contexts in the host country. Constraints are also linked to the family situation and the circumstances they have to cope with in every day life. The situation of parents, in particular mothers, are important for the coping of children. The tension between excluding experiences and expectations regarding how the situation of the child & its family should improve or deteriorate after the flight is for both parents & children a constitutive reference for how coping strategies are developed.

Bjørnholt, Margunn (Independent, Labben 22, 1359 Eiksmarka [tel: (47) 67159003; e-mail: margunn.bjornholt@gmail.com]), **The Origins and Current Status of the 'Man Question' in Norwegian Gender Equality Policies and Family Law,** *International Sociological Association, Gothenburg, Sweden,*

¶ Today, normal justice lacks shape, even within formal institutions; deviations are not the exception but the rule. The shape of controversy is an object of struggle: the social substance of justice is disputed, as well as whose interests and needs need consideration; there is a lack of shared understanding of adequate procedures. There is disagreement over "what", "who" & "how". With this diagnosis of the state of the art, Nancy Fraser introduced her Vilhelm Aubert memorial lecture at the University of Oslo in 2006. This description of a general confusion & a lack of agreement on the shape of controversy, pictures very well the present, contradictory state of the "man question" in the Norwegian gender equality context. On one hand, Norwegian policies of fostering caring masculinities are a much celebrated part of present gender equality policies, nationally as well as internationally. On the other hand, family law reforms are strongly influenced by men's rights groups, and discourses that construct men as victims, rather than beneficiaries of structures of gender inequality, are influential in popular conceptualizations of men & gender equality. In this paper I will discuss the emergence of Norwegian masculinity policies, by using a combination of a science of technology studies (STS) approach and the concept of the psy-complex as developed by Rose & others, but modified to fit the Norwegian social democratic welfare state context, in which the social sciences, more than the psy-disciplines, have played an important role in social engineering. I will draw on research into welfare state development that increasingly sees the development of family policies as a result of the amalgamation of political ambitions, social reforms and theories & policy proposals put forward by social scientists. I will in particular discuss how early Norwegian theorization and research into men & gender relations during the 1950s & 60s, has shaped Norwegian masculinity policies & how conceptualizations of the "man question" have evolved over time, trying to trace both continuities based on the layering of old theory & research, as well as change in the theoretical/political approach to men & gender equality. Based on this theoretical/historical analysis I will discuss the present theoretical/political status of the "man question" in a Norwegian context.

Blackstone, Lee R. (SUNY College at Old Westbury, P.O. Box 210, Old Westbury, NY 11568-0210 [tel: 631-239-6040; e-mail: blackstonel@oldwestbury.edu]), **Painful Listening: The Musical Noise and Cultural Transcendence of Southern Italian Tarantism,** *International Sociological Association, Gothenburg, Sweden,*

¶ The ancient music of the tarantism ritual, a ceremony to treat a supposed "spider bite," is undergoing a revival in the Salento, an area of southern Italy. Tarantismo is a particular cultural formation of the region, a method by which people could vent their dissatisfactions & disappointments in life. This project speaks directly to the historically experienced conditions of alienation endured by southern Italians. The art of music emerges in my study as an essential resource that embodies concerns over the inclusivity & exclusivity of civil society. The tarantata–the women bitten by the spider–were marginalized by their condition, as were musicians who furnished or attempted to play the associated healing music. Now, however, the music & dance are being embraced in a new social context as a form of cultural activism, illustrating that listening can reflect the boundaries of civil society. Which music in a society is to be considered tolerable & an expression of cultural citizenship, versus problematic music (noise) that results in more rigorous social control? The particular case of the tarantism ritual allows us to consider how traditional forms of music can be transformed into a dialogue of political & cultural resistance.

2010S00294

Blain, Michael J. (Department of Sociology, Boise State University, Boise, Idaho USA, 83725-1945 [tel: 208 426 1346; e-mail: mblain@boisestate.edu]), **Power/Knowledge and Victimage Ritual in the Global War on Terrorism,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper reports the results of an analysis of the roles of the human sciences & victimage ritual in the global war on terrorism (GWOT). The war, it theorizes, can best be conceptualized as a mode of power & subjection by means of victimage ritual. The discourse of terrorism entered the English lexicon during the French Revolution era (1789-1815). It provided "liberal" governments with a conceptual solution to the practical problem. They needed to differentiate legitimate from illegitimate forms of political violence in societies founded on the people's democratic right to engage in revolutionary violence in response to tyranny. At the same time, the discourse of terrorism also provided a pretext for "legitimate" violence

against those groups (domestic & foreign) who threatened or resisted liberal regimes & Empire. This theory is tested with evidence from the genealogy of the Anglo-American discourse of terrorism, including text analyses (US presidential speeches, 1790-2009 & New York Times editorials, 1860-2006), and "terrorism" in social scientific & psychological discourse. The results support the theory that GWOT is a modern biopolitical variant of a traditional "religious" victimage ritual. Hence, the "terrorist" is both an object of social scientific knowledge and a villainous scapegoat in a global war. On the one hand, the political discourse of terrorism represents the war a heroic struggle to defend a global liberal regime founded on principles of security & freedom, against terrorist villains who do not value life the way normal people do & who seek to destroy that liberal order. The ritual destruction of human life–the terrorist's lives as well as the troop's lives–is central to how victimage rituals function in the political communication of the war. On the other hand, Michel Foucault's biopolitical account directs our attention to the role of the social sciences in the constitution of "terrorism" & "terrorists" as objects of knowledge. "Psychological" torture is described as a rational technology of "enhanced interrogation" designed to produce "actionable intelligence."

Blanch, Josep M., Cantera, Leonor & Stecher, Antonio (Dep Psicología Social; Universitat Autònoma de Barcelona, Campus UAB, Edifici B, 08193. Barcelona. Spain [tel: 34 3 581 1326; fax: 34 3 581 2125; e-mail: jmbr47@yahoo.es]), **Entrepreneurial Public Services Reorganization, Workplace Culture and Work Well-Being in Ibero-American Universities and Hospitals,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction. The entrepreneurial reorganization of public universities & hospitals is a managerial colonization of social spaces traditionally not determined by the political market economy, the business ethics, & the productivity, efficiency, competitiveness, profitability, & excellence rhetoric. The aim of the study is to analyze the working conditions & quality of working life in the context of this contemporary process of turning universities & hospitals into enterprises. Mainly focusing the relationship between perceived attributes of organizational culture and identification with organization, on the one hand; and psychosocial well-being & worker satisfaction, on the other. Method. From a population of a number of Ibero-American countries composed of university professors & researchers, & health care professionals who work in hospitals, it is taken a convenience sample (n=1000), intentional & stratified, according to criteria such as gender, generation, profession, contractual situation and occupational status. Collection of information is taking place in 2009. Data collection combines quantitative & qualitative techniques, among which a survey through questionnaire that includes a series of closed items & open questions, & a semi-structured interview. Results. We have identified a double kind of perceived effects of the university & hospital restructuring: on the upside given the material & technical conditions of work & certain aspects of social climate. In the negative, the workload & the intensification of work time. Conclusions. This research brings elements for an evaluation of the collateral psychosocial effects of entrepreneurial reorganization of universities & hospitals of the public networks.

Blanco, Mercedes & Pacheco, Edith (CIESAS/COLMEX, Juarez 87. Tlalpan. CP 14000. Mexico, DF [tel: 525554493000; e-mail: blancos50@hotmail.com]), **Gender Division of Labor and Family Models in Mexico,** *International Sociological Association, Gothenburg, Sweden,*

¶ There are various theoretical & methodological approaches for describing the role of family & work at different spheres of life. One of the main ways of analyzing the assignment of gender roles & their inequality is by examining the link between family and work. Another crucial perspective directly linked to the processes of organizing family life is the sexual division of labor. At the same time, it specifically refers to what certain authors have called family models. All these aspects are explored in this paper. In order to describe the case of Mexico & the changes that have taken place over several decades in the analytical axes mentioned earlier, this paper begins with an overview of female economic participation during the second half of the 20th century & the early 21st century. Then, in order to describe the new patterns of life, the paper traces the changes that have taken place from the model of family organization known as the "traditional family" in the specialized literature to the diversity of family configurations that exist today. In this traditional model, men are the financial providers, with women being confined to the familial-domestic sphere (1950s-1960s) and the patterns of coexistence between men & women are clearly governed by links that become asymmetries that operate in an extremely unfavorable way for women. The paper then describes the transition period (1970s & 1980s) until the 1990s, when there were indications of the existence of certain modifications of family models. Thus, in non-traditional arrangements, there is significant female economic participation which not only translates into couples where both spouses earn incomes but also into the start of relative & partial transformations of both patterns of coexistence & division of domestic labor, although even today, these changes are fairly limited.

Blee, Kathleen M. & Linden, Annette (Department of Sociology, University of Pittsburgh, Pittsburgh PA USA 15260 [e-mail: kblee@pitt.edu]), **Women in Extreme Right Parties and Movements: A Comparison of the Netherlands and the U.S.,** *International Sociological Association, Gothenburg, Sweden,*

¶ Far-right parties & extremist movements have distinct ideas about the place of women in politics. In some extremist politics, majority women appear primarily as symbols of national, ethnic, racial, or group status rather than as potential activists. These women are portrayed as sexual or economic victims of minority men, pointing to the need for majority men to become involved in political agendas. More often, especially recently, new ideas of gender have percolated into the far-right, supplementing–although not replacing–the emphasis on majority women as potential victims. This new view posits majority women as potential warriors of their race/nation/group, fighting to sustain their eroding privileges alongside their male comrades while retaining their role as supporters of men & mothers of children. We explore the extent to which the differing images & roles of women in far-right politics might reflect the difference between the far-right parties that seek electoral office of Western Europe and more politically marginalized, non-electoral far-right movements of the United States. This paper draws on extensive life-history interviews with female activists in far-right parties in the Netherlands & far-right political movements in the U.S. in the late 1990s conducted by each author. In these interviews, women were asked to reflect on the motivations & circumstances of their entry into far-right politics & their experience in these movements & parties. These data are unique; no other study has gathered such extensive data directly from women in these far-right groups.

2010S00298

Blokker, Paul & Brighenti, Andrea (University of Trento, Florence, Italy, 50134 [fax:; e-mail: paulus.blokker@soc.unitn.it]), **Politics between Justification and Resistance,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper aims at discussing the discursive practices that are used by social actors in distinct moments of interaction in which the imperative to justify one's action emerges. Different justifications can be related to a number of constituted orders of worth, which can be of a political, legal, social, economic, or moral nature. Whereas practices of justification–grounded in distinct orders of worth–delineate specific patterns of visible and invisible lines of argument, these practices can always be countered by practices of criticism of–or resistance against–constituted orders. We propose to focus on two significant tensions or problématiques that have emerged in this line of research. The first aspect we propose to focus on is the tension between political philosophy & a "sociology of critical capacity", in particular in that the latter criticizes the singularity of normative political philosophy. The second aspect we seek to bring out is one of the relation between theoretical pluralism & the implication & elaboration of such justificatory schemes in various contexts of social interaction, as well as the actual dialectic of justification, critique, & compromise in social reality.

2010S00299

Blommaert, Lieselotte, Van Tubergen, Frank & Coenders, Marcel (Department of Sociology, Utrecht University, Utrecht, the Netherlands, 3584 CS [tel: +31 30 253 4813; fax: +31 30 253 4405; e-mail: l.blommaert@uu.nl]), **Implicit and Explicit Interethnic Attitudes and Ethnic Discrimination in Hiring,** *International Sociological Association, Gothenburg, Sweden,*

¶ We study the effects of explicit & implicit interethnic attitudes on ethnic discrimination in hiring. Explicit responses are controllable, intended & made with awareness. Implicit measures of attitudes are characterized by reduced controllability or awareness and/or lack of intention. Still relatively new to sociologists, psychologists have been studying implicit attitudes for over a decade. However, the effects of implicit interethnic attitudes on (discriminatory) behaviour remain under-researched. We hypothesise that both explicit & implicit negative interethnic attitudes increase the likelihood of discriminatory behaviour, but the effect of

implicit interethnic attitudes is stronger than that of explicit interethnic attitudes. To test these hypotheses, we use data from a laboratory experiment conducted amongst 157 students. The experiment consisted of: 1) an Implicit Association Test measuring implicit interethnic attitudes; 2) a questionnaire measuring explicit interethnic attitudes & background characteristic; 3) a recruitment test for a job vacancy, in which students reviewed sets of résumés representing 24 fictitious applicants who varied with regard to ethnicity, gender, education & work experience. Participants graded the applicants and selected 3 of them for an interview. Discriminatory behaviour is assessed by means of ethnicity-based preferences for applicants. These data are analysed by means of OLS & logistical regression analysis.

Boccagni, Paolo (University of Trento, Department of Human and Social Sciences, via Verdi 26–38 100 Trento–Italy [tel: + 39 340 8001021; e-mail: paoloboccagni@hotmail.com]), **Together Again, Overseas? Constructing Ecuadorian Migrant Associations from Above and Below,** *International Sociological Association, Gothenburg, Sweden,*

¶ Migrant associations, as a topic of study, may be approached in several respects: amongst the others, the missions they state and implement; their embeddedness in co-national networks (and in civil society overseas); their attitudes & claims towards public authorities in the host and, increasingly, in the home societies. The paper analyzes the issue, with a central focus on the interaction between State-led & migrant-grassroots influences, in the development of Ecuadorian migrant associations in Europe (especially involving Spain & Italy). It builds on my ethnography of a translocal flow between Southern Ecuador & Northern Italy, on an analysis of Ecuadorian emigrant policies, & on field interviews to relevant stakeholders in Ecuador, Italy & Spain. By critically exploring both the public discourse & policies of the Ecuadorian government towards emigrant associations, & the prevailing patterns of sociability-making of migrants themselves, the paper casts light on a few key points:–the competing visions, interests & agendas that shape the spontaneous development of migrant associations, as well as the policy-makers' attitudes towards them;–the grassroots dynamics of participation, representation & self-legitimation within migrants' associations, vis-à-vis the broader patterns of migrants' co-ethnic social life overseas;–the scope for transnational action, whether in terms of advocacy, communication, project implementation or political representation, emerging in emigrant associations–and the conditions accounting for it–the dilemmas & the opportunities inherent in their relations with public authorities, resulting in claims-making, co-optation or even in novel forms of collaboration between emigrant civil society & public institutions, whether overseas or in the motherland.

2010S00301

Boccia, Artieri Giovanni & Gemini, Laura (Un. Urbino Carlo Bo, Department on Communication Studies, Urbino, Italy, via Saffi, 15 61029 [e-mail: giovanni.bocciaartieri@uniurb.it]), **Citizen Artists and Spread Creativity. An Analysis about the Artistic Evolution from the Audience's Point of View,** *International Sociological Association, Gothenburg, Sweden,*

¶ Thinking about the audience, & the art audience, nowadays means thinking about more & more expanded forms of creativity. This paper wants to investigate–through the artistic gaze of art and its social function–the working progress passage from an idea of the mass public to the performing audience till the networked publics (Ito 2008). The networked publics are a new form of, the audience more & more capable of translating its experience, for example of an art work, into a creative action. Today we can observe the creativity of the audiences as a generation of contents that feed the artistic communication. The cultural context of this process is the context of the networked media, of the convergence and participative culture. A context that supports & explains a new, emerging, relationship between production & cultural and artistic consumption. Without removing or underestimating the value of the professional artist & the role of the social system of art, the acting evolution concerns the relationship with the spectator. In other words the research of an active relation with the spectator meets the awareness of the contemporary audience and the way in which within the social media the positioning perception in communication changes. As part of a public we know which could be the contribution of contents that potentially we can give to the artistic communication & its circulation. Today it is possible to talk, indeed, in terms of amatorial culture & citizen artists put side by side & integrate, sometimes with some troubles of course, the mainstream art. Since then the work of the Avangarde there are many cases that show the political, social & aesthetic value of art in the active involvement of the public: from the mail art to the 19th theatrical scene till the forms of interactivity of the virtual art. A further step concerns the fans treated as co-authors–in Italy it is the case of literature & the famous group Wu Ming to name but one example–or the development of sites like MySpace that in many & interesting cases have conferred the success, even commercial, of musicians otherwise unknown and excluded from the official circuits of the music market. Moreover, the networked publics can count on the Social Networks as FB, FF, Twitter in order to act in a creative way on the artistic processes, by generating a community of fans & conveying new contents for the artists. A process apparently reaching its height inside the online worlds, like SL, where, as we'd like to show, everyone is at the same time producer & consumer of creativity.

Bode, Ingo (University of Kassel, Arnold-Bode-Str. 10, 34109 Kassel, Germany [tel: +498042923; fax: +498043265; e-mail: ibode@uni-kassel.de]), **A Metamorphosis of Hybridity? The Impact of Managerialism and Market Governance in the German Hospital Sector,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recent debate on changes in public service organizations has brought new interpretations of neoinstitutionalist theory (keywords are "competing institutional logics" or "institutional pluralism"). This follows the proliferation of market-oriented governance in sectors formerly subject to a hybrid steering mode featuring both bureaucratic hierarchy & professional self-administration. As will be shown for the case of German hospital sector, public regulations based on social planning, collective need assessment, outcome-oriented funding etc. have given way to more market-oriented external governance. We are dealing here with an extension of hybridity that translates into new modes of internal governance, epitomized by managerialists tools such as internal benchmarking, value for money evaluation, & business-like accounting & control devices. The paper explores the ways macro-level governance feeds into the internal governance process of hospitals, including with regard to the interplay of concurrent normative references. How do hospitals, under condition of exacerbated hybridity, handle their (hitherto untouched) institutional mission of treating all patients according to needs and irrespective of further considerations? Do newer versions of the neo-institutionalist approach help grasping the changing nature of hybridity, in hospitals & elsewhere? Drawing on an extensive literature review & explorative interview data, the paper provides some preliminary answers to these questions.

Bodovski, Katerina, Greenman, Emily & Reed, Katherine (Education Policy Studies, The Pennsylvania State University, 300 Rackley, University Park, PA, USA, 16802 [e-mail: kxb918@psu.edu]), **Neighborhood Characteristics, Parental Practices and Children's Math Achievement in Elementary School,** *International Sociological Association, Gothenburg, Sweden,*

¶ Using a large, nationally representative database of American elementary school students- Early Childhood Longitudinal Study a Kindergarten Cohort (ECLSaK) & the contextual data from the 2000 U.S. Census, this study has two main objectives: a) to assess the effects of neighborhood characteristics on parental practices, controlling for individual family characteristics, & b) to assess how the effects of parental practices on students' achievement vary across different types of neighborhoods. This paper focuses on a critical but under-studied stage of children's educational trajectories a the elementary school years. The longitudinal nature of the data allows us to examine parental practices at the beginning of children's school career (grades K-1) & their associations with math achievement through the end of the 5th grade. No study has yet examined the association between neighborhood characteristics, parental practices & children's achievement while focusing on a specific set of parenting practices pertaining to the child's education. No prior, comparable- sized, nationally representative database, including extensive information on parental practices & student achievement, has been analyzed in conjunction with geographic information. The findings will shed light on the relationship between neighborhood context and individual behavior of parents & how these shape children's school experiences.

Boene, Bernard (Université de Rennes, Rennes, France [e-mail: b.boene@online.fr]), **Method and Substance in the Military Field,** *International Sociological Association, Gothenburg, Sweden,*

¶ This presentation tries to assess the cognitive merits of various research programmes in the treatment of military issues. It contends that, on such topics more than on others, method influences conceptualization & theory construction. Having noted the infrequent showings of some programmes in the military field, it goes on to demonstrate, based on the literature produced over a century, that the blames laid at positivism's door are especially justified in it. The Weberian/Simmelian tradition has shown more promise. A brief synthetic formulation of its achievements suggests that it alone accords with Clausewitzian thought, & shows sufficient flexibility to account for recent changes which baffle other programmes, or to open avenues of collaboration with promising new approaches (notably, nonlinear dynamics).

2010S00305

Bogner, Artur & Neubert, Dieter (University of Bayreuth, Bayreuth, Germany, 95440 [tel: +49 921 554119; fax: +49 921 554118; e-mail: Dieter.Neubert@uni-bayreuth.de]), **Civil-Society and Non-State Actors in Conflict Management and Post-Violence Processes in Sub-Saharan Africa,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recent debates on conflict transformation & peacebuilding emphasize civil-society & other non-state actors at various levels of social structures–such as non-governmental organizations, churches, local associations, local leaders & bodies with or without traditionalist legitimation (so called "tracks 2 & 3"). They are viewed as key actors in the (re)construction of a post-violence society. At careful inspection the distinction of 'state' versus 'civil society' proves too sweeping & tends to exclude relevant actors & institutions from close examination. The socio-political arrangements that evolve in de-escalation processes are more complex than this static binary difference suggests. We shall demonstrate the complexity & diversity of relevant non-state actors & forms of association with the aid of case studies from Uganda (and Ghana). Furthermore, the cases from Uganda suggest that a successful peace process often contradicts the ideals of "positive peace" & "transitional justice". Therefore we recommend (amongst others) a moderate de-coupling of the concepts 'civil society' & 'democratization' & to focus on the factual diversity of non-state actors & their complex roles in post-violence processes in the global South.

Bogomolova, Tatyana (Department of Social Problems, Institute of Economics, SB RAS, Novosibirsk, Russian Federation, 630090 [tel: +7/383/330-0535; fax: +7/383/330-2580; e-mail: bogtan@rambler.ru]), **Economic Mobility Trajectories of the Russian Population: The Experience of the Last Two Decades,** *International Sociological Association, Gothenburg, Sweden,*

¶ The individual's capacity to make use of all disposable capital, namely human, economic & social, to respond the challenges of time & social environment, to resist covariant & idiosyncratic shocks is reflected in his/her trajectory of economic mobility. This paper is devoted to detection of patterns of economic mobility trajectories of the Russian population in the last two decades, 1990-s & the current one based on the combination of "quantity" and "quality" data analysis. The informative base, used for this research, comprises the data of Russian Longitudinal Monitoring Survey (RLMS) for the period of 1994-2007, as well as the materials of individually detailed interviews. Some certain types of change of individual's economic position, the characteristics of socio-demographic groups, & also the determinants of upward and downward steps of the trajectories have been detected on the basis of statistic analysis of RLMS data. The aim of individuals' interviewing was to study the so-called "subjective" economic mobility. Being the crucial turning points in economic mobility trajectory of individual, both macro-events (such as reforms and economic crises) & micro-events (such as getting education, new employment & loss of job, marriage & divorce, birth of children) affect the position of a specific person, & the way it happens is revealed through the analysis of the obtained research materials.

2010S00307

Bohlin, Anna U. K. (CEFOS, University of Gothenburg, Box 720, 405 30, Gothenburg [tel: +46 31 786 4144; fax: +46 31 786 4480; e-mail: anna.bohlin@cefos.gu.se]), **Restituting Protea Village: Neighbours, Newcomers and Nation-Building in Post-Apartheid Cape Town, South Africa,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper focuses on class, ethnic & gender relations in & around Protea Village, Cape Town, a neighbourhood razed during apartheid. Former residents, who were forcibly resettled on the outskirts of the city some forty years ago, won their land back through the land restitution programme in 2006. They are currently in the process of planning the redevelopment of the residential area, to which 86 families will return. Given its location within a prosperous part of Cape Town, many residents of the surrounding areas are opposed to the redevelopment. They fear reduced property prices, rising crime levels & a loss of green areas, & some residents have taken the City of Cape Town to court over the issue. Based on fieldwork & interviews conducted in 2008, this paper examines the emerging relationships between former & current residents, arguing that the neighbourhood is an important arena for the playing out of new forms of post-apartheid urban belonging. While relations between some former & current residents are fraught, this paper shows how outside of formal processes, various activities & events related to the planned redevelopment have resulted in new connections being forged between the returnees and the current residents.

2010S00308

Boito, Eugenia, Espoz, María B. & Sorribas, Patricia M. (CONICET/CEA-UE, General Paz avenue, 154, 2 floor, Córdoba, Argentina. 5000 [tel: 54-351-4341124; e-mail: ceaULue@cordoba-conicet.gov.ar]), **Pensar los des-bordes mediáticos del conflicto: las ciudades-barrios como síntoma de la actual tendencia urbana de socio-segregación** (Thinking from Media Discourse on Conflict: City-Districts as a Symptom of the Current Trend of Socio-Urban Segregation), *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ This work aims to describe, from the media discourse production, the map of social unrest that arose in the implementation of a policy of social housing in the city of Córdoba, Argentina as it was the program "Mi casa, mi Vida" (My House, My Life) (2004) for "vulnerable" families. In this instance was rebuilt a corpus consisting of news corresponding with two periods of application of that housing policy, 2004/2005 (transfers to the new neighborhood-cities & launching of the program for the rest of society) & 2007/2008 (latest applications of the program), based on local printing press. This description & the identification of certain scenes of the conflict in both periods, allow us to set a framework for understanding the current urban trends in Latin America that clearly respond to a "strategic town planning"–in the Benjaminian sense which distinguish body-class. Separation that is also executed by public/media discourse through operations that respond to a "political economy of morals" about poverty and that throughout the intervention of diverse social agents–constituted themselves as "legitimized voices"–who appropriate the enunciation of the conflict, outlining the edges and overflows of social unrest inscribed in the social housing policy stated.

2010S00309

Boldt, Thea D. (KWI, Goethestr. 31, 45128 Essen, Germany [tel: +49 201 72 04 207; fax: +49 2 01 72 04 111; e-mail: thea.boldt@kwi-nrw.de]), **Micro and Macro Trajectories in the Context of Transnational Polish-German Migration,** *International Sociological Association, Gothenburg, Sweden,*

¶ The concept of trajectory is used broadly in the social sciences. Most of the scholars in the frame of the interpretative qualitative research, especially biographical studies, refer to Anselm Strauss' work on chronic illness when using the term (Glaser/Strauss 1968, 1970; Strauss et al. 1985). In Germany Strauss' approach to trajectory has been developed further by Fritz Schuetze & Gerhard Riemann, who apply it to more universal phenomena of suffering (Riemann/Schütze 1991). Schuetze, who's mainly interested in analysis of biographical narration processes, defines trajectory ("Verlaufskurve") as a cognitive process of comprehending the biographical experiences of suffering & crisis due to unexpected circumstances & organizing it in the biographical narration. Some authors like Ursula Apitzsch explore the empirical potential of trajectory beyond its normative notion and put attention to the fact that the re-organization of biographical experience due to the radical changes can release new potentials for further biographical development (Apitzsch 2000). In my work I use the term "trajectory" to define the phases of biographical identity transformation that take place in cause of experience of biographical discontinuity & lead to re-organization of biographical structure & re-interpretation of biographical experience in the horizon of past, present & future in relation to different levels of collectivity (family, ethnic groups, nation etc.). Analysing biographical narrations of Polish emigrants living in Germany I'm especially interested to comprehend the phenomenon of continuity & change (transformation, discontinuity) on the social structural level (Oevermann 1991) in micro & macro scale. In my paper I'd like to propose the comparison between the biographical trajectories of Polish emigrants in Germany & socio-historical trajectories of transformation in Europe that affected greatly the German-Polish relationships (ex. 1989 a

Fall of the Wall, 2004 a EU East Enlargement). Special attention shall be put to the national identity constructions in two nation states (Poland & Germany) and to the question in which way the processes of socio-historical transformations between Western & Eastern Europe effected the reconciliation between the two countries after the World War II (Spohn 2003). In this way the impact of European macro-trajectories on the collective reflexion about national identity in both countries in regard to the same historical frame of conflicted German-Polish relations shall be examined in comparison to biographical narrations of Polish emigrants in Germany. In my paper, I'd like to exemplify the impact of the macro trajectories (socio-historical transformations) on the micro trajectories (biographical trajectories) in form of reflexion, re-interpretation and re-definition of the common German-Polish past in the biographical frame. Furthermore through the comparison between micro & macro trajectories in transnational European migration setting I aim to explore the theoretical potential of the "trajectory" concept further. Boll, Karen (IT University, Copenhagen, Denmark [tel: 0045 2980 4828; fax:; e-mail: kbl@oem.dk]), **The Shaping of the Danish Tax Authority and Black Market Car Dealings,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper investigates how risk management–in relation to black market car dealings–is working in the Danish Tax Authority. Focus will be on how this management theory shapes work practices of tax inspectors & how these practices equally shapes taxpaying businesses that act in the market. Hereby the paper draws attention both to what makes organisations & what makes market actors. The analysis is based on an ethnographic fieldwork & draws attention to several specific issues. First, the analysis shows that there is a simultaneous shaping of the tax authority & market actors by the management devices. This is in contrast to a belief held by tax inspectors that businesses' non-compliance is primarily shaped by moral & values held by the persons in charge of the businesses. Second, the paper illustrates how the managerial concept of risk management plays a decisive role in performing a specific rationale of government. This rationale of government shapes the gaze of the tax inspectors & makes them see specific things. Third, the paper draws attention to the hard work of shaping the "right" reality. Per definition, black market car dealings prefer to be invisible to the tax authority. Thus the tax inspectors & the black market car dealers are constantly engaged in disputes about how to perform the "right" reality. In sum, the paper shows how work practices guided by risk management are built up, how they shape actors, how they are contested & how different realities are performed.

Bonanno, Alessandro & Cavalcanti, Josefa Salete Barbosa (Department of Sociology, Sam Houston State University, USA, Huntsville, Texas, USA, 77341 [tel: 936.294.1488; e-mail: socULaab@shsu.edu]), **Food Quality and Labor: Corporate Retailers and Fresh Fruit Production in Brazil,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper investigates the consequences that the demand for quality food in the global North has on the use of labor in a producing region of the global South. Globalization has linked once distant actors & processes. Because of capital hypermobility, now global networks of production & consumption have reconfigured the scope of social relations & their consequences. Agriculture & food is one of the most globalized sectors & one in which distant producers & consumers are linked together in commodity networks. As new & more products are made available to consumers, the demand for quality food has prompted global supermarket chains to address it in the global North. It has further been accompanied by production in the global South. Employing a case study methodology, this paper analyzes the consequences that the production of grapes has on labor in an irrigated region of the Brazilian Northeast. This production is destined for export to corporate supermarket chains. The study demonstrated that the global production of quality grapes engenders negative consequences for labor. Laborers work longer for less pay, perform more sophisticated tasks, are employed mostly through temporary contracts, & experience new and more advanced forms of control. Additionally, the paper illustrates the ways in which others salient actors, such as global food retailers, brokers & firms, operate in regard to labor. It is concluded that, despite the manifested intentions of those advocating quality food, its production does not immediately translate into better labor relations in the global South.

2010S00312

Boni, Alice Selene (University IUAV of Venice, Venice, Italy, 1957 [tel: +39 02 36543452; e-mail: aliceselene.b@gmail.com]), **Cities of Differences. How to Rethink the Theme of Community?,** *International Sociological Association, Gothenburg, Sweden,*

¶ I would like to propose a discussion about the urban treatment of diversity (I. M. Young, 1996) inside a society that is often called the society of differences. Diversity & difference like inequality are not here perceived as inequalities but, how Crosta suggests (2001), as values resulting from social interactions, that are unique & different for each person. The theme of diversity in the cities thought by the public policies approach, puts a strain on the relation between territory & population, between spatial organization & social organization & also between rights, society & individuals. My questions are: "How does the fact to be members of the society here analyzed reduce & limit the individual rights?" And, "How is it possible to find & to protect, in this context, those forms of interactions that have resulted in the production of public commons?". I inquired how diversities are treated in a life space, observed & studied its transformation process through social practices & public action. This place is in the city of Milan, & it is subject of a new neighborhood plan, in which, it is interesting to find out the idea of a city & community behind the project. Inside this research, led using a circumstantial approach, I tried to explore, testify and trace the connections between heterogeneous components of urban life, putting together practices, narrations, architecture and everyday life. Finally I would like to discuss the theme of community & the possibility to rethink this theme using the key word "event" that is distant from the concept of community as an assumed precondition, in this case I'd rather give the idea of community as an event (a possibility) of social interactions.

Bonini, Astra (Johns Hopkins University [e-mail: astra@jhu.edu]), **The Rise and Fall of the United States: Oil, Power and Inequality in the World System,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the role of oil in enabling the rise, maintenance and increasingly likely fall of the United States as a hegemonic power in the world economy, & examines the relative importance of oil to China. The paper examines the nature of each country's trade and investment relations with oil producers, business organization in the oil sectors, foreign aid policies toward oil producing countries (flows of finance, technology & knowledge), and economic emphasis on capital versus labor intensive production. The objective is to understand how a transition away from a US centered world economy & potentially toward a China centered world economy will change the distribution of wealth & power between oil consuming & oil producing countries in the world system.

Bonneville, Luc (Université d'Ottawa, 554 King-Edward (Ottawa, Ontario, Canada) K1N6N5 [tel: 613-321-8953; e-mail: luc.bonneville@uottawa.ca]), **Comment contrer par le dialogue inter-professionnel les conflits et le stress en milieu de travail : le cas du travail hospitalier** (How to Deal with Dialogue Inter-Professional Conflict and Stress in the Workplace: The Case of

Hospital Work), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Dans le cadre de cette conférence , nous allons présenter les constats que nous avons effectués dans le cadre d'une recherche qualitative menée auprès d'infirmières travaillant en contexte hospitalier au Québec. Entre 2007 et 2008, 60 entrevues (n = 60) semi-directives ont été menées auprès d'infirmières et d'infirmières auxiliaires. Nous nous sommes intéressés à leur travail, au quotidien, pour comprendre les difficultés auxquelles elles sont confrontées sur le terrain (dans leurs interactions entre elles et aussi avec leurs patients). Nous voulions en apprendre davantage sur leur vécu (notamment au plan relationnel), dans un contexte (plutôt généralisé chez ces professionnels) qui est marqué par un haut taux de dépression, de stress chronique, de fatigue chronique, d'absentéisme, de violence (réelle et symbolique), etc. D'un côté, ces professionnels vivent les pressions engendrées par la société dans son ensemble et par le type de management qui prévaut au sein de leur organisation (un management de la performance et de l'excellence où des valeurs comme la "qualité totale" priment), et de l'autre ils doivent aussi répondre aux exigences (de plus en plus complexes) des patients et de leurs proches. Or, au-delà des contraintes socio-organisationnelles associées à l'instrumentalisation (à des fins de productivité) des relations entre soignants et soignants, et entre soignants et soignés, nous avons observé un cas spécifique de "mise entre parenthèse" de chaque journée de travail par ce que les soignants appellent une "culture d'entraide". À tous les jours, de manière tacite puis ensuite plus ou moins institutionnalisé (donc avec le support des gestionnaires), les soignants se rendre dans un local pour dialoguer, échanger, se disputer, débattre, ou tout simplement pour discuter de choses et d'autres qui peuvent ne pas avoir de lien avec le travail. Cette forme d'exutoire permet ainsi aux soignants d'améliorer leur sentiment d'appartenance à l'organisation par l'amélioration de la qualité de leurs relations (on observe alors un désamorçage des conflits, de la violence, du stress, etc.). L'aspect fondamental de ce constat réside dans le fait qu'il va à l'encontre des principaux modes de gestion qui prévalent en ce moment dans le contexte hospitalier (où la tendance est à la gestion de type industriel). Cela nous rappelle aussi que le dialogue est fondamental dans la résolution des problèmes quotidiens vécus en milieu de travail, et que les moments de "fuite" se conjuguent avec une amélioration globale de la qualité de vie au travail.

Bonny, Yves (Département de sociologie, Université Rennes 2, Place du Recteur Le Moal, Rennes, France, 35043 [tel: 299141985; e-mail: yves.bonny@univ-rennes2.fr]), **The Normative Dimension of Sociological Theory and the Dialogue with Political Philosophy,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this communication is to examine the articulation between political philosophy & sociological theory from two perspectives. The first starts with a canonical distinction between the analytical & normative orientations of political philosophy as opposed to the value-free & empirically based objectivation developed by sociology. It then proceeds to consider whether the concepts & questions developed in their social theory by political philosophers could be somehow appropriated by sociologists. By contrast, the second perspective starts with a critique of this distinction & proposes to closely articulate the value-free & normative dimensions of social theory within the sociological tradition itself, as two inseparable orientations of the discipline, aiming at articulating distanciation and involvement. From within such a perspective, sociology does produce a political philosophy of its own, whether it is explicit or implicit. These two perspectives will be discussed & the second one defended through the examination of the category of civil society. We will show the importance of distinguishing at least four uses of this category: 1) a concept mobilized through history by political philosophers & theorists, such as Hegel or Gramsci; 2) a concept developed by sociologists within an hermeneutical orientation through a theoretical reconstruction of effective historical developments; 3) a notion mobilized by numerous social and political actors with extremely varying meanings, which sociology can take as its empirical object of study; 4) a concept developed by sociologists within a normative orientation, which naturally enters into a dialogical relation with political philosophers.

Borel-Saladin, Jacqueline M. (Sociology, University of Cape Town, Rondebosch, South Africa, 7701 [tel: +27 21 650 3501; e-mail: jsaladin@iafrica.com]), **Migration and the Question of Social Polarization,** *International Sociological Association, Gothenburg, Sweden,*

¶ The manufacturing sector, once a major source of urban employment and consisting of a large percentage of skilled & semi-skilled, middle-income jobs has declined while the service sector, argued to be predominantly either high-skill, high-pay or low-skill, low-pay jobs, has grown. Thus, the decline of manufacturing & the growth of the service sector is argued to result in a more polarized society (Sassen, 1994). Low-wage, low-skill service sector jobs are argued to attract immigrants from rural areas or developing countries who are poorly educated & unskilled & therefore unable to compete in the urban labour market for anything other than low-skill, low-pay jobs. Thus, the contention is that immigration creates social polarization by increasing the numbers of low-wage workers (Sassen, 1994). However, other scholars hold that the growth of an expanded low-wage service sector is only possible in the face of large-scale migration of these poor, uneducated, unskilled workers (Hamnett, 1994). Using survey and population census data of the Johannesburg region of South Africa from 1970 to 2008, the following questions are addressed. Is the occupational structure of the employed workforce becoming polarized due to the growth of low-wage service sector jobs? How much of this polarization is due to the employment of low-skilled in-migrants? My results show that while there has been large-scale in-migration of low-skilled workers from the countryside, & that low-skilled migrants are over-represented in low-wage jobs, the growth of low-wage jobs has not been enough to result in a polarization of the occupational structure. Instead the increase in high-skill, high-wage & middle-income service sector jobs is that much greater, leading to a pattern more consistent with growing professionalization of the urban workforce.

Borelius, Ulf (Department of Sociology, Göteborg University, Göteborg, Sweden [e-mail: ulf.borelius@comhem.se]), **The Rise of Liberation Theology and the Catholic Student Movement in Latin America,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Peruvian theologian Gustavo Gutiérrez is considered 'the father of liberation theology'. The dominant notion is that he got his ideas while working among the poor in Peru, in the 1960s. An alternative notion is that he formulated his theology while serving as a theologian for the Latin American Episcopal Council (CELAM), also in the 1960s. My research shows that there are good reasons to question both these notions. In the paper it is argued that the theology of liberation rose within the Catholic student movement, and that it originally was a response to the student's religious needs & demands. It is also proposed that liberation theology is a collective product, created by both students & professional theologians. The study is based on materials gathered from several Latin American archives, the archives of Catholic Student Movements, & on interviews & email correspondence with several pioneers of the theology of liberation.

Borghi, Vando (University of Bologna–Dept. of Sociology, Strada Maggiore 45–40125 Bologna [tel: 0512092866; e-mail: vando.borghi@unibo.it]), **(Re)locating Northern Modernity. Lines of Tension of the Network Society Model, Looking at Possible Modernities,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper starts from the need of giving a more precise time-spaced collocation to the conceiving of modernity. A definition of modernity as the result of an interpretative space–produced by tensions between the ideal of individual autonomy & the objectives of full intelligibility & rationalization of the world–is discussed. The model of the network society is then analyzed as one of the current Western dominant frameworks of that interpretative space. On the one side, it seems to provide the most effective vocabulary for understanding crucial social processes of the modern corporation and, more in general, of the "new spirit of capitalism"; moreover, network organizational model is usually presented as more democratic & open, compared to the traditional modern hierarchical devices. Organising via vertical devices–institutions, political representative systems, etc.–has to leave space to the self-organising, horizontal society via networks. But the paper points out as well the fields of tension and the paradoxical contradictions–mainly concerning a crucial pillar of the Western definition of modernity: the process of individualization–internal to that model. In the third part of the paper, some promising directions of social theory are explored. The possibilities of combining sociology & critique, through the abandoning traditional monological intellectual architecture of the "Northern" or "metropolitan social theory" & producing a more inclusive & open social theory of modernity are discussed, looking for possible alternative frameworks for modernity as interpretative space.

2010S00319

Borghini, Andrea (University of Pisa [e-mail: borghini@dss.unipi.it]), **The Power of Symbolic Power and Everyday Life,** *International Sociological Association, Gothenburg, Sweden,*

¶ In our global era the crisis of the nation state opens up new vision about power & its dynamics. It doesn't mean the state's end, but the chance to give a different vision of it. Particularly, the focus of our paper stresses on, from one side, Symbolic Power, as a power own of the state, the power of constituting the given through utterances, of making people see & believe (Bourdieu); and, from the other side, on Social Imagination, at the same time, as the object & the source of the Symbolic Power. The, sometime problematical, intertwining of them gives rise to several implications: The nation state's epistemological dimension and its influence of the way thinking Society; The role of the Governance, as a political instrument that shows the relationships between State & Society, Symbolic Power & Social Imagination; A new vision about crisis & transformations of the nation state. Through Symbolic Power, it continues to assert itself and control over everyday life. The conclusion is that sociologists has to concentrate their efforts at this level of analysis, in order to understand the complex political dynamics of our time & in what way the Political comes back to Society.

Börner, Stefanie (Bremen International Graduate School of Social Sciences [tel: ; e-mail: sboerner@bigsss.uni-bremen.de]), **Collective Preconditions of the Social. The Nationalisation of Social Insurance at the End of the Nineteenth Century,** *International Sociological Association, Gothenburg, Sweden,*

¶ The question whether an EU-wide social policy is conceivable at the European level & which prerequisites it requires has often been referred to in theoretical terms. Besides the known financial and democratic deficits within the institutional framework of the EU especially sociological research often thematises another dimension which can be summarised as solidarity bonds: Can a rather comprehensive system of social security be realised without a feeling of solidarity among its members? This paper sheds light on these collective preconditions of social policy. We often forget that such a transition from a smaller to a bigger territorial level has already been successfully accomplished between the local and the national level at the end of the nineteenth & beginning of the twentieth century. Using the example of German & English workmen's mutual benefit societies the paper empirically examines how existing categories of belonging have been challenged by the projected national health insurance schemes. Secondly it identifies dominant patterns of argumentation for or against the expansion of membership spaces. In a third step possibilities to apply and generalise this historical sociological method to the current constellation will be discussed.

Boschken, Herman L. (San Jose State University, 711 Puma Court, Davis, CA, 95618 [tel: 530-758-5557; fax: 530-758-5557; e-mail: boschkenULh@cob.sjsu.edu]), **Global Cities Are Coastal Cities: Implications for Environmental Policymaking,** *International Sociological Association, Gothenburg, Sweden,*

¶ An understated realization of urban affairs is that global cities are mostly found in a coastal zone. This is true worldwide but it is especially characteristic of American global cities, where virtually all are found in coastal areas. Although much of the American population chooses to live in coastal regions because of their rich biodiversity, & in global cities because of the robust employment & lifestyle opportunities, the population pressures do not always mix well in producing sustainable outcomes. Moreover, sustainability is a critical holistic matter in such uniquely immense cities because it involves complex systemic interactions between urban development & the a coastal ecology. This article develops the metrics for this unique setting & identifies two principal agents contributing to the policy challenge: the concentration of foreign trade through global-city seaports & the resource-intensive activity levels & mobility needs of a global professional managerial class. The article goes on to argue that systemic incongruities appear to have been perpetuated by a "silo effect" (the dysfunctional segregation of policy disciplines often caused by differences in ideology, scientific fragmentation, and professional focus that limit the ability of one discipline to sufficiently interact with another). It concludes with implications about how one might address policymaking in light of the collision between urban & ecological sustainability in the coastal zone.

Bosi, Lorenzo & Della Porta, Donatella (European University Institute [e-mail: lorenzo.bosi@eui.eui]), **Explaining Individual Path of Radicalization in Political Activism,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this article we aim at single out three different paths of radicalization in political activism on the basis of the dominant motivation: ideological path, instrumental path, & symbolic path. While some basic causal mechanisms are common to all three paths, the dominant individual motivations are different, & so are the types of networks which are mobilized, the speed of the process and its dynamics. Within a most different research design, we will look for similarities in two very different forms of political violence: the left-wing underground organizations in Italy, from the early 1970s to the early 1980s, & the ethno-nationalist political violence of the Provisional Irish Republican Army (IRA) in Northern Ireland, from the second half of the 1960s to 1972. We aim in particular at conceptualizing some different ways in the underground, reflecting on their characteristics, preconditions and consequences. In this typological endeavor, we shall rely upon life history interviews conducted mainly by the two authors in Italy and Northern Ireland. Finally, we conclude by discussing the advantages of our approach to better understand the micro-foundations of political violence, which are fundamental if we want to develop a dynamic & interactive approach to the study of the radicalisation of political conflicts at both macro & meso levels.

Bosisio, Roberta & Belotti, Valerio (Department of Social and Political Studies, University of Studies of Milan, Milan, Italy, 20122 [e-mail: roberta.bosisio@unimi.it]), **"Whose Space Is This? Also Mine". Young People Take the Floor,** *International Sociological Association, Gothenburg, Sweden,*

¶ The research presented in the paper explores young people's experiences of participation in the family, at school & in the local community, & examines participation practises acted within these daily life contexts. The aim is: to explore children's and adults' representations of participation in the light of children's rights; to understand if participation is part of children's daily life experience; and, finally, to explore if local authorities "do take children's rights seriously" when they plan social, urban & environmental policies. The research has been conducted by means of three different surveys all over Italy. The first involved a sample of 21.578 11, 13 & 15 year old boys and girls selected within 559 schools. The second & the third involved respectively a sample of 163 head teachers of secondary schools & 61 mayors. The landscape of participation practises is varied & complex for both the thematic areas & the methods. Nevertheless young people participation is often not recognised by adults, who do not always take into consideration youngsters' contributions, especially at school where adults are still oriented not to consider children as serious interlocutors & social actors.

Boso, Àlex (Department of Political and Social Sciences, Pompeu Fabra University, Barcelona, Spain, 08002 [tel: +34 93 5421517; e-mail: alex.boso@upf.edu]), **Who Earns More? The Inconsistencies of the Spanish Migration Legal Framework,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper analyses the evolution of immigrant rights in Spain and seeks to assess the role the Spanish migration law plays in the development process of immigrants' legal protection. I will first emphasise the main macro-contextual determinants that push people from the South to migrate in the first place. I will then examine in-depth the international, European & Spanish migration legal framework. Accordingly, I will suggest that both residence and labour rights, that are crucial in determining immigrants' access to other fundamental rights & basic needs, have become privileges clearly commodified by the Spanish migration law. In order to test this, I will use data from a National Survey with immigrants (the National Statistic Institute, 2007) in base of which I will analyse how immigrants' legal status has a significant impact on their income level & this independently of other determinant income factors like social status, age or gender.

2010S00325

Botterman, Sarah (Political Science–Katholieke Universiteit Leuven, Parkstraat 45 box 3602–3000 Leuven–Belgium [tel: +32 16 32 32 47 ; fax: +32 16 32 30 88; e-mail: sarah.botterman@soc.kuleuven.be]), **Religious Voting in Belgium: Prevalence and Contextual Effects,** *International Sociological Association, Gothenburg, Sweden,*

¶ Traditionally, the majority in Belgium was Catholic & voted for the Christian democratic party. The religious cleavage was consequently viewed as the most important source of voter alignments. However, voter

alignments decreased due to secularization & other prominent cleavages. Being a predominantly Catholic country with few other religious minorities & having a Christian democratic party with traditional ties to the Catholic Church we can investigate the religious vote in Belgium. The first research question is: Does the religious vote still exist in Belgium? Does the chance to vote for the Christian democratic party increases if someone is Catholic? We examined the municipal elections of 2006, using linear & logistic regression models. Our second research question is: Does the municipal context influence the individual religious vote? Does the chance to vote for the Christian democratic party increase if someone is Catholic in a municipality with a high percentage of Catholics? To answer this question, we will use logistic multilevel regression. For our analysis, we use the Social Cohesion Indicators in Flanders (SCIF) community dataset (n=308) & the new SCIF survey dataset (n=2080).

2010S00326

Bouchayer, Françoise (Centre Norbert Elias, CNRS-EHESS, Marseille, France [tel: 00 33 491 14 07 20; fax: 00 33 49I 91 34 01; e-mail: bouchayer@univmed.fr]), **How Health Professionals Deal with Managerial Shaping of Their Activity,** *International Sociological Association, Gothenburg, Sweden,*

¶ In industrialized societies health professionals activity is currently shaped both by the health insurance systems & by the evidence-based medicine. This paper will examine how these professionals deal with the implementations of this managerial frame. We will focus on primary care professionals, in France. Our methodology is mainly based on empirical data: in-depth interviews among general practitioners, nurses & physiotherapists. We start from the idea that care delivery is not self-evident, that it is not easy to cope with patients & their various complaints and requests. So, primary care professionals gradually develop what we call "preference systems" regarding the characteristics of their activity: client base profiles, informal or alternative specialisations, daily work organization, ways of being with patients & care, etc. Our main results are: 1. Professionals logics & managerial logics can be in tension in the field of care delivery because of a loss of room to manoeuvre for health professionals; 2. Health professionals have diverse resources to keep personalized control on their activity; 3. Health professionals organizations react to the "top-down" managerial rules & try to promote more "bottom-up" perspectives.

2010S00327

Boudet, Hilary Schaffer, Davis, Jenna & McAdam, Doug (Stanford University, Stanford, California, USA, 94305 [tel: 650-380-8497; e-mail: hilschaf@stanford.edu]), **Civil Society and Conflict in Global Infrastructure Projects: Experience from the Water and Pipeline Sectors,** *International Sociological Association, Gothenburg, Sweden,*

¶ The role of international non-governmental organizations (INGOs) in opposing infrastructure projects in the developing world has become an important topic of debate in the popular press & academic research on civil society & project management. Our objective is to develop & test a conceptual model of drivers of conflict within infrastructure projects using fuzzy set/Qualitative Comparative Analysis. More specifically, our analysis seeks to identify combinations (or recipes) of country, project, and stakeholder factors that are associated with the emergence of conflict within 26 development projects in the oil & gas pipeline and water supply sectors. Our research provides evidence of a conflictual yet symbiotic relationship between INGOs and international financial institutions. We found that the involvement of international financial institutions is associated with conflict in both sectors. INGO connections did not appear in pipeline recipes but are a necessary condition for conflict in water projects. Moreover, impacts to indigenous people figure significantly in the recipes of conflict for pipeline projects, suggesting the salience of this issue globally & the role of international & local NGOs devoted to the protection of indigenous peoples in opposing these projects.

Boudreau, Julie Anne (Institut national de la recherche scientifique, Montreal, Quebec, H2X 1E3 [tel: +1-514-499-4072; e-mail: julie-anne.boudreau@ucs.inrs.ca]), **The Politics of Street Gangs: Urban Informality as a Logic of Political Action and its Consequences on the State's Role and Instruments of Action,** *International Sociological Association, Gothenburg, Sweden,*

¶ Roy & AlSayyad (2004) argue that "urban informality" has become a new way of life, while the work of Pedrazzini (2007) shows how young gang leaders have become the quintessential urban individual, most adapted to the conditions of urbanity. This paper critically assesses the public debate on street gangs in North America, looking at its stigmatising effects from the point of view of youth categorized as being "at-risk" of being recruited. It discusses how their feeling of injustice, the representations they have of the gang universe, & their daily practices of mobility, shape their political subjectivity. Based on interviews with youths in Montreal, the paper analyses street gangs as illustrations of urban informality as a way of life. By informality we mean all forms of action that illustrate the weakening of traditional modes of socio-political regulation through public policy, & signal the rise of economic polarization. Informal networks can take various forms, from street vending to street gangs, from clandestine immigration to squats, from counterfeiting to drug trafficking. These various forms are not necessarily related, but they all take shape in cities. We hypothesize that under the contemporary historical conditions of urbanity, a new logic of political action is developing, characterized by 1) interdependencies lending unprecedented salience to small acts that can easily be transformed into unexpected political situations on global & local scales, 2) unpredictability as a premium drive for action, 3) non-consequentialist forms of action (non-strategic, intuitive, affective), 4) a force of impulsion (experimentation, slowly arriving at political claims without having planned it) rather than being energized by antagonism (a clearly identified enemy), & 5) an ambiguous & interdependent relationship between the formal and the informal. The aim is to shed light on how the State defines its role at the edges of its authority (the porous formal-informal boundary).

2010S00329

Boussard, Valérie (Université de Versailles, 47 boulevard Vauban, 78 047 Guyancourt cedex. France [e-mail: valerie.boussard@wanadoo.fr]), **Managers as "Professionals" of Management,** *International Sociological Association, Gothenburg, Sweden,*

¶ Traditionally, sociological analyses have opposed Organization (or Management) to Professions. This communication aims to discuss this opposition by presenting some empirical results about the activity of managers in a big French public firm, the National Railway Company named SNCF. Reading Freidson's propositions (2001), we can conclude that managers are all but professionals. They are just agents of a weberian rationalization. They have no rules, no professional skills, no credentials & so on. The empirical research about managerial work in the SNCF (quantitative & qualitative data) leads to contest these latter propositions. The communication will bring some evidence that managerial work is based on a kind of professional knowledge, according to the definition of Abbott (1988).This knowledge is developed & shared within a professional/occupational space, which could be named the "managerial professional space" & which is grounded on three interdependent principles: Control, performance & rationality (Boussard, 2008). This space should be conceived in a neo-weberian way, where professional or occupational groups are linked by ecological relationships & compete with each other for jurisdiction occupation. This professional knowledge allows managers who develop managerial practices & devices to have a successful career within the firm, while managers who don't behave in this "managerial way" have flat or short careers. In the same time, acting within management rules lead managers to implement, step by step, changes in the firm which could subsequently no longer be interpreted as the rise of a global trend due to rationalization or capitalism laws. It should be more accurate to explain recent mutations of the SNCF as the converging interactions of managers who consider their occupation as a professional way of organizing work of other workers.

2010S00330

Boutillier, Clément (CEAN, Sciences PO Bordeaux, CEAN–IEP de Bordeaux 11 allée Ausone Domaine universitaire 33607 Pessac Cedex, FRANCE [tel: +234 7056258388; e-mail: boutillierclement@msn.com]), **Could Politics Not Be Dirty: Youth Perceptions of Politics and Policies in Lagos State,** *International Sociological Association, Gothenburg, Sweden,*

¶ The return to civilian government in Nigeria in 1999 has triggered new ways & more opportunities for Nigerian citizens to participate in politics. However, many still perceive it as "a dirty game" which offers little room for newcomers & for those unable to aggregate important networks of followers & supporters. Thus, young people are marginalized from the decision making-process, often used as a tool during elections while already being excluded from the job market to a large extent. The Lagos state administration, especially since 2007, has however put a strong emphasis on sorting out what have been perceived as the causes of this potentially explosive "youth problem". The key aspect of the subsequent state policies has been to create opportunities for youth to be busy (either through employment or leisure) while also insisting on the necessity for political

elites to be accountable & to deliver basic services to the people. By observing & interviewing young people targeted by these policies & discourses, this paper sheds light on emerging forms of political imagination & new links of trust between them & political elites in Lagos.

Bover, Tomas & Chaves, Mariana (CONICET-UNTREF-UNLP, La Plata, Argentina [tel: 54 221 4522539; e-mail: mchaves@untref.edu.ar]), **"The Circumstances of Life": Biographies of Young Policemen in Argentina,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ This work focuses on the analysis of biographical stories of young people entering state security forces. In Argentina, Police institutions recruit low & middle-class youth people that ended the secondary school education. Work, to be a policeman, is a unique election that implies being invested in an institution that represents a conflictive relation between State & citizens, mainly young citizens, but to be admitted to the police is also a choice of short survey with warranted job, & implies both the security of a job with continuity, & the insecurity of the risk of interruption of life itself. In their stories of life, this election, is justified by the "circumstances of the life" that they presented as a contradiction, an option never before evaluated or the only possible to way out, & sets out the "circumstances" of class, family, labor, gender, & emotional among others, that would oblige them to become policemen. "The circumstances of life" are spaces where the individual narrative is part of a societal narration, & analyze them implies analyzing the constructions of the biographies of young people in agreement to a world in motion

Bowes, Alison, Dawson, Alison & Bell, David (Applied Social Science, University of Stirling, Stirling FK9 4LA, Scotland UK [tel: +44 1786 466424; fax: +44 1786 466299; e-mail: a.m.bowes@stir.ac.uk]), **Can Lifestyle Monitoring Support Unpaid Care? Some Ethical Considerations,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction Electronic lifestyle monitoring (LM) may save lives by alerting family & non-family carers & indeed older people themselves to changes in routine which may indicate serious illness or threats to health & well-being (Sixsmith et al 2007). So-called "third generation" telecare systems (Brownsell and Bradley 2003) installed at home can collect detailed data about day to day behaviour, which could be analysed to demonstrate "normal" routines for an individual, against which unusual activity could be identified. Methods Drawing on literature review & case studies, including research in West Lothian, Scotland (Bowes & McColgan 2006), the paper discusses ethical implications of the use of LM to support unpaid care, & considers its potential to change caring relationships. Results Unpaid carers may have enthusiasm for LM which those receiving care do not share, raising key consent issues. The passive & unobtrusive nature of LM means that care partnerships are subject to surveillance whose penetrating nature they may not fully realise & from which it is difficult to withdraw. The level of intimate intrusion which LM represents is unprecedented. These issues are magnified when working with people who are cognitively impaired. In many respects, those least able to consent are those most likely to be seen as appropriate targets for LM. Conclusions Research on LM has mainly involved small numbers of participants over relatively short periods & has not explored how systems are emotionally, psychologically & socially experienced by the parties concerned & how this may affect relationships of care. An ethic of care, which emphasises the importance of relationships & interaction in care partnerships, implies consideration of integrity-protection within the "altered existential conditions" (Agich 2003) of care with surveillance, whether at home or in other settings.

Bowman, Dina (The University of Melbourne / Brotherhood of St Laurence, 67 Brunswick St Fitzroy 3065 [tel: + 61 3 9483 1373; fax: + 61 3 9417 2691; e-mail: dbowman@bsl.org.au]), **Sen and Bourdieu: Making Sense of Economic Inequality,** *International Sociological Association, Gothenburg, Sweden,*

¶ Sen's capabilities approach has become increasingly popular in Australian social & economic policy making circles. While it has much to offer, it emphasises normative understandings of freedom or capability & overlooks the role of culture in shaping the choices that men & women make & perceive as possible or reasonable. In this paper, I draw on my experience of a joint longitudinal study that examines the employment, retention & advancement of low paid workers in Australia. A key element of this work is an examination of motivations & aspirations. I reflect on my use of Bourdieu's concepts in analysing how these men & women make sense of and respond to their circumstances as they move in & out of low paid work. I argue that while a capabilities approach is useful in evaluating inequality, Bourdieu's concepts of field, forms of capital & habitus–especially as they have been developed by feminists–enable a nuanced understanding of the processes and experience of inequality.

Boyadjieva, Pepka Alexandrova (Institute of Sociology, Bulgarian Academy of Sciences, Sofia-1000, Bulgaria [tel: +359899751574; fax: +3599805895; e-mail: pepka7@gmail.com]), **Social Equity in Higher Education–Mission (Im)Possible?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper discusses the European policy concerning access to higher education. It is argued that in this respect the London Communiqué from May 2007 is of crucial importance. It not only defines the social dimension of higher education as a priority but also sets the very ambitious goal of ensuring a social diversity among students, which reflects the social characteristics of a country's population. Analyzed are two main examples of introducing social dimension of higher education: a) the social engineering during the communist regime in Bulgaria & b) the policy of affirmative action in the US & some other countries. During the whole period of communist regime in Bulgaria, 1944-1989, higher education had been one of the main factors for modeling society in the direction of reaching a homogeneous society. The variety of means which were used is analyzed: quota system, privileges for different social groups, lowering of the admission criteria for some groups, special support for some social groups, etc. In discussing the affirmative action practices the main arguments in favor & against them are outlined. The paper argues that the issue of access to higher education occupies a central place in every contemporary higher education system & that the admission policies are its crucial component. The importance of admission policies stems out of the fact that they are simultaneously and strongly linked to two major values of modern university–quality of education & social justice.

Boyer, Charles, M., Saeed, H., Adams, S., Robidoux, M. & Kendall, M. (University of Ottawa, Ottawa, Ontario, K1N 6N5 [tel: 613.715-3123; e-mail: charlesboyer613@hotmail.com]), **Situational Factors around Injury in Bodychecking and Non-Bodychecking Hockey,** *International Sociological Association, Gothenburg, Sweden,*

¶ In partnership with Hockey Canada, this study examines injury in competitive bodychecking & non-body checking youth ice hockey in male & female leagues in Ontario & Quebec. The study involved quantifying the amount of injuries, but also documenting the situational factors in which hockey injuries occur to better understand how & why injuries are occurring. The research utilized a mixed method approach consisting of game observation, postgame injury assessments & semi-structured interviewing with players, coaches & parents. In total 50 games were attended & a total of 90 participants were interviewed. All games were video recorded through a dual camera video system. Game footage was then analyzed frame by frame to pinpoint injury locations, points of impact & situational factors surrounding the injury. Results from the research revealed; 1) a disproportionately higher rate of injury in bodychecking hockey compared to non-bodychecking male and female hockey; 2) an overwhelming percentage of injuries were the result of bodychecks either given or received; & 3) while the majority of injuries were classified as non-severe, there were multiple serious injuries that lead to season ending injuries.

Boyle, Geraldine & Warren, Lorna (Bradford Dementia Group, University of Bradford, Bradford, England, BD5 OBB [tel: 00-44-1274-236602; e-mail: g.m.boyle@bradford.ac.uk]), **Researching the Decision-Making Capacity of People with Dementia: Challenges and Strategies,** *International Sociological Association, Gothenburg, Sweden,*

¶ Internationally, there has been a shift in mental health policy and related legal reform away from viewing people with dementia as "mentally incompetent" to recognising their decision-making capacity. However, there has been little empirical research to date on their actual decision-making abilities & how their "capacity" might be facilitated. This paper will report initial findings from a qualitative study, currently being undertaken in England, which explores the extent to which decision-making by people with dementia is not simply a cognitive process, but is also a social process, influenced by social & economic factors. Ethno-

graphic methods (interviews with people with dementia and their spouses & participant observation) are being used to examine in-depth the types of decisions that couples living with dementia make on a daily basis & the dynamic & interactive processes by which these decisions are negotiated or made. The paper will highlight some of the challenges involved in undertaking fieldwork relating to decision-making with participants who may lack some decision-making capacity. Practical ways of facilitating their participation in research will be discussed.

2010S00337

Bozec, Geraldine (Sciences Po (Centre d'études européennes), Paris, France, 75007 [tel: +33 6 64 82 04 31; e-mail: bozec.geraldine@free.fr]), **The Self, the Nation and the World: How Do French Primary Teachers Teach Pupils to Be Citizens Today?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper explores how French primary teachers teach their pupils to be citizens nowadays, focusing of the civic identities which are promoted in schools & their national, global & European dimensions. Historically, the construction & reinforcement of national identity in pupils was the major aim of citizenship education, particularly in France where a centralized public school system was built & where citizenship was thought in a unitary way. The current context, marked by globalization, deepened European integration, increased cultural diversity & accentuated individualism, is challenging this traditional mission of the school. The paper is based on a qualitative study which investigates official curricula & educational material, but also teachers' conceptions & educational practices. It concludes that the primacy of the French nation as a space for civic identity, democracy & civic practices is still maintained in school curricula & educational material. French primary teachers do not necessarily follow such a line, their attitudes towards citizenship education & national identity being differentiated according to their ideological orientations & their teaching environment. However, the paper finally argues that a certain rapprochement in teachers' behaviours can be noticed, due to routine practices and unquestioned issues.

Braga, Eugenio C. F. (Unicamp / IBGE, Brazil [e-mail: ecfbraga@gmail.com]), **Occupational Composition and Positions for a Sociology of Social Scientists,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper presents a survey with Social Sciences alumni from a thirty-five years time span of traditional universities in Brazil. It was developed following theoretical questions of a sociology of social scientists, different from other previous national perspectives & attempts. The survey brought empirical data with which we could: a) elaborate a description of the labor market by occupational current situation & work trajectories, b) delineate the social profile of the alumni group, c) grasp from the profession its most valued parts, of higher social position or higher status & prestige (with the support of a tradition in the social stratification field–occupational prestige), & d) integrate all data into a social composition analysis of the occupational positions projected by that social criterion. As a result, the segments of the profession–parts with different history, social demand & prestige attraction–could be analyzed (by race, gender & social origins), searching for openness & closure tendencies, & niches that concentrate social attributes.

Brahinsky, Joshua (History of Consciousness, UC Santa Cruz, Santa Cruz, CA 95064 [e-mail: jbrahins@ucsc.com]), **Cultivating Body Logics: How Pentecostals Know God,** *International Sociological Association, Gothenburg, Sweden,*

¶ Through an ethno-Historical account of an Assemblies of God missions training center (Bethany University) & a para-church organization (The Promise Keepers), I argue that Pentecostal diffusion is inspired in part by a collection of carefully entrained pedagogies of conversion & commitment, marked most clearly by sensory experience & cultural hybridity. In particular, this paper traces the historical mutations of what I call the body logics–or portable sensory dynamics–that are so central to Pentecostal pedagogies. Following the Pentecostal sensorium from its institutionalization in early Assemblies of God practice to more contemporary manifestations demonstrates a process of abstraction that seems to undergird an ease of transposition to new contexts and an ambivalent but productive relationship to modern secular subjectivities. As such, I advance investigations of intimate sensory experience by recognizing their practice as a vigorous negotiation with the modern & as part of an ongoing effort at global diffusion.

2010S00340

Brandão, Carlos da Fonseca (São Paulo State University [e-mail: cbrandao@assis.unesp.br]), **Civilization, Violence, Wars and Control of Emotion,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this paper is to discuss Norbert Elias's ideas regarding to control of emotions, violence and, consequently, to situations of war, in the context of process theory civilization, highlighting aspects of psychogenesis & sociogenesis. In this context, we will also consider, as one of the most important theoretical references about thinking in Eliasian terms, the influence of Max Weber ideas, especially with regard to the Weber's idea of legitimate use of physical violence, resent, among other times, in the digression that Elias makes about the monopoly of physical power. We will discuss initially what kind of influence the control of emotions may come to bear on the present sense of fear in people, & then analyze the possible links between violence & the control of emotions itself. Finally, we will discuss how these issues are present in times of non-pacification inside societies, i.e., in war times which modern industrial society has still faced.

Brandão, Zaia, Canedo, Maria Luiza & Xavier, Alice (PUC–Rio, Rio de Janeiro, Brasil, 22451-900 [tel: 55 21 35271815; fax: 55 21 35271132; e-mail: zaia@puc-rio.br]), **Family and School in Solidary Construction of Student Habitus,** *International Sociological Association, Gothenburg, Sweden,*

¶ Based on 2009 survey (students, parents, teachers) developed in 10 of the best public & private schools in the city of Rio de Janeiro, and on interviews with school teams, this paper shows some crossed analysis results of family & institutional routines. It represents a first attempt to understand the process of development and reinforcement of the student habitus that supports their good performances. Differently from expected, in the Brazilian case we find among popular families (major group in public school) some traces of a relatively stronger parent's engagement to accompany their children studies than among the private school student's families (higher social & cultural level). This result drove us to pursuit the characteristics of family support that, in different family strata reinforce the student habitus . The results point out different management styles & pedagogical models of the institutions that, articulated with family styles to deal with children scholarity–among families with different structures and volume of capital–pointed to the presence of combined strategies to produce the student habitus. These results offer an investigate overview about family & school relationship in the production of schools quality.

2010S00342

Brandén, Maria (Stockholm University Demography Unit, Stockholm, 106 91 [tel: +46 736 233595; e-mail: maria.branden@sociology.su.se]), **Gender, Gender Role Attitudes and Migration Motives, Sweden 1999-2009,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this article is to study whether there are gender differences in the propensity to move for one's own career & for one's partner's career in Sweden, 1999-2009. Further, the study aims at answering whether gender differences, if any, can be explained by bargaining power, career ambitions, and/or gender roles. Panel data including 1147 young adults is analyzed using multinomial logistic models. The results indicate that children function as a larger tie for women's career migration propensities compared to men's. Having children also affects men's career migration negatively, but they continue moving due to career reasons to a much larger extent than women with children do. The pattern cannot be explained by differences in the effect from educational level between men & women, or by lower career ambitions among women with children. Gender role attitudes surprisingly, & in contrast to studies on the Germany & the United States, don't have any effect on neither the discovered pattern or any effect per se.

2010S00343

Braun-Thuermann, Holger (Centre for Globalisation and Governance, University of Hamburg, Allendeplatz 1, D-22146 Hamburg, Germany [e-mail: holger.braun-thuermann@uni-hamburg.de]), **Hybrid Organizations: Boundaries, Practices, Compromises–The Case of Spin-Off Firms,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper explains hybrid organisational structures as a consequence of organizations' task mediating, surviving & developing between the institutionalized expectations of specialized functional systems & diverse orders of worth. Shedding light into these processes of "organizing hybridity"

spin-off firms were chosen for empirical study supposing that this type of companies are–at least temporarily–located between state funded public realms of research on the one hand & the private sector business, commodities & venture capital on the other. During the initial phase of a founding process & also in later stages research and development (R&D) practices are newly combined. Even on the level of individuals a kind of "hybridity" can be identified as professional identities vary between scientist & business(wo)man. The empirical observation is interpreted with arguments und concepts taken from the various sociologies of practice.

2010S00344

Brayfield, April & Korintus, Marta (Department of Sociology, Tulane University, New Orleans, LA 70118 USA [e-mail: aprilb@tulane.edu]), **Social Cleavages in Hungarian Childrearing Values,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the stratification of childrearing values in Hungary. We investigate the degree to which education, occupation, and economic resources influence childrearing values among a national sample of 439 Hungarian mothers with a child enrolled in a government-sponsored nursery. Our survey asked respondents to rank order the top three qualities that should be encouraged in children by parents & by careworkers separately, the most important things that children should learn in nurseries, & the reasons why a society should have nurseries & kindergartens. We find that childrearing values are more likely to vary by the mother's education than by occupation or economic resources. We suggest that (1) maternal ideologies about the nature of children's development and what best promotes their well-being & future success exert a powerful influence on the everyday life experiences of babies and toddlers, & (2) the stratification of childrearing values facilitates the reproduction of social inequalities.

2010S00345

Breckner, Roswitha (University of Vienna, Institute of Sociology, Rooseveltplatz 2, A-1090 Vienna [tel: +43 4277 48217; e-mail: roswitha.breckner@univie.ac.at]), **Pictures of Violence–Dealing with Photographs from the Armenian Genocide,** *International Sociological Association, Gothenburg, Sweden,*

¶ Photographs from atrocities & cruel violence serve as proof in conflicts where that what has happened is still denied by one side. This is also the case in the conflictive political discourses concerning the human atrocities committed during the Armenian Genocide at the beginning of the 20th century. At the same time, photographs taken from the deportations, starvation, & death of Armenian women, men & children confront "us" as those looking at a distant past with a gaze which Susan Sontag has coined as "Regarding the Pain of Others". The shock when seeing the vulnerability & victimisation of human beings might make it difficult to find words to talk about, & in consequence might raise the wish to turn away. Last, but not least, these photos fix our imagination about the Genocide to the visibility of selected situations which were more or less coincidentally chosen to be photographed, in most cases by others than the persecuted themselves, & therefore not necessarily picturing their experiences. With an exemplary analysis of a few photographs the paper aims to discuss the dilemmas arising from the fact that these photos are traces from a denied past making it visibly evident, and which, at the same time, can raise different & difficult feelings and imaginations in coming across with the challenge of looking at them.

2010S00346

Breitkreutz, Paul D. (University of Nebraska-Lincoln, Lincoln, NE, 68588 [tel: ; e-mail: pbreitkr@unlnotes.unl.edu]), **Liberation Recitation: Assessing the Effects of a Social Movements Project on Student Civic Engagement Attitudes and Sociopolitical Beliefs,** *International Sociological Association, Gothenburg, Sweden,*

¶ Can a project focused on social movements & community based organizations empower students enrolled in a sociology course and simultaneously improve their understanding of social inequality as the product of social structure? I propose that student political efficacy, discussion, & interest will increase at a greater rate for students completing a course project compared to those who do not. Students will also have increased levels of agreement with structural causes of social inequality after completing the project. I use an explanatory mixed methods design to assess the research questions. Pretest-posttest surveys of 294 students were collected during the 2008-2009 academic year from students enrolled in large lecture sections of introduction to sociology. Focus group interviews are analyzed to help explain the quantitative survey findings. Findings indicate students completing the course project have improved levels of political efficacy & political interest compared to students not completing the project. There are no significant differences in views of social inequality or political discussion between students completing the project & those who do not. The results confirm that a course project can have some effects on student sociopolitical beliefs.

2010S00347

Brennan, Deborah, Himmelweit, Susan, Cass, Bettina & Szebehely, Marta (Social Policy Research Centre, University of New South Wales, Kensington, NSW, Australia 2052 [tel: +61293857800; fax: +61293857838; e-mail: d.brennan@unsw.edu.au]), **The Marketisation of Childcare and Social Care: Rationales and Consequences,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores both the conceptual foundations of care markets and the specific rationales for the introduction of markets and/or market mechanisms in childcare & social care that have been put forward in particular national contexts. Starting from the assumption that care policy & provision can either exacerbate or redress inequalities, the authors draw on examples of the marketisation of care from the UK, Sweden & Australia in order to explore the impact of care marketisation on particular forms of inequality including gender & class. The paper focuses on political as well as economic aspects of care markets.

2010S00348

Bretonniere, Sandrine (CADIS-EHESS, 54 boulevard Raspail, 75006 Paris, France [tel: 021 223 6669; e-mail: sandrinebretonniere@yahoo.fr]), **Autonomy of Choice vs. Unavailability of the Human Body: How France and Romania Deal With Bioethics,** *International Sociological Association, Gothenburg, Sweden,*

¶ France & Romania stand at two opposite ends of the bioethics spectrum. France has a set of laws regulating bioethical issues, which the parliament reviews every 5 years since 1994. The law revision is accompanied by a heated public debate which engages doctors, researchers, intellectuals, associations & different public organs. The issue of surrogacy–illegal in France–best articulates the question of autonomy of choice in the present debate. Romania, on the other hand, has hardly voted any laws on bioethical issues, although it has ratified the Oviedo Convention. A law on Medically Assisted Procreation (no. 217/2003) was rejected by the President, & the Constitutional Court in 2005. Romania–and more generally 'Eastern Europe'–is perceived by Western Europeans as a purely mercantile arena with no ethical constraints. Indeed, both in the case of France & of Romania, the economic perspective is central: autonomy is being opposed by public authorities on the grounds of possible (or proved) exploitation of the human body. In this paper, my objective will be two-fold. Firstly, I intend to show that France & Romania have, in fact, a similar ethical perspective grounded in the principle of the unavailability of the human body. Legally implemented in France, virtual–but supported by a strong Orthodox tradition–in Romania, this principle is being questioned by a growing demand for autonomy in both contexts. Secondly, I will analyze how these two countries deal (in terms of public debate, political and institutional power play) with these two polarizing & seemingly irreconcilable principles that inform & shape the public & the private spheres.

2010S00349

Briceno, Miguel A. (Instituto de Filosofia, Universidad Central de Venezuela, 1041 Caracas, Venezuela [tel: +58 212 693 0038; e-mail: mibricen@gmail.com]), **Polycontextural Logic: New Resource for Transdisciplinary Research in Sociology,** *International Sociological Association, Gothenburg, Sweden,*

¶ The reflection on the theoretical observation (i.e. meta-observation) involved in the concept of poly-contexturality is the framework in which a theory of complex systems is possible, which in turn enables an observation that oscillates between models structured in a hierarchical order (normally linked to a logical-deductive formalization) & models structured in hetero-hierarchy. And this would allow this reflection to be done in a formalized language that does not follow either the principles of the Aristotelian logic or the postulates of the Kantian transcendental reflection. It is precisely this liberation from the dictates of mono-contextural logic what paves the way to an observation of complexity, in which one or the other language is used to model the states of things, such as the epistemological problems of molecular biology or the social systems. And–what is gaining relevance–it also paves the way to a true transdisciplinary meta-observation, since each discipline chooses its own contexture & only the use of poly-contexturality makes it possible to formulate transdisciplinary relationships within the framework of such meta-logic.

Briggs, Daniel (University of East London, London. E15 2JB. United Kingdom [tel: 0044 208 233 2338; e-mail: d.briggs@uel.ac.uk]), **"Kicked Out To Go Centre": Disorientation from Mainstream Education and its Implications for Urban Youth Identity, Lifestyles and Life Perspectives,** *International Sociological Association, Gothenburg, Sweden,*

¶ UK urban state schools have recently experienced increased pressure to improve their performance levels. This has been manifested through various campaigns to change the public perception of these schools while making improvements to the physical school environment. However, punitive policies on "problematic" pupils also appear to be increasingly used to sustain this image. Many are "excluded" and referred to off-site educational provision (OSEP) where they receive reduced timetables & unchallenging courses, & this reduces their chances of gaining a solid education. Based on ethnographic fieldwork with a cohort of 20 excluded young people in one south London borough, this paper will discuss these issues in greater detail. I will suggest that the exclusionary processes to which some urban young people are exposed have implications for their identity, self worth & lifestyles, & make them increasingly vulnerable to gang life, crime & victimisation. Moreover, their life options are truncated despite their efforts they may make otherwise.

2010S00351

Brighenti, Andrea Mubi (Department of Sociology, University of Trento, Trento, Italy, 38122 [e-mail: andrea.mubi@gmail.com]), **Suburbanisation in Alpine Cities,** *International Sociological Association, Gothenburg, Sweden,*

¶ During the last century, Alpine cities have experienced a tension between, on the one hand, strong traditional local identities and solidarities and, on the other, the requisites of modernity and modern urbanism. Various competing models of development for Alpine space have been proposed & applied, but the infrastructures of physical & informational mobility of the industrial and postindustrial capitalist model seem to have finally overcome all resistance & alternatives, at least on a large scale. In this paper, I focus my attention on one spatial & territorial outcomes of such a process, considering the case of suburbanisation. While the European urban model is very different from the Northern American one, in Europe, too, patterns of suburbanisation and enhanced spatial segregation are visible today. In the case under scrutiny, an additional complexity derives from the fact that while in the U.S. the suburb is generally built on previously uninhabited place, in the Europe, & more specifically in the Alpine cities, suburbanisation comes about as a residential expansion of ancient villages close to major cities. Consequently, middle class newcomers live in newly built houses just outside the old, in most cases medieval, historic village. I seek to conceptualise and understand what kind cleavages, solidarities and, ultimately, what type of neighbourhoods & territorial configurations do emerge from such a peculiar suburbanisation trend.

2010S00352

Bringel, Breno (University Complutense of Madrid, Spain, Madrid, Spain, 28223 [tel: +34 661 465985; e-mail: brenobringel@hotmail.com]), **A Roundtrip: The Spatialities of Transnational Activism in Latin America,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper we propose to analyze the spatialities of Latin American social movements as a tool for mapping new lines of interpretation to the study of social movements in the region. In particular, we make a roundtrip around the spatialities of rural social movements, especially peasant ones. Thus, we will highlight, in a comparative way, how specific movements in Brazil, Paraguay, Ecuador and Guatemala have been shifting from local & national to regional and global, analyzing its particularities, but also how the insertion of these movements in transnational networks & international arenas of political action has led to a reconfiguration of its demands, imaginations & practices at domestic or local level. From these examples, based on an extensive fieldwork conducted over the past five years, we suggest the need for a "spatial turn" in the study of social movements that should be inclusive & takes into account an update of some classical theories out of date when building rigid boundaries between national & international politics among other elements. Therefore, theoretically, we attempt to contribute to the analysis of transnational activism in the region, proposing some analytical categories & a disciplinary and epistemological opening of theories of social movements in a period of crisis & transition marked by the increasing incorporation of relational mechanisms.

2010S00353

Brissonneau, Christophe & Ohl, Fabien (Centre de Recherche Sens Ethique Société, Centre Universitaire des Saints-Pères, 45 rue des Saints-Pères, 75270 Paris cedex 06 [tel: 33 01 60 86 14 69; e-mail: christophe.brissonneau@anadoo.fr]), **Learning to Dope in Track and Field during the 80's-90's in France,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the French track & field federation, there is no clear organisation of doping. Nevertheless, when preparing the Olympics, peers & people in charge of the federation convince the athletes that it is impossible to avoid doping to win. They are also sensitive to ethical discourses that federation put on stage. Some believe in it & are convinced that they do not to take drugs. But most of the athletes have to face the contradiction between the Olympic ethics & the wish, recalled by the federation staff, to win medals. Even if the sporting federation is not directly involved in doping, they incite athletes to have training camps. Track & field top-level athletes do training camps and competitions in the eastern communist countries, with the support of the federation, where they learn about the importance of the medical support. Based on interviews & observations, our paper will observe the socialisation process to pharmacological and doping products. We will argue that camps are kinds of "turning points" in which athletes face tension & contradiction between the so-called Olympic values & the pressure to improve performances & to win medals.

2010S00354

Brito de Oliveira, Lucia Maria (Law School; University of Brasilia, Brasilia/DF, Brazil, 70910-900 [tel: 00 55 61 33072349; fax: ; e-mail: lmboliveira@unb.br]), **Towards (Re)Democratization: Inter-American Court of Human Rights and People on the Move,** *International Sociological Association, Gothenburg, Sweden,*

¶ One of the challenges law had to face in Latin America during the (re)democratization process that started in the 80s of the XXth century was & still is to deepen democratic institutions and manners by placing the human beings in the centre of not only the national but also the regional legal system. Human beings seen as individuals whose dignity is not linked to citizenship but by the fact of being a person. In this long, non linear & inconstant historical & social process, the Inter-American Court of Human Rights had a fundamental role. Studying the construction of its jurisprudence, important themes were debated in a very profound way: state responsibility, amnesty laws, enforced disappearances, censorship, summary executions etc. In all contentious cases and advisory opinions, the Inter-American Court reinforced the human being as the centre of the logic of the legal system. Focusing in two paradigmatic advisory opinions OC 16/1999–The Right to Information on Consular Assistance. In the Framework of the Guarantees of the due Process of Law (October 1, 1999) & OC 18/2003–Juridical Condition & Rights of the Undocumented Migrants (September 17, 2003), it is possible to understand the crucial role this Court had on rooting the democracy as a daily practice & not a vague concept. In 1999 & in 2003, the Court pronounced on the exercise of human rights regardless to the status of national or alien. In both advisory opinions, it analysed the synergy of globalization & law in a very profound way expanding the economical aspects & including the historical & social interactions. These two advisory opinions crossed the line of traditional definition of law by opening the door to a richer transdisciplinary perspective not only of law, but also on rights of people in movement, on legality, on state responsibility & on human rights. OC 16/1999 & OC 18/2003 had & still have important repercussions in national legislations of the region.

2010S00355

Britton, Dee (SUNY Empire State College, 113 West Avenue, Saratoga Springs NY USA 12866 [tel: 518.587.2100 ext. 2875; e-mail: dee.britton@esc.edu]), **Disaster Tourism: The Mostar Paradox,** *International Sociological Association, Gothenburg, Sweden,*

¶ The words disaster & tourism seem to be intrinsically paradoxical, yet visits to sites of disaster & death have grown exponentially during the past four decades. Lennon & Foley note that "dark tourism" packages disaster into an economic product that provides interpretation of the event as well as potential economic gain to a devastated community. The community of Mostar, Herzegovina is a postmodern disaster tourism site. Once a symbol of Yugoslavian multiculturalism, Mostar became a battleground in the Bosnian wars of the 1990s. Stari Most, a sixteenth-century bridge that was the largest single span masonry arch bridge in the world, crashed into the Neretva River on November 9, 1993 after being shelled by local Croatian forces. A collaboration of nations, NGOs, and transnational groups rebuilt the bridge & Old Town, the surrounding tourist destination. Seventeen years later, Old Town is surrounded by former business districts that contain many unrepaired buildings that were bombed during the wars. Unfor-

tunately, these buildings have become a part of the Mostar tourist experience at the expense of local economic development. The commodification of Mostar's wars limits its ability to redevelop its social & economic infrastructure.

2010S00356

Broadbent, Jeffrey P. (Department of Sociology, University of Minnesota, 909 Social Science Building, 267 19th Ave. S [tel: 612-624-1828; e-mail: broad001@umn.edu]), **Comparing National Responses to Climate Change,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction to Panel during RC24 Environmental Symposium, July 1): The project on Comparing Climate Change Policy Networks (Compon) is an international project conducting research on the factors that affect the capacity & success of nations in reducing greenhouse gas emissions (or protecting sinks) & thereby helping to mitigate global climate change. Current lack of response at national and international levels depends not so much on absence of the right institutions, but upon a deficit of political will. The Compon project studies the conditions affecting the aggregation of political will concerning climate change & its translation into policy in 15 countries, including the largest emitters, representing differing positions on the issue, & at the international level. Hypotheses include the relative effect of building acceptance through persuasion in stakeholder participation, versus conflict between opposed advocacy coalitions. The mixture & effect of these two modes will depend upon background conditions such as cultural receptivity to science, political institutions, the array of interest groups and geographical vulnerability to climate disaster. The national teams used equivalent methods to collect data on national debates and networks of mobilization among pro & con actors to affect policy.

2010S00357

Brodén, Veronica (Linköping University, 581 83 Linköping [fax:; e-mail: veronica.broden@liu.se]), **Aiding Research Capacity: Abandoning or Strengthening the Linear Model?,** *International Sociological Association, Gothenburg, Sweden,*

¶ There is an unequal distribution of resources for higher education and research in the world, & many low-income countries have difficulties building up research capacity & knowledge systems which can contribute to long-term development & poverty reduction. Many aid organizations offer support with the goal to improve research capacity in low-income countries, & this type of aid has increased since the 1990's. The paper departs from an assumption that the research gap–as other inequalities–is problematic, & asks what dilemmas can arise in research aid. The paper begins with a literature review, & then narrows in on the case of the Secretariat for Research Cooperation (part of the Swedish International Development Cooperation Agency). I ask questions like: What methods exist in research aid? How is the link between research capacity & development portrayed? What methods are deemed successful while others are not? There seems to be general consensus surrounding the idea that aid-actors should support the building of research capacity. Furthermore, many aid actors have explicit ambitions of escaping a colonialist heritage as well as abandoning the linear view of science & technology development, but there is nevertheless debate concerning whether this is being achieved.

Bronzini, Micol & Vicarelli, Maria Giovanna (Department of Social Sciences Polytechnic University of Marche Region, Piazzale Martelli 8 60100 Ancona Italy [tel: +39712207138; fax:; e-mail: m.bronzini@univpm.it]), **Family Learning for People with Long Term Conditions: Family Involvement and Health Behaviours,** *International Sociological Association, Gothenburg, Sweden,*

¶ Many studies on health behaviours often move from the idea of an isolated actor who, if adequately trained & informed, would act rationally & carry out all those actions necessary to manage his condition at best. This approach neglects that behaviours are always situated & socially embedded & it lacks an appropriate consideration of the social context, that is how the daily life and the social relations (in primis family's ones) condition & put constraints to the concrete behaviours. Especially in the case of chronic diseases, which heavily strike the family unit, the lack of family involvement can, in the worse hypothesis, make the patient adoption of positive health behaviours useless, with the risk that he cannot conjugate them with the family or social requests. For instance the others members of the family could not have still totally accepted the pathology & hope to return to the previous situation or, simply, they could not know all its implications. Moving from these theoretical considerations the paper aims to present an innovative experience of Family Learning for people with long term conditions implemented in three health districts of Marche Region, which has been the object of a feasibility study. Family Learning, up to now, has found application mainly in the educational field. When applied to care-assistance for patients with chronic disease Family Learning consists of a learning process involving patients & their relatives together with health and social professionals under the guidance of a tutor acting as a facilitator. It aims to make families as competent & involved as possible in the care process, providing them competences (with respect to a specific pathology) & enhancing their abilities in order to assume positive health behaviours. The paper presents the main results of this feasibility study & explores which surrounding conditions are necessary from a macro (political-institutional), meso (organizational) & micro (family) point of view.

Brooks, Pauline E. (Brooks Evaluation/Research Consulting, 3512 Glenhurst Ave., Los Angeles, California 90039 USA [tel: 1 (323) 821-5891; e-mail: pbrooksUL3@hotmail.com]), **Unacknowledged Hidden Obstacles,** *International Sociological Association, Gothenburg, Sweden,*

¶ There are numerous constraints, external & internal, on efforts by academics to empower persons that are subjected to oppressive forces in society. Silencing is one major area of constraints. For instance, persons/groups that are oppressed rarely have meaningful opportunity to have input into identifying & shaping critical areas for research, program & policy development, evaluation and the like, concerning broader societal change. This silencing makes it possible for the mainstream, including mainstream academics/researchers, to remain uninformed or in other ways exclude the perspectives, issues, priorities, reasoning, & even the culture (values) of persons/groups subjected to oppressive forces. Similarly, there are constraints on directly addressing the perpetration of oppression. In studying the perpetration of racism, for example, constraints are often found in the: a) academic literature that researchers rely upon & repeatedly reference; b) researcher's own socialization; c) racialized arrangements in the physical & social-psychological environments in which academics function; d) academy's system of career-related rewards; & e) covert rules, including taboo topics such as studying the linkages between one racial group's societal advantages/privileges and another racial group's societal disadvantages/dis-privileges. Concrete examples are drawn from two decades of research and evaluation with & within diverse African American, Latino and Asian communities inside the United States & projects in South Africa, Kenya, Ethiopia & Burkina Faso.

Brooks, Rachel & Waters, Johanna (Department of Politics, University of Surrey, Guildford, GU2 7XH, UK [tel: 01483 683138; e-mail: r.brooks@surrey.ac.uk]), **Young People and Educational Mobility: The Perpetuation of Social Advantage,** *International Sociological Association, Gothenburg, Sweden,*

¶ Over the last decade there has been considerable growth in the number of young people who choose to pursue degree-level study abroad, with the figure now approaching three million (OECD, 2007). The extant literature on "East" to "West" educational mobility has shown how, for many students, such migration is a means of securing valuable cultural & social capital, & distinguishing oneself from those who graduate with a tertiary qualification from "only" a domestic institution (Huang & Yeoh, 2005; Ong, 1999). In contrast, Rivza & Teichler (2007) have argued that educational mobility by students from the "West", & particularly from Europe & the US, is motivated by different concerns–to experience life in another country rather than to secure what is perceived to be a "better" or more prestigious form of education. However, drawing on recent research with British young people, we argue that, even amongst this group, overseas education can have a significant impact on furthering existing inequalities. In particular, we contend that a very privileged group located within the upper middle class are choosing to pursue an elite education overseas as a means of "compensating" for a failure to secure a place at a "top" university in the UK. In this way, we suggest that while travel & educational mobility may be being opened up to a wider cross-section of young people than in the past, highly privileged groups remain able to exploit the available educational opportunities very effectively to maintain their social advantage.

Brophy-Warren, Sorcha Alexandrina (Yale University, New Haven, CT 06511 [e-mail: sorcha.brophy-warren@yale.edu]), **Jeopardizing Civility: Imagining the Transnational in the**

Anglophone Caribbean, *International Sociological Association, Gothenburg, Sweden,*

¶ In 2001, then Prime Minister of Barbados Owen Arthur assumed responsibility for the Barbados Ministry of Culture, believing that heavy government investment in arts & heritage initiatives would catalyze economic growth in the 21st century. However, the concerns of the Prime Minister's office were not purely economic. Their desire to promote & export Bajan culture was also undergirded by fears of the "erosion of traditional values" & the cultural homogeneity that is perceived to be a result of transnational cultural flows. The conversations that ensued have the potential to challenge how we think about transnational cultural flows, the modern social imaginary, & how a relationship with the past shapes national identity. Here, I chart a debate within the government about what authentic Barbadian culture is, & what normative currents one must navigate in order to inhabit the island. Those who invoke the role of "Barbadian values" refer to a general perception that the island is a traditional one & that norms of civility are more fundamental to social life in Barbados than elsewhere. "Civility" & "tradition," terms inextricably tied to imperialism & empire are employed in this dialogue as a critique of transnationalism, empire, & hegemony.

Brose, Hanns-Georg (Faculty of Social Sciences University Duisburg-Essen Institute of Sociology, Duisburg, Germany D-47048 [tel: + 49 203 3792739; fax: + 49 203 3794350; e-mail: hg.brose@uni-due.de]), **Backwards into the Future?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Starting from the assumption, that the structure of social time in contemporary societies can best be described as the simultaneity of nonsimultaneities, it will be argued, that there appear many contemporaneous temporalities on the screens of the world-society. Hence there are many present pasts and possible future presents, that might to be synchronized. The imagination of the future as a 'storehouse of possibilities' (Luhmann) amongst which we deliberately choose goals to be progressively reached, has lost ground. The future appears not any more as future possibilities but as a complex variety of possible futures & as a strain to make risky choices among them. To make decisions, social systems refer to their memory while developing their expectations. We move "backwards into the future". This becomes more evident in some contemporary concepts of dealing with (the) future(s). While "innovation" & "newness" were for a long time uncontested general promises of future possibilities, concepts like "sustainability" & "renew-ability", that claim to save past possibilities, gain attention & significance.

Broughton, Chad (University of Chicago, 5845 S. Ellis Ave., Chicago, IL 60637 [tel: 773-834-9810; fax: 773-834-9810; e-mail: ceb@uchicago.edu]), **Making the Undergraduate Classroom into a Policy Think Tank: Reflections from a Field Methods Class,** *International Sociological Association, Gothenburg, Sweden,*

¶ This article examines the opportunities & limitations presented by organizing an undergraduate field research methods class as a policy think tank for project-based research. It finds that having demanding end goals to meet for the policy client necessitated a top-down, corporate course organization for data gathering and policy analysis efficiencies, thus limiting somewhat the extent to which students could lead the course & gain experience practicing various field methods. The think tank model & working for a client, however, had anticipated & some unanticipated pedagogical benefits for learning sociological research methods, substantive sociological & policy areas, the policy research process, & how to work effectively in goal-directed group work. Finally this article considers the pedagogical & ethical concerns with the course-based production of "policy-relevant" knowledge in the context of stark social divisions between student & subject.

Brown, Kate Pride (Vanderbilt University, Nashville, TN 37207, USA [tel: +1 615 881 5756; e-mail: kate.pride-brown@vanderbilt.edu]), **Cultural Threats: Assessing Discursive Hostility toward Social Movements,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper builds on the current discussion of opportunities and threats in social movement studies. Scholars have considered the mobilizing force of political & discursive opportunities, as well as that of political threats. This paper introduces the subject of cultural/discursive threats. Importantly, this paper shows that threats are not just mobilizing, but may also be responsible for demobilization. Using in-depth interviews with activists from the Russian environmental movement, I illustrate how an environment may become culturally hostile to movement activity. Moreover, while cultural threats may be specific to a particular movement, they may also be more general, broad-based threats. Just as authoritarianism and repression may be equally hostile to all social movements, a discursive space may be threatening, not only to a particular movement, but to progressive collective action itself. In Russia, widespread social distrust & assumptions of corruption create a discursive hostility toward the idea of collective efficacy and social change.

Brown, Matthew J. (Centre for Longitudinal Studies, Institute of Education, London, WC1H 0AL [tel: 44 207 911 5325; e-mail: m.brown@ioe.ac.uk]), **Assessing the Validity of Retrospective Questions,** *International Sociological Association, Gothenburg, Sweden,*

¶ Researchers wishing to gather information from adults about earlier periods of life often rely on the use of retrospective questions. It is recognised that retrospective responses will be affected by a certain level of recall error but there is typically no evidence on which to make an assessment of the magnitude. The most recent sweep of the National Child Development Study, conducted in 2008/9 when its cohort members were aged 50 asked a sub-set of c. 3000 respondents a number of questions about the time when they were aged 11. These questions re-collected information that was first collected contemporaneously at the time when cohort members were aged 11. This paper makes use of this unique opportunity to assess the accuracy with which individuals can recall these details some 40 years later by examining the consistency of the responses given on these two occasions. The rich life-history information collected from & about the study's participants over the course of their lives also presents an opportunity to investigate the factors that might cause variation in recall error. The paper uses a series of regression models to assess the impact of a range of factors (education, employment, family life, health) on ability to accurately recall childhood circumstances.

Brown, Patrick R. & Calnan, Michael W. (CHSS, University of Kent, Canterbury, UK, CT2 7NF [tel: +44 1227 827575; e-mail: p.r.brown@kent.ac.uk]), **Trust as a Means of Bridging the Management of Risk and the Meeting of Need in Mental Health Services,** *International Sociological Association, Gothenburg, Sweden,*

¶ Many accounts of mental health policy, both recent & historical, note the existence of a dualism between policies which seek to care for the needs of vulnerable individuals on the one hand, & those which seek to effectively manage the risk that these patients pose (to themselves & the wider public) on the other. This apparent mutual exclusivity presents a serious dilemma for policy-makers and services–in that media driven pressure to ward against the "risk" presented by service-users tends towards more coercive approaches which neglect the meeting of need (especially need as understood through a social lens as opposed to a medical one). Moreover vulnerable people are less likely to approach such services in the first place. At a theoretical level, it is argued that trust represents an effective means of bridging this problematic gap. While risk may be applied in a way that is self-defeating & acts as an obstacle to the meeting of needs, services & professionals viewed as trustworthy by their users will be better able to meet the needs of their users & assess risk. Drawing on recent qualitative research undertaken in England involving service-users, carers, professionals & managers, the potential for mental health policy to be framed around trust–rather than risk–is thus examined. In particular we explore the role of trust in encouraging initial engagement with services, facilitating more open disclosure, & enhancing agreement and cooperation with treatment. Broader, macro-policy recommendations are inferred from these findings.

Browne, Craig Alan Richard (Department of Sociology and Social Policy, University of Sydney, Sydney, Australia, 2006 [tel: 61-2-93512665; fax: 61-2-90369380; e-mail: craig.browne@sydney.edu.au]), **The Critique of Objectification and the Re-Conceptualisation of Alienation,** *International Sociological Association, Gothenburg, Sweden,*

¶ The concept of alienation obtained broad application through its connection to the notion of objectification. Objectification constituted a descriptive & normative notion of the production of the social world through the activity of a subject. It underpinned the concept of alienation's explanation

of processes of social reproduction under the conditions of a heteronomous social structure. Marx traced alienation to capitalism's dispossession and appropriation of direct producer's objectification. However, critiques of the production paradigm led to attempts to re-conceptualise alienation in ways that were not tied to the suppositions of objectification. The resulting conceptions, like Habermas's vision of the colonisation of the lifeworld and Castoriadis's notion of the instituted imaginary, drew on alternate theoretical traditions, especially phenomenology, psychoanalysis and linguistics. My paper initially assesses the validity of the critique of objectification. It then suggests that while the alternative depictions of alienation clarify forms of experience that are equivalent to alienated labour, they are less specific with respect to the structural conditions of alienation's reproduction. Consequently, difficulties in specifying the social reorganisation required for transforming alienation become justifications for subordinating the concept. The concept's continued relevance will be shown to depend on a normative understanding of the relationship of action & structure.

Brownlie, Julie (University of Stirling, Stirling, FK94LA, Scotland, UK [tel: 01786 473171; e-mail: julie.brownlie@stir.ac.uk]), **Getting Through: Biographies, Mental Wellbeing and Social Change,** *International Sociological Association, Gothenburg, Sweden,*

¶ Biographies are not only relevant to mental illness but to mental wellness–i.e. to the things that help us to get by or through emotionally difficult times. But those individual biographies need to be socially & historically situated. Drawing on a recent multi-method, UK-wide study of emotions talk & emotional support, the Someone To Talk To Study (see www.someonetotalkto.info), this paper considers the way that people talk about their emotional lives against the backdrop of what sociologists have characterised as an emerging "therapeutic culture". The paper challenges important aspects of the therapeutic culture thesis–including the claims that we have become increasingly dependent on people such as mental health professionals & others who are "trained to listen" (Furedi, 2004, Nolan, 1998)and that we now see biographical events such as bereavement & divorce not as a "part of life" but rather as the domain of these experts (Giddens, 1991; Bauman, 1997; Hochschild, 1991). But it also suggests that while vulnerability might not give people's life stories a sense of coherence, its conceptual counterpart, resilience, neither captures how people understand what they are doing when they "get through".

Bruce, T. (University of Waikato, Private Bag 3105, Hamilton 3240, New Zealand [tel: 64 7 838 4500; fax: 64 7 838 4555; e-mail: tbruce@waikato.ac.nz]), **Analysing Rugby and Nationalism from Below: "I Was Gutted" and Other Reactions by New Zealanders during the 2007 Rugby World Cup,** *International Sociological Association, Gothenburg, Sweden,*

¶ Popular mythology has long held that rugby is New Zealand's national game, & the nation's "mood" is said to rise & fall with the men's national team's performances. Yet, in the context of the recent transformation of amateur elite rugby into a commercialised and global brand, we know little about what it means to New Zealanders today. Instead of a "top down" approach investigating the articulation of rugby & nationalism by power brokers (such as media, rugby officials, politicians), this paper takes up the challenge posed by historian Eric Hobsbawm who noted that national discourses "cannot be understood unless also analysed from below… in terms of the assumptions, hopes, needs, longings and interests of ordinary people" (Hobsbawm, 1991, p. 10). Based on fieldwork, surveys, public comments on newspaper websites, and interviews, this paper identifies the wide range of emotions and reactions of New Zealanders to the 2007 Rugby World Cup, highlights key tensions that emerged, & speculates on what these mean for the place of rugby in the national imagination.

Bu, Feifei & Ngai, Ngan-pun (Department of Social Work, Chinese University of Hong Kong, Shatin, NT, Hong Kong [tel: +852 91830806; e-mail: feifeibu@gmail.com]), **Silent Struggle: A Case Study of Children with Incarcerated Parent,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study examines the experiences of children with incarcerated parent in the Chinese context, with focus on the investigation of the problems confronted by the children, their coping strategies and the embedded strengths that enable them to overcome risks in daily lives. The study was conducted in a foster care center in the city of Tianjin, China. A total of six cases were selected for data collection. Through extensive fieldwork of various types including spending one month to fully participated in the children's daily lives, participant observation, formal & informal interviewing and documentary review, useful data were collected, analyzed and interpreted. The preliminary findings indicate: 1) due to negative experiences of children with parental incarceration, they manifest behavioral & emotional problems, including sense of insecurity, bad temper, larceny & so on forth; 2) coping strategies that these children adopt dealing with their problems include: support seeking, fighting, suppression, wishful thinking, & so forth; and 3) there are strengths embedded in the children such as diligence, optimism, & independence, which enable the children to overcome difficulties. Besides, implications for social work practice and research with this particular group of children are discussed.

Buchinger, Eva (AIT Austrian Institute of Technology GmbH, Vienna, Austria, 1220, Donau-City-Str. 1 [tel: +43 0505504580; fax: +43 0505504599; e-mail: barbara.machovits@ait.ac.at]), **Multilevel Governance: A Systems-Theoretical Approach,** *International Sociological Association, Gothenburg, Sweden,*

¶ The notion of multilevel governance is nowadays a crucial issue in politics. This is caused by the increase of globalization processes and the related activities of international & supranational institutions such as the United Nations & the European Union. Multilevel governance is therefore (in Europe) a triplex: state level, EU supranational level, & UN global level. The investigation of globalization processes & multilevel governance requires a macro perspective. One of several approaches to do this is provided by the systems-theoretical assumption of a functional differentiated world society, whereby function systems are characterized by autopoietic reproduction along with "codes" and "programs". The analysis of multi-level governance on basis of the political code (government/opposition) poses the question, how effectively state related "collectively binding power" can be transferred to other political levels & how commitments are achieved. The analysis of multi-level governance on basis of programs draws attention on the multiplication of organizational structures & their interplay. The paper will discuss these questions a commitment finding between states & EU within the UN-framework, coordination between organizations on different level of politics a by the example of the Kyoto protocol.

Büchner, Charlotte, I.R., Smits, Wendy & van der Velden, Rolf, K.W. (Research Centre for Education and the Labour Market (ROA), Maastricht University, Maastricht, the Netherlands, 6200 MD [fax:; e-mail: c.buchner@maastrichtuniversity.nl]), **Education, Cognitive Skills, and Labour Market Success: A Perspective on Gender Differences,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recent studies on returns to cognitive skills vary in their results regarding labour market outcomes of males & females. This paper analyses earnings returns to domain-specific skills & whether or not men & women are rewarded differently for it. Using a combined data set of Dutch longitudinal & register data, we apply different measures of cognitive skills obtained at the age of 12, and control for social background, educational aspirations, field of study, job & partner characteristics & recent family situation at the time when earnings are observed. We correct for sample selection bias regarding labour supply decisions & for unobserved heterogeneity on the school level. Our findings show that men & women benefit to the same extent from schooling and cognitive skills. The effect of cognitive skills thereby is exclusively explained by the individuals' school per-

formance in math. In education segmented labour markets, however, returns to math skills only are significant for lower educated men & higher educated women. High math scores early in life may encourage girls to further invest in schooling & other productivity-related skills, while the negative association between math skills and education for lower educated men suggests a reserve of talent.

2010S00374

Budarick, John (Monash University [e-mail: John.Budarick@arts.monash.edu.au]), **Media, Movement, and the Search for Security amongst Iranian Australians,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper draws on data from a project in which Iranian-Australians were asked to reflect on their use of media in the search for feelings of security, home & belonging. Through an analysis of a series of in depth interviews with participants, I focus specifically on the news media & look at the role it plays in the lives of people born in Iran & now living in Australia. Drawing on the concept of ontological security & its application to media in the work of Roger Silverstone, as well as the notion of epistephelia, I argue that news media plays a key role in the search for a sense of security & belonging amongst participants of the study. It is argued that as migrants the participants in this study have gone through a process wherein the routines, relationships of trust, & sense of home so important to ontological security have been disrupted. The epistephilic desire for, & consumption of, news in Australia is part of the work that goes into re-establishing this feeling of ontological security.

Buechler, Simone J. (University of Illinois at Chicago, 601 South Morgan St. MC 219 Chicago, Illinois 60607 USA [tel: 773 857 0344; e-mail: buechler@uic.edu]), **The Brazilian Immigrant Community in Newark, New Jersey: Housekeeping, Construction and Return Migration with the Global Economic Crisis,** *International Sociological Association, Gothenburg, Sweden,*

¶ The vagaries of neo-liberalism have resulted in both the celebration and retrenchment of multiculturalism & economic opportunities for Brazilian immigrants going to & returning from Newark, New Jersey. This paper examines how there has been a relatively recent celebration of multiculturalism as a promising part of the neo-liberal agenda in both São Paulo, Brazil & in Newark, New Jersey but during times of economic crises immigrants have become the scapegoats for a neo-liberal model gone awry. The enforcement of employer sanctions, the lack of legalization policies, and difficulties obtaining driver's licenses, along with the recession have encouraged return migration. Brazilian immigrants have had to return to Brazil leaving their foreclosed homes. Neoliberal ideals of growth encouraged Brazilian immigrants to find jobs in construction & housecleaning, just to lose them with employer fear, the crashing housing market, & recession. The tables have been turned as this time Brazil has hardly been affected by the economic crisis. However, there have been high failure rates of small businesses of returned migrants. This paper stems from research conducted for 14 years in São Paulo, Brazil & on a study from November 2008 to May 2009 of Brazilian immigrants in Newark, New Jersey.

2010S00376

Buechler, Stephanie, J. (School of Geography and Development/ University of Arizona, Tucson, Arizona, USA 85721 [tel: 520 904 8869; e-mail: buechler@email.arizona.edu]), **Migration in a Mexican Border Community in the Context of Economic, Political and Environmental Dislocations,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is based on ethnographic research conducted from 2007 to the present in Sonora, Mexico in a community located 70 km from the international border between Mexico & the U.S. The impact of the global economic crisis as well as environmental crises related to water & climate are evident there. This community is the locus of both in & out-migration. In-migrants come from Sonora or other regions in Mexico, & from the U.S. With the economic crisis, these migrants are settling in the community to try to obtain work in, for example, nearby mines & U.S. assembly plants. Other migrants are returning from the U.S. & settling there; some have never lived there before. Their return migration is precipitated by the economic crisis & strict migration enforcement in the U.S. The community's economy is still dominated by agriculture but growing water scarcity & climate change are altering this production. An exploration of the linkages between in and out-migration, the economic crisis, the changing environment, and agriculture showed that, for example, as wells are going dry, farmland is being sold to in-migrants for new housing construction. The pace of this construction, however, is slowing with the economic crisis.

Bühler-Niederberger, Doris (University of Wuppertal, Gauss-Strasse 20, 42097 Wuppertal, Germany [tel: 0202 439 22 83; e-mail: buehler@uni-wuppertal.de]), **Early Childhood as a Touchstone of Theoretical Concepts and Methods of Childhood Sociology,** *International Sociological Association, Gothenburg, Sweden,*

¶ Childhood sociology–especially with its concept of the child as competent actor–has been concentrated mostly on middle childhood & rarely on early childhood. There have all the same been very early contributions of well known sociologists concerning little children: Harvey Sacks' "On the Analysability of Stories by Children" (1974) & Norman Denzin's "Childhood as a Conversation of Gestures" (1971). Both authors analyzed the communicative contributions of little children, they showed that with very limited or even without verbal competencies there is a significant contribution of children to communication. This is consistent with the concept of the child as actor, but the actorship of the little child is very limited & vulnerable, as it becomes visible only to the very sensitive social scientists who is aware of the subtleties of interaction & its more hidden rules & structures. Even most social scientists overlooked such actorship before Sacks' and Denzin's work & most of them also after their publications. It seems therefore important to add other theoretical concepts to the actor concept, like e.g. "adults" interpretation of little children's action" & structural/situational and/or personal ignorance of little children's action.

Büke, Atakan, Aetinkaya, Özgür & Eren, Zeynep Ceren (Sociology Department, Middle East Technical University, Ankara, Turkey 06531 [tel: +90-3122107684; e-mail: atakanbuke@gmail.com]), **Transformation of Agricultural Relations in Turkey after 1980: The Case of Aukurova,** *International Sociological Association, Gothenburg, Sweden,*

¶ Parallel to the transformations in the world economy in general & in Turkish economy that became apparent with the late 1970s, agricultural relations in Turkey started to witness drastic changes after 1980. Some of the major changes that can be problematized under the concept of neoliberalism can be listed as follows: reorganization of public administration of agriculture (de-regulation/re-regulation); liberalization of agricultural trade; changes in the subsidy policies; delimiting agricultural production in some products through the implementation of quotas; giving weight to labour-intensive & high value-added products rather than capital-intensive products in accordance with the new international division of labour; penetration of capital to the production & reproduction relations through giant international corporations; parallel to this last point changing class structure and the rise of contract farming. All these transformations imply radical changes in the social relations that prevailed until the 1980s. However, both the critical & non-critical literatures that are dominated by the disciplines of economics & agricultural economics provide structural, macro & technical analysis. Although, these structural analysis provide the general framework, they are far from reflecting the social & cultural affections and the effects of the sides of these agricultural relations to the process. In the light of the framework provided by the international & national critical literature, the aim of this study is to re-read this process from below through the experiences of agricultural workers, petty commodity producers, & farmers gathered by interviews as well as the related literature. With this respect, this study will focus on Aukurova region, which has been an important production center since the early phases of the capitalization process of Turkey, particularly on Adana which is the biggest city of the region.

2010S00379

Bulz, Nicolae (National Defence College / World Economy Institute, Romania / Center for Strategic Economic Studies, Australia, Bucuresti, Romania, 013626 [tel: +4021 6675321; e-mail: nbulz@yahoo.com]), **Does "Generosity" (Re)present an Evaluation of Social Progress within the Contemporary World Changes?,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper focalises the research on attempting the way to aggregate three types of indicators: onto generosity nexus, onto creativity realm, on solidarity ideal–all these (nexus, realm, ideal) being within the dynamic relation of individual-community. The main constrain consist on the status that humankind did not & does not attain the required level of the local-global development praxis and cognitive internalization of the (hypotheti-

cal) reality to sustain large scale world changes to be a support-set of the decision making regarding local-global development (including pro-market reform & poverty eradication). Technologically-mediated social space has both the potential to create new connections & the possibility to disembody, & remove physicality from human relationships, typically desensitizing us towards each other & reducing a sense of other as human. The concept of Generosity within the Creative process & Solidarity status highlights a critical tension in the deep social and cultural world. Are we more or less generous in technologically mediated work space, & how do we retain a sense of the other, an-other towards whom I have responsibility to relate & perhaps even care–an-other I value? How do I experience this connection when the connection is mediated through data fragments, through a window I can close with a click? What does this DO to generosity, to self-transcendendence? The "generosity versus creativity and solidarity" seems to be a pioneering stance in that it specifically examines the role of generosity in creative processes and in solidarity nexus associated with the very technologies we now use routinely to frame (and decontextualise/recontextualise) human relations, & notions of community. This inter/trans/co-disciplinary paper tries to facilitate, within a set of indicators & indices, the identification of the stages of the complex development of a real social system & their creativity, solidarity, partnership & generosity characteristics; that is a condition & initial point to set out an appropriate guiding system in a contemporary society based on the "sociology on the move" prospective. Ultimately, this sociological approach can inform policy, leadership, regulation, social-enterprise and socio-political debate, amongst others.

Bunich, Ekaterina A. (State University–Higher School of Economics, Sociological department, Moscow, Russian Federation [tel: +07 495 3046503; e-mail: kath.bunitsch@gmail.com]), **Personal Stereo Listening in Urbanizing Societies,** *International Sociological Association, Gothenburg, Sweden,*

¶ Because of the urbanization the construction of space was largely transformed. Interactions are tended to be fragmented, disconnected, fleeting, spatial& temporal. In urban life there is hardly any correlation between social & physical distances. If one person stays near another person, it does not mean, that they are in one level of stratification. Bauman has characterized city as a "place of non-meetings". Another city's problem is the intensification of emotional life owing to continuous shift of external & internal impressions. This lead to blasé attitude, i.e. indifference toward the distinction between things. At the same time technologies of playback of the music are also changing, tending to become absolutely transparent. In such circumstances we can distinguish a number of aims of personal stereo listening: privatization of public space, time compression, space-making & acquisition of the control over the space. The objective of the study is to build a theoretical framework, causes & consequences of personal stereo listening can be scrutinized. The paper applies such theoretical resources as: sociology of space (G.Simmel, Z/Kracauer, H.Lefebvre, M.Auge), sociology of music (T.Adorno), problematic of Gemeinschaft vs Gesellschaft (F.Toennies) & post phenomenology (D.Ihde).

Burak, Esra (Stanford University, Stanford University Department of Sociology, 450 Serra Mall, Building 120, Stanford CA, USA, 94305 [tel: (650)353-0548; fax: (650)725-6471; e-mail: eburak@stanford.edu]), **The Social Maximum: Do Americans Believe There Should Be a Ceiling to Earnings?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Most Americans feel that no one should fall below a minimally decent living standard. If people perceive some as having "too little," could others be perceived as having "enough" or even "too much"? In this paper, I investigate whether Americans think that there is a social maximum–a dollar threshold in earnings that, if exceeded, is viewed as unjustifiable. Using nationally representative data (N=1,026) from a survey which includes closed-ended, open-ended & vignette questions, I explore what Americans think about a cap on compensation; who favors a cap and who does not; among those who favor a cap, what determines the dollar amount of the chosen cap; whether earner characteristics matter for favoring or not favoring a cap & why people favor or disfavor a cap. Results show that 61% of all Americans favor a cap on compensation, & that more than 2/3 of those who favor a cap support a cap of /BFM2X4B|END5 million or lower. Among the studied factors, the only factor that has any effect on how people feel about a compensation cap is charitable giving: when earners are described as giving away half of their incomes to charitable causes, people are less likely to favor a cap. Finally, the top-most reasons for favoring & disfavoring a cap are, respectively, desiring more equality & seeing the idea of a cap as conflicting with a free market system.

Burgin, Say N. (School of History, University of Leeds, Leeds, West Yorkshire, United Kingdom, LS2 9Jt [tel: (44)7794 895466; e-mail: hy08snb@leeds.ac.uk]), **Domination and Myopia: Differential Discourses of White Privilege,** *International Sociological Association, Gothenburg, Sweden,*

¶ While critiques of the concept of white privilege have been circulating for some time now, an assumption nearly always operates that suggests that white privilege discourses function the same everywhere. Typically, McIntosh's landmark conceptualization of white privilege as an "invisible knapsack" is taken as the definition of white privilege. This paper posits that there is no single discourse of white privilege. In looking at the discourse of white privilege utilized by one anti-racism effort–the Race Traitor project–& tracking the criticisms of white privilege discourse put forward by Leonardo (2004), I try to show that understandings of white privilege are not all built the same. The Race Traitor project requires particular attention because the project presents one of the most specific–even if not widely regarded–ideas for bringing about racial justice & it rests heavily upon a discourse of racial privilege. I critically assess the place of white privilege within this project & propose that its particular use of the discourse creates both problems and opportunities specific to the particular way in which white privilege is understood within the project.. Understanding that there are times when it is surely useful to speak generally of a discourse of white privilege, this paper, nonetheless, suggests that in order to wholly assess the strengths & limitations of discourses of white privilege, it is important to assess their differentiated understandings & proposed usages of white privilege.

Burgués, Ana, De Botton, Lena, Martin, Sandra & Pulido, Cristina (University of Barcelona, pg.Vall de Hebron, 171. Campus Mundet. Edifici Llevant [tel: +34934035099; e-mail: lenadebotton@ub.edu]), **Hipatia from Alexandria: A Women on Dialogue with Religion and Science,** *International Sociological Association, Gothenburg, Sweden,*

¶ The modernization of European societies was associated, among other issues to secularization. Place the right in the middle, but soon it stood as opposition to religion. The story, however, offers numerous examples in the scientific community where the religious experience does not prevent the knowledge. Thus we recover the figure of Hypatia of Alexandria. First, was a scientist known for his intense search for the truth against any imposition & did so in a constant dialogue with intellectuals from different cultures and religions. Second, an unwavering commitment to freedom & thus against social interpretations or models that placed in a subordinate position to women. Hypatia's example on the one hand requires a reinterpretation of the religious tradition to place on equal contributions women have made throughout history, and secondly to strengthen science & religion dialogue. This proposal calls for the acquisition of a critical perspective on religion through proposals such as the theory of argumentation (Habermas), the separation of the three spheres of value (Weber) or dialogic feminism (Puigvert) among others.

Burholt, Vanessa & Dobbs, Christine (Centre for Innovative Ageing, Swansea University, Singleton Park, Swansea, Wales, SA2 8PP [tel: + 44 (0)1792 602186; fax: +44 (0)1792 295856; e-mail: v.burholt@swansea.ac.uk]), **Gender Differences in Inter- and Intragenerational Relationships of Older South Asians Living in the UK, India and Bangladesh,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction: This paper examines gender differences in intergenerational (mother-child, father-child) and intragenerational (sister-sister, sister-brother) solidarity between older Gujaratis, Punjabis & Sylhetis living in South Asia and the UK. Methods: The sample comprised 603 older South Asians aged 55+ (103 Gujaratis, 100 Punjabis & 100 Sylhetis living in the UK: 100 each of Gujaratis, Indian Punjabis & Sylhetis in South Asia). Relationship data were analysed for N=2,328 parent-child dyads & N=734 sibling dyads. Exploratory latent class analysis was performed using five dichotomous indicators to classify parent-child & sibling relationship type according: structural solidarity (the proximity of children); associational solidarity (frequency of contact); affectual solidarity (emotional closeness); & two measures of functional solidarity (giving and receiving of help). Results: Parent-child relationships were assigned to one of three groups (Intimate but distant; Tight-knit; Sociable). Sibling rela-

tionships were assigned to three different groups (Sociable; Proximal-but-indifferent; Detached). Comparisons of relationships in each location (UK vs. South Asia) taking into account the gender of the participant showed significant differences for all but three relationships (Gujarati Father-daughter & brother-brother; Punjabi mother-son). Overall, the results suggest that relationships in the UK are less close on some dimensions of solidarity than those in South Asia.

Burnett, Cora (Department of Sport and Movement Studies, University of Johannesburg, P O Box 524 Auckland Park South Africa 2006 [tel: +27115592677; fax: +27115592671; e-mail: corab@uj.ac.za]), **The Development Dynamics of the GTZ/YDF Programme in Africa,** *International Sociological Association, Gothenburg, Sweden,*

¶ The 2010 FIFA World Cup in South Africa attracted a diverse set of international stakeholders, ranging from governments, international development agencies & global corporate partners such as the Sport for Social Change Network (Nike). The German government, in collaboration with GTZ (Deutsche Gesellschaft für Technische Zusammenarbeit) & European Union, are main partners in a sport for development initiative (Youth Development through Football) that has since 2007 been implemented in nine different African countries. The multi-level articulation of stakeholders & network formations with the NGO-sector at grassroots level, gave rise to an emerging field of scientific inquiry around the development dynamics involved in such a high profiled initiative. This paper will explore the intricate webbing of partnerships in the African context of development as it relates to the GTZ/YDF programme. It is in the clustering of partnerships informed by donor expectations, national strategic objectives & community-based realities that the process of development finds expression and meaning. The discussion of role-identification, stakeholder analysis & core elements of development work in & through sport that informs a conceptual framework & identify existing models within & across nine African countries.

Busbridge, Rachel (University of South Australia, Adelaide [e-mail: rachel.busbridge@postgrads.unisa.edu.au]), **Double-Tasks and Transformations: The Politics of Recognition for Arab-Australians Post-9/11,** *International Sociological Association, Gothenburg, Sweden,*

¶ Like many other Western nations, particularly those involved in the so-called "War on Terror", Australia has witnessed an intensification & acceleration of Islamophobia & anti-Arab sentiment since the events of 9/11. The persistent Othering, marginalisation, & vilification of those from Muslim & Arab backgrounds has placed this group in profound need of recognition. However, as I consider in this paper, what exactly would recognition involve for Arab-Australians in the post-9/11 context? Typically, the discourse of recognition has been centred upon the contention that the particularity of groups requires acknowledgement, & as such the recognition of difference should be built into politics. In this paper, I argue that such an approach to recognition is unlikely to work in the case of Arab-Australians. Arab-Australians, I maintain, are a group forged not by any particular common distinctiveness, but rather a common experience of racism & cultural exclusion, as well the enduring slippage between Arab & Muslim that pervades much popular discourse. As such, a politics of recognition must take this aspect of group formation into account. I thus propose the recognition of Arab-Australians to necessitate a double-task. Firstly, recognition ought to (re)affirm the internal diversity of the group in order to contradict the stereotypes to which the group are often subjected. Secondly, recognition ought to consider the broader societal processes that have largely constituted the group as such. This double-task approach, I argue, has the potential to shift recognition beyond a symbolic acknowledgment of distinctiveness and into a critical arena focused on the transformation of broader societal process of exclusion.

Busby, Helen & Mohr, Alison (Institute for Science and Society, University of Nottingham, Nottingham, UK, NG72RD [e-mail: Helen.Busby@Nottingham.ac.uk]), **'Consumer Freedom' or 'Consumerism'? Dilemmas Posed by the Private 'Banking' of Stem Cells in Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper explores how the private storage or "banking" of stem cells has refracted some key tensions about "consumers" in relation to health care in Europe. It draws on two research projects, concerned with parents' perspectives on cord blood banking in England, & with the governance of stem cell banking in the European Union. The first draws on 55 qualitative interviews with parents & key professionals, the 2nd deployed socio-legal perspectives to analyse governance of this novel form of cell banking. Both projects address the multiple expectations and uncertainties that underpin some of the controversy about cord blood banking. Private cord banks often promote speculation that novel "regenerative therapies" might be developed that utilise the patients' own pre-deposited cells. Their activities have proved especially controversial in Europe, where they contravene a longstanding emphasis in public policy & law on common good or solidarity as the basis for tissue banking. Markedly different stances are taken to the governance of private stem cell banking within different national health systems. The dilemmas posed for policy makers by high levels of consumer interest in the uses of cord blood stem cells coupled with uncertainty about the extent of possible future applications, will be explored.

Busch, Lawrence (CESAGEN, Lancaster University, Lancaster LA1 4YD, United Kingdom [tel: +44 1524 510842; fax: +44 1524 510856; e-mail: l.busch@lancaster.ac.uk]), **Individual Choice and Social Values: Choice in the Agrifood Sector,** *International Sociological Association, Gothenburg, Sweden,*

¶ In his 1951 work, Social Choice & Individual Values, economist Kenneth Arrow asked how the values of individuals might be aggregated into a social choice. Today, we live in a world in which choice is celebrated as a virtually undiluted good. In the agrifood sector we can choose from a vast array of items in the local supermarket. Consumer choice is also used to promote fair trade, animal welfare, geographically specific food & agricultural products, fair labor practices, & protection of the environment. In short, choice is seen as both "revealing preferences" of consumers as well as their ethical stances with respect to various issues facing the world today. But all this assumes that choices are individual. It not only accepts the methodological individualism common to mainstream economics as a research strategy, but assumes that it provides an adequate means of understanding & organizing the world. However, if we reject that such individualism, & grant that humans are social beings, then appropriate food choices are learned through a complex process of interaction. One might say that the Arrow points the other way: individual choices are & must be based on socially held, shared values.

Bustamante Kuschel, Gonzalo (Universidad Adolfo Ibáñez, Diagonal las Torres 2640, Peñalolen, Santiago, Chile [tel: 56 + 2 + 3311548; fax: none; e-mail: gonzalo.bustamante@uai.cl]), **A Luhmanian Analysis of the Religion Factor in the Chilean Right Parties,** *International Sociological Association, Gothenburg, Sweden,*

¶ Luhmann's theory assumes political & religious systems as isolated realities. According to him, differentiation within modern Society has produced a more radical separation between systems. In spite of this isolation, we have different process of irritation. From this theoretical background, I will analyze the religion-factor as an ideological issue in the constitution of the Chilean right parties after the country's return to democracy. In this work I will expose critically the main idea of Luhmann regarding the key factors of the political system & the religious one. From this I will introduce the concept of irritation & its relevance for this analysis. Then, I will apply this to the main categorical ideas and ideological discourses of the Chilean right post-Pinochet. My main thesis will be that the luhmannian approaches enrich the analysis of the political discourse. Furthermore, that can be useful in the case of Chilean right-wing parties to demonstrate why in the Chilean democratization of political actors should be a separation of these two systems. The Luhmann idea of Democracy assumes the form of a non-normative procedimental system in which it is not possible to introduce the idea of a final truth. Key Words: System, Religion, Politics, Irritation, Gremialismo, Liberalism, Democracy.

Butler, Catherine, Parkhill, Karen A. & Pidgeon, Nick F. (Cardiff University, 70 Park Place, Cardiff, CF10 3AT [tel: +44 (0)2920 876520; e-mail: butlercc1@cardiff.ac.uk]), **Engaging With 'Carbon': Locally Situated Public Discourses of Energy Technologies,** *International Sociological Association, Gothenburg, Sweden,*

¶ Throughout the world, socio-political concern about climate change and the security of future energy supplies has led to an increasing focus on the significance of "low carbon" energy development. Encompassed in such global discourses are technologies classed as renewable energy forms,

such as wind & tidal power, but also nuclear power, which is increasingly cast as an important technology in efforts to address energy supply & climate change issues. Such technologies are contrasted with exhaustible fossil fuel energy sources, with coal fired power receiving particular attention as a high carbon energy source. The political and cultural acceptability of shifts to alternative low carbon technologies has significant implications for the viability of different energy systems. Such politics of energy transitions play out in particular places & cultural contexts with varying implications for the acceptability of change & continuity. In this paper we draw upon empirical case studies conducted in 2009 in two differing parts of the United Kingdom which both play host to major energy infrastructures; Aberthaw in South Wales which hosts a coal fired power station & Hinkley Point in South West England which is the location for a nuclear power station. Both of the case sites will also be affected by proposed tidal energy development in the Severn tidal estuary, currently under consideration by the UK government. In-depth qualitative reconvened interviews with members of the public (participant n-53) living in these areas, involving an innovative visual methods approach, & interviews with local professionals working in roles relating to energy (participant n-19) form the basis for our analysis. We examine how energy transitions are being conceptualized in these specific localities by both ordinary citizens & professional social actors with roles and responsibilities in the energy sector. In particular, we pay attention to the role that the socio-cultural & historical contexts of the localities play in the formation of participants views & explicate the significance of discourses about carbon for our interviewee's conceptions.

2010S00391

Butticci, Annalisa (Dept of Sociology, Univ of Padova, Italy, Via Cesarotti 10/12, 35122 Padova, Italy [e-mail: annalisa.butticci@unipd.it]), **African Pentecostal Woman Pastors: Challenges and Opportunities in Italian Religious Arena,** *International Sociological Association, Gothenburg, Sweden,*

¶ This work analyses the role & position of African Pentecostal woman pastors in the Italian context. Their role is both interesting and intriguing in particular in countries with a strong catholic identity like Italy where women cannot exercises any spiritual and religious leadership role. The paper pays particular attention to women religious leadership, a dimension usually lacking in standard works on Pentecostalism & Charismatic movements. One of the goals of this work is to interrogate the intersections of gender with other structures & agencies that play a central role in defining religious leadership strategy & forging women charismatic personalities. The study examines the articulation of women's leadership in relation to the structures & agencies offered by the Italian context of migration where they simultaneously inhabit multiple arenas of the public & private sphere. Therefore, this work explores female religious leadership valuing the concrete context of leadership as a matter of consideration. The analysis focuses on obstacles & opportunities offered to women by the different social, political, cultural & religious landscapes. The paper is based on a research project in progress conducted in Italy through the use of in-depth interviews & life stories of Nigerian and Ghanaian women pastors, focus groups & participant observations of Sunday services, religious, & cultural events.

2010S00392

Büttner, Sebastian (Institute of Sociology, University of Erlangen-Nuremberg, Erlangen, Germany, 91054 [tel: +49 9131 85-22086; e-mail: Sebastian.Buettner@soziol.phil.uni-erlangen.de]), **The World-Cultural Mobilisation of Sub-National Space: Insights from a Macro-Phenomenological Research Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ Sub-national territories have become important stimulators of multi-faceted development processes, especially in Europe where the expansion of EU structural & regional policy over the past two decades has contributed to strengthen regional involvement. Today, European regions & localities experiment with various types of development activities. However, most of the measures & policies regions & local authorities put into practice are part of the same activating & enabling style of policy-making that has become fashionable these days on global scale. In this sense, the current drive towards greater local & regional self-determination should not be seen as a counter-movement to globalisation, but rather as an expression of a more general trend towards all-encompassing social mobilisation. This paper departs from classical assumptions of sociological neo-institutionalism (esp. world-polity approach) regarding the "world-cultural" construction of modern actor identities fostering the diffusion of scientifically grounded and "approved" world-cultural models, principles & practices. Thus, instead of overemphasising local peculiarities, path-dependency and diverse actor constellations in regional governance systems, we acknowledge the eminent impact of a highly generalised world culture of "knowledgeable experts" (bureaucrats, scientists, EU consultants, private consultants etc.) on current sub-national transformations. This argument is specified at the example of the diffusion of European regional development practice to new EU member states in Central & Eastern Europe.

2010S00393

Butts, Rachel (Michigan State University, 316 Berkey Hall, East Lansing, MI 48824 [tel: 5174499633; e-mail: rbutts@msu.edu]), **The Effect of Child Welfare Intervention on the Relationship between Child Abuse Victimization and Adult Mental Illness,** *International Sociological Association, Gothenburg, Sweden,*

¶ U.S. child abuse allegations tally 6 million per year. State child welfare services have the capacity to investigate about half of these, with only a quarter to a third confirming abuse. Although some studies link adverse outcomes with child welfare intervention and others link child abuse victimization with subsequent health problems, few have investigated the potentially moderating effect of state intervention on the pathway between child victimization and adult well-being. This study uses a self-reported survey of incarcerated women to examine the role of child welfare intervention services on the relationship between childhood victimization & adult mental illness. Statistically significant relationships are observed between childhood abuse victimization and state intervention, & between victimization & mental illness, but not between state intervention & subsequent mental well-being. The effect of child victimization on adult mental illness persists despite intervention. Policy recommendations are explored.

2010S00394

Byamugisha, Helen M, Ikoja-Odongo, Robert, Nasinyama, George William & Lwasa, Shuaib (Makerere University, Kampala- Uganda [tel: +256-772-589721; fax: +256 41 540374; e-mail: hbyamugisha@mulib.mak.ac.ug]), **Information Utilization among Urban Dwellers: A Case for Urban Farmers in Kampala City in Uganda,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper presents results of a study conducted in Kampala District in Uganda to determine how urban farmers use agricultural information. Urban farmers in Kampala do not effectively use available information resources to improve agricultural productivity. Urban farming is hence characterized by low agricultural production that leads to food insecurity, poverty & social inequality particularly among the urban poor. The study employed both qualitative & quantitative study design. Respondents included 274 urban farmers, 3 focus groups comprising 36 respondents & thirty key-informants. Household, focus group & key-informant interviews were the methods employed. Data analysis for the quantitative data was done using the Statistical Package for the Social Sciences (SPSS) software. Analysis of the qualitative data included examining transcripts, categorizing responses, & "unitizing" the data according to the objectives of the study. Results show that information use is as varied as the urban farmers' agricultural information needs. The paper concludes that if urban farmers in Kampala district were effectively utilising agricultural information, they would improve their agricultural production, boost food security, & reduce urban poverty & social inequality. Recommends that for agricultural information to be effectively utilised, it needs to be systematically collected, processed, organized, repackaged & disseminated to the urban farmers as & when needed. Key words: Information, information utilization, urban dwellers, urban farmers, food security, poverty, social inequality

2010S00395

Byfield, Natalie P. (St. John's University, New York, USA 11439 [tel: +1 718 990 1976; e-mail: byfieldn@stjohns.edu]), **The Relationship between the Discourse of Restorative Justice and the Carceral State in the U.S.,** *International Sociological Association, Gothenburg, Sweden,*

¶ The traditional discourse inside the administrative entities of the criminal justice system focuses on punishment & runs counter to the goals & the discourse of restorative justice, whose focus is healing. The discourse within the community-based restorative justice movement doesn't deny the culpability of individual offenders but it seeks a broader interpretation of social responsibility in the context of crime. This paper is a preliminary study which uses the experiences of one such New York-based organization as a case study of the impact of the restorative justice movement on the criminal justice system. This organization uses memoir-writing workshops as a form of restorative justice. Over 600 women have gone through these workshops in the last four years. Using a critical realism approach

(Fairclough 2005), this paper treats the workshops & narrative writings of these incarcerated women as discursive events & social processes respectively. It finds that as the women in the prison writing workshops are being self-transformed by their memoir work, some of their jailers are also being changed by the process of regularly hearing the women's stories. It theoretically examines whether or not their writings represent expressions of agency that have the opportunity to transform carceral institutions.

2010S00396

Cabral, Ximena I. (Centro de Estudios Avanzados Unidad Ejecutora Conicet (CEA-UE CONICET) Universidad Nacional de Córdoba (UNC), Juan Nepper 6493 Arguello Cordoba 5147 [tel: 54 351 156273317; e-mail: ximenacabral@yahoo.com]), **Aesthetic of Resistance in the Social Protest: The Expressive Resources in the Defense of Water,** *International Sociological Association, Gothenburg, Sweden,*

¶ As part of a line of inquiry within the studies on Collective Action and the Sociology of the Bodies & Emotions, this paper suggests an approach from the perspective of qualitative methodology, which thinks about the expressive sphere of collective action along with the analysis of expressive resources in the politics of resistance of the social protest. In this paper we will work specifically around the identification, selection & description of different expressive resources & images produced by the constituted groups of people that work for the Defense of Water in Argentina. Around the recovery of visual data about the protest for the Defense of Water between 2005 & 2009, we will select a micro-cycle of this conflict in the city to investigate about the framing processes and requirements / expectations at play. The expressivity forms are able to turn, thus, into ways of retaking the action when including actors in their relation with the background, at the same time they allow an access to the inside of experiences of life, expressed along with the selection & creation of new expressive resources -as an actualization of collective actors' sights/perceptions/ practices within the conflict. This process involves also a reading of diverse characteristics: on the one hand interrogations about the expressivity of accounts of social actors' experiences of life–not restricted only words & verbal accounts as the only ways of telling. On the other hand, a reading of the capturing techniques as an estrategy of data collecting that makes possible the re-construction of situations & interactions. In this sense, to recognize & understand the possibilities of the various ways in which aesthetics means hegemonic resistance, in various expressions of challenge & contestation, represent the central work issue from which we will able to approach the expressivity of the studies on collective action & social protest.

2010S00397

Cabral, Ximena I., Ibañez, Ileana & Huergo, Juliana (Centro de Estudios Avanzados Unidad Ejecutora de Conicet, Universidad Nacional de Cordoba, Juan Nepper 6493, Arguello, Córdoba 5147 [tel: 54 3516273317; e-mail: ximenacabral@yahoo.com]), **Hunger and Feeding Policies among the Advance of the Soya Frontier: The Resignification of the 'Olla(s) Popular(es)',** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ The transformation in the traditional eating habits of popular sectors can be reconstructed in the image of the olla popular (soup kitchen). This image operates as an analyzer that condenses these changes in response to a policy on the bodies in a neo-colonial scheme. In Argentina, with the advance of soya monoculture, since 2001 its consumption is promoted from certain focused policies of meal plans. The State begins to "fatten" the popular sectors and the impact of this is embodied in the forms of subjectivity, socialization & health of those living in conditions of poverty and exclusion. We will perform a historical analysis of the senses associated to feeding, with practices of gathering & family and social organization around food, traversed by the production model and food policies in recent decades. These practices & senses will be rebuilt in the olla popular in three scenarios: in the street–associated with the struggle & demands of different collectives for "managing the olla" among all–in family everyday–ordinary modes of feeding of popular sectors–& in the meal center–as a material & symbolic state intervention.

Caetano, Ana (CIES, ISCTE-IUL, Lisbon, Portugal [tel: +351 217903077; fax: +351 217940074; e-mail: ana.caetano@iscte.pt]), **Reflecting on Personal Reflexivity: A Sociological Approach,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is part of a PhD research that analyses the social mechanisms of personal reflexivity. The focus of the study is placed on the processes through which people confer meaning to their actions & how they choose to act in a certain way. Special attention is given to the connections between societal structures of constraint & opportunity, social contexts that frame individual's everyday life & agency. The paper is structured in three points. First, the discussion is centred on the main theoretical approaches that can contribute to the analytical understanding of the various ways individuals think about themselves & about their social circumstances. Special critical attention is given to the works of Anthony Giddens, Pierre Bourdieu, Bernard Lahire & Margaret Archer. Second, it will be presented an analytical framework that brings together those theoretical discussions & that identifies the main sociological dimensions that can be mobilized to the operationalization of the concept of personal reflexivity. Third, the first empirical results of the analysis, collected through biographical interviews, will be presented & discussed.

2010S00399

Caforio, Giuseppe (Centro Interuniversitario Studi Storico Militari, Pisa, 56125, via s.antonio 58 [tel: +39 050 20499; fax: +39 050 20399; e-mail: gcaforio@fstewebnet.it]), **The Military Profession Face to Asymmetric Warfare,** *International Sociological Association, Gothenburg, Sweden,*

¶ The military profession face to asymmetric warfare the end of the Cold War & the resulting disappearance of the two opposing blocs of states whose equilibrium was nevertheless a strong guarantee of the preservation of some sort of status quo, opened a Pandora's box from which have progressively & tumultuously emerged religious wars, ethnic conflicts, the disintegration of states & the birth of new state entities often in conflict with each other, phenomena all strongly at odds with the free trade & globalisation needs of the victors in that war. Most of these new conflicts (new wars, according to the M. Kaldor definition) are asymmetric & the Western World (in a broad sense) has now to face a different and peculiar form of warfare, characterised by a situation where a weak side (state or non state actor) is opposed to a strong military state power. What could the impact of that on military profession be? As Bengt Abrahamsson & Alise Weibull wrote "the change from an invasion defence towards a defence based on flexible response puts the military profession under the strain of changing large parts of its expert base, as well as ethical norms & corporate traditions" (2008. p. 13). This paper tries to point out the challenges that the military professional has to face today & the training & educational problems that arises from these new conditions in a different international scenario.

2010S00400

Cairns, David (Centre for Studies and Research in Sociology (CIES, ISCTE-IUL), Lisbon, Portugal [tel: +351 217 903 077 ; e-mail: david.cairns@iscte.pt]), **"I Wouldn't Want to Stay"–Youth, Recession and Transnational Mobility in Ireland,** *International Sociological Association, Gothenburg, Sweden,*

¶ This short paper explores the theme of youth transnational mobility in the Republic of Ireland & Northern Ireland, focusing upon the migration intentions of a sample of the tertiary educated youth population, against the backdrop of the recent economic crisis. Building upon prior investigation by the author in 2007, quantitative & qualitative research has been conducted with 400 university students in Dublin, Belfast & Cork during February-April 2010. The analysis of quantitative data reveals that the majority of these young people intend to leave Ireland in the future, moving predominantly to other English language speaking countries, with such plans more prevalent in the Republic of Ireland (72%) than in Northern Ireland (52%). Further quantitative analysis & the qualitative interviews help contextualise these outcomes, explaining why those who wish to move want to do so and elaborating upon how they are organising their migration plans. The results emphasise the importance of social relationships rather than economic factors for those who wish to leave, while fears regarding the recession are more prominent in the accounts of those who have decided to stay.

Calasanti, Toni M. & King, Neal M. (Virginia Tech, 560 McBryde (0137) Blacksburg, VA 24061 [tel: 540 231 8961; e-mail: toni@vt.edu]), **Masculinity and Aging Bodies in the U.S.,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recent attention to age relations has made clear that even the most privileged men are subject to ageism, & that different men's bodies serve as markers for when & how such ageism is experienced. This paper draws on preliminary analyses of data from pilot interviews, case histories, & anti-aging web sites to explore such topics as the contemporary constructions of men's aging bodies in the U.S. as both feminized & not young, and hence, not masculine; the similarities & differences in these construc-

tions since the 1920s; & some men's experiences of their bodies within this cultural context.

Caldarovic, Ognjen & Sarinic, Jana (University of Zagreb, Faculty of Philosophy, Ivana Lucica 3, 10000 Zagreb, Croatia [tel: +385-1-612-0007; fax: +385-1-612-0007; e-mail: ognjen.caldarovic@ffzg.hr]), **Presumed Cosmopolitanism–On Which "Base" Accepted or Refused? Current Developments in a Transitional Society,** *International Sociological Association, Gothenburg, Sweden,*

¶ In many transitional societies the question of cosmopolitanism started to be only recently an issue. Due to a switch to capitalist free market ideas, many things in these societies changed. Social differentiation took place as well as, in some cases, forced migration as a result of war activities (ethnic cleansing resulting in ethnization of territories). Many areas became populated only by the people who declared themselves as belonging to one nationality, one religion, or to the same "roots". In this sense, "the differences" are widening, not coming closer. An open affiliation with "others" is still based on some old traits & traditions. In Zagreb, for example, there are more then 100 homebound associations of people based on territorial origins ('clubs'). Many people will "get along" best with "their people", they deal business with their people & they trust "their" ('my people'). The second example are football fan clubs that function also on regional, national & the least on the football sport club base. All of that represents a stunning example how modernization process and tendencies toward cosmopolitism & combined with traditional divisions & habits. In our paper we'll show & systematize previously mentioned processes, will give research illustrations and discuss potential developments & ways of recognition of cosmopolitanism as one of the necessary features of modern society.

Callens, Marc (Flemish Government Research Centre, Boudewijnlaan 30, B-1000 Brussels, Belgium [tel: +32-2-5534196; e-mail: marc.callens@dar.vlaanderen.be]), **Life Satisfaction and Gender: A Multilevel Age Period Cohort Analysis,** *International Sociological Association, Gothenburg, Sweden,*

¶ We use Multilevel Age Period Cohort analysis to assess the relative importance of gender, cohort, life cycle & regional effects on life satisfaction data from the Mannheim Eurobarometer Trend File 1970-2002. Multilevel Age Period Cohort approach is an appropriate technique for the analysis of hierarchical repeated cross-section surveys by both distilling out the effects of the clustering of survey respondents (by survey year or cohort & by region or country) & disentangling age, period & cohort effects. Our primary substantial focus in this paper is to explain time-gender differentials across nations.

Calvo, Esteban & Sarkisian, Natalia (Harvard University, Boston, MA 02135 [tel: 617-894-6661; fax:; e-mail: estebancalvo@gmail.com]), **Retirement and Well-being: Examining the Characteristics of Life Course Transitions,** *International Sociological Association, Gothenburg, Sweden,*

¶ Much literature debates whether transitions to retirement lead to increased or reduced well-being. We attribute this controversy to the lack of theorizing on life course transitions & argue that the effects of such transitions depend on their characteristics such as speed (gradual/abrupt), perceived control (voluntary/forced), anticipation (expected/unexpected), timing (earlier/later), & synchronicity with other life changes (focal/overlapping). Using change models with Heckman correction on the panel data from the Health & Retirement Study, we examine the effects of retirement on four dimensions of well-being–psychological, physical, economic, & social. Retirement transitions can be both beneficial & detrimental to well-being, depending on their characteristics, dimensions of well-being, & the specific point in the trajectory of change. Compared to abrupt retirement, gradual retirement is beneficial for health & income but it dampens social ties; the effects on income and social ties disappear once the transition is completed. Perceived control boosts well-being. Unexpected transitions dampen social ties, but only after the transition is completed. Retiring later is associated with better psychological & economic outcomes but worse health outcomes. Finally, the effects of synchronicity depend on the nature of contemporaneous changes. Our findings underscore the need for a more complex view of life course transitions.

Campbell, Hugh R. (Centre for the Study of Agriculture, Food and Environment. University of Otago, Dunedin, New Zealand [tel: +64-3-4798749; fax:; e-mail: hugh.campbell@otago.ac.nz]), **Productivism, Resilience and 'Foods from Somewhere': Emergent Politics in Global Agri-Food Chains,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper seeks to understand the emergent politics of some national and global-scale experiments in agri-food chains. In particular, the emergence of highly audited, visible & branded products from countries like New Zealand. In contrast to the dominant post-WWII character of global food trading, where most foods were traded in commodity relations with a distinct lack of visibility to major parts of the food chain (what Philip McMichael calls "food from nowhere"), this paper engages with the potentials & pitfalls of "food from somewhere". These are regimes of food relations where visibility, branding, geographical location & credence claims are the core elements to value-creation for food companies. This paper uses the example of high-value, branded foods from New Zealand–incorporating dense suites of audit, indicators & environmental sustainability claims–to demonstrate the emergence of "food from somewhere" that operate under different logics & metrics to food from nowhere. These global-scale export chains are distinctly different to more European-style experiments in multifunctionality, localisation & Geographical Indicators. Using recent scholarship on audit, feedbacks & resilience, the paper discusses the ways in which "food from somewhere" is being authenticated as well as how sustainability claims are being legitimised. It also demonstrates key sociological transitions from farmer subjectivities based around productivist & industrial logics towards subjectivities constructed around qualities like environmental sustainability, high-value, craft & consumption. The conclusion is that foods from somewhere open up complex new realms of agri-food politics and are useful for demonstrating some of the new theoretical framings for understanding the potential resilience of agri-food systems to shocks like climate change, energy costs & commodity price spikes.

Campbell, Rook (University of Southern California, 3518 Trousdale Parkway, Von KleinSmid Center 330 Los Angeles, CA 90089 USA [tel: 214-478-2261; fax: 214-478-2261; e-mail: rkcampbe@usc.edu]), **Global Sport Governance: Regulating Transnational Athletic Labour,** *International Sociological Association, Gothenburg, Sweden,*

¶ Sport global governance -institutions such as International Olympic Committee (IOC); Fédération Internationale de Football Association (FIFA); Union of European Football Associations (UEFA); World Anti-Doping Agency (WADA) & Union Cycliste Internationale (UCI) have powers to decide who participates, when, & where. Decisions on athletes eligibility -including doping bans and non-doping issues such as nationality transfer- as well as decisions on commercial, endorsement, & labour contracts are to name but a few areas of major importance to states, societies, and individuals. Regulating global sport markets also involves multinational corporations & global capital. Issues of corruption, bribery, & financial "doping" threaten fair play, massive money interests, & stability of teams, leagues, sport international institutions & as well as domestic & global economies. Ultimately, this paper is about global governance. Sport transnationalism opens space for conceptual innovation & working through broader dilemmas of global governance. Sport governance reveals both points of convergence & contestation for issues of legal regulations, political authority, economic interests, and social norms. I examine questions on the relationship between globalization & global governance through institutional, labour, and political economy analysis in the area of sports.

2010S00408

Campillo, Inés (PhD Candidate; Department of Sociology I-Social Change, Complutense University of Madrid [e-mail: icampillopoza@gmail.com]), **Reconciliation of Work and Family Life Policies in the Mediterranean Welfare Regimes: The Italian and the Spanish Cases,** *International Sociological Association, Gothenburg, Sweden,*

¶ Although European reconciliation policies were at the beginning driven by a clear compromise with equal opportunities between men and women, in the last decade they have been mainly developed as part of the European employment policy. The objective of those policies has thus turned into the promotion of a "dual earner" society, that is, a full employment society in which both men & women participate in paid employment. Given the diversity of countries that shape the European Union, this political objective must have different implications for every country. It obviously demands a greater policy effort in the Mediterranean countries, whose welfare regimes have been characterized by the backwardness of their welfare policies, by their familiarism & by their low female employment rates. The aim of this paper will be precisely to describe & assess the reconciliation policies implemented in Italy & Spain during the last decade, taking specially into account their defamiliarizing impact & the inequalities between women & households they are unintentionally promoting.

Canales, Andrea (Department of Sociology, University of Oxford, Manor Road Building, Manor Road, Oxford, OX1 3UQ, UK [e-mail: andrea.canales@sociology.ox.ac.uk]), **Completion of a University Qualification in the UK: A Multilevel Analysis of the Effects of Individual and Institutional Characteristics in the Generation of Inequalities in Educational Attainment,** *International Sociological Association, Gothenburg, Sweden,*

¶ Although the expansion of higher education has provided new educational opportunities to students from different backgrounds, it has not necessarily translated into comparable expansion of success. In this paper, I focus my attention on analyzing to what extent individual characteristics & institutions affect students' chances of completing a degree in British universities. I use elements of integration theory & rational choice theory to explain the variance of educational attainment. Integration theory assumes academic achievement is not only shaped by mechanisms at the individual level but also by the institutional context. Student dropout is understood as an unsuccessful integration to universities. Rational choice theory, on the contrary, points out students of higher ability & more financial resources have higher probabilities to obtain a university degree. This paper uses national-longitudinal data, which follows a student cohort (n= 216.359) throughout the years. I conduct multilevel analysis to test for the significance of individual /institutional effects on degree attainment. The findings suggest that individual and institutional factors are significant predictors of educational attainment. However, the effect of individual factors weakens throughout the years. Students who attend universities where their academic credentials are better matched have higher chances of completing their degrees.

2010S00410

Canek, Marek (Department of Political Science, Faculty of Arts of Charles University, Prague, Czech Republic [e-mail: marekULcanek@yahoo.com]), **The Competition State and the Expansion of the Guest-Worker Programs: The Case of the Czech Republic,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper I will argue that the evolving character of the state has been an important factor leading to changes in the labour migration policies & institutions governing these policies in the Czech Republic in the last few years. Most importantly in 2008 a guest-worker program called the "Green Cards" was adopted. The changes in labour migration policies are a consequence of the rise of the competition state in the Czech Republic since the end of the 1990s. With the creation of an incentive program for foreign capital in 1998, foreign direct investment ensued & became the main strategy of development. To fill certain jobs where there was increasingly a "lack" of domestic labour force & help keep a check on wages, immigration from mostly Central & Eastern Europe and some Asian countries was on the rise, which accelerated especially with the economic boom after the Czech Republic's entry into the European Union in 2004. The paper will focus on the extent to which (im)migration policies have become subordinated to the competition state (Drahokoupil 2009).

2010S00411

Canstein, Julia (Martin Luther University Halle-Wittenberg [fax:; e-mail: julia.canstein@googlemail.com]), **The Role of the Internet in Strengthening Japanese Civil Society Organizations,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper focuses on the Internet as an instrument used by Japanese non-profit organizations (NPOs), which are characterized by having few financial & personal resources & by suffering from lack of members. The paper argues that increasing their membership is essential for the reinforcement of Japanese NPOs. The main assumption is that the Internet is an effective tool for recruiting new members. A study investigates this argument by analyzing the web sites of 156 NPOs from the Japanese city of Niigata to find out whether NPOs actually make efforts to recruit members via the Web. The results of the content analysis show that the Internet as a tool for recruiting new members is not used by NPOs from Niigata, or only in a limited way. A possible explanation for these results might be the fact that many NPOs are deeply rooted in their local context & might prefer using direct personal contacts to the global media Internet.

Canto Mila, Natalia & Seebach, Swen (UOC (Open University of Catalonia), Av. Tibidabo 39-43, 08035 Barcelona [e-mail: ncantom@uoc.edu]), **The Disembodiment of Love. Love in Postmodern, Digital Spaces,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper seeks to question the ways in which the relationships that human beings establish to themselves, to other human beings, & to objects, have changed in the last decades, perhaps even years. This paper is based on the assumption that many of the changes that have occurred are deeply related to the implementation, & growing dominance, of technology mediated communication, & attempts to explore the hypothesis that these changes have particularly affected those relationships in which materiality, the human bodies, play an important role in the interweaving of those invisible threads that build society binding people together. Love as a social field is highly representative for these social changes. Internet, mobile phones, email have transformed some of the ways in which human beings communicate & thus relate to each other, as well as to themselves, & to their environment. Simultaneously the more traditional mass media (still) have a huge role to play in the moulding of expectations that we have of ourselves, "normal biographies", & the ways in which relations to others have to evolve. They all contribute to changing the meanings & forms of communications of (the discourses of) love. The objective of this paper is to examine the ways in which the forms of communication & the imageries of the body & of romantic love have changed with the widespread use of electronic means of communication, above all internet & mobile phones. In order to do so 20 autobiographical narrative interviews have been realised, as well as a text analyses of women's & men's magazines regarding their counselling on love & sexual relationships.

2010S00413

Canto Mila, Natalia & Seebach, Swen (c/o Seebach–UOC (Open University of Catalonia), Av. Tibidabo 39-43,080035 Barcelona [e-mail: sseebach@uoc.edu]), **The Future as an Object of Sociological Analysis,** *International Sociological Association, Gothenburg, Sweden,*

¶ The future has often played an important role in sociology. Yet, traditionally it was its prediction, control or modelling that which constituted the objective of sociological research. Thus the future was the objective but not the object of sociological analyses & theories. Sociological research & sociological theory worked in order to be able to predict that which would happen (the Comtian "savoir pour prévoir" is a paradigmatic example of this way of dealing with the future in sociology). This paper presents a different way of dealing with the future as a category of sociological analysis, thus making of ideas, pictures, images & figures of the future an object of analysis. The thesis presented here asserts that social relations as we know them would not be possible without ideas & images of the future in the imaginaries of each participant in society. And that the form and colours of these pictures arise & change within their specific socio-historical contexts. Future imaginaries are shaped by and within the structures that web society together, and, at the same time, are webbed by the reciprocal actions & effects (Wechselwirkung) that, in fact, are society. The aim of the paper is therefore to investigate the images & narratives that are being elaborated & webbed on the future in contemporary Europe today. In order to accomplish this objective 60 individual life-stories have been collected in Germany (mainly Saxony and Westphalia) & Spain (Catalonia). Through the analysis of these life stories we are able, on the one hand, to prove whether & how the future holds the central role in the very possibility of society as we know it, & in each individual's sociability. On the other hand, we are able to trace the main contours & typologies of

future imaginaries that are being mobilised in autobiographical narratives in today's social webs.

2010S00414

Cantor, Guillermo (CONICET–Universidad Nacional de Rosario, Rosario, Santa Fe, Argentina [e-mail: guillermocantor@gmail.com]), **Felons and Slaves: Immigration, States, and the Politics of Naming in the United States and Argentina,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines patterns of immigrant political incorporation in Argentina & the U.S. based on two events–a sweatshop fire in Buenos Aires that lead to the death of six immigrant workers and immigration reform proposal HH4437 which ignited protests in Washington, DC. I reconstruct the dialectic between the discourse utilized by state actors & responses from the immigrant community surrounding these events. Drawing on the analysis of in-depth interviews & news stories, I argue both cases crystallize episodes of contention in which state actors directly or indirectly categorization of immigrants–as felons, in the U.S., & as slaves, in Argentina–shaped the way immigrant communities attributed threat & the modes in which they mobilized to contest such categorizations & their implications. In the U.S. case, Latinos viewed public use of the category of felony as an attempt to single out a group for punishment. In Buenos Aires, by contrast, part of the immigrant community interpreted government officials' utilization of slavery as a threat to possibilities for work. In both cases, however, the cultural struggle based in a dispute of names had consequential implications regarding what human rights were in practice privileged, restricted, or openly denied to specific groups.

2010S00415

Canzano, Antonello (University "G. d'Annunzio" of Chieti-Pescara, Via dei Vestini, 31 66100 Chieti Scalo (Ch) Italy [tel: +39 335 8141771; fax:; e-mail: a.canzano@unich.it]), **The Transformation of the Political Mediation of Interests in Local Governance,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper analyzes local politics in the context of the frequency, intensity & style of governance which is limited to a few important aspects, as a consequence of the transformation of political parties. From the perspective of the relationship between particular parties, groups & social formations, the view has now been acquired that the weakness of political power often gives more power to other actors who can gain ground in the headquarters decision, but it is not appropriate to support outright expropriation of control of decision-making by the parties, which lose any ability to mediate interests. The problem must be approached differently. Currently mediation interests are conducted in a general redefinition of roles that proposes a new model of interest representation in which the processes of governance are increasingly affirmed. Increasingly active participation of new actors in the processes of public decision is particularly needed to see/understand to what extent this participation occurs. This paper begins with empirical research that the author has conducted on the evolution of local politics in Italy. Research is focused mainly on the role of new local political actors with other social forms that aim to achieve mediation of local interests.

2010S00416

Capetillo-Ponce, Jorge & Galanes, Luis (University of Massachusetts, 100 Morrissey Blvd., Boston, MA 02125 [tel: 617-287-6284; fax: 617-287-6284; e-mail: jorge.capetillo@umb.edu]), **Foreigners in their Own Land: Immigration, Tourism and Cultural Identity in the U.S. Virgin Islands,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper attempts to answer one central question: What happens to nativist/national narratives of identity when impacted by such globalizing forces as massive immigration & tourism to the point where natives become an absolute minority of the population? I will attempt to address such question by looking at one single Caribbean island, Saint Thomas (one of the three U.S. Virgin Islands or USVI), where the above-mentioned components of globalization have led to a situation where natives become "foreigners in their own land." Thus, this paper is interested not only in the experience and discourses of injustice & discrimination coming from the immigrant subjects, but more so on the experiences of injustice coming for the receiving culture. Immigration to the island of St. Thomas has been continuous since the acquisition of the territory by the U.S. from Denmark in 1917, but became massive after the development of the tourism industry on the island beginning in the 1950s. The USVI registered an increase in population of 96.9% during the period 1960-1970, & an additional increase of 56.7% percent during the period 1970-2005. The total increase during the period 1950-2005 was 318%, & was mostly due to immigration. Moreover, it took place in a political context in which natives had no control whatsoever over immigration policies since, as a U.S. possession, these functions were centralized at a federal government level. Drawing on the works of Stuart Hall & Partha Chatarjee, the works addresses critically the idea of homogeneous empty time posed by Benedict Anderson, arguing, with Chatarjee, that "[p]eople can only imagine empty homogeneous time; they do not live in it… [for] empty homogeneous time is not located anywhere in real space–it is utopian. The real space of modern life consists of heterotopia." We propose that the notion of homogeneous empty time has limitations when it comes to analyzing nationalist/nativist discourses in the context of places like St. Thomas. Further, drawing on Chatarjee's critique of Anderson, we show that the imagined narratives of the nation in the USVI are not mere obstinate survivals from the past, but at least as much narratives that owe their existence to the community's encounter with modernity, globalization & capitalism, & which in the case of the USVI are exacerbated by its encounter with the "heterotopic" realities that occupies its time/space, & which ultimately result from the process of massive immigration and tourism into the island.

Cappello, Gianna (Department on Politics, Law and Society, University of Palermo, Piazza Bologni, 8 Palermo, Italy, 90134 [tel: +39 91 23892213; fax: +39 91 23860809; e-mail: gianna.cappello@unipa.it]), **Media Education, Pleasure and Play. Bringing Leisure into the Classroom,** *International Sociological Association, Gothenburg, Sweden,*

¶ Media consumption is the basic ingredient of children's leisure. It plays a major role in the construction of their identity and sociality, & is mainly experienced through pleasure & play. This ludic dimension has been a key emphasis in postmodern theory as opposed to the modernist notion of mastery through seriousness and rationality (and the denial/suppression of desire). In this paper I want to argue that the widening gap between children's out-of-school "vital worlds" (largely defined through media leisure) & formal education can be reduced by introducing media education activities in the classroom. The creative use of media provides a space in which students can explore their pleasurable media leisure & at the same time develop a kind of self-reflexivity towards it. By arguing for the pedagogical value of pleasure & play as experienced through media leisure, I also want to emphasize the limitations of a rationalistic approach to knowledge & learning. However, I am not suggesting that media education should abandon all notion of cultural criticism. While teachers are asked to provide space for exploring CREATIVELY pleasure, nonetheless it is also vital to encourage students to engage CRITICALLY their (changing) positions–as citizens and consumers–in contemporary media culture & understand the conditions under which the pleasure they get from their media leisure is socially constructed.

Carleheden, Mikael (Øster Farimagsgade 5, Postboks 2099 Department of sociology, University of Copenhagen, øster Farimagsgade 5, Postboks 2099 1014 Copenhagen K Denmark [tel: +45 353-23286; e-mail: mc@soc.ku.dk]), **The Structural Transformation of Modern Democracy,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the paper I take my point of departure in a theory about the structural transformation of modernity. This theory understands modernity on an abstract level as autonomy, that is, as an inescapable tension between freedom & discipline. Further, it involves a distinction between abstract modernity & three historical epochs of realized modernity. The theory is inspired by Peter Wagner's history of modernity, but develops it further. However, the main purpose of the paper is to apply this general theory of a structural transformation of modernity on a special case; i.e. modern democracy in the West. In this part of the paper, Habermas' early theory of the structural transformation of the public sphere & his later theory of three paradigms of law will be important points of departure. In his early work Habermas talks about two epochs of democracy (liberal democracy & social state mass democracy). In his later work he has added a third epoch of deliberative democracy which he sees as a solution to the legitimation crisis of the social state mass democracy. In the paper I will not primarily discuss deliberative democracy on a normative level, but use it as a point of departure in order to understand the contemporary structural transformation of democracy.

2010S00421

Carlotto, Maria Caramez (University of São Paulo, Universidade de São Paulo - USP Faculdade de Filosofia, Letras e Ciências Humanas–FFLCH Programa de Pós-Graduação em Sociologia–PPGS Av. Prof. Luciano Gualberto, 315–sala 1063–Cidade Universitária 05508-010–São Paulo -SP [tel: +55 11 35890413; e-mail: mariacarlotto@usp.br]), **Recent Changes in the Scientific Knowledge Production and Dissemination Regime in Brazil,** *International Sociological Association, Gothenburg, Sweden,*

¶ The hereby proposed paper addresses the transformation of the production & dissemination regime of scientific knowledge in Brazil, during the period comprised between the political opening of the 1980s until the redefinition of the national policy of science & technology in the year 2000. The research was oriented by the concept of regimes of production & dissemination of scientific knowledge that conceive science both as an institution (that means, a champ with its own rules & needs of legitimation) and as a practical activity (that means, encompassing patterns of research accomplishment, broadcasting of the results & formation of new researchers). Therefore, it articulates two viewpoints: (1) the analysis of the legal-institutional change & the legal organization of science in the country; (2) the study referred to alterations of concrete scientific practices. The main aim is to show how changes in the legal framework of science influence scientific practices of the Brazilian scientific elites. The paper will present the results of an empirical research based on (1) the analysis of the Brazilian scientific & technology laws policies; (2) interviews with laboratory directors, members of scientific bureaucracy (directors of innovation agencies, coordinators of funding agencies, etc.); (3) a survey applied to 211 scientists working with nano & biotechnology in the most important Brazilian laboratory (National Light Laboratory Síncrotron). The foremost conclusion is that Brazilian scientific elites both articulate the change of the legal framework to promote the university-enterprise links & support scientific practices that preserve the relative autonomy of science.

Carmo, Renato Miguel do & Santos, Sofia (CIES, Lisbon University Institute, Lisbon [fax:; e-mail: renato.carmo@iscte.pt]), **Between Marginalization and Suburbanization: Mobilities and the Production of Social Capital in Southern Portugal,** *International Sociological Association, Gothenburg, Sweden,*

¶ The population fluxes are gradually losing its traditional boundaries and new spatial configurations are being created. The territories are no longer defined by the existence of a clear rural–urban divide, where the former tended to be characterized by its social and spatial fixity & the latter by intense & diversified paths of mobility. Now territories & communities are dealing with a constant reconfiguration which one of its main expressions is the intensification of mobility. On the other hand, people are no longer attached & related to their communities & neighbourhoods in the same way as before (in more traditional societies). The way people create their own social ties depends from a complexity of sociological factors like, for instance, the interpersonal capacity to generate relationships based on mutual trust. This presentation intends to measure the level of spatial mobility in different social spaces & its impact on the generation of some forms of social capital, using information from a survey application. We will analyze the neighbourhood relationships that are taking place in two different municipalities located in southern Portugal: São Brás de Alportel that has suffered in the last two decades a process of suburbanization; Alcoutim whose regressive demographic trends are widening.

Carmona, Roser (Drom Kotar Mestipen Roma Association of Women, Via Laietana 41, Barcelona 08003, Spain [tel: +34 93 3152969; e-mail: info@dromkotar.org]), **Roma Voices Leading to Political Change,** *International Sociological Association, Gothenburg, Sweden,*

¶ Roma, a people without a territory, have been traditionally excluded from any kind of scientific development. Their voices have not been only silenced but science has traditionally contributed to the reproduction of stereotypes & social exclusion. When a critical communicative methodology was used in the European Framework Programme, Roma have the opportunity to raise their voices in the scientific & political spheres. The results of the research were presented in the European Parliament by an illiterate Romaní woman, among other Roma people, researchers & policy-makers. Later on, the European Parliament & the Parliaments of some member states approved those results by unanimity & most European policies on Roma started to change. Without having engaged with Roma representatives, research would not have led to such important political developments.

Carpentier, Sarah (Department of Political and Social Sciences–Antwerp University, Antwerp, Belgium, 2000 [tel: 003232655400; e-mail: sarah.carpentier@ua.ac.be]), **Paths Out of Social Assistance in Belgium: Who Is When Allocated to Which Labour Market Integration Programme?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Active labour market policy has become a crucial element of social assistance schemes in European welfare states. Although a vast literature assesses the effectiveness of specific active labour market programmes, little is known about the selection process of beneficiaries towards types of welfare-to-work programmes. This paper addresses two questions. Firstly, whether, & how much time after their entry in social assistance, do different types of social assistance beneficiaries exit to work either through different sorts of welfare-to-work programmes or through the regular job market. Secondly, this paper studies which are the labour market outcomes of these paths out of social assistance. These questions are studied for Belgium, as this country extensively uses public sector job creation programmes, although a variety of other active labour market programmes are also available. A one third proportionally stratified sample of the inflow population in the Belgian social assistance scheme in the years 2004 & 2005 is used, including background variables like age, sex, gender, household type, labour market history, and nationality at birth. For these beneficiaries the careers in the labour market are followed over four years, & retrospectively since 1999. The first exit out of social assistance is analysed both by descriptive statistics & by event history analysis to multiple exit states.

Carrère, Geoffrey (Université Toulouse 1 Capitole (LEREPS), 21, Allée de Brienne 31042 Toulouse cedex 9 (France) [tel: +33 06 48 19 86 11; fax: +33 3 05 61 12 87 08; e-mail: carreregeoffrey@hotmail.com]), **Road Safety Experts and the Subjectivation Process of Public Action,** *International Sociological Association, Gothenburg, Sweden,*

¶ Anthony Giddens & Ulrich Beck studies underline the importance of experts in the risk society. In this way, risk & expertise appear like coextensive notions. This paper aims at presenting a work in progress of a study of experts, carried out in the Quebec Ministry of Transport. Also, we aim to go beyond the simplistic division between experts & the lay-public. Three methodological tools were used for this study: observation in an ethnographic approach, none-directive & semi-directive interviews. The expert population studied is composed of civil engineers who construct road infrastructures in order to reduce the number of accidents. During this empirical study we highlighted a subjectivation process in road safety expertise. We define the subjectivation process, on the one hand, as the ambition to control drivers' behaviours by the infrastructures & on the other hand, as the interactional use of experience & knowledge which arise from expert & lay-public rationalities. In their interaction, experience & knowledge lead also to hybrid behaviours like the expert-driver figure. In this way, this paper first of all explains how the subjectivation process takes shape in road safety expertise. Then, it examines its origins in the crisis of the profession & the various criticisms of modernist urban planning.

Carter, Katherine (University of Kurdistan-Hawler, 30 Meter Avenue, Hawler, Federal Region of Kurdistan, Iraq [e-mail: carterkatherine@fastmail.fm]), **She Works Hard for a Living: Cape Verdean Women Respond to Economic Globalization,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper describes the social & economic difficulties Cape Verdean women face on a daily basis & the pride women take in working, surviving economically, & beating the odds against them in a global economy. Narratives are also given of the difficulties women perceive in their relationships with men & the ways they cope with or confront the men who cause them pain. The findings tell us that women's lives are indeed affected by the economic forces of globalization. But they also tell us that another stratification system shapes the women's lives as well. That power structure is the one that organizes gender. Previous literature would predict that we might find women articulating a critique of globalization and a government inadequate to the task of helping women (and men) to be successful workers & parents. Instead, qualitative ethnographic data discloses their insight of the issues. Their perception focuses on the system of gender inequality as a source of the difficulties they must address.

Carter, Thomas (Chelsea School, University of Brighton, 1 Denton Road, Eastbourne, BN20 7SR [tel: +44 1273 641852; e-mail: t.f.carter@brighton.ac.uk]), **Patterns of Transnational Sport Migration: A Cuban Case Study,** *International Sociological Association, Gothenburg, Sweden,*

¶ The transnational movement of sport-related professionals has long, specific histories in a variety of sports. Much of the literature on sport-related migration assumes historical connections based on former colonial relations. While certain patterns of movement do mirror historical colonial migratory patterns, the reasons for these routes in sport are not necessarily the same as the political economic relations of larger migratory patterns between metropole and colony. To illustrate these points I draw upon the history of Cuban transnational sport migration & ethnographic fieldwork on contemporary Cuban sport. After summarizing twentieth century migratory patterns within sport, I focus upon the changing patterns of Cuban transnational sport migration over the past twenty years by tracing how patterns of state-sanctioned migration and undocumented migration of Cuban sports professionals shift due to changing political & economic circumstances within & without Cuba. These shifting patterns make it clear that greater attention must be paid to the dialectic local conditions of the point of departure & the desired point of arrival.

Caruso, Giuseppe (Centre of Excellence in Global Governance Research - University of Helsinki, Helsinki, Finland [tel: +358 9191 23525; fax:; e-mail: giu.caruso@gmail.com]), **The World Social Forum and Global Crises. Theories and Practices of Global Transformation,** *International Sociological Association, Gothenburg, Sweden,*

¶ The latest financial, economic & social crises have generated intense debates & activism within social movements the world over and within their spaces of convergence. In particular, in the World Social Forum regular sessions have been organised to investigate opportunities & challenges provided by the global conjuncture since September 2008. The annual event in Belem, Brazil, in early 2009, has been traversed by waves of frustration & hope. The debate on how to face the crisis & how to construct a world beyond capitalism has been continued since Belem in its International Council, animated by the coordinators of its Strategy Commission. At the heart of the debate a thorough analysis of opportunities & challenges provided by the crisis to the world movements & to the WSF in particular. In this paper I discuss those analyses & strategic considerations, & the radically changing mood & political postures among movement activists participating in two meetings of the WSF International Council in Rabat, Morocco, in May 2009 & in Montreal, Canada, in October 2009. A shift has taken place among the activists at these two meetings as I observed. In the first meeting the discussions were more centred on 'opportunities' while few months later it was mostly centred on the 'challenges' of facing a conjuncture that movements thought, perhaps too optimistically, could give them the opportunity to act for radical change. The feeling of urgency was reinforced by the analysis of the responses to the crisis negotiated in the London & Pittsburgh G20 meetings and contributed to the perception of a fast closing window of opportunity for action for the WSF & its movements.

Carvalho, Mario Vieira (Universidade Nova de Lisboa CESEM (Research Centre for Aesthetics and Sociology of Music), Lisbon, Portugal, 1069-061 [tel: 351 214848034; e-mail: mvc@mail.telepac.pt]), **Systems of Musical Communication and Processes of Colonial/Postcolonial Emancipation,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Eurocentric view, implemented in musicology, is inseparable from the processes of rationalization (disenchantment of the world) diagnosed by Max Weber, including in their impact on the musical sphere. In European music these rationalization processes have reached their most advanced development, notably since the introduction of notation, and, in a second moment, after the invention of musical composition. In connection with the notion of ethos, the rationalization of music is determined by social domination & used by the latter, either in its association with magical or religious practices, or inscribed in rituals of power, or in the specific context of the functional differentiation of art as an "autonomous" system of communication, in which the process of rationalization of European music culminates. In this paper, I address the topic of emancipation in colonial & post-colonial contexts, including those of religious fundamentalism, by focusing particularly on systems of musical communication. The main points are: a) the issue of emancipation & the structural connection between musical systems respectively of intracultural and intercultural domination; b) the functional differentiation and dedifferentiation of musical systems as factors of domination & / or emancipation; c) self-regulation based respectively on cumulative feedbacks ("culture") & compensatory feedbacks ("civilization").

Carvalho, Tiago & Casanova, José Luís (ICS-UL and CIES-ISCTE-IUL [e-mail: tiagomlcarvalho@gmail.com]), **Blogosphere and Democracy in Portugal–Results of a Websurvey,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper we present the results of a web survey applied in Portugal involving n=209 opinion bloggers. This study has three goals: to characterize bloggers according to their social position, political activities, values & social orientations; to analyse the relation between online & conventional participation & how different types of participation relates with different values and beliefs; finally, to discuss new dynamics within the public sphere and their impact on democracy. The results show that bloggers are mainly men & professionals that combine online activism with political party & association involvement. It's a relatively homogeneous elite but however diverse in terms of values and political action. We have found four types of political action: residual, associative & protester, associative & party-member, and cumulative. Each type of political action involves different values & beliefs. In the end, we discuss the impact of the new media on the renewal of the public sphere, the opportunities that this new media creates to the enlargement of democracy & the support it gives to the expression of socio-political autonomy projects & to the construction of societal projects.

Caso, Alvaro & Castaños, Fernando (Facultad de Filosofía y Letras UNAM, Mexico D. F. Mexico 01900 [tel: 52 55 55 54 15 79; e-mail: alvarocasoca@yahoo.com]), **Obeying the Law in a Democratic Regime: One Case of Compliance,** *International Sociological Association, Gothenburg, Sweden,*

¶ A case of complying, observing the law poses two key problems for understanding the human condition & the comprehension of social life: (1) Where does the obligation to obey come from? (2) Why is this obligation willingly fulfilled? This paper reviews ancient, classical & contemporary theoretical discussions on these problems. It also summarizes & articulates results on narrowed versions of them, concerning the source of the obligation & the basis of authority in a democratic regime. On the one hand, it is shown that, in a democracy, certain forms of participation tacitly endorse the systems of rules that make them meaningful & valid, and hence bind citizens. On the other hand, it is argued that democratic legitimacy is a complex (bi-dimensional and bi-stratified) disputable quality; a legitimate act is one that can be demonstrated to be valid & desirable. On these bases, it is claimed that, in a quality democracy, deliberation is, both, sought for & committing. This is why a quality democracy tends to be self-sustaining. A discussion on the possible implications for compliance in non-democratic states & in organizations different from states is pointed to.

2010S00435

Cassilde, Stéphanie (Department of Economics CERDI University of Auvergne, Clermont-Ferrand, France, 63000 [e-mail: stcassilde@hotmail.fr]), **Self-Declared Skin Color in Contemporary Brazil: A Chromatic Mobility Model,** *International Sociological Association, Gothenburg, Sweden,*

¶ It is well established in literature that popular saying "money whitens" is a strong mechanism of skin color self-declarations in Brazil. It was indeed observed comparing self-declarations and declarations by a third–mainly the interviewer–that the higher the educational level, the lighter the declaration by respondents. The same link was assessed for wages & income. These researches do not include a full analysis of darkening and chromatic immobility. Admittedly darkening is sometimes mentioned, but it is rather a strict counterpart of lightening than a choice for itself: if "money whitens", "poverty darkens". But contemporary evolutions of representations in Brazilian society lead notably to a valorization of darkening. In this paper, I construct a chromatic mobility model to analyse lightening, darkening & chromatic immobility together. In this model, the mobility is realized by the respondent in relation to the perception of a third. Each individual realizes a trade-off to maximizes its satisfaction. This trade-off calls together personal identity & social identity. The empirical application of this chromatic mobility model relies on original data collected during a field research conducting in São Paulo (November 2006–August 2007). I conclude that the link between chromatic mobility and educational level has to be nuanced. Indeed, it exists a threshold above which darkening is preferred to lightening. I although underline variables which are linked to chromatic immobility.

Castañeda, Fernando R. (FCPyS/UNAM, México D.F., México, 04510 [tel: +52 55 56657532; e-mail: sabido@unam.mx]), **The Future of Mexican Sociology,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ In México there is a strong division among disciplines within the Social Sciences. Anthropology, Sociology, Economics, Political Sciences are well differentiated. Each them have their own organizations, meetings, etc. Sociology have lost impact because this differentiation. The Mexican Sociological Association is developing new strategies to strengthen sociology. Both by developing new fields & by defending the sociological traditions.

2010S00437

Castaño, Cecilia & Vázquez, Susana (University Complutense of Madrid, c/Rector Royo Villanova s/n Ciudad Universitaria 28040 Madrid, Spain [tel: 0034 609800405; fax:; e-mail: susanavazquez@edu.ucm.es]), **Gender and Profession in Academic ICT Cultures,** *International Sociological Association, Gothenburg, Sweden,*

¶ Empirical data show that a major gender divide exists globally in the ICT sector that is primarily a male domain, both as a discipline and field of study & as a profession. Women's ability to access to ICT jobs depends not only on their education level and professional experience & talent, but it is also determined by cultural & institutional factors. In this context, the paper discusses how women, professors & researchers, "fit in" within the ICT academic field. In order to reach our goal we use a qualitative approach based on interviews with male & female researchers & professors in the Telecommunication Engineering School (ETSIT), Polytechnic University of Madrid. This school is pioneer & leader in education & research within the ICT field in Spain. Qualitative methodology seems to be the appropriate instrument to explore: 1) Why are so few women at the top in the ICT academic field, in particular in engineering, & why is their advancement so slow? Further, why do not more girls go into engineering?; 2) Is the nature of the career trajectories gendered?; 3) Which are the organizational mechanisms within the departments culture that produce & reproduce gender inequalities in the academia?; & 4) Which are the programmes to attract and retain women in engineering?

2010S00438

Castaños, Fernando & Caso, Álvaro (Instituto de Investigaciones Sociales, Universidad Nacional Autónoma de México, Circuito Mario de la Cueva, Ciudad Universitaria, 04510 D.F., Mexico [tel: (52)(55)56227400, ext. 246; fax:; e-mail: zuno@unam.mx]), **On Having to Obey the Law,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is about an ancient problem that has not been solved fully: the sources of the moral obligation to obey the law. It considers the problem's conceptions provided by Amurabi, Confucius, Socrates and Aquinas. It ponders the approaches followed by Hobbes, Locke, Rousseau, Kant & Hume to understand it. It discusses XXth Century attempts to disentangle it, by Kelsen, Hart, Dworkin & Rawls, or to dissolve it, by Nozick, Simmons & the so-called philosophical anarchists. It critically appraises Habermas's views on more general matters that are relevant here. That review shows the problem's longevity is a consequence of its belonging in a complex thematic network, which leads us to concentrate on a narrowed version of it: the origin of the obligation in a democracy. From the review also, we propose that in this type of regimes citizens are

bound to obey the law, first & foremost among themselves, when they participate in public deliberations or elect representatives to do so. These are willful acts that tacitly endorse the systems of rules that make them meaningful & valid. (They are, too, the sources of the obligation's counterpart, namely, the democratic state's legitimacy to enforce the law.)

2010S00439

Castellani, Brian C. & Castellani, John D. (Kent State University, 3300 Lake Road West, Ohio, USA, 44004-2316 [tel: 440-964-4331; e-mail: bcastel3@kent.edu]), **The Reflexive Strengths of the SACS Toolkit for Modeling Complex Systems,** *International Sociological Association, Gothenburg, Sweden,*

¶ The SACS Toolkit is a unique method for modeling complex social systems, based on the latest developments in complexity science and sociological inquiry. A crucial feature of the SACS Toolkit is the methodological importance it assigns to reflectivity. (Here, reflexivity refers to the circular, epistemological impact that researcher & an object of study have on one another.) The SACS Toolkit deals with reflexivity in ten important ways: Here are some examples. First, to initiate the reflexive process, researchers are required, from the very start of a study, to make explicit their ideas about a topic by constructing a working model. Second, researchers are required to build their model from the ground-up and to stay (in the tradition of grounded theory) theoretically grounded. Third, researchers are required at different points in the modeling process to determine if they are "forcing or fitting" their model. Fourth, the SACS Toolkit is based on the epistemological perspective of sociocybernetics, which takes the reflexive position that a complex system cannot be contained within any one model; instead, modeling is continually needed; therefore no one model is entirely "right." Finally, from the start of the study to the end, the SACS Toolkit makes extensive use of graphs and other visual tools to help researchers create & manage a meta-model of their model. To demonstrate the reflexive strength of the SACS Toolkit, we discuss a qualitative, longitudinal study we are currently conducting on an educational system in Maryland, USA. (For more information, see www.personal.kent.edu/~bcastel3).

Castelli Dransart, Dolores-Angela (Research Department Fribourg, University of Applied Sciences Western Switzerland, HEF-TS, J. Prouvé 10, 1762 Givisiez, Switzerland [tel: +41 26 429 62 72; fax: +41 26 429 62 01; e-mail: Angela.Castelli@hef-ts.ch]), **Memory Building after a Suicide: Paths Followed by Families and Individuals,** *International Sociological Association, Gothenburg, Sweden,*

¶ Premise: Those left behind after a suicide (survivors of suicide) build up a family as well as a social memory of the deceased person and of his/her act, which is still often considered as deviant. Different strategies & types of memory rebuilding & of making sense after such an event will be presented. Methods: Interpretative qualitative study. 38 in depth interviews with survivors of suicide (28 women, 10 men). Grounded Theory Analysis. Findings: The building of the memory is a process that usually presupposes two phases: 1) the rebuilding of the path that has led to this tragic end (process, its context, the presumed reasons and factors) 2) the building of a public version of the story intended for people outside the family circle (interpretation of the suicide that is socially acceptable, or at least comprehensible, while avoiding two pitfalls: moral judgment & the stigmatisation of the person or his/her family). Memory plays a specific role within the four types of reconstruction processes (ideal types) of survivors of suicide: i.e. a driving force, the source of an increased awareness of life, an additional obstacle to the rebuilding of self, an instrument to put things into perspective.

2010S00441

Castro, Biancca Scarpeline de (UNICAMP e INCT/ PPED, Cidade Universitária "Zeferino Vaz" [tel: 55-21-99311040; fax: 55-21-38735246; e-mail: bianccastro2@gmail.com]), **The Labeling of Transgenic Organisms in Brazil: The Relation among Companies, Experts and Lay People,** *International Sociological Association, Gothenburg, Sweden,*

¶ Brazil has, since 2001, a specific law about labeling transgenic products, however that law started to be effective at the end of 2007, with the execution of a judicial process which obligated the practice of that the law. This way, some soy oil factories started to present a yellow triangle with a "T" in the middle on their label, pointing that those products have more than 1% of transgenic organisms in their composition. The aim of this paper is analyzing how those companies are dealing with that new requirement & what kind of speech they have been transmitting to their consumer & to the researchers about information put on the label of the product. This way, some soy oil factories were selected, contacted by the researchers & asked to explain the new symbol on the label, its meaning, the quantity of transgenic organisms in the composition of the product, the benefits & the risks present in the consuming of those products, among other questions. At the first moment, we declared ourselves as consumers and, in a new contact, as social scientists, intending to verify if there was any difference of approach & information transmission from the companies to laypeople & to experts. We will also analyze the sales taxes for each of the soy oils, observing their alterations with the insertion of the mentioned symbol, & in this way, observing if it has influenced the choice of consumers. We will present a historical reconstruction about the case of labeling transgenic organisms in Brazil, pointing the changes in legislation, the disputes & actors involved, besides the implementation of the judicial process which finally obligated the companies which used transgenic organisms to put such information on the label. The research, which intends to verify the relation of the companies with unprofessional & expert people about labeling & trading genetically modified food, uses authors like Brian Wynne, Ulrich Beck & Anthony Giddens for the comprehension of the relation between lay-expert people & market, & Bruno Latour for the analysis of the dispute among different actors in the construction of a "fact" or social "truth", in this case, the dispute about legitimacy of transgenic food in Brazil.

2010S00442

Castro, Celso (Fundação Getulio Vargas/ CPDOC, Rio de Janeiro, Brazil [tel: 552137995700; e-mail: celso.castro@fgv.br]), **Anthropological Methods and the Study of the Military,** *International Sociological Association, Gothenburg, Sweden,*

¶ Only a few anthropologists have taken the military institution as their object of investigation. In Brazil, however, during the past two decades about ten researchers have done work in the Armed Forces using participating observation, a classical method of ethnographic research. The presentation is based on personal accounts made by these researchers (assembled in the book "Antropologia dos militares" [Anthropology of the Military], Rio de Janeiro, Zahar eds., 2009, ed. by Celso Castro & Piero Leirner) & focus on some of the central issues of their experiences, including: the researcher's entry in the field; patterns of interaction with the "natives"; the way hierarchy and discipline–two pillars of the military institution–affect the course of the research; gender-related dynamics; & issues related to the publishing of the researcher's results. It is important to consider these issues is important for the consolidation of an anthropological perspective on the study of the military.

2010S00443

Cattaneo, Ada (IULM University, Milan Italy [e-mail: ada@adacattaneo.com]), **The Future Is Here. It's Not Widely Distributed Yet. Trends, Values, Consumptions in Italian Sociocultural Scenario and the Dawning of a Mediterranean Paradigm,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper assumes & demonstrates that a cultural explanation approach grounded on values is more qualified to decrypt the growing complexity of current social, cultural, economic, political phenomena, than conventional socio-demographics categories. It explores such an issue focusing on Italian context. The argumentation is divided in four main topics: Italian values scenario–it describes Italian values (Wellthiness = wellness + healthiness + happiness, Nature, tradition, simplicity, authenticity, empathy, experience, community, duration, participation, responsibility, measure, interaction), their current spreading, distribution & weight through the analysis of Italian sociocultural map; Sociocultural Trends–it studies Italian values development in a diachronic perspective & their political effects; Lifestyles & Consumptions–it shows values impact on Italian lifestyles & consumption habits (consumption as a political act, boycott vs. buycot, "In-divisus" centrality, the serendipity-effect of echo-friendly attitudes…); Mediterranean Model–on the basis such a scenario, the paper concludes arguing the gelling of emerging values & their trends into an original paradigm that is a new Mediterranean civilization proposal.

2010S00444

Cattaneo, Ada (IULM University [e-mail: ada@adacattaneo.com]), **When the Many are Reduced to One, to What is the One Reduced? A Study on Italian Leisure Topicality in the Forthcoming Xpannow Era,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper is a reasoning on Italian leisure lifestyle, on its comparison with American Way & its topicality. In particular it deals with: the Latin

origins of leisure; the decline of crunch-time American Way & the rising of a US commercially-oriented leisure-lifestyle/economy; Italo-Mediterranean leisure-lifestyle (otium, La Dolce Vita, slow shopping, Wellthiness= wellness+ healthiness+ happiness) mainly focused on an holistic balance of Individual wellbeing. The analysis of Italo-Mediterranean leisure in both of its manifestations (Wellthiness & slow shopping) reveals it is particularly attuned not only to Italian sociocultural background but also to the overall Zeitgeist of the forthcoming Xpannow Era=EXPERIENCE+PAN (global, holism, interconnection…)+NOW (disembedding, bit time, networking, augmented reality…)

2010S00445

Cattani, Antonio David (PPGS UFRGS, Av. Bento Gonçalves, 9500 Porto Alegre RS Brazil [tel: 55.51.30.19.43.50; e-mail: adcattani@uol.com.br]), **Autonomy and Emancipation,** *International Sociological Association, Gothenburg, Sweden,*

¶ The concept of autonomy or emancipation refers to a huge range of values & experiences, the essence of which is the principal of free determination of the individual, a specific group or a larger social set. Both concepts refers to the utopian desire of otherness and is therefore an invitation to the transformation that constructs the new, expanding the spaces of freedom, & affirming the possibility of improvement of human beings & their achievements. Emancipation is not confined to a concept or theoretical framework; it is a constellation of meanings and projects critical of the present & its limits, it is the exploration of potentials, revolts & ruptures; it is the overcoming of imposed social & economic boundaries, in short, it is the courage of wanting to build a better world. The objective of the paper is to present a theoretical review of the concept of autonomy or emancipation & a short balance of the most important alternatives under construction especially on Solidarity Economy.

2010S00446

Catto, Rebecca A. (Religious Studies, Lancaster University, Lancaster LA1 4YD UK [tel: +447771764711; e-mail: r.catto@lancaster.ac.uk]), **Religion, Global Flows and the Contact Zone–Theoretical Development?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Work on globalization and, more specifically, its relationship with religion has burgeoned since the late twentieth century, with growing recognition of the significant role religion can play in global flows of people, information & even goods. Sociologists such as Peter Beyer & Robert Wuthnow have significantly advanced understanding in this area. Yet, there is more work to be done to interpret & explain these complex relations. This paper is an investigation of what the postcolonial concept of the contact zone may add to the debate. I applied it in combination with glocalization to illuminate Christian missions from South to North in my doctoral thesis & here investigate its potential wider applicability. Globalization theory moves us beyond modernization's narrow conceptualization of bounded nation-states as discrete units with its emphasis upon their interconnectedness. It also brings the legacy of colonialism to bear, but may not go far enough in highlighting persisting uneven power relations. The individual and their agency can be neglected as well. What the metaphor of the contact zone can contribute to analysis of encounters between and within religions in global migration at the micro, meso & macro level will be explored.

Causevic, Senija & Lynch, Paul (Queen Margaret University, School of Business, Enterprise and Management, Edinburgh, UK, EH21 6UU [tel: +44 131 474 0000; fax: +44 131 474 0001; e-mail: scausevic@qmu.ac.uk]), **Tourism, Normalisation of Social Relationships and Heritage Codification,** *International Sociological Association, Gothenburg, Sweden,*

¶ This work presents the impact of post-conflict interpretation and reconstruction of the cultural heritage & its influence on identity formation & normalization of social relationships. Empirical research, in the form of deep participant observation of the guided tours, whereby the researcher has been fully immersed into the situation as a ratified insider, took place in Bosnia and Herzegovina's cities of Sarajevo, Mostar, Srebrenica & Banjaluka. The field data was analysed using a critical theory approach. Research also utilised Maurice Bloch's anthropological account of the Double Burial & Hanna Arendt's interpretation of the Eichmann's court case. The research shows that today's Bosnia and Herzegovina is described as a divided state & many feel disappointed & misinterpreted under the prescribed national identities. Multiculturalism, which once used to be a part of Bosnian identity, has been denied, thus delaying the process of social relationships normalisation. The research shows that tourism activities play a reconciliatory role in shaping post-conflict development. Despite reconciled societies being precursors for any economic development & sustainable policies implementation, post-conflict tourism is usually explored under an economic development agenda. Through the lens of heritage codification, this research argues that tourism activities need to be recognised not only as an economic enhancer, but also as an important part of the total process of social renewal. Key words: post-conflict, heritage, identity, social reconciliation.

Cavalcanti, Leonardo (Autonomous University of Barcelona, Barcelona Spain [tel: ; e-mail: leonardo.cavalcanti@uab.cat]), **The Specific Incorporation of Brazilian Immigrants in the Labour Market of Spain and their Position in the "Hierarchy of Otherness",** *International Sociological Association, Gothenburg, Sweden,*

¶ The content of this paper is based on the results of a research financed by the Ministerio de Trabajo e Inmigración de España [Spanish Ministry of Labour & Immigration]. This investigation, supervised by Prof. Carlota Solé–Director of the GEDIME [Immigration & Ethnic Minorities Research Group], Autonomous University of Barcelona–deals with the socioeconomic incorporation of Brazilian immigrants in Spain. This is elaborated paying special attention to the "common places" that make up the labour stories of Brazilians in Barcelona & Madrid, through quantitative data (official statistics) & in-depth interviews. The text discusses one aspect of the incorporation into the labour world done by the Brazilian collective:–The different trajectories of Brazilian immigrants' incorporation into the Spanish labour market & how the unique heterogeneity of this group affects their position in the "hierarchy of otherness" in comparison with other Latin American groups living in Spain. Apart from showing the main quantitative data about the Brazilian immigrants in Spain, the article also discusses how the unique heterogeneity of this group in Madrid & Barcelona brings about different incorporation patterns into labour force.

Cederberg, Maja (Department of International Relations, Politics and Sociology, Oxford Brookes University, Gipsy Lane Campus [tel: +441865483963; fax:; e-mail: mcederberg@brookes.ac.uk]), **'Race' and Racism in Contemporary Sweden: Self-Images and Displacements,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper considers the particularities of studying "race" and racism in a contemporary Swedish context. During the last ten years, research on migrant "integration", & on the different forms of disadvantage that migrants & ethnic minorities are subject to, has grown significantly, at the same time as these issues have gained political priority. In part, this has entailed a shift in discourse, & a partial recognition of the fact that features that used to be regarded as the sole properties of "other" societies, are present in Swedish society too. Notably, talk of structural forms of ethnic discrimination has become much more common. Whilst this represents an important step forward, the political, & to some extent also the academic debate, is still characterised by a number of (discursive) limits. In this paper, I want to focus in particular on the concepts "race" & racism, and how these are used and/or avoided in the academic & political debate. I will suggest that this use, or lack thereof, follows on from a specific understanding or image of the (Swedish) self, as well as a specific understanding of what "race" & racism is all about: understandings that together imply a tendency to displace the concepts onto other geographical & historical contexts. By engaging with the conceptual debate about "race" & racism in sociology, I will argue that such a displacement forms a significant obstacle for fully grasping the experiences and positions of migrants & minorities in Sweden.

Chachashvili-Bolotin, Svetlana & Adler, Irit (Ruppin Academic Center [e-mail: svetachb@gmail.com]), **Educational Expectations: The Case of Immigrant Students from the FSU and Native-Born Jewish Students in Israel,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study focuses on the differences in educational expectations among the Former Soviet Union (FSU) immigrant students and native-born Jewish students in Israel. It is well established that educational expectation influence scholastic outcomes, both among immigrant & native students. According to the Immigrant Optimism Perspective, children whose parents are immigrants have better school grades than children whose parents are native-born, partly as result of the high parental educational expectations. For example, one of the explanations of higher educational achieve-

ments among Asian immigrants in America is attributed to their parents' high expectation. In addition, educational expectations both among parents & children are universally high for all racial & ethnic groups, since most adolescents expect to go to college. However, substantial gaps remain, especially between less advantaged groups and more advantage groups. This study examines the factors that influence parental & child educational expectations among FSU immigrant students compared to native-born Jewish students in Israel. The immigrants from the FSU are characterized by having on average higher parental educational level, than are natives. Thus, we propose to examine the hypothesis according to which FSU immigrant students will have higher parental & child educational expectations, in comparison to natives. Using a representative sample of data from the Ministry of Education, we implemented a serial of logistic regression models. Preliminary findings indicate significant differences between the two groups. Immigrants' parental educational expectations are lower than natives', though their parental educational background is higher. In addition, the child educational expectations do not differ between immigrant and native-born students. Possible explanation to these findings can be that FSU immigrants suffer from mismatch between high parental education & their parental economical means, while natives do not perceive similar mismatch.

Chan, Shun Hing (Hong Kong Baptist University, Department of Religion and Philosophy, Hong Kong Baptist University, Kowloon Tong, Hong Kong. [tel: 852 34117285; fax: 852 34117379; e-mail: shchan@hkbu.edu.hk]), **Changing Church-State Relations in Contemporary China: The Case of Cangzhou Diocese,** *International Sociological Association, Gothenburg, Sweden,*

¶ The focus of this paper is to examine the church-state relations in contemporary China from the sociological perspective of state-society relations. The research questions of this paper are: what are the essential characteristics of the church-state relation in Cangzhou Diocese in Hebei? What are the pattern of church-state relation in Cangzhou Diocese in light of the concept of corporatism and civil society? This is a qualitative research, collecting data by methods of both field study & in-depth interview. The research findings are: the competition between the open & the underground Catholic Church, the mediating role of the Vatican, & the pragmatic attitude of the government, are three key factors shaping the pattern of the church-state relation in Cangzhou Diocese. The church-state pattern can be described as "dependent resistance," a kind of power relationship which the concept of corporatism and civil society cannot adequately capture.

Chandra, Vinod (J N P G College, Lucknow University, Lucknow, Uttar Pradesh, India 226001 [tel: +91 522 9415189200; fax: +91 522 2635563; e-mail: vchandra009@gmail.com]), **From Social Mobility to Social Inequality: Case Study of Elite Higher Education in India,** *International Sociological Association, Gothenburg, Sweden,*

¶ The present research is focused on inequalities produced by higher education system in India in the last few decades. In fact, the common belief is that education is a tool of social mobility in developing societies. Particularly, the higher education provides a socially approved "high status career" in the society through which people enhance their social & economic status. In India, where social status of a person has been derived from its caste, higher & professional education became a very influential factor for determining the achieved status of a person. In this process people enhanced their status. Higher education system in India was also graded & some of the Institutions were known as "Institutions of National Importance". These Institutions produces the elite class in the society & therefore, to be treated as Elite Higher Education. They not only produce elitism but also induct students of elite section of the society. The present study is a micro level examination of this process. The paper argues that elite higher educational institutions, in the phase of mass higher education, perpetuate a crisp form of class inequality which is not a healthy sign for a society like India where so many form of social differentiation already exists.

2010S00453

Chandrashekhar, Vanagundhi (Hutti Gold Mines Ltd., Indian Administrative Service, # 58, Dwarika, 3rd Cross, Shaktinagar, CHBS III Layout, Behind BHEL Township, Bangalore–560 040, Karnataka, INDIA [tel: 00 91 80 23214828; fax: 00 91 80 25718365; e-mail: vanagundhisekhar@gmail.com]), **Implications of Executive Perception for Corporate Social Responsibility (CSR) Profile,** *International Sociological Association, Gothenburg, Sweden,*

¶ CSR has emerged as a high profile managerial practice viewed as of strategic importance in the business circles world over as well as a leading concept in academic research in recent times. However, it is assumed that the organizational commitment, relevance, effectiveness & the outcome are assumed to be the functions of the perception & acceptance of CSR as a positive business intervention by the executives at helms of corporate decision making. The present study explores the conceptions & perceptions of top executives about CSR, CSR provisions & CSR practices in a sample of 34 corporations in India. Data are gathered through web survey as well as the personal interviews with the top executives of these organizations vested with responsibility of CSR policy and funding. The instrument for interviewing focused on their assessment of CSR activities, policy process, resource allocation, execution & evaluation of CSR achievements in their respective work organizations. The analysis of the data reveals that the executives had a clear conception & a progressive perception of CSR as a component of corporate governance with comprehensive identification of stakeholders & their conflicting interests. However, the findings suggest that corporate organizations take to CSR for different reasons & objectives ranging from philanthropy to building brand image of the company through welfare, compensatory principle & mandate of statutory requirements. The executives considered CSR allocations as reasonably adequate considering the agenda of CSR activities & the capacity of corporate bodies to afford CSR initiatives. The CSR policy, however, was viewed as rather lacking in empirical grounding to align & gear CSR activities to the felt needs & interests of stakeholders which could have enhanced their degree of relevance. The study further indicates that while execution of CSR schemes is not lacking in commitment & competence, the evaluation and assessment of CSR results is viewed as lacking in objectivity and precision which otherwise would have served as invaluable insights and inputs for future course of CSR action. Further analysis of data relating to executive perception & organizational performance on CSR front reveals that CSR results could be seen as the function of clarity of conception, strength of commitment and confidence of positive outcome of CSR schemes among the top executives.

2010S00454

Chang, Andy Scott (National Taiwan University, Taipei, Taiwan, 106 [fax:; e-mail: andygiu@gmail.com]), **Militant Activists under Siege: The Interplay of Protest Tactics and Framing in Contentious Mobilization,** *International Sociological Association, Gothenburg, Sweden,*

¶ Empirical research based on movements in nondemocracies has underscored the "repression paradox" as a major limitation on the political opportunity structure (POS) thesis, where repression has been shown to both facilitate & discourage mobilization. Departing from current efforts to reconceptualize the POS to reconcile contrary findings, however, I argue that a movement's internal characteristics require a central place in assessing its outcomes, particularly in relation to movement ascendance & its impacts on the activation of protest cycles & the wider polity. Analyzing militant mobilization during Taiwan's transition from dictatorship from 1991 to 1992, I contend that the interplay between strategic framing & high-risk protest tactics not only solidifies oppositional identities & enables movement survival under state repression; it also crucially mediates the movement's capacity to develop a "master frame" that can generate a broader protest cycle in support of political change. The paper concludes by postulating the theoretical links between framing & tactical repertoire in permitting movements to overcome state repression and to diffuse into broader protest cycles.

2010S00455

Chang, Chin-fen & Chen, Mei-hua (Institute of Sociology, Academia Sinica, Taipei City, Taiwan, 11529 [tel: +886-2-26525114; fax: +886-2-26525050; e-mail: chinfen@sinica.edu.tw]), **Class and Occupational Divide of Global Sex Tourism by East Asians,** *International Sociological Association, Gothenburg, Sweden,*

¶ Sex tourism has been a notable phenomenon of international tourism. That Western/ white/ middle class/ men from the North travelling down to the South for sex tourism had attracted the interests of researchers from different disciplines. Literature shows that sex consumption of white/ middle class men in the "Third World" normally involves complicated social relations embedded with inequalities by gender, race, sexuality, & economic development (e.g., Thanh-Dam, 1983; O'Connell Davidson, 1998; Brennan, 2002). Using the most recent East Asian Social Survey, conducted in 2008, this article examines how extensive that people (mostly

men) from Japan, Korea, & Taiwan engaged in global sex tourism, what social positions they have, & whether their sexual consumption follows the pattern of geographically north-to-south model. This paper is a first attempt to study intersections of sex consumption, global economic hierarchy, & nationalities about East Asians, using a quantitative analysis. According to the analyses, we find that 63% of Taiwanese reported that they know their friends, coworkers or neighbors (FCN) ever attended sex-related entertainments when they went abroad. The statistics for Japanese & Koreans are 56% and 33% respectively. Not surprisingly, the destinations where East Asians visited the most are in the South, Southeast Asia, being followed by East Asia. However, East Asians also went northbound, such as North America & Europe, for sex consumption. Results of the correspondence analysis show that respondents doing manual work likely had FCN attending sex tourism in Southeast Asia & East Asia, while FCN of higher white collar workers tended to have sex tourism in North America or Europe. FCN of Taiwanese has a clear occupational divide in destinations of sex tourism, but those of Koreans are generally divided by class differences. Neither class nor occupational divide can portray the regional differences of sex tourism in Japanese case.

Chantraine, Olivier (Université de Lille 3–Gerriico, Université de Lille 3–Geriico Villeneuve d'Ascq 5-9160 France [tel: 0033320922555; fax:; e-mail: ochantraine@nordnet.fr]), **Récit et "Nouveau Management Public": le cas des Universités** (Accounts and "New Public Management": The Case of Universities), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ L'évaluation de l'activité des universitaires connaît en France de grands changements, généralement surtout rapportés à l'utilisation de divers indicateurs, dont l'analyse critique a été abondamment documentée. On voudrait dans la présente communication montrer un aspect jusqu'ici peu étudié de cette nouvelle évaluation: une mise en récit de l'activité passée, et même future qui, en fait, argumente l'activité scientifique des individus et des équipes selon des règles qui retrouvent les plus anciennes règles de la fiction. En particulier, la diérèse prime sur la diégèse, dans la mesure où l'attente esthétique du lecteur, puis de l'auditeur, est la première demande que le texte doit combler. On proposera d'analyser ce phénomène dans ses manifestations écrites, mais aussi dans sa scénographie et sa dramaturgie à l'oral. On retrouvera ainsi les règles vénérables d'unité de temps, d'action et d'intrigue, les notions de "mission", "d'entreprise" et de "héros". On repèrera aussi la mise en scène du narrateur légitime. On mettra cette analyse de la mise en récit dans la perspective théorique de "la connaissance des événements futurs", analysée par Alfred Schütz Cette analyse reposera sur une observation participante de ces processus, dans laquelle nous assumons un rôle d'observateur impliqué, sur lequel nous reviendrons brièvement. Nous montrerons ainsi que la "fiction" est au cAur du Nouveau Management Public, que les règles du récit sont celles d'un pacte communicationnel qui unit dans une même foi les lecteurs-auditeurs-critiques et les auteurs-narrateurs-personnages. Ce pacte repose sur ce qu'on pourrait appeler un "grand secret", dont le dévoilement par l'observateur impliqué fait scandale.

Chari, Anurekha (Department of Sociology, Univ of Pune, Pune, Maharashtra, India 411007 [tel: 00 91 20 25601305/06; e-mail: anurekha@unipune.ernet.in]), **Social Exclusion, Poverty and Gendered Citizenship: Microcredit Programmes in India,** *International Sociological Association, Gothenburg, Sweden,*

¶ Social exclusion of marginalized communities is a basic feature of societies. There are groups of people of particular caste, class, ethnicity, sexuality & gender who are discriminated because of their disadvantaged position within the social structure. They are excluded in terms of livelihoods, political rights, lack of access to infrastructural resources & human dignity. In this poor women form the largest group of socially excluded sections from the society, culture, economy & polity. Recently citizenship theory has emerged as an analytical framework to analyse gender and development. Analysing development programmes for women using gendered citizenship framework I argue would help in understanding how far has the programme been successful in helping women accessing their rights. In this paper I analyse microcredit as a poverty alleviation development programme using the gendered citizenship framework. Microcredit having a potential for poverty reduction & for women's empowerment thus provides an important case for understanding gendered citizenship. Many feminist women's organizations are organizing women in microcredit programmes. I ask whether this intervention is part of a long term strategy that women's groups have been involved with giving citizenship rights access to women. In this paper I examine the inter-linkages between gendered citizenship, & gendered development by evaluating the design of "microcredit" programme for women.

Charles, Nicolas (University of Bordeaux, Bordeaux, France [e-mail: nicolas.charles@u-bordeaux2.fr]), **Fairness Issues in Coming Transitions from Higher Education Studies to Work. The Case of France, England and Sweden,** *International Sociological Association, Gothenburg, Sweden,*

¶ Higher education systems have massified in European countries in recent decades, leading to an ever bigger stratification of these systems. Comparing France, England & Sweden, & two different higher education institutions in each country, we aim at analysing equity issues faced by different students in their transitions from higher education studies to work. We focus on what is perceived by final-year students as fair or unfair in their coming transition to work according to their type of studies & their country. Students' discourses invoke principles of justice to think through the fairness of this transition: "Don't I merit to have a direct transition to work? Why can I have access to jobs only in a narrow field of work whereas my skills are multi disciplinary? Did I really choose to do that?". The sense given by students to their experience are then contextualized with the structures of the higher education system & the models of society. Thus we aim at understanding if patterns of student experiences in terms of equity perceptions for transitions to work exist throughout different countries or diverse types of studies.

2010S00459

Charmarkeh, Houssein & Couton, Philippe (University of Ottawa, Department of Communication [tel: Canada; e-mail: hcharmar@uottawa.ca]), **Diasporas et médias: réseaux de communications des somaliens au Canada et aux États-Unis** (Diasporas and the Media: Communication Networks of the Somali in Canada and the United States), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Les mouvements de réfugiés engendrent souvent de puissantes formes de mobilisation politique de la part des personnes déplacées, pour qui les médias communautaires jouent un rôle primordial. Ces "rescapés de la violence" se trouvent souvent dans des situations renforçant fortement leur implication politique envers leur communauté (Zolberg, Suhrke et Aguayo, 1989). Cette mobilisation est de plus en plus aisée de nos jours, en raison de l'accès facile à des moyens de communications multiples et rapides. Les Somaliens sont l'un des groupes migratoires les plus susceptibles de faire usage de ce type de mobilisation diasporique. Dispersés entre l'Afrique, l'Europe et l'Amérique du Nord, les Somaliens forment une communauté expatriée véritablement transnationale, tissent de nombreux liens familiaux, claniques et politiques consolidés par des outils communicationnels complexes (Al-Sharmani, 2006). On peut donc parler d'un processus de formation et de mobilisation diasporique, dans lesquels les différents outils médiatiques ont joué un rôle important. Nous concluons que la diaspora somalienne devient une communauté transnationale déterritorialisée qui s'approprie des médias dans le but de préserver la culture et la transmettre à la deuxième génération (Kleist, 2008).

Chaturvedi, Ishita (Robert Kennedy College, Zurich, Zurich 8005, Switzerland [tel: 91-9839911265; e-mail: ishitachaturvedi@yahoo.com]), **Environmental Friendly Development–Socio Economic Analysis of Central and East Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ One of the economic challenges that this paper has highlighted is the transfer of energy saving technology for post socialist countries. In such countries this paper confronts the question that is it necessary to damage the environment for a faster economic growth? Or the tested & tried technologies that could save energy and protect environment would be a better choice. The study is based on the case studies & SWOT analyses of Poland, Hungary & Czech Republic, for a specific boiler cleaning technology developed by UK based Sentinel Solutions–a part of General Electric when the study was conducted. As a world of conclusion the paper underscores that in many ways, even for a faster rate of growth, the developing societies of post socialist countries do not add to the unnecessary destruction of environment.

2010S00461

Chaturvedi, Manjeet (Banaras Hindu University, Department of Sociology, Varanasi 221005, India [tel: +919839911265; e-mail: manjeetchaturvedi@yahoo.com]), **Collision of Populations**

Reviewing Episodes, Cases towards Critical Mobilities in Social Theory, *International Sociological Association, Gothenburg, Sweden,*

¶ The paper is a review of the real time cases of shifting of large volumes of populations & an explorative process towards working out some points to add to the critical mobilities, a social theory venture still in its formative years. Forced Migration mainly due to economic reasons like developmental policies & projects and recession, political turbulence & environmental outbreaks and disasters is a phenomenon whose inevitability is undeniable as the factors grow intense & become widespread. As the totality of global societies advances & people in their large numbers more thickly & more often start relocating internally in one country or across the borders, the social sciences have to frame specific theory to explain such mobility. The review, inter alia, found out that it is a phenomenon that was unwanted but inevitable, lots of study used racial, ethnic & cultural world views & generalized, migrant resettlements invoked rehabilitation as issue of governance, & the immigrants in many ways were heterogeneous. The studies indicated an extremely complex field but identified a threat that ruled out graying concepts of co-existence & the melting pot. They also indicated that the collision of populations a one native & the other influx of émigré–is for a variety of reasons is a collision of two or more "worlds"–structurally constructed in different histories & when they thronged in a specific space new construct, collision of populations as a process is unavoidable. Quotes of human habitat, justice for all, humanitarianism & other associative processes are searched as a critique & government, non-government and non-profit organizations have been bidding for abundant protectionism for the local populations while optimum accommodation offered to the émigré. In theory the analysis of misfit is the problematic along with the cosmopolitan face which makes it a part of complexity research & a context of an extraordinary discourse. This paper comes out to be a working exercise which raises questions & some pertinent points which may be useful and additive to theory building of critical mobilities.

2010S00462

Chau, Nearkasen & Baumann, Michèle (INSERM, U669, Univ Paris-Sud and Univ Paris Descartes, UMR-S0669, 8 rue du Breuil, F-54180 Heillecourt, France and University of Luxembourg, INSIDE, L-7201 Walferdange, Luxembourg [tel: +352 46 66 44 9224; e-mail: Nearkasen.Chau@wanadoo.fr]), **Associations of Obesity, Alcohol Abuse and Smoking with Cardiovascular Disease: Behaviours and Risks Vary with Age among Working People,** *International Sociological Association, Gothenburg, Sweden,*

¶ Objectives: To assess the relationships between unhealthy behaviours (obesity, alcohol abuse & smoking) & cardiovascular disease (CVD) among working people at different ages, & to consider the mediating effects of socioeconomic characteristics. Methods: A random selection of 2872 working people in north-eastern France completed a postal questionnaire covering: obesity, smoking, alcohol abuse (Deta-Cage questionnaire), age, physician-diagnosed CVD, & potential confounders - sex, education, occupation, living alone & income. Data were analyzed using odds ratios (OR), adjusted odds ratios (ORa) & [95%CI] computed with logistic models. Results: Behaviours varied significantly with age. The following figures apply to ages less than 30, 30-49, & greater than or equal to 50 years, respectively: obesity, 2.7%, 6.2% & 9.5%; alcohol abuse, 8.1%, 9.0% & 12.2%; daily smoking, 60.4%, 58.6% & 50.3%. CVD was present in 5.9%, 10.2% & 23.3%. Among young adults (less than 30 years), CVD related only to obesity (OR=3.64 [1.00-13.29]) & the relationship was not mediated (OR decreased to 3.54) by the confounders, among which only male sex was significant (ORa=0.27 [0.11-0.64]). In the 30-49 group, CVD related to obesity (OR=3.33 [2.12-5.23]) & alcohol abuse (OR=1.75 [1.11-2.74]). These relationships were slightly mediated (ORs changed to 3.14 & 2.10, respectively), but only male sex & insufficient income were significant (ORa=0.66 [0.47-0.94] & ORa=1.64 [1.04-2.60], respectively). Among older workers (greater than or equal to 50 years), CVD related to smoking (OR=1.69 [1.05-2.71]) & alcohol abuse (OR=1.92 [1.01-3.65]). These relationships were slightly mediated (ORs decreased to 1.61 & 1.72, respectively) but only low education was significant (ORa=1.73 [1.00-3.02]). Conclusions: CVD related to unhealthy behaviours, which vary with age. Obesity, and obesity-related risk factors, such as lack of physical activity and poor diet, affected more younger workers (50 years), alcohol abuse affected primarily those aged 30 & smoking those aged >50. Socioeconomic factors play a role but have little confounding effect on the impact of unhealthy behaviour.

2010S00463

Chavez Becker, Carlos & Patraca Dibildox, Veronica (El Colegio Mexiquense, Ex-Hacienda Santa Cruz de los Patos, Zinacantepec, Mexico, 51350 [tel: 52 (722) 279990 ext.214; fax: 52 (722) 2799908 ext. 200; e-mail: mejalmamut@yahoo.com]), **Fair Trade and Corporate Social Responsibility as Models of Autonomous Certification: Reflections from Transparency and Access to Information,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper makes a contrast of two different, analytical and empirically, models of autonomous certification. Although Fair Trade (FT) & the Corporate Social Responsibility (CSR) have very dissimilar missions & objectives, both projects have, as one of its analytical angles an important concern on methods of autonomous certification. From this perspective, both initiatives are interested in offering true, reliable & opportune information to the public about the services, goods & outputs that deliver to society. Our main hypothesis is, as a reflection since the topics of transparency & access to information, that FT has developed a more effective & better standardized model of autonomous certification than the ones that the CSR has developed, mainly due to the great heterogeneity & diversity of the procedures that compose it. For this reason, the CSR has, from the point of view of the autonomous certification, an important alternative in which it could be enormously developed, assumption which is one of our main conclusions. This could be the route that finally allows CSR to establish itself as a tool to value & differentiate corporations that effectively have a social responsibility. Additionally, we discuss how FT, at least potentially, could be a way of CSR.

2010S00464

Chelcea, Liviu (Department of Sociology and Social Work, University of Bucharest, Str. Schitu Magureanu 9, 010108, Bucharest, Romania [tel: 0040721223246; fax: 0040213158391; e-mail: liviu.chelcea@gmail.com]), **Gentrification as Primitive Accumulation: Property Rights, the Market and the State in a Postsocialist City during the 1990s,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this study I argue that gentrification in Eastern Europe involved the state as much as it involved the market. During the 1990s, gentrification functioned as a process of primitive accumulation, whereby capital was created easily, following the state allocation of valuable properties at below the market prices. Based on a census of a central area in Bucharest, Romania carried out in 2000 (N=2695) & interviews I describe its changes in social composition, property rights & urban functions. Real estate agents, former owners who regained state confiscated housing, politically powerful tenants & families who take quasi-kinship roles toward their elderly neighbors, function as gentrifiers. Six strategies of appropriating the market value through the relocation of financially disadvantaged residents are described.

2010S00465

Chen, Taichang (Department of Sociology, University of Oxford, Department of Sociology, Manor Road Building, Manor Road, Oxford, UK OX1 3UQ [e-mail: taichang.chen@sociology.ox.ac.uk]), **How Well does Family Support Insures Old Age Against Low Pension Income in a Modernizing China?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The rapid population ageing & the uneven implementation of social security in China are expected to strongly influence both the structure of family relations & the pattern of private transfers between generations. This raises important questions as to how well traditional family-based mechanisms insure elderly incomes when the pension systems fail. Using a nationally representative dataset from the Follow-up Survey of the Aged Population in Urban/Rural China 2006 (SAP) conducted by the China Research Center on Ageing (CRCA) from the perspective of adults aged 60 & above in twenty provinces/municipalities, this study provides an analysis of determinants of intergenerational financial transfers from adult children to their elderly parents & those in the opposite direction. I am allowed to use it because I am an associate research fellow of the CRCA. The findings support the hypotheses of coexistence of need-based & short-term exchange transfer motivations. In both urban & rural areas, the data shows that children's financial transfers to their elderly parents are based on the parents' need. Elderly parents, especially those in urban areas, are also found to have short-term exchanges with their adult children, taking care of home & grandchildren & receiving financial supports in return. The results suggest that adult children will continue as viable participants in the support systems of elderly parents.

2010S00466

Chen, Taichang (Dept Sociology, Oxford U, UK OX1 3UQ

[e-mail: taichang.chen@sociology.ox.ac.uk]), **The Evolution of Labour Market Segmentation and Competitiveness in Urban China: Evidence from a National Household Survey,** *International Sociological Association, Gothenburg, Sweden,*

¶ China has experienced dramatic changes since its economic reform programme in 1978, and it is in the process of creating a functioning urban labour market that rewards workers on the basis of human capital. "There are now probably over 100 million rural-urban migrants in China. The phenomenon has been referred to as 'the greatest migration in human history'." (Knight, 2007) More importantly, the *hukou* (residential registration) system that gave certain entitlements to land, work, housing and food to a resident, sharing the resources of the community functioned as a de facto internal passport system. Therefore, Urban China presents an interesting environment in which to study labour market segmentation. A 2002 nationally representative household survey is used to investigate how far a competitive urban labour market China has been created. There are very few Chinese datasets which have good information for urban residents and migrant workers. And for the few there are, they cover narrow and small sample size. The 2002 Income Survey we have been using in this study is possibly the first one to provide the data we need to make comparison of nationally representative samples of urban residents and migrants. Segmentation may arise from government restrictions (e.g. migration restriction), government arrangements for the state sector (e.g. set a higher wage than market level), and profit-sharing in state-owned enterprises. It creates different wage-setting behaviour in different sectors and therefore job queues to the high-paid sector. Our multinomial logistic models of ownership sector selection suggest that government agencies and institutions attract the most skilled urban residents, while urban residents with the lowest education level tend to be self-employed. By contrast, either the highest (with university degree) or lowest (with elementary qualification) educated migrants are more likely to set up their own business. A modified Roy sorting model was used to test the heart of a segmented labour market: whether workers can move freely to equate wage as a result of barriers. We find evidence of both segmentation and competition between urban residents and migrants which is consistent with previous studies. In addition, there is evidence that segmentation exists across sectors for urban residents, with those currently working in government agencies and institutions being the highest-paid tier, followed by state-owned enterprises, private-invested enterprises, those in urban collective enterprises and self-employment are considered as the lowest-paid tier. Although we do not find evidence of segmentation among migrants, our data suggest that migrants are blocked from getting jobs in the 'upper-tier' for urban residents, and thus are forced to engage in self-employment. Therefore, the urban labour market is segmented into multi-tier and is still in a transition stage.

Chen, Yin-Zu (National Taipei University [e-mail: chenyz@mail.ntpu.edu.tw]), **Internet's Strategies of Social Movement in Mexico City,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper aims to study the use of the new information technology by the social movement organizations in Mexico City. Former studies about social movement & internet are focusing mostly on the long-distance organizing of collective actions, such as inter-/trans-national movement & on the applying of the digital information technology by the social movements in the industrial countries. The analysis of the websites of the groups and organizations that struggle for the sexual & reproductive rights in Mexico City has the goal to analyze the relation between social movement's strategies & the new information technology in a developing country & to find out the how the socio-political context shapes the performance & strategy of social movement organizations based on the digital communication. The results show the degree of internet penetration, the traditional media structure and the technical limitation in interaction with the organizational characteristics influencing the online strategy of Mexican social movement organizations.

Chen, Ying-Fang & Lue, Jen-Der (Department of Social Welfare, Chung Cheng University, Taiwan, 3F., No.103, Fuxiang St., Fengshan City, Kaohsiung County 830, Taiwan (R.O.C.) [tel: 886-07-8118646; e-mail: yingfang0902@hotmail.com]), **Could VoC Approach Explain Taiwan's Female Employment and Gender Occupational Segregation?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Compared to the advanced countries, the employment rate of married women in Taiwan (41.2%) equals that of Italy (42.4%) & U.K. (47.3%), & surpassed that of Germany (38.4%) & Japan (17.6%). However, Taiwan's female employment rate decreases enormously while their children are aged above 3 years old. Another interesting finding of Sawako (2007) shows married women's income contribute much to Taiwan's household income about 20-45%. The female employment contributes therefore much for the family's income maintenance. The other important pattern of female employment to be observed is the gender segregation of occupations. The service sector & the clerk position is mainly female-dominated work. The previous researches on gender segregation in labor market focus mainly on the following factors: human capital, gender bias from cultural perspective & rational choice approach. These approaches have the shortcomings of micro-analysis. This article aims to approach the problematic of occupational segregation & low female employment rate in Taiwan from the angle of Varieties of Capitalism (VoC) approach. Based on the theoretical consideration of VoC, it is expected that firms needing highly labor skills & large size would prefer occupational or contributory insurance, whereas the employers with low labor skills small firm size would favor universal scheme. It is argued that the organizational capacities of the organizational actor (employer organization) would change this preference ordering. Recently, VoC had tried to unravel the gendered implications of some of the key institutions. Rational employers will also consider their institutional comparative advantages when hire female workers. As a result, it will make the fact that the same institutions affect men & women differently. However, It is fair to say that the VOC literature has presented CMEs in a better light than LMEs, & it is lack of East-Asia lens. In the article, we will focus on Taiwan's female employment problems, which institutional characters tend to LMEs, & use empirical data to investigate whether VoC approach could successfully explain its phenomenon.

Chen, Yu-Hua & Yi, Chin-Chun (National Taiwan University, 1, Sec. 4, Roosevelt Rd., 106, Taipei, Taiwan [tel: +886 2 33664417; e-mail: yuhuac@ntu.edu.tw]), **The Intergenerational Transmission of Value of Children in Taiwan: Continuity or Divergence,** *International Sociological Association, Gothenburg, Sweden,*

¶ Half a century ago, population explosion was once a major demographic problem threatening the future of humanity. In recent decades, a new problem of under-population has become a global trend in developed countries, with below replacement fertility being a common phenomenon in the East Asia. This paper will explore the institutional context of low fertility in Taiwan. We argue that values of having children serve as the fundamental ground for understanding fertility behaviors. Using data from a recently completed 3-generation sample of Taiwanese grandmothers, their adult daughters, & daughter's adolescent children, the relationship of socio-economic contexts & value of children is analyzed. Major patterns of intergenerational transmission of value of children will be classified. To delineate impact of the institutional context, middle class, working labor, in contrast with the rural residents are compared. In addition, grandmothers and mothers are compared with respect to their fertility-related attitudes & their actual reproductive behaviors. The preliminary result shows that emotional benefit of having children are the most reported reason across three generations. While support of old age as well as to benefit social relations are endorsed by grandmothers, these two values are much less emphasized by mothers and teenagers. Whether value of children will continue or diversify among the future generation in Taiwan will be discussed.

Cheng, Li-Chen (Department of Social Work, National Taiwan University, 1, Roosevelt Road, Sec. 4, Taipei, 10617 Taiwan [tel: 886-2-33661256; fax: 886-2-33669575; e-mail: lccheng@ntu.edu.tw]), **The Effect of Marital Disruption on the Intergenerational Transfers: Evidence from Taiwan,** *International Sociological Association, Gothenburg, Sweden,*

¶ Transfers cross generations had long been seen as a social norm to maintain family bonds in the Chinese cultural context. Parents invested in children to accumulate their human capital in return for their care giving & financial support in old age. And children benefited from their parents' resources to accumulate their lifetime income & social capital to provide old age support for their parents in adulthood. However, the newly increasing incidence of marital disruption has significantly altered family kinship systems, particularly the social & economic bonds among family between parents & children. For the past few decades, extensive research has focused on the immediate impact of changing marital pattern & family composition on children psychosocial wellbeing, but few studies had contributed in exploring the longer-term impact of family system. For example, evidence indicated that parent absence had deleterious effect on chil-

dren's developmental outcomes due to weakened involvement & financial disinvestment. In contrast, given the importance of private transfers for frail elderly individuals, less research explored how marital disruption modified intergenerational bonds & redirected the flow of resources between parents & children in later life course. Along with the fast graying population in Taiwan, it has legitimate concern for researchers & policy makers alike to examine the potential erosion of the family as a support network on intergenerational transfers. This study is exploratory to examine the effect of early stage of marital disruption on economic and social transfers between elderly parents & adult children. The study used the 2006 wave of the Taiwan Social Change Survey to examine the effect of marital disruption on the intergenerational exchange between households. The data set included a series of questions on transfers of money, time, & emotional support so that was suitable for the study. The Survey interviewed a random sample of 2,120 persons nationally, however, a sample of 1,510 married or formerly married households were included for the analysis. Among them, only 16% households had divorced or widowed family members, 10% & 6% respectively. In the descriptive analysis, from children to elderly parents were not affected by adult children's marital status, but widowed parents are more likely to receive monetary & time transfers from their adult children than their divorced counterparts. The study used multiple regression analysis to examine if respondents' other socioeconomic characteristics predicted the intergenerational transfers, controlled for their marital status. The analyses indicated widowed parents were more likely to receive their adult children assistance in errands running than divorced parents. But in monetary transfer, if the elderly parents received money transfer from children was based on their economic need level, instead of their marital status. For example, low income elderly parents were more likely to be given monetary transfer by their adult children. As for emotional support, female elderly parents were more likely to find psychological comfort from their daughters, instead of their sons. The findings in the study indicated that early stage of marital disruption through divorce adversely affected social transfers between elderly parents & their adult children in terms of care giving. But monetary transfer from adult children to elderly parents was largely an altruism motive of need assessment. Social policy & social work practice implications are included.

Cherkasova, Anastasiya (Department of Political Science and Sociology, Ural State University, Ekaterinburg, Russia, 620083 [tel: +7 3432 555-926; fax:; e-mail: cherkasova.anastasia@gmail.com]), **American College Students: Life Values and Religion,** *International Sociological Association, Gothenburg, Sweden,*

¶ What does it mean to be religious & young in the USA? We are interested in how religion effects life values of American students. Our main hypothesis was that life values of those students who consider themselves religious differ greatly from non-believers: being religious leads emerging adults towards having stronger value of family, more active volunteering, overall morality & less deviant behavior. Based on qualitative research conducted at the University of Minnesota in 2010–50 in-depth interviews with male & female students of age between 18 & 24, we have found that activism in volunteering correlates with level of religiosity. As well as this, believers (regardless religious affiliation) tend to claim instant family as their most important value. To sum up, there are several nontrivial findings that strongly supports our hypothesis.

Chesters, Graeme S. & Brem-Wilson, Josh (Peace Studies, University of Bradford, Bradford, West Yorkshire, BD7 1DP [tel: 00 44 (0) 1274 234802; e-mail: g.s.chesters@bradford.ac.uk]), **Social Movements, Knowledge Production and Converging Crises,** *International Sociological Association, Gothenburg, Sweden,*

¶ Whilst some academic disciplines have been richly innovative in both their approaches to, & work with social movements, for the most part movements are still considered as objects of knowledge for researchers & academics, rather than as knowledge producers in their own right. In order to respond to this omission this paper maps out a theoretical & methodological framework for responding to the following questions: 1) What would be the implications for social & economic policy if we began to take seriously the idea of social movements as producers of knowledge about the social and material world? 2) What knowledge are social movements producing about crucial contemporary debates, such as those regarding political agency & participation, ecological sustainability and the new organisational possibilities for social & economic life produced by computer mediated communications? 3) Could this knowledge help us to better understand & respond to the complex and converging crises that are arising from climate change, energy and food insecurity, financial instability & political and institutional failures of accountability & representation? 4) What would the implications be for social movement studies if social movements were privileged as sites of knowledge-production rather than as objects of knowledge?

2010S00473

Cheung, Sin Yi (University of Birmingham, Birmingham, UK [tel: 441214146064; fax: 441214146061; e-mail: s.y.cheung@bham.ac.uk]), **Immigrant Integration in Post-Industrial Economies–A Comparative Study of Overseas Chinese,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study aims to provide a cross-national analysis of the socio-economic integration of recent Chinese immigrants & their children in four western post-industrial economies: Australia, Britain, Canada & USA. It will be the first attempt to compare the experiences of overseas Chinese across multiple destinations using large-scale nationally representative data & systematic standardised analysis, taking into account the importance of sending region. What, if any, cross-national variations might we expect to see in Chinese immigrants' integration? To understand these variations this study will investigate context-specific regularities of the host societies such as immigration policy, levels of discrimination, policy of integration, and immigrant-specific features of the different Chinese groups. Such an approach will yield new insights into how conditions at destinations affect the integration of immigrants. By examining a single ethnic group with a shared cultural heritage in different receiving contexts will also illuminate differences in integration regimes. Methodologically this study fills an important gap in existing research on Chinese in the West because the majority of literature remains single-country or ethnographic studies. Censuses of population from 1990 onwards & nationally representative surveys in each country will be used to test the different theoretical expectations.

Chiesi, Antonio M. (Department of Social and Political Studies, Università degli Studi Milano, Milano, Italy 20122 [tel: +390250321295; fax: +390250321240; e-mail: antonio.chiesi@unimi.it]), **Interpersonal Networking as a Strategy for Business Success. The Economic Performance of Immigrant Entrepreneurs in Italy,** *International Sociological Association, Gothenburg, Sweden,*

¶ The literature on social capital (SC) applied to ethnic minorities stresses the role of culture in the construction of ethnic networks. In this view the tendency to use bonding SC by Chinese minorities & the use of bridging SC by Egyptians has been interpreted, for instance, as a feature of their cultural tradition. Less attention has been paid to the strategies that actors adopt in order to exploit & increase their SC. The general hypothesis of the paper is that any individual belonging to a given minority is subject to structural constraints & opportunities in his/her interpersonal relations. These relations are rationally used & represent one's SC. The paper discusses the results of an empirical research on SC, measured through the ego-network technique, applied to a sample of immigrant & native entrepreneurs in different Italian areas of small business. The substantive results show that some structural features of personal networks predict the business success of entrepreneurs & their social integration at local level (size of personal networks, average status of alters & ethnic heterogeneity of the network), controlling for the ethnic group & the sector of economic activity.

Chihaya, Guilherme Kenji (Center for the Study of Social Stratification and Inequality Tohoku University, Graduate School of Letters and Arts 27-1 Aoba Ward Sendai Miyagi Prefecture 980-8576 [tel: 81-22-795-3876; fax: 81-22-795-5972; e-mail: chihayakenji1893@gmail.com]), **Partner Introduction and Homogamy in China: Does Who Introduces Matters?,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study looks at the influence of third party introduction on homogamy of education, class destination & class origin in China. The data used was from the 2006 Chinese General Social Survey and the method as multinomial logistic regression. The focus of interest was on the effects of having a marriage partner introduced by siblings or cousins, parents, former schoolmates, neighbours, co-workers & matchmaking agencies compared to finding a partner by one-self. The hypothesis was that this kind of introduction would decrease homogamy since it helps to by-pass the constraints imposed by organised settings such as schools & workplaces. The hypoth-

esis holds for educational & class destination homogamy, since introduction by most kinds of partner has significant effects in increasing the odds of hypogamy. For class destinations, however, the effects of introduction by parents decreases the odds of hypo & hypergamy, increasing the odds of homogamy. This might be related to both the effects of the network of parents, who can mostly draw potential partners for their children from a pool of people with the same class origins, & to parental desires of having their children marry others of the same class.

Chinsinga, Blessings & Mkandawire, Bertha (Department of Political and Administrative Studies, University of Malawi, Zomba, Malawi [tel: +265 888 577 842; fax: +265 1 524 046; e-mail: kchinsinga@yahoo.co.uk]), **Informality, Democracy and Participation in Local Governance Processes in Malawi,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the extent to which politicians across the political divide have exploited informality in Malawi's democratization project to undercut meaningful citizen participation in local governance processes. The progressive development of a robust local governance framework remains an extremely uncertain agenda 15 years after what was widely projected as a highly successful transition to democracy. Fresh local government elections have been persistently postponed since May 2005 yet local governments are popularly regarded as an important vehicle for democratising political participation since they provide an institutionalized arena for citizens to engage with governance processes on a regular & predictable basis. The indefinite postponement of the local polls has been variously justified using formal political, constitutional & institutional platforms but ironically to promote & serve selfish short-term political goals & ambitions. The argument of this paper is that formality is almost entirely overshadowed by informality because of the underlying neopatrimonial logic of the country's politics which is further exacerbated by the winner takes it all implication of the First Past The Post (FPTP) electoral system since it essentially transforms political competition into a zero-sum game. The major preoccupation of political actors is therefore either to stay in power or gain power at whatever cost hence short-term political goals & ambitions are prioritized over long-term development of functionally robust democratic institutions which greatly disempowers citizens as exemplified by local governance processes hitherto.

Chiotaki-Poulou, Irini & Sakellariou, Alexandros (Panteion University, Department of Sociology [fax:; e-mail: i.chiotaki@gmail.com]), **The Re-Production of Women's Social Status in Greek Society in the Official Discourse of the Greek Orthodox Church (1998-2008),** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper we are going to study the Eastern Orthodox Church of Greece & its conception of women's social status in Greek society. We begin our study with the ascertainment that the Greek Orthodox Church reproduces the patriarchal pattern of a masculine dominated society in a more refined way than in the past. This thesis raises a series of questions. In what way contemporary Church reproduces this pattern? Which social status has the Orthodox Church in store for women? Which kind of feminine patterns provides? Our theoretical background is on the one hand the notions of P.Bourdieu on masculine domination & symbolic violence and secondly the conceptions of M.Foucault on sexuality & bio-power. In our effort & in order to trace the latent content of Church's discourse we are going to study & analyze the official discourse of the Orthodox Church using the method of discourse analysis. More precisely we are going to analyze the official discourse of the former Archbishop Christodoulos (1998-2008) because his speeches form an extensive corpus of material very useful to analysis and also because the Archbishop of Church has a dominant & crucial institutional position in Church's organization in general.

Chiu, Tasing (Kaohsiung Medical University, Kaohsiung, Taiwan [tel: 07-3702410; e-mail: tasing@kmu.edu.tw]), **Assessments and Implication of Disability in Taiwan,** *International Sociological Association, Gothenburg, Sweden,*

¶ Who are the disabled? This is the question to be explored in the current study. Medical sociology used to discuss "disability" following the idea of "sick role." "Disability" thus has meant "role failure," which refers to inability to meet normal expectations within a certain social context. Therefore, a person who is granted "disability status," usually by a physician, can be excused from his or her normal obligations. In the past 30 years, disability assessment in Taiwan has been done by physician specialists according to the location of impairment in the body. Yet, since impairment is defined as anatomical or biological deficiency while disability means failure to fulfill one's original social role, these two concepts have had no necessary connection. As a matter of fact, both impairment & disability are historical products of the interaction of body & social-cultural environment. Different institutions in different periods have offered different definitions & standards for "normal" and "abnormal." A dynamic array of actors & discourses have contributed to the formation of these definitions. This study thus will apply the 'social worlds' frameworks to examine the meanings and content of disability within a historical framework in Taiwan.

Chow, Esther Ngan-ling & Osirim, Mary (Department of Sociology, American University, 4400 Mass. Avenue, NW, Washington, D.C. 20016, USA [tel: 202-885-2475; fax: 202-885-2477; e-mail: echow@american.edu]), **Border Crossings: Doing Collaborative Research on Gender and Global Transformation,** *International Sociological Association, Gothenburg, Sweden,*

¶ Our paper aims to explore how transnational & transcultural research studying women & gender are collaboratively conducted to produce various forms of feminist knowledge that empowers women individually & collectively, transforms communities & promote their well-being. We specifically will examine the following questions: (1) How do researchers decide to design a given study collaboratively, comparatively and/or transnationally? (2) What are the issues & problems that scholars experience in different stages of collaboration in the field by translating theoretical idea into research inquiry from one cultural context to the next? (3) If an inquiry involves collaboration either within the Global South or North or both, what challenges do the researchers face in the process of knowledge production? And (4) what are the effective strategies & possibilities that may have & have not worked in engaging in such a quest of transformative feminist knowledge? We will contextualize how social, cultural & institutional factors influence cross-fertilization and/or pose obstacles in transnational gender inquiry. Our studies on women migrant workers in China & on women entrepreneurs in Zimbabwe will be used to elucidate issues & problems in conducting fieldwork across languages & cultures, as "insiders/outsiders" & as equal partners in working in unfamiliar communities in or outside of our nations of origin.

2010S00481

Chuansheng, Jiang & Yunfeng, Deng (China Academy of Safety Science and Technology, No.17, Huixin Xijie, Chaoyang District, Beijing 100054, China [tel: +86 10 64941136; fax: +86 10 64971736; e-mail: jiangchuansheng@yahoo.com.cn]), **Behavior in a Large Scale Evacuation due to an Accidental Chlorine Release in Urban Area in Chongqing, China,** *International Sociological Association, Gothenburg, Sweden,*

¶ An accident occurred in a chemical factory in the urban part of Chongqing city, the largest city in southwestern China in April 16, 2004. Continuous chlorine release & consequent dispersion was resulted from the accident. The release began in early April 16th with an explosion of one of seven adjoining chlorine tanks and ultimately ended in the evening of April 19th 2004 owing to the elimination of all the potential release sources through purposely detonation. An evacuation was initiated in 1000 radius of the factory in the early morning of April 16th, & the evacuation radius was reduced to 500m at 5pm on the same day. However, less than one hour later, an unexpected explosion happened in about 6pm due to the wrong operation in the emergency response on the spot, and the people in the radius between 500m to 1000m were evacuation for the second time. In late night of April 16, the evacuation radius was again reduced to 500m. More than 150,000 people were evacuated in each evacuation process. In the morning of April 18, before the purposely detonation, the third evacuation, the largest during the accident, was conducted. We collected the media reports, some paper & multimedia materials from the impacted communities and Chongqing municipal government, & conducted a field survey in about 400 evacuees in four communities around the chemical factory with questionnaire. With all these information, we drew out the

basic timeline of the evolution of the accident & the governmental response, & further systematically analyzed the behavior of the evacuees using the information revealed in the questionnaires. This paper is aimed to present what we have found during the analysis, including the effect of different notification methods, the preparation time distribution & its influencing factors, the potential apprehensions as for evacuation decision, the behavior variation among different communities & possible explanation, etc. A disaster subculture was identified in two impacted communities, & shadow evacuation behavior was confirmed in this case.

Chudnovskaya, Irina N. (Faculty of Sociology, Moscow State University, Moscow, Russian Federation, 119992 [tel: +7 495 7023562; fax: +7 495 9394698; e-mail: inchud@bk.ru]), **Codeswitching as a Feature of Communicative Competency in Social Management,** *International Sociological Association, Gothenburg, Sweden,*

¶ The efficiency of social management practices directly depends on the communicative competency of the managing stuff. The more the parameters number is accounted during the social communication management, the higher results of social interaction are achieved. Traditional interpretation of the term "Codeswitching" involves functional changes of the linguistic idiom a national language, dialect, style, etc. We suggest extending the concept "Codeswitching", adding a personal aspect, which characterizes the codes of individual features of information-communicative structure of the person. Obstacles during the professional communications in multilingual work collectives are caused by a variety of reasons, referring not only to language, cultural and religious differences, but also to differing informational-communicative types of collective members. In the research we rely on the modified MBTI character type model which is constructed on the basis of K.G. Jung's sights. Four dichotomic pairs of characteristics are allocated in the model: extravert-introvert, sensing - intuitive, thinking–feeling, judging–perceiving. These characteristics describe people on their preferences in ways of receiving & processing the information & decision-making. To each type its own set of communications & language features is peculiar. Therefore the situations when people speaking the same national language, but referring to different types, cannot come to mutual understanding are frequent. In work collectives the knowledge of the concrete language & communicative character type features of people must be counted nearly of the same necessarity for successful social management, as knowledge of the language itself.

Chueke, Jacques (i-DAT, Faculty of Arts, University of Plymouth, Drake Circus Plymouth, Devon PL4 [tel: +44 0755148-6023; e-mail: jchueke@gmail.com]), **Beyond Digital Interfaces: Novel Features Besides Mouse & Keyboard,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper investigates new forms of interaction within digital interfaces. It examines the assumption that advances in embodied and direct interaction computing will improve the field of user-machine interface, bringing features to users that allow a more direct & natural manipulation of digital interfaces (eye gazing, touch screen, voice & gesture recognition). As Dourish suggests (2004: 27), interaction with screen & keyboard tends to demand our direct attention; we have to look at the screen to see what we're doing, which involves looking away from whatever other elements are in our environment, including other people. The computer sits on the desk & ties us to the desk, too. Embodied computing aims to make user-machine interaction more organic, i.e. integrating computer technology with natural actions & behaviours from a user, regardless of characteristics, limitations, intelligence or culture. An interactive digital installation was created in order to investigate the sociological aspects of the experience that takes place between the beholder & the reactive environment. All interaction occurred with movement & sound emitted by the observer. The curiosity that emerged when coming across an unusual situation & the response, the action that arises in a phenomenological context were subjects of this research.

Ciccia, Rossella (European PhD Socio-Economical and Statistical Studies/La Sapienza University of Rome [tel: +39 068189579; e-mail: rciccia@yahoo.it]), **Variety of Labour Regimes in European Advanced Economies. Comparing Labour Markets beyond the Welfare State,** *International Sociological Association, Gothenburg, Sweden,*

¶ In no society has the population entirely engaged in paid employment. Even today in Europe people in employment account for only a little more than 65% of the working-age population, while the presence of employment differentials between countries appears to be essentially related to differences in the labour market engagement of "optional" labour force groups: women, youths & older people. In spite of this, mainstream theories of the labour market have neglected to account how age & gender influence systematically the ways in which labour markets are organized. The aim of this paper is thus twofold: 1) to classify European labour regimes according to the extent & ways in which the main "optional" labour force groups–women, youth & older people–have been incorporated in formal labour markets; 2) to investigate the relationship between different models of labour regimes & the ways in which care/reproductive activities are organized. The two-stage principal component analysis carried out shows the clustering of European advanced economies into four distinct labour regimes models–familialistic, state-led, Fordist, half-time. Secondly, we can observe a broad correspondence between the institutional characteristics of labour & care arrangements across countries with regard to childcare.

Cichocki, Piotr & Kilarski, Marcin (Western Institute, Poznan, Poland, 61-854 [tel: +48 61 852 7691; fax: +48 61 852 4905; e-mail: cichocki@iz.poznan.pl]), **On the Foundations and Impact of the Eskimo Words for Snow on Social Sciences and Philosophy,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper we focus on the academic life-cycle of the Eskimo words for snow as one of the most controversial linguistic examples popularized in the 20th century humanities. Among its many uses, the most prominent one consists in providing a forceful exemplification for relativist claims. In addition to reconstructing the history of the example, we compare it with other misconceptions concerning North American Indian languages in order to show how their "exotic" lexical & grammatical properties were taken as evidence for a supposedly deficient capacity for abstract thought. More generally, we demonstrate the influence of social & philosophical theories on linguistic analysis, & the subsequent reflexive impact of linguistic evidence on social sciences & philosophy. We distinguish three distinct phases in the rise, development & ultimate decay of the example: a) origin and propagation of the myth; b) exposition & denouncement; c) uncritical reception of the critique. While the Eskimo example was popularized by Whorf (1940), we trace its prehistory from its first mention by Boas (1911) in order to demonstrate its inherent ambiguity. We then examine the main denouncements of the example, including the original contribution by Martin (1986) & the two best-known promulgations of her ideas by Pullum (1989) & Pinker (1994). Our criticism mainly focuses on their impressionistic and partial treatment of data & sources as well as the lack of interest in the wider theoretical context of the example. However, these accounts did not bring about an immediate decay of the example outside of linguistics. Eventually the snow-antithesis came to be either fully endorsed by those who chose to take the snow example as a case of a linguistic urban myth or completely ignored by multiple publications persistently quoting the discredited myth. Only a very limited critical discussion on the topic has taken place between these two extreme standpoints. This consideration leads to an examination of the foundations of the intellectual demand for the example & the reasons for its continuing prevalence following the exposition of the misconception.

Cicourel, Aaron V. (University of California, San Francisco, CA 94118 [tel: (415) 476-6064; fax: (415) 476-6552; e-mail: aaron.cicourel@ucsf.edu]), **The Emergence of Self and Social Structure in Children and their Demise among the Aged: Habitus Revisited Conceptually and Empirically,** *International Sociological Association, Gothenburg, Sweden,*

¶ Social structure has many conceptual & empirical instantiations. For example, socially organized activities called institutions, bureaucracies, social interaction, social networks, & other normatively organized practices & culturally produced artifacts. All of the aforementioned activities or practices can exist only within a community's socially distributed, common sense or tacit, normative understandings of knowledge systems that makes it possible for natives to create, recognize, & sustain a variety of habitual or mundane socially organized belief systems. Socialization of the young & the "reverse socialization" of the aged to death necessarily requires essential caregiver practices ("scaffolding") by individuals & groups. Pierre Bourdieu's habitus (Bourdieu, 1977; 72-78) is a useful ideal type associated with particular symbolic environments consisting of 'structured structures' & "systems of durable, transposable dispositions." Layers of "structures" influence experiences & practices and sustain the

reproduction of dominant cultural entities. For example, the child's cumulative experiences (from family to school to work) are viewed as layers of "structured structures." Bourdieu's actors are differentially situated in social structures linked to a dominant culture & the actors' personal assessments of these relations. Key terms for Bourdieu are the "internalization" & "incorporation" of culture. Bourdieu's notion of "habitus" briefly outlined above, however, lacks several essential conceptual & empirical issues, & empirically does not examine local, actual, day-to-day socialization practices by others that are constitutive of the emergence of a "sense of social structure" embedded in the acquisition of a "social self," and necessary for normal social development. Nor does habitus address changes in the adult's sense of self & social structure in adulthood that differentially is weakened & "disappear" during the aging process. Following Roberts (1964, 438-439), the notion of a single culture can be viewed as an information economy whereby "information is received or created, stored, retrieved, transmitted, utilized, & even lost." Socialization to adulthood and to death, therefore, revolves around an information economy that is "stored in the minds of its members and, to a greater extent, in artifacts." After reviewing earlier work (Cicourel, 1993a; 1993b; 2004; 2006) on the necessity of viewing "habitus" as a developmental, reproductive cornerstone of social structure, I turn to recent empirical work (Cicourel, ms) on the way social structure & an individual's habitus begin a partial, & in many cases, an eventual demise among the aged with Alzheimer's Disease (AD) & Frontotemporal Lobar Deterioration (FTLD). I conclude by suggesting the necessity of viewing social structure as patterns of institutionalized socialization & developmental processes embedded in socio-cultural practices. Conceptual & empirical elements of habitus revolve around (often tacit), informal, routine 'scaffolding practices' by individuals & groups within normative institutional settings. Such practices invariably consist of "representational re-descriptions" (Karmiloff-Smith, 1992), namely, re-descriptive devices that seek to capture experiences and thoughts that go beyond the limitations of our sensory capabilities. For example, the human ability to synthesize and compress or summarize our thinking by producing cultural beliefs, speech narratives, gestures, & other symbolic & physical mediums.

Cindoglu, Dilek (Bilkent University, Department Of Political Science Ankara Turkey [tel: 90 312 2901913; fax: 90 312 2902742; e-mail: cindoglu@bilkent.edu.tr]), **Contested Modernities and the Power of Agency in the Public Sphere; Headscarves and Swimsuits of Pious Women in Turkey,** *International Sociological Association, Gothenburg, Sweden,*

¶ The dressing practices of women in the public sphere have historically been a matter of political contestation between secular & religious discourses in Turkey. Moreover, the growing Islamic pious dressing [tesettür] practices of women both in Turkey & in other western countries which receive immigration from Muslim societies has given the clothing discussion a transnational dimension. This paper aims to look into the dressing practices of women with the feminist intersectionality approach in order to account for the reflections of social class & religious, ethnic, political identities on the regimes of migrant woman's clothing. The focus will be particularly on the discourses around the two pieces of clothing, which crystallize the boundaries of the secular & religious divide in Turkey: The headscarf & the swimsuit.

Cindoglu, Dilek & Ozcurumez BolukbasI, Saime (Bilkent University, Department of Political Science Ankara Turkey [tel: 90 312 2901913; fax: 90 312 2902742; e-mail: cindoglu@bilkent.edu.tr]), **"Care Drain" Revisited: Labor Market and Mothering Experiences of the Migrant Women from the Former Soviet Union Countries in Turkey,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the empowerment strategies of the transnational migrant women in Turkey arriving from the former Soviet Union and Central & Eastern Europe in the post-1990 period & usually working as live-in-maids. The research suggests that due to transnational labor migration, women become absentees from the traditional gender role performances, i.e. being a stay-at-home mother & taking care of the children & the husband, which results in the "care drain" in their homes. However, this paper challenges this view by arguing that: (1) care work at home is not necessarily the job for the woman only, therefore by presenting the social problems in the country of origin concerning care for families as a consequence of women's migration not only devalues women's agency as transforming her role, but also overemphasizes the gendered nature of care work; (2) migrant women do not stop mothering once they migrate for work, rather their way of mothering is more gender-neutral through providing material means for the existence of their children & relatives who provide care for these children. Throughout the migration process, women do not deny their parenting responsibilities, on the contrary a significant part of their identity is being a mother; (3) the real absentee parents in that transnational context are indeed the fathers who voluntarily deny all their responsibilities in childcare and breadwinning due to the major labor market transformation that they experienced in the Former Soviet Union countries. Our research findings based on semi-structured interviews with migrant women in Turkey support these arguments at least in two ways. First, transnational migrant women who migrate for work and/or who re-marry with a Turkish man both continue to provide for their children and/or parents left behind, & the former also provide for their spouses in cash & kind. Hence the care is not drained but transformed to a monetary & geographically distant one. Second, for most of them they are paid for the household work including care for others that they otherwise would need to do for free due to the traditional gender roles in their country of origin. This awareness itself empowers women & despite their relatively disadvantaged situation on the labor market, they are not willing to give up their paid live-in maid status in Turkey. Consequently, we maintain that the paid live-in maid status of the women who migrate for work needs to be revisited with a view to account for in what ways this mobility has transformed their role as women in their home countries beyond identifying them as victims and villains causing "care drain" in their countries of origin. This paper is based on an ongoing theoretical & empirical research conducted in the framework of the FP7 funded research project GeMIC in general of work package 9 focusing on transnational & mixed families in European countries Bulgaria, Greece, Turkey.

Ciochetto, Lynne Margaret (Massey University, Wellington, New Zealand 6140 [tel: 6448015794; e-mail: L.M.Ciochetto@massey.ac.nz]), **People Profit Planet: An Exploration of the Environmental Implications of Development in Brazil, Russia, India and China (the BRIC Economies) by 2050.,** *International Sociological Association, Gothenburg, Sweden,*

¶ The proposed paper explores the implications of the BRIC thesis that Brazil, Russia, India & China will be the dominant economies by 2050 (Goldman Sachs, 2003). The assessment is made using the triple bottom line: profit, people, planet. The BRIC economies encompass over 25% of the world's land area, 40% of the world's population and a combined GDP (PPP) of 15.435 trillion U.S. dollars. What happens in these economies in the next 40 years has a significant impact on the rest of the world. The main focus will be on the environmental implications of patterns of industrial growth, rising standards of living & the continued expansion of consumerism as well as the issues of social justice for those people who contribute to the "bottom billion".

Ciolli, Vanesa (Instituto de Investigaciones Gino Germani, Facultad de Ciencias Sociales, Universidad de Buenos Aires, Av. Corrientes 3518 5º K, Ciudad Autónoma de Buenos Aires, Argentina, C114AAO [tel: +54 11 48624244; fax: +54 11 47693220; e-mail: vanesaciolli@yahoo.com.ar]), **Global Social Policy and Local Social Conflicts: Notes to Think about State Autonomy in Latin American,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ In Argentina, since the uprising of December 2001, social policies are reformulated. On the one hand, WB & IDB increase funds for social programs. On the other hand, national social policies try to overcome the discredit of previous social assistance plans, promoting self-employment through social programs to support projects of social economy & local development. "Plan de Desarrollo Local y Economía Social Manos a la Obra", by far the most important one, was created by the government & supported with funds of the National Bank. At a first glance, the program seems to be an example of state autonomy & capacity of innovation on the field of social policy. However, the empirical research about the interactions & overlaps between this program & those financed by the IDB in the frame of Strategy for Poverty Reduction shows that the impact of global social policies in national social policies, goes beyond the particular programs that IDB finances. Can social policies implemented by the Latin American Governments that do not replicate global social policy be considered an adaptation of the latter for the specific social context (in order to improve results) or, to the contrary, are they the proof that there is a certain margin of state autonomy in the social policy area?

Cipriani, Roberto (University Rome 3, Via del Castro Pretorio 20 - Roma - Italy - 00185 [tel: +39 06 57339110; fax: +39 06 57339102; e-mail: rciprian@uniroma3.it]), **Values and Religious Rights,** *International Sociological Association, Gothenburg, Sweden,*

¶ Values are the roots of human & religious rights. At present, people say that "nowadays there are no values anymore". A recurrent distinction concerns the difference between applied values and final values, therefore between values concerning individual practices & values which represent real goals to achieve. The issue of universal values is not secondary in juridical perspective. As human beings are variable, values as well have a variable dynamics. It is not always easy to discern secular values from religious values. Vice versa, there are some typically secular values which are accepted by people inspired by religious principles. The main issue regards those who hold religious and secular values. If religious values are presumably conserved by churches, denominations, confessional organizations, for secular values the state is usually considered to be the main holder, through the established rights & duties. The existing relation between secular & religious values therefore is not a surprise. The different religions & Churches operating in Europe manifest a variety of behaviours towards religious pluralism & agreements between state & religious organizations.

Citroni, Sebastiano & Lichterman, Paul (Sociology and Social Research Department. University Bicocca of Milan [e-mail: sebastianocitroni@hotmail.com]), **The Street Is For Giant Tamales and Big Beds. A Pragmatic Comparison of Cultural Organizations in Milan and Los Angeles,** *International Sociological Association, Gothenburg, Sweden,*

¶ How do local cultural organizations try to promote an inclusive, inviting urban milieu & what tensions do they face? This paper shows how cultural entrepreneurs in Milan & Los Angeles try altering public perceptions of what is good & inviting, or not, about their urban locales. Esterni, in Milan, produces art festivals , "alternative" open performances & trains people to start their own local cultural organizations, in hopes of regenerating public spaces that welcome diverse populations, including recent immigrants. Mama's Hot Tamales, in Los Angeles, sponsors art exhibits & wine-tasting parties & also trains Latin-American immigrants to turn home-cooked tamales into saleable cuisine, all in efforts to re-define its neighborhood as an attractive shopping and entertainment destination, not a scary place. The organizations follow different strategies for "packaging" culture, shaped by differing civic traditions. Mama's wants affluent visitors to its neighborhood to create a vicarious identification with immigrant, ethnic cultures. Esterni wants to encourage ordinary Milanese to experience Milan in new ways, to upgrade everyday sociability in city life. Our pragmatic approach shows how each strategy of promoting an inclusive urban locale encounters different social and cultural tensions that approaches focused solely on economic or inter-racial conflict would miss.

Ciuperca, Ella Magdalena (Romanian Intelligence Academy, Bucharest, Romania, 013601 [tel: +40722794482; e-mail: ellaciuperca@yahoo.com]), **Romanian Migrant Labor Force and the World Crises: How Much of the Scapegoat Theory Can Be an Explanation?,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this globalized world that we are living in, Romania faces a strange situation: while there is not enough labor force inside the country, the biggest number of migrants ever, about two million, are working abroad. Speaking about the way they interact with their host countries, Miguel de Unamuno said that when two people meet, their images about each other are meeting & also the images they have regarding themselves are meeting. In this paper, I will focus not only on this relationship or on the impact of the world economical crises, but especially on the way Romanians see themselves & the way they are treated accordingly. One way to tackle this issue is to investigate the image Romanians have as citizens of European Union. Therefore, I conducted a sociological survey (using questionnaire) that underlines the core image of Romanian newborn European citizenship. These results will be the foundation for some new proposals to make them more accustomed with European identity & citizenship & therefore more integrated in their host countries.

Claisse, Frédéric & Delvenne, Pierre (University of Liège, Liège, Belgium, 4000 [tel: +3243664697; e-mail: fclaisse@ulg.ac.be]), **Building on Anticipation: Dystopia as Empowerment,** *International Sociological Association, Gothenburg, Sweden,*

¶ A dystopia can be defined as the depiction of a dark future building on the systematic amplification of current trends & features. It relates to a complex narrative posture that relies on the critical observation of a threatening present that would lead to an apocalyptic future "if nothing was done". Yet, however inescapable this future may be described, the very existence of such a narrative presupposes that the political community it tries to reach is actually able to do something to thwart it. A successful dystopia aims at making itself obsolete: once the world it depicts is identified as a possible (or even unavoidable) future, it seems to empower its readers again, restoring a "sense of possibilities" (Musil) that eventually makes alternative pathways thinkable. We propose to broaden the range of commonly accepted dystopists (usually fiction writers & novelists like e.g. George Orwell's *1984*) to sociologists like Ulrich Beck. Building on his Risk Society (1986), Beck's strong diagnosis about the breakdown of First Modernity & the coming of Second Modernity contains a noticeable prophetic & evangelical overtone that aims at "reinventing politics". We defend the notion that the dystopian posture can be used to characterize both fiction and nonfiction writers such as Orwell & Beck: a common ability, based on the same set of inextricably cognitive & normative patterns, to anticipate the future & eventually empower political communities to engage in further action.

Clark, Terry N., Carreira da Silva, Filipe & Cabaco, Susana (University of Chicago, 1126 E. 59th St. #322, Chicago, IL, 60637, USA [e-mail: susana.laia@gmail.com]), **The Rise of Culture: How and Why Arts Participation Promotes Democratic Politics,** *International Sociological Association, Gothenburg, Sweden,*

¶ Making selective use of Tocqueville's ideas on the virtues of civic life, many social scientists have focused on the political benefits of a specific set of voluntary associations. In this article, we make three claims that can be read as criticisms of this neo-Tocquevillian model of participation. First, a crucial shift in the political & economic structure of contemporary societies is ignored–the rise of culture. We operate with a more comprehensive conception of democratic politics & we also distinguish between distinct norms of citizenship, exploring the associated political repertoires. Our model positions culture both at the associational level & as a dimension of social life. This paper's major finding is that the civic benefits of the membership in cultural organizations vary consistently according to context.

Clément, Franz (REPREM, CEPS/INSTEAD, BP 48, L 4501 Differdange [tel: 00352 58 58 55 900; fax: 00352 58 55 60; e-mail: franz.clement@gmail.com]), **The Current Economic and Financial Crisis: Transformations in Work in the Greater Region,** *International Sociological Association, Gothenburg, Sweden,*

¶ There is in Europe an area called "Greater Region" around Luxembourg. Within this area important flows of cross-border workers take place. The current financial & economic crisis seems to have an impact on this situation. More & more cross-border workers experience a loss of their job in Luxembourg because of the crisis. However, according to the European regulations, such a job loss also involves a passage into unemployment in the home country of the cross-border worker & not in the country where the job has actually been lost. Which is the real social cost of these movements? The current crisis in the "Greater Region" involves strong competition & distortions. The workers of this area are especially attracted by Luxembourg where they benefit from higher wages than elsewhere. Isn't Luxembourg's employment market regionalizing, even internationalizing itself more under the effect of the crisis? The crisis also entails a new governance of the industrial relations. The governance of Luxembourg's job market stays at national level. Paradoxically, this job market is dominated by non-national workers. Is it possible to envisage in the long run a regional governance of the job market in order to take account of this reality?

Clune, Laurie A. (Ryerson University, Toronto, Ontario, Canada [tel: 416979-5000; e-mail: lclune@ryerson.ca]), **Mapping Work: Using Informant Generated Maps to Discover the Social Organization of Injury Management,** *International Sociological Association, Gothenburg, Sweden,*

¶ Study Premise: The legislated process of Early & Safe Return to Work (RTW) has yet to be explored from the standpoint of injured workers. This paper describes how cartographic techniques were used to gain an appreci-

ation of the workers standpoint & analyse data. Description of the study: In this institutional ethnographic inquiry designed to understand RTW in hospital settings six injured registered nurses & 22 other injury management informants were interviewed. Maps of the RTW process were created by the researcher prior to data collection & by all nurse informants. A systematic interrogation of the maps proved valuable in focusing the study and immersion in the data. Findings: This study reveals that injured nurses engaged in invisible & unrecognized domestic, rehabilitation & accommodation work during RTW. While creative ways of facilitative their successful RTW were identified, the constraints of collective agreements & human resource procedures along with a lack of appreciation of their invisible work resulted in the unsuccessful return of all nurses. These occurrences which are counter to the intentions of the RTW policies add to the global nursing shortage. Nurses, as regulated professionals & women, have distinct challenges that must be considered for their successful RTW.

Coban, Asli & Ozakin, Ulku (Middle East Technical University (METU), Gender and Women's Studies, Ankara, Turkey, 06531 [tel: +90 312 210 30 19; fax: +90 312 210 30 19; e-mail: asli.cob@gmail.com]), **Sexuality in Only-Women Places of Feminist Practice in Turkey: A Lesbian Intervention?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Only-women-platforms/places have always constituted the main spatial form of feminist policy making in Turkey; & lately feminist women started to share these places with lesbian women. Feminist politics in Turkey have obviously failed to produce a positive understanding of female sexuality, making references to the female body & sexuality only within the context of male violence. Only-women-places have been the spatial extensions of disembodied & de-sexualized feminist project; they were being cleansed of male sexuality/violence together with men, while they actually ousted female sexuality as if female sexuality can be defined only through the medium of male sexuality. Therefore, along with women's agency embedded in female sexuality, hetero-normativity of policy-making spaces (and bodies within it) has gone unaddressed, too. This blind spot has caused a striking failure in identifying & connecting with the embodied agency of women & possibly feminist activism in everyday-life & everyday-places. Without having spaces/bodies of its own, feminist politics has become trapped in the area of disembodied juridico-political thinking. Lesbian sexuality, however, easily permeated the only-women-places of feminist practice, revealing hetero-normative investments in these places and actively transforming them. Therefore, in spatial performances of lesbian sexuality in only-women-places of political practice, feminists may realize the potential & already existing agency of female sexuality. However, there remains the danger of assuming lesbian sexuality as a mere speculation like female sexuality itself, a show, a performance. It seems that not mentioning it, feminist organizations consider lesbian sexuality in their organizations as a part of an only-women-experience which is intrinsically asexual & belonging to the private realm of experience. This paper examines the case of Turkey in connection with the spatial-political struggle between lesbian & different groups of feminist women over the account of female sexuality and as it takes place in the direct encounters within only-women-places of feminist political practice.

2010S00499

Cobanoglu, Yavuz & Cobanoglu, Yavuz (Management and Labor Sociology; Tunceli University, Atatürk District, Muhlis Akarsu Street, Tunceli/ Turkey, 62000 [tel: +90 428 213 17 94; fax: +90 428 213 18 61; e-mail: yavuzcobanoglu@tunceli.edu.tr]), **Examination of Islam with Modernity: A study on Fethullah Gülen Community,** *International Sociological Association, Gothenburg, Sweden,*

¶ According to an idea which has been dominant in social sciences for a long time, modernization "as a project" was to abolish religious & conventional structures & "modern man" was to emerge. Today we can easily say that it did not happen this way. Modernity & its impacts could not abolish any religion or convention. By means of globalization & postmodernism, an awakening has been experienced through religiosity, convention and cultures. However, this process should not be perceived as a drift toward the three great religions. Today world history is also witnessing the rise of "new religious acts" in a way it has never witnessed before. Although rationalism, which is the gift of modernism in our age, did not abolish any religious forms, we can mention that it transformed them. Every single person, whatever religion or belief system he believes in, tries to base his experiences on a rational ground. Thus, this sharpest line between modernism & religion still remains important. Under these circumstances, we witness a religious cult, which has been growing stronger & has more than 5 million followers, being the centre of interest. The religious act, which is named "Fethullah Gülen & his community", handles Islam differently from radical interpretations. It differs from other interpretations by accounting spiritual & rational explanations for many religious concepts. Although the writings of Fethullah Gülen, attempting at a compromise among reason, science & religion, is appreciated by masses, on the other part we are confronted with an Islamic interpretation which is in search of exceeding its limit without leaving it behind. This study is the outcome of a concern which aims at interpreting the relation between modernism & religion in Turkey through Fethullah Gülen & his community.

2010S00500

Cock, Jacklyn ([e-mail: Jacklyn.Cock@wits.ac.za]), **'Green Capitalism' or Environmental Justice: A Critique of the Sustainability Discourse,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper argues that the sustainability discourse has been appropriated by neo-liberal capitalism. This is ironic because capitalism is not ecologically sustainable. Capital accumulation cannot adjust to ecological limits. Instead, in the pursuit of profitable growth and new markets, it seeks to commodfy nature, even turning the atmosphere into a tradeable commodity. It is shown that, in the name of sustainability and cost recovery, the installation of pre-paid water and energy meters in South Africa is having devastating impacts on poor communities. A reclaimed notion of sustainability linked to social and environmental justice is necessary.

2010S00501

Cock, Jacklyn & Lambert, Rob (SWOP institute, Wits University, Johannesburg, South Africa. 2050 [tel: 27117174439; fax: 27117174469; e-mail: Jacklyn.Cock@wits.ac.za]), **Globalising Local Resistance: Case Studies of Arcelor Mittal and SIGTUR,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper builds on the assertion by Panitch & Leyes (2006) that "we must fight for a new relation of humankind to nature". It argues that this new relation involves recognising how the crisis of nature is linked to the crisis of justice as increasing environmental damage has differential social impacts & is linked to deepening social inequality both globally & locally. The central concern of the paper with the power of global corporations is illustrated through two case studies: firstly local struggles against pollution by the global giant steel producer, Arcelor Mittal in South Africa. Secondly, the paper reflects on instances where unions & labour internationals have tried to build power through globalizing the local. This includes efforts of the Southern Initiative on Globalisation & Trade Union Rights (SIGTUR) to challenge global corporations. The paper concludes that unless new sources of power & corresponding strategies can be imagined & expressed, the social & environmental regulation of global corporations will remain a remote prospect & the impending environmental catastrophe will not be averted.

2010S00502

Cock, Steven (Department of Sport and Exercise Sciences, University of Chester, Parkgate Road, Chester, England, CH1 4BJ [e-mail: s.cock@chester.ac.uk]), **The Development of Swimming Strokes: A Sociological Interpretation,** *International Sociological Association, Gothenburg, Sweden,*

¶ The emergence of distinct swimming strokes was an important development within the sportization of swimming. Many historians have focused primarily upon the transitions that occurred–from early forms of the breaststroke, through different forms of the sidestroke, to the emergence of the first crawl strokes–in the principal racing style of the nineteenth century. But rather than providing such a mono-linear interpretation, it may be possible to trace the development of different styles of swimming on the front, back & side in more detail & over a longer period of time than has previously been attempted. This is important in order to provide a starting point for developing a more adequate appreciation of how the contemporary sport of swimming has emerged out of the past. I therefore intend to provide a sociological analysis of people's changing attitudes in relation to swimming strokes, styles & techniques between the sixteenth & the early twentieth centuries & to place this discussion within the context of long-term changes throughout the wider figuration. This will involve the analysis of documentary evidence from a range of different texts, the archives of the Amateur Swimming Association and a variety of newspapers.

2010S00503

Coelho, Denilson Bandeira (University of Brasilia, Brasilia, Federal District Brazil, 70904-970 [tel: 55 61 33072865; fax: 55 61

33073930; e-mail: denilsonbc@unb.br]), **Adoption of Policy Innovation by Local Government: The Diffusion of Brazil's Bolsa Escola Program,** *International Sociological Association, Gothenburg, Sweden,*

¶ The literature of political science asserts that conditional cash transfer programs have been widely implemented because a) it corresponds to an alternative policy strategy adopted by governments that face opposition to implement innovative public policies, or b) because the new global economic order has reduced the social spending to the poor. In this work I introduce a new approach to explain the spread of the Bolsa Escola Program (BEP) between Brazil's cities. During 1995-2001 municipalities governed by the Worker's Party (PT) & the Party of Brazilian Social Democracy (PSDB) created or emulated the BEP at higher rates than others parties. Even after the federal government created the national Bolsa Escola, local governments continued to create the municipal BEP. What factors determine the diffusion of social policies like BEP across the Brazilian municipalities? Why did some local governments decide to adopt the national BEP & others did not? To answer these questions, the research tests the influence of structural, internal & external variables on the dissemination of BEP. Three hypotheses are tested in the study. The first is that local political competition is positive for the diffusion. The second hypothesis claims that the party alignment between municipal and the federal level increases the likelihood to adopt federal BEP. The third affirms that social networks can work to promote diffusion. In order to understand the politics of policy diffusion in Brazil the study uses an Event History Analysis to statistically test the impact of political incentives on the diffusion for Brazilian's municipalities.

Cohen, Joachim (End-of-Life Care Research Group; Vrije Universiteit Brussel, Brussels, Belgium, 1090 [tel: 003224774714; fax: 003224774711; e-mail: jcohen@vub.ac.be]), **Euthanasia and Other End-Of-Life Practices in Belgium: Practice, Attitudes, and Experiences before and after the Legalization of Euthanasia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Euthanasia continues to be a subject of debate in several countries. Belgium is, so far, one of the only three countries in the world to have legalized euthanasia. Empirical information on euthanasia from this country is, therefore, highly relevant from a sociological perspective. This presentation discusses what societal elements contributed to the legalization of euthanasia & which effects legalization had on end-of-life care practice. Empirical data from various sources are used: European Values Studies (EVS) data on attitudes of the general public towards euthanasia; mail surveys among representative samples of Belgian physicians in 2001 (N=1750) and in 2009 (N=979) assessing attitudes & experiences of physicians before & after the euthanasia law; & large-scale post-mortem surveys of attending physicians of a representative sample of death certificates in Belgium in 1998 (N=1925), 2001 (N=2950), & 2007 (N=3623) providing insight into end-of-life practice before & after the euthanasia law. A favorable stance towards euthanasia among both the general public & the medical class in Belgium has contributed to the legalization of euthanasia. The enactment of euthanasia seems to have had an effect not only on the euthanasia practice but also on wider end-of-life practice: euthanasia, but also certain other types of end-of-life decisions (eg terminal sedation) have become more frequent. Unlike popular belief there are no indications in actual practice (nor based on the views & experiences of physicians) of a shift towards more life-ending acts in vulnerable groups or of an antagonistic relationship between euthanasia & palliative care.

2010S00505

Cojocaru, Stefan (Alexandru Ioan Cuza University; Department of Sociology and Social Work, Iasi, Blv. Carol I, no. 11, Romania, 700506 [tel: 0040744788779; fax: 0040332402516; e-mail: stefan.cojocaru@expertprojects.ro]), **Appreciative Intervention Based on Social Projectionism,** *International Sociological Association, Gothenburg, Sweden,*

¶ The presentation focuses on a participatory approach of planning the appreciative intervention in social experiences that renounces on "deficiency paradigm" & the classic determinism. This perspective helps us understand the connections between personal knowledge, formulation & planning objectives & achieve change through participation & negotiation. The "overturned determinism" paradigm, explained by social projectionism theory, helps us understand the role & power of formulating objectives in achieving change through participation. The renouncement of the classical model of determinism in the social sciences help us to explore, in a social constructionist view, epistemological and interdisciplinary aspects of the action directed by appreciative approach.

Cole Tinyase, Emmanuel ([e-mail: temmanuelcole@yahoo.com]), **Intimate Partner Violence and Sexually Risky Behavior in Botswana: Implications for HIV Prevention,** *International Sociological Association, Gothenburg, Sweden,*

¶ AIM: Evidence-based research has identified a link between experiencing intimate partner violence (IPV) & exposure to HIV in the general population & for women & girls in sub-Saharan Africa in particular. Emerging evidence in Sub-Saharan Africa supports the fact that violence perpetrated against women & girls tends to increase their risk of HIV infection. The aim of the study was to explore the type & severity of IPV- & HIV-related risk behaviors among remote, rural, & urban dwellers in Botswana aged 15 & over. METHODS: The study combined both quantitative and qualitative methods of inquiry. Respondents came from remote area settlements & rural & urban areas of Botswana. The sample population was 1,378 Botswana, who are 15 years & above. Face-to-face structured & unstructured interviews were conducted by trained interviewers. RESULTS: Thirty-two percent of the respondents reported that they had been in a relationship that they perceived as abusive. Respondents had had at least 2.4 abusive relationships. The mean Habitat Sustainability Index summed score was 2.4 (SD = 2.2). Women were more likely to report having been in an abusive relationship than men. The linear combination of physical, verbal, emotional, & sexual abuse explained 37% of the variance in sexually risky behaviors, $r(2) = .37$, $F(13, 113) = 4.113$, $p < .001$, F change = 4.392. Emotional abuse & sexual abuse were the best predictors of sexually risky behaviors. When categories of abuse were classified by physical & nonphysical abuse, nonphysical (verbal & emotional abuse) accounted for a greater part of the variance in sexual high-risk behavior (beta = .32, p = .001). CONCLUSION: Intimate partner violence (IPV) is common in Botswana & is related to high-risk sexual behavior. Programs for the prevention of HIV should adopt a life course model in order to identify the underlying factors in high-risk behavior.

Coleho, Maria Francisca Pinheiro (Universidade de Brasília, Campus Universitário, Brasília, DF, Brazil, 71.000.000 [tel: 55-61-33072389; e-mail: coelhofrancisca@gmail.com]), **Social Movements and Institutions,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study approaches the relationship between social movements and institutions in Brazil concerning three different stages of the process of redemocratization: the transition to democracy; the National Constituent Assembly; & the new constitutional order. The general question is: what is the interface, reciprocity or conflict between social movements & institutions in this context of social change? This study examines the different roles of social movements & institutions in each specific period. In the predemocratization moment, the movement for direct elections for president, Diretas-Já, is analyzed. In the National Constituent Assembly, the movement in defense for free public education is examined. In the new constitutional order, the pro-reform political movement is studied. This research seeks to identify the agents, individuals or groups, the ones engaged in leadership, programs and platforms. This work focuses on the scope of the studies on social movements & democracy. It belongs to the field of representativeness & legitimacy of the demands of social movements in the context of democracy & its challenges.

Coletu, Ebony (American University - Cairo, 16 Mohamed Thakeb, #903 Zamalek, Cairo EGYPT 11211 [tel: 20 273 68 353; e-mail: coletu@aucegypt.edu]), **Networked Communication as Collateral in Microlending,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper I investigate the rising popularity of online giving networks that match donors in more affluent countries with small-scale microentrepreneurs abroad. Building on accounts of identity economics & preferences for giving to particular kinds of recipients (Akerlof & Kranton, Identity & Economics, 2009; and Becker, Accounting for Taste, 1998), I investigate the rhetorical production of appeals for cash aid that rely as much on new mechanisms for disclosing, framing, & circulating information to generate connections between strangers, as they do on cultural schemas & donor preferences. I argue that brief stories, information, & commentary drafted by professionals and volunteers, donors & in some cases clients, circulate to create a unique form of collateral for the bottom tier of borrowers, previously termed the "unbankable". I offer four techniques that explain how this collateral accumulates & use them to assess role of language-mediation in microlending. This approach modifies Harrison White's theory of stories & networks (Identity and Social Control, 2008)

with a focus on mediating institutions, and adds a rhetorical supplement to Akerlof & Kranton's theory of identity economics to better understand the forms of personal disclosure & professional mediation that influence online giving.

Collen, Arne (Saybrook University, 747 Front Street, San Francisco, CA 94111 USA [e-mail: acollen@saybrook.edu]), **Research Proficiencies in Human Inquiry Applied to Doctorate Graduate Education,** *International Sociological Association, Gothenburg, Sweden,*

¶ There is a general skill set in the sciences doing research with human beings, following a reiterating cycle from entry into inquiry through phrases of data collection & processing to outcomes that put the researcher in a position to enter the cycle once more. At the author's university, the skill set provides the foundation for research training in three doctoral programs. Presumed is that the acquisition, development, & attainment of proficiency doing human inquiry rests on this set of skills. A curriculum of research-oriented & competency-based coursework is described by which graduate students undertake research training culminating in the doctoral dissertation. Many systemic & cybernetic principles come into play that help us understand research skill building from acquisition to mastery, interrelatedness among these skills in practice, levels of complexity involved in successfully navigating inquiry, & practical know-how. Issues & challenges remain in providing an efficacious research curriculum, which the author and colleagues are currently assessing. The paper concludes with some reflections upon this approach for graduate education & research training.

Collin, Johanne (University of Montreal, Faculty of Pharmacy, Montreal, Canada, H3C-3J7 [tel: +514-343-7145; fax: +514-343-2031; e-mail: johanne.collin@umontreal.ca]), **Thinking in 3D: Redefining Pharmacologization through the Interaction between Medicalization, Socialization, and Molecularization,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper, I would like to demonstrate that pharmacologization is not merely an extension/adaptation of the process of medicalization. It is rather a complex process through which medications become major devices for transforming individual and collective identities & social dynamics. My goal is therefore to propose a theoretical model that conceptualizes pharmacologization as a result of the interaction between three processes that are at the heart of contemporary societies: "medicalization," "socialization," & "molecularization." While medicalization concerns the shifting of boundaries between the normal & the pathological, molecularization concerns the boundaries between nature & culture, & nature & artifact. Imagining a society at the molecular level entails the naturalization of self-improvement practices & the extension of human limits (e.g., suppressing menstruation in women, suppressing the need for sleep, etc.) Finally, socialization, as a process in which the boundaries between inclusion & exclusion are constantly being redrawn, is also mutually informed by the phenomenon of pharmacologization. In societies characterized by mass individualism, in which there is a need for constant adaptation to rapid change, responsibilization, and performance, the use of medications (particularly psychotropic drugs) has been institutionalized as a mechanism for normalizing human behaviour.

2010S00511

Collins, Randall (Dept. of Sociology, Univ. of Pennsylvania, Philadelphia, USA 19104-6299 [e-mail: collinsr@sas.upenn.edu]), **Entering and Leaving the Tunnel of Violence: Micro-Sociological Dynamics of Self-Entrainment in Severe Violence,** *International Sociological Association, Gothenburg, Sweden,*

¶ Detailed micro-sociological evidence from videos, ethnographies, and reports of subjective phenomenology show that violent confrontations are difficult to carry out; most stop at the level of threat, bluster, & eventual withdrawal. Those that continue on to successful violence must get past the barrier of confrontational tension/fear, which arises from breaching the primary tendency of focused interaction to entrain its participants in a shared rhythm of micro-gestures & emotional expressions. Face-to-face violence thus has a character that can be metaphorically described as descending into the tunnel of violence, an altered state of consciousness sometimes described as dream-like, frenzied, or out of oneself. How severe is the violence that happens depends on how long persons stay in this tunnel, & on interrelated processes on several levels: physiological arousal (cortisol & adrenaline, affecting heartbeat & perception); self-entrainment through subjective focus on the trajectory of one's emotional rhythms and internal dialogue; social micro-coordination with supporters in violence; & reciprocal micro-coordination with victims. Cases analyzed include burglars, military & police atrocities, prison torture, & school rampage killings.

Collins-Mayo, Sylvia (Kingston University, Penryhn Road, Kingston Upon Thames, England, KT1 2EE [tel: ++44 208 547 2000; e-mail: s.collins-mayo@kingston.ac.uk]), **Young People's Vicarious Religion,** *International Sociological Association, Gothenburg, Sweden,*

¶ Throughout Western Europe young people as a whole are less religiously orientated than older people on all the usual measures of affiliation, belief & practice, particularly in relation to the Christian Church in its various denominations (Voas, 2009). It is often suggested that lack of church engagement is indicative of young people's rejection of traditional institutional religion in favour of new forms of spirituality characterised by highly individualised, subjectively validated belief systems. Alternatively it is claimed that young people are increasingly secularly minded. This paper will argue that the everyday religion of many young people in England lies somewhere in-between these two positions. Based on an extended case study of English Christian youth & community work, which involved a thematic analysis of survey & interview data gathered from over 300 8- to 24-year-olds, it will suggest that Davie's (2007) notion of "vicarious religion" is a useful way of understanding young people's lived religious engagement. Religiosity is a situated phenomenon; for the most part young people in England are benignly indifferent to Christianity but nevertheless many utilize both its tradition & institution in the occasional construction of their religious identity, belief & practice.

Collmer-Hakenesch, Sabine (George C. Marshall European Center for Security Studies, D-82467 Garmisch-Partenkirchen, Germany [tel: +49-(0)8821-750-2379; fax: +49-(0)8821-750-2688; e-mail: CollmerS@marshallcenter.org]), **State Fragility as Catalyst and Antecedent in Globalized Conflicts: Findings From Comparative Research,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since the 1980's the number of fragile states has risen considerably due to the collapse of states in Africa & Asia, but also accelerated by the end of the Cold War. The Balkan Wars in the 1990A's led to the dissolution of the Republic of Yugoslavia and the formation of a couple of new states - the latest one, Kosovo, declared independence only in 2008. In the Caucasus & in Moldova secessionist conflicts appeared & where misleadingly dubbed "frozen conflicts". However, as those conflicts remain unsolved over an extended period of time, they are all but frozen, but may relapse into bloody dispute any time a as was shown by the five-day war in Georgia in summer 2008. Also, as these conflicts may have ramifications in other parts of the world they may be called globalized conflicts. The paper investigates factors and root causes of the conflicts in Kosovo, Georgia & Moldova. It draws on the results of a comparative research project, thereby asking about the correlation between globalized conflicts & state fragility. The paper looks at structural factors as well as at the role of certain key actors.

Colomb, Claire (University College London, Bartlett School of Planning, Wates House, 22 Gordon Street, London WC1H 0QB [e-mail: c.colomb@ucl.ac.uk]), **Pushing the (Discursive) Urban Frontier: 'Temporary Uses Of Space' and the City Marketing Discourse in Berlin in the 2000s,** *International Sociological Association, Gothenburg, Sweden,*

¶ After the reunification of the city in 1989, the changing landscape of the "new" Berlin under construction was marketed & staged through city marketing events & campaigns which featured the large-scale urban redevelopment sites of the 1990s such as Potsdamer Platz & the new Government Quarter. In the 2000s, new images & narratives began to be integrated into the official city marketing discourse–including sites, places & people which had been left out of the promotional imagery of the 1990s. This paper analyses how former wastelands & vacant buildings which were reused by artists or cultural entrepreneurs for "temporary uses" (such as urban beaches on Berlin's waterfront) have been instrumentalised in the marketing discourse as part of the shift towards the promotion of the "creative city" & of an urban development model which relies on a multiplicity of "creative spaces" whose boundaries & nature are constantly reinvented by young "space pioneers". In the search for new images which can distinguish a city from its competitors, the "imagineering process" needs to be

constantly taken forward by finding "new urban frontiers". This very instrumentalization poses a major challenges for the creators & users of "temporary spaces", because it changes the way such spaces work, their audience, and often threatens their existence by raising investors' interest in previously neglected areas.

Colombo, Alba (Universitat Oberta de Catalunya, Av. Tibidabo, 39-43 08035 Barcelona Spain [tel: +34 932 537 531; fax: +34 934 176 495; e-mail: acolombo@uoc.edu]), **Impact of Culture Festivals as Urban Development Strategy. Methodology and Conceptualization of Festival Effects,** *International Sociological Association, Gothenburg, Sweden,*

¶ Given the growing needs of urban strategic development, culture events are considered one possibility for the policy makers to provoke direct economical impacts on the city, area or region. Therefore some strategic economical impacts studies of festivals are growing around Europe. The present work aims to analyze the conceptualization about what is understood as "impacts" from different perspectives. Generally the economical impact studies have been used to value goods, public & private, as well as to evaluate the consequent processes of development. Are these studies using the same concept or idea of impact? The interesting fields of this research are at least three; the analysis of different conceptualization of "impact" at different European studies, the identification of other impacts related to the economical one of different European festivals studies & the methodology comparison of different European studies. To be able to identify the meaning of "impact" in different studies, this research is focused on festivals based on different arts & culture sectors. The paper ends with some remarks concerning the need to identify a clear conceptualization of "impacts" of cultural festivals, in order to further the debate on economical impacts related to urban development strategies.

2010S00516

Colombo, Clelia (Government of Catalonia, Av. Diagonal 409, Barcelona, Spain 08006 [tel: 0034935526061; e-mail: ccolombo@gencat.cat]), **The IDEALULEU Project: Fostering Youngster eParticipation in Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ Citizen participation into the public sphere is a key element to citizen engagement into the democratic political process. This paper analyses the development & results of an electronic participation experience with youngsters at regional level in Europe: the IDEALULEU Project. IDEALULEU seeks to foster electronic citizen participation in public decision-making involving citizens from different European countries. It is focused on youngsters from 14 to 30 years old, one of the less participative groups & the one with highest Information & Communication Technologies (ICT) skills. Funded by the European Commission, it is developed by Catalonia, Regione Toscana & Poitou-Charentes. Its goal is threefold: to encourage an European youngster's debate on climate change; experiment with ICTs as a supporting tool for citizen participation; & develop an educative process that allows youngsters to learn on democracy and citizenship. The main participatory phases combine online debates with offline participation. The phases are: a virtual debate held on an Internet web 2.0 platform & an Electronic Town Meeting developed incorporating electronic tools to offline participation meeting. The project is developed from January 2008 through December 2009. It involves around 1300 European youngsters, and achieves high participation rates, high quality debates and rigorous & seriousness participation.

2010S00517

Conaldi, Guido (University of Lugano, CH, Lugano, Switzerland, 6900-CH [tel: 00415866664471; e-mail: guido.conaldi@usi.ch]), **Informal Hierarchies and Cooperation in Self-Organising Teams: Empirical Evidence from Open Source Software Development Communities,** *International Sociological Association, Gothenburg, Sweden,*

¶ I examine the role of informal hierarchies in fostering collaboration in self-organising communities by analysing communication networks among members of communities involved in Free/Open Source Software (F/OSS) projects. I document structural properties of the hierarchy both emerging from & being influenced by the self-assignment of community members to tasks. Furthermore, I analyse the interaction between the emergent organisational hierarchy & the network of actual collaboration developed by the community members. F/OSS communities are formed by groups of software developers, who communicate mainly over the internet & collaborate to the production of software products. F/OSS communities may be conceived as natural experiments on the emergence of social structure out of network interaction as virtually no exogenous hierarchy is imposed on production teams. I reconstruct the structure of communication networks by harvesting the official development mailing lists of selected projects. Contributions to collective code bases & to the bug tracking repositories are used to reconstruct collaboration networks & task assignment. In the analysis I control for a variety of sources of individual heterogeneity in production and communication activities. The objective of the study is to investigate whether status-based informal hierarchies generated by local communication patterns influence the productive goals of selected communities through the stabilisation of task assignment and collaboration networks. If in these contexts informal hierarchical structures represent a viable option in order to reduce complexity & facilitate the internal assignment of tasks, it is expected that a balance has to be stricken not to hinder the flexibility & potential for knowledge recombination characteristic of flatter team structures.

Conde, Eugenia, Gorman, Dennis & Poston, Dudley (Texas A & M University, College Station, TX 77849 USA [tel: 979 845-5133; fax: 979 845-4057; e-mail: eugeniacd@tamu.edu]), **The Effects of Different Methods of Handling Missing Data on the Estimation of Models of Teen Pregnancy,** *International Sociological Association, Gothenburg, Sweden,*

¶ We argue that proper handling of missing data is a critical component of conducting rigorous scientific research. In our view, rigorous research should be designed in such a way that hypotheses are testable & falsifiable. To achieve this end, researchers should start by addressing an interesting scientific puzzle that is informed by a theory of the problem. Our perspective is based on Karl Popper's philosophy of critical rationalism, which requires that the conditions under which hypotheses are accepted or rejected, & the appropriate analysis associated with identifying these conditions, be stated a priori. We also argue that statistical analyses should be conducted using the most up to date statistical tools that will allow researchers to obtain more accurate estimates. Research on missing data, as well as our own empirical research, demonstrates that the inferences that a researcher draws can change depending upon which specific statistical method is used to handle missing data. For example, we found that the odds of having had a teen pregnancy for Latinas compared to whites were not significant when using listwise deletion but became significant when using mean substitution. Moreover, when using multiple imputation the results changed from significant to non-significant depending on the number of imputations used in the analysis. While the literature on missing data has identified the limitations of the different methods for handling this problem, correct use of these techniques is not yet at the forefront of evaluating & interpreting rigorous scientific research. We contend that missing data play a crucial role when making statistical inferences; therefore, scientific rigor should include correct use of missing data techniques.

2010S00519

Conde, Eugenia, Poston, Dudley & Gorman, Dennis (Texas A & M University, College Station [tel: 979 845-5133; fax: 979 845-4057; e-mail: eugeniacd@tamu.edu]), **Modeling the Incidence of Teen Pregnancy in the Light of Missing Data: Problems and Solutions,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the effects on parameter estimates & models of teen pregnancy of using different methods for handling missing data. The three most popular methods of handling missing data are compared, namely, listwise deletion, mean substitution, and multiple imputation. Our results show that estimates and theoretical conclusions can change significantly depending on which missing data method is used. For example, the odds of having had a teen pregnancy for Latinas compared to whites are not significant when using listwise deletion to handle the missing data, but they become significant when using mean substitution. Other kinds of differences are found when using multiple imputation to handle the missing data. Our analysis highlights the need to pay more attention to the roles that missing data & the different ways of handling the problem have on scientific research. We also argue that more scrutiny is required in the reporting of results and conclusions in studies that have missing data.

2010S00520

Conilh de Beyssac, Marie Louise & D'Ávila Neto, Maria Inácia (UFRJ - Program Institute of Psychology of Federal University of Rio de Janeiro, Av. Pasteur, 250 Praia Vermelha Rio de Janeiro RJ Brazil [tel: 55(21)3873-5348; fax: 55(21)2295-3491; e-mail: marie7@terra.com.br]), **The Paradise Is a Double Click Away:**

Is the Youtube the New Noah's Ark?, *International Sociological Association, Gothenburg, Sweden,*

¶ The research explores the imaginary of the nature of Brazil with access to internet that share videos through the website YouTube (www.youtube.com - broadcast yourself). The objects of the study are the elements of imaginary present in the moving images associated with nature & the awaken to the finite resources of the earth and the life on it. The study investigates the types of moving images that arise in a spontaneous mobilization on the nature theme, with the observation point standing on the information available within a technology collaborative network. In this empirical study, the theoretical background of Gilbert Durand for the imaginary is investigated in moving images. The theoretical models of Barthes, Goffman, Joly, Gervereau combined sustain a qualitative methodology of film analysis of images, using the Atlas Ti software as a tool for categorization & analysis of the material. In the study, the qualitative data are movies with different durations published up to November 2009 & organized in the site by its registered users, but with no login requirement to be watched by the public. The selection of the movies in the study is according to the following criteria: Portuguese language, location Brazil, inside links channel & play list with the filter key words on the nature theme. The research points to a possible mythic structure & an anthropocentric view in the non-verbal elements–imagery and symbolic–of the imaginary of nature & sustainability. In this sense, Noah's Ark is an interesting metaphor for the collection of different types of social representations that emerge from images of nature & sustainability, which saturate the virtual space of YouTube. They seem to embody a virtual paradise, just two clicks away. In that sense, these representations are closer to everyday life of most Brazilians than the Amazon–more than 80% of the population lives in cities; and, as Noah's Ark, it is indiscriminately occupied by penguins, polar bears & by typical Brazilian tropical animals as onças pintadas. We intend to explore specifically in the "Session 4: The practice of sociology in the realm of virtualization" of the "Research Committee on Sociotechnics–RC26 Sociological Practice" issues relating to the use of the methodology of image & film analysis applied to the investigation of the records "left" by Internet users in a collaborative environment for video sharing.

Connolly, John & Dolan, Paddy (DCUBS, Dublin City University, Collins Avenue, Dublin 9, Ireland [tel: 00 353 1 7008910; e-mail: john.connolly@dcu.ie]), **Globalization Processes and Functional Specialization: The Emergence of Communications and Media Functions in a National Sports Organization,** *International Sociological Association, Gothenburg, Sweden,*

¶ The shifting interdependencies between the Gaelic Athletic Association (GAA), the media, & other sports organizations; the increasing integration of Irish people into global networks of production and consumption; & the intertwining of all these processes led to the gradual development of specialist communications/media functions in the GAA. From the 1960s, this figuration became longer & denser; "cross-channel" Association football, & other national and international sports & leisure activities, were increasingly conceived as "competing" with Gaelic games for the allegiance of Irish "youth". This process overlapped with changes in the sports-media complex; an expanding media network–media organizations were integrated into wider, & more differentiated networks of competition & cooperation; & the increasing individualization of Irish society as Irish people became more expansive in their outlook towards other sports & leisure activities. The GAA, particularly those individuals at a high level of orientation in the organization, felt compelled to deploy communications specialists in the struggle for "media space". Such specialists had become increasingly perceived as essential in commercial contexts as means to engage with, & understand, the more nuanced tastes of Irish "youth". Our data comprises interviews & historical data relating to the GAA & wider social developments in Ireland.

2010S00522

Conrad, Peter (Brandeis University, Waltham, MA 02454 USA [tel: 781-736-2635; e-mail: conrad@brandeis.edu]), **The Impending Globalization of ADHD,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines ADHD as case of the expanding medicalization of human problems. ADHD emerged as Hyperactive Syndrome (among other names) in the United States in the 1960s. For several decades it remained largely a North American phenomenon & was only rarely diagnosed & treated in other countries. Beginning in the 1990s there has been migration of ADHD diagnoses & treatment to a wide range of countries, especially in Europe, but also in other countries. This migration was in part shaped by the international pharmaceutical industry, the global influence of American psychiatry, & the differential adoption of the DSM-4 & the ICD-10 definitions of the disorder. This paper examines the extent and sources of ADHDs international expansion based on the extant literature of ADHD diagnosis & treatment in various countries. What does the ADHD case tell us about international transfer of medical categories & treatments in an age of globalized Western biomedicine?

2010S00523

Consolim, Marcia Cristina (Universidade Federal de São Paulo, São Paulo, Brazil, 07252-312 [tel: 55-11-50825093; fax: 55-11-50825093; e-mail: mconsolim@terra.com.br]), **Collective Psychology and Sociology in the Late 19th-Century French Intellectual Field: The Case of the *Revue Internationale de Sociologie*,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper aims at contributing to a better understanding of standpoints taken by the *Revue Internationale de Sociologie* in the field of social studies in France its first twenty years (1893-1912). The *Revue* was founded by René Worms at a time when the French university was beginning to offer the "social" disciplines and, accordingly, aimed both at disseminating the social sciences and legitimizing a certain view of these subjects and their relationship with sociology. Firstly, this is about showing that recruitment by *Revue* is characterized primarily by "free intellectuals" as opposed to "academics" and that their main contributors, despite their diversity, belonged to two identifiable groups: members of law and economic milieus and pedagogues. Due to their position in the intellectual field, social sciences were considered subordinate to the social and pedagogical demands of the elites. Secondly, this is about showing that analysis of the opposition between collective psychology and sociology for hegemony in the field of social studies may contribute to an understanding of the standpoints *Revue* took. Despite the organicism defense taken by some of its main contributors, psychology and, particularly, aspects of Gabriel Tardes psychology were adopted as a strategy against Émile Durkheim and his journal *L4Année Sociologique*.

2010S00524

Constantopoulou, Christiana (Department of Sociology Panteion University, Syngrou 136, 17671 Athens Greece [tel: 30 210 9201782; fax: 30210 9223678; e-mail: sociolog@otenet.gr]), **Récits Apocalyptiques et Imaginaire Contemporain (Introduction au Thème des Sessions Francophones)** (Apocalyptic Stories and Present-Day Imagination (Introduction to the Topic of the Francophone Sessions)), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ La narration sociale est essentielle (vecteur de connaissance); depuis le milieu des années 90, une "société de rêve" est proposée aux consommateurs; ainsi les récits contemporains véhiculés surtout par les médias sont un terrain riche pour l'analyse sociologique. Analysant le contenu des récits filmiques ayant eu le plus grand "succès" (commercial) dans les dix dernières années (ex. *Harry Potter, Seigneur des Anneaux*) nous essayons de voir les grands sujets qui émerveillent l'imaginaire contemporain mondialisé. Pour longtemps, l'imaginaire des oeuvres à succès (surtout de la Science Fiction) était plutôt centré autour des fantasmes qui rassuraient devant la "crainte du pire"; par contre, l'imaginaire des oeuvres de la dernière décennie est en plein dans le discours "épique": le grand amour inachevé, le sacrifice nécessaire (contre l'injustice, ou le "mal"), le "dialogue" avec l' "autre" (hors la loi, extra-terrestre, mort, etc.); à côté des discours de rêve quotidiens (de la publicité et des séries télévisées), il existe un "imaginaire de base" qui révèle un désir de multiplier les contacts entre l' "ici-bas" et un "au-delà" à redéfinir.

2010S00525

Cook, Brian D. (Stanford University [e-mail: bcook@stanford.edu]), **The Political Economy of Collective Action in Post-Apartheid South Africa,** *International Sociological Association, Gothenburg, Sweden,*

¶ While there is a large literature in sociology & political science that addresses the role of social movements in democratic transitions & the processes leading up to regime change, there is far less research on what happens to social movements after a country has successfully moved to electoral democracy. This research project uses data from South Africa from 1994 to 2009 to investigate two important & related theoretical puzzles: 1) what are the major factors that generate collective action & social movement mobilization following a successful democratic transition; and 2) how do changes in the political economy of a country impact the emergence of social movements & the form & content of mobilization. The results of this research have a number of important implications for theo-

ries related to social movements and democratic transitions. Since 1994, social movement mobilization in South Africa can be directly linked to shifts in underlying political & economic conditions. I argue that future research employing research mobilization & political process perspectives must be broadened beyond narrow questions surrounding mobilization to include a more systematic evaluation of the relationship between socioeconomic inequality, political opportunities, & movement emergence.

2010S00526

Cooke, Lynn Prince (University of Kent, Canterbury UK CT2 7NF [tel: 44 1227 764931; fax: 44 1227 827005; e-mail: l.p.cooke@kent.ac.uk]), **Policy Effects on Gender-Class Intersections of Wage Equality in Six Countries,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recent research suggests class-equality policies benefit the least-skilled women, but at a possible wage penalty to highly-skilled women. Here I detail how policies in Australia, East and West Germany, Spain, the UK, & the US structured unique gender-class employment equality intersections. Data from wave 5.2 of the Luxembourg Income Study & a two-stage non-parametric model are used to illustrate how policy set distinct patterns of relative gender-class wage equality. Controlling for employment likelihood, human capital, & family characteristics, employed women in the bottom earnings quartile in the three liberal regimes enjoy a significant wage premium over similar men. In contrast, British and US women in the upper half of the earnings distribution face a gender wage gap of 30 to 40%, whereas that gender gap in Australia is less than 10%. In contrast, employed women in the continental European countries face a wage gap along the entire earnings distribution that narrows along the upper half as would be expected with the corporatist elements of those regimes. The total gender wage gap in former socialist East Germany is somewhat smaller, but displays the same corporatist pattern. Thus class equality policies do not trump other sociopolitical sources of gender stratification.

Corbett, Michael J. (School of Education, Acadia University, Wolfville, Nova Scotia, Canada [tel: 9025851190; fax: 9025851761; e-mail: michael.corbett@acadiau.ca]), **An Improvised Curriculum: Literacies in Tension and Hierarchies of Text in an Age of Accountability,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper reports on a two-year study in Atlantic Canada that investigates the introduction of film-making into a rural middle school. Using semi-structured interviewing, ethnographic & action research methods the project documented the tension between the tested literacy curriculum & broader multiliteracies goals of the official curriculum. Just as the state has developed a comprehensive & traditional standardized means of assessing print literacy, the emergence of digital technologies has transformed the way young people work with text & image. We focus on the perspective of teachers regarding what counts as literacy & what place digital media have in a school literacy program. We analyse the way film-making emerged as a highly improvised pedagogical project. Teachers' attempts to use the film project for curricular purposes came into conflict with students' desire to improvise around familiar media frameworks such as the commercial, the sit-com & the horror/action film. The tension between the unpredictability of improvisation & the predictability of pre-formulated curriculum outcomes generated a new concept we call the hierarchy of text. At the top of the hierarchy is the textbook which encapsulates manageable pedagogical knowledge. At the bottom are relatively unmanageable student-produced improvised digital texts. The competing demands of the textual hierarchy, student interests, an internally contradictory curriculum, & standardized outcomes/testing created new dimensions of professional challenge for both preservice & inservice teachers.

Cordero, Matías (University of the Basque Country, Donostia, Spain [tel: +56 679304672; e-mail: cordero.matias@gmail.com]), **The Voice of the Child and His/Her Right to Play,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper is an overview of a larger research project which intends to problematize the apparently aproblematical child's right to play, as spelled in the United Nations Convention on the Rights of the Child (UNCRC). Using the theoretical framework of the (new) sociology of childhood, & aided also by approaches from critical human rights theory, critical psychology, anthropology & play theory, it asks, from the perspective of children themselves: What right(s) are we talking about? The one that since always has coupled child with incompetence & adult with competence? And if so, is this really a child's right, or an adult's? What child are we talking about? The "universal" child of the UNCRC, constructed as innocent, vulnerable, emotionally priceless but economically worthless? Or about the child of the majority world–i.e. the majority of children–which usually doesn't fit under those categories? What play are we talking about? The one promoted by the psychology of child development as a tool of child learning and education, as the travaux préparatoires of the UNCRC suggest? And if so, is that the play that children most play, enjoy & want to play?

Cordero-Coma, Julia & Breen, Richard (Spanish National Research Council, CSIC, Madrid, Spain, 28037 [tel: +34 916022753; e-mail: jcordero@ceacs.march.es]), **He Said, She Said: Husband-Wife Discrepancies in Condom Use and Reports of Preventive Behavior,** *International Sociological Association, Gothenburg, Sweden,*

¶ In populations where extramarital sex is common & condoms are not generally used, married people are at high risk of becoming infected with HIV/AIDS. Some preventive practices, such as the use of condoms in marital sexual relations, may be in conflict with specific social norms that regulate marriage. In this paper we examine the influence that the fidelity norm & the traditional association between marriage & reproduction have on condom use within marriage. To do this we apply latent class analysis to estimate a "true" or latent measure of condom use within marriage based on the individual, & sometimes discrepant, reports of husbands & wives. Moreover, we also explore the reasons why individuals tend to misreport their preventive sexual behavior. In order to test the robustness of our results, two different samples of monogamous couples are taken from the Malawi Diffusion and Ideational Change Project (MDICP), 2004 & 2006. The analysis supports the hypotheses that, on the one hand, the suspicion of unfaithfulness & the number of living children increase the "true" use of condoms by married couples, & on the other hand, that having been informed by experts about AIDS prevention at home induces men & women to over-report condom use within marriage in a survey but does not necessarily increase the extent to which condoms are used.

Cormack, Phillip A. & Comber, Barbara M. (Centre for Research in Education, University of South Australia, Magill, South Australia, 5072 [tel: +61883024230; e-mail: phillip.cormack@unisa.edu.au]), **Education Policy Mediation: the Work of Policy-Makers, Principals and Parents with Mandated Literacy Assessment,** *International Sociological Association, Gothenburg, Sweden,*

¶ In Australia & other advanced industrial states, standardised testing regimes have become ubiquitous in the measurement and reporting of student learning. Considerable media attention is given to these results & the dangers involved in comparing schools & even states, while proponents argue that they improve educational outcomes. Drawing on institutional ethnography (Smith 2005) & critical discourse analysis (Luke 1995) we report on the methods & interim findings of research into the ways in which mandated literacy assessment is involved in the reorganisation of teachers' work. We argue that education policy is mediated in various ways from its official launching points to the various iterations of practice on different institutional sites. In this paper we explore three different sites where the mediation of policy gets done–online policy sites, schools via principals, and homes through parents. One of the strategies which has characterised recent educational governance reforms has been movement away from traditional policy documents towards more diverse textual practices characterised by their semi-official status, administrative nature & often ephemeral forms. We argue that the reforms introduced into Australian schools around mandated literacy assessment provide an exemplary case of such a move. This paper provides an analysis of the various textual forms through which literacy assessment reforms have been introduced, sustained, exemplified & administered. We show the local effects of assessment processes & how they make a difference in the lives of differently located educators & parents.

Cornejo, Miguel, Mezzadri, Fernando Marinho, Godoy, Leticia, Lemas da Rosa, Ricardo & Matus, Carlos (Universidad de Concepción, UFPR, Barrio Universitario Concepción Chile [tel: 56 41 2204207; e-mail: mcornejo@udec.cl]), **The Public Policies and the Social Sport: Case of Study Curitiba - Brasil and Talcahuano - Chili,** *International Sociological Association, Gothenburg, Sweden,*

¶ This research wants to compare public order, social control, institutional structure, financing & the legal system of the sports & recreational service of the City Councils & of the Sports Board in the Cities of Curitiba, Brazil & Talcahuano, Chile. The focus of this investigation is qualitative & it is based on the comparative method, which considers the existence of a certain degree of simultaneity between these cities. The content analysis of Bardin (2009) is used as a theoretical and methodological fundament, which establishes some parameters to carry out the research. Initially, the public structure that organizes the actions of the government in sports & recreation is defined as the Department or Office of Sports & Recreation. The Local boards, as sports structures, which are created by law and have the characteristic of the group of elements in the different sections of civil society, public & private. The elected board establishes its own procedure rules & has a certain Autonomy with respect to the executive power (Teixeira, 2002). Among the obtained data, the following can be highlighted: the different ways & intensity of citizen participation in the institutional structure, the sports design, administration of public policies in the departments & city council boards of Curitiba & Talcahuano.

Coronado, Gabriela (University of Western Sydney. Centre for Cultural Research and School of Management, Locked Bag 1797 South Penrith DC 1797, Australia [tel: 61 02 9685 9842; fax: 61 02 9685 9593; e-mail: g.coronado@uws.edu.au]), **Selling Culture? Between Commoditisation and Cultural Control in Indigenous Alternative Tourism,** *International Sociological Association, Gothenburg, Sweden,*

¶ The importance of Indigenous peoples for tourism is well recognised but their participation & value are restricted, with limited access to economic benefits & their culture expropriated. Opposing this tendency, an increasing number of indigenous organisations are becoming tourist agents offering alternative forms of eco-cultural rural tourism. The tourist attracted are regarded as having social, cultural & ecological consciousness, but still expect "authentic" cultural representations based on deeply internalised ideologies from old colonialist views. Therefore, for alternative forms of tourism to be successful, indigenous organisations need to manage the tensions between their own culture & identity & the culture the market demands. The focus in this paper is how alternative tourist projects in Mexico and Peru deal with the challenge of managing the commoditisation of their culture & natural resources without losing control of their own cultural values. Based on a semiotic discursive analysis of the indigenous organisations' web pages, considered as hypertexts of meaning, I analyse in their Web-stories implicit & explicit models of cultural representation, organisational patterns & the contradictions & paradoxes they face as tourist agents. My findings point to the simultaneous appropriation of neocolonial representations & indigenous struggles for cultural & political control.

2010S00533

Corrigall-Brown, Catherine & Wilkes, Rima (University of British Columbia, 5303 N. W. Marine Drive [tel: 604-822-0452; e-mail: corrigall.brown@ubc.ca]), **Testing the Protest Paradigm: Images of First Nations Protest in Canada,** *International Sociological Association, Gothenburg, Sweden,*

¶ Studies have shown that the media tend to emphasize the negative, violent, & irrational elements of protest. However, these findings are based entirely on the analysis of textual accounts of collective action, with no attention paid to the images that often accompany these articles. This is a problem since, like written texts, images also frame issues & movements. While we know that textual descriptions of protest tend to follow a "protest paradigm" which marginalizes protesters & legitimizes authorities, we do not know the extent to which images of protest conform to, or diverge from, this paradigm of coverage. We address this research question through an analysis of newspaper photographs of one the most significant recent cases of indigenous-state conflict in North America–the 1990 "Oka Crisis." This event was a 78-day armed standoff between Indigenous Peoples and Quebecois & Canadian authorities over the attempted expansion of a golf course onto Mohawk territory. The mass media released thousands of articles & photographs in their coverage of the event. Through a quantitative analysis of these images, we assess the extent to which images frame protest & protesters in the same way as do textual accounts: as marginal, weak, and violent/emotional.

Corte, Ugo (Uppsala University, Sociology Department, Box 624, SE-751 26 Uppsala [e-mail: ugo.corte@soc.uu.se]), **From Play to Sport: An Application of Michael P. Farrell's Theory of "Collaborative Circles" to a Small Group of Professional Athletes,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper uses the theory of collaborative circles to explain the developments of a cadre of professional athletes through the analysis of a case study. Farrells theory argues that innovative work is seldom the product of a lone genius, but instead the result of collaboration between small groups of individuals that unfolds through seven stages. Following a recent critique put forth by McLaughlin (2008) this paper argues that while the theory is useful to understand the internal small group dynamics of collaborative circles, it fails to take into account the structural conditions conductive to such processes. In order to fill this gap the author suggests a theoretical extension of specific analytical tools originally developed within social movement theory, and in particular by resource mobilization theory, to contextualize action.

Corten, Rense & Knecht, Andrea (Department of Sociology/ ICS, Utrecht University, Heidelberglaan 2, 3584 CS Utrecht, the Netherlands [e-mail: r.corten@uu.nl]), **Alcohol Use among Adolescents as a Coordination Game in a Dynamic Friendship Network,** *International Sociological Association, Gothenburg, Sweden,*

¶ Alcohol abuse among adolescents is associated with delinquency, mental health problems, & educational problems. Social influence by peer groups has often been found to be one of the important factors explaining alcohol abuse. Whereas most research on this topic studied only effects of personal networks of adolescents, we propose a theoretical approach that allows for predictions on effects of the macrolevel social network structure of a group on average alcohol use in this group. We argue that using alcohol can be understood as risk-dominant but inefficient behavior in a coordination problem, given that adolescents face incentives to align their behavior with that of their friends. At the same time, adolescents are also likely to selectively choose their friends among those who behave similarly. Accordingly, we propose a game-theoretical model in which actors choose behavior in a repeated coordination game in a network, & are also allowed to change the network. Specific predictions on levels of alcohol use as depending on initial network structure are based on computer simulations of this model. We test the predictions using longitudinal data on alcohol use & friendship choices in school classes in Dutch high schools. We are able to replicate the predicted "catalyzing" effect of initial network density on the development of alcohol use: the denser the initial network, the more likely the process will move further in the direction of the initial tendency. However, the predicted opposing effect of centralization could not be confirmed.

Cortes, Jorge D. (Universidad Autonoma de Puebla, 4 Sur No. 104 Col. Centro Puebla, Pue. Mexico 72000 [tel: 52+ 222 2466484; fax: 52+ 222 2466484; e-mail: jdcortesm@yahoo.com.mx]), **Social Networks in Areas of Migration. Citizen Participation in Local Elections in Areas of High Marginalization. The Case of the Sierra Mixteca in Puebla, Mexico,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Sierra Mixteca, located in the south of the state of Puebla, in the center region of Mexico, is one of the poorest areas in the country. For the last 20 years it has been one of the areas with the highest rate of population expulsion, mainly to the United States. It is also an area where many of its communities receive dollars by the remittances. In addition, it is because of these dollars that the families survive & develop socially. This paper studies two communities of the Sierra Mixteca which represent the entire region. In these communities, the families have created groups & living networks that allow them not only to satisfy the basic needs, but also have generated ways of citizen participation (access to goods & services) that in local elections work as organizations of high electoral influence. The paper analyzes the last six years, where three local elections have taken place and these communities have kept acceptable levels of access to consumer goods & services.

Cortes, Soraya Vargas & Silva, Marcelo Kunrath (Department of Sociology, Federal University of Rio Grande do Sul, Av. Bento Gonçalves, 9.500, Porto Alegre, RS, Brazil, CEP: 91509-900 [tel: 55-51-33087007; fax: 55-51-33087007; e-mail: vargas.cortes@ufrgs.br]), **Unequal Political Participation: How Socioeconomic Inequalities and Civic Engagement Affect Political Action–Metropolitan Regions of Southern Brazil–2007,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper examines political inequalities using the theoretical framework that streams from the scholarship on political participation & social capital. It analyses how socioeconomic inequalities & civic engagement affect political action in two metropolitan regions, São Paulo & Porto Alegre, located in the most developed regions of Brazil the Southeast & the South. The methodology involves the analysis of quantitative data from a survey carried out in 2006 & 2007, in both metropolitan regions. To represent socioeconomic inequalities it uses the indicator level of education. Civic engagement was examined considering two different types of engagement: political & non-political. The variables engagement to political parties, trade unions or professional organizations, & subjective political engagement (interest in politics) express the first, while association to social clubs & to religious organizations expresses the second. Political participation was measured through two indicators of political actions: signing petitions & attending political demonstrations. The paper's main conclusions are: (1) the socioeconomic inequalities produced unequal opportunities to participate in the political life; (2) engagement to political organizations & subjective political engagement tends to affect positively the predisposition to political action; (3) engagement to non-political organizations also affects the predisposition to political action, but in a lesser way.

Cortesero, Regis (Ecole Nationale Supérieure d'Architecture de Paris La Villette-LAPSAC/Université Victor Ségalen Bordeaux 2, 144, avenue de Flandre 75019 Paris, France [tel: 1 33 06 19 79 57 45; e-mail: regis.cortesero@wanadoo.fr]), **La Discrimination comme Conscience Critique. Sentiments d'Injustice et Discrimination chez les Habitants des Banlieues Sensibles en France** (Discrimination as Critical Consciousness. Feelings of Injustice and Discrimination in the Inhabitants of Sensitive Suburbs in France), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Entre "souffrance et politique ", le concept de sentiment d'injustice peut-être mobilisé comme interface. Dans le sillage des travaux d'auteurs comme B. Moore ou A. Honneth, on définira celui-ci comme une interprétation spontanée et infrapolitique d'une souffrance vécue. Cette interprétation peut entretenir des liens d'affinité plus ou moins forts avec des cadres ("frame") plus structurés politiquement, au moyen desquels elle peut potentiellement s'élever au rang d'une conscience politique. Notre terrain d'investigation sera celui des banlieues populaires françaises: comment qualifier le regard critique que leurs habitants portent sur la société qui les environne? Une recherche par entretiens et questionnaires conduite dans diverses villes françaises entre 2005 et 2008 montre que les sentiments d'injustice des populations des banlieues sont désormais extérieurs aux cadres critiques traditionnels organisés autour du thème de l'exploitation. Ces sentiments décrivent à présent une situation de mise à l'écart, de "bannissement" hors des murs de la cité, et constituent l'horizon de signification de conduites politiques "non conventionnelles" parmi lesquelles figure le recours à l'émeute. Un nouveau cadre d'injustice plus proche de l'expérience du rejet social et articulé autour du thème des discriminations se dessine. Son pouvoir de synthèse explique en grande partie son "succès", mais il présente une image plus morale que politique des difficultés vécues. Il échoue alors à stabiliser les jugements, qui fluctuent, chez un même individu, entre dénonciation des injustices et dénonciation des "victimes" dont les inconduites "expliqueraient" les discriminations dont elles sont l'objet. Incapable de fonder un cadre d'interprétation proprement politique, ce thème vient alors paradoxalement renforcer les logiques "séparatistes" d'enferment dans un "ghetto", ainsi que le rejet aussi violent qu'ambivalent d'un monde extérieur qui exclut a rejet dont les émeutes de 2005 ont constitué une expression paroxystique.

Cortez Ruiz, Carlos (Universidad Autonoma Metropolitana - Xochimilco, Calzada del Hueso 1100 Colonia Villa Quietud, Coyoacan, Mexico D.F. C.P 04960 [tel: 52 55 54837066; fax: 52 55 55949100; e-mail: ccortez@correo.xoc.uam.mx]), **Emerging Forms of Participation and Construction of Communitarian Citizenship from Indigenous in Mexico,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines emerging forms of participation demanding rights in a variety of spaces in Mexico. The analysis of different social experiences is used to reflect on their implication on issues such as citizenship & participation. Since 1994, when a social movement emerged demanding changes in the situation of indigenous population, different forms of participation have been articulated with the purpose to respond to the demands of historically marginalised groups. Along these years, the social movement has fostered changes in relationships with the Mexican state & civil society around an agenda of rights. The experiences show differences in the perspectives on important issues, including the character of the regional development or the protection of natural protected areas, but even about what citizenship, participation and accountability means & how can be realized in complex socio-political context. The social movement has promoted an idea of citizenship that poses limits to individualism, & promotes the idea that communitarian purposes motivate the positive integration of everybody into societal networks. Through a combination of radical ideas of change with a new kind of political praxis, local alternatives have been developed oriented towards sustainable production; democratization of communication; fair trade, community education; health; & even justice systems.

Corvo, Paolo (University of Gastronomic Sciences, Pollenzo -Bra (Cuneo), Italy, 12042 [tel: +390302400566; e-mail: paolo.corvo@unicatt.it]), **The Promise of Happiness in Globalized Tourist,** *International Sociological Association, Gothenburg, Sweden,*

¶ Western man is dominated by anxieties & fears; on the one hand, he is seized by the excess of expectations he has and, on the other hand, he is gripped by tricky "glocal" problems that can be solved only by means that go far beyond the individual sphere. It is a fragile, insecure, unsatisfied self that waits all the year round for holiday to come & concentrates on it great expectations and hopes, assigning a deep meaning to the vacation, i.e. the conquest of a new social identity generated by means of creativity, self-realization, development of communicative relations. According to people's intentions holiday should be a time of relationships with a strong symbolic quality, a place where it's possible to recoup the identity lost in working time. By pursuing physical and spiritual well being & chasing a vague, but intense dream of happiness, holidays & tourism are given a festive dimension, a privileged time with its own rites & ceremonies in which everything must work perfectly & nothing shall recall the grey weekdays. The desire for enjoying the beauties of nature close to and, at the same time, for living significant cultural experiences fosters the hopes of many people who are going on holiday: nature and culture represent the framework for recovering the harmony with themselves & the others. From such a point of view what tourists prefer are places with a strong link with nature, surrounded by vegetation, where it is possible to do open air activities, play sports & enjoy the beauties of the surrounding landscape. The strong tie established between tourism & rural environment finds expression also in the rediscovery of cultures & traditions, of food-and-wine products & their places of origin, following routes that go through agricultural production, artistic & religious monuments, greenways.

Costa, Marcio da, Ribeiro, Luiz Cesar Q. & Koslinski, Mariane C. (Federal University of Rio de Janeiro, Rio de Janeiro, RJ, Brazil, 22290-240 [e-mail: marcioc@pobox.com]), **Residential Segregation, School Quasi-Market and School Segmentation in the Context of Rio De Janeiro,** *International Sociological Association, Gothenburg, Sweden,*

¶ There is a growing discussion on the influence of education policies that stimulate freedom of school choice by parents & of residential segregation on school segmentation. This paper aims at understanding the mechanisms through which school segmentation is built, considering the context of the city of Rio de Janeiro. Although the Rio de Janeiro model of residential segregation can be partly understood through centre-periphery relations, it also presents very specific characteristics. It combines geographical proximity & social inequality, as one can find favelas scattered through the city. Moreover, previous studies have suggested that in Brazil we can speak of quasi-markets, even in the absence of educational policies promoting school choice & competition among schools. In face of a very limited supply of public schools with outstanding reputation, there is competition among students and the use of obscure mechanisms to select students used by such schools. The paper intends to illustrate the tendencies on school segmentation in the city of Rio de Janeiro. Then it intends to map the results of the working of a school quasi market, as well of the role of residential segregation on the different chances of students access to a high prestige school. We state that territorial segmentation & residential segregation are within the functioning of educational quasi-market & combine with the structure of unequal offers.

Costa, Rosalina Pisco (Department of Sociology, University of Évora, Portugal [tel: +351266740805; fax: +351266703110;

e-mail: rosalina@uevora.pt]), **Leisure and the Consumption of Family through Family Rituals,** *International Sociological Association, Gothenburg, Sweden,*

¶ Family rituals are a specific field where we can find a gender construction & distinction between "leisure organizers" and "leisure consumers". While traditionally men & children are "consumers", women are the main orchestrators (or organizers) behind family rituals (Coltrane, 1998). In this sense, literature usually recognizes in women the responsibility for shopping, house and food preparations or invitations sending. However, women's status & social image is changing fast all over the world & women's increased participation in the labor market, the diversification of family lifestyles, as well as the "new" role of men in family life challenges this traditional way of constructing family rituals. In this paper we specifically take a look at leisure associated with what we can classify as "family rituals" (Wolin & Bennett, 1984; Imber-Black & Roberts, 1992; Gillis, 1996; Pleck, 2000). Methodological anchored upon empirical data from qualitative in-depth interviews carried out to both nuclear & single-parent families, this paper's purpose is, in a more specific way, to discuss family rituals as leisure activities and to deconstruct them as privileged places for 'making' and consuming families' sense of belonging, acquired by the sharing of space, time & meaning. Through an empirical & theoretical analysis of collected data we hope to critically highlight the sociological knowledge of the contemporary relations between leisure & families, discussing mainly the hidden dimensions of leisure in family rituals with a special focus into the stresses and strains impacting both children & parents in different family structures.

Costanzo, Joseph M. (Univ. of Maryland / Univ. de Liège [e-mail: imgnjoe@aol.com]), **Planning to Integrate: Immigrant Participation in Inter-Cultural Community Projects,** *International Sociological Association, Gothenburg, Sweden,*

¶ Immigrant integration continues to be a top priority of the European Commission & a fixture of scholarly & political debate in both Europe & the United States. Although a dominant discursive current in contemporary European & American social science literatures, the fields of urban planning and environment-behavior-society (EBS) have only recently begun recognizing immigrant residents in the planning process. Through the use of mixed research methods, including ethnography, archival research & analysis of available data on public participation, culture, & immigrant integration, this research sets out to study whether immigrants' direct involvement in inter-cultural and participatory planning processes facilitates their integration and fosters host community acceptance. With the onsite support of local experts, artists, & community organizers, I intend to carry out this research by examining immigrant involvement in Zinneke Parade 2010–a biennial multicultural parade & festival in Europe's Capital City Brussels, Belgium–where immigrant residents participate in the planning, design & execution of the city-wide celebration. My research analyzes the impact of this ongoing cultural movement in Brussels & the meaning of its participatory process for the increasingly involved & visible immigrant members of the greater Bruxellois community. (This is a doctoral thesis project in progress.)

Costas, Ilse (Institute of Sociology, University of Goettingen, Göttingen, Germany, 37073 [tel: 0049 551 39 4802; fax: 0049 551 39 7692; e-mail: icostas@gwdg.de]), **Careers and the Reorganization of University and Research Systems in France and Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since 2005 the university & research system in France is exposed to deep structural changes, which can be subsumed to the neo-liberal credo of competitiveness, commodification of knowledge production, and market forces. It is not only the Bologna process with which Europe seeks to adapt to the Anglo-Saxon New Public Management model of higher education, but also the "Shanghai shock" (low ranking of French universities in a world-wide ranking) that provoked a set of reforms regarding the steering of research fields, research institutions & universities. This paper looks at the ways the institutional set-up & the current changes of the French academic system influence gender relations in comparison to the developments in Germany. It is well known that one of the favourable conditions encouraging women to choose a university career or a career in a research institution in France is the fact that they are often offered a permanent position after a short postdoctoral period. However, now that this career structure is under attack by the "market adorers", women's career choice in academia & the gender make-up in research institutions will be affected. The performance indicators for scientific quality themselves are constructed according to concepts of hegemonic masculinity. Tools for standardization, quantification & controlling, processes of auditing disseminate the illusion of objectivity, neutrality and universalism in the production of knowledge, which has been refuted by feminist & other critical methodology. From a methodological perspective we have to take into account that in the compared countries the new public management policy meets different structures, systems & discourses of higher education & research with different processes of doing gender as well as gender relations. This results in a variety of patterns of more or less hierarchical gender relations.

Couceiro, Mariña (Department of Sociology/ Universitat Autónoma de Barcelona, Cerdanyola del Vallés, Spain, 08193 [tel: +34 93 581 42 12; e-mail: marina.couceiro@uab.cat]), **Healthcare Reform in Central and Eastern Europe: From Universalism to Increasing Inequality in Access and Financing,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is focused on healthcare reforms implemented in the EU8 countries & on how, despite the common influences these countries received from some international agencies during the transition, the reform has give place to apparently homogeneous health care insurance systems which are deeply heterogeneous in regard to levels of inequality in the access & financing of the system. More specifically, the levels of out-of-pocket-payments (OOP) as % of total health care expenditure will be considered a key indicator not only of the level of privatization but also of the degree of universalism of the system, since OOP significantly impact on individual's ability to afford & access health care services. The first part of the paper will describe the international influences these countries received during the transition & the kind of model imposed by these organizations. The second part will analyze from a comparative perspective the particular reform path implemented by EU8 countries. Finally, the third part will focus on the differences found between countries, especially in regard to the differences in the financing of the system represented by different levels of OOP payments, & the implications it has in regard to the lack of equity in accessing health care services based on socioeconomic status of the population.

Coulangeon, Philippe & Petev, Ivaylo (LSQ - CREST/INSEE & OSC/Sciences-Po-CNRS, Paris, France [tel: ;e-mail: philippe.coulangeon@ensae.fr]), **Car Ownership as a Status Marker in France between 1981 and 2008,** *International Sociological Association, Gothenburg, Sweden,*

¶ Cars, unlike most other status markers, are at once household-level commodities, require a considerable & lasting financial commitment, & are mobile, ubiquitous & ostentatious expressions of social standing. The question therefore is how households combine the functional constraints associated with car ownership (e.g., household's size & composition, residential characteristics & location, etc.) & the symbolic practices associated with dimensions of social status & class. We are particularly interested in the changing role of car ownership as a status marker over the contemporary period. For this purpose, we use data from the "Transport" surveys of the French National Institute for Statistics (INSEE), collected in three separate years: 1981, 1993 & 2008. The surveys consist of random samples for a total of approximately 40,000 households, who report informa-

tion, among other things, on the number, model & capacity of their personal vehicles as well as on standard socio-demographics. The analysis of the relation between social class & car ownership is based on modeling techniques from multi-correspondence & latent class methods. Since this is a study of change over time, we incorporate in the analysis contextual measures of the car industry relative to the evolution throughout the last three decades in economic & environmental considerations.

Cousin, Bruno (Observatoire Sociologique du Changement, Sciences Po (France), 27 rue Saint-Guillaume, 75337 Paris Cedex 07, France [tel: +33 6 10 11 21 16; e-mail: bruno.cousin@sciences-po.fr]), **Socio-Spatial Mixing and Upper-Middle Class Self-Segregation: The Refounded Neighborhoods of Paris and Milan,** *International Sociological Association, Gothenburg, Sweden,*

¶ My research contributes to a differential analysis of the upper-middle classes' relation to socio-spatial mixing, diversity & the self-segregation dynamics that characterize the urban spaces in which they are concentrated. More specifically, I present the case of five neighborhoods & residential complexes of close-to-downtown Parisian & Milanese suburbs, characterized by a population composed in majority of executives (especially managers from the corporate sector). In the case of these neighborhoods, dwellers' residential choices & representations of urban space cannot be described with the analytical categories commonly mobilized to explain the role of upper & middle classes in social segregation (and social upgrading of spaces) within European cities. Indeed these choices correspond neither to the preservation of a traditional bourgeois homogeneity, nor to a process of suburban secession, nor to a gradual gentrification. The process and the neighborhoods of refoundation involve on the contrary complete physical leveling of an area & the quick eviction of former residents followed by brand new types of construction, no class mixing, no interest in it by the new residents, nor any emphasis on or glamorization of the historically working-class flavor of the neighborhood. After an historical & a socio-statistical framing that identify several specificities of these neighborhoods, a comprehensive cultural approach a based on the 89 in-depth interviews & the series of ethnographic observations I carried out in Levallois, Courbevoie (France) and Segrate (Italy) a restitutes & analyzes the constructions of meaning concerning the urban space, the symbolic boundaries & the registers of justification used by locals, in order to account for their residential choices & their leaning towards aggregation based on affinity with their own kind.

Cousin, Olivier & Rui, Sandrine (Université Bordeaux 2, 3 ter Place de la Victoire, 33076 Bordeaux [tel: 0142386722; e-mail: cousin@ehess.fr]), **Sociological Intervention. Evolutions and Specificities,** *International Sociological Association, Gothenburg, Sweden,*

¶ Our communication proposes to think over the method of sociological intervention, 30 years after *The Voice & The Eye* (Touraine, 1978) was published. It rests on an enquiry held in 2008 among some thirty social scientists who had (or not) resorted to this singular method & also among a few of those who participated in the groups. It also feeds on a review of published & non published literature. If, at the beginning, Alain Touraine endeavoured to specify sociological intervention with regard to group interviews techniques we intend to examine this specificity in comparison with the evolutions this method has undergone, as much on the theoretical & methodological levels as on the point of view of the objects it is used for. From social movements to social problems, from social movement to the subject & his/her experience, this evolution has been accompanied by a change in the orientation of the method but very little in its practice. Sociological intervention lies on the same principles: the confrontation of a group of actors with interlocutors, sociologists as mediators since they present & lay their analysis to the people participating in the research who will thus be able to build a self-analysis of their situation & of their position. But in a more fragmented field of sociology & in a more tensed professional background some variations & arrangements can be noticed. Consequently, the aim is to question the principles again, the rules & the methods of implementation considering the critical debates, the uses as well as the effects on the people participating & the sociologists.

Couto, Gabriela (Master candidate in Environmental Science Post-Graduate Program on Environmental Science (PROCAM) University of São Paulo (USP), Brazil [e-mail: coutogabriela@usp.br]), **Brazilian Environmental NGOs and the Climate Change Issue: A New Approach for the Amazon Forest,** *International Sociological Association, Gothenburg, Sweden,*

¶ All of the Brazilian environmental NGOs which work with the Amazon forest and have annual budget over than U $2.500 million are dealing with the climate change issue since the launch of the IPCC *Fourth* Assessment Report in 2007. Created in the 1990s and conceived to contribute and promote a better use of the natural environment resources of the Brazilian Amazon forest these group of NGOs are changing the way they implement their strategies. Internally, they are increasing the "climate team" by hiring new employees or shifting them from others projects. Externally, they have been innovating the way they work in the local scale and diversifying their network of relations. Finally, new donors are come into sight to finance climate projects of those NGOs. A previous analysis shows that the climate change issue in not only settled in the national agenda as a priority but this group of actors sees it as the major and biggest opportunity to reduce deforestation in the Amazon forest. And this "opportunity" is pushing this Brazilian environmental group of NGOs to a gradual and increasing process of rationalization, requiring from them an efficient management system without losing their bindings with social groups which are part of their identities.

Cox, Peter & Howman, Brian (Department of Social and Communication Studies, University of Chester, Chester UK CH1 4BJ [tel: 0441244512039; e-mail: peter.cox@chester.ac.uk]), **Environment and Class Conflict,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper argues that the clash of interests visible in contemporary global environmental degradation, (e.g. human induced climate change, resource depletion) constitutes a new form of class conflict. However, the increasing polarisation of competing interests between the global bourgeoisie & the proletariat are today separated in time. We argue that class interests are now intergenerational, with future generations constituting a new proletariat who have no voice in a system of contemporary capital. The structuring of this intergenerational conflict was manifested and dramatically escalated in the new right project of the 1980s involving the dismantling of established manufacturing production in the early-industrialised nations. In this process, the emerging importance of refocusing production in ecologically sound forms was thus postponed & removed from consideration as production was relocated overseas. Further, when ecologically sustainable manufacturing is considered today, it is structured so as to disadvantage future generations in the new manufacturing locations, as they become disposed of traditional land & livelihoods & are prevented from enjoying the benefits accrued by the traditional industrial nations. The paper thus addresses the constitution of ecological class conflict, drawing upon ecosocialist critiques and revisiting left analyses immediately preceding the rise of the new right

Cox, Robin S. (Disaster & Emergency Management, Royal Roads University & The Justice Institute of British Columbia, 2005 Sooke Road, Victoria, BC, Canada, V9B 5Y2 [tel: 250-391-2600 Extension 4855; fax: 250-391-2619; e-mail: robin.cox@royalroads.ca]), **Looking beyond Individual Preparedness: Civic Infrastructure Engagement and Disaster Resilience,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper will present the intersecting preliminary findings of two applied research projects. Building Resilience & Rural Health System Capability for Pre-Disaster Planning & Preparedness is a 4-year Canadian project focused on enhancing disaster resilience in rural, remote & coastal communities. Disaster resilience indicators identified through interviews with community members from 8 rural, remote & coastal communities in British Columbia, Canada will be contrasted with those identified in a meta-analysis of national & international risk management & disaster resilience frameworks. Engaging Civic Infrastructure in Psychosocial Pandemic Planning was a project designed to engage social service, mental health, & faith-based organizations from Vancouver, Canada in health emergency planning for the psychosocial consequences of the H1N1 pandemic. Data from 2 participatory workshops (discussions, graphic representations, & responses to a short questionnaire) were analyzed & informed the production of a template for a participatory psychosocial disaster planning process. The initial findings from the resilience project & this planning process pilot will illuminate strategies for community and civic infrastructure engagement in disaster planning, principles and indicators of community disaster resilience. An emerging web-based, interactive

framework for community-driven risk and resilience management planning will be described.

Crage, Suzanna M. (Department of Sociology, University of Pittsburgh, Pittsburgh, PA, 15260 [tel: 412-648-7587; e-mail: scrage@pitt.edu]), **Policymaker Discourse about Refugee Policies in Munich and Berlin: Local Variation in Approaches to National Policy Concerns,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper compares policymaker attitudes & preferences concerning refugees in two major German cities, Berlin & Munich. During the 1980s through mid-2000s, when Germany received up to hundreds of thousands of asylum applications yearly, did these cities encourage refugee isolation or integration, & why? Germany is one of the top refugee-receiving countries in the world. Scholars have found that federal policies are linked to nationalism & national identity, but this is only part of the story: federal laws set guidelines for refugee housing & aid, but localities implement them. Using records of city policymaker debates & related documents, I show that discourse & policy preferences about refugee housing & aid varied meaningfully between Berlin and Munich. This was related to how refugees were framed, & how those frames linked refugee issues with German national identity concerns. Berlin policymakers more likely discussed refugees using a security frame, which saw them as a group threat to German national identity & encouraged policies that minimized their impact. Munich policymakers more likely discussed refugee issues in terms of human rights concerns of asylum seekers, which made German national identity & culture concerns less relevant & encouraged policies meant to increase refugee quality of life.

Crane, Diana (University of Pennsylvania, Philadelphia, PA 19104 [tel: ; e-mail: craneher@sas.upenn.edu]), **The Global Art Market as a Reward System: Implications for the Sociology of Art Markets,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recent changes in the market for contemporary art have implications for our understanding of how art markets operate, how reward systems in the arts are changing, the extent to which avant-gardes are declining, & the ways in which high & popular culture can be distinguished. Social, cultural & organizational changes in the past decade have produced a global market for contemporary art whose influence on the prestige of art works outweighs that of major urban art worlds & that is qualitatively & quantitatively different from previous art worlds. Bypassing urban art markets and art communities, these transactions take place at four international art fairs under the aegis of a small group of powerful dealers, who have access to a high level of financial resources, & in three national auction markets. Auction houses rather than museums define contemporary art.

2010S00555

Crankshaw, Owen & Goetz, Deborah (University of Cape Town, Sociology Department, Private Bag X3, Rondebosch, 7701, South Africa [tel: 27 21 6503501; e-mail: owen.crankshaw@uct.ac.za]), **The Mechanisms of Labour Market Spatial Mismatch: A Realist View,** *International Sociological Association, Gothenburg, Sweden,*

¶ The spatial mismatch hypothesis argues that low-skilled black residents, who are restricted to excluded ghettos, have been isolated from the knowledge of job opportunities by the suburbanisation of jobs. The result of this emerging spatial mismatch is higher rates of unemployment among low-skilled black workers. Research on this question usually relies on a "deductive" methodology in which causal mechanisms are proposed and then tested using sample surveys. The logic of this argument follows the deductive-nomological model of explanation in which statistical associations are established between independent and dependent variables. We argue that this type of explanation has the characteristics of a "black box" explanation because it ignores the social mechanisms that may cause certain outcomes. As an alternative, we propose a "realist" approach to the study of the labour market spatial mismatch that uses a "retroductive" methodology to discover causal mechanisms. By using this approach, we have established that the residents of excluded ghettos in Cape Town are not necessarily isolated from information on the suburban job market. Through a variety of workplace mechanisms, workers create a wide range of social networks that extend well beyond the confines of their neighbours & reach into networks of both employers & colleagues.

2010S00556

Crespi, Isabella (Dept. Education/University of Macerata, Macerata, Italy 62100 [tel: 0039 0733 258 5957; fax: 0039 0733 258 5957; e-mail: isabella.crespi@unimc.it]), **Living in a Multiethnic Family: The Negotiation of Identities and Cultural Values,** *International Sociological Association, Gothenburg, Sweden,*

¶ Living in a multiethnic family is a challenge that implies that the couple, the families of origin, & the broadest social context allow & facilitate the possibility of combining differences and negotiation as best as possible. These families seem to be a micro example of what is the meaning of living in a multicultural society nowadays at the macro level. Differences & similarities are played every day in the lifecourse of the couple & their families & requires the entire family group itself (including previous generations) redefines the overall arrangement of cultural equilibrium: it becomes necessary to rethink relational dynamics, but especially to reconsider the hierarchies of values, both individual & familial, due to the different cultural belonging of the partners. The aim of the paper is to show the results of a research which investigates 35 multiethnic families (with life stories collected for each of the partner) living in the centre of Italy. In particular, the paper will focus on some specific questions: what connections can be identified between negotiation and conflict of reciprocal identities in the family life of multiethnic couple? How do cultural & religious values affect family & personal identity? What is the relevance of cultural and familial belonging for the partners when they begin their life together? How & if this changes during life-course?

2010S00557

Créton-Cazanave, Laurence (LTHE, Université de Grenoble, Grenoble, France, 38000 [e-mail: lcretoncazanave@gmail.com]), **The Process of a Flash-Flood Warning as a "Game With Distances": How to Play Together ?,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper will address a new approach of the flash-flood warning as a socio-technical process that transforms perceived environmental phenomena into significant signals for people that aim to assess the situation/the environment. Deeply linked with skills of action, the warning is processed by many stakeholders, such as weather and flood forecasters, mayors, state representative (préfet) and riverside residents. Based on more than 90 qualitative interviews and observations in situ, conducted during a research about the flash-flood warning process in the Vidourle catchment (Gard, South of France), the paper will show that the stakeholders' practices during a warning process rely on a "game on the distances". Indeed, achieving to assess the situation & to build a collective meaning about what is about to happen requires, both, to reduce the distance between the phenomenon & the stakeholders, & between the stakeholders themselves, & to maintain a "security distance" between the river & the society. Stakeholders' practices are centered around, or linked by, this "game on the distances". Though, it appears to be a relevant framework to study the concrete manner stakeholders do process the warning & to, finally, understand "how it works".

Crocket, Hamish (Department of Sport and Leisure Studies, University of Waikato, New Zealand [tel: 0064 212511888; e-mail: hamish.crocket@gmail.com]), **Beyond Rules and Duties: Creating New Sociological Understandings of Sport Ethics,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper, I will argue that postmodern forms of ethics are an important tool for a sociology of sport that is "on the move". Postmodern ethics, such as those of Foucault, Levinas, & Bauman, allow us to develop understandings of values within sport that go beyond lists of rules & obligations, or romantic notions about the "essential nature" of sports. Further, openness to engagement with postmodern ethics allows for a significant re-evaluation of normativity within ethics. I will draw on examples from my research with ultimate Frisbee players to argue that postmodern ethics offer sociologists an important means of evaluating ethics as a socially negotiated & contested process. As such, the sociology of ethics offers an approach to studying sport that is both new and complimentary to sports-related sociologies of gender, commercialization, ethnicity, globalization, & nationalism. In proposing a revised focus on ethics, I do not argue that sport has a special ethical relevance to our lives, but rather I argue that our understandings & practices of ethics are of vital importance both within sport & broader society.

Lessons in Caring: Learning from the Experiences of Older Lesbian, Gay and Bisexual Adults, *International Sociological Association, Gothenburg, Sweden,*

¶ This paper focuses on the complex interrelationship between sexuality, gender & caring amongst older lesbian, gay & bisexual (LGB) adults. Data was collected via individual interviews & focus group discussions with older LGB adults aged 50-75 & service providers in an inner city borough in the UK. The study was funded by a local authority equality scheme. In this paper we present results relating to both unpaid care work performed by partners, friends & the wider LGB community & institutional support and/or barriers to accessing care in later life experienced by this group of adults. To this end, the paper contributes to a small but growing body of research that has sought to increase understandings of sexual diversity in later life & the implications this has for care work. Furthermore, the paper argues that older LGB adults' experiences indicate important issues relating to care, support, community & social networks applicable to all adults, whatever their sexual orientation. Indeed, the paper argues that rather than marginalising their experiences, the experiences of older LGBT adults can inform sociological debates concerning ageing in contemporary, late modern society, whilst simultaneously extending our understandings of what it is to age. The paper concludes, therefore, with recommendations for both policy makers and practitioners who are concerned about sexuality & care in later life, together with sociologists concerned with gerontology and identity more generally.

Crothers, Charles (Dept. Social Sciences, AUT, Auckland, New Zealand [tel: 64-9-8156082; e-mail: charles.crothers@aut.ac.nz]), **Agenda Setting and Steering Mechanisms in Anglo-American Sociologies,** *International Sociological Association, Gothenburg, Sweden,*

¶ External attempts have often been made to influence the directions of national sociologies including government agendas which indicate the topics & types of research that are being encouraged–often through the provision of funding opportunities. These have been counter-balanced to a limited extent by internal steering mechanisms within national associations & more general disciplinary contexts, but any collective sense of directions for sociology may be only slightly developed. Nevertheless there are some mechanisms which may attempt to create an internally-directed set of research questions & approaches: Presidential addresses, editorials, inaugurals & on occasion more explicit agencies such as disciplinary taskforces or submissions concerning policy made to government bodies. Other unintentional means are more indirect, with the effects of cues emanating from book reviews, symposia and disputes. This paper describes these mechanisms as they have influenced several Anglo-American national contexts, & assesses the extent to which they have in fact affected the direction of sociology in that country.

2010S00561

Crothers, Charles, Baehr, Peter, Fleck, Christian, Hess, Andreas & Mclaughlin, Neil (Dept. Social Sciences, AUT, Auckland, New Zealand [tel: 64-9-8156082; e-mail: charles.crothers@aut.ac.nz]), **Author Meets Critics Session: Hannah Arendt, Totalitarianism, and the Social Sciences,** *International Sociological Association, Gothenburg, Sweden,*

¶ Hannah Arendt despised the social sciences in general, & sociology in particular. She criticized their debunking modes of explanation; their theories of structural causality; their "functionalism;" & their version of value-freedom. A special concern of hers was the congenital inability (as she saw it) of sociology to understand & explain totalitarian movements: Bolshevism & National Socialism. Peter Baehr's book describes Arendt's consternation & partly endorses her critique. Yet he shows not only that Arendt's picture of sociology was a caricature but also that her view of sociological treatments of totalitarianism was problematic. To do this, Baehr examines in depth three of Arendt's sociological interlocutors and critics: Raymond Aron, Jules Monnerot, & David Riesman. He outlines their theories of totalitarianism, their attempts to vindicate variants of sociological reasoning, & the extent to which their impressions of Bolshevism & National Socialism have been vindicated by modern historical scholarship. A final chapter explores the nature of modern Islamist terror whose specificity Baehr explains adapting arguments derived from Arendt & Aron.

Crow, Graham (University of Southampton, Southampton, United Kingdom, SO17 1BJ [tel: +44 2380592672; e-mail: g.p.crow@soton.ac.uk]), **Studying Young People's Imagined Family Futures,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper discusses the use of essays written by young people, in which they are invited to write about how they imagine their lives will unfold, as a way of studying their ideas about "family". It compares the re-analysis of essays collected in 1978 (that are now archived) with the results of a new set of essays collected in 2009-10 from young people in the same geographical location, the Isle of Sheppey in Kent, United Kingdom. This comparison will indicate how much ideas about "family" have changed in the three decades since the original research was undertaken. The study is research in progress, but initial indications are that young people's imagined futures include involvement in conventional family forms & gender roles. Essays in which young people write stories about how they imagine their lives will unfold generate interesting data through which ideas about "family" can be studied, & the comparison of two sets of data from young people a generation apart adds another dimension of interest & allows some commentary on social change & continuity.

2010S00563

Crump, Jeff (Housing Studies Program, University of Minnesota, 240 McNeal Hall, St. Paul, MN 55108 [tel: 612.624.2281; fax: 612.625.2750; e-mail: jrcrump@umn.edu]), **Mortgage Lending, Foreclosure and Neighborhood Destruction in the Twin Cities,** *International Sociological Association, Gothenburg, Sweden,*

¶ In Minneapolis/St. Paul, Minnesota, USA a rapacious mortgage lending industry has stripped the equity from inner city neighborhoods leaving behind a landscape of foreclosed homes. These boarded and abandoned buildings are frequently vandalized by scrappers searching for copper & other valuable materials. Squatters may temporarily reside in foreclosed homes & even former homeowners may return to their home, seeking shelter from the ruthless streets of homelessness. City officials seek to quickly demolish "eyesores" leaving behind empty lots where homes once stood. This paper is an exploration of landscapes of foreclosure and impoverishment in the Twin Cities. The purpose is to understand how equity is stripped from borrowers & their communities & to link real estate exploitation to the landscape of the city. To accomplish the research goal I have photographed foreclosed homes, compiled & analyzed mortgage transactions & conducted interviews with borrowers. At the end of the housing boom what is left are empty lots, grieving & impoverished former tenants and homeowners & the sound of silence as neighborhoods are emptied of their residents.

2010S00564

Cruz, Rui Vieira (University of Minho [e-mail: rmvcruz@gmail.com]), **Will Nanotechnology Be the Vapour Machine of the Sixth Kondratieff Wave?,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper centres its focus on the perspectives that see the role of nanotechnology as the innovative revolutionary technology ("the second industrial revolution"; "molecular revolution") which will be the basis for the formation of the sixth Kondratieff wave, and those who see it as a Schumpeterian creative destruction process but without enough strength to create a new wave. This paper also correlates the importance of the relation between nanotechnology & energy, namely in the production, conservation, distribution & efficiency, to create, or not, the sixth Kondratieff wave. Because the energy issue is so important in the construction and/or destruction of all the Kondratieff waves it is now imperative to understand how the national governments (concerning especially the Portuguese context) & supranational institutions such as the European Commission & the European Union in general are responding & will respond to the Terawatt Challenge (Smalley, 2004). The great investment that we are seeing in nanotechnology, both in the public & private sector–but noticing that the public system is losing its preponderance in investments & control (Joy, 2004)–& its relevant applications in the energy sector (starting in the fossil fuels, to clean and renewable forms of production & transport systems) are affecting the economic, social, politic & environmental organization of societies. As empirical research an analysis was made of how the social impacts (real & possible) & motivations of the (r)evolutionary nanotechnology & its relation with the energy sector are (being) constructed & transmitted to the audiences by some of the daily Portuguese press.

2010S00565

Cruz, Rui Vieira & Araújo, Emília Rodrigues ([e-mail: rmvcruz@gmail.com]), **Nanotechnology and the Visions of Future,** *International Sociological Association, Gothenburg, Sweden,*

¶ The public perception of nanotechnology is being constructed making use not only of old narratives, such as nautilus entering the human blood-

stream (Nerlich, 2005), but also of new ones such as those which anticipate the existence of nanobots (Drexler, 1990; Crichton, 2006), thus creating a very distended vision of future. It is a fact that culture is constructing new possibilities for nanotechnology in movies, tv shows, videogames, papers, books, etc. That is why it is being assumed that nanotechnologies are building new imaginaries & new forms of society. In parallel it is also presupposed that it is bringing new ethical issues & risks which need to be deconstructed. This presentation seeks to explore the range of effects bring about by nanotechnology as regards social, economical & cultural futures & presents some insights concerning the type of changes to take in regarding modes of governance & regulation of temporal horizons. It is grounded on sociology of science as well as on social studies of science but it is also sustained by several theoretical bodies which have been dealing with cultural changes in emerging networks of power which go behind nation-state action. It is believed that Nanotechnology will become incorporated in all parts of society, including new forms of operating & dealing with machines & new forms of human social interaction. But all these developments bring about important ethical & legal issues which, in turn, require new types of socio-political solutions in several spheres of live (cultural, educational & economic) & interventions that are thus far insufficiently developed, legitimized & justified. We sustain that nanotechnology challenges the concept of culture, understood in a wide sense & integrating the notion of future as well as the concept & the experience of risk, insofar as it basically refers to (as yet) unknown processes of change occurring in the present time with consequences in a near future for individual experiences. From a macro point of view, the presentation shows the tendencies regarding the impact on democracy processes, citizenship & patterns of interaction. From a more micro standpoint, we refer to the specific uses of nanotechnological developments & their implications on ways of life & forms of thinking & representing the future, focusing on two groups–the general public & scientists. Following a methodological path which integrates quantitative data as well as the use of interviews, case analysis, Delphi techniques & focus groups, the paper aims at building up a body of knowledge to more informed policies directed at citizens, policymakers and governments on spheres such as ethics & nanotechnological training.

2010S00566

Cubizolles, Sylvain (CURAPS Université de La Réunion, 117 Rue du Général Ailleret - 97430 Le Tampon - Ile de La Réunion [tel: 02.62.57.95.91; fax: 02.62.57.95.71; e-mail: sylvain.cubizolles@uni-reunion.fr]), **World Cup 2010, Tourism, Township and the Sentiment of Exclusion in an Outstation Town in South Africa,** *International Sociological Association, Gothenburg, Sweden,*

¶ The advent of the 2010 World Cup is indeed, in more ways than one, depicted as an accomplishment for the South Africans. In preparation for this event, many of the Municipal Councils which are depicted on the South African Tourist Map, propose offers capable of attracting foreign visitors. The purpose of the present study is to highlight the way in which one of the initiatives put in place by the Municipality of Stellenbosch, which itself considers Football as a "sport of the Black people", excludes a section of the people of this town who have been playing Football themselves since a long time. This study seeks to explore how, on the one hand, Football & its inclusion in the tourism sector, can rekindle the race barrier between the various south African communities of this provincial town & on the other hand the tensions which can emerge as a result.

2010S00567

Cucca, Roberta (Polytecnic of Milan, LPS, Via Bonardi 3, Milano, 20100 [tel: ; e-mail: roberta.cucca@polimi.it]), **Does the Sector Matter? Economic Specialization and Growing of Inequalities in Six European Cities,** *International Sociological Association, Gothenburg, Sweden,*

¶ According to the literature, in most European large cities, social inequality has been rising in the last years, though in different forms & timing. This trend seems to be related to the economic specialization taking place in these cities, as a consequence of their transition towards a post-industrial/global city. The social impact of such economic transformation depends not only on the peculiar institutional & structural preconditions given in the cities, but also on the capacity of the local welfare & the educational system to match these changes. Based on empirical research carried out in six big European cities, comparable for their socio-economical background (Milan, Barcelona, Munich, Copenhagen, Lyon & Manchester) but partially different in their economic specialization, this paper examines how economic changes and social inequality are entangled to create peculiar patterns of development. The analysis will be developed by selecting social and economic indicators, both static & dynamic, & focusing on the mechanisms by which social changes & economic trends reciprocally interact. Communalities & differences among cities will be finally identified.

2010S00568

Cuellar, Mamen (ISEC - Cordoba University, Cordoba, Spain; 14080 [tel: 0034957218541; e-mail: ma2cupam@uco.es]), **Participatory Organic Guarantee Systems: Supporting Alternative Agrifood Paradigms,** *International Sociological Association, Gothenburg, Sweden,*

¶ The insustainability of the agricultural & food world can be analyzed from different approaches. One of them is the concept of agro food systems, that is, the way the different actors involved in food production, commercialization & consumption establish their relationships, & the role each of them play in these proceedings. Around conventional agriculture, since the "Green Revolution", a complex system has been developed where consumers & producers have been pushed into the background and other actors have assumed the main decisional positions. According to this, the mechanisms that regulate the way food is produced, distributed & consumed have been built, even the public ones, such as the procedures of quality guarantee, based on the system called third party certification. That is, between the interested parts of the guarantee (production a first part; & consumption a second part), there is a third entity (certification bodies) that has the responsibility to generate the demanded confidence on what is being exchange. When alternatives to the conventional agriculture are built, such as organic production, they face the lack of originality of public regulations, deeply influenced by the conventional & unsustainable logic. In this way, public regulations on alternative proposals push to a conventionalisation of these alternatives and, in the end, exclude social basis buildings in favor to big actors & conventional structures. During the last years, we have been researching on the way public regulations avoid the coexistence of both paradigms: corporate based structures & long distance & passivity between producers and consumers; & social & collective structures based on the active role of consumers & producers & their involvement. The field we have been researching & contrasting this hypotheses in is the organic certification system: face to the official and conventional one, other proposals are emerging, called the Participatory Guarantee Systems, that committed to a guarantee based on the direct participation of producers & consumers at a local level. Deep implications are involved in these proposals, not recognized by the public regulation in spite of the demands expressed from the organic sector during the discussions on the new European legislation in the last 2 years. A qualitative & action research on three experiences on PGS supports this communication (one experience in Brazil, another in France & the third one in Spain) where we aim to present: the exclusion of collective & social procedures in the public recognized organic guarantee System; the strengths & weaknesses of these alternative guarantee procedures in sustainability building processes & the constraints that limit their capacity to change the present regimes.

Cuervo, Hernan (University of Melbourne, Melbourne Graduate School of Education - Parkville - VIC 3010 - Australia [tel: 613 83449533; fax:; e-mail: hicuervo@unimelb.edu.au]), **Attracting Pre-Service Teachers to Rural Schools,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines a frequently overlooked reason in the difficulties of recruiting & retaining rural school staff. That is, the lack of focus on the impact of pre-service rural teaching courses on rural school staffing. This includes a deficiency in the curriculum content but also a lack of rural practicum. In other words, pre-service teachers lack significant & meaningful exposure to the benefits & challenges of teaching in a rural school and living in a rural community, which contribute to building teachers' professional & personal self-esteem & abilities and overcome anxieties fostered by negative stereotypes of rural postings. Therefore, I argue that any success in recruiting and retaining staff in rural schools begins with teachers' preparation. In order to reverse the teacher shortage & attract new & experienced graduates there is a need to enhance desirability for rural postings. I propose a way forward by identifying a set of strategies to introduce teachers into what working in a rural school entails.

Cuesta, Marta (Högskolan i Halmstad, 301 18 Halmstad [tel: 004635167100; fax: 035-18 61 92; e-mail: marta.cuesta@hh.se]), **Voices Not Only from the Margins,** *International Sociological Association, Gothenburg, Sweden,*

¶ My point of departure is that feminisms make clear: the ways & methods into understand emancipation. This paper aims to reflect about emancipation connected to narratives & biographical works. Biographies can be understood as political testimonies, especially if those illuminate people's experiences, for example, of exclusion or marginalization positioning but also about solidarity. My theoretical ambition is to go through & problematize the concept emancipation. Central questions can be; is feminism the only way into highlight emancipation from a subjective point of view? Which is the central link into go through an emancipation's process? In which manners is emancipation motivated? However, my analytical point of departure will focus on differential works (biographies, narratives, or works based on actions or reflections about feelings on emancipation). My critical understanding will contextualize these voices & lives within a "situated knowledge", method.

Culley, Lorraine & Hudson, Nicky (Applied Social Sciences, De Montfort University, Leicester, UK. LE1 9BH [tel: 0116 2757753; e-mail: lac@dmu.ac.uk]), **Making Babies across Borders: User Perceptions of Transnational Assisted Reproductive Technologies,** *International Sociological Association, Gothenburg, Sweden,*

¶ Infertility is thought to affect over 70 million women globally & 1 in 7 couples in the UK experience difficulty conceiving a child. Worldwide, some 40 million women are accessing assisted reproductive technologies such as IVF. Increasingly, UK & other European citizens are crossing borders to access this form of healthcare, often using donated eggs & sperm, & giving rise to what some regard as new & "unsettling" family forms. While there is considerable media coverage of what is popularly known as "fertility tourism" & academic debate on the complex social and ethical issues that this raises is increasingly evident, there has been little empirical work which examines the extent & nature of this growing global phenomenon. Transnational reproduction can be explored through the lens of globalisation & theorised as arising from a complex mix of biomedical & business interests combined with an intense personal force which can propel people to go to what some consider extreme lengths to have a child. It may also involve what some regard as an extreme form of body commodification, where eggs, sperm, embryos & wombs are bought and sold on a global market (Spar 2008). It is a process which clearly raises some important issues for sociologists & may tell us much about concepts of risk, autonomy, choice & consumerism in healthcare, as well as the cultural & power dynamics in different societies. This paper is drawn from an ESRC funded, qualitative research project which explores the issue of cross border reproductive care. 1. The project aims to explore the motivations, understandings & experiences of UK based individuals who travel abroad for fertility treatment. The main component of the study consists of in depth interviews with over 40 cases (individual women & men or couples) who have engaged with fertility treatment in countries such as Spain, the USA, the Czech Republic, Ukraine and South Africa. In our paper we would like to explore the ways in which this process has been constructed in popular & academic discourses & compare this with the way in which those most intimately involved in the process perceive it. We will articulate the ways in which individuals are negotiating the consumption of assisted reproductive technologies in a global context. We will address in particular how would-be parents perceive the drivers for this process & how they construct the possible personal and social implications of cross border care. 1. Transnational Reproduction: An exploratory study of UK residents who travel abroad for fertility treatment.

Currie, Cheryl L. (School of Public Health, University of Alberta, Edmonton, Alberta, Canada T6G2T4 [tel: 780 2481503; fax: 780 4920856; e-mail: cheryl.currie@ualberta.ca]), **Risk and Protective Factors for Addictive Behaviour among Urban Aboriginal Peoples,** *International Sociological Association, Gothenburg, Sweden,*

¶ Background: Indigenous peoples share a disproportionate burden of addictive behaviour with serious implications for health. Social disadvantage is a major risk factor for addictive problems, and many indigenous populations worldwide are in positions of severe socioeconomic disadvantage. The objectives of this study were to examine the extent to which social disadvantage contributes to alcohol, smoking & gambling problems among Aboriginal Canadians living in urban centres, & explore Aboriginal culture as a potential protective factor for these problems. Methods: Data were derived from a national Canadian survey administered in 2006 to Aboriginal, Métis & Inuit adults aged 15 & older. Surveys were administered in 20 Aboriginal languages; the response rate was 80%. Results: Regression models were used to estimate the extent to which addictive behaviour was associated with generated factor scores for Aboriginal cultural continuity & social disadvantage. Results suggest a complex interplay between various addictive behaviours, social disadvantage & the degree to which individuals feel enculturated within Aboriginal, Métis & Inuit traditions. Conclusions: This study promotes a better understanding of the ways in which the social environment drives patterns of addictive behaviour among urban Aboriginal peoples, & identifies potential strengths within Aboriginal cultures that may protect against these problems.

Czech, Magdalena (Institute of Sociology, Jagiellonian University, Cracow, Poland [tel: +48508366454; e-mail: magczech@gmail.com]), **Sociology of Translation–Towards a New Sociology of Language(s),** *International Sociological Association, Gothenburg, Sweden,*

¶ Translation is not just a linguistic phenomenon, as it is related to the social & cultural context. That is not a very innovative finding. But as such, it illustrates very clearly the surprising absence of sociological reflection on translation. Sociology of culture, language & literature do not pay much attention to the issue of rendering a ubiquitous aspect of the globalized world. That is why the idea of a sociology of translation expressed in the publication Constructing a Sociology of Translation (Wolf, Fukari: 2007) may be considered as a very fresh one (what is demonstrative: among eleven coauthors of this book, there are only two sociologists). I do not intend to state a thesis as radical as the one developed by Eugene Nida, eminent researcher of translation, who wrote that only a sociologist approach to translation is ultimately valid (Nida: 1976). Although, I would like to present several possibilities of sociological study on translation–as a social action & as a social fact. I will also present my research project on rendering strategy applied by institutions of the European Union as an embodiment of the myth of full equivalence in translation.

D'Agostino, Federico (Department of Cultural Studies, University of Rome III, Rome, Italy, 00185 [tel: +39 06 58310135; fax: +39 06 58310135; e-mail: f.dagostino@uniroam3.it]), **The Fragmented Identity and Self in the Postmodernity,** *International Sociological Association, Gothenburg, Sweden,*

¶ The identity in postmodernity has gone through a process of metamorphosis to be understood within the framework of globalization & local context. These are steps of my presentation: 1. The dissolution of traditional rationality. 2. The fragmentation of individual identity & self. 3. The end of cultural sharing of collective representations. 4. A multiple ego navigating in ethical relativism. 5. The prevailing aesthetics perspective about ethical issues. 6. A new symbiosis of self with nature. Finally, the wearing of social dimensions encompassing the self & leaving it alone opens a door to a decentered self in facing the "the grounding meanings" of life.

D'Ávila Neto, Maria Inácia, Beyssac, Marie Louise de, Nazareth, Juliana & Jardim, Gabriel (Federal University of Rio de Janeiro, Av. Pasteur, 250, Rio de Janeiro, Brazil [tel: 5521 38735348; e-mail: inadavila@gmail.com]), **Applying Methodologies Using the Visual Resource on the Narratives of Cultural Minority Groups,** *International Sociological Association, Gothenburg, Sweden,*

¶ The idea that guides this study is that women's bodies are the focal point of the strategies of power in societies with patriarchal roots as Latin American ones. The historical records of Brazilian culture show that women in colonial Brazil were taught to be silent before the elder, especially men. The patriarch was the absolute master of his domain, which included among its properties the slaves & their own families. Silent women before the authority of the patriarch, express them selves through their bodies. Such models assigned to women coexist nowadays in a dyssynchronic mode, and remain in the imaginary of the society as a kind of identity that confirms women identities in a physical substance, disciplined by control of the expression of their sexuality, naturalizing tasks and roles. The body, like language, is also a place of expression of power. The visual record can capture the expression of women, especially in culturally disadvantaged groups or minorities (DA'Ávila Neto, 1989). The use of images makes it possible to record & interpret data (Joly, 2008). In addition, in a participatory research, the idea is that the subjects can always be included in the process of production of results, becoming co-authors of this process. The drama games allow subjects of study to take part in a set of roles where daily life is staged. Through video feedback, the scenes are displayed to them to be commented on what they saw, provoking new ways

of thinking & participation. The use of video or images becomes even more relevant when subjects are illiterate women. Usually with no voice, because they have to be silent before the father figure, & often the husband, many women keep their expressions in their bodily signs (Goffman, 1979), all their individual & collective memories are bodily memories, accessible only by visual means (Hirsch, 2002; Sarlo, 2008; Braidotti, 2000; Lauretis, 2007).

da Mota Gomes, Sílvia, Machado, Helena & Silva, Manuel Carlos (Department of Sociology of the University of Minho, Braga, Portugal, 4710-057 [tel: ++351 96 8224 931; e-mail: silvia.mf23@gmail.com]), **Crime and Press. How the Gypsies and Immigrants Are Represented in Portugal?,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper aims to analyze the discourses provided in the Portuguese daily newspapers when covering criminality perpetrated by immigrants & minority ethnic groups. We gathered & analyzed news published during 2008 & 2009, combining a critical & a cultural approach of the media representations. Our purpose is to understand how media narratives create & reproduce the representations of the established powers and, simultaneously, to discuss the possible implications of those discourses on the creation of stereotypes that associate criminality to specific social groups. Current studies about the effects of the media on the representations about criminality allow for the conclusion they suggest the citizens not only what to think about but also how to think. That is, media visions about criminality tend to produce consensual & shared views, while feeding the general public with stereotyped notions about "criminals", associating criminality with socially excluded groups & ethnic minorities, such as gypsies & immigrants. This paper discusses the media coverage of criminality as an example of a product of a cultural industry; an industry that promotes certain representations of criminals & of causes for criminality, all of which are subordinated to the market's logics & to prevailing cultural & political structures. Thus, these media narratives frame visions of social order & foster consensus & social control, through the exaggeration about victimization risks & by exploring public and social emotion, constituting what might be called "moral panic". These media narratives are nourished by global logics of commodification of the public sphere based on criminalization of poverty & the fear of "troublesome" populations.

Da Re, Dario (University of Padova - University of Verona, Italy [tel: ; e-mail: dario.dare@unipd.it]), **The Visual Tool Kit,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper deals with the digital tool kit used by the visual researcher in two specific steps of the research process: data collection & data analysis. Before examining in detail the subject is essentially focused on some methodological differences among these three hierarchical concepts: method, techniques, and instruments. Some authors confuse these stages. Methods (first level) are quantitative or qualitative & one of the peculiarities of visual studies is that they can implement both methods. One of the first questions raised in this paper is the following: can visual be considered as a new different method with its own techniques & with its specific tools? My answer is not so clearly affirmative but in this paper I assume visual as a complementary method. Before collecting & analysing visual data it is necessary to choose a technique (second stage). A reality can be understood using qualitative techniques, such as video interviewing, video storytelling, photo, or video ethnography, video focus group. But the visual approach has its own techniques, such as reflexive video or photography, photo or video elicitation, photo voice & "before & after", the rephotography practice. A section is dedicated to the management of secondary data gathered from archives, media, Internet/YouTube. The core of the paper is represented by the research instruments (third stage), the so-called visual tool kit. In the beginning the digital tool kit has been specified, because this visual method, more than all the others, can obtain a great advantage from the digital convergence. Visual data are collected directly in binary format taking photo or video and nowadays, at last, it's possible to treat them using specific software. In this work are described two kinds of methodological software. The first, well-known in qualitative analysis, is Atlas Ti, the second is Transana, which has been created specifically for handling video. Caqdas (Computer Assisted Qualitative Data Analysis) is an acronym which, in visual key, could be converted in Cavdas (Computer Assisted Visual Data Analysis). The question related to validity & reliability is only one of the many critical points involving visual studies which can be solved working with these kinds of software. Cavdas represent a sort of last frontier in the visual studies but in this paper are presented many different digital instruments (hardware & software) applied in the various visual techniques.

Dabul, Lígia (Departamento de Sociologia / Universidade Federal Fluminense, Niterói, Rio de Janeiro, Brasil [tel: 55 21 25589796; fax: 55 21 22452843; e-mail: ldabul@uol.com.br]), **Conversations at Exhibitions: The Art Public,** *International Sociological Association, Gothenburg, Sweden,*

¶ Amongst everything visitors do together at an art exhibition–contemplate pieces, read signs, labels & wall texts, play, study, follow the monitor, date, etc.–talking is probably the most regular activity; & it is also very frequent in other situations of social life. The study of this activity elucidates mechanisms in which a group conveys meaning to objects & events, and refers to common ways–though little known–people have contact with plastic arts. Talking is also an essential way in which people interact. In some cases, despite the subject, what matters to them is the conversation itself, the fact of being talking, an activity that has some rules & puts together this or that social group, depending on the place & historical situation. This text focuses on conversations between visitors at art exhibitions, showing how they can vary, surpass other social activities & have a hand in giving meanings to the art pieces and the exhibitions themselves. Analytic implications for further studies are also given.

Daftary, Amrita (Dalla Lana School of Public Health, University of Toronto [e-mail: amrita.daftary@utoronto.ca]), **Disentangling the Double Stigma of HIV and Tuberculosis: Accounts from South Africa,** *International Sociological Association, Gothenburg, Sweden,*

¶ Tuberculosis is the leading opportunistic infection among individuals infected with the human immunodeficiency virus (HIV), the greatest impact of which is felt in South Africa. Approximately three-quarters of the country's tuberculosis cases are co-infected with HIV, significantly increasing morbidity and mortality associated with either infection. The clinical challenge of this co-epidemic is further complicated by operational shifts in health care delivery, and social and economic inequities facing individuals at greatest risk. Despite a recent spurt in government responses to integrate health care services for HIV and tuberculosis, stigma is a primary deterrent to their effective uptake and delivery. A deeper understanding requires us to disentangle the social cycles through which stigma attached to tuberculosis in relation to HIV, and vice versa, are constructed and sustained. Based on my research with patients and health care workers in KwaZulu-Natal, South Africa, the epicenter of this syndemic, I examine how the biological and social interplay between HIV and tuberculosis has created a unique platform for new forms of labeling, othering, covering and double stigma. The impact of these is realized in patients' accounts of their health and health-seeking behaviour, access to health care services, illness disclosure, ownership and acceptance. The findings of this analysis form a backdrop for discussing the implications these trends may have on the sound sociomedical integration of HIV-tuberculosis health care.

Dagan, Hagai, Hermoni, Gal & Lebel, Udi (Sapir College, m.P. Hof Ashkelon, Israel [tel: 972544300406; fax: 972777867887; e-mail: ulebel@gmail.com]), **Trauma and Nostalgia in Israeli War Films,** *International Sociological Association, Gothenburg, Sweden,*

¶ Films about the First Lebanon War (1982) first emerged in Israel some three decades later. Their directors abandoned the traditional discourse in which Israel's military involvement in Lebanon had been discussed; the new discourse was typified by an ideological examination of the war's justness, a focus on the suffering inflicted on Palestinians living in Lebanese refugee camps, & the sense of loss that afflicted the families of fallen Israelis. In the recent films, a new personal, post-traumatic discourse has come to the fore. It emphasizes the core trauma of soldiers (who have meanwhile become filmmakers) following their exposure years before to horrific scenes of battle. All the films we analyze–"Yossi and Jagger", "Beaufort", "Waltz with Bashir", & "Lebanon"–have garnered major international awards & become the "new face" of Israel in matters pertaining to the "Lebanon experience". On the Israeli street too, they have become popular films–not only among adherents of the liberal post-national discourse, but also for many who belong to republican-nationalist groups. In this research, we argue that alongside the trauma in these films, nostalgia is also present. Trauma & nostalgia conduct an inner dialogue between illustrating wartime horrors and presenting war as a negative, victimizing, traumatic phenomenon that must be avoided–with a dimension

of nostalgia for the masculine-familial-national experience of warfare. We intend to illustrate our argument by engaging with the principled question of trauma versus nostalgia, as reflected in the aesthetic-visual aspect of those films, in their textual & content aspects, the public discourse that flared up around their screening, & in the numerous awards they were awarded in Israel. This combination of trauma & nostalgia merits discussion in the broader Israeli context, & perhaps also in the broader national context, as regards ambivalent attitudes to the experience of war. It is a traumatic, victimizing experience on the one hand, but also generates common denominators & formative collective experiences. Examining the films may contribute to a richer debate on the issue of the nostalgia/trauma combination, materially linked to the experiences of war, loss, & bereavement. Collective political psychology condemns those experiences, yet enthusiastically adopts and harnesses them in service of the national ethos. The trend is chiefly discernible in the postmodern era when the experience of battle provides a familial-collective-national sense alongside male (and homo-erotic) comradeship. At the theoretical level we also argue in this context that it would be incorrect to position these films, like the entire discourse of trauma, as a discourse seeking society's demilitarization. For juxtaposed with the traumatic aspect, this discourse also has a nostalgic element, that fosters longing for scenes of battle & the military experience. This, as part of the "militaristic-liberal" discourse, which displays sights of warfare from the perspective of the soldier–a victim of the war–& nurtures identification with his trauma, not his heroism, but without striving to delegitimize it.

Dahan-Seltzer, Geneviève (Laboratoire Interdisciplinaire pour la Sociologie Economique-LISE-CNRS, LISE-CNAM 55 rue de Turbigo 75003 Paris [tel: 33 1 40 27 23 86; e-mail: genevieve.dahan-seltzer@wanadoo.fr]), **La Sociologie à l'Épreuve des Trajectoires Professionnelles** (Sociology to the Test of Professional Careers), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ A l'ère de la mondialisation, où l'injonction est au mouvement perpétuel, où la flexibilité et la mobilité sont de mise, il appartient à l'individu de faire preuve de réflexivité afin d'analyser tant les contextes économiques, politiques et culturels dans lesquels il évolue que ses enjeux professionnels et personnels s'il veut "être acteur de sa trajectoire" autant que faire se peut. Il appartient aux sociologues de s'ouvrir à l'interdisciplinarité, d'adopter conjointement des niveaux d'analyse macro, méso et micro, d'imaginer de nouveaux dispositifs pour accompagner la (re)construction identitaire des individus confrontés dorénavant aux tensions entre chemin subi et chemin choisi.

2010S00582

Dalila Cerejo, Sara & Favita, Andreia (FCSH-UNL (CESNOVA), Avenida de Berna 26C 1069-068 [tel: 00351217970928; fax: 00351217970928; e-mail: dalilacerejo@fcsh.unl.pt]), **Emotions and Women's Reactions to Violence: A Systemic Approach,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper represents an attempt to deepen knowledge within the thematic of gender violence from the sociology of emotions perspective. The objective is to shed light on some questions such as the perpetuation of violent situations, while carefully analysing the victim's reaction: why they never tried to separate from the aggressor, reasons for the continuity of the violent conjugal relationship, why they never reached out for help from qualified institutions, amongst others. In this particular thematic, as so happens in various aspects of social life, the interconnection between the social, cultural & symbolic systems is irrefutable, therefore it is of primal urgency to discuss its articulation with the individual system composed of responses/actions/reactions/interactions & so on, & the social and cultural system which provide the actor with the symbolic and many times, unconscious tolls of actions & interactions. If we carefully observe the results from the several projects, that the research team from Universidade Nova de Lisboa developed, we became aware that most women demonstrates an seeming "passiveness" towards the violent acts that they suffer. Again & again, at the question "what was your reaction to the violent act in question", most women refer "not to do anything/hanging on in silence". Thought such references, it is in our interest to develop new interpretations, allowing us the understanding of the part played by social emotions in the experience of violent situations, particularly within the conjugal ties & the way that those emotions can, eventually, conditioning social action. Inevitably, when we try to deepen questions related with emotions we are, frequently confronted with the presence of the traditional paradigm in which love is subdue, & sometimes opposes, reason. Hence, and as Luhmann argues, "love makes the reasons for its one reasons, prevail" turning into, many times, in a difficult dialogue in which reason assumes the part played by society & thus, reflecting interests & resisting the irrational impulses of love (Luhmann, 1982). Therefore, we start from the hypotheses that some social emotions can inhibited an explicit reaction towards the acts of violence. Social emotions, can be distinguished from other types of emotions since they are the target of a process of learning and assimilation of certain social values: "that which we learn to like or hate, discretely, over a long perception & emotion process relating to groups, objects, activities & places" (Damásio, 2003, 66). On the level of emotions it is therefore important to define what in us is innate & what is socially acquired, since so often emotions are considered an individual experience. Consequently, an approach from sociology of emotions allows us to understand, not only, how emotions influence the self, and the ways they shape the social interaction web, but also, how the individual develops bounds & ties with the social structure and its cultural symbols, concomitantly, the way those same ties condition their experience & express emotions. When we mention action/reaction/decision, we refer to a set of variables, from a very diverse nature, intertwined & related with more justifiable dimensions, hence more rational, & others underlying more emotional or even biological factors. [Abstract shortened by ProQuest.]

2010S00583

Dall, Anna (Faculty of Arts and Social Sciences, University of the Sunshine Coast, Australia [tel: +61 421 608 447; e-mail: adall1@usc.edu.au]), **"Is PISA Counter-Productive to Building Successful Educational Systems?",** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper presents work in progress on a doctoral project entitled "A cross-national, comparative study of cultural factors underpinning 15 year old students' performance in reading literacy in Australia, Finland, Sweden & Indonesia". The study aims to go beyond the PISA league tables to provide an in-depth comparison of what literacy means to students & teachers in different sites. The paper takes one embedded case study, to illuminate discussion about the purpose of schooling & valid accountability standards. Various national steering documents show there is cross-national consensus that academic achievement is only one of a number of goals that should be attained in educating children. PISA mainly measures cognitive achievement & some affective aspects underpinning academic performance. However, the strong emphasis on students' personal, physical, mental & social development that is found in national steering documents is outside the scope of PISA. Considering the enormous interest PISA attracts & the impact of the outcomes on national education policies, the question arises as to what is in reality the main purpose of schooling and what is simply politically correct rhetoric. In addition, if successful schooling equals fostering independent, socially skilled individuals who can take an active part in a democratic society, would not PISA scores be considered invalid & possibly even counter-productive as PISA not only disregards most affective and conative aspects, but may even lead to a utilitarian, narrowed cognitive scope?

Dallaire, Christine (School of Human Kinetics, University of Ottawa, 125 University, Ottawa, ON, Canada, K1R 6P2 [tel: 1 613 562 5800 x4279; fax: 1-613-562-5497; e-mail: christine.dallaire@uottawa.ca]), **Hybrid, Fluid or Singular Linguistic, Cultural and National Identities: Youth Taking on or Reinventing Francophone Identities in Canada,** *International Sociological Association, Gothenburg, Sweden,*

¶ The French Canadian minority youth association, the Fédération de la jeunesse canadienne-française (FJCF), created the Jeux de la francophonie canadienne (JFC) to foster Francophone identity among French-speaking youth in the hopes of reversing the increasing rate of assimilation to the English language majority and sustain Francophone community development. This ethnographic study draws on interviews, questionnaires & drawings from teenage participants at the 2008 edition of the JFC to examine what type of "Francophone identity" youth reproduce at the games. In an environment that refrains from imposing a predefined Francophone identity & instead invites participants to decide for themselves what it means to be a Francophone, the discourse analysis shows that youth participants are, not surprisingly, reproducing different intersecting versions of what it means to be a "Francophone". Francophoneness is discursively constructed by some teenagers as a hybrid identity that can combine different cultural heritage but mostly refers to an affiliation to both English & French languages. Yet other participants describe their Francophoneness as a singular cultural & linguistic identity, despite the fact that they live part of their lives in English. The analysis further reveals participant

youths' shifting allegiance to the idea, on the one hand, of a pan-Canadian Francophone identity and, on the other hand, their attachment to the cultural, linguistic, political & territorial characteristics that distinguish among them at the games.

Daloz, Jean Pascal (CNRS University of Oxford, Oxford OX1 3UQ [tel: +44 1865 285 984; fax: +44 1865 278 725; e-mail: jean-pascal.daloz@politics.ox.ac.uk]), **New Directions in the Study of Social Distinction: Symbolic Consistency vs. Synecdochic Strategies,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is an extension of my recently published work on The Sociology of Elite Distinction which sought to offer a systematic discussion on the applicability of the major theoretical frameworks dealing with social distinction. Although this critical examination was a necessary step, the intention is now to go further & to provide explanations for some intriguing dissimilarities emphasised in my comparative explorations. I am concerned here with one of the ten significant subjects I want to tackle in my next book. Comparative research leads one to discover that in some societies the pursuit of social distinction intensely aims at "completeness." On the other hand, there are places where social actors rather try to project a desirable image to others through several attributes only. This calls attention to the art of "synecdochism" which consists in conveying a message of social distinction via investing heavily in a few elements that are particularly valued. Obviously enough, this kind of strategy may be related to an incapacity to cover the whole spectrum of possible signs of eminence. However, it also points to the fact that priorities vary greatly across contexts. The paper examines some important dimensions related to such alternative ways.

2010S00586

Dambrauskas, Alicia (Education and Culture Ministry, Non Formal Educational Area, Montevideo, Uruguay [tel: 0059829150103 Interno 1614; e-mail: aidambrauskas@gmail.com]), **Building a Bridge Towards Social Inclusion through Education,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ The article is focused on the genesis of the National Program for Education & Work, an educational proposal of the Ministry of Education & Culture targeting young people between 15 & 20 who are neither studying nor working, & thereby constituting a vulnerable population that is at risk to plunge into social exclusion. This condition affects 8% of young people of this age segment in Uruguay, a country with an aging population, something unusual in the Latin American context. The origin of PNET is marked by a significant territorial expansion & the promotion of an integral education concept. Its main challenge is acting as a bridge to effective social inclusion of its target, vulnerable youth who carry the stigma of failure or neglect in their transit through the formal education system. The study, which has the specificity to be sustained in a qualitative perspective, through a research & action methodology, highlights several tensions that are experienced by the teachers & that affect their daily practice. The PNET is a flexible & comprehensive proposal, where creativity, interdisciplinarity, & the combination of both group work & personal work with students, give it a distinctive character. However, those strengths, which give the opportunity to consider the demands of a changing & diverse population, without rigid pre-designed itineraries, place educators in need of a permanent reflexivity about the nature of the educational link and the performance of their role. The PNET is located in the border between inclusion & exclusion. Give the tools to engage de formal education system & continue studying with success, or join the labor world through a decent job, is the greatest challenge. Reconciliation with knowledge is not only necessary but also urgent to achieve a place in the information society that is so elusive with the poor the & weakest. If the PNET is a valid option to achieve this goal, linking education & work, seizing the many educational aspects of work, & making education the key to access the world of work with dignity are, in short, what this text discusses.

2010S00587

Dance, L. Janelle (Sociology, University of Nebraska-Lincoln, Lincoln, Nebraska, 68588-0324, USA [tel: 402-472-2962; fax: 402-472-6070; e-mail: ldance2@unl.edu]), **Struggles of the Disenfranchised: Commonalities among Native Americans, Black Americans, and Palestinian,** *International Sociological Association, Gothenburg, Sweden,*

¶ To "disenfranchise" is to deprive of civil privileges or rights of citizenship or constitutional rights. Pierre Bourdieu's notion of "symbolic violence" provides one conceptual lens & John Gaventa's notion of "mobilization of bias" provides another through which more nuanced definitions of disenfranchisement are advanced. Both Bourdieu & Gaventa reveal important mechanisms of disenfranchisement as an active yet nuanced process by which the state or state-sanctioned institutions deprive citizens of basic rights. The histories of American ethnic minorities provide a variety of stories about disenfranchisement & struggles against disenfranchisement for civil rights. This is especially true for Native Americans & Black Americans. To what degree do the historical experiences of Native & Black Americans resemble the experiences of Palestinians? To what extent do such experiences portend a Palestinian future? Which conceptual frame–symbolic violence or mobilization of bias–are most useful for understanding important nuances of these three distinct disenfranchisement processes? To explore & answer these questions, the author has not only conducted reviews of relevant scholarship but has also put these questions to different scholarly audiences, including Arab American, Native American, & Black American scholars. This paper is a work-in-progress that may raise more questions than it answers.

Dance, L. Janelle & Lunneblad, Johannes (Sociology, University of Nebraska-Lincoln, Linvoln, Nebraska, 68588-0324, USA [tel: 402-472-2962; fax: 402-472-6070; e-mail: ldance2@unl.edu]), **O. Palme, W. Bush, Hipsters, and Hip Hoppers: Ghosts and Stereotypes that Haunted a Cross-National Research Project,** *International Sociological Association, Gothenburg, Sweden,*

¶ During the 2006/2007 academic year we participated in a six-nation research project titled "The Children of Immigrants in Schools" (NSF, PIRE: No. 0529921, 2006). An aspect of this project's research design was that European scholars would conduct research in American schools & American scholars would conduct research in European schools. As members of the U.S.-Sweden team, our research goal was to identify & categorize promising school practices for immigrant students. We would soon learn, however, that our respondents would categorize us. Therefore, in this paper, we provide a candid analysis of the national, popular, & political symbols that emerged as a "White Swede" conducted research in a high school in New York City & a "Black American" conducted research in a high school in a large Swedish city. More specifically, this paper presents how we were managed by "apparitions" resembling Olof Palme & George W. Bush, as well as stereotypes like "hipsters" & "hip-hoppers". We had limited control over our own presentations of self due to the societal, cultural, & national views that respondents held about us. This paper contributes to methodological discussions about the limits of impression management & other unpredictable aspects of ethnographic field relations.

Daneski, Katharine A. (Swansea University, Swansea, UK, SA2 UPP [tel: 01970 635810; e-mail: k.a.daneski@swansea.ac.uk]), **Old Age or Disease? Stroke in Fourth Agers,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction: Stroke causes one third of deaths worldwide & is a major cause of disability. The earlier term for stroke is "apoplexy" & this paper explores medical practices over the last three centuries in which constructions of the older person as "apoplectic" or "stroke patient" are negotiated. Methods: The paper uses documentary evidence from primary sources in the United Kingdom. The data are analysed using a framework informed by the writings of Michel Foucault in which the emergence of different discourses of stroke medicine is described. Results: Old age has been a major factor that influenced stroke medicine over the centuries. "Old age", once classified as disease, has now been refuted by the possibility of pathology existing in older patients. Yet, despite advances in medical technologies, the "oldest old" or "fourth agers" are implicitly excluded from recommended practices in Britain that might improve outcomes for stroke patients. Conclusion: The paper discusses the implications of these findings where it is suggested that the blurred boundaries between pathology & old age affect the provision of health care for the oldest old where status as "stroke patient" is lost.

Danilova, Elena N. (Institute of Sociology, RAS, Moscow, Russia, 117259 [tel: +7 495 7190940; fax: +7 495 7190740; e-mail: endanilova@gmail.com]), **What Depends on "Street Level" Bureaucrats? Changes in Role Forming Identities of Tax Inspectors and Their Professional Behaviour in Russia during 2000s,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper looks at the changes in professional identities of "street level" bureaucrats, such as tax inspectors, & their observable behavior as

the key to understanding the outcomes of tax policy in Russia through the prism of role forming identity & regulatory capture theory. The paper will demonstrate that one of the keys to a remarkable turnaround of tax collection is the change in the relationship of the policy makers, the tax inspectors ,& their clients. The key questions are what improves the performance & the capacity of tax inspectors to do their job, how the policy principles turn into actions at the local level of the interaction of inspectors & citizens & firms. The paper utilizes data of a unique panel survey of tax officials & citizens (2001, 2008) as well as ethnographic studies. A 2001 survey revealed a serious gap between the state higher authorities & actual behavior of the rank-and-file tax inspectors & taxpayers. Both tax inspectors & taxpayers were rather on the same side of the "barricade", opposing to policy-makers, state higher level tax authorities. Role forming identities were vague, informal ad-hoc arrangements, corruption & tax evasion were not only wide-spread, but often justified by both sides of the taxation mechanism. In 2008 the situation seriously changed, the reform resulted in increasing state regulatory capture capacity & more obedience of taxpayers.

Dantas, Ana Roque (CESNOVA-FCSH/UNL, Av. Berna 26C [tel: 00351917202517; fax:; e-mail: ana.roque@fcsh.unl.pt]), **Happiness: A Sociocybernetics Approach,** *International Sociological Association, Gothenburg, Sweden,* (POR)

¶ This paper focus on happiness & its influence on social action, through a sociological analysis of the structural, sociocultural and individual dimensions that condition the importance given to happiness. There's a lack of sociological literature on happiness, but the contributions of authors such as Veenhoven, Layard, Baudelot & Gollac, Frey & Benz & also Lipovetsky help organizing my work, at a theoretical & conceptual level & at results interpretation. The proposed analysis model is a holistic approach that relates several subsystems & the various possibilities of action that arise in this frame. Based on Luhmann's theory of complexity & social systems, the main goal is the comprehension of the social processes associated with the construction of the idea of happiness, as well as the identification of values, expectations, meanings & feelings that guide social action. Research methodology combined a statistic data analysis with the study of the actors' individual trajectories using sociological in-depth interviews. Results show that happiness is subject to evolution, transformation & fluctuations influenced by several conditions of social actor's life. Namely: social relations, work, financial situation, friends & family & life styles as well as social actors' reflexivity of their own life circumstances.

Danteur, Thibault (Sociology Dpt, Paul Valéry University, Lersem, Montpellier, France, 34090 [e-mail: thibault.danteur@gmail.com]), **When Rationality Drives to Irrational Choices : The Example of the Supermarket's Industry,** *International Sociological Association, Gothenburg, Sweden,*

¶ This text, based on empirical research within the Moroccan supermarket industry, aspires to illustrate, through the example of food product choices, the traditional controversies in sociology regarding action processes. Applying qualitative methodologies such as field observations, anthropological photography, or informal interviews, an attempt is made to go past the classical sociological dualisms–holism/individualism, rationality/irrationality, utilitarism/anti-utilitarism–underlined by the theories of social action & the sociology of trade & social exchange. Its ambition is to suggest that in such an industrialized environment as the supermarket, rationality and irrationality are understandable not only as antagonistic but also as complementary. Therefore, it aims at demonstrating a dialogical principle of recursion that articulates those two notions within the choice's process & situations. In other words, through an interactionist methodology that considers the social situation of choices, it argues that consumers are both rationalizing irrationally & "irrationalizing" rationally.

Daré, Williams, Barnaud, Cécile, Botta, Aurélie, D'Aquino, Patrick & Fourage, Christine (CIRAD/Department of Environment and Societies/UPR Green, Station La Bretagne, BP20, 97408, Saint Denis Messagerie cedex 09, Réunion Island (France) [tel: +262262528037; fax: +262262528021; e-mail: williams.dare@cirad.fr]), **Researchers, Local Stakeholders and Political Decision Makers in Regional Land-Use Planning: Ethical Lessons From a Companion Modelling Approach in RéUnion Island,** *International Sociological Association, Gothenburg, Sweden,*

¶ We analyse the nature of interactions among local stakeholders, decision makers & researchers facilitating participatory processes. Drawing on a participatory process aimed at stimulating dialogue between local stakeholders & decision makers in the Réunion Island, this article raises the key ethical question of the role & influence of researchers in such political multi level systems. In the Réunion Island, we developed a companion modelling approach to support the revision of the regional land-use plan. A multi-agent system, Domino-SMAT (DS) aimed at simulating the evolution of land-use in the next 20 years was built with stakeholders. Then, the model was presented at the Region, and modified with them to integrate in the model some results obtained in the previous stage of the official participatory process. DS was used to illustrate & explore scenarios. As stakeholders played a part at different stages of the process, we wonder whether by opening the participatory process we did not reinforce asymmetries of power between themselves. We suggest ethical rules researchers engaged as a facilitator in a participatory process should follow in order (i) to explicit his posture to others participants and (ii) to assess his effects on the research process & on the participants.

Darling, Victoria (Programa de Posgrado en Cs. Políticas y Sociales. Universidad Nacional Autónoma de México, Ciudad Universitaria, UNAM [e-mail: victodarling@yahoo.com.ar]), **Reflexiones Sobre el Poder Destituyente de los Movimientos Sociales en AméRica Latina** (Reflections on the Dismissive Power of Social Movements in Latin America), *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ A lo largo de los últimos años, diferentes movimientos sociales protagonizaron sucesos reivindicativos de nuevo tipo en América Latina. Las revueltas acontecidas han sido de gran magnitud, considerando aquellas que derribaron gobiernos constitucionales como el caso de Ecuador (2000 y 2005), Argentina (2001) y, Bolivia (2003 y 2005). Mucho se ha escrito sobre las características novedosas de estos movimientos que se destacaron en contextos signados por crisis económicas, socioculturales y políticas derivadas del modelo esencialmente neoliberal. En virtud de este particular, realizamos un paneo analítico por las principales dimensiones constitutivas de los movimientos sociales latinoamericanos del siglo XXI, para luego adentrarnos en un aspecto específico: la capacidad destituyente de estos colectivos. El avance de investigación que desarrollamos se ubica en el marco de análisis orientado al estudio de la lógica de las prácticas de los sujetos sociales (Bourdieu, 1999). Hacia el final de la reflexión, nos permitimos destacar que el protagonismo y despliegue intermitente de los movimientos sociales de la Región a lo largo del último siglo, además de realizar una llamada de atención sobre sus novedosas formas de organización y manifestación, ha evidenciado la necesidad de construir nuevos mapas interpretativos para el análisis sociológico.

Darnell, Simon C. (International Development Studies, Dalhousie University, Halifax, Nova Scotia, Canada B3H 4H6 [tel: 902-494-7896; e-mail: simon.darnell@dal.ca]), **Is Sport New? Viewing 'Sport for Development and Peace' through Theories of International Development,** *International Sociological Association, Gothenburg, Sweden,*

¶ The recent mobilization of sport in international development, & the institutionalization of the Sport for Development & Peace (SDP) movement, is often positioned as a response to the challenges and/or failings of traditional development approaches (see Kidd, 2008; Levermore & Beacom, 2009). That is, whereas development has been deconstructed as totalizing, modernist and/or ethno-centric, SDP is often looked at as a novel & inclusive means of meeting development goals. To date, though, the practical & political implications of this positioning of sport have not been empirically examined. Drawing on interviews with policy makers & programmers from across the SDP movement (NGOs, charitable foundations, consultants, etc.) I explore how SDP organizations conceptualize and respond to the enduring politics & contestability of development & consider these approaches in relation to contemporary development theorizing. The results suggest that while SDP stakeholders employ a host of critically & politically informed approaches to development, sport in development is clearly produced & constrained within the broader political economy and as such is best viewed as a different, but not transcendent (or even politically challenging), approach to development practice and struggles.

Datler, Georg (University of Zurich, Institute of Sociology, 8050 Zurich, Switzerland [tel: +41 44 6352325; fax: +41 44 6352399; e-mail: datler@soziologie.uzh.ch]), **Measuring European Iden-**

tity: A Lack of Content?, *International Sociological Association, Gothenburg, Sweden,*

¶ Analytically every collective identity can be characterized by its content & the contestation of its content (Abdelal et. al 2006). I will argue that there is a crucial problem with the quantitative measurement of European identity: The widespread operationalizations do not specify any content of European identity. Drawing on the comparative data of the project "Youth and European Identity" (European Commission, 5th Framework Programme) for 10 regions across Europe & using confirmatory factor analysis these measurement instruments turn out to lack measurement invariance. In this paper I will take my theoretical claim one step further & use data on the meaning of Europe to construct subgroups. If one source of measurement invariance is the systematically differing meaning of the term Europe, this strategy should result in a decrease of measurement invariance problems.

2010S00597

Datta, Ranjan Kumar & Chapola, Jebunnessa (Monmouth University, Criminal Justice, West Long Brnch, NJ, USA [tel: 732-320-3745; e-mail: rda027@gmail.com]), **Immigrants and Crime,** *International Sociological Association, Gothenburg, Sweden,*

¶ Numerous studies have examined political influences on immigrant communities' allocations of fiscal & personnel resources for policing, & public opinion or public confidence in the criminal justice system. Rational theory maintains that resources are distributed in accordance with the need for crime control whereas the conflict theory argues that they are allocated with the aim of controlling racial & ethnic minorities. Existing research more consistently supports the conflict argument, but important issues remain unaddressed. The study addressed a previously unexamined question: whether immigrant communities & native-born Americans have equal criminal justice knowledge of the United States' criminal justice system. The analysis includes the key variables from the opportunity structure & rational choice, deterrence power, & social disorganization theories. The study contends that American immigrants have limited options in assessing criminal justice knowledge that decreases their understanding of the criminal justice system. This study suggests that this lack of knowledge of immigrant populations impacts the field of CJS, and also creates a great deal of anxiety in these populations surrounding the CJS.

Davidson, Debra, J. & Gismondi, Michael (University of Alberta, Edmonton, Alberta, Canada, T6G2H1 [tel: 780-492-4598; fax: 780-492-0268; e-mail: debra.davidson@ualberta.ca]), **Discourse and Legitimacy in an Age of Energy Calamity,** *International Sociological Association, Gothenburg, Sweden,*

¶ We explore resistance to the largest & arguably most environmentally destructive of industrial projects today, the Alberta tar sands. While this megaproject has attracted international attention, we focus on local environmental organizations & citizens engaged in public dialogue with state & corporate actors, using transcripts of public hearings & some supplementary data sources. Through discourse analysis, we identify frames & narratives utilized by proponents to extract consent, & the frames & narratives of opponents used to challenge that consent. We evaluate this discourse in terms of narrative consistency, frame resonance, and strategies used to defend/challenge legitimacy. Corporate proponents offer a consistent frame premised on uncertainty and complexity, which has the affect of alleviating corporations from culpability & supports a narrative in which corporate actors are heroes doing their part to solve global problems. State proponents offer a complementary discourse designed to defend their reputation in the global marketplace, emphasizing responsibility for energy provision & calling for "realistic" responses to climate change. Local environmental organizations have taken a moderate approach, offering constructive suggestions for improvement without challenging the growth paradigm, while embracing the pre-eminence of technical & quantitative discourse. Alberta's citizens define the tar sand's contribution to climate change in ethical and ideological terms, holding corporations & the Albertan state directly responsible. Frames suggesting identification with global citizenry are prominent.

Davie, Grace (Department of Sociology and Philosophy, University of Exeter, Exeter, UK [tel: +44 1392 263302; fax: +44 1392 263305; e-mail: g.r.c.davie@ex.ac.uk]), **Europe as an Exceptional Case: Explanations and Implications,** *International Sociological Association, Gothenburg, Sweden,*

¶ McLeod & Woodhead compare the European & the American cases, the former in terms of religious activity, the latter in terms of particular policies. They both note similarities as well as differences. Drawing on recently published work, the first part of this paper reflects on this material, weighing the balance between long & short-term changes in both Europe & the US. In order to do this, it will look in particular at two aspects of the debate: the presence or otherwise of territoriality & contrasting understandings of the Enlightenment. The second part will consider the implications of these differences in two respects: firstly for policy-making & secondly for the social sciences more generally. If the philosophy of social science, & the tools & concepts which emerge from this, come primarily from the European case, to what extent are these ideas applicable elsewhere, not only in the US but beyond? In engaging these issues this paper will draw together the themes of both sessions 4 & 5.

2010S00600

Davis, Howard H., Baker, Sally & Kowalska, Marta (School of Social Sciences, Bangor University, Bangor, Gwynedd, Wales, UK LL57 2DG [tel: 01248 382123; fax: 01248 382085; e-mail: H.H.Davis@bangor.ac.uk]), **Language Acquisition in Biographical Narratives: Steps in Supranational Identity Formation,** *International Sociological Association, Gothenburg, Sweden,*

¶ One significant aspect of the theme of international educational mobility in contemporary biographies is the experience of language learning & the role of languages in facilitating & inhibiting mobility. Using autobiographical narrative data from the Euroidentities project, this paper considers some of the contrasts between biographical accounts which involve experiences of international schools, specialist language schools (especially in certain parts of Europe), privatized language learning through family & personal networks, & employer sponsored training. Language is both a means of social interaction & a personal accomplishment & such experiences provide good material for interpreting the relationships between individual & collective processes & identity formation. Narratives suggest that the more proficient the level of language, the more advanced form of international education is available to the individual. However, complex biographical experiences of, for example, minority languages, the acquisition of English as a first or second language, or the use of more than one language in educational settings, are integral to the development of self-conceptions over time.

Davis, Mark D. M. (School of Political and Social Inquiry, Faculty of Arts, Monash University [e-mail: mark.davis@arts.monash.edu.au]), **'You Have to Come into the World': Transition, Emotion, Health and (Well)Being in the Everyday Life of the Internet,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper I use experience-oriented narrative analysis to examine accounts of everyday life with the internet. Based on interviews with a diverse group of internet users living in Melbourne, I explore stories of encounters with computers, the internet and related media technologies, with a focus on the life course, health, and wellbeing. The analysis presented will attend to personal engagements with the social transformation attributed to the internet, in particular: the internet as an everyday health technology; the marking of internet-related life transitions with the language of emotions; & discourse on "worlds" & being. On the basis of these themes & with reference to an example website, I suggest a narrative critique of health care & the new media. I argue that the health internet does more than instruct, persuade and circulate material & symbolic goods; it offers itself as a method for making emotional transitions & "being in the world".

2010S00603

Davis, Mary Ann (Sam Houston State University, Huntsville, TX, USA [tel: 1-936-294-4083; fax: mad011@shsu.edu; e-mail:

mad011@shsu.edu]), **Intercountry Adoptions to the United States: Saving Orphans or Buying Babies,** *International Sociological Association, Gothenburg, Sweden,*

¶ Are intercountry adoptions driven by supply or demand factors? We note five flows covering the past 50 years: the European war orphans; adoptions from Central & South America; adoptions from the former Soviet Union; adoptions from China; & a recent flow from Africa. We place our analyses in the context of migration theories. Data are the United States Immigration & Naturalization Service (INS), individual migration data, from fiscal years 1972 to 2006. Analyses are descriptive analyses & logistic regressions. Variables for analysis are: orphan, a dummy variable; age group, (categories under 1; ages 1 to 4; ages 5 & above); sex & country of origin. We analyze adoption rates questioning do countries with higher TFRs will send more ICAs; do those countries with an imbalanced SRB place more of the unwanted sex in adoption; are adoptions negatively related to distance; are countries with low GNI PPPs more likely to send ICAs; & finally do countries with a negative net migration rate have a positive ICA flow to the U.S.? None of these "push" factors are significant. Results instead reflect that the U. S. has a continuing "pull" preference for white or honorary white, young, infant to age 4, adoptees.

2010S00604

Davolio, Federica (University of Milan [e-mail: federica.davolio@unimi.it]), **Aesthetics as Politics? The Slow Food Way to Critical Consumerism,** *International Sociological Association, Gothenburg, Sweden,*

¶ Slow Food was born as a gastronomic association for the promotion of local food cultures. Nevertheless, hand in hand with its internationalization, it has definitely broadened the scope of its mission, getting closer to notions of critical consumption and sustainability. Advocating a concept of food quality that relies on environmental, social & sensory virtues (an eco-gastronomic vocation, in SF terms), it has extended its action from consumers to producers. This new course has disclosed the opportunity for interacting with organizations committed to food sovereignty, sustainable agriculture, biodiversity but has also implied a reflection & attitude on the side of SF toward critical consumerism. Drawing on a variety of quantitative (a survey on SF Italy demographics & initiatives) & qualitative sources (publications, speeches & interviews with key members), the paper will address the multifaceted nature of this association, increasingly inclined to the politicization of food pleasure. The aim of the paper is 1) to explore how the notions of food quality and pleasure are developed as devices for common goods such as shared knowledge, environment, global justice via consumer agency; 2) to problematize the actual position of SF into the wide world of critical consumerism, focusing on the inner tensions between the original bon vivant & the acquired "politically thick" vision of food consumption practices.

2010S00605

Dawson, Andrew (Religious Studies, Lancaster University, Lancaster, LA1 4YN, UK [tel: 01524 592418; e-mail: andrew.dawson@lancaster.ac.uk]), **Consuming the Self: New Spirituality as 'Mystified Consumption',** *International Sociological Association, Gothenburg, Sweden,*

¶ Using the analytical lens of late-modern social theory (e.g. Bauman, Beck, Bourdieu, & Giddens), this paper explores the hermeneutical value of regarding particular forms of new religiosity/spirituality as typically commoditised expressions of contemporary consumer society. In so doing, & whilst acknowledging the dangers of reductionism, the article engages new spiritualities from a number of angles. First, it is argued, new religiosities might be treated as continuous with, & thereby expressive of, the commoditizing processes of late-modernity. Regarded as modes of self-assertion, new spiritualities are held to promote the cosmic aggrandisement of the late-modern self. Second, the countercultural discourse of much new religiosity is acknowledged. Here, new spiritualities may be seen as discontinuous with certain contemporary dynamics and, thereby, to comprise a reflexively orchestrated rejection of modern consumer society. Third, & following Wallis' typology, new religiosities are treated as neither wholly affirming nor entirely rejecting late-modern society, but rather accommodating key elements of it. In effect, the paper concludes, new spiritualities might best be regarded as forms of "mystified consumption."

2010S00606

Dawson, Marcelle C. (University of Johannesburg, P. O. Box 524, Auckland Park, 2006 [tel: + 27 11 559 4272; fax: +27 11 559 1439; e-mail: mdawson@uj.ac.za]), **The Politics of Protest Policing in South Africa,** *International Sociological Association, Gothenburg, Sweden,*

¶ The policing of dissent has captured the attention of social movement scholars in the "global north" for well over a decade, but this area of enquiry is relatively under-researched in the south. This paper attempts to shed light on this issue in the South African context. It addresses the policing of protest primarily from the viewpoint of demonstrators, but also explores the experiences of the police who are called upon to restore public order. The paper begins with an account of post-apartheid restructuring within the South African Police Service in order to problematise the nature and extent of democratic practices within this state institution. The discussion then considers protest action, paying particular attention to the Regulation of Gatherings Act–the piece of legislation that is used to control protest in South Africa–as well as the techniques used by the police to squash dissent & the experiences of repression from the viewpoint of local activists and the police. Relying on the abundant international literature on the policing of protest, as well as the limited, but useful, scholarly work on this issue in the South African context, the paper highlights the similarities & differences between protest policing in South Africa & elsewhere. It also tries to address some of the gaps that exist currently in social movement theorising. For instance, Pamela Oliver (2008) points out that as a consequence of the study of collective behaviour & social movements becoming a sub-field within the discipline of sociology, the study of dissent has been distinguished from scholarly inquiry into crime. As a result, social movement scholars miss the links between repression & crime control & fail to show how the crackdown on criminal activity serves to repress political resistance. Drawing on original field material from four provinces in South Africa, this paper highlights the connections between the control of "ordinary" crime & the repression of dissent. Finally, reflecting on oft-repeated claims by community activists that democracy does not exist in South Africa, the paper presents an argument on the limitations of representative democracy and examines the possibilities of what a participatory democracy would entail.

2010S00607

Daye, Christian (Department of Sociology, University of Graz, Graz, Austria, 8010, Universitaetsstrasse 15 [tel: +433163807417; e-mail: ch.daye@uni-graz.at]), **Notes on the History of Political Gaming,** *International Sociological Association, Gothenburg, Sweden,*

¶ The RAND Corporation has been one of the major institutions involved in the development of game theory in the United States. Having been established towards the end of WWII by the US Air Force & Douglas Aircraft Company, it focused on research that could inform the strategy of the US Air Force. In parallel to the canonical approaches to game theory, RAND's social science division, under the directorship of Hans Speier, developed a procedure or the study of foreign affairs they called "political gaming". This paper explores the relation between political gaming & the contemporaneous work in game theory. Based on archival materials, it deals with the intellectual & cognitive level of both branches of research as well as institutional & personal factors involved in the formation of political gaming. It ends by outlining the trajectory of political gaming as a method of research after its conception at RAND.

de Carvalho, Maria Eulina P. (Universidade Federal da Paraíba, João Pessoa, 58059-900, PB, BRAZIL [tel: (55-83) 3226-2345; fax: (55-83) 3247-8368; e-mail: mepcarv@terra.com.br]), **Parental Involvement and Homework Policies: A Discussion of Gen-**

der and Class Implications, *International Sociological Association, Gothenburg, Sweden,*

¶ Neo-liberal policy has been calling for parental involvement and family accountability as factors of school success. In Brazil, the Family-in-School National Day was launched in 2002, & in 2003 national testing included questions on family educational/cultural activities, students' domestic routines, parents' monitoring of school attendance, help with homework, stress on achievement and attendance to school meetings. However, family contribution to schooling is mainly through mothers' daily monitoring of homework, a practice that depends on free time & educational & cultural capital. Parental involvement is gendered, & schools have differential expectations on parental roles & blame mothers for students' lack of discipline & poor learning. In a country where daily school attendance is still limited to 4 hours, policy rhetoric stressing the impact of family input on test outcomes is blind to gender & class. This paper presents empirical research evidence on the perspectives of family/mothers, school/teachers, and 5th-grade students about homework in public & private schools in Paraiba, Northeastern Brazil, gathered along 2006-2009 (Concepções e práticas de dever de casa, PIBIC/UFPB/CNPQ), showing that: (1) mothers value schooling but many are unable or unqualified to help with homework; homework time is a stressful experience for many mothers & children; families, including poor single-mothers, have resorted to school help services in order to keep their children busy the other half of the day; (2) whereas low class public school students do little homework & are inarticulate about school & life projects, middle class private school students have incorporated the habitus of school success.

De Grande, Hannelore (Department of Sociology, Ghent University, Ghent, Belgium, 9000 [tel: 003292649165; e-mail: Hannelore.DeGrande@UGent.be]), **Typologies of the Career Paths of Doctorate Holders,** *International Sociological Association, Gothenburg, Sweden,*

¶ Stimulating research has been at the heart of the EU policy agenda during the last decade & continues to be a core challenge in the EU plans for 2020. This has resulted in a substantial growth of the number of researchers. Doctorate holders are seen as key players in stimulating society to move towards a knowledge-driven economy. Where they end up after graduation & how their career paths develop, has caught less policy attention. In this paper we seek to address this gap, by uncovering typologies of career paths of doctorate holders using Optimal Matching Analysis, a technique which has proved to be a good tool for career research. We use data of the "Careers of Doctorate Holders" (CDH)- survey to analyze the typologies. This survey was sent to all Belgian doctorate holders in 2005, of which 7160 (partly)completed the questionnaire. Analyses of the full career of doctorate holders was done on a subsample of these respondents. Our analysis differentiates across various disciplines, gender, & age cohorts. The results show among other things that there is great variation in the career trajectories of doctorate holders from different disciplines. Further research is needed to uncover how doctorate holders can validate their specialist knowledge on the non-academic labour market & to what extent the boost in the number of researchers pays off for society as a whole.

De La Fuente Vilar, Graciela (Internet Interdisciplinary Institute; Open University of Catalonia, Castelldefels, Spain, 08860 [tel: +34 93 673 51 31; fax: +34 93 664 19 70; e-mail: gdeULlaULfuentev@uoc.edu]), **Too Much or Too Little? Bolivian Immigrant Women Communicating with Their Families,** *International Sociological Association, Gothenburg, Sweden,*

¶ Transnational families have incorporated in their daily communication the opportunities offered by the information & communication technologies. The use of ICT by Bolivian women in Barcelona represents a meeting point with their families thousands of miles away. Do these contacts allow families to maintain family ties at a distance? This paper presents an analysis of how Bolivian transnational families are managing the communication moments through the use of ICT & the impact of these in their lives. The preliminary results of the ethnographic work & in-depth interviews based on 10 cases of Bolivian transnational families, with a dual perspective–host & origin societies–are twofold. On one hand for these families communication technologies have become instruments for circulating emotions & decisions, and they are also changing their distance perception. On the other hand, when we look in depth we find that there are technology elements & family dynamics that interfere & affect their long-distance relationships, making it very hard for transnational families to handle the "being while being absent" feeling. Thus, we can slightly recognize that the reconstruction of their family roles, specially the maternity role, it is becoming more complex, as well as their family histories.

De La Mora, Gabriela (Instituto de Investigaciones Sociales Universidad Autónoma de Nuevo León, Paseo de la Reforma y Lázaro Cardenas s/n, Unidad Mederos, Monterrey, Nuevo León [tel: 0181 83294237; fax:; e-mail: gabrieladelamora@gmail.com]), **Analysis of Property: A Local Proposal of Payment for Environmental Services in Mexico,** *International Sociological Association, Gothenburg, Sweden,*

¶ The study & research of property & its rights have an enormous relevance on legal, economic, political, ecological, and sociological matters. Recently, the idea to establish clear property rights over land has been considered as a condition to preserve natural resources, develop payment for environmental services & promote sustainable development at the local level. For these kinds of projects, the definition of the property, as well as the services associated to these resources become important. The linkage between water & forest represents a great complexity in relation to property in the context of compensation for environmental services in Mexico, because several actors with different interests & perceptions of those rights converge with diverse appropriation practices & different regimes of property and institutions governing uses at the local level. My proposal is to explain this complexity through a case study of a rural community in Mexico that has implemented several agreements of environmental services with the municipality. From a sociological point of view property could be considered a process, because its construction over time depends on social perception about legal rights, practices & social interactions in a specific time and space context.

De La Puente, Carlos (Sociología IV / Universidad Complutense, Campus de Somosaguas - 28223 - Pozuelo de Alarcón - Madrid (Spain) (Europe) [tel: +34 91 394 29 74; e-mail: cdelapuente@cps.ucm.es]), **The End of the Descartes' Era Begins the Comte's Era or the Movement of the Sociology Toward a Material and Objective Base,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ To propose the end of the Descartes era, it is supposed that, besides considering the application of philosophy to sociology, the Comte era should have begun, which is supposed to also apply neuroscientific knowledge to sociology. The point of departure is the suggestion that Comte makes in Lesson 45 of the *Cours de Philosophie Positive*, & the relationship with the brain of the concepts considered key for sociology & that they were discovered by its founders: social facts, social action, the mean of the action & the ideal type, which themselves related them with the brain, in an explicit or implicit way. Considering that these concepts are in themselves information, they should be part of the cognitive component that is stored in and produced by the brain.

De la Torre, Renée (CIESAS, España 1359, Colonia Moderna 44190, Guadalajara, Jal., México [tel: (52-33) 36 56 62 53; fax: (52-33) 32 68 06 25; e-mail: reneedela@gmail.com]), **Catholicism in Gudalajara, Mexico: Thresholds of Tension between Conservative Orthodoxy and Popular Heterodoxy,** *International Sociological Association, Gothenburg, Sweden,*

¶ This work puts the current status of the Catholic church in Guadalajara, which is thought of as the hard core of Mexican conservative Catholicism, into relief. The title is one it has earned by representing a Hispanic Catholicism, & because it has been the cradle of the most radical & intransigent Catholic movements, as well as being a bulwark against protestant missions. Nevertheless, in spite of appearances, changes in matters of religion are occurring under the surface among members of the congregation. This is shown by the adoption of new content in questions of the supernatural, & in new meanings & new ways of conducting ceremonies & rituals, which for the most part run through traditions recognised as popular religion. In short, this paper seeks to demonstrate that Catholic traditions are undergoing profound transformations that present us with the outline of a heterodox Catholicism, which consists of an apparently more conventional Catholic practice now living together with religious movements of the indigenous reinvention type, secular syncretisms, various kinds of esotericism with different origins & stock beliefs, & a buoyant New Age presence searching for Mexican roots.

De Oliveira, Márcio (Department of Social Sciences, Federal Uni-

versity of Paraná, Brazil, Rua General Carneiro, 150 Zip Code 80060-150 Curitiba, Pr [tel: 55 41 33605173; fax: 55 41 33605173; e-mail: marciodeoliveira@ufpr.br]), **A Chapter of Brazilian Sociology History: The UNESCO Research about Racial Relations and the Unexpected Racism Against Poles in Curitiba (Paraná).,** *International Sociological Association, Gothenburg, Sweden,*

¶ The history of Brazilian sociology has been very influenced by the UNESCO's fight against racism just after the Second World War. In Brazil this fight culminated in a research program about racial relations which took place between 1951 & 1952 in the cities of Recife, Salvador, Rio de Janeiro, & São Paulo. The UNESCO option for Brazil had one great reason: the country was considered to be a successful model of harmonic racial relations and, in this sense, it would be a paradigm for other racial conflictive countries all around the world. Nevertheless, Brazilian history and society disappointed UNESCO's officials because the Brazilian research team had discovered that the model of democratic racial relations–as described by the most famous Brazilian anthropologist, Gilberto Freyre (1900-1987)–was glaringly overestimated. So, after the UNESCO research, a new Brazilian team–headed by the most important sociologist of this period, Florestan Fernandes (1920-1995)–engaged a new research about racial relations on Southern Brazil. This area was left out of the first UNESCO research apparently because of the small number (even the lack) of black people. Nevertheless, in the city of Curitiba (the capital of the state of Paraná), they were surprised by discovering a new type of racism: racism against white people, particularly, against descendents of the Poles. This paper, by returning to this period, intends to recover the details of this unexpected discovery, to analyze these untold dimensions, placing it in its real position in Brazilian sociology history. In order to do so, we analyze the context of the research made in Paraná, such as the articles & books produced after that & published by the researchers Octávio Ianni & the former president of Brazil, Fernando Henrique Cardoso, between the years of 1959 and 1966.

2010S00616

De Pauw, Caroline (Université de Lille 1, CLERSE-CNRS, Villeneuve d'Ascq, France, 59650 [tel: +33 614767999; e-mail: caroline.de-pauw@laposte.net]), **Medical Strategies which Allow to Decrease the Stigmatization of Precarious and/or Vulnerable People,** *International Sociological Association, Gothenburg, Sweden,*

¶ The object of this communication is to present the preliminary results of an empirical research on the care of vulnerability in general medicine. This study is based on the observation of consultations but also waiting rooms in several offices of general medicine of Nord-Pas-de-Calais (France). With more than 30 days of field observations, more than 1000 patients & 4 doctors were analyzed. Our first results show that there are strategies organized by certain doctors, strategies which allow to decrease the stigmatization of precarious and/or vulnerable people (drug addicts, homeless persons, beneficiaries of the additional universal healthcare coverage, …), whether it is in the organization of their exercise (different & additional medical activity to general medicine, atypical group's discharge), during the consultations (attitude towards their patients, arrangement of their office), or in the organization of their waiting rooms. The observations also allow to show that these strategies have a positive influence on the behaviour of the vulnerable and/or precarious people who remobilize & follow the care & the treatments which are proposed to them. Finally, this study allows us to confirm how, when these strategies are not organized, the stigmatized persons conform to the role that was assigned to them by society & have the expected behaviour: no follow-up of the treatment, drug addict patients' aggressiveness, etc. This communication is on the crossroads of the sociology of health, the sociology of disparities, the sociology of occupations, & moral sociology, it will based on authors such as Péneff, Paugam, or still Kellerhalls.

De Silva Ljunggren, N. (Stockholm University, CEIFO, Väringavägen 29, 18263 Djursholm [tel: 0046 8 7534700; e-mail: nilani@telia.com]), **The Role of Informal Market: Petty Trading as a Strategy for Survival in Post-Conflict: Case Study Liberia,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study investigates the role of the small-scale entrepreneurs in petty trading as a strategy for socioeconomic survival in Post-war Liberia. The study is based on a number of interviews conducted in the country and related literature. It also provides us with a better understanding and knowledge of petty trading, in other words, survival strategies, socioeconomic activities, sociocultural interactions, and political issues that determine the petty trading sector in post-war Liberia. With the help of social network theory from a sociological perspective & through empirical evidence it is possible to say that petty trading encompasses a wider range or variety of dynamic socio-economic activities than is usually assumed in the literature. It also indicate that these small-scale trading activities dominated by females represent the fastest growing sector in the economy, & they have a growing capacity to absorb large numbers of people who may otherwise be unable to secure wage-earning jobs in the public & private sectors. Petty trading activities entail an extraordinary range of skills, including the ability to engage in semi-skilled labour, & require business acumen & social skills that can often be acquired outside the boundaries of formal education. It is important to introduce an environment to enhance the innovative climate; as such initiatives will create new job opportunities, restrict poverty, & promote gender equality.

De Souza, Leticia Godinho & Cruz, Marcus Vinicius (Fundação João Pinheiro, Al. das Acácias, 70. Belo Horizonte - MG. 31.275-150 Brazil [tel: +55 31 34489646; fax: +55 31 34489613; e-mail: leticiagodinho@gmail.com]), **Beyond a Tough Police for Bad Guys? Prevention Policies in Latin America,** *International Sociological Association, Gothenburg, Sweden,*

¶ The increase of crime & violence rates in Latin America contrasts with the economic reactivation & poverty reduction in the last decade. The region, which has 8% of the world-wide population, answers for near 30% of homicides. This scenario has stimulated new crime control standards, characterized for hardening behavior control, tough justice application & old social order conceptions, contrasting with a spread of so-called "prevention policies". However, "repression strategies versus prevention strategies" as category of analysis cannot by themselves afford preventive practices of the new policing standards in Latin America countries. This paper aims to present some of these new strategies of crime prevention recently adopted by Latin American countries, such as Brazil (Community Police, CompStat), Argentina (Zero Tolerance, Law & Order Control) & Colombia (Neighborhood Watch, Broken Windows), highlighting its theoretical framework, mostly derived from central countries. Some findings point that these new strategies express, on the one hand, legal & humanity principles, penalty utility, & socialization of inmates–according to the theorical perspective of penal welfare (in David Garland's account). However, they coexist with punitive & "authoritarian" points of view in which policy performance ultimately expresses social revenge on "potential criminals" & citizens considered "undesirable" for community life. Finally, despite the widespread use of the expression "community" in "prevention" strategies, real participatory & inclusive perspectives are still isolated & have a slight effective impact on conservative and fear-dominated societies.

de Vries, Jennifer (Business School, University of Western Australia, 35 Stirling Highway, Crawley, West Australia, 6009 [tel: +61 8 9370 4985; e-mail: jennifer.devries@uwa.edu.au]), **Benevolent Colleagues or Radical Change Agents? Rethinking Mentoring to Challenge the Gendered Status Quo,** *International Sociological Association, Gothenburg, Sweden,*

¶ Benevolent colleagues or radical change agents? Rethinking mentoring to challenge the gendered status quo. Mentoring programs targeted at women within higher education remain popular. Devos (2008:195) suggests this popularity is "because they speak to institutional concerns with improving performance in a performance culture, while being seen to deal with the problem of gender inequity". The mentoring program investigated here was designed, through repeat mentoring, to enable mentors to develop a more systemic understanding of gendering processes & to engage mentors in working for gendered change. The research took place in an Australian research-intensive university. Interviews with male and female professors, mentors in the Leadership Development for Women program, explored mentor's understanding of gender issues & the approach they brought to mentoring & their mentoring role. The majority of mentors relied on an instrumental one-way knowledge transfer approach to the mentoring relationship. This approach clearly diminished the possibility of learning from mentees. A developmental two-way mentoring approach was more conducive to mentor learning & to the development of gender insight on the part of the mentor. However mentors appeared to be captive to the ongoing project of being successful in a competitive & ambitious university, thus interpreting their mentoring role as assisting more junior colleagues to succeed within the existing gendered status quo.

de Vroome, Thomas & van Tubergen, Frank (ERCOMER institute, Utrecht University, Utrecht, the Netherlands, 3584 CS [tel: +31 302538206; fax: +31 302534733; e-mail: T.M. deVroome@uu.nl]), **National Identification and Settlement Intentions among Immigrants in the Netherlands,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study focuses on two aspects of immigrant integration: national identification & settlement intentions. We use cross-sectional survey data of first generation immigrants from Turkey, Morocco, Surinam & the Dutch Caribbean in the Netherlands (N=2979). We analyze to what extent immigrants' national identification and settlement intentions are related & to what extent they have the same determinants in terms of economic opportunities in the host and origin country & socio-cultural orientation towards the host country, minority group & origin country. We use seemingly unrelated regression in STATA 10 to estimate our models. Results show that there is a positive association between immigrants' national identification & settlement intentions, that education and economic opportunities are differentially related to the outcome variables, & that there are similar relations of contact with natives with the outcome variables. Moreover, we find that country of origin is differentially related to the two outcome variables.

Dealwis, Caesar & Khemlani David, Maya (Mara University Of Technology Malaysia, Samarahan Campus, Sarawak, 94600 [tel: +6082616652; fax: +60826773000; e-mail: cjerdealwis@sarawak.uitm.edu.my]), **Language Choice of Dayak Bidayuh Undergraduates in the Friendship Domain,** *International Sociological Association, Gothenburg, Sweden,*

¶ Sarawak is the largest of the fourteen states in Malaysia & is located on the island of Borneo. The Dayak Bidayuh form the fourth largest ethnic group in Sarawak after the Ibans, the Malays & the Chinese. There are four major Bidayuh dialectal groups & the major linguistic problem facing them is that there is no common Bidayuh language. Using Fishman, J. (1968; 1972) as the main framework, the objectives of this paper are to determine the extent of Bidayuh, Bahasa Melayu, English and Sarawak Malay used in the friendship domain by the rural & urban younger generation of Dayak Bidayuh undergraduates & to investigate the reasons for the code selection. The data were collected through three main instruments, namely a questionnaire distributed to 213 respondents & audio recordings of 32 casual conversations. Myers-Scotton's (1993c) Matrix Language Frame Model was utilized to analyze the transcriptions based on different categories of language used & these will be supported by face-to-face interviews to explain language choices.

Debert, Guita Grin (Universidade Estadual de Campinas (Unicamp), Alameda Casa Branca, 1088, Sao Paulo, SP, 01408000 [tel: 5511 30855298; fax: 5511 30855298; e-mail: ggdebert@uol.com.br]), **Ageing, Gender and Sexuality in the Brazilian Society,** *International Sociological Association, Gothenburg, Sweden,*

¶ Brazil is a country where the cult of beauty, youth & sexuality is seen as one of its most salient cultural characteristics. This cult contrasts with the premature ageing of the population along axes of gender, class, race, & ethnicity. Drawing on the interplay of gender, ageing, & sexuality, the aim of this paper is twofold: (1) to show through content analysis of discourse produced by Brazilian Gerontology, Sexology & self-help literature how gender differences are dissolved in their attempt to demonstrate that the decrease in sexual activity in old age is replaced by a unique and intense sexual pleasure ;(2) to analyze the way in which these discourses on the ageing body & sexuality are differently perceived & evaluated by older men & women participating in "senior citizens clubs" who mobilized mostly women & the "pensioners' associations" that generally congregate men in the city of São Paulo.

2010S00623

Decataldo, Alessandra & Fasanella, Antonio (Department of Social Research and Sociological Methodology, Sapienza University of Rome, Rome, Italy, 00198 [tel: +390684403323; fax: +0684403346; e-mail: alessandra.decataldo@uniroma1.it]), **Evaluation of the Italian University Reform Policies,** *International Sociological Association, Gothenburg, Sweden,*

¶ Our purpose is to highlight a research program intended to underline weaknesses & strengths of the implementation of the DM 509/1999 within the Italian university system, therefore attempting to understand if the DM 270/2004 has the means to make up for those weaknesses, as mentioned. The University of Rome La Sapienza was identified as an ideal context for this analysis, due to its dimensions & complexity, & because of its variety of scientific and educational areas of academic training. From a practical point of view, we analyzed how the DM 509/1999 was introduced and implemented within & by the university organization (with the goal of understanding the criteria by which the normative innovation was merged with the re-organization of faculty, majors, etc.), by the professors (analyzing how they re-evaluated their activities) & by the students (analyzing a wide variety of phenomena such as dropping out, delayed & decreasing graduations, through either objective & subjective data, with specific attention to the question of "didactic loads"). From a methodological point of view, we came to the creation of longitudinal multidimensional models of the students' careers, aiming at identifying the "mechanisms" through which from an initial state t0, a subsequent state t1 is generated.

2010S00624

Deindl, Christian (University of Cologne, Research Institute for Sociology, 50939 Cologne, Germany [e-mail: deindl@wiso.uni-koeln.de]), **Social Involvement and Wellbeing in Old Age: A European Comparison,** *International Sociological Association, Gothenburg, Sweden,*

¶ All Western societies are ageing. Getting old is naturally associated with changing & even diminishing social networks: people retire, children are moving out, & network partners get frail & die. Additionally, arising health problems may prevent older people from staying socially active. But people today do not only live longer, they also experience more healthy life years they can spend actively. Old age is thus no longer only associated with frailty and loneliness. This might also change social networks & living conditions of elders today: social activities & the social capital derived might influence wellbeing positively–also in older age. Using the Survey of Health, Ageing & Retirement in Europe the connection between wellbeing & social involvement and social networks in old age will be analysed. A special emphasis is given to social support (giving & receiving of money, practical help, etc.) & social involvement. The comparison between 14 European countries is suited to examine the influences of societal contexts on wellbeing in old age–a question that is becoming more & more relevant for welfare policies. In particular the following questions will be addressed: What kinds of networks do older people have? How much social involvement & support can be found? Is there a relation between social ties & wellbeing in old age? And finally, do patterns differ across Europe & how could these be explained?

2010S00625

Del Alamo Pons, Oscar (Consorci de Salut i d'Atenció Social de Catalunya (CSC), Avinguda Tibidabo, 21. 08022. Barcelona. Spain. [tel: (34) 93 253 18 20; fax: (34) 93 253 18 20; e-mail: oalamo@chc.cat]), **Active Aging: Welfare, Dependency, Social Services in the Spanish and Catalonian Reality. CSC's Approaches and Perspectives,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ According to United Nations' prognosis, in 2050 Spain will be the most aged country in the world after Japan. With a high likelihood, this demographic transition will lead to an increase in the potential demand of social services. Consequently, this emerging demand will increment the public expenditure derived from the cost of care services for the elderly population. Even more when in 2007 the "Ley de Atención de la Dependencia y Promoción de la Autonomía Personal" (also called "The dependency law") came into effect in Spain & Catalonia. This law has become the first step in order to achieve a more exhaustive welfare state. So, apart from the pension, public health & education system, the welfare model has nowadays a fourth axis destined to attend dependency situations & those ones affected by the lack of autonomy. This fourth axis is a very important element to establish the Spanish Welfare State as one of the most advanced in the world. This fact also means that Spain–& Catalonia–has to face some critical challenges: a) more resources & capacities will be needed to satisfy the aforementioned demand; b) consequently, an elevated cost that–unlikely–won't support itself as the population contributing to–in economic terms–the system & the population receiving from the same system will be too unbalanced and will require to be increased; c) the historic delay concerning public expense–in terms of social services that has been usual in the country (overall if we compare Spanish reality with neighbour dynamics from European Union countries); d) the progress in fields such as life expectancy has not been accompanied by better health conditions in the population (especially in elder people). In this sense, strenghtening active aging turns into one of the most suitable strategies in Spain & Catalonia with a view to: a) boost longevity & reduce the probability of falling into loss of autonomy & dependency situations; b) consequently, cut down

the number of incidences that must be supported by the public system, not only because of the case increase but also because of the demographic unbalance (elderly people vs. younger ones). In Spain and Catalonia, despite the importance that the availability of initiatives & policies aimed to promote people health could have in half term, these are limited in contrast to the quick aging of the population. This proposal suggests, concerning the aforementioned aspects: a) to diagnose the challenges that Spain and Catalonia are facing due to their population aging process; b) and to expose in which way fortified active aging policies could reduce the pernicious effects of the mentioned demographic processes. Also, the strategies that CSC designs for the projects it manages–and their registered effects–will also be detailed.

2010S00626

del Mar Griera, Maria, Forteza, Maria & Martinez-Ariño, Julia (Universitat Autònoma de Barcelona, Cerdanyola del Vallès (08193) Barcelona, Catalonia, Spain [tel: 0034 636734131; fax:; e-mail: mariadelmar.griera@uab.cat]), **Beyond the Freedom of Religious Rights: The New Management of Religious Diversity,** *International Sociological Association, Gothenburg, Sweden,*

¶ Religious diversity has become a crucial issue in the policy agenda in European countries in recent years. To face the new challenges in the religious field many new policy instruments are being promoted and the traditional models of state-church relationships are being redefined. However, a look at the new strategies of management of religious diversity shows that the main changes are not at the law level, but rather at the emergence of new "soft governance" strategies such as the establishment of selective funding, the training of religious staff, & the promotion of "official representatives" of religious communities by the governments among others. We will analyze these changes under three hypotheses: an aim of a growing control over religious communities, & especially over the Muslim community; a path dependence dynamic following the dynamics of relationship with the traditional churches; & the opening of a window of opportunity for the recognition of the religious communities' public role. The paper will mainly focus on the case of Spain but we will also refer to some examples coming from other European countries such as Austria or Italy.

2010S00627

Delaunay, Catarina (CESNova a Centro de Estudos de Sociologia da Universidade Nova de Lisboa, Lisbon, Portugal [tel: (+351) 21 790 83 00; e-mail: catdelaunay@gmail.com]), **The Beginning of Life at the Laboratory: The Challenges of a Technological Future for Human Reproduction,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper analyses the underlying principles & social consequences of the increasing detachment between human reproduction and sexuality via the process of technological intervention in the biological body, with a focus on current debates in Portugal. With biomedical techno-sciences, conception has become artificial (in vivo or in vitro fertilization). The risks & uncertainties concerning the development of Science & Technique in the biomedical field applied to reproduction present important challenges & bring forth critical questions to future generations and to humanity as a whole. For example, gametes donation (heterologous assisted reproduction) implies fulfilling some ethical principles such as informed consent, anonymity and gratuitous involvement; other possible problems include the potential development of eugenic aspirations, dilemmas arising from the commercialization of gametes, embryos & foetus or surrogate motherhood, from reproductive cloning or embryonic stem-cell research techniques. In this framework, new entities appear on the scene like gametes donors, cryopreserved embryos or rented wombs that demand new laws & governmental regulation. It is essential to study which values the techno-sciences are actually redefining, the range of social choices towards these values & the consequences these choices have. The paper will reflect upon these new values & will question whether they are compatible or not with democratic principles such as autonomy, human dignity or equal rights. I will approach this problem both theoretically, using tools from the Sociology of Science & of Medicine, through data analysis (reports from ethical committees, legislation, media), and through focused interviews to relevant actors (doctors, infertile couples, experts).

2010S00628

Delerue Matos, Alice (Research Centre for the Social Sciences / University of Minho, Portugal, Largo do Paço, 4704-553 Braga, Portugal [tel: +351253604212; fax: +351253604697; e-mail: adelerue@ics.uminho.pt]), **Grandchild-Grandparent Socialization,** *International Sociological Association, Gothenburg, Sweden,*

¶ In a context of population aging, the Sociology of the Family has been interested on the influences of the grandparents on their grandchildren but did not devote the attention deserved to the study of the influences of the grandchildren on their grandparents, in spite of the role played by the youngest generation in the family & social integration of the elderly. In this qualitative research, we interviewed 34 children from 10 to 13 years old who were the eldest grandchildren of Portuguese elderly. The study shows that the socialization of grandparents by grandchildren includes a diversity of skills & knowledge, mainly of new technologies (computer, mobile phones skills, etc.), native language learning, and contemporary life styles. Grandchildren also play an important role motivating their grandparents to social engagement in education, leisure activities & family or social events. Finally, grandchildren are active providers of emotional support to their grandparents. They represent a potentially significant resource for a better integration of elderly in contemporary societies.

2010S00629

Delicado, Ana (ICS University of Lisbon, Av Prof Anibal de Bettencourt, 9, 1600-189 Lisbon [tel: 00351217804700; e-mail: ana.delicado@ics.ul.pt]), **Technologies for Change: The Case of Clean Driving,** *International Sociological Association, Gothenburg, Sweden,*

¶ Scientific research & technological development are heralded by some as the main means for preventing climate change, by devising ways of reducing emissions, improving energy efficiency, or even capturing carbon already released into the atmosphere. However, it is crucial to examine whether R&D endeavours are taking into consideration social needs & concerns, local knowledge, & lay expertise to assess if citizens are being involved in the definition of research questions, in data collection, or in the design & implementation of technical solutions. This paper is based on a case study of a Portuguese R&D project, CleanDrive, an educational simulator for safe & environmental driving. Combining expertise from mechanical engineering & software development, the game tries to accurately reproduce the performance of the vehicle in response to road conditions & to the driver's behavior. But how have human & social characteristics been factored in the project? Which conception of user is explicitly or implicitly assumed by the research team? How was the device tested in real human subjects? What reactions has it been eliciting from users? This case study will be analysed through a combination of methodologies & techniques: document analysis, interviews with scientists & engineers & users, & ethnographic observation.

2010S00630

Delorme, Nicolas (University of Grenoble [e-mail: nicolas.delorme@ujf-grenoble.fr]), **Sports Information into the Internet Age: Position and Professional Identity of the French Online Sports Journalists,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the last decade, the journalistic field experienced significant transformations with the entrance into the digital age. Beyond the emergence of free press, the explosion of the Internet phenomenon is a major factor explaining the growing "hyper-competition" within that field. If the arrival of this new medium does not cause the disappearance of others, it nevertheless calls into question their acquired positions. The aim of this exploratory study is to determine the place occupied by the online sports journalists in the journalistic field & in the sub-field of sports journalism in order to understand how these spaces were restructured after the arrival of these new entrants. This study was conducted in two separate phases. Initially, quantitative data were collected from questionnaires (n = 97). Then, following the analysis of the quantitative data, semi-structured interviews (n = 22) were conducted. Results suggest that online sports journalists exercise a separate profession, which is still very different from that of their colleagues in the print newspaper. They suffer from lower esteem within the journalistic field; this disregard could however be in balance according to whether the journalist exercises his functions within an incorporated or independent website. Results also show that the sports field plays an increasingly dominant role in the production & circulation of news via the development of its own media. These institutional media would impose a new heteronomy which would be all the stronger towards the online journalists because of its time specificities & working conditions. Finally, this study shows an important structural homology between sports journalism & the other specialized sub-fields of the journalistic field already analyzed in the scientific literature.

Demanet, Jannick (Department of Sociology; Ghent University, Korte Meer 3-5; 9000 Ghent [tel: +32 (0)9 264 91 90; fax: +32 (0)9

264 69 75; e-mail: jannick.demanet@ugent.be]), **Social-Ethnic School Composition and School Misconduct: Does Sense of Futility Clarify the Picture?,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the area of school deviancy, important school variables remain understudied: school compositional features. However, we imagine that the placing together of groups in schools, for example groups with differing poverty levels or different ethnic groups, might yield tensions between them, resulting in anti-social and anti-school behavior. Therefore, this contribution assesses whether the social-ethnic school composition influences students' school misconduct. Based on general strain theory, we expect to find that individual sense of futility–an indicator of goal blockage feelings–acts as an intermediate mechanism in this relationship. Moreover, starting from cultural deprivation & oppositional culture theory we hypothesize that a shared school culture of futility acts as a mediator as well. According to these theories, school misconduct can be seen as a shared response of disadvantaged groups to their situation. Multilevel analyses of data from the Flemish Educational Assessment, consisting of 11,872 students in 85 schools, showed that ethnic composition has an impact on school misconduct. There is more deviancy in ethnically mixed schools than in ethnic concentration schools, due to a greater student sense of futility in these mixed contexts. The presence of a culture of futility did not affect the probability of being deviant. These results applied only to natives: school features did not affect migrant students' deviancy. We explain this by reference group theory. Natives attending concentration schools compare their situation more with ethnic minority members, which are disadvantaged in larger society. Natives are a privileged minority in those schools, making the need for resistance superfluous.

Demey, Dieter H. (University of Cambridge - Department of Sociology, Cambridge, United Kingdom, CB2 3RQ, [tel: +447760497777; e-mail: dhd23@cam.ac.uk]), **Are There Gender-Specific Effects Of Education on the Transition to Parenthood? An Analysis of Belgian and British Panel Data,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper aims to investigate whether there are gender-specific effects of education on the transition to parenthood. Dominant sociological & economic theories of fertility focus on how the fertility decline in the industrialised world can be explained by the growth in women's economic independence, in particular by their increasing participation in the education system & labour market as well as by changes in women's occupational & income prospects. Descriptive findings of previous studies show that higher educated women have a lower average family size than low educated women, delay entering motherhood, & have higher rates of childlessness. However, there has been scant attention for the influence of education on the transition to fatherhood, even though it has been argued that focussing on changes in both women's & men's lives would lead to a better understanding of changes in family formation. Furthermore, for both women & men, the results of studies which statistically model the probability of becoming a parent as a function of educational attainment (and other factors) are partly inconclusive, showing both negative & positive effects. The paper intends to analyse the influence of women's and men's educational attainment & enrolment on the transition to parenthood & to identify gender-specific effects of education on becoming a parent. Data from two panel studies have been analysed using methods for longitudinal data analysis: the Panel Study of Belgian Households for Belgium & the British Household Panel Survey for Britain. Preliminary results show that, after controlling for educational enrolment, educational attainment has a negative effect on first birth probabilities for women, whereas for men educational attainment exerts a negative effect in Britain and a positive effect in Belgium. Furthermore, Belgian higher educated women & men accelerate entering parenthood after leaving education, while the opposite is observed in Britain.

Demirhisar, Deniz Günce (EHESS CADIS, 54 Bd Raspail 75006 Paris France [tel: 0033 6 71 90 1662; e-mail: denizgunce@gmail.com]), **Social Movements in Contemporary Turkey: Representations of Social Movements in Art Works and Reconstruction of Collective Memory: A Subjectivation Process?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The focus of this communication is the transformations of social movements in Turkey, through an analysis of a corpus including literary & cinematographic productions in the popular culture and sociological interviews from the field research of my PhD thesis. I will argue that these recent art productions revitalise a certain dimension of social movements, constructing heroes, depolitising them through aventuresque narratives. However, they present an alternative discourse to the official history. Some taboos are being destroyed in the process of democratization. On the other hand, these works of art are often the productions of old social movements actors. The subjectivity of the "revolutionary" figure, mostly heroic & afterwards demystified will be discussed. What are the impacts of artistic expression upon collective memory, new social actors & their link to the past, oscillating between mythification & criticism? I will try to explore the links between the collective memory issues & the subjectivity of actors for a better understanding of actual social movements in Turkey. How do novels, films & a new grammar of collective action, very creative itself, contribute to the democratisation of Turkey? Could we define these processes as a subjectivation processes?

Deng, WeiZhi (Shanghai University, Shanghai, China [e-mail: deng@dengweizhi.com]), **Social Conflicts in Current China and the Solutions,** *International Sociological Association, Gothenburg, Sweden,*

¶ The higher GDP in China, the more social conflicts at the same time, this is present-day China. China rapidly developed economically, but social development is neglected. The conflict between the rich & the poor, the conflict between officials and common people, & cultural conflicts are the key Chinese problems. There are 10 new features of the Chinese conflicts such as: conflicts turn out to be well organized, with high-tech media, & the internet makes the influence of social conflicts "out of control". Moreover, the "official solutions" & "practical solutions" of the conflicts are different. All these tendencies are the background of the new Chinese policies' aim at a "harmonious society".

Denis, Ann (Sociology & Anthropology Dept, U of Ottawa, Ottawa, ON, Canada K1N 6N5 [tel: 613-562-5800 x 1429; fax: 613-562-5906; e-mail: adenis@uottawa.ca]), **Internet Use as an Indicator of (Ethnic) Cultural Practices of Barbadian and Franco-Ontarian Young People,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Internet has been analyzed as both an instrument of cultural assimilation/homogenization (given the Anglo-American domination of the Web), & as a means of promoting the maintenance of ethnic specificities, particularly in the case of minority and/or transnational ethnic communities. We examine patterns of Internet use by senior high school students in three types of minority ethnic communities, in order to explore how this relates to their status as cultural minorities, & to their keeping in touch with their more geographically dispersed (ethnic) community, including possible diasporic/transnational components. Multivariate analysis is used to examine their cultural minority status in intersection with their other social locations (notably gender & social class). One type is composed of a sample of Barbados students, conceptualized as a minority internationally, & experiencing long-standing Anglo-American socio-cultural hegemony. The other two types are subgroups within a sample of Franco-Ontarian students in Canada. All attend schools where teaching is in French, an official language in Canada, but a minority one within Ontario. All are exposed to both Anglo-Ontarian/Canadian & Anglo-American socio-cultural hegemony. The two subgroups are those whose ethnic origins only include some combination of British & French, and those whose origins include other ethnic origins.

Denissen, Amy M., Boyns, David, Gerbasi, Alexandra & DeBose, Herman (California State University Northridge, 18111 Nordoff St., Northridge, CA 91330-8318 [tel: 818-677-4894;

e-mail: adenissen@csun.edu]), **Economic Crisis and the Public University: The Effects of Budget Cuts on Institutional Culture, Commitment, and Resistance at the California State University,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study investigates the impact of the economic crisis at the California State University (CSU) system, & the specific effects of tuition/fee increases, furloughs, & enrollment cuts on the campus community. Using both qualitative & quantitative methods, the study determines how discrete stakeholder groups (faculty, staff, & students) are affected by the economic crisis. Specifically, we examine the impact of the economic situation on institutional commitment, engagement, identification, justice, and satisfaction. The study also asks who becomes invigorated by the economic crisis, & who retreats. Since the nature of the current economic situation at the CSU is unprecedented, the outcomes of this study reveal the disposition & extent of the impact of these cuts on all affected groups, & the various coping & resistance strategies that emerge to contend with these conditions. Preliminary analysis suggests that perceived institutional support and greater institutional identification are negatively related to resistance activities while perceived justice & greater institutional commitment are positively related to resistance activities.

Déplaude, Marc-Olivier (INRA, Paris, France [e-mail: deplaude@ivry.inra.fr]), **Reinventing a Figure : "Foreign Doctors" in France,** *International Sociological Association, Gothenburg, Sweden,*

¶ Great Britain & United States have hosted many abroad-trained doctors since the 1950s & have allowed some of them to pursue their careers on their territories. On the contrary, France was, until the late 1970s, virtually closed to doctors who were not trained in its universities. However, since the early 1980s, many French hospitals have employed "foreign doctors", i.e. doctors many of whom came from former French colonies & protectorates. Thus these doctors have become a key component of the current French healthcare system. How did that change unfold? How can it be explained? What does the lasting presence of foreign doctors in France tell us about the recent transformations of the French healthcare system, & about the way the latter is regulated? What does this case teach us about contemporary migrations and North-South relations? On a more theoretical level, to what extent does this issue lead us to reconsider certain sociological and historical analyses about professional closure practices? These are the main questions this communication addresses. The analysis is based mainly on written sources, but also on retrospective interviews with high civil servants & doctors.

2010S00639

Dermott, Esther & Haynes, Jo (Department of Sociology, University of Bristol, 12 Woodland Road, Bristol, BS8 1UQ, UK [tel: +44 (0) 117 9287505; e-mail: esther.dermott@bristol.ac.uk]), **Displaying Mixedness: Difference and Family Relationships,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper builds on existing research on mixed heritage families in order to both explore mixed parentage discourse & practice and expand sociological analysis of the category of mixedness. In the paper we argue that the concept of "displaying families" (Finch 2007) can be usefully deployed in the study of mixed families as a mechanism for understanding the experiential dynamics of parental differences as relational & processual. First, we outline the problems with the mixed category as it is operationalised within academic & policy research & explore the usefulness of the distinction between nominal & experiential dimensions of social identity. Second, we critically engage with the concept of display as a useful for illuminating when, how & for whom experiential dynamics of difference within mixed parentage families are relevant for conveying the meaning of family. Finally, we draw attention to the methodological conundrum of researching mixedness posed by our conclusions. We therefore provide analytical insights into Finch's concept of display by deploying it to address intransigent issues in the study of mixed parentage families.

Dernovaya, Anna (Russian State University for the Humanities, Moscow, Russian Federation [tel: +7 916 946 91 21; e-mail: anna.dernovaya@rggu.ru]), **You Are in the Army Now … Or Socialization of Conscripts from a Symbolic Interactionist Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper argues the army can be considered as a "total institution" if it takes a total control upon the individual by the instrumentality of strong formal & informal rules. This statement is illustrated by the example of the Russian army. The examination of the Russian system of conscription shows that the process of socialization of recruit in the army contains primary and secondary elements. On the one hand, characteristics of secondary socialization, according to theory of Berger and Luckmann, such as internalization of "sub-world", role-specific knowledge & vocabulary, formal interactions, distance, high degree of anonymity, & role-taking are integral features of the relationship between recruits & command staff. On the other hand, at the same time informal relationships, high degree of emotional identification, prevalence of face-to-face informal interactions, & lack of choice, which are characteristics of primary socialization, play an important role in military service. The combination of these elements enables the army to take control of the conscript.

2010S00641

Deschaux-Beaume, Delphine (Institute for Political Studies, Grenoble, 38040 France [tel: +33476826011; e-mail: delphine.deschaux@wanadoo.fr]), **Studying the Military in a Comparative Perspective: Methodological Challenges and Issues,** *International Sociological Association, Gothenburg, Sweden,*

¶ My paper is based on my PhD in political science (defended in December 2008) dealing with the genesis, practices & uses of the European Security & Defence Policy with a focus on the comparison between France & Germany both in the genesis & daily practices and representations of ESDP actors (both military & diplomats). More precisely, I will focus in my paper on the methodological problems I encountered during my field work. I lead over 130 qualitative interviews with high military officials, diplomats & political leaders in Paris, Berlin, Bonn, & Brussels. Here I will focus on what it means to study the military with a qualitative methodology. I will therefore raise three main issues, which are intertwined in my research: comparison, qualitative method, & reflexivity. The first issue will be the qualitative perspective & the questions it raises regarding the specificity of the military mission, which is often confidential. This raises the question of how to interview military officers & bring them to talk without leading them to transgress their reserve duty. This issue will also lead me to draw the limits of qualitative interviews. Comparison between French & German officers also raises the question of the differences in that matter between the French army (where the reserve duty is very strictly observed) & the Bundeswehr (where the officer is considered as a "citizen in uniform", which allows him to speak much more freely). This will be the second issue: how to construct a comparative research design taking into account the fact that French & German officers have different socialization frames, which of course show up in the interviews. More concretely, how to raise the questions, so as theses questions make sense to the interviewees ? The last issue will address the question of reflexivity, & more precisely of the position of the enquirer before the military officers. What does it mean, & how does it impact the research? This issue of reflexivity will be declined in two ways. The first way will be the question of the enquirer as a civilian & academic person: this raises the problem of the specific language used by the military, which the academic has to manage at least a little so as to show credibility to the interviewees & also to understand what they mean with these specific words. The second question will be that of the impact of the gender of the enquirer (here a woman) in a mostly masculine sphere. My research has enabled me to show that this twofold impact is real, by comparing my enquiry results with male colleagues also working on similar topics & interviewing military officers. As a conclusion, I will try to show that studying the military on a qualitative perspective raises specific challenges linked to the specificity of the interviewees & their profession, but is also a very stimulating kind of social interaction, both for the enquirer and for the military interviewees. I of course rely on my case study (French & German officers in ESDP) to draw empirical examples, so as to illustrate the three issues raised in the paper.

2010S00642

Desfor, Gene & Bonnell, Jennifer (York University, Faculty of Environmental Studies, Toronto, Ontario, Canada, M3J1P3 [tel: 416 767 9859; e-mail: desfor@yorku.ca]), **Nature as an Agent of Urbanization: Torontos Don River during the Nineteenth and Twenty-First Centuries,** *International Sociological Association, Gothenburg, Sweden,*

¶ Our analysis unravels aspects of societal relationships with nature by comparing a nineteenth-century improvement project with current plans for Toronto's Don River. The earlier plans for the river spoke ambivalently of a nature that was both exalted & outside the bounds of human control but also somehow in need of improvement. In contrast, contemporary plans use language and images that emphasize sustainability, recognize the importance of promoting & maintaining healthy urban ecosystems, &

expound win-win solutions for both the economy & the environment. The transformations of the Don River differ dramatically in their form–the first a straightening & encapsulation of the river; the more recent an attempt at re-naturalizing, or "un-doing" the effects of those earlier alterations. This paper argues that they share similarities, however, in their intended linkages with urbanization. Both the nineteenth-century "improvement" & the twenty-first-century re-naturalization plan support the city's urbanization ambitions. The late nineteenth century's straightening of the Don was primarily linked with industrialization of the city, while the more recent plans for re-naturalization support a knowledge-based economic mode of development. By the mid- and late-twentieth century, as global economic restructuring was taking hold, industry moved out or closed down on the central waterfront and left behind landscapes of little consequence for Toronto's emerging economy. The "industrialized" Don needed reinvention to be relevant for a new urban space economy, & recent planning initiatives to re-naturalize the river's mouth represent material and symbolic processes for the contemporary production of an urban waterscape.

2010S00643

Desjardins, Mariève ([e-mail: mariekaz@yahoo.com]), **L'expérience de l'Interactivité: L'Engagement dans l'Oeuvre comme Vecteur de Nouvelles Narrativités Individuelles et Collectives** (The Experience of Interactivity: Commitment in Works of Art as a Vehicle for New Individual and Collective Narrativities), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Les oeuvres interactives présentées sous formes d'installations et sur le Web, innovantes par leurs dispositifs exploitant les nouvelles technologies, bouleversent le monde de l'art d'aujourd'hui en invitant le spectateur à contribuer à leur révélation esthétique et narrative via le déploiement d'un mécanisme. Ces changements dans l'art trouvent pourtant leurs origines dans les années 1960-1970, où les artistes démontrent une véritable volonté d'intégrer la présence du spectateur dans la manifestation de l'oeuvre. On pense aux créations collectives dites participatives, qui visent à concilier les rôles du spectateur et de l'artiste dans l'art, et aux happenings, où le public est invité à intervenir dans le déroulement de la narration. Alors que le citoyen est fortement incité à se positionner dans la société, le spectateur se voit investi d'une réelle responsabilité d'appropriation de l'art, ce qui modifie substantiellement sa place dans la création, la diffusion et la réception des oeuvres. Les oeuvres interactives d'aujourd'hui, qui incitent encore davantage le spectateur à exprimer ses subjectivités lors de son expérience de l'oeuvre, sont toujours à l'image des changements sociaux, notamment des transformations dans les formes de communication, plus que jamais marquées par l'engagement d'acteurs individuels à la révélation des histoires personnelles et collectives.

2010S00644

Destro de Oliveira, Glaucia (IFCH-UNICAMP, Campinas, SP, Brasil, 13083-970 [tel: 55 11 83431443; e-mail: gdestro@gmail.com]), **Aging Well in the International and Local Perspectives,** *International Sociological Association, Gothenburg, Sweden,*

¶ The research focus is to understand how the Brazilian government thinks & puts into practice the ideas present in Madrid's Letter (2002), which the international organism ONU elaborates, & defines how different countries should elaborate the public policies for the elderly population. It is important to remember that the different points–about political participation, way to live, & habitation, for example–in this document are based on autonomy, independence, & active aging. In Brazil, all of the legislative documents mention this international suggestion. So, this way the ONU defines how being older is reflected in the public policies in this country. On the other side, of course, there are too many particular configurations in these realities–this country is big & includes different economic contexts & experiences according to ethnicity, class, & gender. In this sense, the idea of this research is to understand, through a qualitative methodology, how global & local spheres are articulated in Brazil's public policies & pretends to show how particular situations can bring credentials & transformations in the way to understand aging. The point is to analyze discourses about the elderly.

2010S00645

Devadason, Ranji (Department of Sociology, University of Bristol, 12 Woodland Road, Bristol, BS8 1UQ, UK [tel: +44(0)117 3310609; e-mail: ranji.devadason@bristol.ac.uk]), **Moral and Market Entrepreneurs: Aspirations, Values and Ambition amongst Transnational Employees,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines what is distinctive about global professionals in different sectors: international NGOs, UN agencies and multinational corporations. These are the moral & market entrepreneurs of globalization. It analyses the practices and strategies developed by professionals in order to face the challenges associated with transnational working. The analysis draws on survey data & interviews with transnational professionals working in global organisations to address these themes. This in turn facilitates evaluation of what the "globalizing of minds" entails for these employees, both personally & professionally. Moreover, in order to bridge the gap between individual orientations & the institutional landscape, I will analyse the strategies by which corporate & not-for-profit organisations standardise practices across different sites, countries & regions. This, in turn, may involve analysis of processes of professionalisation & bureaucratization, to examine whether these detract from NGO workers' motivations & passions to "make a difference in society" & corporate employees' more individualistic ambitions. This paper thereby addresses intersections between cultural & economic rationalities for transnational professionals, since their values & aspirations are invariably informed by organisational incentives & hierarchies.

2010S00646

Devine, Paula (School of Sociology, Social Policy and Social Work, Queen's University Belfast, Belfast, Northern Ireland, BT7 1NN [tel: +44 28 9097 3034; e-mail: p.devine@qub.ac.uk]), **Gender and Mental Illness: Measurement and Analysis in Northern Ireland,** *International Sociological Association, Gothenburg, Sweden,*

¶ Many surveys report that women have higher levels of mental illness than men do. However, such statements raise many questions about how both the concepts of gender & mental illness have been measured within quantitative survey research. I will begin this paper by identifying & critiquing ways in which gender & mental illness have been measured in large-scale population wide surveys. In particular, the 2006 Northern Ireland Life & Times Survey will be used as a case study. This survey included two well-known scales: the twelve-item General Health Questionnaire (GHQ-12), and the Bem Sex Role Inventory (BSRI). Within the paper, I will highlight how more appropriate measures of gender & mental illness have been created, based on factor analysis of these scales. Within the final section of the paper, I will present the results of multivariate analysis of the relationship between masculinities & mental illness, using the components identified in the previous section. These findings indicate that the use of a male/female dichotomy is too crude, & reinforce the need for alternative measures of gender to be operationalised. Whilst the paper reports on results from a regional dataset, its findings are applicable globally.

2010S00647

Di Marco, Graciela (Universidad de San Martín, Buenos Aires Argentina [tel: 54-11-4943-2431; fax: 54-11-4943-2431; e-mail: gradimarco@sinectis.com.ar]), **Women and Trade Unions in Argentina,** *International Sociological Association, Gothenburg, Sweden,*

¶ The different stances on neo-liberal policies in the 1990s in Argentina resulted in internal ruptures in Argentina's Trade Unions. Along with the longstanding General Confederation of Workers (CGT), in 1992, two trade unions that opposed the flexibilization policies joined in the creation of Congreso de Trabajadores Argentinos [Congress of Argentinean Workers], better known as CTA. In 1997, the CTA was formally established as a workers' union that offered an alternative to those who did not agree with CGT. This paper aims to describe this process, analyze women's participation in the CGT & the CTA, and compare the outcomes regarding women's labor rights in those organizations. Trade union women furthered the institutionalization of gender areas and, later on, the law of quotas. At the same time, to a higher or a lesser degree, they joined women's movements in their claims for issues that are important to women's lives, whether in labor or in private situations. For these purposes, I have interviewed several women leaders in Trade Unions & reviewed relevant documents issued by the Trade Unions themselves.

2010S00648

Diaz Orueta, Fernando (Department of Sociology II. University of Alicante, Campus de San Vicente del Raspeig, 03080, Alicante, Spain [e-mail: fernando.diaz@ua.es]), **Urban Movements and Urban Policies in Valencia: Challenging a New Order,** *International Sociological Association, Gothenburg, Sweden,*

¶ In keeping with the experience of other European countries, urban policies have changed dramatically in most of the Spanish cities. This new ori-

entation has meant the adoption of new priorities and forms of urban management. The previous emphasis on social justice as one of the main aims of urban policies has been replaced by new market-oriented tendencies. The paper examines the city of Valencia where new urban policies clearly burst since the mid-90s. Urban mega-projects, such as the City of Arts & Sciences, or mega-events, such as the 32nd America's Cup symbolize the new stage. But the new orientation given to urban policies has been challenged by new urban movements, with a very complex & heterogeneous composition and quite different regarding those of the 70s. They have meant a substantial disagreement with the consensus built by the main political Valencian forces & the local & regional authorities. These new socio-political practices question not only the urban and economic model & the consolidation of a more unequal city, but the restrictions in the local arena as a space of democratic participation. Finally, & considering the experience of other Spanish cities, the paper tries to establish if this is an exceptional case or, on the contrary, we're talking about a majority trend.

2010S00649

Diaz-Catalan, Celia (IESA-CSIC, C/ Campo Santo de los Mártires, 7 14.004 Córdoba [tel: 0034 957421909; e-mail: cdiaz@iesa.csic.es]), **Reward Systems in Spain: Do the Regions Make the Difference?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Evaluation Agencies command a strategic position in public science systems. Evaluation activities make up a vital part of reward systems that are used to stratify scientific organizations. In this way, some of the practices established by evaluation agencies have spread & are accepted as common rules of behaviour by people that work in the R&D domain (Whitley 2007). In Spain, it has been demonstrated that scientific community responds to the incentives (Jiménez Contreras, de Moya Anegón, & Delgado López-Cózar 2003). From 2001 with the new University Law, autonomous governments can provide of additional increase in salaries through the evaluation of merits. The entities responsible for assigning merit to researchers are the National Agency for Quality Assessment & Accreditation (ANECA) & the regional evaluation agencies. This paper examines the mechanisms and criteria in the attribution of merits in four autonomous regions. It aims to analyze if there has been a response by the new incentives. In a second place, it focuses in the criteria, to examine if they are related with the main goals of the Regional Innovation Systems, or on the contrary, they follow the national tendency. The research reported is based on both legal documents and qualitative interviews, with experienced scientists in policy-making or R&D management, particularly those who were involved in the evaluation agencies. The boundary-work focus is useful to differentiate quality activities among scientist, analyzing their own views with regard to the different evaluation criteria. Neo Institutionalism focus is used to trace the origin and changes in the merit attribution in the autonomous regions.

2010S00650

Díaz-Mendez, C., Callejo, J., García-Espejo, I., Southerton, D. & Warde, A. (University of Oviedo. Dpt. Sociology., Departamento de Sociología. Facultad de CC.Economicas. Universidad de Oviedo. 33006 Oviedo, Asturias, España [tel: (34)985105042; fax: (34)985105050; e-mail: cecilia@uniovi.es]), **A Comparative Analysis of Food Consumption in United Kingdom and Spain,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper presents the first comparative results of food habits in Spain & the UK. At the beginning, we offer an overview of changes in food expenditures & general developments in the last years. Secondly we explore the temporal organization of the daily diet to know when to eat & how food activities are organized, we reefer basically about cooking & eating. Thirdly, we explore the changes in the places where people eat (eat out or at home), with special emphasis on some clear differences between the two countries: eating out is a very common habit in the UK & little practiced & studied in Spain. Our aim is to describe the most significant similarities & differences in eating behaviour of the British & the Spanish people & seek explanations about them. Our data come from surveys of expenditure & time use surveys of the UK (Expenditure & Food Survey Time Use Survey) & Spain (survey of family budgets & time use survey).

2010S00651

Dickinson, David (Wits University, Johannesburg, South Africa, 2050 [tel: +27 11 717 4438; e-mail: david.dickinson@wits.ac.za]), **Grassroots AIDS Exceptionalism within Plural Health Systems: Evidence from South African HIV/AIDS Peer Educators,** *International Sociological Association, Gothenburg, Sweden,*

¶ The existence of a plural healthcare system in South Africa is widely recognised. Reasons for their continued existence include cost, access, & a desire for holistic treatment. Additionally, sections of the South Africa population, view allopathic explanations of HIV/AIDS as the medicalisation of a bio-moral problem. This tension helps explain the limited headway that has been made in preventing new HIV infections. This paper argues that the extraordinary focus on HIV/AIDS by health professionals has created an unstable grassroots understanding of HIV/AIDS. The paper draws on in-depth interviews with 23 African workplace HIV/AIDS peer educators who participated in a research project by recording "AIDS myths" over a six-month period. HIV/AIDS peer educators, who are committed to propagating an allopathic explanation of HIV/AIDS, remain embedded within cultures that maintain bio-moral explanations of misfortune. The findings indicate a, problematic, differentiation between peer educators' understandings of AIDS & other illnesses; something that requires them to utilise creative techniques to keep these parallel belief systems in balance. Insights into the challenges faced by peer educators, who are "between & betwixt" competing explanations of AIDS, helps us appreciate the many & complex ways in which AIDS is conceived & the challenges this presents for health promotion generally & the prevention of HIV infection in particular.

2010S00652

Didham, Robert J. & Choi, Mee Young (Institute for Global Environmental Strategies, 2108-11 Kamiyamaguchi, Hayama, Kanagawa, 240-0115 Japan [tel: +81-46-826-9589; fax: +81-46-855-3809; e-mail: didham@iges.or.jp]), **Cultivating Sustainable Livelihoods through Education and Capacity Building: Modelling "Education for Sustainable Development" to Advance Communities of Practice,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Institute for Global Environmental Strategies research on Education for Sustainable Development (ESD) identified a critical need to investigate how ESD moves beyond the formal education sector & into the informal sector to help achieve communities of practice for sustainable development. The current topic, "Modelling ESD for Sustainable Livelihoods", is being investigated through primary field research in South East Asia and through discussions with policy makers throughout the region. The objective of this research is to explicate & model the association between ESD, Community Practice, & Sustainable Livelihoods, & thus develop a framework of good practice to link ESD with Sustainable Livelihood initiatives in order to open an arena of practical, real-world learning & facilitate participation in community-based decision-making. The key question to be addressed in this paper is: "How to advance the sustainable livelihood practices of individual people by engaging them in a process of critical praxis & experiential learning through engendering communities of practice for ESD?" This paper will describe how ESD can be utilised to advance communities of practice and promote Sustainable Livelihoods. Furthermore, it will investigate how the methodologies of ESD (including ideas of experiential learning & critical praxis) can be applied both in policy & implementation to strengthen local-level practice of sustainable development.

2010S00653

Dieckhoff, Martina, Gebel, Michael, Giesecke, Johannes & Steiber, Nadia (Wissenschaftszentrum Berlin für Sozialforschung, Reichpietschufer 50 [tel: +49 - 30 - 25491 - 150 ; e-mail: dieckhoff@wzb.eu]), **Institutional Change and Age-Graded Inequality in Labour Market Risks,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper investigates labour market risks in Europe, with a special focus on unemployment & temporary work. It undertakes a detailed analysis of such labour market risks in different phases of people's careers, focusing on the youth & the population of prime-age. The differentiation between different career phases (i.e. age-groups), allows for an in-depth investigation of the mechanisms that underlie the allocation of labour market risks in different countries. This allows us to test the conventional theories about dual-labour markets for different age-groups. In particular, in addition to established factors such as systems of employment protection, unemployment insurance & collective bargaining coverage as well as macro-economic & demographic change, we investigate institutional & structural determinants of labour market risks that are more specifically relevant for certain career phases (e.g. initial education systems, continuing training policies, skill diversion). Our central aim is to investigate the extent to which certain labour market institutions contribute to an age-graded inequality in labour market risks. In particular, we test whether institutions which may decrease inequality at certain stages of the life-

course might increase inequality in labour market risks at other stages. We apply multi-level regression techniques using harmonised micro-data for 25 countries. The data come from the European Labour Force Survey & cover a period of 16 years (1992-2007). Our analysis is aimed to contribute to a better understanding of how diverse institutional factors may affect inequalities in employment opportunities & labour market risks throughout the life-course.

Diekmann, Andreas & Przepiorka, Wojtek (ETH Zurich, Sociology, ETH-Zentrum, SEW E 24, CH-8092 Zurich [e-mail: pwojtek@ethz.ch]), **Do Voluntary Commitments or Binding Contracts Help to Overcome the Intergenerational CPR Dilemma?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The intergenerational common pool resource (CPR) dilemma captures the fact that unlike cooperation, non-cooperative behavior produces external costs that accumulate over time & decrease future payoffs. In a laboratory experiment we investigate whether voluntary commitments or binding contracts help to overcome the detrimental effects of self-interested decisions in the present on future benefits of all group members. Subjects are randomized into two treatment groups & a control group, each consisting of five subjects. In each of ten consecutive rounds subjects individually decide whether to invest in asset A or asset B. While investments in asset A have a high rate of return & generate external costs, investments in asset B have a low rate of return & generate no externalities. Before making their first decision, subjects in the first treatment can voluntarily commit themselves to invest in asset B. Subjects in the second treatment can sign a contract that enforces subjects' investments in asset B. However, the contract comes into effect only if all five group members signed it. In the control treatment there are no such regulations. We find that investments in asset B are higher in the two treatment groups than in the control. These differences are due to the higher propensity to invest in asset B by subjects who made a commitment & groups in which all parties signed the contract respectively. However, as external costs accumulate over time, average benefits decrease and conditional cooperation remains the driving force of subjects' behavior.

Dijkstra, Jacob (Sociology/ICS, University of Groningen, Groningen, The Netherlands, 9712 TG [tel: +31 50 3636208; e-mail: j.dijkstra@rug.nl]), **Put Your Money Where Your Mouth Is: Trust, Civic Norms and Contributions to Public Goods,** *International Sociological Association, Gothenburg, Sweden,*

¶ Communities with a lot of social capital are generally thought to be better able to solve collective action problems, such as the production of public goods. However, public goods that are beneficial for the groups of actors producing them may have either favorable consequences for the rest of society ("benign" public goods, such as fund raising activities of a charity organization) or unfavorable ones ("malignant" public goods, such as mobilization of members of a street gang to commit crimes). As key elements of social capital, trust & civic norms should be related to the production of public goods. However, if these public goods are malignant, the overall effect of their production on society can be negative. Therefore, it is crucial to know whether trust and civic norms are differentially related to the production of benign and malignant public goods. This paper reports an experiment combining questionnaire measurements of trust & civic norms with a public goods game. The results allow four conclusions: (i) important standard trust measurements are positively related to contributions to benign public goods, but not to contributions to malignant public goods, (ii) the interpersonal trust scale (IPT) however, is positively related to contributions to malignant public goods, (iii) standard trust measurements measure trustworthiness rather than trusting, & (iv) the expectation that others contribute is the most important predictor of contributions to both benign & malignant public goods. Thus, questionnaire measurements of trust are generally discriminating between benign & malignant public goods. A direct measurement of trust (i.e., the expectation that others will contribute) however, does not discriminate between these two types of public goods.

Dijkstra, Jacob & Payne, Diane (Department of Sociology, University of Groningen, Groningen, Netherlands, 9712 TG [tel: ++3150 363 6208; e-mail: j.dijkstra@rug.nl]), **Collective Decisions in the EU: Explaining the Norm of Cooperation,** *International Sociological Association, Gothenburg, Sweden,*

¶ A research puzzle for EU scholars interested in decision making is the repeated pattern of co-operation in the Council of Ministers. Why do individual member states actually comply with this EU norm and moreover how does this norm operate as a mechanism of cooperation across the member states in the EU decision process? We argue the norm of cooperation between member states is sustainable, because the configuration of members' positions & interests gives rise to a decision situation that resembles a repeated Prisoner's Dilemma (PD). It is rational for individual member states to comply since not doing so would mean large forgone gains in the future. We test this by making use of two current models of collective decision making: the Position Exchange Model (PEM) & the Externalities Exchange Model (EEM). The results suggest that the predictive power of PEM should vary inversely with the average proportion of "winners" in the data set. More winners implies that for actors the shadow of the future becomes smaller, since there will be fewer occasions on which they will actually be in a PD payoff structure.

Dillman, Jennifer L., Yeatts, Dale E. & Cready, Cynthia M. (Department of Sociology and Family Studies, Abilene Christian University, Abilene, Texas, 79601 [tel: (325) 674-2432; e-mail: jennifer.dillman@acu.edu]), **Geographic Distance, Contact, and Family Perceptions of Quality Nursing Home Care,** *International Sociological Association, Gothenburg, Sweden,*

¶ The effect of frequency of nursing home contact on family perceptions of quality care is the focus of this research. A family member characteristic, such as geographic distance from the nursing home, affects frequency of contact with the nursing home. Frequency of contact, in turn, affects family perceptions of the care his or her loved one receives in the nursing home. The theoretical framework for this study is based on Allport's intergroup contact theory, which posits that when four contact Conditions–institutional support, equal status, common goals, & intergroup cooperation–are present in an intergroup situation, a reduction in anxiety between groups is likely to occur. Regression analysis tested the hypotheses using survey data collected from 275 family members of residents in 10 Dallas-Ft. Worth area nursing homes. Results support Allport's premise that contact alone between groups–i.e., family members & nursing home staff–is insufficient for increasing or decreasing family perceptions of quality nursing home care. Additionally, three of the four contact conditions were statistically supported by the data. In sum, this research provides nursing homes with an empirically tested model for improving family perceptions of quality nursing home care.

Dilmac, Julie Alev (CERSES-CNRS-Paris Descrates, Centre Universitaire des Saints-Pères, 45 rue des Saints-Pères, 75270 Paris cedex 06 [tel: (+33) 01 42 86 42 42; fax: (+33) 01 42 86 42 41; e-mail: jadilmac@hotmail.com]), **Honor Killings in Turkey: "Their" Honor and "Our" Honor',** *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Despite the social contestation against this practice, honor killing still tends to have a very important place in the Turkish media and discourses in everyday life. However, how do these crimes, described as barbarian & considered tied to drives, continue to exist in spite of all the regulations instituted by law? These killings made in name of "namus" (sexual honor) seem to be incompatible with the modern women's vision developed in Turkey. Thus, honor is maintained by women's conducts: they have to know the limits, determined by the knowledge of shame & all rules which govern the interpersonal relations, defined & controlled by family. Defying these rules is defying the patriarchal authority, but also all the rules of the group. Although these practices are developed essentially on the country side, they tend to be emerged with the rural depopulation to urban areas, challenging the rules imposed by law. A lot of surveys have been made on honor killings, describing the mechanism of violence committed against women. Yet this paper's aim is to point out the vision of non practicing murder & to try to show how these crimes tend to redefine the frame of otherness, & their consequences on the conception of gender. My field of study is based on interviews with young Turks (mostly from Istanbul's area).

Dimitrova, Svetlana (EHESS, Paris, France [e-mail: svetdi@yahoo.fr]), **Criticize the Illusion, Understand Its Research: The Autobiography of an Organic Intellectual of the Socialist System,** *International Sociological Association, Gothenburg, Sweden,*

¶ To be "dissident", a "protestor" or at least "alternate", proves to be the necessary element for a biography which gives right to an intellectual life in the "post socialists" countries after 1989. If positioning during the communist period does not offer a referent objectifying a "clean" biography, the autobiographical write-up can, on the other hand, create a trajectory of implicit dissidence. Is it necessary to choose the criticism of such an approach which aims to adjust in a universalizing ethnical frame and to rid from the guilt of the past; or, rather, to opt for the understanding of the rewritings accounting for the tensions between the individual constraints & choices transcending the context? We will propose an analysis of the autobiography of Lubomir Levğev, representative of the artistic-creative intelligentsia, having occupied posts of senior officials in the intellectual and the political field in Bulgaria, before 1989. His autobiographical write-up, "You are the next one" with a subtitle "Novel of memories", creates a character who lives inside the system and apart from it, a narrative posture of obliteration of the stigma.

Dimmock, Alexandra K. & Burchell, Brendan J. (Department of Sociology, University of Bristol, 12 Woodland Road Bristol, Bristol BS8 1UQ [tel: +44 151 336 2143; e-mail: soakd@bristol.ac.uk]), **From Breadwinning to Babysitting: An Exploratory Study of Stay-At-Home Fathers' Experiences,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores the lives, decision making processes and experiences of twenty-six full-time stay-at-home fathers. The men were contacted online, for instance through social networking sites, & the data collection was mainly via emails & online "chats". They discussed masculinity & gender roles in terms that they defined themselves, whilst aware of gender norms and common stereotypes. They reported that reactions from others were mixed, often with emotional & practical support coming primarily from immediate & extended family members. Fathers acknowledge stigma toward their roles, but reported being generally unaffected by the attitudes & reactions of others. The internet as a source of advice & information from other stay-at-home fathers is central to understanding the social support available to this emerging family type that challenges norms in both public and private spheres. The men discuss a range of influences that guided them to the role of becoming full-time primary carers; their own previous careers, their partner's earnings capacity and satisfaction with their jobs, & their beliefs about the importance of parents in child-rearing were all preeminent in their discourses. This study is rooted in a burgeoning body of scholarship including maternal gatekeeping, "doing gender" and identities, ideologies & discourses on fatherhood.

DiMuzio, Tim (Center for Excellence In Global Governance Research, University of Helsinki, 3 Yliopistonkatu PL 4 Helsinki, 00014 Finland [tel: 358 0465726386; e-mail: timothy.dimuzio@helsinki.fi]), **Capitalizing a Future Unsustainable: Global Energy and the Fate of Market Civilization,** *International Sociological Association, Gothenburg, Sweden,*

¶ Liberal capitalist polities are being held up as the ultimate civilizational achievement precisely at a point in time when the energy intensive built environments & rampant & senseless consumerism of these societies are threatened by ecological devastation & the coming end of cheap & abundant fuel. Throughout the twentieth century this pattern of high energy consumption social reproduction was largely shaped by the global energy industry & the industries it spawned and/or allowed to flourish. Yet due to a number of foreseeable, if not entirely predictable, future obstacles & challenges, this blueprint of development seems doomed to failure. However, despite some recognition of these challenges & the recent worldwide collapse in capitalization, it appears as though investors are continuing to capitalize this unsustainable future. In this paper I use a power theory of value approach to critically assess how far & in what ways the global energy industry is continuing to shape & reshape the terrain of social reproduction & governance towards an unsustainable future. In the first section of this paper I historicize the emergence of a more fully globalized market civilization by putting it in the context of the discovery of fossil fuel energy & how this resource has been integral to the "modernization" project of the twentieth century. In the ensuing sections, I outline the power theory of value of Nitzan & Bichler and argue that this perspective can help us account for the rise of a petro-market civilization. This sets the stage for a final section which offers an analysis of the oil & gas industry vis à vis the alternative energy sector of the global economy.

Diniz, Adriana V. S. (Departamento de Sociología y Antropología Social/Universidad de Valencia, Facultat de Ciències Socials, Universitat de València, 46022 - València (España) [tel: +34 96.382.84.54; fax: +34 96.382.84.50; e-mail: adrianavsdiniz@hotmail.com]), **Transiciones Biográficas Formativas y Profesionales de Sujetos Adultos en España y en Brasil.** (Educational and Professional Biographical Transitions in Adults in Spain and Brazil), *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ Las transformaciones en el mundo del trabajo, de la educación y formación, en el marco del concepto de lifelong learning, parecen atrincherar al sujeto adulto, y le exigen plantearse un conjunto de dilemas respecto a cómo relacionarse con lo educativo-formativo en esta etapa de la vida. Desde la perspectiva biográfica, nos ha interesado comprender de qué forma los adultos, en España y en Brasil, se relacionan con los dispositivos institucionales educativo-formativos disponibles y cómo éstos impactan y/o han impactado en las biografias de aprendizaje para y en el trabajo. La investigación se ha anclado en los estudios sobre transiciones (Casal y Cardenal) y en la teoría de la biograficidad (Alheit y Dausien). Han sido realizadas cincuenta y uno entrevistas narrativas. Los resultados apuntan que el proceso de construcción de las biografías de aprendizaje, en las diferentes fases de la vida adulta (joven adultez, adultez y adultez mayor), no son homogéneas, sino diversas y marcadas por desigualdades; influenciadas no solamente por la oferta pública educativa-formativa, sino que depende también de las decisiones del propio adulto, como sujeto reflexivo, en el proceso de enfrentamiento de dilemas en la (re)vinculación a lo educativo-formativo, desde las condiciones espaciales y sociales en las que está inserto, y desde las expectativas, los valores y los horizontes del mundo de la vida. Sistematizamos zonas de dilemas enfrentados e identificamos modos de transiciones formativo-profesionales. Sugerimos pautas para las políticas públicas dirigidas a ampliar los modos de gestión biográfica de aprendizaje de personas adultas en las transiciones formativo-profesionales.

Dinwiddie, Gniesha Y. (University of Maryland College Park, 2169 LeFrak Hall College Park, MD 20742 [tel: 3014058938; e-mail: gdinwiddie@aasp.umd.edu]), **Does Stress "Get Under the Skin" Differently by Race/Ethnicity? Understanding Social Inequalities in Cardiovascular Risk in Adulthood,** *International Sociological Association, Gothenburg, Sweden,*

¶ Cardiovascular Disease (CVD) is the major cause of death in the United States & racial/ethnic minorities have higher incidence and prevalence rates compared to other groups in the population. Although studies have documented population differences in CVD, the underlying distal risk factors that influence critical levels of biological risk to account for these differences are not well understood. Using secondary data from the 2003-2006 National Health and Nutrition Examination Survey, the article examines the association between social status, socioeconomic status & seven biological markers of CVD risk. The seven biological markers are High Density Lipoprotein, Low Density Lipoprotein, C-Reactive Protein, Homocysteine, Blood Pressure, waist circumference and triglycerides. Results show a significant pattern of association between educational level & biomarkers that varied by race/ethnicity. When a cumulative risk score was applied against risk factors for CVD, lower educational attainment was associated with higher cumulative risk. Results of the paper shows that socio-economic status is a significant predictor of metabolic risks in adulthood & assessing education's relationship to biomarkers appropriate for assessing cardiovascular risks that vary by race/ethnicity & age group is important for understanding disparities in health.

Dix, Steffen (Steffen Dix; Institute of Social Science; University of Lisbon [e-mail: sdix@ics.ul.pt]), **Beyond the Dual Perspective of Being Either Religious or Secular (Modern): Portuguese Catholicism as a Case Study,** *International Sociological Association, Gothenburg, Sweden,*

¶ Modernization is often associated with secularization. However, it has become clear over the last few years that modernisation doesn't cause a necessary decline of religion. Even in modern European societies, we have to acknowledge the simultaneous existence and the link between the religious & secular spheres. Based on the case study of Portuguese Catholicism, I endeavour to re-examine the dual perspective of being either religious or secular (modern). Bearing in mind that there has never been a linear transition from the religious to the secular in Portugal, it would be more accurate to say that traditional Catholicism has tried over the last decades to adapt to the conditions of increasing modernisation. In this sense, Portuguese Catholicism in the second half of the twentieth century

is not necessarily an antinomy of or in opposition to modernisation. On the contrary, by modernising & even secularising itself & assuming a role in criticising socio-cultural life & regulating popular religiosity, Portuguese Catholicism should be understood as an important forming factor of a modernity that is singular & typical only to the Portuguese. To sum up, the main aim of this paper is to show that modernity is not only transforming traditional religion, but also that traditional religion can be a formative factor of modernity in a European society.

Dixon, Jane M. (Australian National University, Canberra, ACT, Australia 2064 [tel: 61-2-61255623; fax: 61-2-61250740; e-mail: jane.dixon@anu.edu.au]), **Postcapitalist Politics or Multi-variant Capitalism? Competing Understandings of Diverse Food Sub-systems,** *International Sociological Association, Gothenburg, Sweden,*

¶ In seeking to understand the diversity of food sub-systems within and between countries, agri-food scholars have both established and then critiqued several influential antimonies: industrial versus post-Fordist systems; conventional versus alternative systems; fast versus slow food systems; mass versus the quality market; the "food from nowhere" versus the "food from somewhere" regime. In contrast, Gibson-Graham (2006) propose that the contemporary contestation in systems is best conceived as a diversity of post-capitalist experiments: with capitalist markets being important to some & rejected by others. This paper applies this more inclusive perspective to the food sub-systems evident in Western Sydney, Australia, & Thailand. It confirms the centrality of hybrid economic arrangements to livelihood generation, community well-being & environmental protections. It proceeds to argue that the transformative potential of some diverse arrangements can become truncated over time by reliance on access to relatively large markets or non-local markets. These latter examples are better encapsulated by the term "multi-variant capitalism" (see Bugden 2000): where the spectrum of labour relations & variable use of natural resources & space is harnessed to market imperatives. The paper concludes with discussion of the post-capitalism & multi-variant capitalism perspectives within a context of "multiple modernities", a Congress theme.

Dobratz, Betty A., Shanks-Meile, Stephanie L. & Waldner, Lisa K. (Sociology, Iowa State University, Ames, IA USA 50010-1070 [tel: 515-232-7673; fax: 515-294-2303; e-mail: bdobratz@iastate.edu]), **Terrorism and White Separatists in the U.S.: A Look at Leaderless Resistance,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores the terrorist strategy of leaderless resistance that some white separatists/supremacists claim to be using in the U.S. Based on an analysis of the authors' interviews with white separatists & other available data, we examine how the rhetoric associated with terrorism in general & leaderless resistance in particular is used, why it has been used, & its likely use in the future. Few actual events of terrorism in this movement have occurred, most significantly those associated with the Silent Brotherhood in the 1980s. Yet, the threat of terrorist activities captures the attention of movement members making them feel like they are part of a significant social movement. It also seems to both generate media attention & provide an avenue for recruitment into the white separatist movement in the U.S. Possible implications for the Obama administration will be considered.

2010S00667

Dobrica, Petronel-Mirel (University of Bucharest, Faculty of Sociology and Social Work, Bucharest, Romania, 9 Schitu Magureanu Street,10181 [tel: 040730039428; fax: 040213158391; e-mail: petroneld@yahoo.com]), **Romanian Penitentiary System. The Consequences of the New Law of Prison Punishment,** *International Sociological Association, Gothenburg, Sweden,*

¶ In 2006, Romania adopted new legislation which fundamentally transformed the penitentiary system & the prison punishment. The new legislation created four different regimes of prison punishment, in the sense that it created penitentiary specialization (ranging from maximum security to open system). It also introduced new punitive technologies. Both elements should influence the prisoners social careers, both inside the penitentiary institutions, as well as after their release. The legal system of penitentiary & prison punishment have been reformed without prior evaluations. This study aims to evaluate the effects of this new legislation. It is based on participant observation & interviews with prisoners & employees of two prisons (one prison of maximum security & the other with all four types of regimes), carried out in 2008-2010, in order to evaluate the institutional changes and the new experiences. The data indicate some major conclusion, such as: (1) although the law allows a relatively high level of freedom and a high level of contact with the rest of society, the reality indicates the stagnancy of penitentiary institutions (the number of prisoners placed in semi-opened & opened regime of execution is scarce); (2) prisoners refuse to claim less restrictive detention regimes, because the existing "architecture" of prisons in Romania does not offer protection against other inmates' aggression, etc. Communication is the preliminary outcome of the project, "Deculturalisation, as an Effect of Detention. Resocialisation in the Progressive & Regressive System Context of Freedom Deprivation Sanctions", which is financed by National Council for Scientific Research CNCSIS.

2010S00668

Doddasiddaiah, N. (Dept. of Sociology, Karnataka State Open University, Manasagangotri, Mysore - 570 006, Karnataka, INDIA [tel: 00 91 821 2519948; fax: 00 91 8472 263206; e-mail: ndoddasiddaiah@rediffmail.com]), **CSR Profile as a Function of Union Ideological Affiliations and Dispositions,** *International Sociological Association, Gothenburg, Sweden,*

¶ Trade unions, though on decline in terms of their influence on corporate governance & their control on workforce owing to the forces & constraints brought into being in the wake of changing economic trends & process, they are still looked upon as an integral part of industrial culture & civilization. Post industrial era is characterized by decreasing role & diminishing say in matters relating to conditions of work once looked upon and conceded as their prerogatives. Unionism is seen as a response to the need for protecting the interest of the workers, who are even today one of the major stakeholders of an enterprise. It is assumed that the community initiatives of the enterprise in pursuance of its corporate social obligations are looked upon by the unionism as not in the interest of their membership. In many cases unions perceive CSR as a threat, as it transfers yet more power and discretion to managers leaving them with ever lesser sphere to operate & hence, one of the widely debated issues is the impact of CSR on trade unions & their institutional infrastructure which of course is not in the purview of this paper. It is hypothetically assumed & observed as well in their response, that the community initiatives of the enterprise in pursuance of its corporate social obligation, often with considerable resource outlay are viewed by the unionism as not commensurating with the interest of the workers. In many of the responses in the years immediately after emergence of Corporate Social Responsibility (CSR) as an indispensable component of good corporate governance, the unionism was found to be lukewarm if not out rightly antagonistic to CSR initiatives on the grounds that, the resources made available for CSR programmes could deprive workers their legitimate share in the profit they were responsible to generate. It is also further assumed that the response & disposition of unions on the CSR initiatives are the functions of their ideological subscriptions determined by their affiliations. Thus, the union & ideology subscribed to could be viewed as significant contextual variables in determining the CSR profile of an enterprise viewed from systemic perspective. The paper seeks to put these assumptions to empirical test in the context of Indian firms. Data are gathered from 63 Indian work organizations pertaining to the ideological affiliations of the unions operating in the firms & their dispositions toward CSR activities viewed as a response to their perceived implications for workers as prime stakeholders of unions. Further, implications of union dispositions for CSR profile of the firm have been probed. The findings indicate that the ideological affiliations of unions do not influence their dispositions towards CSR initiatives in a significant way with unions from all ideological backgrounds being skeptical about CSR allocations and spending. However, contrary to what is speculated the leftist unions are less favorably disposed than are the rightist and moderate unions & as such, firms with leftist unions appear to be having relatively poorer CSR profile.

Doecke, Brenton & Kostogriz, Alex (Faculty of Arts and Education, Deakin University, 221 Burwood Highway [tel: Burwood Victoria 3125; e-mail: alex.kostogriz@deakin.edu.au]), **Redefining Teacher Accountability: The Impact of High Stakes Testing in Australia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Over the past decade or more, federal & state governments in Australia have introduced a range of standards-based educational reforms designed to improve the educational outcomes of schools and systems, & to allow comparisons between Australia's educational performance & that of other countries. These initiatives have been directed at improving Australia's

capacity to participate in a globalising economic environment–such, at least, is the rhetoric in which standards-based reforms are based. This paper focuses specifically on the recent introduction of standardised literacy testing in all states across Australia, & raises questions about the impact of this reform on the work practices of English literacy teachers in primary & secondary schools. We draw on data from a major research project funded by the Australian Research Council, involving interviews with teachers about their experiences of implementing standardised testing. We use Dorothy Smith's concept of institutional ethnography to trace how teachers' work is increasingly being mediated by standardised testing & to construct cases which show how they grapple with the tensions between their obligations to students & state-wide mandates. Data collected so far indicate that the introduction of testing does not merely constitute an additional part of a teachers' workload, but that it is having a significant impact on their identity as literacy educators, their capacity to implement rich forms of curriculum & pedagogy, & their relationships with students. Teachers experience these reforms as bringing about increasing surveillance & a form of accountability that is radically transforming the nature of their work.

2010S00670

Doerschler, Peter & Irving Jackson, Pamela (Political Science, Bloomsburg University, Bloomsburg, PA USA [e-mail: pdoersch@bloomu.edu]), **Immigrant Integration and Trust in Public Institutions: Lessons from GSOEP and ALLBUS,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Council of Europe (2003: 7) has delineated eight key dimensions of life as important to immigrant integration, & the European Parliament (2007: 139) has followed up with an effort to benchmark immigrant integration in these areas: employment, housing, health care, nutrition, education, information, culture, & basic public functions (including equality, anti-discrimination, and self-organization). Civic integration contracts have been developed in western European states ostensibly to focus state efforts supporting immigrant advancement toward economic, social and political integration with the host society. While some have criticized these contracts as tools of "migration control" (cf. Joppke, 2007: 4), there has been very little empirical examination of the assumptions underpinning the contracts. Recent research (cf. Doerschler & Jackson, 2010) using the German Socio-Economic Panel Data (GSOEP) suggests that while immigrants' knowledge of the host nation's language has a limited positive impact on some aspects of their economic success, it does not improve immigrants' experience with discrimination, or their concern for anti-foreigner hostility. In the current paper, we follow up on our initial effort, this time examining the relationship between the indicators of immigrant integration that are currently the focus of the EU-wide benchmarking effort & the degree of trust expressed by immigrants in specific institutions of the German state. Trust has long been viewed as a critical component of democratic legitimacy between citizens & government (cf. Putnam 1993). Without a certain degree of trust in government, citizens may question the value of democracy & eventually support non-democratic alternatives. Using data from the 2008 German General Survey (ALLBUS), we detail differences between Germans & non-Germans in their trust of eleven public institutions & programs in Germany (health care, Constitutional Court, Parliament, local government, justice, public television & print media, higher education, federal government, police, political parties) as well as two institutions of the EU (Commission & Parliament). Beyond describing these core attitudinal differences between German citizens & non-citizens, we also compare differences between select ethnic (Turks and Germans) & religious groups (Muslims, Protestants, Catholics and respondents without a religious identity). The nationality and religious comparisons allow us to assess the extent to which the integration process is generalizable across immigrant groups. Our study provides a foundation for effective policymaking fostering immigrant integration.

Dolan, Paddy (Dublin Institute of Technology [e-mail: paddy.dolan@dit.ie]), **Uneven Social Development and the Oscillating Scope of Identification: Ireland's 'Modernity' Since the Late Nineteenth Century,** *International Sociological Association, Gothenburg, Sweden,*

¶ Ireland serves an interesting case for examining Norbert Elias's theories of the civilizing process, in particular the widening scope of mutual identification & the formation of a more even-tempered habitus in the context of lengthening chains of social interdependencies over time. Elias of course noted that these processes were by no means linear, but he concentrated on the general arc of development in the direction of civilizing processes, particularly in relation to France. The very different case discussed in Elias's The Germans demonstrates a more uneven history of state formation & the developing national habitus. By the late nineteenth century in Ireland, the growing interdependencies between Irish & British people, particularly in the "economic sphere", contributed to class realignments in Ireland & the decreasing power ratio between established landlords & tenant farmers. Rising class tensions coloured by ethnic cultural revivalism (ironically supported by minor gentry groups) led ultimately to state demonopolization of violence & a new nation-state formation (incomplete due to the partition of Ireland) initially with a fragile capacity to pacify the territory. This we-group espoused an ideology of national insularity and economic self-sufficiency despite continued dependence on British people as consumers of Irish produce. The Irish group depended on Britain not only economically but also as a source of within-group identification & pride due to the violent liberation struggle. So the nature of Irish-British interdependencies had contradictory emotional dimensions, which were further complicated by the emergence of a rising Irish dependency on Britain as a destination for emigrants from the 1950s in particular. The national pride in military struggle was overtaken by the shame in failing to provide social opportunities for group members, which in turn compelled Irish politicians to seek more diverse & deep global interdependencies. Eventually this produces a wider circle of mutual identification though not without other emotional experiences of nostalgia, regret & resentment. This oscillating mutual identification & "mixed emotions" is related to the uneven, non-linear social development in Ireland, which nevertheless reveals an ordered structure of social change in Elias's sense.

2010S00672

Domecka, Markieta & Mrozowicki, Adam (Queen's University, Belfast, School of Sociology, Social Policy and Social Work, Belfast, the UK, BT71NN [tel: +447521581894; fax:; e-mail: m.domecka@qub.ac.uk]), **Linking Structural Influences and Agential Powers: Biographies, Careers and Reflexivity,** *International Sociological Association, Gothenburg, Sweden,*

¶ Contributing to the ongoing debate on the agency a structure relations, we propose to take into account biographies not only as empirical material but also as a theoretical concept linking structural influences & agential power of reflexivity. Biography as a methodological tool allows us to enter the life-world of an individual & to reconstruct the subjective meaning it has for him or her. Moreover, as a theoretical concept, biography allows us to analyse, on the one hand, the structurally defined enablements and constraints connected with actual placement in space & time, and on the other, the agential attempts to reflexively deal with structural powers. In our empirical work, we explore the career patterns of manual workers & business people (mangers and entrepreneurs) placed in the context of Polish post-socialist transformation. The analysis of over 200 biographical interviews makes it possible to reconstruct four career patterns:"construction", "anchor", "patchwork" & "dead end". Different degrees & forms, in which career patters are actualised in the milieus studied, demonstrate the role of unequal distribution of resources in putting life projects & careers into practice. At the same time, the existence of similar career patterns in two contrastive milieus suggests that the modes of practicising reflexivity, which shape occupational choices, are irreducible to the structural positioning of social agents.

Domingo, Eduardo M. (Theology and Religious Education Department, De LaSalle University-Manila, 2401 Taft Avenue, Manila 1000 [tel: +632524-4611 local 534; fax: +632524-4611 local 534; e-mail: eduardo.domingo@dlsu.edu.ph]), **Intertextuality and the Sociology of Religion: Re-Reading Texts and Contexts of Animism in the Philippines,** *International Sociological Association, Gothenburg, Sweden,*

¶ Born from concrete historical-cultural contexts, sociological paradigms have not only influenced the topics of interest of researchers but their tools & methods of inquiry as well. Hence the contexts of the sociology of Weber, Durkheim, Marx, & other sociologists have also become the texts of sociology of religion and of the studies of their respective followers. Unconsciously, however, practitioners & researchers have been improperly appropriating these paradigms in different and/or new contexts. Using intertextuality as the key concept, this paper illustrates the importance of considering the contexts of sociological assumptions & paradigms in current studies. The new & changing conditions demand a reading not only of the new contexts for sociology but also a re-reading of the sociological paradigms we use. Re-reading these contexts as texts to be appropriated, researchers are given a better & wider perspective to make the sociology of religion not only meaningful & appropriate but truly relevant.

Dominguez, Fernando (Sociology, NYU, New York 10012 [e-mail: fr547@nyu.edu]), **Media-Art and the Future of Cultural Objects in a Digital Age,** *International Sociological Association, Gothenburg, Sweden,*

¶ The emergence of media-art, that is, art which depends on electronic equipment for its display & storage, is acknowledged as one of the most significant developments in contemporary art. Since the appearance of film & video art in the late 1960s, the increasing engagement of artists with different media technologies, like audio, computers, or the Internet, has resulted in a host of new art forms, as audio-installations, digital-art or Internet-art. Unlike traditional cultural objects–like books, paintings or sculptures–which can be preserved for decades or even centuries, the rapid obsolescence of media technologies subjects media-based cultural objects to an endless cycle of "cultural refreshing" whereby these objects have to be continually updated from "old" media (e.g. 5-14 inch floppy, VHS, film) to "new" storage formats (e.g. DVDs) to prevent them from becoming irretrievable or lost. This paper will analyze media-art as one of the key fields illuminating the unprecedented challenges that cultural objects face in a digital age. Specifically it will address the following questions: What are the socio-material networks required to keep up with this endless technological cycle of cultural refreshing? What are the criteria for establishing which cultural objects are preserved & which ones are left to degrade? Who are the key individual & institutional actors involved in these decisions? What are the media-technologies required to assure the future reproducibility & authenticity of these cultural objects? What peculiar version of our contemporary cultural legacy are these technological processes articulating?

Dona, Giorgia (School of Humanities and Social Science, University of East London, 4-6 University Way, London, E16 2RD [tel: 0044(0)208-223-2791; fax: 0044(0)208-223-3296; e-mail: g.dona@uel.ac.uk]), **Challenging the Exclusivity of Ethnicity in Ethnic Conflicts,** *International Sociological Association, Gothenburg, Sweden,*

¶ To date, most representations of ethnic violence have focused on the antagonistic relationships between ethnic groups in terms of victims & perpetrators. This focus has tended to neglect the existence of non-oppositional & non-ethnic social identities that are also present during conflict. I make use of the social category "internal bystander" to violence in order to discuss overlapping and hybrid social identities that can be seen as a counterargument to the primacy of ethnic ones. This category also challenges the exclusive reliance on ethnicity to describe the unfolding of social relations during conflict. The experiences of internal bystanders to violence–individuals who inhabit the social spaces of conflict but who are neither direct targets nor perpetrators of violence–challenge exclusive explanations of ethnic polarization and collapsed social relations. Bystanders' testimonies highlight the existence of other narratives of assistance across ethnic boundaries, as well as resistance to ideologies of ethnic cleansing, & ongoing negotiations of ethnic & non-ethnic identities during violence. In the development & consolidation of post-conflict discourses of national unity & reconciliation, there is a danger that bystanders' testimonies become invisible in historical accounts of past ethnic violence, & that their potential contribution to reconciliation processes is marginalised.

Donat, Elisabeth (University of Innsbruck, Department for Sociology, Universitätsstr. 15/II [tel: 0043-512-507-7302; e-mail: elisabeth.donat@uibk.ac.at]), **The Appeal of Social Theory–An Integrative Approach of Teaching the Importance of Social Theory for Empirical Studies,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper is introducing a teaching example of clarifying the importance of a theoretical basis for empirical research to the students. The course has been undertaken at the University of Innsbruck, Austria. Students of this course tried to operationalize the "Theory of Planned Behaviour" by I. Ajzen & to examine this theory by an online survey on traffic behaviour of students at their university. Besides the experienced difficulty to translate theoretical assumptions into empirical research, students reported a better understanding of the theory & the proposed influences, when looking at concrete items & measures. Therefore methods became a key factor for a better understanding of theory & vice versa theory helped them to organize their empirical work more effective & with a larger scientific output. In reflecting these experiences during teaching, our team in Innsbruck decided to provide more integrative teaching in theories & methods courses. In autumn 2010 a course on authoritarianism is offered, which tries to illustrate the relationship of theories & methods by means of team teaching & other instruments. This paper is going to summarize experiences from past courses & offers suggestions for the planning of future courses.

Donato, Luisa & Grand, Martino (IRES Piemonte - Economic Social Research Institute of Piedmont, Via Nizza 18, Torino, Italy, 10125 [tel: +39 011 6666455; fax: +39 011 6696 012; e-mail: luisa.donato@unito.it]), **Equal Access to Education in Piedmont. Gender-Based Differences and Motivations for Vocational Training Choice,** *International Sociological Association, Gothenburg, Sweden,*

¶ Within the training offer domain, vocational training is still little investigated although being an instrumental function of active labour policies, in connection with the various requirements of the main target groups, among them young students, women, & men in their compulsory education age. The primary objective of this research has been to define a quantitative framework of gender-based polarizations in educational paths in Piedmont. In the light of polarizations emerging from the quantitative investigation, we decided to investigate this matter by means of qualitative methods using focus groups & tandem interviews. The research-based investigation has been focused on the analysis of gender-based choices & the analysis of motivations at the basis of choice for a given educational path, to draw the attention of the players involved, teachers & students. The objective has been to create a useful source of information in order to analyse the status of vocational training courses aimed at complying with the obligation of compulsory education in the Piedmont Region. The study allows us to provide an effective & interesting reflection on such a widespread situation, although still little known whose quantitative investigations like PISA shall provide a report in the short-term.

Doneddu, Silvia (Universitat Autonoma de Barcelona, Barcelona, Spain [tel: 0034663888131; e-mail: silvia.doneddu@gmail.com]), **Hypothesis of an Emerging Rural District in Catalonia,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Marshall's District model & more specifically its External Open Economy theory, shows that the asymmetric principle of Steindl–which states that anything done by a small company can be done by a big company, but not vice versa–can be argued against by applying a new role to the small companies away from the segregation into the irrelevant part of the global market, where different theories and studies have placed them for a long time. In 2003, a debate about the possibility to apply the District model to the rural path opened in the QA-Questione Agraria journal, involving some researchers already compromised in local development analysis based on the concept of the Marshall industrial district. In this paper I will present a case study that shows the intent of small holdings to gain a niche in the market working in organic food production through an alternative work asset organization & a sustainable development model. The production is realized locally, which supports the growth of the local economic system, creating a hypothesis of an emerging organic district. The case study refers to a rural area of Catalonia, el Moianès, a natural subcounty situated in a high plain. The investigation exposes the positivity as well as the criticism & the contradiction inside on the multilevel governance dynamics. Data from this case study was collected through qualitative screening method using semi-structured interviews with key actors.

Doneker Mancini, Karen (University of Delaware, Newark, Delaware 19716 [tel: 302-312-8282; fax: 302-831-3261; e-mail: kmancini@udel.edu]), **Understanding the Role of Family Support in the Lives of Emerging Adults with Disabilities: Implications for Higher Education,** *International Sociological Association, Gothenburg, Sweden,*

¶ The transition to emerging adulthood brings with it many challenges for which students need support. Students with disabilities face additional challenges related to their disabilities. The greatest challenges facing students with disabilities are socially constructed (Levine & Wagner 2007). In addition, to access to courses, institutions need to consider how open & welcoming the campus is to students with disabilities. Many students with disabilities face difficulties integrating into campus life, peer relationships, student activities & career development programs. Support services need to recognize the diverse needs of this population through reevaluating current services & instituting disability specific supports that go beyond accommodations. Integral to the transition is the role of family. Families serve as a resource to help students maximize the effectiveness of the

accommodations & proactively address crisis situations. The incorporation of family into the transition process has resulted in greater numbers of students attending post secondary institutions (Levine & Wagner 2007). Positive family relationships prior to and during the college experience are correlated to higher grade point averages & better adjustment to college life (Cutrona et al. 1994). Families can serve as a prevention mechanism on campus. They are often an untapped resource that when combined with university level support services, can influence student success. However, some families struggle with understanding the disability, how it affects functioning at college & how they can help. As such they are a resource that needs to be cultivated & a broad definition of family should be employed. A model for universities to respond to this challenge will be proposed & implications for outreach to provide a seamless system of support for families will be discussed. Suggestions for future research & evaluation will be provided.

Doran, Marie-Christine (University of Ottawa, 55, av. Laurier E., Ottawa, Canada, K1N 6N5 [tel: 613 562-5800 ext 2009; e-mail: mcdoran@uOttawa.ca]), **Human Rights Claims and Collective Action in Latin America,** *International Sociological Association, Gothenburg, Sweden,*

¶ During the last two decades, Latin America has been under the dominant trend of political reconciliation. Looking for compromises that would not challenge military power, torn between opposing views of Memory, political authorities have turned to the political stability paradigm that justified the exclusion of judiciary procedures in cases of State terror & Human Rights violations, in order to avoid unnecessary suffering to the victims by exposing them to testimony. Recently, social mobilization claiming for justice & the end of impunity in many countries begun to challenge the dominant trend of reconciliation. In El Salvador, Chile, Argentina, Mexico, & Colombia, all countries with very different histories of State conducted human rights violations, claims for justice as well as innovative forms of "public expression of suffering" have been a main social trend for the five last years. Moreover, field studies conducted by an international Research on Violence & collective action (GRIPAL 2008-ongoing) are showing that the idea of Human Rights is, surprisingly, one of the core values expressed by the interviewed as a motivation for collective action & desire for the end of violence. Between the international discourse of Human rights, often imposed upon populations through NGOs, & the public expression of suffering, what is the social representation of human rights & struggles against impunity that we find in lifestories? And how does it challenge the dichotomy between autonomous social action & political discourse, be it from those who ban judiciary action for the stake of victims, or from those who believe Human rights is a univocal dominant discourse ?

2010S00682

Dores, Antonio Pedro (Dep. Sociology ISCTE - Lisbon University Institute, Lisboa, Portugal, 1600 Lisboa [tel: +351 964764741; e-mail: antonio.dores@iscte.pt]), **Emotions Build Systems,** *International Sociological Association, Gothenburg, Sweden,*

¶ Western culture presents fear as opposite of love. Adam & Eve should fear the fruits of the knowledge tree for love of God. Abraham should not fear the death of his own soon for love of God. The faith in the love of God calms all fears, even if it is not a earthly medicine for human relive but, instead, a spiritual heal receipt to the bad parts of the life on Earth. Those who feel no fear are devilish people. They cannot feel love as a sharing and solidarity feeling. They feel love as a possession feeling. Fear and love are emotions calling for social changes. If the people feel afraid, as well when they feel in love, people must do something about it, whenever one can. One has the choice of reinforcing the strongest social links one has for certain, to calm down fear or love or, instead, to leave the fearful or communal situation, as well as the social net linked to it, in order to become safe & to join the subject of the new love, whenever this subject is more powerful than the fearful previous situation. Western culture fears (private) violence against the people, which has been through all history the main subject of change & memory, & loves true love, innocent love, (public) emotion that is able to change even when everything else continues the same.

Dori-Hacohen, Gonen (Department of Communication, University of California, San Diego, 9500 Gilman dr. La Jolla, CA 92093 United States [tel: +1-858-4580571; e-mail: gonendorihacohen@yahoo.com]), **The Discourse behind the Talk: Back- and Front-Stage in the Production of Public Affair Radio Phone-in Program in Israel,** *International Sociological Association, Gothenburg, Sweden,*

¶ Political radio phone-in programs are taken as part of the public sphere. Using ethnography complemented with discourse analysis, this paper describes the production of the leading Israeli program, in order to shed light on the production of a public sphere. Three types of discourse interlace in the production: the service, the radiophonic, & the public sphere discourse. The editors and producers are the agents of the service discourse, which is used to screen callers. The editors, hosts, & mainly the technicians, who check the sound quality of a caller, are in charge of the radiophonic discourse. Only the technicians do not take part in the public sphere discourse. The tensions in the production are both between agents & discourse types & are part of the front-stage a back-stage division. Editors & technicians clash over the public sphere versus the radiophonic needs. At the front-stage, callers complain to the hosts about being screened, though the editors screen them at back-stage. The hosts are famous, old, civilian males whereas the editors are novice, young soldiers from both genders. Yet, this mixture is beneficial in the construction of the public sphere & the production of the radio program.

Dorin, Stephane (Université Paris 8, Culture et Communication, 2 rue de la Liberté, Saint-Denis, 93526, France [tel: +33.6.48.27. 31.65; fax:; e-mail: stephane.dorin@univ-paris8.fr]), **Contemporary Music Lovers: Sociological Portraits,** *International Sociological Association, Gothenburg, Sweden,*

¶ I would like to present the results of the qualitative part of a survey I conducted over the past 3 years on contemporary music lovers in France. The specific social characteristics of contemporary music lovers must be challenged through the omnivorous hypothesis: are they univorous, in the way Distinction leads us to see them, or are they omnivorous, which would mean they are no more "specialist" & "competent" ? And if they have become omnivorous, is it in a specific way ? What are the social components of their taste structure? A series of 30 in-depth interviews has been conducted in 2009. They allowed us to measure the influence of sociability in a legitimate cultural practice, while this variable was used mainly to study popular culture and media so far. They also provide information about the effects of cultural industry products on the cultural consumption patterns of people relatively away from these cultural goods until recent years. The methodology here draws on qualitative tools, since the evolution of contemporary music audiences has proved to challenge some well-known results of cultural consumption patterns. The results of this survey are then particularly relevant for the study of a specific segment of upper & upper middle classes, with a high amount of cultural capital, as compared with economic capital, a segment clearly associated with creativity & with a strong appetite for legitimate & avant-garde cultural products.

Dormagen, Jean-Yves (University of Montpellier 1, 39 rue de l'Université, Montpellier, France, 34000 [tel: 33-684601918; e-mail: Jean-Yves.Dormagen@univ-montp1.fr]), **Why Do Exit Polls Necessarily Go Wrong? And Why It Matters for Sociological Knowledge of Electoral Behavior.,** *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Since the French presidential election of 2007, we have undertaken research on bias in investigations of electoral sociology. In order to assess the quality & the limits of our data, we chose to study the votes starting from ten polling stations characterized by large morphological, sociological & political differences. An exit-poll has been organized for each of the nine ballots between the presidential election of 2007 & the local elections of 2010. The data produced with the exit-polls will be at the center of our paper. Our method of investigations makes it possible to identify bias in participation in the surveys & bias in declarations of votes. In particular, we have data allowing us to measure with a high degree of accuracy the

bias that we involuntary record. For that, we can use the registration records. They make it possible to calculate bias in terms of age & gender which we record in our various polling stations. We can also compare the electoral results obtained in our polling stations with the declarations of votes obtained in our questionnaires. That makes possible to measure political bias of selection or political bias of declaration among the voters. The advantage of our localized studies is also to be able to identify selection contextual bias. They allow us to know if the social & political properties of the various polling stations studied influence the extent of recorded bias. The objective of this paper is thus to propose a realistic analysis of biases of selections & declaration in their triple dimension: social, political & contextual.

2010S00686

Dortants, Marianne (USBO/USG Utrecht University, Utrecht, the Netherlands, 3511 ZC [tel: +3130-253 8101; e-mail: m.dortants@uu.nl]), **The Influence of Leadership on Inclusion and Exclusion in Boxing. How and Why Leaders Manage Diversity by Neutralising Gender and Ethnicity.,** *International Sociological Association, Gothenburg, Sweden,*

¶ The purpose of this study is to analyze why & how leaders in boxing create a discourse of gender & ethnic neutrality. I used observations & interviews with coaches & athletes to collect data about the ways in which gender & ethnicity were "said and done" in a multi ethnic boxing club in which both boys & girls participate. I focused on the history & dynamics that produce (or not) gender & ethnic neutrality on different levels & on when, how, & why gender & ethnicity are viewed as legitimate or illegitimate as an issue for discussion & action. The results indicated that trainers (and athletes) have a mix of motives to justify who is allowed to box (matches) or not. Trainers construct a successful boxer as disciplined, which is gender & ethnic neutral. Trainers use a combination of implicit & explicit management techniques to manage diversity. Although trainers have a more powerful position, they always need to negotiate with athletes about what is to be "said & done", especially because of their voluntary membership. Remarkable is the difference between front stage & backstage practices of gender & ethnicity.

Doucet, Marie Chantal (Université du Québec à Montréal, 455 boul. René-Lévesque Est [tel: 514-987-3000 #4508; e-mail: doucet.marie-chantal@uqam.ca]), **Travailler sur Soi, une Sociologie de la Connaissance Subjective** (Working on Oneself: A Sociology of Subjective Knowledge), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Dans la mouvance des transformations socioculturelles, le travail sur soi est devenu central bien quil fasse l'objet de débats sinscrivant tout à fait dans le renouvellement d'une sociologie de la connaissance. Le cadre épistémologique présentant l'intégration de la vie sociale dans un mécanisme objectif a jusquici dominé les approches et construit les objets de recherche. Cependant, ce modèle aujourdhui est de plus en plus remis en question car il laisse échapper un monde en mouvement, qui ne cesse de se redéfinir lui-même à travers diverses formes de communication. Le travail sur soi sera ici défini comme une pratique réflexive, psychothérapique et/ou spirituelle, un acte de connaissance dans lequel les sujets sengagent, à partir de leurs croyances et leurs affinités propres. Selon Giddens, la réflexivité serait le processus d'après lequel les êtres humains agissent en société. De ce point de vue, le travail sur soi est envisagé comme une expérience fondamentalement sociale. l'individu devient ici objet de sociologie, un "laboratoire de l'imaginaire social", suivant l'heureuse expression de Fernand Dumont. l'apparition de l'individu à l'avant-scène de la conscience contemporaine introduit un rapport particulier avec le monde social dont une sociologie de la connaissance de l'expérience subjective pourrait rendre compte.

2010S00688

Douglas, Karen Manges & Sjoberg, Gideon (Sam Houston State University, Huntsville, TX 77341 [tel: 936-294-1513; e-mail: kmd007@shsu.edu]), **Towards a General Theory of Resource Use: Constructing Alternate Institutions to Cope with the Future and the Commons,** *International Sociological Association, Gothenburg, Sweden,*

¶ Our objective is to delineate analytically a more generalized theoretical orientation regarding the management of water & other resources. We make no claim that we are constructing a general theory: our objective is more modest. We are intent on isolating steps that move the theoretical argument forward. Our theorizing is grounded in the research conducted for about a decade by the Douglas on a major social experiment underway in central Texas: the creation & development of the Edwards Aquifer Authority (EAA). A social regime has been constructed in order to manage the use of the aquifer's water usage in the event of a major drought. This particular case highlights basic processes that have been neglected by environmental sociologists & by sociologists more generally. In discussing some of these processes we stay in some instances relatively close to the data at hand, but in other instances the activities of the Aquifer Authority becomes the basis for outlining broader theoretical patterns & processes. Our analysis unfolds in the following manner: First, we briefly outline the growth and development of the Edwards Aquifer Authority in central Texas. Second, we specify our theoretical point of departure, employing as we do Walter Firey's pathbreaking book *Man, Mind & Land* (1960) as our take-off point for detailing our perspective. Among leading environmental sociologists Firey stands almost alone in privileging the cultural system. Yet he also stresses the interrelationships among the cultural, economic & ecological systems. Third, our analysis modifies & extends his framework in several differing respects. For example, & in contrast to Firey, we articulate an alternative conception of culture & stress the centrality of the political system. Additionally, the activities involving the creation of the Edwards Aquifer Authority suggests several fruitful areas for sociologists to examine (or reexamine as the case may be) including the role of the future; the nature of property; the construction of alternative institutions & organizations; & a reconceptualization of social planning in order to more effectively address the problem of looming water shortages & related, large-scale environmental issues confronting the globe.

DovilA, KriukelytA & Ramegowda, A. (Department of Sociology, Vytautas Magnus University, K.Donelaiğio 52-310, LT44244 Kaunas, Lithuania [e-mail: dovile.kriukelyte@gmail.com]), **Motherhood Experience while Being Imprisoned: Is It a Social Problem or an Aspect of Positive Social Reintegration? Religion and Reproductive Choice: A Study across Two Religious Groups in the Indian State of Karnataka,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the relationship between religion & fertility decisions in Hindu and Muslim families in the Indian state of Karnataka. The most established stereotype vis-à-vis the influence of religion on fertility patterns is that Muslims have larger families than Hindus. This view tends to ignore the role of socio-economic contexts in which Hindu or Muslim families are placed. It is thus imperative to examine the relationship between religion and reproductive behaviour in the light of empirical data drawn from diverse economic, educational & regional groups among both religious communities. The study would be placed in the context of the following issues: ADT Educational level & fertility decisions ADT Gender differentials in reproductive choices ADT Rural-urban variations in fertility patterns ADT Occupational differences and family size ADT Income levels & number of children Empirical data for the study would be generated from a sample of Hindu & Muslim families drawn from both rural & urban pockets in the Shimoga District of Karnataka. Other factors that form the basis for sample selection are the educational-occupational & income levels of families.

2010S00690

Drago, Alessandro (Lazio Region, Viale del Tintoretto 432 - 00128 Roma - Italy [tel: +39 06 5168 9004; e-mail: adrago@regione.lazio.it]), **Sociology, a Discipline in Search of an Identity for the New Millennium. The Sociological Approach Facing and Crossing the Rising Themes of the Future: Urbanism and Regional Governance, New media and Infotainment, Migration and Social, Integration, Environment and Sustainability, Energy and Participation,** *International Sociological Association, Gothenburg, Sweden,*

¶ This article aims at reconnecting sociology with the real world focusing on jobs sociologists can do, & actually do, in different fields as investigators, consultants or managers. At the same time the question is whether developments in social & sociological theories have helped sociologists to integrate in the world of work. Unfortunately, due to scarce economic resources available this article is not based on empirical research such as fieldwork but inspired by consolidated sociological theories & mainly by the experience of many works as a sociologist curried out by myself in different fields. The observation that follows highlights the transformation of the figure of the sociologist in the world of work that evolved after World War II onwards: from the investigator in the public sector & in marketing next to economists to the multifunctional expert working in the strategic planning of public policies & private investments as well in the management of non-profit sectors. Some prominent sociologists have recently

begun to declare the decline of this discipline which gives way to other disciplines in interpreting reality. This article states that Sociology's demise is far away unless there will be sociologists to interpret the social world they work in. Rethinking sociology is useless if there's not a common ground, which is not only scientific, where sociologists may confront in the light of their daily contributions to their works. In this case it is important to compare the category of sociologists with other professional categories & open a discussion on what is missing to clearly identify & affirm the sociological role & contributions to the social development & how social & sociological theory may help in this. In few words, social & sociological theories need to reconnect to the real world with & through the commitment of its promoters, the sociologists, by drawing knowledge from their working experiences, that can be collected in networked places.

2010S00691

Dreher, Jochen & López, Daniela Griselda (University of Konstanz, Konstanz, D-78457 [tel: +49-7531-882342; fax: +49-7531-883156; e-mail: Jochen.Dreher@uni-konstanz.de]), **Subjectivity and Power,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this work is to examine the potentiality of the issue of subjectivity to give account of the phenomena of power and inequality. We will base our analysis on Thomas Luckmann's phenomenological & sociological considerations, emphasizing the constitutive & the constructive dimensions of the system of typifications & relevances, in doing so we will argue that they are shaped by power hierarchies. In opposition with those perspectives which consider phenomenological reflections as nonpolitical, we will argue that the issue of the subjective consciousness of the individual actor & his or her life-world is of great value to analyze concrete manifestations of inequality, domination, & exploitation. We will offer a specific conception to investigate the relationship of subjectivity & power in describing a "parallel action" which on the one hand phenomenologically studies the subjective constitution of power differences & on the other hand, from a sociological perspective, analyzes the socio-historical construction of exactly these power differences.

2010S00692

Dri, Clarissa (Sciences Po Bordeaux, University of Bordeaux [fax:; e-mail: clarissadri@yahoo.com.br]), **Democracy in Mercosur: What Role for a Regional Parliament?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Mercosur was created in 1991 by Argentina, Brazil, Paraguay, and Uruguay with explicit economic goals. But for states leaving behind the military dictatorships of the 1980s & going through a process of internal democratization, it was also a matter of political and social cooperation. Progressively, a relatively complex institutional framework was therefore built up. In 2005, a parliament was created in Mercosur. Its Constitutive Protocol affirms the necessity of reinforcing, deepening & democratizing the integration process. Apparently, the national wave of democratization would be finally arriving at the regional arena. But what are the chances of a regional parliament to strengthen democracy in an organization formed by states with a strong presidential tradition? This paper intends to answer this question based on the institutionalization process of the Mercosur Parliament: the more institutionalized the legislature is, the more it shall influence the political system. The hypothesis to be analyzed is that the limited institutionalization of the assembly so far is related to the unbalance of Executive & Legislative forces in South American nations. A qualitative study of the main moments of the institutionalization period of the parliament, including two conflictive situations in Mercosur, will provide elements for the analysis.

2010S00693

Dromundo Valadez, Rolando Mauricio (Telesur, Luz Saviñon 9 Colonia Del Valle Del. Benito Juárez, Mexico City, Mexico, 03100 [tel: +5255137964931; e-mail: rolmau@yahoo.com]), **Corporate Sport against Public Sport Policies in Latin America,** *International Sociological Association, Gothenburg, Sweden,*

¶ Physical activity, recreation & sport haven't been a priority in development policies in Latin America except for the case of Cuba. Sport activity has had many restrictions for almost the entire population in the region. Not enough time for leisure together with conditions where immediate survival is more important have not allowed the population to have access to healthy & active living. Otherwise, sport has become a very profitable business in the area. In Mexico & Brazil, for example, there are markets that are worth millions throughout sponsors, TV rights & other incomes related to sports. The Mexican Soccer League for example, is the fourth most lucrative in the world. Local governments have preferred to finance professional sport & the show related to it instead of implementing policies that increase physical activity & sport practice among the population. In that sense, the biggest benefit has been for all the corporate enterprises that surround sport and their profit rates meanwhile it has signified a decrease in support for sport for all.

Dubied Losa, Annik (University of Geneva, 1211 Geneva 4 [tel: +41223798307; fax: +41223798325; e-mail: annik.dubied@unige.ch]), **Celebrity-News: The New Dominant Stories in Contemporary Media, and its Issues,** *International Sociological Association, Gothenburg, Sweden,*

¶ In recent years, celebrity-news has established itself as one of the new dominant narratives in information media & magazines. It has probably been affected more than any other by the instrumental use of narratives ("storytelling"), particularly when referring to politicians. In this paper we will show how & why celebrity-news is especially suitable to provide all the twists & turns storytelling feeds on. It implies giving a description of its narrative matrix as well as demonstrating how this matrix tends to produce dynamic narratives. Our narrative analysis (part of a wider research project on celebrity: http://www.unige.ch/ses/socio/recherche-people/indexULen.html) will concentrate on the thread of 4 celebrity stories structured around celebrity figures: an actor, two pop singers & the wife of a politician. The analysis of these four different kinds of celebrities will allow us to look at all the different types of celebrity-news & their narrative.

2010S00695

Duelmer, Hermann (University of Cologne, Cologne, Germany, 50670 [tel: 492214769430; e-mail: hduelmer@uni-koeln.de]), **Reliability and Internal Validity of Factorial Designs: A Comparison of Experimental Plans,** *International Sociological Association, Gothenburg, Sweden,*

¶ The factorial survey is an experimental design where respondents are asked to judge varying descriptions of persons or situations (vignettes). The weight that is assigned by each respondent to the different vignette characteristics will be estimated via respondent specific regression analysis. The more complex a research question, the less it is possible for an individual respondent to judge all vignettes. To bridge this bottleneck, random designs are recommended (for instance, Jasso 2006) & used (cf. Wallander 2009) most time, whereas quota designs are not discussed at all. First comparisons of random designs with fractional factorial and D-efficient designs are based on fictitious data (Dülmer 2007), first comparisons with fractional factorial & confounded factorial designs are restricted to theoretical considerations (Steiner/Atzmüller 2006). The aim of this contribution is a) to outline the basic ideas of random & quota designs & b) to shed light on the expected differences with respect to their reliability and internal validity. The conclusions of these considerations are illustrated on the basis of real data. The yardstick for the empirical comparison of most promising designs is established by the estimators of a parsimonious full factorial design. Multilevel analyses confirm that, if they exist, confounded factorial designs are ideal. Randomly selected D-efficient designs are also superior to simple random designs.

Dufour-Poirier, Melanie (University of Quebec (Canada), Industrial Relations Department, 283, boul. Alexandre Tache, C-3827, Gatineau (Qc), J8X 3X7, Canada [tel: 1-819-595-3900 X 2287; fax: 1-819-773-1788; e-mail: melanie.dufour-poirier@uqo.ca]), **Transformations de l'Action Syndicale sur une Base Transnationale: Résultante d'une Analyse Stratégique et Identitaire** (Transformations of Syndical Action on a Transnational Basis: Result of a Strategic and Identity Analysis), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Cette recherche trace une analyse critique et située d'un cas empirique d'alliance syndicale internationale dans les Amériques. Elle aborde plus spécifiquement l'étude des logiques d'action de six syndicats locaux dans la construction d'un conseil mondial d'entreprise dans l'industrie des mines et de la métallurgie. Ses objectifs sous-jacents visent à la fois à reconstituer de quelles façons ces acteurs sinsèrent dans cet espace émergent, à comprendre sur quelles bases ils structurent leurs relations entre eux et à identifier les contraintes ainsi que les sources de tension afférentes à une diversité de contextes nationaux. Dans cette perspective, l'action collective à la base de cet effort de redéploiement doit sappréhender comme un construit interactif constamment remanié par les acteurs, insufflant chez eux des repères stratégiques, identitaires et normatifs en continuelle mouvance et redéfinition. Au total, une soixantaine (60) d'entretiens explora-

toires et semi-dirigés ont été réalisés auprès d'informateurs clés en poste dans des organisations syndicales locales, régionales nationales et internationales au Canada, au Chili et au Pérou: une analyse hypothético-inductive a été privilégiée. Les résultats se dégageant de ces travaux révèlent la présence de trois niveaux de facteurs explicatifs documentant les dissemblances et les similitudes recensées chez ces six acteurs en matière d'implication internationale.

Dugundji, Elenna, Poorthuis, Ate & van Meeteren, Michiel (Universiteit van Amsterdam, Department of Geography, Planning and International Development Studies, Nieuwe Prinsengracht 130, 1018 VZ Amsterdam, Netherlands [e-mail: e.r.dugundji@uva.nl]), **Diffusion in Large Virtual Networks: Distinguishing Social Connections and Cultural Discourse Influence on the Adoption of Twitter Clients,** *International Sociological Association, Gothenburg, Sweden,*

¶ With the onset of Internet & phone-based technology, people leave numerous traces of their social behavior in–often publicly available–data sets. One of the challenges of analysis of these data sets is delineating meaningful "real life" communities within large & noisy virtual networks. In this paper we look at a virtual community of independent–or "Indie"–software developers for the Macintosh & iPhone that primarily interact online. We use a large data set from the social networking site Twitter. Through pruning methods & a community detection algorithm, we are able to detect the "Indie" community of only 20,000 users within a network of several million edges. Triangulation with qualitative data proves that the proposed method is able to distill meaningful communities from large, noisy and ill-delineated networks. We use this virtual community of "Indie" developers to analyze the adoption of Twitter client software. Within this community, three software developers have developed Twitter clients that compete for adoption by users in the same community. Generally, social networks & social capital are considered to be important variables in explaining the adoption and diffusion of behavior. However, it is contested whether the actual social connections or the cultural discourse causally determine this adoption & diffusion. In this paper we are able to analyze how the two different mechanisms influence the adoption and diffusion of Twitter clients by combining traditional network analysis techniques with discrete choice analysis.

Dunk-West, Priscilla (Flinders University, School of Social and Policy Studies, GPO Box 2100, Adelaide, South Australia 5001, AUSTRALIA [tel: +61 8 8201 5288; e-mail: priscilla.dunkwest@flinders.edu.au]), **Theorising Individual, Everyday Sexuality: De-Differentiation and Late Modern Identity,** *International Sociological Association, Gothenburg, Sweden,*

¶ In recent decades sexuality has been a key site whereby empirical and theoretical explorations have been advanced. In sociology sexuality has become central to identity theories. Additionally, the everyday level of analysis is of increasing interest to sociology. What I refer to as everyday sexuality represents the "ordinary", day-to-day, non-problematic sexual self. This paper theorises individual, everyday sexuality in late modern life. Analysing data from thirty interviews with men & women, accounts are critically examined using sociological literature in which identity in late modern life is theorised. Participants in this study were found to have used reflexive action in a conscious, agential manner which saw them draw from what is theorised to be a de-differentiated self. Narratives about sexuality are argued to traverse, whilst being contingent upon, traditionally upheld boundaries between "selves" & interactions with social structures. The creative mediation of identity experienced through both subjective and structural social life simultaneously constitutes this reflexive agential action. This paper argues for a reconfiguration of identity to account for the creative mechanisms through which individuals are locating the sexual self in day-to-day social and subjective life.

Dunlap, Riley E. (Oklahoma State University, Stillwater, OK 74078 USA [tel: 405-744-6108; e-mail: rdunlap@okstate.edu]), **Climate Change Denial: An Overview,** *International Sociological Association, Gothenburg, Sweden,*

¶ The denial of anthropogenic climate change is an increasingly international phenomenon, with roots in the USA. This paper examines the "climate change denial machine," focusing on the key actors involved & their major strategies. It describes the roles played by the fossil fuels industry & conservative foundations in providing the funding for a complex array of conservative think tanks, public relations firms, contrarian scientists, front groups, and bloggers who–with the help of conservative media–disseminate misinformation about climate science & the reality of anthropogenic climate change. The key strategy of the denial machine is to "manufacture uncertainty" over climate science, and thus undermine calls for climate change policy. In recent years this strategy has been supplemented by intense attacks on climate science & threats against individual scientists.

Duret, Pascal & Cubizolles, Sylvain (CURAPS Université de La Réunion, 117 Rue du Général Ailleret - 97430 Le Tampon - Ile de La Réunion [tel: 02.62.57.95.91; fax: 02.62.57.95.71; e-mail: Pascal.duret@univ-reunion.fr]), **Sociology of Sport, Global Identity Coherence and Theories on the Identity of the Individual,** *International Sociological Association, Gothenburg, Sweden,*

¶ This presentation will endeavour to answer the following question : How can the Global Identity Coherence of an individual be analysed through his sporting practices? Based on work in the field of Sociology of Sport, our purpose is to highlight the limitations of recent theories on the Identity of the Individual, considered as a multiple being, when an analysis considers him from the point of view of his Global Identity Coherence. This purpose requires on the one hand, redefining the heuristic aspect conferred on the Sociology of Sport. This needs to take into account the global sociological problems which Sports enables one to encounter instead of concentrating oneself purely on the limitations that have been assigned to the subject & from which it should not ideally deviate. This reflection invites, on the other hand, a keen insight into the limitations surrounding the individual: identified as plural, multiple, or multi-facetted in identity when studying him as a coherent entity. We have identified three limitations: the constant confusion between Identity & Role; the imaginary compartmentalization of different identities & the lack of interrogations pertaining to the link between these different identities.

Durr, Marlese, Patterson, Dana & Harvey, Iris E. (Department of Sociology, Wright State University, 3640 Colonel Glenn Highway, Dayton, Ohio 45435-0001 [tel: 1-937-775-2667; fax: 1-937-775-4228; e-mail: Marlese.Durr@Wright.Edu]), **Race Women: African American Women's Mobilization to Feminists Collective Action,** *International Sociological Association, Gothenburg, Sweden,*

¶ With the publication of the *Feminine Mystique* in February, six months before the August 1963 March on Washington, the second wave feminism (1960-1980s) received heightened national prominence. As majority women's status was examined, African American women were fully engaged in the battle for civil rights, yet simultaneously faced with a comparable form of nonviolent civic engagement–The Women's Movement. Both sought change & peace within American society for women & girls, but Black women wondered how to reconcile issues of gender over and/or against race & civil rights. Despite the inveigling nature of second-wave calls to arms against inequality, heterosexuality only, family, workplace rights & promotion, and privilege over their bodies, Black women felt that race was inextricably tied to social change & acceptance. As African American women endeavored to participate confederately in this new social movement, they continued the struggle for civil rights across all spectrums of American life; many describe the emotional labor they confronted as part of a race-gender bias toward issues which affected majority feminists. Simply stated, they became spokeswomen for their sisters as they sought to locate their place in a movement which had earmarks of a continuing outsider status. The contests to finding a lasting & equal place within this lobby, despite the publication of Frances Beale's double Jeopardy thesis (1969), Paul Murray's Liberation of Black Women (1970), the Combahee River Collection Black Feminist Statement (1974), Alice Walker's womanist argument (1983), Deborah King's multiple jeopardy, multiple consciousness premise (1988), & Patricia Hill Collins Black Feminist Thought (1991) has proven to be pedestrian. Yet, through their writings, African American women & other Women of Color harvested a definition of feminism they could all share and build from. This paper examines the intersection of race & gender identity as it became a part of Black women's social activism. Data for this paper will be collected by interviewing African American women 55-60 years of age & older that actively engaged in the Civil Rights & Women's Movement, while seeking to maintain their identity, but locating an intersecting place for themselves in both avenues of social change.

2010S00702

Dworkin, A. Gary & Tobe, Pamela F. (University of Houston,

4800 Calhoun Road, Houston, Texas 77204-3012, USA [tel: (713) 743-3955; fax: (713) 743-3943; e-mail: gdworkin@mail.uh.edu]), **Teacher Morale and Burnout in an Era of School Accountability: High-Stakes Testing and Student Misbehavior,** *International Sociological Association, Gothenburg, Sweden,*

¶ Substantial research on teachers has pointed to the combined roles of school climate, including administrative policies & practices, and student behaviors & attitudes about schooling as central in shaping teacher morale & teacher burnout. Studies by Dworkin and his colleagues (1987 to 2009) & by Gaziel (2004) have suggested that in the presence of high levels of job stress, supportive principals can mitigate teacher burnout, while other research has suggested that disruptive & deviant behaviors of students can exacerbate teacher burnout. Further, in an era of standards-based accountability systems in which schools & teachers are evaluated by the extent to which they can raise standardized student test scores, the accountability system itself serves as a significant stressor that affects burnout. The present study examines the relative power of administrative support & student disruptions on the morale of public school teachers. The current study relies on a large, longitudinal data base consisting of student test scores, student attitudes about schooling, teacher attitudes about their job, their campus administrators & their students, and administrator attitudes about their teachers. Linkages are made between 3,200 teachers, their principals, samples of 12,000 students, & more than 30,000 standardized tests scores per year over five years. The HLM models developed can indicate the relative explanatory power of campus, student, & teacher effects of the morale of public school teachers in a large, urban school district. The present study is informed by prior work on teacher burnout conducted by Dworkin & his colleagues between 1987 & 2009.

2010S00703

Dwyer, Tom & Santos, Jose Vicente Tavares dos (Department of Sociology, IFCH, University of Campinas, Caixa Postal 6110, 13083-970 Campinas, SP Brazil [tel: +5511-32849335; fax:; e-mail: tom@unicamp.br]), **Communication, Development and Interaction in the BRICs–A Sociological Reflection,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper begins by examining three dimensions of relations between BRIC partners in a globalized world: economic, cultural exchange and Supra-national organizations. (Wieviorka) Increased contact between the BRIC countries is resulting in greater awareness of differences. Conflicts are inevitable. Should our political and international elites not get to know each other better, build respect for each other, & mechanisms for conflict resolution, these may flee from control. The key assumption of this paper is that the building of a common research agenda can help develop sociological knowledge & provide a basis for building mutual understanding. For example, massive structural changes have been experienced by citizens as the BRIC countries have engaged in modernization & development processes is a fertile field for comparative analyses. Increasingly BRIC cultural content is produced & transmitted to other countries, the study how such content is received & incorporated into the world views of different categories of receivers in the BRICs, especially youth, seems to be a further important area for study. Sociologists can also make an important contribution by analysing emergent conflicts. As the interactions between the BRICs develop meaningful dialogue will become both a value & a necessity. This paper aims to make a contribution to structuring a research agenda for new times.

2010S00704

Dziuban, Agata (Institute of Sociology Jagiellonian University, Krakow, Poland, 31-007 [tel: +48691657158; e-mail: agata.dziuban@uj.edu.pl]), **My Self on Myself: Tattooing as a Biographical Strategy in Contemporary Poland,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this presentation is to examine tattoo acquisition, as a beauty practice, enabling individuals to negotiate & reinterpret their identity in the context of contemporary culture. By analyzing biographical interviews with male & female tattoo enthusiasts in Poland, this study looks to explore tattooing as a meaningful practice involved in the broader biographical strategy enabling individuals to gain a stable sense of self, coherence of biographical narrative & establish one's own relations with others. This is done by firstly analyzing motivation & consequences of tattoo acquisition among tattoo enthusiasts. Secondly, examining in what sense body-modification practices reflect changing cultural forms of self-display & self-formation associated with aesthetization of the body. And thirdly, by arguing that interest in tattooing in contemporary Poland may be understood as a symbolic way of differentiating or positioning oneself within the broader community and as a cultural commentary, reflecting social meanings behind tattooing.

Easterby-Smith, Sarah C. (Department of History, University of Warwick, University of Warwick, Coventry CV4 7AL [e-mail: sarah.easterby-smith@warwick.ac.uk]), **'Polite Plants': Translating Natural Knowledge in the Late Eighteenth Century,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores how information about the natural world was communicated in the late eighteenth century. I use the historical example of the Scottish plant-hunter Thomas Blaikie (1750/1-1838) to examine how such information was transmitted & translated between actors of different social & cultural backgrounds. Taking "translation" as a metaphor for the (mis)communication of knowledge about science, I discuss how language, social status, and comportment influenced the transfer, & translation, of information about botany in the late eighteenth century. Thomas Blaikie was sent on a plant-collecting expedition to Switzerland in 1775, where he faced problems of language & cultural difference. Blaikie learnt ways of overcoming these, & began to act as an intermediary within local botanical networks, fraternising with all types of "knower". I discuss the interaction between actors' different knowledge systems, will highlight some of the ways in which information is "translated" in accordance with the social and cultural contexts in which it has been produced & received.

2010S00706

Ebeniro, Chioma Daisy (Department of Sociology, University of Port Harcourt, P.M.B 5323, Choba, Port Harcourt, Rivers State, Nigeria [tel: +2348033427372; fax: NA; e-mail: chioma2nv@yahoo.com]), **The Role of Women in Conflict and Conflict Resolution in the Niger Delta Region in Nigeria,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Niger Delta region has been the mainstay of the Nigerian economy due to oil production from the region. This region is characterised by immense poverty, & has suffered from a long history of socio-economic neglect & environmental degradation. This situation has led to serious incidents of conflict & violent protests over the years by the poor people of this region. Against the backdrop of insecurity, conflict, & violence pervasive in the Niger Delta region, the people live in fear of being targets of militia groups whose latest means of making a statement to the government, the multinational companies & the international world, is by way of kidnapping people for ransom money. Several groups & agencies have attempted to solve the wave of conflict in the region with not much success. However one group of people which are the womenfolk have not been given serious attention in their role in this region. Women are not given much attention in conflict resolution in the Niger Delta region due to the socio-economic positions occupied in the society. Despite these limitations the women in this region have either individually or collectively, attempted to contribute to the development of this region. This paper examines the contributions of women in the resolution of conflict in this region

2010S00707

Eberhardt, Christopher (The New School for Social Research [e-mail: eberharc@newschool.edu]), **Environmental Futures Within Networks: Lessons from U.S.-China Collaboration on Climate Change,** *International Sociological Association, Gothenburg, Sweden,*

¶ Is the fact that China & the United States together account for 40% (20%:20%) of all greenhouse gas (GHG) emissions just a matter for treaty negotiators, or are there important lessons for public sphere theory? To varying extents in the media, including print publications & online videos, individuals & organizations have demonstrated a desire to imagine China & the United States as able to work together to address climate change. These efforts result from what the author calls publics, the intersections of networks of individuals circulating between international and domestic sites. But to what extent are these efforts shaping the imaginations of government leaders & private citizens in China and the United States, leading to reductions in GHG emissions? Using interviews & participant observation in China & the United States the author building on public sphere theory creates a new framework for understanding transnational environmental space. The paper demonstrates that transnational environmental space needs to be understood as a complex interweaving of publics with both government & public opinion facilitated by media. Using this new framework, the author argues it is then easier to understand the impacts of transnational efforts to address climate change more specifically & environmental issues more generally.

2010S00708

Economou, Aikaterina (University of Macedonia,, 156 Egnatia Str, GR-540 06 Thessaloniki Greece [tel: 00302106010794; e-mail: vicULpec@yahoo.com]), **Corporate Social Responsibility as a Source of Sustainable Competitive Advantage in Contemporary Firms and Organizations,** *International Sociological Association, Gothenburg, Sweden,*

¶ Modern firms & organizations are trying to survive in the new globalised & competitive markets. Businesses embrace multifaceted human relationships, between employers & employees, managers and stockholders, manufacturers & consumers or stakeholders. These relationships are not merely economic relationships based on exchanging goods & services, but they are also moral relationships with ethical dimensions in all function areas of firms & organizations. Thus, business decisions should be taken into account from a business, a legal & a moral perspective. In the last two decades, an increased social sensitivity to business ethical issues has been observed in addition to a greater interest in firms' responsible & social roles. These trends pressure companies to operate ethically & as a result corporate social responsibility is accepted as a core business value. This paper investigates the mean & advantages of business ethics, corporate social responsibility & sustainable competitive advantage serving as a link with organizational effectiveness.

Edwards, Melissa T. (CCS, UTS, Sydney, Australia, 2007 [tel: +61 2 95143319; fax:; e-mail: melissa.edwards@uts.edu.au]), **Propelling Community-Driven Conservation Strategies: Emergent Community Organising,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this study of a diverse community-based coalition, a proactive collective conservation vision was derived & enacted through dispersed leadership, connectivity between disparate networks and consensus decision making mechanisms. Conservation of a "Green Corridor" of remnant vegetation running through the centre of the regional city was preserved, contrary to local government development & planning strategies. This community coalition formed through grassroots participation in order to encourage citizen action on conservation issues where there was a perceived inaction on the part of the state & business institutions. Eventually representing over fifty community-based groups this coalition bridged divides between traditionally disparate groups and individuals. Given the successful community-driven conservation outcome, this exploratory analysis questions what were the critical organizing mechanisms that enabled the collective organising? Analysis of interviews with key participants, online correspondence and other secondary source information were interpreted within a cross-disciplinary conceptual framework combining new social movement & complexity theories to uncover the processes used for organising. Several overarching aims guided the analysis: exploring the emergent organising processes, questioning cohesion within networks, representing the outlying information, unpacking the collective notion of "movement identity" & identifying critical turning points. The cross-disciplinary framework extends civic participation concepts to consider that which is facilitated through collective action in the "space in-between" somewhat disparate associations & individuals. Through a new social movements lens this paper examines how the community coalition emerged in tension between a strongly developed "corridor brand" and loosely coordinated autonomous actions. Mechanisms that enabled the organising were examined through a complexity framework to simultaneously consider tensions between: consensus & conflict; collective action despite centralised control; participation in absence of "active" involvement; and a-political stance despite intense internal politicking. The overarching analysis demonstrates the significance of connectivity, both as a metaphor for negotiating diversity, as well as in terms of network-building to enable collective community organising.

2010S00710

Eerola, Petteri (Department of Education, University of Jyväskylä, Jyväskylä, Finland [tel: +358142601712; e-mail: petteri.eerola@jyu.fi]), **Narrating More Child-Centered Fatherhood–Three Narratives of Young Finnish Men Entering into Fatherhood,** *International Sociological Association, Gothenburg, Sweden,*

¶ In Finland the discussion on fatherhood has expanded over recent decades. This increased fatherhood discussion has presumably had some influence on how men talk about being fathers. This study looks at young men's narratives of fatherhood & becoming fathers. The research here is based on interviews with sixteen Finnish men who became fathers at 22-27 years old, & who are currently living in traditional nuclear families. Through narrative analysis, stories arise of active, traditional & role-seeking fatherhood. Active fatherhood is characterized by shared parenting, traditional fatherhood by financial support as a form of commitment and participation. Role-seeking fatherhood is characterized by a man growing in fatherhood through challenges. From the bases of these narratives we can see how in all of them fatherhood is spoken differently than in the previous generations' narrative model of fatherhood. We might ask, has our way of talking about fatherhood changed the narrative model for manhood? It appears that in the cultural narrative model for manhood, as young men know it, fatherhood is spoken of according to the postmodern narrative model for it. Further, the narratives investigated here show more clearly than in previous studies how a man's relationship with his spouse is spoken favorably of in those narratives where fatherhood is realized in a desirable way for the man. Through these narratives, we can get an image of young Finnish men becoming more child and family centered as fathers.

2010S00711

Efe, Adem (Suleyman Demirel University, Isparta Turkey [tel: 0090 246 211 45 43; fax: 0090 0 246 237 10 58; e-mail: ademefe45@yahoo.com]), **Mondialisation, les Nouveaux Mouvements Religieux et le modèle de Turquie** (Globalization, New Religious Movements, and the Turkish Model), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Comme Oliver Roy disait aussi, "le mondialisation a formé les nouveaux marches religieux." Mais, ce nest pas juste de caractériser comme la rentrée des religions. La mondialisation est un phénomène économique, et ne concerne pas des régionaux comme apriorité. Et aussi, elle a la spécialité liant au religieux à l'échelle mondiale au cadre de la religion, la culture, et la politique. La mondialisation s'est nomme aussi "la Mondialisation Technologique" ou "l'Ordre de Monde Nouveau" ou "la Deuxième Dévotion" et "New Age". En 1961, Julius Evola caractérisait comme la deuxième dévotion était "défaite" On commence le sujet des Nouveaux Mouvements Religieux. "La notion de Nouveaux Mouvements Religieux s'est manifesté après les années 1950, et particulièrement; a commencé se répandre entre les jeunes à partir des années 1960 et a été utilisé exprimer les caractères de ésotérique, mystique et post catholique. Pour ces mouvements récemment dans Notre Pays, on utilise les notions différents comme "les Mouvements Milleniums" , "les Sectes", "les Sectes de Résurrection", "les Mouvements Millénariste", "les Groupes Religieux", "l'Opinion Religieux". Ceux-ci est formé refusant l'église et son irraisonné commentaire et aussi le modèle de société moderne mais en face de ceux-ci, par les personnes modernes cherchant les pratiques et les doctrines modernes à fermer l'ouverture de la conviction. Les mouvements en question se sont nommés aussi; comme "les Jeunesse Religieux Sectes" pour intéresser aux jeunes le plus. Les Nouveaux Mouvements Religieux est accepté comme une saveur pour la société moderne réchappe les problèmes socio-économiques spécifiques. Les personnes dans une recherche pour réchapper sont enroulées comme les autres mouvements sociales, Nouveaux Mouvements Religieux aussi assure une importante atmosphère pour les constructions compliquées culturelles, sociales; les atmosphères de crise et les tensions; les irrégularités, les blocages, les non-satisfactions,les privations sociales. En général, le fait que l'ordre social maigrit, anéantit, fait obéir quelque pouvoir et aussi les périodes chaos sociales cause à ces mouvements. Quant à M. Özkan, il définit comme la mondialisation, le changement vite, le pluralisme, l'hédonisme, l'individualisme, le consumism, l'indifférentisme contre la religion, le subjectivisme pour les raisons de celles-ci. On se voit tous ces raisons soit au cadre des narrations avancé. On discutera des formations de Ces Nouveaux Mouvements Religieux en Turquie dan ce déclaration.

Ehrenfeld Lenkiewicz, Noemi (Universidad Autonoma Metropolitana, Av. San Rafael Atlixco NAo 186, Col Vicentina, 09340, Izt. Mexico [tel: 55 58046463; e-mail: enoe@xanum.uam.mx]), **Violence in Youth: the Hidden Burden of Sexual Abuse among Students at a Public University,** *International Sociological Association, Gothenburg, Sweden,*

¶ Violence in all its forms became a daily issue in Mexico, being part of a critical situation that has never been known as that extreme. It is estimated that there are more daily deaths in Mexico than in Iraq, especially in the last 2 years & there are imputed to a war declared by the government against the drug production cartels and drugs traffic. However, violence is a predominant element in all Mexican sectors of society, namely domestic violence & gender violence predominant in the last national surveys. Sexual violence indicators show impressive figures & women, especially the young, are the most frequent victims of it. A survey carried out at the 4 campuses of a public university, reveals that sexual abuse is experienced

by one out of five students, but when looking at the qualitative information given in the interview schedules, these figure rise enormously. In this paper will be discussed if the problems of conceptualizations of sexual abuse & violence in general that young students have, as well as the problems of creating an appropriate methodology that allows to get a better insight & more realistic figures about a problem which is hidden in the educational institution, which produces severe impact in students' lives & which needs urgently institutional & social measures to diminish the negative impact of sexual violence.

2010S00713

Eifler, Stefanie (University of Halle, Institute of Sociology, Adam-Kuckhoff-Strasse 41, 06108 Halle (Saale) [e-mail: stefanie.eifler@soziologie.uni-halle.de]), **A Factorial Survey on the Rationality of Everyday Crime,** *International Sociological Association, Gothenburg, Sweden,*

¶ In a factorial survey (n=494), opportunities to commit a minor form of delinquency within the routines of everyday life are analyzed. In particular, an integrated or unified theoretical framework is developed which allows to study the interaction of beliefs, techniques of neutralization & everyday crime (wrong change, fare dodging, keeping found money).

Ekerwald, Hedvig (Sociological dept, Uppsala University, P.O. Box 624, SE-751 26 Uppsala, Sweden [tel: +46 18 471 11 94; fax: +46 18 471 11 70; e-mail: Hedvig.Ekerwald@soc.uu.se]), **Biographies by Toril Moi and Yvonne Hirdman: A Comparison,** *International Sociological Association, Gothenburg, Sweden,*

¶ Toril Moi's influential Simone de Beauvoir biography, *Simone de Beauvoir: The Making of an Intellectual Woman* (1994) & Yvonne Hirdman's newly published Alva Myrdal biography, *Alva Myrdal: The Passionate Mind* (2008) are biographies on women living during the same epoch, de Beauvoir 1908-1986 & Myrdal 1902-1986. The biographies are written in the same essayistic style, with the aim to contextualize the exceptional careers. I will here compare the two biographies & try to grip the biographical methods of Toril Moi & Yvonne Hirdman. The biographers are not professional sociologists, Moi being a historian of literature & Hirdman a historian, but being gender researchers writing on two persons of great importance to sociology they both belong to the field of social sciences encompassed by the history of sociology.

El-Menouar, Yasemin & Blasius, Joerg (Institute for Social Sciences, Universtiy of Dusseldorf, Dusseldorf, Germany, 40225 [tel: +492118115290; e-mail: elmenouar@phil-fak.uni-duesseldorf.de]), **Including Arabic-Islamic Countries in Cross-Cultural Research: Equivalence of Constructs, Response Behavior and Measurement Problems,** *International Sociological Association, Gothenburg, Sweden,*

¶ With the growing public & political interest in Arabic-Islamic countries, these countries are increasingly included in cross-cultural surveys (e.g., World Value Survey, Gallop World Poll, Arab-Barometer). One main target of such surveys is to investigate in which way the value orientations of the populations of Arabic-Islamic countries like Algeria, Morocco, Palestine, and Kuwait differ significantly from those of Western countries. Thereby, an important issue to be considered is the question of whether items which were developed in a specific cultural context are applicable in other contexts. Are the items understood equivalently & what do they measure in this specific context? Moreover, specific cultural patterns of response behavior should be accounted for. Especially the inhabitants of Arabic-Islamic countries have different limits of sensitivity with regard to the questions. Other issues are that survey research is relatively new in these countries & the freedom of speech is not as natural as in other countries. Consequently, high rates of social desirability are to be expected. By means of multiple correspondence analyses, we are going to explore, whether differences in the results of the mentioned countries (Western vs. Arabic-Islamic) can be attributed to methodological or substantial data variation.

Eldén, Sara (Department of Sociology, Lund University, Box 114, SE-211 00 Lund [tel: +46-708-756075; e-mail: sara.elden@soc.lu.se]), **Scripts for the "Good Couple": Individualization and the Reproduction of Gender Inequality,** *International Sociological Association, Gothenburg, Sweden,*

¶ This article discusses & questions the effects of individualization on marriage & heterosexual couples. Processes of individualization are understood in terms of the individualized framework of thinking about self & others permeating Western societies. Theorists of late modernity have declared popular therapeutic manuals for the heterosexual couple a symptom & an effect of individualization processes. In popular therapy, Beck and Beck-Gernsheim encounter evidence of individualism & the disappearance of "scripts for a life together" (protecting "me" against "us"), while Anthony Giddens sees potential for a democratic, pure, & gender equal couple. Drawing on a study of constructions of "the couple" in Swedish popular therapy (self-help books, therapeutic TV-show etc.), this author argues that "new" scripts for heterosexual couples are emerging, scripts that hold elements of both traditional & late modern societies and relationships. In these, a "normal fantasy" of the couple is (re)produced, not in the form of traditional authoritarian scripts but in individualized notions of what is a good, normal & happy life, a fantasy that is the responsibility of the individual/couple to complete. Further, the analysis shows that individualized assumptions enable (an indirect) reproduction of stereotypes and inequalities of the genders, e.g. regarding unequal divisions of domestic work, with reference to "what is best" for a specific individual or couple. The author argues for the necessity of revaluing both understandings of individualisation in sociological theories, & also the "workings" of individualized narratives on cultural as well as individual levels.

Elguezabal, Eleonora (Centre Maurice Halbwachs (CNRS, EHESS, ENS, UCBN), 48, bd Jourdan 75014 Paris [tel: +33 1 43 13 62 00; e-mail: eleonora.elguezabal@ens.fr]), **How Architects and City Planners write about Urban Change: An Approach from the Sociology of Professions,** *International Sociological Association, Gothenburg, Sweden,*

¶ How do architects & city planners use scholarly research and writing? How can we understand their academic production from the point of view of the sociology of professions? This paper explores the way how, & the possible reasons why, city planners and architects make use of academic writing when they discuss in terms of dualization the changes of the city of Buenos Aires. The academic production of city planners & of architects is, as we intend to show, actually related to the reconfiguration of their profession. This reconfiguration is fostered by the growing dominance of, on the one hand, economic values in urban policies, and, on the other hand, of the global Real Estate sector in city making. In this context, the scholarly practices of some architects and some city planners are connected with an international network of scholars who denounce the "dualizing" urban tendencies of the last decades. Academic writing is, as we will see in this paper, a way for some critical architects & city planners to take part on local urban debates and, at the same time, to establish some autonomy regarding the dominance of the Real Estate sector in city making.

Eliaeson, Sven G. (Uppsala University, Dept of Sociology, Box 624, SE-751 26 Uppsala [tel: +46 (0)18 4717605; fax: +46 (0)18 4711170; e-mail: Sven.Eliaeson@soc.uu.se]), **The Significance of Gunnar Myrdal for the Understanding of Post-1989-Transformations: A Contribution to the Conceptual History of a Public Intellectual,** *International Sociological Association, Gothenburg, Sweden,*

¶ The relevance of the classics for the understanding of post-1989 transformation processes is a partly unploughed field, for reflection, evaluation, & selection. Stage models such as Rokkan's, based on a number of North-West European cases, seem to have some general value, but do not exclude "exceptionalisms" concerning the design of modern nations. Various classical scholars are relevant. Schumpeter has a double relevance, about capitalism overburdening itself & the historical tendency of demos to define itself. Carl Schmitt, Norbert Elias, and Talcott Parsons are difficult to ignore. Myrdal's institutionalist approach, e.g. his ideas about the soft state, vicious & virtuous circles & cumulative causation, remains relevant; for pan-European problems in the era of EU-enlargement. Friedrich List is an institutionalist pioneer, bringing the state into the political economy. Veblen could also be mentioned. Samuel Pufendorf is as a theoretician of civil society avant la lettre an a peacemaker between religions, just as Axel Hägerström later on is a peacemaker between secular religions (ideologies), in the post-Enlightenment predicament of value-incommensurability. Secular Scottish-Enlightenment four stages theories (Ferguson, Adam Smith) are pivotal. Marx remains relevant. Many classic authors carry straws to the same stack, promoting secularized Western Modernity. Which contributions are still relevant? And where? We cannot answer this question on behalf of post-Communist societies. Perhaps we can help the classics serve as sparring partners. Gunnar Myrdal's increasing relevance for post-1989 affairs, in the perspective of EU enlargement

processes & the consequences of the implosion of the Soviet (read Russian) empire is intriguing. During his travels in Central Asia between two assignments, as director of ECE & the giant project Asian Drama, in 1957, he wrote a very long & as yet unpublished letter to his wife Alva, filled with acute observations & predictions. He does not exactly predict the events 1989 & 1991 but he identifies the tensions, demographic and other, leading up to these events or, more precisely, have steering effects upon events in the wake of die Wende.

Eliasson, Linda (Mid Sweden University, 831 25 Östersund [fax:; e-mail: linda.eliasson@miun.se]), **Making Sense of Uncertain Situations: Spontaneous Volunteers at the Scene of Accidents,** *International Sociological Association, Gothenburg, Sweden,*

¶ This dissertation explores spontaneous volunteers' response to traffic accidents. More specifically, it is the volunteers' understanding, or sense making, of the situation that is the focus of the study. The study shows that there are similarities between everyday emergencies, crises & disasters when it comes to volunteer response. As has been reported in disaster studies, volunteers also define everyday emergencies, such as traffic accidents, as uncertain situations. When making sense of this uncertainty social interaction has been shown to be of great importance. Results show that spontaneous volunteers do not only interact with each other, victims, & officials, they also interact with the physical surroundings which in this case is the scene of accidents & its material culture. Altogether, these different forms of interaction are being used by the volunteers as a way to make sense of & respond to traffic accidents. The study suggests that some of the results could be applied to other situations, such as more large-scale crises or disasters, especially when it comes to creating an understanding for the interaction between volunteers and officials at the incident site.

Eliseeva, Irina I. (Sociological Institute of RAS, St.Petersburg, Russia, 190005 [tel: 7 812 316 2496; fax: 7 812 316 2929; e-mail: irinaeliseeva@mail.ru]), **Innovations as New Opportunities for Economic Growth in Russia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Innovation is the most important factor of economic growth & social development which is closely connected with globalization. In this respect, Russia wants to become integrated into the international innovation networks. Russia's national competitive advantages include: (1) energy & other raw resources of international significance, including fresh water reserves; (2) financial resources gained from utilization of raw resources & development of electric power sector & mining & processing industries; (3) the country's unique geographical position ensuring strategic advantages for the development of multilateral international economic cooperation & the performance of transit functions; (4) a range of existing strategic trends in economy aimed at innovation breakthroughs; (5) availability of highly competent professionals in the academe, education & high technologies, who create new forms of intellectual scholarly environment; (6) invariably high levels of financing of fundamental investigations & projects. The "brain drain" that has been happening over the last 20 years, too, can become a competitive advantage in terms of Russia's integration into the global innovation networks. If we are to achieve real results, numerous conditions must be met, the main among which is creative freedom, with a system of checks & balances set in place by governmental agencies. Innovation must become the idea to consolidate the nation.

Ellerbrok, Ariane A. (University of Alberta Department of Sociology, 5-21 HM Tory, Edmonton Alberta T6G 2H4, Canada [tel: 780-492-5935; e-mail: ellerbro@ualberta.ca]), **Face Recognition Systems: From Security to Convenience,** *International Sociological Association, Gothenburg, Sweden,*

¶ Face Recognition (FR) is a biometric surveillance technology that is expanding in terms of its technical applications & its popular representation. While FR has traditionally been developed and marketed as a security technology that will assist in the identification of "risky" persons, it has recently become available on home computers & photo networking websites to help individuals organize their personal digital photos. Thus FR has undergone a substantial makeover in terms of its popular representation a from a technology associated with state control, airport security, & "the war on terror" to a benign & user friendly computer application that instead speaks to pleasure, convenience, & user empowerment. This paper examines this shift in representation, & considers the various logics that are mobilized on behalf of FR systems & driving their expansion, including danger, citizenship, convenience, & play. While this paper looks at the expansion of FR specifically, it does so with an eye to analyzing the ongoing expansion of surveillance technologies more generally. As such it provides insight into an emerging technology while also speaking to the dynamics of surveillance on a broad scale.

Elling, Agnes (WJH Mulier Instituut, Amsterdam, The Netherlands, 5201 AD [tel: 0031-73-6126401; e-mail: a.elling@mulierinstituut.nl]), **Unifying Orange: Does National Sporting Pride Have No Gender or Ethnicity?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Sports media analysis has shown that nationalistic frameworks may partly overrule other identity markers like gender & ethnicity. National elite sports policy is mainly legitimized by the ascribed potential of representing athletes or sport teams to enhance national identification & cohesion. Elite sport is regarded as an "innocent" vehicle for the (re)construction & articulation of national pride & unity in a globalizing & "threatening" world. It is also considered to assist in the confusing process of ethnic integration in multicultural countries like the Netherlands. In this paper we explore relations between achievements of athletes and teams representing the Netherlands in international sport events & feelings of national pride & belonging with respect to gender & ethnicity. We will present the results of national survey data from 2008-2010, addressing possible effects in feelings of national pride & belonging by achievements of Dutch athletes in the men's European Football Cup 2008 & the Olympic Games in 2008 & 2010. More specifically we will reflect on the unifying and "overruling" capacity of "orange" pride among men & women with different ethnicities.

Elliott, Michael A. & Schmutz, Vaughn (Department of Sociology, Towson University, Towson, Maryland, 21252 [tel: 410-704-2354; e-mail: melliott@towson.edu]), **World Heritage: The Modern Construction of a Common Natural and Cultural Order,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since the passage of UNESCO's 'Convention concerning the Protection of the World Cultural Heritage' in 1972, the designation of world heritage sites has grown by leaps & bounds. To date there are nearly 900 such designations of both cultural & natural origin from every region of the globe. One striking paradox of the world heritage movement, rarely addressed in the literature, is the belief that certain natural & human creations are the collective property & responsibility of all humanity, despite having vastly different historical, cultural, & geographical origins. Indeed, where did this notion of a shared cultural & natural heritage come from? Furthermore, what has led us to designate an ever increasing number of these creations as worthy of protection and preservation? Drawing on the insights of Roland Robertson & John Meyer, we argue that the expansion of the world heritage movement is rooted in fundamental, globalization processes such as: (1) the expansion of an interconnected global polity; & (2) the diffusion of global, yet contested, cultural conceptions that promote the world as a single place, the universalization of particularized identities, & the salvation of humanity through scientific and technical rationalization.

Eloire, Fabien, Ducourant, Hélène & Balagué, Christine (University Lille 1, Lille - France [tel: 0033684692510; fax:; e-mail: helene.ducourant@univ-lille1.fr]), **What Are Phone Trade Conversations ?,** *International Sociological Association, Gothenburg, Sweden,*

¶ We propose a multi-disciplinary overview of the content & structure of a large collection of call center conversations data (about 1500 recorded inbound conversations from a French call center). The aim of the research is twofold : to define what are phone trade conversations, mainly using a quantitative analysis & to question the efficiency of usual call center's measures of their activity. Our ongoing empirical research aims at linking structural elements (length, number of topics, topics, rebounds, clients' expression of satisfaction…), & agent evaluation criteria used in the call center (use of polite formula, reformulation of the caller's complaint,…). A qualitative approach (conversational analysis) of selected parts of interactions completes the analysis. Special attention is paid to the way partakers use their "localization" during the talks & to the way call center agents orally express the actions they are accomplishing to the callers. Finally, through a comparison of the agent's evaluation criteria & the analysis done, we intend to qualify what are/aren't "perfect talks" according to the call center management's criteria.

Emanuelson, Pamela (University of South Carolina, Columbia, SC 29208 [tel: 803-777-1919; e-mail: Emanuels@mailbox.sc.edu]), **Developing Beliefs about Structures,** *International Sociological Association, Gothenburg, Sweden,*

¶ In exchange research, usually actors' beliefs are assumed to be accurate. That assumption, however, is unsubstantiated. Some exchange structures are information-poor & it is unknown if, under such circumstances, actors have accurate beliefs or, if not, if actors can form accurate beliefs after repeated interaction. It has already been shown that limiting information in semi-strong networks affects exchange ratios. Is it possible that the difference between full-information & limited information outcomes is a function of actors' inabilities to correctly infer structure when they lack full information? This paper examines two limited-information networks to determine if actors form accurate beliefs about structure after repeated interaction. I show that they do not. Instead, most actors infer simple networks. By simple I mean networks that have few ties, few positions, & that, in many of the networks, positions are automorphically equivalent.

Emery, Mary E. (Iowa State University, 315 East Hall ISU, Ames IA USA 50010 [tel: 402 304 1531; e-mail: memery@iastate.edu]), **Local Food Systems, Shorter Value Chains and Food Safety: The Conundrum of Good Food,** *International Sociological Association, Gothenburg, Sweden,*

¶ As the good food movement in the US attempts to expand the eaters supplied, particularly those of limited means, it has moved to link institutions, such as schools, prisons, & hospitals, to local growers. Sourcing food from local farmers is often rejected outright as illegal & not allowed by state & Federal regulations. However, by completing a Good Handling Practices audit, local growers can qualify. But the audit criteria were established by multinational food conglomerates, making it expensive & even theoretically impossible for small farmers to meet these criteria. This paper discusses how the various players in the good food movement in the Midwest addressed these issues and attempted to contribute to the local economy, population health, and ecological sustainability by analyzing the barriers, including a power analysis of how such decisions are made, & engaging in collective negotiations to expand the markets for local producers and the access of institutional populations to good food by complying with & adapting the safety standards of the dominant agri-food regime.

Enarson, Elaine (Women\'s College, University of Denver, Denver, CO USA 80208 [e-mail: enarsone@gmail.com]), **Thinking about Men In Disasters: A Critical Examination of Gender and Disaster Literatures,** *International Sociological Association, Gothenburg, Sweden,*

¶ Our understanding of gender in disaster has been constructed predominantly by women thinking about women. It follows that much of what little is known from a gender perspective about men in disasters is derivative. For theoretical & political reasons, the paper offers a new approach. A state-of-the-art summary of current thinking about men & masculinities in disasters is offered & a proposed new global research agenda, both based on review of how men & masculinities are framed in development studies, in climate change literatures & in the gender & disaster subfield as written from the global South & from the North. Taken as a whole, this work suggests the need for sustained, strategic and egalitarian partnerships that bring women & men together in a collective social justice approach to disaster risk reduction and climate change adaptation. We won't get there without more careful thinking about how the embedded structures of differing forms of patriarchy & global capitalism position boys & men with respect to vulnerability & social power in diverse cultural, political, and environmental contexts.

Encarnación Moya Recio, Maria (Universidade de Sao Paulo, Sao Paulo, Sao Paulo [tel: 55-11-32887858; fax: 55-11-81778375; e-mail: encaULmoya@uol.com.br]), **Inequalities in Poverty–The Role of Sociability,** *International Sociological Association, Gothenburg, Sweden,*

¶ This article aims at understanding the association between sociability and urban poverty. Since the last decade urban poverty in Latin America has received renewed attention. Besides the increasing concentration of poverty in urban areas, recent studies point out the limitations of analyses based on income or only on individual attributes. Indeed, poverty must be considered a multidimensional, relational & also a heterogeneous phenomenon. Using this broader conception to approach urban poverty, the article analyses how personal social networks of individuals in situation of poverty relates to their social conditions. The analysis is based on a research carried out in two Brazilian metropolises, Sao Paulo and Salvador. Network analyses methods were used, which allowed identifying diverse relational patterns among individuals. Social precariousness defined as high dependency ratio households showed to be correlated by these individual relational patterns, with some differences among both cities.

Engdahl, Emma & Carleheden, Mikael (HumUS, Örebro universitet, Örebro, Sweden, 701 82 [tel: +46 19 303519; e-mail: emma.engdahl@oru.se]), **The Transformation of Alienation within Modern Society,** *International Sociological Association, Gothenburg, Sweden,*

¶ Sociology arose around 1900 as a response to the general need to understand the ongoing transition from 'traditional' to 'modern' society & the many social problems (anomie, alienation, disenchantment, inequality, exclusion, etc) which had their base in this groundbreaking transformation. While the distinction between 'tradition' & 'modernity' was fundamental for early sociology as a discipline, a number of contemporary social scientists question the adequacy of such a distinction. One problem is that the distinction implies that the last major transformation of Western societies occurred some hundred years ago and that subsequent social change has only been a question of gradual modifications. These contemporary scholars suggest instead that transformations of social institutions & of cognitive and normative convictions within modernity are so fundamental that the history of modern societies itself must be divided into different epochs. Today, distinctions such as between 'early' & 'late' (or 'high') modernity (Giddens), modern & 'postmodern' society (Lyotard), 'first' & 'second modernity' (Beck), 'solid' and 'liquid' modernity (Bauman) have become widespread. Recently it has also been argued that the history of modernity should be divided into three rather than two epochs (Wagner, Boltanski, & Chiapello). In our paper we develop a three-part model of structural transformation within modern society, in terms of the age of asceticism, the age of organisation, & the age of authenticity. The central aim of the paper is to apply this model to the social conditions of self-realization. This includes an investigation of the meaning of failed self-realization in the three different époques of modernity. We understand alienation here as failed self-realization & thus conceptualize three modern forms of self-alienation as counterparts to the three different forms of self-realization.

Engelmann, Wilson (Universidade do Vale do Rio dos Sinos - Unisinos [e-mail: wengelmann@unisinos.br]), **Human Rights and Nanotechnologies: Limits and Possibilities Between Technological Innovation and Rights of the Human,** *International Sociological Association, Gothenburg, Sweden,*

¶ The new technologies, developed by various areas of human knowledge, challenge our capacity to understand the world in which they are inserted. The advances generated by the technology areas (hard areas) must be endorsed by the epistemological assumptions achieved by the humanities areas. Recently, it was common to speak about microscopic discoveries; nowadays it is absolutely common to talk about discoveries generated on a nano scale. This certainly creates curiosity and challenges, clearly showing that culture (here represented by science) joins on an increasingly smaller scale in natural structures, in order to extract the greatest amount of benefits. In this context nanotechnologies are generated, involving students from many areas of knowledge, raising the fascination of creativity. About the discoveries on nano scale, a question arises: what are the limits, possibilities, & consequences of these researches in fractions smaller than ever? This problem of the research pretends to alert, especially, for the dangers for human rights, if they were not considered a necessary ethical reference to justify the results of the researches and of the regulatory marks that will be developed. To approach the problem we will use the phenomenological-hermeneutic method, using as

2010S00731

Engels, Xavier, Ferry, Vincent, Kaldur, Kristjan, Markina, Anna & Strömpl, Judit (AROFE / GREE-2L2S, A.R.O.F.E. 10 rue de la Sajotte 88170 AROFFE [tel: 0033 3.29.06.41.50; e-mail: arofe@club-internet.fr]), **Inclusion/Exclusion of Young People with Immigrant Background: (A Feeling of) Duality in Education and Labour Social Fields,** *International Sociological Association, Gothenburg, Sweden,*

¶ 'Otherness' made a remarkable comeback in the common concetion of immigration: the dichotomy between 'us' a nationals, natives, ethnic majority a & the 'others' a migrants, foreigners, ethnic minorities a seems

to spread like it is based on obvious facts. That otherness we want to question in another way, from the point of view of migrants: regarding their own subjective feelings and social experience, this paper intend to consider the processes of inclusion (or exclusion) youngsters with migrant background are allowed to enter in matter of education & labour. Even if the access to education & labour market is widely considered as a primary right through European countries, equality isn't necessary the rule: willingly or not, countries provide a panel of legal and social barriers to prevent specific populations from competiting with nationals. Some of such boundaries may be unwanted side effects that national states try to reduce, while some other have use of them. If legal patterns are easily notified, like the dispositions regarding residence or work permits, social dimensions may be more or less obvious & evident. Education & labour market are two important areas where the inclusion/exclusion of young people into the active life of society happens in general. The basic boundaries are learning opportunities & facilities, which could either help integrating or marginalize one. In, most countries, policies stress the knowledge of national language as a key question in the integration process, yet various strategies exit to elude 'otherness' or to create a dual system on it, bringing either bridges or barriers. The question of the access to qualifications & diploma comes on a second time, after the basic language mastering skill. In those schemes, education may be seen either as an opportunity to be granted access to labour market, or appears to be the place of an institutionalized border, defining which segments may be reach or not with migrant background, even defining further clusters of employment dedicated to specific profiles. Furthermore, the concrete professional opportunities may be questioned in regard to social networks & social capital, which operate as additional or alternative regulations. Our analysis is made on the basis of qualitative data in depth interviews with young people while they spoke about their life experiences. We focus on the young people interpretations and assessment of their education & perspectives or real experiences of entering to the labour market. Despite all studied countries being members of EU, there are more differences than commonalities: the historical background, the development processes, the nature and forms of national economic markets. However, the subjective experiences concerning inclusion/exclusion of young people with immigrant background are in some points quite similar, with clear distinction between nationals & migrants in terms of educative and employment opportunities, while migrants often find themselves behind nationals in terms of qualifications, wage, employment rate, etc.

2010S00732

Engström, Sofia (Dept of Sociology, University of Gothenburg, P.O. box 100, 405 30 Gothenburg [tel: +46 31 7864925; e-mail: sofia.engstrom@sociology.gu.se]), **Identity Construction in Family Care,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines how caring identities are constructed, in relation to children & care needing elderly relatives, & which practices are made possible by these identities. Special attention is paid to gender & to comparing identities in childcare & in elderly care. The analysis is based on semi-structured interviews conducted in 2008-2009 with 40 employed Swedes, caring for young children or/and elderly relatives. Respondents were interviewed about their views on their caring responsibilities & on using the Swedish municipal care provision, how they combined care & work & how caring responsibilities were distributed in their families. This paper analyses how interviewees present themselves as carers in relation to their ideas of what it means to be a good parent or a good daughter or son. Different but sometimes coinciding moral standards are used as normative models when it comes to childcare and elderly care. Caring responsibilities in relation to children are almost always taken as given while responsibilities in relation to elderly parents often need to be accounted for. Work obligations can to a varying degree be used as a legitimate excuse for not caring, mainly in relation to elderly care. Gender is shaping & is shaped by the construction of caring identities and the consequent caring practices. Women seem to find it harder than men to construct themselves as good carers while also investing in their careers.

2010S00733

Ergi, Zehra & Gärtner, Christel (Universität Münster, Münster [e-mail: zehra.ergi@uni-muenster.de]), **The Transformation of Islamic Religiosity among Young Muslims in Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recent youth studies have shown that the religiosity of young Germans is less pronounced. Even though one third of them say that they believe in God, this statement correlates with a value system which is highly secularized. Contrary to these findings more than half of the young people with migratory background say that they believe in God. These results reflect the challenges of the adolescent life period, generally. In this phase young people have to position themselves towards certain themes in order to find & form an own identity. Religion respectively religiosity is such a theme among others. The higher religiosity of adolescents with migratory background might be traced back to the fact that in their cultures of origin religion is still deeply rooted. Whereas German adolescents who grow up in a secular culture do not have to deal with this theme, those young people have to gain an attitude–positive or negative–towards it. Especially, the discourse on Islam in the West nearly forces young Muslims to position themselves towards their religious roots. On the basis of biographical narrations we want to show how Muslim adolescents place themselves towards both: their culture of origin & the culture of the receiving country, and, in doing so, how they transform their parents' approach towards religion & develop a new Islamic religiosity (respectively secularity).

2010S00734

Ergin, Nezihe Başak & Eriksson, Maria (Middle East Technical University Department of Sociology, Middle East Technical University,06531 Ankara/TURKEY [tel: +905053854900; e-mail: basakULergin@yahoo.com]), **Counter-Projects Against Urban Renewal in the Cultural Capital Istanbul Negotiating Participation: Vulnerable Children in Family Law Proceedings,** *International Sociological Association, Gothenburg, Sweden,*

¶ Drawing upon a Swedish study of vulnerable children as social actors in family law proceedings this paper explores how children themselves approach & negotiate the issue of participation. The discussion is based upon thematically structured interviews with children whose father has been violent to their mother & who have met with social workers in the context of a legal dispute about custody, residence or contact. The analysis reconstructs how these children have dealt with encounters with social workers & to what extent they used the space for action they perceived that they had. What children are doing in this situation–that they all are somehow prepared for–can be seen as intentional at least to some extent. Therefore the concept of strategy seems appropriate: actions & non-action are chosen for a purpose. Children's strategies are outlined & it is discussed how different child strategies may be linked to children's perspectives on participation expressed in these interviews, & what these links between children's perspectives & their strategies can tell us about children's participation in the context of a difficult life situation.

Eriksson, Lovisa (PhD candidate, Department of Sociology, Uppsala University, 751 26, Uppsala, Sweden [tel: +46184717953; e-mail: lovisa.eriksson@soc.uu.se]), **Falling in Love on Internet Dating Sites,** *International Sociological Association, Gothenburg, Sweden,*

¶ Using internet for social purposes is common in Sweden, where almost 83 percent of the population has access to internet at home & 78 percent are every day users. According to a national survey conducted in 2007, 13 percent of Swedes had tried online dating in order to initiate sexual and/or romantic relationships. In this paper, the conditions of risk & trust are regarded as fundamental in the formation of interpersonal relationships & the purpose is to elaborate on how those conditions are affected & handled in the practice of digital dating. The study is predominantly theoretical but to a limited extent, empirical examples are collected from secondary sources & used as illustrations. The discussion evolve around the presentation of self in a digital arena & on differences & similarities to risk-management and perceived risks offline.

2010S00736

Eriksson, Ove (Sociological institution, Uppsala University [fax:; e-mail: oen@hig.se]), **Exceptional Local Development in a Period of Housing Market Bust,** *International Sociological Association, Gothenburg, Sweden,*

¶ By analysing the development of a Swedish urban area & the municipality during a period of international recession I give a perspective on the current crises situation. A large export-dependent employer fired workers living in the housing estate that I studied & in other estates owned by the same municipal housing company. Similar redundant housing appeared in other Swedish localities. The government response was a programme for physical regeneration of only 15-year-old suburban estates. This resulted in favourable state loans to the local housing company for a spectacular reconstruction of the estate, which became so expensive that the company later had to sell out part of its stock. A concurrent local development of policy-induced population changes with international migration aspects led to different response from resident quiescent Swedes & Finnish immi-

grants, & Assyrian households who managed to struggle for relocation in the finished buildings. All was happening within a heavy ideological hegemony of the Social Democratic Party, both at local & national level, but the party lost the following local elections. The study explains how this exceptional outcome became possible at a particular time and place.

Ernst, Stefanie ([e-mail: Stefanie.Ernst@wiso.uni-hamburg.de]), **Thinking in Figurations: A Knowledge Sociological Study about the Next Generation,** *International Sociological Association, Gothenburg, Sweden,*

¶ It was Norbert Elias' aim to expose wrong idealizations, myths, and ideologies. Having realised that he had only partly reached his target Elias was a bit sad as he was not sure whether his work would be continued. He explained that "there are more generations needed to fulfil this aim". Now we realize that in fact it was and still is continued. What was the fascination of Norbert Elias as a person & as a scientist? If one, as a younger scholar, looks at reports about the father of Figurational Sociology one still gets the feeling of having missed something very essential. How else can we explain statements in which his scholars say that he not only was a "grandfatherly teacher", an "intellectual grandfather" or friend & "window opener" but that he completely changed one's life. Having been embedded in a specific phase of modernisation after World War Two the scientific reception of Norbert Elias' work impressed a whole generation. Whether looking skeptical towards his thoughts or honouring & respecting him a Elias had an enormous impact & meaning for a generation that is now going towards retirement or is already retired. I study the connectivity and impact of Norbert Elias (for) the international scientific community by interviewing ten of his scholars, assistants and colleagues. The aim is to find out more about Elias' figurational networks, & herein about one specific chain of generations of figurational sociologists which is relevant for the genesis of nowadays establishment of process oriented thinking in different national contexts & traditions of academia. In detail I am interested in the question which sociological thinker was subject to Elias' theory in the interviewee's intellectual development, and why & how far this had an influence has happened. I would like to report on my figurational study about the elder generation of the Elias-Scholars (the so called 1968ers) from Germany, the Netherlands, Ireland, England & Austria.

Ersanilli, Evelyn & Koopmans, Ruud (Social Science Research Centre Berlin, Berlin, Germany [tel: +44 1865 271925; e-mail: evelyn.ersanilli@qeh.ox.ac.uk]), **The Role of Policies, Segregation and Religion in the Interethnic Contacts Of People of Turkish and Moroccan Descent in Six European Countries,** *International Sociological Association, Gothenburg, Sweden,*

¶ Interethnic social contacts fulfill several important functions. Weak and strong interethnic ties can provide immigrants with access to information & material goods such as jobs & housing. Interethnic contacts are also vital for maintaining social cohesion in diverse societies. For interethnic contacts to occur immigrants need to cross social boundaries with the host society. But when does social boundary crossing & blurring regarding interethnic social contacts take place? Using original survey data from a comparative study on Turkish & Moroccan immigrants & their descendents in six West-European countries (France, Germany, Belgium, the Netherlands, Austria, & Sweden), this paper examines the merits of three different theoretical perspectives on interethnic contacts. Firstly, the effects of national integration policies are investigated. The integration regimes in the six countries in the study have provided immigrants differing degrees of inclusion. It is tested whether the degree of inclusion at the policy level, also leads to boundary blurring at the individual level. Second, the effects of segregation are investigated. The study contains information on segregation in the place of residence, neighbourhood, school, & work environment of the respondents. Finally the effects of religiosity are examined. Alba (2005) has suggested that in Europe, religion forms a "bright boundary". It is tested whether people who are devout Muslims have fewer contacts with host country natives, & whether the relationship between Muslim religiosity & interethnic contacts is mediated by the host country context. The six countries in the study have accommodated Islam to varying degrees. The three theoretical perspectives are tested on three measures of voluntary interethnic contacts; contacts in voluntary associations, visits from host country members at home & interethnic marriage.

Ertong,Gunnur, Odabas, Zuhal Yonca & Kasapoglu, Aytul (Ankara University, Department of Sociology, Ankara University Faculty of Letters Department of Sociology 06100 sA-hhA-ye Ankara Turkey [tel: +903123103280; e-mail: gertong07@hotmail.com]), **Two Sides of the Coin: Illness and Health,** *International Sociological Association, Gothenburg, Sweden,*

¶ Lay people's experiences are considered as pretty important for health processes in sociology of health & illness. In this study, the conceptual framework is based on the "Biopsychosocial Model" which argues an individual's health, considering biological, physiological & social status altogether. "Actor Network Theory (ANT)" seems appropriate for this study & its basic concepts are being applied. According to ANT, individuals, objects & space are all assumed to be in close relationship with each other; furthermore they are generated by highly-linked inter-relations. While considering these relations, illness & the patient should be taken as equal components & their network translation should be considered. Relation networks of the patients & translation of their past networks are investigated by using concepts of ANT. In this presentation, the results of a research which applied techniques of visual sociology & depth interview technique to understand the experiences of chronic illness patients & their families as asthma, AIDS, cancer, hepatitis, diabetes, menopause, pregnancy, & renal failure in Ankara, Turkey by both drawing and expressing their illness period by themselves are discussed.

Erturk, Yakin (Middle East Technical University, Ankara, Turkey [tel: 90-312-210 5995; fax: 90-312-210 7972; e-mail: erturk@metu.edu.tr]), **Bridging the Gap in Paradigm and Praxis on Violence Against Women,** *International Sociological Association, Gothenburg, Sweden,*

¶ Feminist scholarship inspired & guided the activism of the 1980s that put violence against women on the agenda of the UN human rights system in 1993, which evolved largely de-linked from theory, resulting on the one hand in the treatment of the problem within a humanitarian/welfare approach that viewed women as victims & on the other hand in a gap between paradigm & praxis. Over the years, the problem has increasingly been defined within the context of structural inequalities in patriarchal relationships that intersect with other systems of inequality, thus moving the agenda away from the victimization approach. Recent scholarship also reveals how violence becomes a means of restoring the order of fixed categories when major dislocations in the way social relations are ordered & governed occur. Understanding the diverse trajectories of women's individual & collective resistance to alternative patriarchal regimes provides a powerful insight for grasping the interlinkages in the institutions & structural dislocations & manifestations of diverse forms of violence. This presentation, with violence against women as its central analytical category, explores the interlinkages in manifestations of violence and shifts in hegemonic relations with the aim bridge the gap in paradigm & praxis with respect to violence against women.

Escriche, Pedro J. (Psychology and Sociology Department/Fac. Social Sciences and Work/University of Zaragoza, Zaragoza, Spain, 50009 [tel: +34-976-76 1000; fax: +34-976-76 1920; e-mail: pescrich@unizar.es]), **Influence of Tourism and Internet on Oasian Communities in Southeast Morocco: Towards Adaptation or Extinction,** *International Sociological Association, Gothenburg, Sweden,*

¶ Nomad communities in Southeast Morocco answered to decolonization and the birth of new countries, by changing gradually their ancestral way-of-life for sedentarization. Nowadays, they constitute micro-societies next to the oasis in order to ensure the access to the most vital & scarce resource: water. Their organisation is fundamentally based on the construction & maintenance of the infrastructures that pick up water (khettaras) & the management of its distribution. In the last decades, with the improvement of communications, the isolation is broken & these communities witness the huge arrival of tourists. In the present work, the social changes that consequently affect these populations are analyzed, with their largely unpredictable consequences. Tourism activities begun in this region with the first Paris-Dakar in 1978; then, thanks to the extension of the road network in the 1990s, it passed from small to large-scale tourism. Such massive tourism flow carried out with it the associated installations: telephone and, above all, Internet. This paper aims also to analyze the consequences: on the one hand, young men immigrate massively to the countries of origin of those rich tourists, which is made easier by the contacts they make on the Internet; on the other, the local economy is developed around tourism, without taking into account the environmental & social sustainability. Traditional structures are shaking & social cohesion disappears. Finally, an analysis is carried out to assess/determine if these Oasian

societies will be able to adapt themselves & survive, maintaining their roots and environment, or if they are doomed to extinction.

Esin, Cigdem (University of East London, the Centre for Narrative Research, UEL Docklands Campus, HSS [tel: London, E16 2RD; e-mail: esin@uel.ac.uk]), **Listening to Sexual Stories within-beyond Modernist Narratives in Turkey,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is based on my research, which examines the complex and antagonistic discourses & power relations interwoven in the domain of sexuality for educated young women in contemporary Turkey. Employing a Foucauldian approach to narrative analysis, this research makes micro-analysis of narratives around sexuality, always positioning them within specific historical, political and socio-cultural contexts. The research draws on the sexual narratives of eighteen educated young women & six of their mothers living in the capital of Turkey. Considering power as a productive force that saturates the construction of narratives, the analysis carefully examines the macro-structures of power framing the individual narratives of participants under analysis. This paper looks deeper into the microphysics of power relations surrounding women's sexuality in modern Turkey through the micro narratives of young women in this research. It presents narrative moments that reveal how educated young women of this research become effects & instruments of power through their discursive positions. It is the complex configuration of the "modern" sex/gender system that creates the conditions of possibility for the construction of multiple positions within these individual stories. The participants meticulously craft their precarious gender positions in telling their stories by simultaneously being within & beyond the same sex/gender system. What they do & what they say can be mapped in a site of what I have seen as "technologies of resistance".

Espinar, Eva & Stoll, Pamela (University of Alicante, Campus de S. Vicent del Raspeig. Ap. 99. 03080 Alicante. Spain. [tel: 34 965903888; e-mail: Eva.Espinar@ua.es]), **Female Gender Identities in Participants' Talk in Political Radio Debates,** *International Sociological Association, Gothenburg, Sweden,*

¶ Media & radio talk have been subject to numerous sociological and communicational studies, often with an interest in how they contribute to creating or modifying the public's political opinion and behaviour. While media sociologists have focused on the way media messages are produced, the topical content they convey and the effects they bring about, analysts of conversation and discourse, for their part, have investigated broadcast talk for its structural & organizational aspects. This paper has the latter as its starting point & seeks to look at how talk is produced and, at the same time, produces, or displays, particular speaker identities in political debates on the radio of two European states, the UK & Spain. Identity is expressed through language use, discourse, & speakers show through their talk in front of others "who they are" at a particular encounter. Guests of the political debates examined include women & men from the main political parties in the UK & Spain, as well as experts & professionals. Their interaction (in the approx. 9 hours' talk for each of the two programmes) will be examined with the aim to identify the ways female gender identities are exhibited in talk through both explicit & implicit procedures. Explicit methods include self-categorizations (as a "woman", a "citizen", a "politician", a "consumer", a "grandmother"), whereas implicit methods of displaying gender identity may be found in what has been termed "style," or "pattern" of talk. Such patterns include amount of talk, frequency of agreements & disagreements, directives, criticisms, & other discourse phenomena. The aim of the paper is to present an overview of female gendered talk as it occurs in roughly the same, or equivalent, speech event, in two distinct European communities. Also, we will briefly reflect on the impact that such public, mass-mediated identities may produce on the public's opinions, behaviours & self-conceptions.

Espinoza Higgins, Monica & Massey, Douglas S. (Princeton University, 187 Wallace Hall Princeton, NJ 08544 [tel: +1 609 258 0081; fax: +1 609 258 1039; e-mail: espinoza@princeton.edu]), **The Effect of Immigration on Religious Belief and Practice, and Vice Versa: Evidence from the New Immigrant Survey,** *International Sociological Association, Gothenburg, Sweden,*

¶ We draw on data from the New Immigrant Survey, a nationally representative prospective-retrospective study, to describe the composition of religious preference & intensity of devotion among the new legal immigrants. We pay particular attention to the overall religious preference of immigrants to the U.S. & compare to that reported among U.S. residents. We also analyze the intensity with which new immigrants practice their professed religions, & estimate models of religious practice and congregational composition, controlling for aspects of religion prior immigration, socioeconomic status, migration history and demographic characteristics of the individuals. We attempt to analyze church attendance at origin & in the United States & to find out whether immigration is a disruptive event that marginalizes immigrants from religious practice rather than "theologizing" them. Results indicate that new immigrants are like most Americans in that they adhere to some religious tradition, they are quite unlike Americans in their specific religious beliefs and the degree of divergence varies considerably by region, country, education, & visa category. We find that the pattern of religious practice established by immigrants in their home countries prior to departure tended to carry over. However compared to Protestants, most religious groups display significantly lower rates of attendance after arrival.

Essack, Shaheeda S. (National Department of Higher Education and Training, 123 Schoeman Street, Pretoria, 0001 [tel: 00 27 12 312 5444; fax: 00 27 12 324 6343; e-mail: Essack.S@doe.gov.za]), **Mitigating Factors in the Funding of Higher Education in South Africa and Emerging Challenges,** *International Sociological Association, Gothenburg, Sweden,*

¶ Higher Education in South Africa has undergone enormous changes since its first democratic elections of 1994. Unprecedented & complex challenges have given rise to the serious review to matters of qualifications/programmes offered, quality assurance, how students are enrolled & how public funds are allocated to higher education. *The Education White Paper 3: A Programme for the Transformation of Higher Education* (July 1997) makes a compelling argument for the necessity of a new funding framework to facilitate the transformation of the higher education system. Key features of this new funding framework must be goal-oriented and performance-related in order to enable it to contribute to fulfilling the vision & goals for the transformation of the higher education system, which include: "More equitable student access; Improved quality of teaching & research; Increased student progression & graduation rates & Greater responsiveness to social & economic needs." This paper provides an explanatory discussion of the following: 1. Key challenges in the transformation of higher education in South Africa. 2. Factors that led to the establishment of the new funding framework. 3. Key features of the funding framework. 4. Some challenges in the implementation of the funding framework. This paper hopes to generate feedback & pave the way for the empirical study with respect to methodology to be adopted, type of respondent and questions to be investigated in future research with respect to cross-national studies.

Esseveld, Johanna H. (Department of Sociology, Lund University, Box 114, 221 00 Lund, Sweden [tel: +46-46-2229570; e-mail: Johanna.Esseveld@soc.lu.se]), **Medical Discourses on & Medical Doctors' Stories about Menopause,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is based on results from a research project entitled "Gendered bodies & middle-aged identities". The project's focus was on the relations between biological, social & cultural factors in the construction of middle age-identity as it relates to the body & gender. The research was carried out in contemporary Sweden & consisted of different sub studies combining a discourse analysis of medical, social science & popular science texts with the analysis of interviews with medical doctors & middle-aged women & men. As it is impossible to present the many findings of the study in one paper, I will limit myself to short summations of the results from the different sub studies & then give a more in-depth presentation of the results of a discourse & narrative analysis of medical texts. The research shows that the interviewed medical doctors provide a complex understanding of the relation between biological & social factors, while leaving room for their female patient's own interpretations of menopause/midlife. However, it also revealed that the dominant discourse in the field of medicine is firmly embedded in a biomedical way of thinking. In this discourse "The climacteric Woman" is created a–steady and identifiable category of person consisting in problems and inconveniences. At the same time, any differences between women–in the experience of menopause & in relation to class, race/ethnicity & sexuality are made invisible. Through its practices & practitioners this dominant discourse reaches a wide audience, influences popular science texts & as such (re)affirms a naturalistic understanding of mid life–an understanding which the medical

doctors in the study could not ignore but this discourse also influences women's own understandings and experiences.

Esteban Castro, José (Newcastle University [e-mail: j.e.castro@ncl.ac.uk]), **Civilization and Multiple Modernities in Latin America,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper addresses the interweaving between socio-cultural and environmental processes in Latin America. Drawing insights from Elias' notion of the triad of controls, I explore the dilemmas facing Latin American countries trapped between what can be called the development imperative (or the modernization imperative), often associated with the search for (or justified in the name of) social justice, & the ecological imperative, expressed both in the increasing awareness of the ecological limits to "development" and in the actual process of ecological devastation brought about by the "modernity" project to the region. I place special emphasis on examining the work of Latin American social scientists in addressing this dilemma, particularly in the classical & current debates around development & underdevelopment. The paper adopts a comparative approach & will examine specific experiences (most likely from South America & probably focused on case from Argentina, Bolivia & Brazil).

Esteinou, Rosario (Centro de Investigaciones y Estudios Superiores en Antropología Social, Juárez 87, Tlalpan, Mexico DF, 14000 Mexico [tel: 5255 55137605; e-mail: esteinou@ciesas.edu.mx]), **Parental Education and Adolescent Social Competence in Mexico: Some Initial Results From a National Survey,** *International Sociological Association, Gothenburg, Sweden,*

¶ Parental education & adolescent social competence in Mexico have not widely been studied by scholars. There are some qualitative and anthropological studies which have analyzed some of its traits indirectly but there are no representative data & systematic studies about it. We can say the same about adolescent social competence. In the following months I am going to make a national survey about these themes. Familism has been identified as an important orientation of Mexicans' individual behavior & it has been suggested that parents instill the values associated with it when they socialize their children. Some qualitative studies have pointed out the importance of the family over the individual's interest, family obligation, support & interconnectedness among its members. Though, this information comes from very few qualitative studies so we need more representative studies in order to determine if this is an extensive feature among the population. On the other hand, Mexican familism can be seen as an aspect which might reveal a collectivistic culture. Very few studies have suggested that Mexican society has a rather collectivistic culture but in the last decades individualistic patterns have spread out within social groups. But we do not know the extension of this process. In the paper I will present some of these results regarding the level of familism & the level of individualistic and collectivistic orientations among adolescents trying to specify some important differences according to the region of the country, the socioeconomic strata, & gender.

Esteinou, Rosario (Centro de Investigaciones y Estudios Superiores en Antropología Social, Juárez 87, Tlalpan, Mexico DF, 14000 Mexico [tel: 5255 55137605; e-mail: esteinou@ciesas.edu.mx]), **The Formation of the Modern Mexican Family over the XX Century,** *International Sociological Association, Gothenburg, Sweden,*

¶ The modern Mexican family, represented by the nuclear family, started to show signs of its presence at the end of the nineteenth century. During the 20th century economic, legal, demographic, social, and cultural factors promoted its consolidation. Nevertheless, at the beginning, the modern family did not unfold all the characteristics classical family sociologists have attributed to it. It took a long time to develop many of them. In fact, we can say that the modern Mexican family assumed different connotations of modernity in three different historical periods: from 1900 to 1950, from 1950 to 1970, & from 1970 to 2000. The objective of this paper is to present the main factors which promoted its emergence as well as the different connotations of its modernity & the types of intimacy that developed in these three periods. This is done by taking much of the information given by economic, demographic, social, anthropological, cultural, & historical studies as well as by vital statistics, census & other official sources. The conceptual framework through which this revision is made takes three dimensions of the family: its structure, its internal relationships, & its kinship networks. These dimensions allow us to establish that even though from a structural point of view the nuclear family has a long history, from the point of view of its internal relationships, this process is more recent, has been complex & assumes different forms or connotations of modernity. Within the framework of the different types of family relations, different types of intimacy developed as well, causing the nuclear family to have some similarities as well as some differences regarding the western one.

Esteve, Albert, Spijker, Jeroen J. A. & Riffe, Timothy L. M. (Centre d'Estudis Demogràfics, Bellaterra (Barcelona), Spain, 08193 [tel: +34 935813060; fax: +34 935813061; e-mail: tim.riffe@gmail.com]), **Education and Union Formation in Low and Middle Income Countries,** *International Sociological Association, Gothenburg, Sweden,*

¶ We use newly harmonized international census microdata from 1980 to 2000 to examine the relationship between education & marriage prevalence among young adults aged 15-39 in a diverse set of 19 low- & middle-income countries. Most countries studied present patterns of young & universal marriage, & have experienced educational expansions in recent decades. We discuss the possible mechanisms behind education effects on union formation & how they may vary between countries. We test the hypothesis that individuals marry later & marry less with increases in education, analyzing differences by educational level, country & gender. Education effects exhibit the greatest change in magnitude between the primary & secondary levels. Country differences in education effects are smallest among women, who consistently marry later and less with more schooling. Between-country diversity in education effects observed among men evidences the variety of values that education may have in marriage systems around the world.

2010S00751

Esteves, Ana Margarida (Brown University, Brown University, Department of Sociology, Box 1916, 02912, Providence, RI, USA [tel: (+1 401) 575 2116; e-mail: anamargarida.esteves@gmail.com]), **The Everyday Life Is Political: Worker Empowerment through Integrative and Parallel Public Spaces by the Brazilian Movement of Solidarity Economy,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper I make an analysis of the Solidarity Economy Forums in Brazil as a novel strategy of worker empowerment, based on what Hilary Wainwright calls "prefigurative politics" as a method for the attainment of social & political change. I show how their construction is closely supported by what I call "parallel public spaces", referring to three forms of articulation which act as point of entrance into the Solidarity Economy Movement: (1) Spaces of debate, mobilization & reciprocal help organized by social movements; (2) Microfinance schemes whose functioning is decided collectively through regular meetings; (3) Fairs & other commercialization events that are organized through regular meetings of the participants. The construction of the Solidarity Economy Forums is a form of "prefigurative politic" since implies the idea that the precondition for gaining state power is the previous establishment of solid networks of worker-managed enterprises in which the activities of production and commercialization are inseparable from collective action. Popular education is identified as the "glue" that makes possible the merging of economic & political action within these networks. The term worker-managed enterprise is used in this dissertation to refer to cooperatives, workers' associations & networks of microentrepreneurs both in the formal & informal economy. Social movements & left-leaning governments in Latin America are adopting this strategy as a new attempt at worker empowerment by promoting public policies for the sector through state/civil society partnerships. I use as a case study the process of construction, by the Brazilian Movement of Solidarity Economy, of FBES–the Brazilian Forum of Solidarity Economy–as well as of two state-level Forums that are represented within this federal structure: those of Rio de Janeiro & Rio Grande do Sul. These Forums are hereby conceptualized as "integrative public spaces", meaning institutionalized structures of interaction that fulfill multiple roles. In this case, they integrate functions of: (a) Deliberation on issues of policy-making among civil society members and between these & the state; (b) Political education & skills development of workers taking part in cooperatives, workers' associations & networks of microentrepreneurs; (c) Support to the organizational development & economic activity of worker-managed enterprises. The aim of these Forums is to promote sustainable alternatives to capitalist production by publicizing & promoting, in partnership with the state & in a collaborative effort among its members, the interests of worker-managed enterprises. This form of production has been growing in Brazil in the past two decades as a result of structural adjust-

ment & growing unemployment. As most worker-managed enterprises are currently part of the informal economy, one of the goals of the Forums is to promote legal frameworks & public policies that facilitate their sustainable inclusion in the formal market. With this analysis, I aim to point out what is new & different about the Solidarity Economy Forums in Brazil in relation to previous strategies of worker empowerment promoted by working-class parties & labor unions.

Etxeberria, Igone, Zamora, Gerardo, Galdona, Nerea, Urdaneta, Elena, Yanguas, Javier, Bianchi, Christiana, Marchisio, Chiara & Rivoiro, Cecilia (Fundacion Ingema, Usandizaga, 6 20. 002 San Sebastian Spain [e-mail: igone.etxeberria@ingema.es]),
RING: TransfeRING Supports for Caregivers, *International Sociological Association, Gothenburg, Sweden,*

¶ Dementia is one of the greatest health & social challenges of the 21st century. Care givers of people with dementia are very likely to experience stress, such as psychological illness, major depression, & other physical health problems. The Ring project seeks to strengthen the position of immigrant caregivers (ICG) in the labour market by setting up two tested & validated training programmes in Romania, Turkey, Italy & Spain. Methodology: (1) literature review on the effectiveness of experiences of participation, involvement, support & psycho-educational training of care givers & on the use of new technologies; (2) identification of a stakeholders' map in dementia; (3) exploration of stakeholders' needs & discourses on care giving; & (4) development of a training programme for ICGs based on the "family stress & coping theory" model. Results: (1) Two innovative programmes for ICG & related stakeholders on handling emotions, the relationship with the demented elderly, & palliative support at the end of life; (2) Ring Training Kit adapted to linguistic, cultural & technological differences in four European countries; (3) identification of the policy implications of ICG's needs and discourses on care giving to provide policy makers with recommendations on how to improve their labour conditions.

Eun, Ki-Soo (Graduate School of International Studies, Seoul National University, Seoul, Korea 151-742 [tel: +82-2-880-8976; e-mail: eunkisoo@snu.ac.kr]),
"Asian Family Values": A Comparative Study of East Asian Societies, *International Sociological Association, Gothenburg, Sweden,*

¶ This study argues that the principal aspect that distinguishes East Asian families from families of other societies lies in family values. It is believed that East Asian families differ from other families because the concept, roles & expectations of family vary and the values & attitudes in many of the sub-fields of families contrast as well. This study also argues that there are "Asian values" that have shaped the unique form of East Asian families. The data used in this study is from the East Asian Social Survey 2006 conducted in Korea, Japan, Taiwan, & China by the Organization of East Asian. This study used principal component analysis to observe the existence of "Asian family values" while also investigating its content. Principal component analysis is a statistical method used to confirm if various questions that are used to measure an intended content, indeed have the same content. These questions are then grouped into a component. Few core components were extracted from the analysis resulting from the pooled data. The first component composed of questions that examined the attitudes that both adult males & females have towards the provision of economic support to their parents. At a glance, the content of the second component seemed unclear. Generally, if it is difficult to identify a common content the component is excluded from the analysis in the next step. However, this research aims to find out if "Asian family values" are shared by Korean, Japanese, & Taiwanese society, so this unclear component was observed & called "Asian family values". The questions for the "Asian family values" components extracted from the data pooled from the three societies were largely about "Asian families." Among these, the following were included: the husband should be older than the wife, the father's authority should be respected unconditionally, the child should bring honor to one's parents, the married female should help her husband's family before her own, & that the individual should prioritize the family's well-being before their own. Namely, characteristics of Asian families such as andro-centrism, male-centeredness, top-down vertical parent-child relationships & the authority of the father were extracted as a component. Through this component, we discovered that "Asian family values" exist in the three societies & we came to the conclusion that the content of "Asian family values" consist of the characteristics observed above.

Evans, Jessica R. (The Open University, Walton Hall, Milton Keynes, MK7 6AA [tel: 01908 274066; e-mail: J.R.Evans@open.ac.uk]),
Audit, Compliance and Anxiety, *International Sociological Association, Gothenburg, Sweden,*

¶ This paper addresses the idea of compliance from a broadly psychoanalytic perspective, based on the precept that it is only possible to understand why people comply (as compared to the manner of their compliance) by investigating "below the surface" of everyday organizational routines. My question is: what does compliance mean for those who comply; & can behaviour that appears to be compliant actually damage the capacity of the organization to carry out its objectives? The implication of my argument is that "compliance" by members of an organization is not always straightforwardly consistent with the primary task of an organization as is assumed by some of the more sociological literature. In order to answer such questions, the paper uses the conclusions of public enquiries in the UK (such as the Lord Laming Enquiry) following cases of child protection failures by front line social workers, as well as the views of social workers who must engage with audit & work management processes as part of service delivery. It is argued that social workers 'comply' with audit/quality procedures that dominate in their work culture in ways that disable both them & the broader service ethos of their organization. Following the work of post-Kleinian psychoanalysts, it is argued that audit processes may have the effect of exacerbating defences. In this way, one can argue that we must face up to the "unintended effects" of social policy & the ways it gets worked through in the everyday practices of organizations. It seems that if we take seriously the psychodynamic processes involved in public service organisations such as these, compliance and dissent may be deeply entwined.

2010S00755

Evans-Andris, Melissa & Kyle, Diane (Department of Sociology, University of Louisville, Louisville, KY 40292 [tel: 502-852-8011; e-mail: mevans@louisville.edu]),
What Keeps Teachers Teaching? An Examination of Teachers Through the Early Critical Years, *International Sociological Association, Gothenburg, Sweden,*

¶ As national policy focuses on issues of teacher quality, teacher attrition poses a growing problem for schools in terms of monetary expenditures, disruption of social cohesion, & jeopardy of school performance (Cochran-Smith, 2004; Ingersoll, 2001; Smith & Ingersoll, 2004). High turnover among early career teachers is attributed to job dissatisfaction stemming from low administrative involvement, the absence of an integrated professional culture, and demands of the job (Darling-Hammond, 2003; Ingersoll, 2001; Johnson & Birkeland, 2003). More than 80% of new teachers in the U.S. participate in some sort of induction program (Smith & Ingersoll, 2004), but their lasting effects are not clear. Based on qualitative in-depth interviews with a panel of 24 teachers who successfully completed a two-year pilot internship program piloted in Kentucky beginning in 2003-04 or 2004-05, this report examines their career paths, the extent that they have built on previous internship experiences as a resource, their satisfaction with teaching as an occupational choice, measures they take to protect job satisfaction, & concerns they hold about teaching. In contrast to other studies (Ingersoll, 2001; Johnson & Birkland, 2003; Shen, 1997), findings after seven years reveal that nearly all these teachers are still teaching, continue to value experiences gained in their previous internships, express high levels of job satisfaction, & anticipate remaining in the educational arena. By tracking teachers through their seventh year of teaching, the project deepens understanding about strategies and conditions that accommodate the career aspirations & promote lasting positive experiences, job satisfaction, & retention of teachers through the early stage of their career.

Evers, Barbara ([e-mail: barb.e@iinet.net.au]),
Elias's Manners and "Thomasius's Decorum", *International Sociological Association, Gothenburg, Sweden,*

¶ New identities encompassing new forms of conduct were shaped by an ethical process Elias termed "courtisation". Drawing people away from regional estates into the royal centre, court life in early modern France transformed men from dangerous warriors into compliant courtiers. The "well-mannered" ideal of the courtier rested on mastering the infinity of niceties set down in manuals of court manners. Christian Thomasius (1655-1728), through his notion of decorum was involved in the search for new ethical doctrines that were capable of teaching peaceful civil conduct so desperately needed in the aftermath of the Thirty Years War. Thomasius sought "working rules", inducing a different relation to the self that

would help towards the formation of appropriate conduct in civil society. Decorum, as a technique for the formation of the self, was a definite new ordering of life. Decorum would teach people how to avoid incivility & impertinence, to cultivate winning ways and manners, & to engage in peaceful interaction with those whose beliefs they may not share. This paper will take "Elias's manners" and "Thomasius's decorum" to explore the ways in which individuals have acquired definite capacities & attributes for distinctive forms of existence as certain types of person. Moreover, by comparing Elias's work with Thomasius's, it will be considered whether the concept of "the civilising process" can be seen to take different forms in different historical & cultural settings.

Evertsson, Marie, Aisenbrey, Silke & Grunow, Daniela (Swedish Institute for Social Research (SOFI), Stockholm University [tel: +46 8 16 26 38; e-mail: marie.evertsson@sofi.su.se]), **Employment Interruptions and Career Penalties in Cross-National Perspective. How Are Work Interruptions Affecting Women's Career Prospects in Germany, Sweden and the U.S.?,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper focuses on if & how women's career interruptions affect their labor market prospects in the short & long run. We compare women with continuous careers to those with discontinuous careers due to time out on parental leave & homemaking, education, unemployment, or other reasons. Our comparison is twofold. The career penalties for these groups of women are compared within and across different institutional contexts: Germany, Sweden, & the U.S. These three countries represent three different welfare state regimes with differing degrees of de-familialization strategies (Esping-Andersen 1999; Lister 1994). Specifically, we estimate event history models of the competing risks of upward versus downward occupational moves for women with time out experience compared to those with no such experience, all else equal. Depending on welfare state regime, we expect women to be subject to varying degrees of career punishment for earlier time out. We use data from the National Longitudinal Survey of Youth (NLSY), the German Life History Study (GLHS), & the Swedish Level of Living Survey (LNU). These data provide us with detailed employment and family biographies, including information on time out on parental leave, unemployment & education, or for other reasons.

Evseeva, Yaroslava ([e-mail: yarULevseeva@mail.ru]), **Older People in Russian TV Advertising,** *International Sociological Association, Gothenburg, Sweden,*

¶ In developed countries older people have become an important advertising target. They are addressed by the manufacturers of a variety of goods–from medication to sportswear. In Russia, though, older people are still out of the focus of advertising. More preferable than those of older people seem images of children. The latter symbolize the future, a perspective. Unlike those of children, images of older people do not carry in themselves any self-contained positivity. The aged body is seen as rushing to still greater negativity–fading & decay. In Russian advertising older people are usually portrayed in one of the three main ways: a) as an uncritical background; b) playing some comic roles for the viewers' fun; c) indulging in activities associated with younger people: active leisure, shopping etc. the third kind of advertisements being a graphic demonstration of Western influence. The paper studies images of older people in modern Russian TV advertising, defining its role in the formation of older people's image in society (and its particular constituents), as well as finding out whether advertising can contribute to the creation of a more positive image of the age group in question.

2010S00759

Evseeva, Yaroslava ([e-mail: yarULevseeva@mail.ru]), **Representations of the Ageing Body in Modern Russian Culture,** *International Sociological Association, Gothenburg, Sweden,*

¶ In pre-revolutionary Russia the old age ideal, for married couples as well as for single persons of either sex, was taking the monastic vows. In Soviet times the ideal body being a young sportive one the ageing body was tabooed. In post-Soviet Russia the bodies of the aged are at the utmost regarded as objects of medical treatment. In contemporary Russia art images of the ageing body are rare. The meanings ascribed to an ageing body are derived from classical art, popular traditional culture, more seldom the world of celebrities, i.e. anyway the framework of publicly approved bodies. The aging body keeps being concealed & repressed. The paper traces the roots of the perception of the ageing body in modern Russian culture. On the base of various sources, including contemporary art, the author studies how the ageing body is seen, what senses it carries in itself & what transformations its representation undergoes.

Eydal, Gudny Bjork & Arnadottir, Hervor Alma (Department of Social Work, University of Iceland, Oddi v/ Sturlugotu, Iceland [tel: +354 5254258; e-mail: ge@hi.is]), **Family Policy in the Times of Crisis: The Case of Iceland,** *International Sociological Association, Gothenburg, Sweden,*

¶ In October 2008 Iceland was hit with a severe economic recession. Unemployment, hitherto almost nonexisting, in 2009 was around 10% & many families have been hit hard by the crisis. The government made an agreement with the IMF on how to restore the country's economy & after long protests from the people elections were held in the spring of 2009 & a new coalition government left of the centre came into power. In light of the heavy debts that Iceland faces the welfare expenditure will be reduced heavily during the next years in Iceland. Such reduction is a demanding task in the case of Iceland since the welfare expenditures have been exceptionally low compared to the other Nordic welfare states, or around 20% of GDP. The paper will examine how family policy has developed in the aftermath of the crisis both on the state and on the municipality level. The paper will examine policy-documents, changes of legislation, budget plans, statistics, & reports on the issue & the aim of the paper is to gain a holistic picture of the changes that have taken place in the field of family policies.

2010S00761

Eydal, Gudny Bjork & Rostgaard, Tine (Professor, Faculty of Social Work, University of Iceland, Oddi v/ Sturlugotu 101 Reykjavik [tel: +354 5254258; e-mail: ge@hi.is]), **Nordic Childcare Policies: Old and New Tensions,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this paper is to compare the policies & politics on paid parental leave, early education & care of the five Nordic countries from the 2000s & the underlying tensions in policy making as well as the tensions that the policies have created for families, institutions & in politics. The policies of the five Nordic countries will be analyzed & compared. Furthermore the policies of the Nordic countries will be compared to the goals and agendas set by the EU in relation to the adult work model, provision of early education & care, where the Nordic model is often portrayed as the model to aspire to. What has the introduction of home care allowances meant for the Nordic model as a unique policy regime & for the EU policy direction, when it is seemingly necessary to complement services with low-paid, gender traditional cash benefits?

Fabiansson, Charlotte (University of Western Sydney, Australia [e-mail: fabiansson@optusnet.com.au]), **An Australian Study of Young People's Identity and Community Belonging,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper explores young people's perceptions of themselves & their self-identity, their community belonging & future aspirations. The research is based on a sample of 750 young people between 14 and 21 years of age living in regional Australia. The findings show that the young people's perception of their own social status influenced their self-identity & community affiliation. The youths who classified themselves as belonging to the highest social status group felt more at home in the community than the low status group, they also felt that people were helpful & that they could trust friends for support. All groups had high educational and occupational aspirations but the low status group had little trust in achieving their preferred aspirations. The research demonstrates that the young people's social, cultural & economic capitals influenced their identity capital & self-identity.

Fachelli, Sandra & López Roldán, Pedro (Department of Sociology, Universitat Autònoma de Barcelona, Campus de Bellaterra, Cerdanyola, Barcelona, Spain 08193. [tel: 0034-935811152; e-mail: sandra.fachelli@uab.cat; pedro.lopez.roldan@uab.cat]), **An Attempt to Measure Social Stratification and Social Changes in Terms of Distances,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the context of a research whose purpose was to analyze the changes in the social & economic model of Argentina in the period 1997-2006, we observed that the social structure, measured by a variable that typifies stratification, remains basically unchanged during the years analyzed in

spite of the profound crisis that occurred at the end of 2001 & along 2002. Within this general framework, the hypothesis that we believe is consistent with the observed behavior is that the distance among social strata can be measured, in an objective way, taking into account the relative positions of the households with respect to primary goods, both intra temporarily (dispersion within the stratus) as well as inter temporarily (changes of the distance among strata). From the Data of the Permanent Survey of Households of Argentina & using Multiple Correspondence Analysis & Cluster Analysis, we have measured these distances in each moment of time. The results show that the distances among the strata express the changes in time, and that they increase during crisis. These distances, measured in terms of inertia in a multidimensional space & starting from the typologies obtained in each year, allow us to have a measure of the dynamics of the social change.

Fairbrother, Malcolm & Martin, Isaac W. (University of Bristol, Bristol BS8 1SS UK [tel: +44 117 9288303; e-mail: m.fairbrother@bristol.ac.uk]), **Does Inequality Erode Social Trust? Results from Cross-Sectional and Longitudinal Multilevel Models for U.S. States,** *International Sociological Association, Gothenburg, Sweden,*

¶ Using data from the General Social Survey, this paper shows that people are less trusting in U.S. states with higher income inequality. The negative association between inequality & trust, however, holds only for whites, not blacks, & cross-sectionally, not longitudinally; since the 1970s, individuals in states experiencing larger increases in inequality have not suffered systematically larger declines in trust. These results are based on multilevel models with individual respondents nested within state-years nested within states. The paper describes a simple but innovative technique by which it distinguishes longitudinal from cross-sectional effects. We also regress income inequality on new estimates of aggregate trust for each state for 1980, 1990, and 2000, & show that longitudinal variation in aggregate trust is associated with change over time in state inequality. Given these findings, we respond to arguments in the literature that mistrust is a consequence of inequality by suggesting that there is at least as much evidence that mistrust is a cause of inequality instead.

Fairhurst, Eileen (School of Social Work, Psychology and Public Health, University of Salford, Greater Manchester, UK. M6 6PU [tel: +44 (0)161 295 6790; e-mail: e.fairhurst@salford.ac.uk]), **Activities and Clothing: Representing Gender in Calendars,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction: The rise of post-modernist approaches to the study of ageing has brought to the fore the cultural perspective and, thereby, problematised the dominance of medical discourses. Amongst other matters, postmodernism has introduced to the academy exploration of strategies of age resistance & age-denial & the tensions between them. Methods: Since 2003 there has been a multi-agency Valuing Older People initiative in Manchester which aims to put older individuals at the centre of plans to regenerate and reshape the city. This initiative is organised around a number of themes, one of which is a positive images of ageing campaign. One part of this is the production of a calendar containing thirteen photographs which aim to question stereotypes of older people. Each calendar has a different theme & four of these calendars form the materials for analysis. Results: This paper presents a selection of these visual images to examine the extent to which "heroic"/"marvelling" or "ordinary" images are presented. How such images reflect cultural ascriptions of activities & clothes typically associated with older women & men is explored. Conclusions: The paper concludes by considering the implications of these images for matters of age resistance & age denial.

Fakouhi, Nasser (University of Tehran, Faculty of Social Sciences, Tehran - Iran, faculty of Social Sciences, University of Tehran [tel: (9821)88004742; fax: (9821)88012524; e-mail: fakouhi@yahoo.com]), **Towards a New Sociological Globality by Interdisciplinary and Inter-Linguistic Strategy,** *International Sociological Association, Gothenburg, Sweden,*

¶ The main idea of A. Comte was to consider sociology (or Social Physics) at the top of all the physical & human sciences just besides the Ethics. But far from this noble idea, over the past two centuries, we finally find ourselves in a situation in which we have to experience a traumatized world, losing all its principles of consistency, coherence and sustainability; a world which gave up itself almost unconsciously to the will of power, violence, technocracy, and money. In this condition, the human & intellectual responsibility of sociologists, in a Durkheimian sense of the term, is more committed than ever. We believe that this responsibility cannot be considered to be achieved without first putting some order in our own discipline: not only to bring North & South together in sociological institutions & works, to distance ourselves as far as possible from colonial, postcolonial & exotic attitudes, but also to rethink the whole thing in a new manner issued by the Informational revolution. This means for us at least two main elements: 1) trying to diminish the boundaries between the disciplines of social and human sciences as well as between the different disciplines of science in general; borders established in the name of the specialization but primarily serving the powers of Nation-States, violence, & money. This task must be done, certainly, without decreasing the ultimate goal of science: to expand the human knowledge in the limits of his ethical capacities & help him to develop his material & spiritual wellbeing. And 2) reducing the boundaries between languages by giving a real chance to draw a multiglottism strategy, to go as far as possible not just to establish a lingua franca, today English (like yesterday Latin & Arabic before it) & giving a real chance to a global project to develop social science translations. In short, one needs to come out of small scientific islands & forget about the Babel complex to achieve a real possibility to rebuild the social sciences in a global manner. In this paper, we want to develop these ideas, as preconditions of a global inclusive sociology.

Fani, Maryam (2L2S University of Metz, Ile du Sulcy, 57006 Metz, France [e-mail: mfani64@yahoo.fr]), **The Perspective of the Passage in the Adulthood to Two Generations Mother-Girl,** *International Sociological Association, Gothenburg, Sweden,*

¶ In traditional society, youth has no social existence. Girls pass directly into adult status. But, in modern society adolescence is a social fact which evolves in connection with economic, political, & cultural changes. The objective of this article is to study the consecutive stages of life as well as the opportunities & the inconveniences of the future for the generation of girls during the passage into adult age. Consequently, we made a comparative survey by questionnaire & interview on the attitudes of girls with regard to those of their mothers based on the fundamental values concerning study, work, & family. In fact, there is a gap of the juvenile life-phase for two generations of mothers and girls, the generation of the mothers, contrary to that of the girls, participated in a period particularly considered as its strong growth of the population, its economic prosperity & its cultural modes of anti-authority. By comparing the journey of entrance to adulthood of two generations, it emerges from it that one of the biggest differences between both groups of individuals is the experience of normative pluralism for the girls more than their mothers.

Farideh, Shahraki (Iranian Rural Development Institute, Tehran, Iran [tel: ; e-mail: shahraki.farid@gmail.com]), **Immigration,** *International Sociological Association, Gothenburg, Sweden,*

¶ Abstract: Immigration, poverty, vulnerability, including the most basic and most important problems is the current era. Effective and influential in their different dimensions & different locations and different times, planners & decision makers to solve them has faced with difficult situations. The aim of this study is to clarify the relationships between social-ecological vulnerability of immigration & resilience & human activities from a multi-disciplinary point of view. Accordingly, this paper describes a conceptual approach to data integration for social-ecological change & human activities toward community resilience using multi-disciplinary data. The multi-spatial approach refers to recognizing phenomena on land surfaces from different spatial scales. Earth surface phenomena begin from one point & enlarge to cover wide areas. It is necessary to integrate variable information from isolated studies as GIS attribute data & also to establish logistic concepts for data integration. Human activities are affected by both social & ecological environments. Conversely, human activities themselves affect both social & ecological environments. Thus there is a cross-interaction among them. One of the most social a geography mobility of human society is migration. Migration has ecological environment vulnerability. I study in this research about migration & effects on southwest in Tehran (capital of Iran). Tehran is located at the foot of the Alborz Mountains. The city occupies the northern part of the alluvial Tehran Plain, sloping from the mountains to the flat Great Salt Desert. The urban area is bounded by mountains to the north and east with the ground sloping southward falling 800 m over the 25 km from the northern suburbs to Shahr-e-Rey in the south. This geographical situation of the city makes it difficult to differentiate the urban area from the mountainous & desert area that surrounds Tehran. Analysis of the resulting land cover maps showed that the physical growth of the city is replacing other land cover

classes such as farming, water resources, etc. Immigration is one of the main problems in the field of sociology in Iran. Annual number of many villages & cities to migrate to Tehran & This migration has created many problems for Tehran. Because many of the immigration, the failure is to access facilities & drought. The main problems are ecological environment. In this research, using scientific studies paid on related to effects in the North West of Tehran. Results indicate that migration in two dimensions lead to environmental vulnerability been worse. First, the effect of immigration on the environment, especially in the field of waste is clearly defined. Secondly, to create low-quality housing in areas where nature is exposed to natural hazards, & vulnerability of immigrants has increased. Research findings in the form of a map-based geographical information system (GIS) to specify & poor rural areas are provided. Results Verification colonies & areas of overlapping areas with high potential environmental vulnerability is in the North West of Tehran. Key words: immigration; environmental vulnerability; GIs; Iran

Faris, Jeralyn L. & Miller, JoAnn (Purdue University, West Lafayette, IN 47907 [tel: 765-413-5871; e-mail: jlfaris@purdue.edu]), **Great Expectations for Problem Solving Courts: Observations of a Reentry Court,** *International Sociological Association, Gothenburg, Sweden,*

¶ There are at least fourteen distinctive types & no fewer than 2,500 unique Problem Solving Courts (PSCs) operating within the state court systems (Center for Court Innovation 2009). The value of a diversity of PSCs is examined in this paper. Without the differences, communities would be faced with a one-size-fits-all model that can only fail. We differentiate between compliance courts, drug courts, & Problem Solving Courts. We then delineate the characteristics of a Problem Solving Court & focus on one type, a Reentry Court. The policies & procedures of a Reentry Court are explained. An observational study & analysis of one such court is detailed. The dialectical relationship between support & control demonstrates that an ex-prisoner's successful reentry into a community does not occur in a vacuum. The dialectical tension should be addressed with a process of critical self-reflection, not only for the reentering ex-prisoners, but for all members of the Reentry Court scene. Participants of such programs as reentry PSCs will not be the only beneficiaries. Communities across the nation & even the world will be safer and recognize the advantages of courts that exercise the tension between support & control of ex-prisoners who are coming home.

Farro, Antimo L. (University of Rome La Sapienza, Rome, Italy 00198 [tel: 00 390649912384; e-mail: antimoluigi.farro@uniroma1.it]), **Social Movements and Economical Crises,** *International Sociological Association, Gothenburg, Sweden,*

¶ Some social and cultural conflicts involve the defence of the life conditions of individuals & groups who are directly affected by the contemporary economic crises. These actions take the shape of diverse forms of mobilization. Different actors in turn engage in these practices in order to resist dominant cultural orientations that sustain economical activities, which are connected to the financial flows. These activities are increasingly separated from the life experiences of individual. These movements raise questions about how one connects individual & social life experiences to broader economical, social & cultural orientations. This paper explores the various ways the practices of actors & their collective actions underscore the separation between financial flows & the social life of individuals. The paper explores the meanings produced by the impact of these actions in the face of broader economical, cultural, social & political powers.

2010S00772

Farro, Antimo L. (University of Rome Lasapienza, Rome, Italy 00198 [tel: 0039067005559; e-mail: Antimoluigi.Farro@uniroma1.it]), **Sociological Intervention and Social Movements,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper discusses the experience of conducting a sociological intervention, which took place within the alterglobal movement in different EU countries from 2005 to 2008. This movement is made up of individuals & groups related to the new as well as traditional radical left, NGOs & other non-violent forces, new social movements, for example environmentalists & feminist, and unions that propose alternatives to globalization. The sociological intervention that was conducted focused in particular on the question of individual subjectivity & its place in cultural, social & political conflicts around globalization. It analyzed notably the subjective implication present in alterglobal movements and espoused by individuals & groups who attempt to shape both individual life experience & broader economical, social and cultural orientations.

Farrugia, David (Youth Research Centre, Faculty of Education, University of Melbourne, University of Melbourne, Parkville, Victoria, Australia, 3000 [e-mail: d.farrugia2@pgrad.unimelb.edu.au]), **Subjectivity and Contemporary Inequality: Young Homeless Australians.,** *International Sociological Association, Gothenburg, Sweden,*

¶ The continued existence of homelessness amongst young people represents a particularly acute example of the inequality and disempowerment which continues to characterise many young people's experience of contemporary social structures. This paper draws on qualitative interviews with twenty young people to understand some dimensions of the process of subjectivity as it is experienced by young people who have experienced homelessness. Young people who have this experience must negotiate difficult & contradictory social processes in articulating themselves as meaningful and worthy subjects: Structural inequality & cultural marginalisation is intrinsic to the experience of homelessness. However, young people are also called upon to actualise responsible & reflexive subject positions by the institutions & governmental regimes they encounter in their negotiation of this social context. The power relations which structure this context, & which young people must negotiate in experiencing themselves as subjects, make experiencing a form of subjectivity that is considered meaningful & morally worthy a task which young people must constantly work at. This paper analyses examples of this identity work on the part of young people experiencing homelessness, theorising the relationships between the subject positions being constructed in the context of homelessness & the social processes constituting the meaning of inequality more broadly.

Fasche, Melanie (Urban and Regional Economic Studies, Hafen-City University Hamburg, Hamburg, Germany, 22085 [tel: +49 40 42827 4568; e-mail: melanie.fasche@gmx.de]), **Geographies of Making Value,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper will explore the distinctive spatiality of the art market for contemporary art from a geographer's point of view. It is aimed at bringing together sociological approaches of the production of art with recent geographic discourses on place & space. The art market is perceived as a network of stakeholders, such as artists, gallerists, collectors, critics, curators, funders, connoisseurs and their interrelationships that determine how artworks are produced, distributed, marketed & consumed. This value-setting process is (still) facilitated by geographic concentrations of these stakeholders in cities, primarily New York City & London and a few other art market centers such as Paris, Los Angeles and Berlin–despite the growing complexity of international flows and an expanding art market. Here, the paper will shed light on the value-setting process of artworks & its particular geographies through the lens of gallery owners in New York City, Los Angeles, and Berlin. The value-setting process can be distinguished in four successive though overlapping phases, namely recognition, reputation building, legitimation, & speculation. It is argued that each phase is connected to specific spatial constellations and expressed by distinctive & shifting geographies of galleries in the urban realm.

2010S00775

Fassio, Adriana (Facultad de Ciencias Económicas, Universidad de Buenos Aires, Av. Córdoba 2122 -CABA-Argentina- CP 1120 AAQ [tel: +5411 4572 0931; e-mail: adrianafassio@yahoo.com]), **Harassment in the Work Place,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ All abusive behaviour (gesture, speech, attitude) that threatens, by repetition or systematizing, the dignity or psychological or physical integrity of a person, jeopardizing their jobs & degrading the work environment, is defined as harassment at work. What arises in this research goes beyond the individual consequences of these forms of abuse & their ethical considerations. There are court decisions condemning harassment situations & draft legislation, which focus on a new player: the organisation. The individual harasser happens to the background, the star is the organisation responsible for the harassment, which must face the emerging costs of the court ruling, the external discredit & the consequent deterioration of its internal environment. From this orientation the research inquiries about what responsibility the leadership of the organisation has in the construction of such ways of relating. How does the organisational structure restrict freedom of action of the members to prevent, control, restrain or punish this behaviour? The objectives of this work are: a) to identify organisational variables which are present when moral abuse at work takes place, & b) to obtain empirical evidence which contributes to construct a typology of harassing organisations. The design of this research is exploratory, descriptive, & not experimental. Semi-structured interviews with key informants (senior staff / managers) and written questionnaires (staff members) were used for a sample of accessible organisations under the snowball strategy (case references/links to others).

Fasting, Kari, Brackenridge, Celia & Kjølberg, Gustav (Norwegian School of Sport Sciences, Department of Social and Cultural Studies, Box 4014, Ullevål Stadion, 0806 Oslo, Norway [tel: +4723262405; fax: +4723262414; e-mail: kari.fasting@nih.no]), **An Analysis of Norwegian Court Reports of Sexual Abuse in Sport,** *International Sociological Association, Gothenburg, Sweden,*

¶ One of the most difficult challenges facing researchers of sexual abuse is to gain access to data, & very few studies have been undertaken that focus on sexual abuse case data in sport. The project presented here analyzed court reports which present a verified factual account of events that research interviews or media reports cannot do. The following questions were investigated: 1) What characterized the perpetrators who were sentenced for sexual abuse in a sport setting, & 2) What were the dynamics of the power relationships between the perpetrators & the victims? Different search words related to sport were used in examining the Norwegian legal database from 1940-2007. A total of 15 cases of sexual abuse in sport were found. The written court reports were entered into MAXQDA 2007, a qualitative data analysis program. The results showed that all the perpetrators were men, 19 to 56 years of age, but it was not possible to identify "one profile" among the perpetrators. The power dynamics that were found between the perpetrator & the victim were adult, expert, position, economic, charismatic, & gender power. The discussion focused on gender power, risk factors & prevention of sexual abuse in sport.

Fatigante, Marilena & Orletti, Franca (Dipartimento di Linguistica, Università di Roma Tre, via Ostiense 236- 00146 Roma (IT) [tel: +393490595373; e-mail: mfatigante@uniroma3.it]), **Questioning Information or Identity? Doctors and Patients in an Intercultural Encounter,** *International Sociological Association, Gothenburg, Sweden,*

¶ Within the last decades several studies have analyzed the structure of medical interactions (Mishler 1984; Frankel 1990; Heath 1992; Maynard 1991; Heritage & Maynard 2006), revealing their institutional format (Drew & Heritage 1992, Orletti 2000), that is, their being characterized by asymmetries in turn-taking, turn design & type of moves, topic management & many other features. With few exceptions (Orletti 2000) conversational studies have mostly focused on interactions between doctors & native patients. In Italy the increase of immigration flows from several European and non European countries on one hand, & the availability of primary care services by the National Health System to all patients (despite recent legislation prohibits non-regular immigrants to refer to doctors & hospitals) on the other, pose new challenges both to medical practitioners & to researchers interested in language. Our study aims at analyzing sources of asymmetries in a corpus of doctor-patient interactions that include both native and non native patients, with particular regard to the activity of questioning (Frankel 1990, 1995; Robinson, Heritage 2006; Heritage, 2010). Data include a corpus of gynaecologist-patient interactions collected in a public hospital in Italy. For the aim of this paper, 20 interactions between a gynecologist & a patient are analyzed, each 10 of them involving, respectively, a native and a non-native patient. Medical visits were (audio) recorded and fully transcribed according to the Jeffersonian conventions (Sacks, Schegloff & Jefferson 1974). We focus, on the one hand, on the interactional strategies employed by the doctors to elicit information from the patients and, on the other hand, on the ways patients format their questions to ask for information and/or convey their concerns. Preliminary analyses show that non-native identity is often made relevant in both cases, & that the status of non-native patient affects the medical agenda (Mishler 1984), in that the domains explored by the doctors' questions differ across the two groups of patients. We finally discuss the specific features of questioning in this medical encounter sustain or, on the contrary, impede, the construction of mutual understanding.

Fattahi, Nasser, Salehi, Sadegh, Khoshfar, Gholamreza, Aghili, Mahmoud & Ebrahimi, Ghorbanali (Mahmoodabad City Council, Mahmoodabad, Mazandaran, Iran [tel: +98 1125224201; fax: +98 11253 42658; e-mail: naserULfattahi@yahoo.com]), **Social Capital Effects on Social Behaviour,** *International Sociological Association, Gothenburg, Sweden,*

¶ The main purpose of this paper is to investigate the relationship between social capital & environmentally responsible behaviours in the northern provinces of Iran. The study was carried out by survey method & 750 urban citizens were selected as sample of the study. A proportionate stratified random sampling method was used to select the samples. Questionnaire was the main instrument for data collection which was designed by the researchers. The survey results a significant relationship between social capital and environmentally responsible behaviours. It also indicates that there is a significant relationship between main elements of the social capital & environmental responsible behaviours. Consistent with previous research, the relationship between social capital and environmental responsible behaviours varies geographically. The results of the research can be applied for the promotion and development of environmentally responsible behaviours & this requires improving social capital & its dimensions like trust, participation in the local community & increase the network relationship between social groups first.

Fattahi, Serwa & Abdolahi, Kamil (Tehran U, Iran [e-mail: srwa.fattahi@gmail.com]), **Communication Technology and Democratizing Global Governance,** *International Sociological Association, Gothenburg, Sweden,*

¶ International communication technology in the 21st century has created Mc Lohans global village. Though internet has played a huge role in this way, poor people in the third world and non democratic countries use satellite TVs more than internet and they have been familiar with western world and other nations more by it. While world system or this global village in the last centuries has moved toward a democratic system, "large- scale slavery and formal colonialism have abolished" (Chase-Dunn, 2007). If in the small villages, in the age of feudalism, at least there was a vertical communication between landlords and farmers, now in the global village there isnt any communication between people and global governance. Therefore, there are many decisions at the international level that can reinstate dictatorship in some countries. Some international organizations like United Nations and Human Right organizations that have emerged after the second world war, aren't suitable at present because they have shaped based on needs of that time and based on interests of big states. For example, as United Nations in reality is United States, many stateless-nations dont have any representative in UN. If these stateless-nations live in the nondemocratic countries, the situation is worse because their interests will be ignored from the direction of both levels: International and local levels. This paper first challenges international organizations polities in the area of middle-east, then expounds the importance of communication technology in direction of democratizing global governance and how it makes equal opportunities to influence global governance by all people in the world. Really we should reach to a global governance that join people together and share them in making global decisions not by representatives of nondemocratic countries but by democratic organizations and social networks in the world.

Faulconbridge, James & Muzio, Daniel (Lancaster University, Lancaster, UK [tel: 00441524510265; e-mail: j.faulconbridge@lancaster.ac.uk]), **Losing Your Identity? The Making and Remaking of Transnational Lawyers,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the way English transnational law firms use communities of practice to connect together, as "islands of expertise", offices in different European countries. Through analysis of original empirical

material collected through interviews the paper shows how firms use communities of practice to not only transfer home-country best practices to European offices but also to manage the geographically heterogeneous affects of institutional contexts on the attitudes & values of lawyers–what we refer to as lawyers' geographically heterogeneous identities. As such the contribution of the paper is twofold. First the paper highlights the important "identity regulation" role of communities of practice that coexists & contributes to the wider organizational learning role focussed upon in existing studies. Second the paper shows how transnational corporations use communities of practice as part of their "institutional entrepreneurship" strategies which seek to minimise the effect of nationally variable institutional contexts on overseas activities.

Fawcett, Elizabeth J. & Cready, Cynthia M. (Texas Woman's University, Denton, Texas USA, 76204 [tel: 940.898.2052; fax: 940.898.2067; e-mail: efawcett@mail.twu.edu]), **Family Members' Perceptions of High Quality Nursing Home Care in Specialized Units for Dementia and Traditional Integrated Units,** *International Sociological Association, Gothenburg, Sweden,*

¶ Families are often responsible for placement of their loved-one in long-term care, & they often continue in their caretaking roles by becoming advocates for their institutionalized kin. This is especially true for those families who place a loved-one with Alzheimer's disease or related dementia in long-term care. Qualitative methods are used to explore perceptions of high quality nursing home care through a comparison of responses to an open-ended question on a questionnaire administered to family members of residents who are housed in Alzheimer's Dementia Special Care units (SCUs) & family members of residents who are housed in traditional integrated nursing home units (Non-designated units). The question, "What do you consider to be the best example of high quality care in any nursing home?" comes from a sample of questionnaires mailed to family members of nursing home residents from 10 nursing homes in the North Texas area. Preliminary results indicate that there is a difference in examples given by family members of residents of Alzheimer's SCUs compared to family members of resident in non-designated units. This may infer real differences between the quality of care provided by SCUs and non-designated units.

Fayomi, Oluyemi (Department of Political science and International Relations, Covenant University, Ota, Ogun State, Nigeria [tel: 234-8033342415; e-mail: oluULfayomi@yahoo.com]), **Migration as Result of Food Insecurity from Niger Republic to Nigeria,** *International Sociological Association, Gothenburg, Sweden,*

¶ Niger is located in the Sahel region, which is one of the environmentally damaged regions in the world. Niger is a degraded land that experiences recurrent droughts which leads to famine crisis. Nigeria has recently witnessed the influx of Nigeriens to states in the Northern parts of Nigeria. This is due to the food insecurity that is looming in the country. According to Garwood (2009), some 2.7 million, or one in five households, were severely food insecure & another 5.1 million were moderately food insecure. Acute malnutrition has affected more than 12 percent of children in the age group under five. In spite of some progress in the education sector, progress towards the UN Millennium Development Goals (MDGs) is still slow & difficult. The principal trade partners of Niger are France, the United States, & Nigeria. Nigeria is a neighbor of Niger Republic. This could have necessitated the need to migrate to Nigeria *en masse* in spite of the language barrier. The recent attempted coup de état has increased the already tensed environment. People of Niger justify their migration to the neighboring country, Niger, on account of food insecurity. An empirical study will be conducted to ascertain the level of food insecurity & denial of the rights to food in Niger Republic, which has led to the massive movement of Nigeriens for better living in already heavily populated Nigeria.

Fayomi, Oluyemi Oyenike & Ajayi, Ola-Rotimi Mathew (Covenant University, Ota, Ogun State, Nigeria [Tel: 234-8033342415; E-Mail: OluULFayomi\Bfm2x41lEndyahoo.Com]), **A Conceptual of Migrant Women from Western Sahel Region to Nigeria,** *International Sociological Association, Gothenburg, Sweden,*

¶ Migration has become a way of life & a common feature for the rural household in Sahelian West Africa in the pre-colonial & colonial eras. It has been intensified in the present post-Cold War era. The governments of the countries that comprise the Sahel Region of then Sub-Saharan Africa are not always prepared to the devastation wrought upon their people by severe drought. Mass migration of women has always been an important component of transnational migration. A dearth of data on women & migration makes it difficult of assess the full implications of transnational migration for women. It is a truism that statistics on transnational migration, both authorized & unauthorized, are far from reaching global coverage & are published without classification by sex & age. To the migrant Sahelian women in Nigeria, migration can be an empowering experience. In the process of transnational migration, most Sahelian women move forcefully as a result of environmental degradation, natural & ecological disasters, & recently political crisis which affect their habitat and livelihood. The paper will consider the analysis of the gender perspective essential in understanding both the causes and consequences of transnational migration of the Sahelian women. Interviews & Focus Group Discussions will be conducted to elicit the socio-economic implications of the migrant women in terms of remittances & dissemination of new values

Fehlhaber, Gorden (Friedrich-Schiller-Universität, Jena [e-mail: gorden.fehlhaber@uni-jena.de]), **The Cultural Logic of Individual Autonomy and Social Design,** *International Sociological Association, Gothenburg, Sweden,*

¶ It has been asked how the liberal value system of modern times limits the developmental possibilities of society. To answer this, the conceptual connections of individual freedom & societal design need to be exemplarily analysed by the theories of Comte and Popper. Comparing the 2 theories it becomes obvious that the impact of the liberal logic is limited. Comte prioritizes controlled design. Rational structures are the main requirement for the development of individual freedom. Whereas Popper sees the self-organised structure as a guaranty for individual freedom and societal progress, Popper & others use this principal for the legitimisation of the autonomous forms of operations within scientific, political & economical structures. But the problem is that 1. crisis-laden conditions in self-organised structures are likely, & 2. the regulation of crisis-laden conditions contradicts the liberal values. The liberal legitimation pattern of self-organisation & individual freedom equals a functional & moral negation of a rational societal order. Therefore, controlled societal development is not compatible with the principles of individual freedom. This leads to the consideration that the current liberal society blocks its own cultural development if not even risks its organizational stability.

2010S00785

Feiring, Marte (NIBR, Gaustadallen 21, N-0349 Oslo [tel: +47 22 95 89 35; fax: 22 60 77 74; e-mail: marte.feiring@nibr.no]), **Science of Selection: The Development of a Social Technology in the Educational and Vocational Fields in Norway between 1920 and 1940,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores how the making of a science named applied psychology redefined societies' view on abilities & disabilities during the first decades of the twentieth century. It studies applied psychology as two interrelated processes. First, the early experimental laboratory developments of scientific knowledge and the new understanding of the relationship between body & mind, and second, the intervention of new quantitative techniques for measuring intelligence & aptitudes for schools, the military and employment services–that is, for society in general. I name the first process "scientification" & the second, "politicisation of the new scientific techniques". The two analytical terms point to how abilities & aptitudes were redefined due to scientific and political interests. This article first gives an overview of the international innovations or what I term social technologies in the field, & thereafter it analyses how these technologies influenced the Norwegian system–first the special schools, then the vocational schools, & finally the employment services.

2010S00786

Felix, Criziany M. (University of Coimbra, Coimbra, Portugal, 3000-401 [tel: +351239855570; fax: +351239855589; e-mail: crizianyy@ces.uc.pt]), **Is Restorative Justice Emancipatory?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The study to be presented analyses the sorts of Restorative Justice existing in Núcleo Bandeirantes (Judiciary) & Gama (Prosecution), both in Distrito Federal, Brazil, with the purpose of verifying their emancipation potential. It inquires whether Restorative Justice is able to overcome the Criminal Justice abyssal lines, a consequence of its western-occidental structure. Aiming to identify the emancipation potential of Restorative Justice we apply the concepts of social reaction criminology to check if it overcomes the critics directed to traditional criminal justice in regard to

(i) definition of criminal phenomenon; (ii) deviant stigmatization; (iii) conflict vision; (iv) criminalised conducts & people selection; & (v) transformation. We used as methodological bases varied techniques of take in data, allowing scales & perspectives variations, because we considered that one technique at the same time that it reveals certain aspects hides others. The methods uses were: (i) semi-structured interviews with Restorative Justice operators; (ii) participant observation of meetings held by Restorative Justice operators, welcome meetings, restorative circles & audiences where restorative intervention was proposed for the first time for the people involved in the conflict; & (iii) documental analyses, including restorative process, reports of restorative justice programs monitoring and institutional legislation of then.

Ferber, Maja (Department of Social Sciences/ J. W. Goethe University, Frankfurt am Main, 60054, Germany [e-mail: m.ferber@gmx.net]), **Social World Perspectives in the Jewish-Israeli Periphery: The Case of Sderot,** *International Sociological Association, Gothenburg, Sweden,*

¶ In order to understand the political positioning of a society in a cross-national conflict, life realities & social world perspectives of the involved societies need to be considered in their plurality. Life realities in Jewish Israeli Society–the focus of this presentation–differ to a high extent. On the basis of Interviews conducted with a topic-centered semi-structured manual, "seemingly neglected" life realities & social world perspectives in Sderot will be discussed. Grounded Theory's flexible set of tools was used in order to deal with the danger of presuppositions & to enable an access as open as possible to the field of the observed phenomenon. The sample includes exemplarily interviews with all population groups constituting Jewish Israeli Society in Sderot. Pointing to the "invisible" biographies with their potentials the people's perceptions get importance. The questions discussed will be: what are the different life realities in people's perceptions in Sderot? What stereotypes & ascriptions play a role? Are there potentials in the "seemingly neglected" perspectives for the political positioning of Jewish-Israeli Society? The generalized collective identity excludes the reality of many Jewish-Israelis. The findings concerning these "invisible realities" & their impact on the people's social world perspectives will be discussed.

Fernández Rodríguez, Carlos Jesús, Alonso, Luis Enrique, Ibáñez Rojo, Rafael & Sola Espinosa, Jorge (Department of Sociology, Universidad Autónoma de Madrid, Madrid, Spain, 28049 [tel: +34 914973740; fax: +34 914973740; e-mail: carlos.fernandez@uam.es]), **Neither Socially Fair, Nor Economically Productive: The Expansion of Non-Standard Employment in Spain,** *International Sociological Association, Gothenburg, Sweden,*

¶ During the last decades–& due to the increasing importance of globalization & the hegemony of a new post-fordist organization of work–several structural labour market reforms have been introduced in Western Europe with the aim of allowing employers to pursue flexibility: this is considered by European governments as a necessary condition to maintain & increase the competitiveness of European companies & economies in a more turbulent scenario. This has led to an important fragmentation of the employment relations in the European context. In the Spanish case, labour flexibility has been developed since the eighties through a reform package which was justified not only by a call for competitiveness, but also (and especially) as a mean to offer solutions amidst the massive unemployment situation that struck the country after the Oil Crises. Those reforms involved a metamorphosis of the Spanish labour market, developing several non-standard employment forms with major social effects. In fact it represents now an extreme case, due to its persistent imbalances & inequalities, highlighted by the current economic crisis. This paper will critically analyse the labour reforms introduced during the period 1984-2006 & their main characteristics as new employment forms which they helped to develop. Comparative data & discussion on the social consequences will be also provided. Our argument is that, rather than contributing to an improvement in flexibility and competitiveness, the expansion of non-standard employment has been socially disastrous & economically inefficient, insofar as it has allowed firms to compete through low wages instead of increasing productivity. Thus these reforms have helped to spread precariousness in the Spanish labour market, creating important social & economic inequality; especially exclusion & discontent among the younger generations.

Fernández, Germán Darío (Incihusa/Conicet, Ruiz Leal s/n, Parque San Martín, Mendoza, Argentina, CP 5500 [tel: 0054 261 5244300; e-mail: german.fernandez@ehess.fr]), **Ethnic Performativity in Daily Life. Dramatic and Reasonable Interactions between Indigenous and Urban Students in Mendoza,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since 2003, a group of indigenous/peasants have a scholarship to study at an Argentinean public university, in Mendoza. The scholarship program is inspired by Affirmative Action politics in North America. Apart from the declared intentions of the institution, I focus on how students give meaning, rationally, to their intercultural experience. Having left their original rural environment, they became bearers of a triple status: indigenous, peasant, & student. These imposed & inherited statuses are not substantial, categorical or complete things; they exist only as concrete practices in daily life. I show that ethnicity must be accomplished in interactions; there is a performativity of ethnicity. Similarly, because of their sui generis capacity of identifying and, if necessary, of formulating common sense rules, indigenous students became "ethnographers" of both environments. This pragmatic consideration contradicts some prejudices against indigenous & peasant people, supposed to be passive, fragile, naïve, & weak individuals. Yet, the daily work of students to accomplish the inherited (ethnic & peasant) statuses is dramatic. Self-esteem & other people's estimation are at stake, as well as the recognition as authentic members of their reference group. Analyzing indigenous people's reasons & rationality, the research focus is how one can become ethnic in Mendoza. Interviews and participant observation have been done. I worked with indigenous & urban students, as well as with people close to them, neighbors from the communities, & University employees.

2010S00791

Feroni, Isabelle (Inserm, Nice, Inserm Umr 912, 23 Rue Stanislas Torrents, 13006 Marseille, France [tel: 0033491598900; fax: 0033491598918; e-mail: isabelle.feroni@inserm.fr]), **Buprenorphine's Generics: The Galenic Prevention of Drug's Misuses,** *International Sociological Association, Gothenburg, Sweden,*

¶ High dosage buprenorphine, the most prescribed pharmaceutical drug in France for opiate dependency (circa 80,000 people) has been allowed for generic marketing in France in 2006. Despite its success, this drug has been the topic of political debates from the very beginning of its introduction in 1995 due to its opioïd status, misuse problems &, more recently, to pharmacist trafficking. The generic's career observation allows to analyse the effects of the pharmaceutical forms improvements on drug's public regulations and patients uses. Galenic changes are often added by firms in order to increase their products sales in the context of competitive markets. Conversely, they are a growing topic of interest for European drug authorities for safety & misuse prevention issues. Our data show that far from being neutral modifications, pharmaceutical form changes try to orient user behavior & to shape the context of drug consumption. They give an interesting perspective about the technical embodiment of normative (good) drug uses, co-defined by regulatory authorities & industrial firms. Data used for this research gather regulatory reports, interviews with main industrial or regulatory actors & direct observations of medical meetings.

2010S00792

Ferreira, Ana L. P., Moreira, Tatiana S., Sonoda-Nunes, Ricardo J. & Marchi Junior, Wanderley (Department of Sociology / Universidade Federal do Paraná, Curitiba, Brazil, 80060-150 [tel: 55-41-9600-4777; e-mail: analeticiaferreira@gmail.com]), **Olympic Games in Brazil: The Impact of a Statement from the Brazilian Olympic Committee,** *International Sociological Association, Gothenburg, Sweden,*

¶ For a short period of time, the world focuses on the end of another Olympic cycle. There is no other occasion that unites so many sports & countries, & mobilizes in this specific way the sport community. In addition, companies, sponsors & television networks participate in this specta-

cle. Philosophical principles that guide this great event are present in the Olympic Chart. In this document we did not find any distinction between the sports, but support for all kinds of sports. As the International Olympic Committee bases itself on this document & such conduct would be applied also in the National Committees, is the Brazilian Olympic Committee acting against its principles when it decides to invest only in sports with chances of winning medals, as its president said? To confirm this hypothesis, we searched the Olympic Chart & other bibliographies about the theme. The content analysis endorsed that the BOC's president statement diverges from the ideal followed by the institution. The action of a privileged agent inside a structure may reflect its values & actions. Thus, the BOC would be incoherent with the conduct adopted & presenting itself in a mercantilist position with more affinity with the economic field.

2010S00793

Ferreira, Leila da Costa, Haddad, T., Martins, R., Barbi, F., Urbinatti, A. & Oliveira , F. (Center for Environmental Studies/ Universty of Campinas, UNICAMP- NEPAM. Campinas/SP/ Brasil. Cep 13081-970 [tel: 55/19/35215103; fax: 55/19/3527690; e-mail: leilacf@unicamp.br]), **Governing Climate Change in Brazilian Coastal Cities: Risks and Strategies,** *International Sociological Association, Gothenburg, Sweden,*

¶ According to Beck (1992, 1995) climate change is part of a new set of risks produced by the process of scientific & technological advance, qualitatively different from the risks of pre-industrial or industrial societies. These new post-industrial risks are characterized by their global reach, by incomplete understanding of their causes & consequences, by the fact of being incalculable, impossible to compensate & often invisible (requiring specialized knowledge to recognize & measure them), uncontrollable, difficult to identify responsibilities & often irreversible. From this perspective, this paper aims at reflecting on the challenges of climate change & the responses our society has built to this problem. The objective is to explore how climate change is being framed & how local governments in Brazilian coastal cities are responding to it in terms of policy strategies & instruments. From the institutional perspective, the fact that these governments are equipped in order to advance toward internalization of sustainability indicators in their various dimensions is considered important; nonetheless, the actions implemented are far from the concerns with global issues, such as climate change. Thus, the discussion about institutional & political indicators of sustainability in the cities & global changes gain crucial relevance upon the political agenda at the beginning of this 21st century.

2010S00794

Ferreira, Maria Ines (Universidade Catolica do Salvador, Salvador, Bahia, Brazil, 41940-450 [e-mail: inesferreira15@yahoo.com.br]), **Brazilian Youth: Schooling and Work Conditions Inequalites,** *International Sociological Association, Gothenburg, Sweden,*

¶ This article discusses research findings on youth experiences and trajectories at school & in the labor market. The purpose was to understand schooling & labor conditions, & gender, racial and economic inequalities in Brazilian youth. Study subjects were all Brazilian youth, from 14 to 29 years old. We have used data from Pesquisa Nacional de Amostragem Domiciliar, elaborated by Instituto Brasileiro de Geografia e Estatística (IBGE), from 2006. Findings show schooling & labor conditions data according to age, sex, color, & family income. It is possible to recognize connections between schooling & labor market conditions from data crossing. Conclusions reveal that women study more than men, but men have better jobs & incomes than women. White people study more years than black people. There are racial inequalities on the labor market, but schooling can diminish these inequalities. Poor people begin to work very young, & tend to abandon school; to the contrary, rich people keep studying for many years. Finally, schooling people who have until 24 years is better than people who have 25 & 29 years. It is caused by new public school opportunities expansion. So it is necessary to provide schooling public policies to youth from 25 until 29 years.

2010S00795

Ferreira, Rialize (Dept of Sociology, University of South Africa, PO BOX 392 Pretoria, South Africa 0003), **Asymmetric Warfare in African Conflicts,** *International Sociological Association, Gothenburg, Sweden,*

¶ Irregular small wars have erupted in African states since colonial independence from Western European countries in the 1960s. The end of the Cold War in 1989 and the changing nature of international politics did not bring about political stability in African states either. These intrastate wars were by-products of historic disputes kept hidden during the Cold War, but when the ideological confrontation ended, they surfaced again. Therefore, intrastate wars and asymmetric warfare are not new phenomena on the African continent and have led to the collapse of state institutions in some countries such as Liberia, Somalia, Sierra Leone, the Democratic Republic of Congo (DRC), Uganda, Sudan and Burundi. The resurgence of African animosities is still suppressed, rather than addressed. The aim of this paper is to investigate how irregular, asymmetric warfare is utilised in African conflicts where rebel and ethnic groups retain residual military capacity, which is quick to deploy against weak central governments if their economic demands are not met in the emerging states. The "grievance" and "greed" models are combined to explain the motivations for conflict, while the conceptualisation and utilisation of asymmetric warfare are questioned. Democratic values such as freedom, justice, equality and human dignity are lacking in conflict-ridden societies where unequal forces compete for political and economic control. Peacekeeping operations applying mostly non-military skills, such as conflict resolution, negotiation and humanitarian action, have thus far not brought about the peace and security the world is searching for, because they cannot succeed unless the basis for equitable participation in wealth and power is established.

2010S00796

Ferri, Mascia (Department of Philosophical Research, University of Rome "Tor Vergata', Rome, Italy , 00133 [tel: +390649918403; fax: +390649918403; e-mail: mascia.ferri@uniroma1.it]), **Social Opinion vs Public Opinion. For a Reconsideration of Sociology in Policy Planning,** *International Sociological Association, Gothenburg, Sweden,*

¶ Although techniques used for polling have improved, any discussion of public opinion, whether in a political or an informal & conversational context, involves a confrontation with established prejudices. Some of these are unfounded, but politicians & journalists still refer to them, especially if they talk on behalf of an alleged social "subject", while others derive from large & inconsistent scientific literature. While philosophers, political scientists, sociologists, & psychologists have not found a comprehensive definition of public opinion, they do agree on some uncertainties: the ambiguous role that public opinion plays in Western democracies, the lack of specificity of the concept, the lack of a unique method & therefore the need to resort to other sciences. It's clear, then, that a vague concept of public opinion cannot be able to attend the aim of social sciences, which is to be a pragmatic guide for politics. It's clear that a vague concept of public opinion cannot meet the requirement of social sciences to be a practical guide for decision making. It is also disconcerting that currently there is no clear distinction between public opinion, namely the media representation and linguistic representation corresponding to the results of elections, & social opinion, which is collective thinking detectable with polls but interpreted through historical aspects, economic, political, social & psychological contexts, and statistics. The problem is then to select the relevant treaties and to identify a possible model for the interpretation, bearing in mind that interviewees can respond with an idea on an "illusion", namely on something already altered, instead of a real opinion. Through the development & demonstration of a standard process of opinion formation, we sought to help formulate a functional concept of public opinion for use in research & in policy planning. Specifically, we developed a model of interpretation that could explain the discrepancies between expectations of a vote (recorded through surveys) & the results of the elections.

Ferry, Koster (University of Amsterdam, Leiden University, Steenschuur 25, 2311ES, Leiden, the Netherlands [tel: +31(0)71 527 8569; e-mail: f.koster@uva.nl]), **Economic Globalization and the Management of Human Resources. A Multilevel Study Across 24 European Countries,** *International Sociological Association, Gothenburg, Sweden,*

¶ Economic globalization is often mentioned as one of the main causes of recent changes in the workplace & the way in which organizations manage their human resources. So far, an empirical study putting this claim to the test has not been conducted. This article investigates the effects of economic globalization by examining how the intensity & consistency of two bundles of human resource practices, namely (1) participation & (2) mobility & security, are related to the economic openness of countries. Using data about employees from 24 European countries, it was found that the effects of economic openness differ for the two dimensions of human resource practices. Human resource practices aimed at employee participation are positively related to economic openness, both in terms of intensity & consistency.

Fersch, Barbara (Centre for Comparative Welfare Studies, Department of Economics, Politics and Public Administration, Aalborg University, 9220 Aalborg, Denmark [tel: +4599408161; e-mail: fersch@epa.aau.dk]), **'German Angst' vs 'Danish Easy-Going'? On the Role and Relevance of Insecurity and Uncertainty in the Lives of Freelancers in Denmark and Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper discusses findings of my PhD research project on work and life patterns of freelancers in Denmark & Germany. In this project I have investigated work & life of freelancers within a cross-national comparative design by means of qualitative interview research. In the paper I am focusing on the role & relevance of insecurity in the narratives of the freelancers. Here a remarkable difference could be found: Whereas insecurity & related fear and anxiety played a huge role in the German interviews ('German Angst') the Danish freelancers attached less importance to the topic of insecurity & showed nearly no sign of related anxiety ('Danish Easy-Going'). Some reasons for this can be found in the different social security backgrounds: The Danish welfare state, characterised by universalism, is much more inclusive for atypical workers (like freelancers) than the German one with its Bismarckian public insurance, where inclusion depends on 'standard employment patterns'. As not all programmes of the Danish welfare state are characterised by universalism (any more) Danish freelancers are faced with exclusion, too. Therefore I am arguing to understand the difference in the context of the concept of "system trust" & its meaning on the micro level.

2010S00799

Feskens, Remco & Kappelhof, Joost (IQ Healthcare, University Medical Center Nijmegen [e-mail: r.feskens@iq.umcn.nl]), **Using a Mixed-Mode Design to Survey Ethnic Minorities?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Increasing nonresponse rates & increasing costs to conduct survey research have led to a search for new data collection procedures. A mixed-mode design is often proposed as a data collection strategy that may increase response rates & reduces interviewer costs. Empirical evidences for both claims are, however, limited. In recent years the Netherlands institute for social research has conducted several large scale surveys among the four largest non-western migrants & their children using a face-to-face mode. Since these groups (from Turkey, Morocco, Suriname & Antillean and Aruba) have traditionally below-average response rates & a face-to-face mode is the most costly interview mode, a mixed-mode design has been considered to implement in the field work strategy. Before any changes are made, experts in survey methodology in general & experts in surveying ethnic minorities & mixed-mode research in particular have been consulted. Above that, literature about mixed-mode research has been reviewed. The results of these consultations & review will be discussed in this presentation. Keywords: mixed-mode surveys, ethnic minorities, nonresponse, measurement Error.

Fevre, Ralph (School of Social Sciences, Cardiff University, Glamorgan Building, King Edward VII Avenue, Cardiff, CF10 3WT [tel: +442920874086; e-mail: Fevre@cardiff.ac.uk]), **Employees' Perception of 'Capricious' Management,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper refers to two substantial British surveys, the Fair Treatment at Work Survey & our own British Workplace Behaviour Survey, as well as our qualitative research amongst employees in four large British organisations. Our data suggest that the problem is not simply employees being driven hard by managers who want more but are not prepared to pay for it. In fact many respondents claim managers & supervisors are doing things that make no sense at all for the organisation they work for, even in the short term. Nearly one in six British employees say their performance at work has been affected because someone, usually a supervisor or manager, has withheld the information they need to do their job properly. Similar numbers say that supervisors or managers have been pressurizing them to do work below their level of competence and three out of ten say their opinions & views are ignored. Capricious & unreasonable managerial behaviour is believed to be damaging to both the organisation & the individual. In part, complaints of unreasonable management are related to perceptions of organisational change, work intensification & reduced autonomy or control. But those who complain of unreasonable management are also more likely than others to have particular expectations of the relationship between the employer & the employee, & to be more likely to apply their own judgement to the behaviour they encounter.

Fiaz, Ahmed Gondal & Idrees, M. (HESJIWE NGO, Raza Block, Iqbal Town [tel: 923007469743; fax: 92426666661; e-mail: hesjiwe@gmail.com]), **Hijra Community and Vulnerable Practices in Pakistan,** *International Sociological Association, Gothenburg, Sweden,*

¶ On the bottom rungs of Pakistan's social ladder, the eunuch-transvestites or "Hijras" scrape out a hard existence. Cultural descendants of the court eunuchs of the Mughal Empire (1526-1858), the Hijras now earn their living as beggars, dancers, and prostitutes. Though often reported on in India, the Hijras of Pakistan are relatively unknown outside of that country. Most Pakistani cities have sizable Hijra communities, divided into clan groups living mostly in slums & presided over by a leader or guru. Hijra means hermaphrodite in Urdu, but most Hijras are homosexual transvestites, some of whom have gone through a crude sex-change operation. The Hijras are both feared & pitied in Pakistan, feared for their supposed ability to place curses, pitied for being outcast children of Allah. Most Hijras leave or are ejected from traditional Pakistani families around puberty & then join the Hijra community for life. Many have also reported that Hijras will kidnap young men, forcibly castrate them & force them into prostitution, gaining income for the community. More Hijras, however, earn their living by begging, & by dancing at carnivals, weddings & births & sexual activities. Hijras are especially apt to visit the families of recently born male children where they are paid to give blessings–or to simply go away. Objective: To assess risk behaviours including number & type of sex partners, condom use, knowledge of STIs & HIV/AIDS among hijras (eunuch) of Lahore, Pakistan. Methods: Two hundred hijras were recruited through Respondent Driven Sampling & interviewed by a team of experienced interviewers. Results & Findings: The mean age of the respondents was 29.2 ± 6.3 years (Range 18 - 55). More than two third (68.5%) were illiterate; 23% were married. Among married, 89% were married to women & had 1 to 7 children. Sixty percent had taken some hard drug (Cocaine, Heroin, Morphine and Amphetamine) during the last 12 months & 3% had injected drugs. Eight percent had sex with a woman during the last year. During the last one week, 82% respondents had 1 - 21 new clients & 69.5% never used condom; 21.5% had oral sex with new clients. During the same period, 72% respondents had 1 - 12 regular clients & 71.5% of them never used condom while 7% respondents had 1 - 5 non-paying partners. During the last one month, five hijras had paid women to have vaginal sex. Nineteen hijras paid another man to have sex with them. Only 27.1% were not aware of any symptom of sexually transmitted Infections. Majority of the hijras (81.5%) were familiar with HIV/AIDS. However, knowledge about its mode of transmission was faulty. Conclusion: Due to the low level of accurate knowledge regarding STI/HIV & pernicious risk behaviours, hijras may become a potent source of HIV transmission, if necessary remedial measures are not taken.

Fidrya, Efim Sergeevich (Magadan Institution of Economics of St. Petersburg Academy of Management and Economics, Magadan, Russia, 685000 [tel: 8 (914) 8670266; e-mail: efidrya@rambler.ru]), **The Health Practices and the Structure of Capital,** *International Sociological Association, Gothenburg, Sweden,*

¶ Problem: The paper is devoted to the problem of the social differentiation of health practices. How do different social groups achieve & keep state of health? What kind of resources and practices are they using? How does it depend on the institutional and cultural context? General concept: We assume that the way of living is not a direct function of life conditions, but is a system of culturally & institutionally framed practices, which are performed by actors due to their positions in different social fields & possessed capitals. Physical, mental, & social health are particular states which have evolved from health-oriented logic, values & practices. Empirical base: Statistics on health were analyzed, 540 respondents were questioned in different areas of the Magadan region. Broad data on medical, economical & social infrastructure, morbidity & mortality, physical health practices, satisfaction with life & confidence in the future, practices of coping with life crisis; food, household, recreational, professional, family & educational practices, etc. were collected. Key statements: Physical, mental, & social health strongly depend on the volume of the actor's economic, cultural, & social capital. The role of social networks, political & administrative institutions, & climatic & geographic factors is also analyzed. On the basis of seven variables four groups with different ways of living were marked out.

Fiebig, Rüdiger & Biehl, Heiko (Bundeswehr Insitute of Social

Sciences, Strausberg, Germany, 15344 [tel: +49 3341 58 1816; fax: +49 3341 58 1802; e-mail: ruediger.fiebig@googlemail.com]), **'Subjective Human Security'. A Model for Explaining and Predicting Public Opinion on National Security and Defence Issues,** *International Sociological Association, Gothenburg, Sweden,*

¶ "Germany's National Security is defended in the Hindu Kush, too." With these words, Germany's former Minister of Defence, Peter Struck, justified the Bundeswehr's participation in NATO's ISAF mission. German military contributions to international operations are increasingly legitimised as a means of enhancing national security. The scientific & political concept behind this is the model of "Human Security". Beginning in the 1980s, "Human Security" emerged in academic debate. In 1994 it gained political and public attention through the UN Human Development Report. But what is the empirical base for this concept? Our paper will offer a model for measuring & explaining "Subjective Human Security". It is based on the assumption that the individual's perceptions of security & threats are decisive for his own well-being, social and economic integration, & political behaviour. Our research is based on the annual nationwide public opinion poll of the Bundeswehr Institute of Social Sciences. The survey was first conducted in 1996, is representative for the German population, and covers attitudes towards national security & defence policy. Our analysis begins by tracking the development of individuals' security perception over time. Subsequently, we examine the German population's threat perceptions. Analysing a wide range of potential security threats from nuclear proliferation to global warming, we analyse the structure of threat perceptions & their impact on individual feelings of security. Finally we investigate the impact of "Subjective Human Security" on political attitudes–especially in the field of national security & defence policy. The "Subjective Human Security" model will offer a frame for further international research & multinational polls, and will provide a tool to further explain & predict public opinion on security & defence issues.

Fietze, Simon, Holst, Elke & Tobsch, Verena (Helmut-Schmidt-University/University of the Federal Armed Forces; Faculty of Economics and Social Sciences, Holstenhofweg 85, 22043 Hamburg, Germany [tel: +494065413904; e-mail: fietze@hsu-hh.de]), **Explaining the Gender Career Gap: Does Personality Matter?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Women are still largely underrepresented in leadership positions in Germany. In the executive boards of directors of the top 200 private companies in Germany, only 2.5 percent of the members are women. While other studies have investigated the influence of human capital & other 'objective' factors on career opportunities, this study focuses on the role of personality traits. We investigate the impact of self-reported personality traits on occupational success by comparing the leaders & other white-collar employees of private companies in Germany. Our bivariate results, based on data from the German Socio-Economic Panel (SOEP)–a representative longitudinal survey of more than 20,000 persons in about 12,000 private households–in 2007, indicate that there are significant differences in personality traits between leaders & other employees & also between women & men in leading positions. Furthermore, women in leadership positions differ to a greater extent from females with a lower occupational status than their male counterparts when it comes to the so-called "Big Five" personality traits (neuroticism, openness to experience, agreeableness, extraversion, conscientiousness) as well as the willingness to take risks for one's own career. This implies that there might by a greater pressure for women to adapt to the male-dominated leadership level than there is for men.

Figueroa, Moreno & Gabriela, Monica (School of Geography, Politics and Sociology, Newcastle University, Newcastle upon Tyne, UK, NE1 7RU [tel: 00 44 191 222 5816; e-mail: monica.moreno-figueroa@ncl.ac.uk]), **The Dilemmas of Racial Recognition: Racism, Mestizaje and Embodied Privilege in Mexico,** *International Sociological Association, Gothenburg, Sweden,*

¶ Mexican practices of racism are currently unrecognizable. The protracted separation of race & nation in social, governmental and academic discourse over the last century has created a situation where racism is not recognised institutionally or publicly, but is lived as an individual embodied experience. This scenario is further complicated by the prevalent racial discourse of mestizaje. Drawing from empirical research on contemporary practices of racism & understandings of mestizaje, this paper analyses Mexicans' current dilemmas around racial recognition. Mexicans do not recognise themselves as racial subjects, but as national subjects. In this context, recognition of racism is not preceded by the explicit claim of belonging to the specific mestiza racial identity. In this paper, I explore why there is a difficulty in identifying as racialised subjects, & argue that due to its fluid & relational character, taking on mestiza identity is a precarious, embodied & painful process that carries with it a set of contradictory forces. On the one hand, as an identity akin to "whiteness", the space of the mestiza becomes the unnamed, invisible, national privileged paradigm. On the other, mestizaje disorients any clear sense of coherence between a racial discourse and a discriminatory practice.

Fiorillo, Marilia (University of São Paulo, Cidade Universitária, SP, SP [tel: + 55 11 4115 2794; e-mail: fiorillo.marilia@gmail.com]), **The Media Reception of the Shifting of Religious Proclivity in Brazil,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper focuses on the way the mainstream media in Brazil are dealing with the swift & dramatic increase of Evangelical & Neo-Pentecostal churches (they almost tripled in the past two decades), in the frame of a traditional Catholic country. Weve been conducting a two-year research, gathering data from four main Brazilian publications (*Veja* magazine & the newspapers *O Estado de S. Paulo, Folha de S. Paulo*, & *Globo*). The aim is to analyze the assumptions & biases that may be involved in the choices & handling of religious themes in media coverage. The methodology is based on "Critical Discourse Analysis" (the discursive "scripts" that provide the ideological contents of the news reported), & New Rhetoric (Chaïm Perelman & his theory of argumentation). Both approaches, applied to statistical analysis, give us the best tools to relate textual structures to the socio-cultural contexts of news production & reception. So far, the conclusion is that there is a recurrent & generalized "Catholic canon" that presides over the media perspective, whose result is the inability to grasp, & deal properly with, the actual new religious scenario. One of the results of this contemporary disseminated media "script" is the systematic derision of Evangelical denominations by portraying them as solely promoters of venality, with no regard to doctrinal or transcendental issues.

Fischer-Kowalski, Marina (Inst. of Social Ecology Vienna, Schottenfeldgasse 29 [tel: +43 1 522 4000 416; e-mail: marina.fischer-kowalski@uni-klu.ac.at]), **Transition to a Low Carbon Society–A Challenge for Sociology?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Society needs not only to reproduce itself socially, culturally, and economically; it also needs to reproduce itself physically, through material & energetic exchange with nature. These exchange relations, this social metabolism, & its environmental implications, such as a massive threat to earth's climate stability, is my point of departure. It will guide me through the analysis of high carbon society & how it evolved, to a discussion of what a low carbon society would presuppose. I will then reconstruct what sociology contributed to understand the transition towards a high carbon, fossil fuel industrial society, & finally explore the chances of sociology to play an important role in the transition to a next, low carbon society. My presentation will be structured as follows: (1) Which role does carbon play in society? (2) CO2 emissions are a core environmental outcome of the "Great Transformation" that shifted society's energy regime from a land based solar to a fossil fuel based regime. (3) The coal regime and the oil regime. What comes next? (4) The role of sociology in comprehending the Great Transformation. (5) Could sociology provide guidance for a next transformation?

Fisher, Pamela & Byrne, Victoria (University of Huddersfield, Queensgate, Huddersfield HD1 3DH [tel: + 44 0 (1484) 473095;

e-mail: p.l.fisher@hud.ac.uk]), **Emotion, Enabling Practice and the Construction of Professional Identity among MENCAP Workers,** *International Sociological Association, Gothenburg, Sweden,*

¶ We suggest that there is a need to debate some of the received wisdom of good practice in learning disability (LD) services in the UK. Practice in LD services is in the process of being transformed away from a focus on care to one based on an ethos of consumer choice. Technologies of welfare are directed towards promoting a particular understanding of citizenship–the citizen consumer/worker. Drawing on observations & 10 interviews conducted with staff at MENCAP, this paper considers how transitions in current practice are impacting on the identities of those working in learning disability services. It raises important questions as to how enabling practice is constructed within policy discourse, & how this is received & understood by those working "on the ground" in learning disability services. We draw theoretically on MacIntyre's seminal work, *After Virtue*, & apply his conceptualisation of internal & external goods to analyse the discourses of MENCAP staff in relation to their views and approaches to their work. We argue that excellent practice is often underpinned by a desire to pursue the internal goods of practice and that this requires an emotionally based orientation towards work with service users. Such an approach, however, is at odds with official discourse that equates service user empowerment with a need to maintain rational detachment.

2010S00810

FitzGerald, David (Department of Sociology, University of California, San Diego, La Jolla, CA 92093-0533 [e-mail: dfitzgerald@ucsd.edu]), **Migratory Stasis and the Economic Crisis: Evidence from a Binational Mexican Migrant Community,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper draws on 1031 in-home surveys & 500 hours of in-depth interviews conducted in 2009 in a migrant sending community in Yucatán, Mexico & its U.S. satellite in California. We find that the economic crisis beginning in 2007 has deterred both fresh migration from Mexico to the USA as well as return migration to Mexico. The U.S. economic crisis, more than concentrated U.S. border enforcement, is deterring migration from Mexico, as all of the most recent cohort of unauthorized migrants was eventually able to cross with the assistance of people-smugglers. However, most potential migrants have put their plans temporarily on hold while they wait for U.S. labor markets to rebound. Migrants already in the USA are not returning to Mexico in large numbers, but rather are reducing their remittances, limiting expenditures, & relying more on their social networks to survive.

Flandorfer, Priska & Fliegenschnee, Katrin (Austrian Academy of Sciences, Institute of Demography [tel: 0043 1 515 81 7726; e-mail: priska.flandorfer@oeaw.ac.at]), **Gender Specific Health Behaviour: Perceived Gender Roles and How They Affect Women's and Men's Health Behaviour,** *International Sociological Association, Gothenburg, Sweden,*

¶ The focus of the paper lies on behavioural factors & the analysis of sociological issues relating to gender specific health behaviour. Theoretical ideas are developed inductively with the Grounded Theory on the basis of qualitative expert interviews with physicians, researchers specialising on gender medicine in Vienna and carers for elderly people. Our theoretical model "perceived gender roles" is the most important main category. It comprises attributes, habits & generation change. Social norms are responsible for gender-specific socialisation, which, in turn, gives rise to differences in the health behaviours & lifestyles of women & men. The category "generation change" describes how these behaviour patterns slowly change. Our overall findings show that behavioural factors play an important role in explaining the gender specific changes in health behaviour. Although traditional gender roles still prevail, they start to weaken, because men have become more health conscious & care more about their bodies. A special characteristic of our study is the use of qualitative methods to gain a deeper understanding of the changes in gender specific health behaviour. In conjunction with quantitative and interdisciplinary research about this phenomenon, our findings can contribute to insights on the sociological micro level.

Flaschel, Peter & Luchtenberg, Sigrid (Faculty of Economics, Bielefeld University, Bielefeld, Germany, 33617 [tel: +49 521 123075; e-mail: pflaschel@wiwi.uni-bielefeld.de]), **Stabilizing Unsustainable Capitalist Societies. Towards New Social Structures of Accumulation in a Globalized World,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper considers flexicurity capitalism from a macroeconomic perspective. The point of departure of the paper is the fragility and unsustainable nature of current capitalist societies with respect to financial market institutions & labor market developments. We argue that monetary & fiscal policy reforms are just the beginning of a societal reform of the current forms of unleashed capitalism. The paper then derives a basic framework where mass unemployment is overcome by far-reaching labor market reforms, leading to an employer of 'first' resort (providing employment security, but not job security), added to an reproduction process that is highly competitive (flexible) & thus not of the type of past Eastern socialism. In flexicurity capitalism there is instead high labor & capital mobility, where fluctuations of employment in the private sector are made socially acceptable through a second labor market where all remaining workers get meaningful occupation & sufficient income.

2010S00813

Flecha, Ramon (Sociological Theory Department, Universitat de Barcelona, Tinent Coronel Valenzuela, 1-11 Facultat d'Economia i Empresa 08034 Barcelona [tel: +34 934034548; fax: +34 934034562; e-mail: ramon.flecha@ub.edu]), **Mondragon Corporative Corporation: A real non-capitalist and non-statist economy,** *International Sociological Association, Gothenburg, Sweden,*

¶ Efficiency & equity are often perceived unfeasible to be achieved both at the same time. Efficiency is associated with traditional capitalist companies, & is pursued at the expense of equity. Equity is associated with cooperatives, & is apprehended as a trade-off for the process of expansion & engaging in real competitiveness. A choice is made between small equitable cooperatives or efficient & competitive capitalist companies, with the former existing only in marginal areas & obliging workers to be self-exploited or to subsist on state funding. Within this context, the case of the Mondragon Cooperative Corporation (MCC) proves these assertions to be wrong, being an example of a real utopia. This is due to it being a case of how to make cooperativism highly competitive within a capitalist system, without compromising cooperative values & structure. In this paper, the expansion of the MCC will be analysed. How has the Mondragon model been extended? What are the main challenges it faces while expanding within the cooperative movement? Crucial elements that show Mondragon to be an example of how to make efficiency & equity a reality for all workers will be identified.

2010S00814

Fliegner, Florian & Alber, Jens (Social Science Centre Berlin, Berlin, Germany, 10785 [tel: +49 30 25491 368; e-mail: fliegner@wzb.eu]), **How the Bottom Third Lives in the Enlarged European Union,** *International Sociological Association, Gothenburg, Sweden,*

¶ Based on the European Quality of Life Surveys 2003 & 2007, this paper examines how the bottom third lives in countries of the enlarged European Union in various dimensions of quality of life and to what extent the bottom third is uncoupled from growth and progress as postulated by some policy pundits & sociologists. The dimensions we examine include an index of material well-being including satisfaction of basic needs, capacity to afford basic leisure activities, housing conditions, as well as financial stress. Our central questions are to what extent these dimensions of inequality cluster to form national syndromes of deprivation and if one of the key findings of the 2003 survey still holds true, namely that the bottom echelons of the stratification order in rich European nations are better off than even the privileged upper echelons in the poorer countries. Thus we also contribute to the political discussion of the issue to what extent the harmonization of living standards pursued by the European Commission has actually been realized in the enlarged EU if we move beyond the inspection of relative income poverty rates to more complex measures of deprivation.

2010S00815

Flinkfeldt, Marie (Department of Sociology, Uppsala University, Box 624, 75126 Uppsala [tel: +46 18 4711169; fax: +46 18 4711170; e-mail: marie.flinkfeldt@soc.uu.se]), **Managing Troubled Positions: Irony and Humour as Resources in Online Interaction,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines online discourse in a Swedish Internet forum *thread*, using a conversation analytic (CA) framework for analysis. The participants of the analyzed thread are women who are on long-term sick

leave from work (sick leave being the general topic of the thread). The analysis in the paper explores how household chores are constructed as gendered. It is discussed how the participants statuses as being on sick leave from work and, therefore, at home during the days, makes problematic describing the performance of household chores, in two ways. First, it may imply that the person on sick leave is in fact capable of (household) work, which risks undermine the legitimacy of that persons illness (and, thereby, sick leave). Second, it may put the person in a *house-wife position*, interfering with equality ideals as well as working ethics traditions in the Swedish society. The analysis makes visible how irony & humour are used in describing the performance of household chores, indexing gender in a playful manner. Of particular interest is how various textual resources, available in Internet interaction, are used to invoke ironic stance, & what consequences this has in the ongoing interaction. Apart from written descriptions such resources include, for instance, emoticons, quoting, & profile pictures and names. The analysis shows how these resources are used collaboratively, making possible the discussion of serious issues, like gender equality, illness, & household chores, while at the same time maintaining a friendly & non- accusatory atmosphere. It is argued that humour & irony in gendering household chores is used to delicately manage both of the problematic positions described above. It can also be seen as a way to balance the potential tension between debate & friendly small talk, something which can be particularly difficult in online interaction, given the lack of audio-visual context.

Fond-Harmant, Laurence (CRP-Santé, 1A-B rue Thomas Edison, L-1445 Strassen Luxembourg [tel: +352 26970 754; e-mail: laurence.fond-harmant@crp-sante.fr]), **De-Stigmatisation de la Maladie Mentale et des Troubles Psychiques: Un Processus Social d'Éducation, de Promotion et de Communication** (De-Stigmatization of Mental Illness and Psychological Problems: A Process of Social Education, Promotion, and Communication), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Le monde change. La psychiatrie est entrée dans un mouvement de réforme et d'ouverture hors des murs de l'hôpital. Les zones transfrontalières constituent des localisations privilégiées au sein de l'Europe pour la recherche en promotion de la santé mentale, entre des visions, des problématiques, des cultures scientifiques et des interventions différentes. Tous les travaux, rapports et réflexions des experts soulignent l'insuffisance de la recherche sur les questions de la dé-stigmatisation en promotion de la santé mentale. Il n'y a, jusque là, aucun travail de recherche interrégional, d'étude ou d'intervention qui regroupe à la fois les points communs et les divergences qui mériteraient d'être définis pour développer des stratégies de dé-stigmatisation de la maladie mentale sur le territoire transfrontalier. Dans notre projet de recherche, les témoignages d'usagers, de familles, les exposés didactiques, les histoires sous forme de contes notamment, ont pour supports la Bande dessinée, le DVD, le site Internet ou le forum : Ils constituent des outils de communication pour une meilleure connaissance de la santé mentale auprès du grand public et des professionnels de santé non psychiatres. Basé sur une approche de "psychiatrie communautaire" et de "psychiatrie sociale" nous poserons une première esquisse des apports attendus de la création d'une "Alliance transfrontalière de promotion de la santé mentale" (Projet financé par le FEDER Fonds Européen de développement Régional).

Fonseca, Jaime R. S. & Xerez, Romana (Technical University of Lisbon/Higher Institute of Social and Political Sciences, Lisbon, Portugal, 1300-661 [tel:(0351) 213619430; email: jaimefonseca@iscsp.utl.pt]), **Some Data-analytical Methods in Social Network Research,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the past two decades, a growing number of social scientists have invoked the concept of social capital, but there seem to be at least two different usages of this term. In this paper we are more interested in network measures that might be used to formalize the notion of social capital. Technical & mathematical applications of social network analysis have increased in the last twenty years, and we would like to consider the contribution of several techniques such as multidimensional scaling, correspondence analysis & latent class models. The dataset is a recent survey (n = 402) developed in the Social Network Analysis perspective, in a Lisbon neighbourhood. Most real networks contain parts in which nodes are more highly connected to each other than to the rest of the network, & the sets of such nodes are called clusters or communities. Data analysis suggested a three-class latent model, estimated from both network structure & network resources dimensions, & a two-class latent model, estimated from both trust and reciprocity in the neighbourhood & community engagement dimensions.

2010S00818

Fontainha, Fernando (CEPEL/UM1 - CAPES Researcher [e-mail: fontainha.fernando@gmail.com]), **A Gambling Framework to Contest-Like Situations: The Selection of French Lawyers,** *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ This paper proposition aims to formulate a theoretical framework to the comprehension of contest-like situations, the framework I developed to understand the judges selection in France, my PhD subject. The two main concepts are Garfinkel's lay sociology and Berger & Luckman's social distribution of knowledge. The structure of the framework is Goffman's metaphoric use of game theory, applied to face-to-face interaction. The basic distinctions are between everyday situations & fateful situations, & low implications situations & situations of high risk and consequence. In an information control dynamics, with moves and counter-moves, strategic properties of action & face-saving schemes, we intend to develop a model to understand these concrete professional competition situations: the public contest. The sociological study of public contests is rare & very precious, especially in continental tradition countries, where all lawyers are odd to experience at least one public competition to start their legal career.

2010S00819

Fontenelle, Isleide Arruda (Fundaaão Getulio Vargas, São Paulo, São Paulo, 05017-000 [tel: 55 11 3864.8079; fax: 55 11 3864.8079; e-mail: Isleide.Fontenelle@fgv.br]), **The New Ideology? The Construction of Responsible Consumption by the Business Media,** *International Sociological Association, Gothenburg, Sweden,*

¶ Basing the analysis on the discourse of two economy-oriented periodicals–the UK's *The Economist* and Brazil's *Exame*–the paper shows how the discourse for responsible consumption shaped & developed in 1996-2007, two landmark years for the turnaround in discourse that laid the blame for environmental degradation on the doorstep of excessive consumption. The article analyses the relationship between the mediatic discourse & some central concepts that are always recurrent when the theme is responsible consumption: the relation with the government, the view of social movements, the role of enterprises as well as the individual consumer's share. We can see the construction of a new ideology around the limits of nature and the role of these actors, with an excessive attribution of responsibility to the individual consumer. In the end, we conclude that there has been a return to the universe of social prohibition and guilt that seemed to have been banned from a consumer society that had breached almost all social limits, & thus giving rise to a new commodity: redemption.

2010S00820

Fontes, Breno Augusto Souto Maior, Da Fonte, Eliane & Viegas, FáTima (Universidade Federal de Pernambuco, Av. Acadêmico Helio, Ramos, s/n Cidade Universitária Recife PE Brazil [tel: 55 81 21268284;fax: 55 81 21268285; e-mail: brenofontes@gmail.com]), **On Mental Health Care Practices: A Comparative Study of Experiences in Angola, Brazil and Portugal,** *International Sociological Association, Gothenburg, Sweden,*

¶ How does society deal with people affected by mental disorders? The types of care provided & the ways to cope with mental disease have peculiar aspects due to the nature of the mental disorder. With a nosology that has not yet been sufficiently developed–which is attested by the recognition by experts of the existence of obscure areas of knowledge–and, consequently, being the object of a dispute within the psyche field–a wide range of mental health practices are found in society. These practices include the public practices–which in Brazil & Portugal culminated in the psychiatric reform, the construction of alternative practices in mental health care–& practices that are strictly based on civil society organizations, as it is the emblematic case of the traditional medical centers in Angola. From a comparative study of mental health care practices in Angola, Brazil & Portugal, the authors analyzed the complex interactions between the civil society and the State, as well as the different solutions encountered by these countries. The present study aims at investigating the "state of the art" of the infrastructure & organization of public services, & also the role of civil society in the field of the health & care to mentally disordered people, in cooperation or not with the State.

2010S00821

Foran, John (Department of Sociology, University of California, Santa Barbara, Santa Barbara, CA 93106-9430 USA [e-mail: foran@soc.ucsb.edu]), **Global Justice: How Radical Social Change is being Made after Globalization,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines ongoing global justice movements in the current context of a multi-faceted global crisis: global warming, peak oil, militarism, new forms of imperialism, economic crisis & deepening world poverty. The cases include the global justice movement, the "Pink Tide" of left governments in Latin America, the Zapatista rebellion in Mexico, & the radical reforms of the past half century in Kerala, India. The paper compares & contrasts these radical social movements, with particular focus on their "new political cultures of opposition." While one set has "taken power" through elections–Hugo Chávez & others in Latin America, & activists/politicians in Kerala, the other is forging a direct action/ participatory democracy model–what John Holloway calls the path of "not taking power"–the Zapatistas in Chiapas, & the vast global justice movement that networks at the World Social Forum. Looking at their diverse, radical political cultures we can ask: What are the strengths & limitations of an electoral path to radical social change versus more horizontally organized attempts to change the world? What do they suggest about new paths to radical social transformation in the future?

Forbes-Mewett, Helen & Nyland, Chris (Sociology, School of Social Sciences, La Trobe University, Melbourne, Victoria, Australia 3086 [tel: +61 3 9479 6711; e-mail: H.Forbes-Mewett@latrobe.edu.au]), **Funding international student support services: Tension and power within 'the University',** *International Sociological Association, Gothenburg, Sweden,*

¶ The international student population in Australia is complex, growing and perpetually changing. The provision of support services by education institutions for a highly complex set of human security needs both on- & off-campus is critical to the success of many international students. Utilising a combination of interviews, internal documents & data, this case study focuses on one internationalised Australian university. Rare insights expose the internal tensions, strategy debates & the use of power relating to decisions concerning the allocation of funds for the provision of support services that provide security for international students. We examine the existing tensions between senior managers who oversee the spending of university funds & frontline staff who argue that a greater level of financial resources is required to adequately provide services to international students. The evidence strongly suggests that a greater proportion of university resources should be allocated to provide support services for international students.

Ford, Margot (School of Education University of Newcastle, Australia [tel: 61 243494413; e-mail: Margot.Ford@newcastle.edu.au]), **Shopping for Identity. Experiences of Inclusion and Exclusion in a Northern Territory Shopping Centre,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper investigates the dynamics of inclusion & exclusion in a highly racially & ethnically diverse city in the Northern part of Australia. Interviews with children, youth & adults from a range of backgrounds demonstrates that the local shopping centre is a space where racial & ethnic identities are constructed, confirmed and contested, both by shoppers, shopkeepers, security guards and those using the space to escape the tropical heat. Qualitative data were collected through a range of one-on-one & small group interviews, using an open conversational style about life in Darwin generally. Topics of inclusionary & exclusionary practices emerged from the conversations. Using an interpretive analysis approach, influenced by Foucault, the conversations were unpacked and interrogated through the lens of racialised practices. The shopping centre in Darwin is a site referred to continually by those interviewed where incidences of overt & more subtle forms of exclusion take place serving to challenge issues of belonging to the local & national Australian community. However, it is also a site to affirm identities & challenge normalised imaginaries of a white dominant Australian citizenry, because of the high percentage of visible racial diversity in this public space.

Förster, Rosalie (Ghent University, Department of Sociology, Korte Meer 5, B-9000 Ghent, Belgium [e-mail: rosalie.foerster@ugent.be]), **When Boundaries Become Permeable–Conversations at Parents Evenings and Their Meaning for the Constitution of an Organization,** *International Sociological Association, Gothenburg, Sweden,*

¶ Parents evenings at school are an annual ritual: parents show up at school to get to know what they in fact already suspect. The knowledge of the teacher as a professional thereby confronts the knowledge of the parents about their child. Parents might ask questions to the teachers but their influence seems limited & the conversations appear to follow a strict scheme imposed by the school. This paper wants to pursue the hypothesis that it is not only the school context restricting the conversations but also the conversations influencing the school as an organization. We argue that the organization 'school' further depends on those conversations since they form a moment where the institution is constituted. Previous research on communication in school contexts often centered around the interaction taking place in classrooms. This paper focuses on conversations between teachers & parents. Examples from tape recorded conversations at parents evenings are used to study how boundaries are discussed, maintained and (re)established in the conversations. Using methods from conversation analysis (Sacks 1992) we can show how the organization school is literally talked into being (Heritage 1984).

Forster, Rudolf, Marent, Benjamin & Nowak, Peter (Ludwig Boltzmann Institute Health Promotion Research, Vienna, Austria, 1020 [tel: +4312121493-20; e-mail: rudolf.forster@univie.ac.at]), **Why & How Participation in Health Issues?–A Theoretical Framework of Good Governance,** *International Sociological Association, Gothenburg, Sweden,*

¶ Subject: In health promotion participation is a key principle which is seen in close connection to empowerment. So far discourse on and practice of participation in health promotion mainly relate to community settings whereas organizational settings are rarely addressed. In this paper we will present a conceptual framework for analyzing reasons (why) & processes (how) of lay participation in "expert-organizations" (e.g. hospitals, schools) & its implications for health (promotion). Line of argument: Three arguments are elaborated: First, the contribution of participation to the main functions of this type of organizations; second, a model to observe & implement participation; finally, a discussion on the relationship between participation, empowerment & health. Conclusions: (1) For expert organizations participation of lay actors mainly fulfills two functions: "Community participation" may be promoted to be responsive to the ever-changing environment and to address diverse needs. To improve the outcomes of their core-processes (e.g. treatment, education), "user participation" may get relevance. (2) For governing participatory processes in expert organizations a multi-dimensional approach including temporal, factual & social dimensions of participation is needed. (3) For understanding the health impact of user & community participation empowerment is an important concept but has to be complemented by other approaches.

Fortes, Rafael (Departamento de Filosofia e Ciências Sociais / Universidade Federal do Estado do Rio de Janeiro (UNIRIO), Rio de Janeiro, RJ, Brazil, 22290-240 [e-mail: raffortes@hotmail.com]), **Mediating Brazilian Surfing: Analysis of Fluir Magazine in the 1980s,** *International Sociological Association, Gothenburg, Sweden,*

¶ In Brazil, surfing became an organized & professionalized sport in the 1980s. This process involved a multiple set of factors, one of which was the role different media played in diffusing the sport to audiences broader than the core participants. Within this scenario, one media feature was especially important: *Fluir*, which quickly became the leading magazine related to that sport. Taking into account all issues published during the 1980s & using content analysis, the study focuses on how the magazine mediates the world of surfing for its readers. The data collected indicate that the mediation emphasizes some issues & approaches on the sport & its culture, while it downsizes or is silent about others. For example, competitions & surf trips receive much more coverage than everyday surfing. Issues of class, gender & location (local, national) arise, as well as conflicts over the different projects for surfing's development & organization in Brazil (e.g. definition of amateur & professional events, judging criteria). The magazine served both as an arena where different agents presented their points of view over surfing & as an agent itself.

Forteza González, Maria (Universitat Autònoma de Barcelona [e-mail: maria.forteza@uab.cat]), **Cursillos de Cristiandad: A Case-Study of a Pioneer Lay Movement,** *International Sociological Association, Gothenburg, Sweden,*

¶ The separation between the Church & the State in Europe in the 19th century provoked the decline of the Catholic Church in the public sphere. The democratic modern States defended the coexistence of ideologies & it began the process of secularization. To confront this situation, the Catholic Action was created, a hierarchical structure that aimed to foster together & to control lay associations with the will to play a relevant role in a new socio-political scenario. In the forties, in Spain, Cursillos de Cristiandad, a lay movement, is born & in the sixties it spread all around the world. The more relevant of its method is the autonomy of the lay to arrive to God, in front of the mediator role of the priest. This was a pioneer proposal that had to face several difficulties, especially for their confrontations with the hierarchy. After the Vatican II, the number of lay movements has increased considerably & nowadays some sociologists are identifying a process of protestantization inside the Catholic Church. To focus on Cursillos de Cristiandad can contribute to shed light upon this process & the research about the pluralism of lay movements.

Fozdar, Farida (Sociology, Murdoch University, South St, Murdoch, 6150, Western Australia, Australia [tel: +61 8 9360 7356; e-mail: f.fozdar@murdoch.edu.au]), **Christianity, Islam, and Australian Identity Construction,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper considers the construction of Australian national identity in relation to religious identity. After considering the place of religion in the modern secular nation state, it explores several data sources (observation, interviews, surveys, political speeches, the Australian citizenship test booklet [versions I & II]) to identify both overt & covert examples of the conflation of national & religious identities, & the growing public face of religion in political discourse. The findings support Mickelthwait and Wooldridge's recent argument that 'God is Back', though in the Australian context this is in subtler, & more insidious, forms than they suggest. The paper focuses on the ways in which Islam is both demonized & marginalized through this process, & the implications for issues of social cohesion/ inclusion.

Frambach, Janneke M. (Department of Educational Development and Research, Maastricht University, P.O. Box 616, 6200 MD, Maastricht, The Netherlands [tel: 0031433885775; e-mail: J.Frambach@educ.unimaas.nl]), **Socrates on the Move: Educational Colonization and Domestication across Cultures,** *International Sociological Association, Gothenburg, Sweden,*

¶ Educational methods are increasingly being distributed around the world, which in practice often means a one-way export of western methods to non-western countries. Some therefore characterize educational globalization as westernization or (neo)colonialism, since inherently western cultural traits steeped in these methods are rarely questioned, along with their applicability to different cultural settings. The application of certain western methods to cross-cultural contexts indeed can be problematic, for it may not consider the often different local cultural educational context. While a number of western educational models build on Socratic philosophy, other models may employ very different learning approaches. In this theoretical paper, a two-directional impact of cross-culturally applying a Socratic learning model is analyzed: a) the "colonization" of local learning models, & b) the "domestication" of the Socratic model. Firstly, a background to the phenomenon is provided by a discussion of relevant literature. Secondly, a theoretical perspective to discuss the two-way impact is introduced, based on Habermas' notion of colonization of the lifeworld, & its opposite, domestication of the system. Thirdly, this macrolevel perspective is connected to the framework of Activity Theory, to enable further investigation on a microlevel. Accordingly, the current worldwide implementation of Problem-based Learning is discussed as a case in point. The paper ends with discussing potential implications for issues of educational globalization & (neo)colonialism, & with introducing a future research agenda.

Franchuk, Victor Ivanovich (Russian State Social University, Moscow, Russia, 129256 [tel: +7 499 1876025; e-mail: vfranchuk@mtu-net.ru]), **Political Culture as the Answer to Calls-Problems,** *International Sociological Association, Gothenburg, Sweden,*

¶ Now among sociologists & politicians there is no unity of understanding the community & public culture, including political culture (PC), which is a is consequence of the uncontrollable differentiation of social sciences, many of which have refused studying the community as a whole, preferring to study it in parts. However, success can be achieved, if the differentiation of social sciences will be accompanied by their integration. As one of the most effective integration means is offered an updated organicist approach to the community & PC. According to the new organicist approach, developed in the Russian State Social University (Moscow), the community is considered as "the system deciding social problems", & PC as a set of samples of PC such as laws & legal acts, social institutes, social values & norms, innovations, organizational systems, national projects & goal programs being means (tools) for the decision of social problems. Thus, all PC is represented as the answer to new calls-problems arising before the community. On each new call, on each new social problem the community should "answer" to corresponding highly effective samples of PC. Therefore the state must constantly control the PC, otherwise in it will be collected a lot of superfluous, ineffective samples of PC, that can lead to a "paralysis" of the social mechanism of the community. PC has a complex structure. First of all PC includes different means (natural, artificial, & combined) of the decision of social problems. Secondly, PC it is focused on the satisfaction of social needs, including economic, military, medical, educational, & others. Thirdly, PC can include borrowed samples of PC from other communities. Thus, PC can be treated as all that is created by people (purposely or inadvertently), is accepted by the community & is used by it for the answer to calls-problems, i.e. new (unordinary) social problems. In spite of the fact that PC constantly changes under the influence of calls-problems, these changes should not concern the "nucleus of PC", i.e. a system of base values & social norms corresponding to them (P. Sorokin), protected historically formed social mechanism (A. Compte), which includes a political system and executive organs. The social mechanism reveals & solves social problems-calls, creating new samples of PC or using already existing samples. Solving problems the social mechanism aspires to keep the formed order in the community, & the main thing, the system of base social values & norms of the community on which it is "leaning". The political system as a leading part of a social mechanism of the community should be engaged in strengthening of a system of base values (and norms), paying most attention to the problem of moral education of the people.

Frändberg, Lotta & Vilhelmson, Bertil (Department of Human and Economic Geography, University of Gothenburg, Box 630, 405 30 Göteborg, Sweden [tel: 031 -7864680; fax: 031 -7861398; e-mail: lotta.frandberg@geography.gu.se]), **Changes in Personal Mobility–Trends and Counter Trends in Sweden,** *International Sociological Association, Gothenburg, Sweden,*

¶ The purpose of this paper is to present an analysis of mainstream trends & counter trends in the development of spatial mobility among the Swedish population, in a medium term perspective. Such knowledge is important for understanding the preconditions for the transformations in spatial mobility regimes required to achieve social & environmental sustainability & also for tracing incipient change in mobility behavior. The analysis of time series and cohorts is based on Swedish national travel surveys conducted intermittently over a period of almost thirty years (1978 to 2006). These surveys cover both daily & long-distance mobility. International travel is included for the last decade. The data have been analyzed in an explorative manner in order to identify significant trends characterizing both everyday & long-distance mobility. With respect to mainstream trends, the results primarily concern the continuation of the spatial extension of overall mobility, of motorization & individualization of travel

modes and an upward convergence between the mobility of women & men. When it comes to counter trends, substantial reductions in daily and long-distance mobility within Sweden are observed among young age groups.

Frausto Martínez, Oscar & Welch-Guera, Max (Universidadd e Quintana Roo - Bauhuas University, Dornburger Str. 19 c, Jena - Germany, 07743 [tel: +49003641332642; e-mail: ofrausto@uqroo.mx]), **Indicators of the Habitat Agenda in Mexico: Local Urban Observatory Programme,** *International Sociological Association, Gothenburg, Sweden,*

¶ Indicators are regarded as important tools for the implementation of Monitoring of the Agenda habitat in Mexico. Since the beginning of the debate about indicators in 1992 different concepts have been developed. Some of the existing indicator sets have been tested already. The results have led to the conclusion that the indicator concepts of the "first period" need to be improved. One of the most important outcomes of the experiences made until now is that it is almost impossible to develop indicators or indicator sets, suitable for every spatial area or different regions. The results of the testing-program of the UN Habitat Mexico confirm this fact. In the present contribution 37 experiences of sustainability indicator development for a specific regional context are presented. The examples from 37 cities underline the necessity to develop indicator concepts based on the specific problems & goals for the region without neglecting the global principles of sustainability. Furthermore, the description of both case studies (methodology of selection, indicators & her application) illustrates the problems & challenges of indicator concepts for a specific region. Finally the authors give some recommendations for the development of sustainability indicators for a specific regional context in Mexico.

Frederic, Sabina & Ugolini, Agustina (Quilmes National University/CONICET, Roque Saenz Peña 350, Bernal (B1876BXD), Provincia de Buenos Aires [tel: 54-11-4365-7120; fax: 54-11-4365-7120; e-mail: sabinafrederic@yahoo.es]), **Quantity and Quality in Recruitment and Retention of Military Effectives in Contemporary Argentina,** *International Sociological Association, Gothenburg, Sweden,*

¶ The difficulties in the recruitment & retention of effectives affect the current & future composition of the Armed Forces in Argentina. Its particular orientation is worth describing and analyzing in light of: the Defense policies supported since the derogation of the obligatory military service in 1996, & as associated to specific political processes of longer term that have re-defined in this country the social appreciation assigned to the militia. Considering these specific aspects can help us to understand the particularities of the levels & current trends in the recruitment & retention. Though the implementation of voluntary incorporation systems has gained relevance in western armed forces (Böene 2005), in Argentina scene configuration implies also the armed forces' defeat in Malvinas War (1982), military responsibility in state terrorism during the last military dictatorship (1976-1983), & an absence of any conflict hypothesis. While the Argentine State has decided to set in about 70 thousand people the number of effectives–among officers, subofficers & troop–, on a whole of 36 million inhabitants, three indicators worry military authorities, in spite of the concerns of the civil Defense government sphere: 1) rising problems to select & to prioritize quality in the recruitment of officers, resultant of the aspirants socioeconomic origin; & 2) increasing number of leave requesting by officers & subofficers of up to ten years of active service, & volunteer soldiers according to the market's regional pressure. The purpose of this work is to offer an exhaustive description of the current conditions in officers, subofficers & troop recruitment, indicating: incorporation rate, registered trends of selection & retention during the last decade, aspirants' socioeconomic & regional origin, & regional scattering in the permanency of voluntary soldiers. This description, situated in its specific social & political local scene, will help analyzing the problem explanations & the answers given so much by the Armed Forces members, than for the Defense Ministry, addressing social recognition of the armed forces, employment offerings & economic incentives, & Defense policies, among other questions that defy the task of recruiting military personnel in our country.

Fregidou-Malama, Maria & Hyder, Akmal (Department of Business Administration, University of Gävle, Sweden, 801 76 GÄVLE, Sweden [tel: 0046-26-648687; fax: 0046-26-648589; e-mail: mma@hig.se]), **Health Service in a Cross-Cultural Environment:,** *International Sociological Association, Gothenburg, Sweden,*

¶ By adapting a model of standardization/adaptation we analyze how adaptation/standardization, trust & network development are achieved when marketing a health service in a culturally distant country through handling the issues of intangibility and heterogeneity. Qualitative data are collected in the form of semi-structured interviews to conduct a comparative study on Gamma Knife in Brazil & Egypt. The study shows that cultural adaptation makes service offerings tangible by reducing the gap of misunderstanding between service providers & local customers. It proposes that a foreign company's service offerings, ideas, values and beliefs connected to the quality of the service are to be standardised. This standardisation communicates the idea of offering both a treatment & also a solution helping the company appear visible & tangible. Factors related to the local market are to be adapted to local tastes, habits & preferences to develop trust & networks. A balanced combination of adaptation and standardisation makes services homogenous & tangible increasing success for service providers. The study contributes to the services marketing literature presenting a model of successful internationalization of health services marketing based on adaptation/standardization, trust & network, to overcome problems of intangibility & heterogeneity.

2010S00836

Freire, Dulce, Saraiva, Tiago & Truninger, Monica (Institute of Social Sciences, University of Lisbon, Av. Prof. Aníbal Bettencourt, 9 1600-189 Lisbon, Portugal [tel: +351 21 7804700; fax: + 351 21 7940274; e-mail: dulce.freire@ics.ul.pt]), **The Rocha Pear**

'Quality Battles' in Western Portugal, *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is an invitation to embark on a journey where the Rocha Pear (a Portuguese autochthonous pear variety) is followed, from its inception in Portugal in the 19th century until nowadays. In this journey, this fruit variety is shadowed across space-time dynamics (Czarniawska, 2007), & particular attention is given to the conflicting & contradictory ways the standardization of the Rocha pear quality was conducted. One can say that two phases mark this process of quality standardization, crucially both manifesting claims for sustainability, localization & biodiversity. The first phase took place in the 1st half of the 20th century, which was highly influenced by the technical & scientific work of agronomic engineers in seed selection & plant improvement. This work had the ambition to protect the autochthonous varieties of fruit in the region of Oeste (Western region of Portugal above Lisbon, well known for its fruit growing activities). Such scientific work was evocative of biodiversity concerns & the preservation of terroir products. However, this science-based fruit selection invariably was leaving out other pear varieties that were not considered of good quality or simply were not competitive in the marketplace, threatening the biodiversity of the region. The second phase culminated with the granting of PDO status to the Western Rocha pear in 2003, transforming this variety into the icon of the Western region, & fixing in its PDO label the territorial links between place, culture & food. However, this was also a form of standardizing & marketing quality, & soon Rocha pear was crossing profitable spaces, highly intermediated & extended to global corporate supply chains. The case of the Rocha pear is illustrative of the "wars between paradigms", following its journey allows for a close examination of the contradictions of delocalization & relocalization processes in the construction of quality (Morgan, Marsden & Murdoch, 2006). The paper will examine the disputes around "biodiversity" & "sustainability" in the qualification of the Rocha pear by means of documentary analysis of material collected through archive sources, interviews with key actors in the sector, & direct observation.

2010S00839

Freire, Elisabete, Crespo, José & Mendes, Maria (Faculdade de Arquitectura da UTL [tel: 351934285280; fax:; e-mail: mamendesster@gmail.com]), **Local Community Participation Strategies to Mediate Urban Conflicts within Lisbon Metropolitan Area,** *International Sociological Association, Gothenburg, Sweden,*

¶ Urban conflicts are based on tensions between two or more parts which, at once, may bring into conflict or may stay latent & thus leading to a growing conflictuality environment. These conflicts is based on problems that need urgent response & resolution; they are linked to social inequalities such as the access to house and labor markets, education, & culture but political dialogue and representation as well. Though conflictuality is inherent to human society, it also leads to solidarity & group cohesion that may prompt to urban violence, as those, recently, in Paris, Athens & Lisbon. The aim of this research is to assess the relationship between people's participative process & urban conflict. Therefore, it will be evaluated, though still on an exploratory basis only, in what way these conflicts may be regulated by promoting participative behaviors on the city management, by inhabitants from problematic neighbourhoods. This analysis will be based on two case studies, within Lisbon Metropolitan Area (LMA): Bairro da Quinta da Fonte (within the district of Loures, at the northern part of LMA) & Bairro do Aleixo & Porto Metropolitan Area(PMA). They are two social neighbourhoods with different genesis though with similar problems; the first is occupied, mostly, by people coming from shunty quarters within the district & the other it was, originally, built for workers & their families from a particular nearby naval industrial area; but when this has closed the houses have returned to the local City Council, & they have brought people from other backgrounds. In both neighbourhoods there is a diverse population in terms of ethnic, cultural & nationalities origins.

Freitas, Any & Godin, Marie (GERME-METICES, Sociology Institute, Université Libre de Bruxelles, Institut de Sociologie C.P. 124 Avenue F.D. Roosevelt, 50 B-1050 Bruxelles [tel: +32-2-650. 31.82; fax: +32-2-650.46.59; e-mail: anyfreitas@hotmail.com]), **Living "above the ocean": Latin-American migrant women in Brussels,** *International Sociological Association, Gothenburg, Sweden,*

¶ This contribution will focus on irregular migrant women from Latin-America working in the domestic sector in Brussels. Hired to cook, clean & care, these women occupy the lower level of what has been called the "Global care chain". This chain manifests itself in the predominantly feminine character of domestic work, often depreciated–& thus delegated–by women & men in Western industrialized societies. Responding to the increasing demand of labour force in the domestic sector, Latin-American women have hence been contributing to a progressive feminization of transnational migration movements to Europe, while reinforcing the gender-specific nature of care-related activities. Brussels has known over time a considerable expansion of jobs related to "care services", partly due to the relocation of international elites to the city. Migrant women have been providing the kind care activities these individuals cannot (or do not want to) do, but which are crucial for performing their professional & social dues. Despite the increasing presence of Latin-American women in this particular "niche", they remain largely invisible, at the social & political levels. More than the nature of their work, the irregularity of their statuses forces them to remain at the margins of the host society. They place themselves hence "above the ocean", i.e. no longer in their countries of origin, but not really in their country of relocation. This paper should bring these women to light, revealing not only the diversity of the group's composition & trajectories, but also the way they cope with their "invisibility", the progressive de-localization of their identities & the definition of new ones. Among other things, we argue that the migratory experience has helped many of them achieving an unprecedented (financial, but also social, familiar) autonomy & relative empowerment, which are however not always translated into the breaking from more traditional roles and (gender) relations.

Freitas, Helana de Abreu & Molina, Mônica (FE/UNB, Brasília/ Brazil [tel: (61)3202-0938; e-mail: helana-freitas@uol.com.br]), **Contributions of the Landless Workers Movement (MST) to Build New Proposals for Rural Education in Brazilian Universities.,** *International Sociological Association, Gothenburg, Sweden,*

¶ This article will analyze some of the contributions of the Landless Workers Movement (MST) for the construction of educative proposals at universities to the rural areas. From the 80s, with the process of Brazilian democratization, the MST was assumed the protagonism of the struggle for the agrarian reform, involving thousands of agriculturists of all the regions of the country. However, soon was found that one of the serious obstacles to advance the organizational process was the low education level of the farmers. From this observation, the MST began to develop educational practices that generate reflection about the real conditions in rural areas, in line with the perspective of the proposed change. The MST searched partnerships in Brazilian public universities to expand the provision of schooling for farmers involved in agrarian reform. These partnerships, despite the conflicts generated with various academic sectors, are bringing innovations to the universities, especially as regards the integration of the universities in other knowledge not valued by traditional science and organization of the formative process. The academia has being to fit entry of a social group that never had access to the Brazilian public universities. For this analysis we will use the work of the sociologist Boaventura de Sousa Santos that examines the role of social movements in counter-hegemonic globalization and the university in the twenty-first century.

Frere, Bruno (FNRS, University of Liège (Belgium), 7 bd du Rectorat, bat. B.31, 4000 Liège [tel: +32 479 438 809; fax: +32 4 366 47 51; e-mail: bfrere@ulg.ac.be]), **The Libertarian Grammar of Solidarity Economy and the Problem of Power,** *International Sociological Association, Gothenburg, Sweden,*

¶ "Solidarity economy", a widely used term for which the most common French equivalent is *économie solidaire*, is generally thought of as comprising five distinct classes of activity : Social Entrepreneurship Consulting Services, Micro-finance, Local Exchange Trading Systems, proximity services, organic small-scale farming, and fair-trade distributions. Because they try to answer to the Aristotelian theoretical question "what can we do to live harmoniously together?", these solidarity initiatives are deeply political in the philosophical sense of the term. They galvanize civic commitment at the "micro" level. But today, an important question arises regarding the kind of formal political institution that would speak in the name of all these initiatives. In France, some intellectuals who have an interest in these solidarity initiatives see them as new economic models with the potential to solve the current financial crisis, & they are eager for academic specialists & leaders of the movement to achieve some kind of consensus about the kind of concrete political identity such initiatives may be expected to generate. However, my own research studies their way of

establishing a basis for moving from micro level initiatives to substantial "macro" polity unity. This communication, using the insights of French pragmatic sociology, and particularly the notion of grammar of justification, aims to understand what the obstacles to this aim being realised are.

Frericks, Patricia R.H. (Sociology/CGG, Hamburg University, Allende-Platz 2, 20146 Hamburg [tel: +49 40 42838 2463; e-mail: patricia.frericks@uni-hamburg.de]), **Social Protection Change in Europe: Redesigning Social Citizenship,** *International Sociological Association, Gothenburg, Sweden,*

¶ Starting in the 1980s & 90s, in various European welfare reforms cost containment policies were introduced, & parts of the social insurance systems & the related resources were transferred to the financial market. Also, different forms of "activation" policies aimed at "motivating" each individual to participate in the labor market. These policies aimed at individualizing social entitlements and at emphasizing their relatedness to labor market participation, and at (partly) privatizing & marketizing social protection. Simultaneously, however, a contrasting & powerful development occurred, which might now, after the "financial crisis" be reinforced. This political & institutional development is moving towards extensive regulatory policies of "private" welfare products, in particular after the stock market crisis in 2001, and towards valuing "solidaric elements" (Myles) such as care giving. In this contribution, I argue that current changes in capitalist welfare societies promote new forms of social citizenship. It is precisely the comprehensively changed combination of measures that establishes new biographical norms as well as new forms of state responsibility & intervention. Moreover, new characteristics on the part of the market are increasingly entering the traditional welfare state areas. Past ideas about participation & commitment to being a "deserving" citizen are no longer considered sufficient. A new ideal of individual "activeness" (a term which I use to distinguish it from generally labour-market-oriented "activation" approaches) has become an important criterion for being considered a "good" citizen. Some gendered outcomes of these reforms will be highlighted, as they illustrate particularly well the implications of current changes and, consequently, their effects.

Frey, Vincnez, Corten, Rense & Buskens, Vincent (Department of Sociology, Utrecht University [fax:; e-mail: vincenz.frey@gmail.com]), **Network and Information Effects in the Emergence of Conventions: Theory and Experimental Findings,** *International Sociological Association, Gothenburg, Sweden,*

¶ Coordination problems occur in many social & economic interactions and are often resolved by conventions. Frequently, one of several possible conventions is more efficient, but is also associated with a higher risk. We study how structural characteristics of interaction networks affect the likelihood of the emergence of efficient conventions in repeated 2 x 2 coordination games. In addition, we examine the effects of information availability. We reason that actors behave backward-looking when they observe only their partners' behavior, but forward-looking when they observe the behavior of all actors & know the structure of the network. Computer simulations based on different decision rules are used to generate hypotheses that are tested in a laboratory experiment. We find no support for the hypothesized network & information effects on the emergence of efficient conventions. Nevertheless, information availability affects individual behavior. In particular, we find that, as assumed in our theoretical model, subjects who know the structure of the network & observe the behavior of all actors use this information to detect situations that allow them to bring about coordination on the efficient convention.

Freyer, Bernhard & Aversano, Valentina (University of Natural Resources and Applied Life Sciences Vienna, Department of Sustainable Agricultural Systems, Gregor-Mendel-Strasse 33, 1180 Vienna, Austria [tel: 00431476543751; fax: 00431476543792; e-mail: Bernhard.Freyer@boku.ac.at]), **Sustainability as an Aspect of Modernity in Monasteries,** *International Sociological Association, Gothenburg, Sweden,*

¶ Modern life is characterized by areas of tension between environmental crises, e.g. climate change, loss of biodiversity or of cultivatable land & a parallel search for new pathways both to reorganize society as well as to develop unique individual ways of life. Hand in hand with these areas of tension, the topic of sustainability & sustainable lifestyles has played an increasingly prominent role in the ongoing public debate, which can be observed at nearly all levels of society, such as politics, economy, science, or education. As regards lifestyle, religions have always attempted to fulfill the function of being role models. Since monasteries as specific & traditional Christian entities provide an alternative model of living that in many cases has endured for centuries, we chose them as the object of our research in order to deepen our understanding of alternative concepts of sustainable pathways. Our study takes place in the context of the research project "Dealing with the Divine Creation" (Umgang mit der Schöpfung) in which we collaborate with six Benedictine Monasteries in Austria (4) & Germany (2). Through a holistic, interdisciplinary & transdisciplinary approach, we aim to prove the following hypotheses: ac Thesis 1: The monasteries' sustainability concepts & convictions are driven by faith and spirituality founded on Benedictines rules. ac Thesis 2: The monasteries' self-understanding of sustainability is based on a broad & actively gained knowledge base, always related to and connected with the public debate on sustainability. ac Thesis 3: There are institutionalized structures in the monasteries dealing with concepts of sustainability & maintaining networks with partners in the surrounding areas. ac Thesis 4: Sustainability is expressed in the form of concrete techniques & processes in the monasteries, promoted by single actors from the secular & the monastic context. Intensive qualitative research as well as a survey of the monasteries' initiatives in the field of sustainable nutrition, agriculture, forestry, energy & tourism are the main tools used for the identification of actors & concrete actions. These will provide a multi-faceted inside view into the active and/or passive management of sustainability as an aspect of modernity in the spiritual context of the six selected monasteries.

Freyer, Bernhard & Bingen, Jim (Division of Organic Farming; University of Natural Resources and Applied Life Sciences, Vienna, 1180; Gregor Mendelstr. 33 [tel: 00431476543750; fax: 00431476543792; e-mail: bernhard.freyer@boku.ac.at]), **Redefining Organic Agriculture through a Postmodern Lens,** *International Sociological Association, Gothenburg, Sweden,*

¶ The current organic agriculture movement risks losing its promise and sacrificing its original principles as an alternative agricultural and food system to the increasingly corporatized conventional agricultural production & distribution system. We argue that for the organic movement to rediscover its promise, it must become postmodern. We address the following questions: What do we mean by postmodern organic agriculture? And, what are the challenges for organic movement to become postmodern in a society which seems to require that it be modern? Post modernists have a distinct way of seeing the world as a whole, philosophical & aesthetic views and a critical analysis on capitalistic cultural conditions. Post modernity is strongly related with an open reflexive debate / sceptical type of discourse, an integration of philosophical, cultural, sociological & ecologic concepts. This paper explores how the organic movement is deeply & unreflexively embedded in the structures & rules of modern life defined by: 1) the myth of choice and, 2) the often unrecognized, but far-reaching controls regulations that help to maintain this myth. We explore how a neo-institutionalist perspective on organic agriculture offers insights into the tensions which the organic movement must overcome to (re)find its identity between modern homo economicus & homo sociologicus.

Friedland, William H. (University of California, Santa Cruz, Oakes College, UCSC, Santa Cruz, CA 95064 [tel: 831 423 8944; e-mail: friedla@ucsc.edu]), **Driving Forces for Alternative Agrifood Movements: Deconstructing Food Horrors,** *International Sociological Association, Gothenburg, Sweden,*

¶ The growth during the past two decades of a host of social movements based on alternative agrifood approaches cries for explanations. While food has been a concern to many people during the past century, the past two decades have shown a remarkable growth of interest in food & the growth of critical movements supporting alternative orientations. This represents something new that indicates the need for explanation of these developments. Concerns about environmental contamination & its effects on people's health is likely one contributor. A second is the remarkable expansion of food chains over ever increasing distances. Demand for fresh fruits & vegetables has increased & networks for production-delivery-consumption have grown involving transport over thousands of kilometers. Accompanied by neoliberal ideologies of free trade & increased deregulation of state control apparatuses, the increased scale of food movements have been accompanied by food horrors of similarly increased scale. On their part, the variety of alternative agrifood movements from organics & Fair Trade have been accompanied by movements such as Slow Food, food security, food sovereignty, food safety, localism, farmer's markets, Community Supported Agriculture, & anti-GMO & other movements focused on various aspects of animal welfare. These move-

ments are much more individuated & separated from each other than the social movements of the working class up to the Second World War and, as well, from the individuated identity movements of the 1960s and early 1970s. This paper explores the character of food horrors and their contribution to the growth of the alternative agrifood movements.

Fritz, Jan Marie & Doering, Sharon (University of Cincinnati, Cincinnati, Ohio 45237 USA [tel: 1-513-556-0208; fax: 1-513-556-1274; e-mail: jan.fritz@uc.edu]), **Women, Peace and Security: National Plans, International Mandates,** *International Sociological Association, Gothenburg, Sweden,*

¶ This research identifies the directives for UN member states in UN Security Council Resolutions 1325, 1820, 1888 & 1889. In addition, it analyzes the 16 current national action plans that were adopted as a response to UNSCR 1325. This study uses 21 criteria to analyze the existing plans & makes suggestions for those developing or revising national plans.

2010S00850

Fritz, Martin (EUROLAB, GESIS - Data Archiv for the Social Sciences, Cologne, Germany [tel: 00492214769424; e-mail: Martin.Fritz@gesis.org]), **Subjective Well-being of the Creative Class,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper seeks to investigate subjective well-being of people in occupations of the creative class. The term is used by the American social scientist Richard Florida to describe the fact that in knowledge-based societies a growing number of jobs & occupations are characterized by the main function "to create meaningful new forms". This applies to occupations in information technologies, culture, arts, education, & science, as well as many occupations in engineering & management. People doing those jobs are all engaged in creative problem solving, developing new and transferable strategies, thinking on their own, & exercising great deals of judgement. They experience high degrees of autonomy and possibilities to express themselves in their jobs. Since this sounds like perfect working conditions for modern individuals one would expect very high subjective well-being among the members of the creative class. However, many sociologists argue that there is an ambivalence of those jobs to produce more freedom & more pressure, more self-determination & more force at the same time. Therefore, the jobs of the creative class may also induce anomic behaviours & feelings & phenomena like exhaustion, depression, anxiety, or disorientation are expected to occur frequently. On the basis of international survey data this paper analyses whether members of the creative class in fact experience negative or positive subjective well-being. Four dimensions of subjective well-being will be distinguished in order to assess the possible anomic consequences systematically: Emotional, evaluative, behavioural, & social well-being.

2010S00851

Frota, Maria Guiomar da Cunha (Federal University of Minas Gerais/Information Science School, Antônio Carlos street 6.627, Belo Horizonte, Brazil, 31270-901 [tel: 553134096115; e-mail: frotaguiomar@yahoo.com.br]), **Political and Legal Effects of the Convention on the Rights of the Child at the International, Inter-American and National Scales.,** *International Sociological Association, Gothenburg, Sweden,*

¶ This article investigates the possibilities & limits for effectuating the Convention on the Rights of the Child(CRC). The following dimensions are questioned: a) the monitoring process of the CRC; b) the contrast between the social organization of children's rights in the National State & the international pressures to incorporate foreign law into the national legislation; c) the role of the Inter-American Court of Human Rights in the processes of child rights violations. The main conclusion is that the possibilities of effectuating international treaties on human rights are different at three scales. Within international organizations (specifically within the UN & its Committees on Human Rights) it is possible to create conventions & monitor them. At the Nation-State scale it is possible to formally incorporate the rights of the foreign law into national constitutions but the punishment related to the violations of these rights will depend on the hierarchical relationship between domestic & foreign law. At the inter-regional scale one can observe the effective actions of the juridical institutions (specifically of the Inter-American Court of Human Rights) to punish & compensate the victims that suffered violations of the rights guaranteed by international treaties.

Frumusani, Daniela & Stefanel, Adriana (University of Bucharest, Iuliu Maniu 1-3 [tel: +40 21 318 15 55; fax: +40 21 318 15 55; e-mail: danifrumusani@yahoo.com]), **Women and Politics: Case-Study of the Romanian Mediated Public Sphere,** *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ 20 years after the collapse of the communist regime, in Romania politics is still a masculine profession, traditionally excluding women. Our study's aim is to analyze the way in which women in politics are (re)presented in the public sphere & in the media, how they speak & are addressed by other participants in the debates, the thematic & structural characteristics of their interventions. The research is based on the content & discourse analysis of 48 broadcasted political debates in the electoral campaigns for the European Parliament, May, 7 - June 7, 2009. Only 16.83% of the participants at these debates were women (journalists, experts, politicians), even if the percents of women on eligible places at these elections was 30%, & in one case, the liberal party, the percents increased up to 80%. When present in broadcasted debates (only 30 editions with at least one woman) women talk less than male candidates, even if the last ones came from parties considered "without electoral chances". Women are more frequently interrupted a by male candidates & the moderators (male & female); they are also less solicited to take the floor or draw the debate's conclusions. Obviously, the opinions of male candidates are valued.

Fu, Li (University of New South Wales [e-mail: fuli0710@gmail.com]), **Grassland Degradation, Policy and Local People,** *International Sociological Association, Gothenburg, Sweden,*

¶ Grassland degradation has been identified as a major & increasing problem during the modernization process in Inner Mongolia in China. The current grassland protection policies still cause many problems for local people's lives. Facing life uncertainty and risk, local people are active respondents rather than negative recipients. Using the concept of risk by a sociological perspective, this paper analyzes the impact of grassland degradation & current environmental policies & particularly explores the forms & implications of local people's responses in Inner Mongolia in China. This paper is based on original fieldwork conducted from 2003 to 2008 in pastoral areas in Inner Mongolia. Under a qualitative methodology, the methods of data collecting are in-depth semi-structural interviews of local herders, government officers & NGO staff, participate observation, & extensive literature survey. This paper indicates that local people have a logic of "life security first". Although local people have traditions to protect grassland, these protections are based on the logic of "life security". In order to pursue life security, local people may still resist environment policies or development interventions if they bring life uncertainty & risk.

2010S00854

Fuchs, Christian (Unified Theory of Information Research Group, Vienna, Austria [e-mail: christian.fuchs@sbg.ac.at]), **Critique of the Political Economy of Web 2.0 Surveillance,** *International Sociological Association, Gothenburg, Sweden,*

¶ "Web 2.0" platforms such as YouTube, MySpace, Facebook, Flickr, and Twitter that focus on data sharing, communication, community, and co-production have become very popular. It is therefore important to understand the economic organization of these platforms. The discussion of surveillance in web 2.0 is important because such platforms collect huge amounts of personal data in order to work. The basic research question of this contribution is: How does the political economy of web 2.0 work & what is the role of surveillance? For answering this question, further questions are asked: What is the role of surveillance in critical political economy studies? What is the role of surveillance in the political economy of capitalism? How does capital accumulation work on web 2.0 platforms? What is the role of surveillance in web 2.0 capital accumulation? For answering these questions, first the role of surveillance in the classical crit-

ical political economy studies is discussed. Then, a model that conceptualizes the cycle of capital accumulation & distinguishes between production & circulation of capital is introduced. Next, the multiple roles of surveillance in capital accumulation are discussed & the connection of privacy, surveillance, & capitalism is outlined. Turning to the relationship of the Internet & economic surveillance, an overview of existing works is given. The relationship of capital accumulation, web 2.0, & surveillance is discussed, the role of the users in this process is empirically studied, & finally some conclusions that centre on the notion of resistance are drawn. The method employed in this paper is a combination of social theory and empirical research. For conceptualizing the role of surveillance in capitalism & on web 2.0, critical political economy is used as method for theory-construction. Data collection about Internet usage & statistical analysis are used for analyzing the political economy of web 2.0. For analyzing user perspectives, the results of a quantitative & qualitative online survey are reported. In classical critical political economy, there is a focus on surveillance conducted by two actors: capital & the nation state. In the cycle of capital accumulation, the economy is conceived as a dynamic system that is based on labour power, constant capital, surplus value production, commodity production & circulation, and profit realization by consumption. Six forms of economic surveillance in capitalism can be distinguished: applicant surveillance, workplace surveillance, workforce surveillance, property surveillance, consumer surveillance, & surveillance of competition. Privacy & surveillance stand in a paradox relation in capitalism: On the one hand the logics of liberalism, the Enlightenment, & private property have continuously declared privacy as a central modern value, on the other hand continuous economic & political surveillance conducted by corporations and the state has undermined the credibility of this value. Web 2.0 is a relatively novel topic in the discussions about Internet surveillance. Political economy approaches that give a detailed analysis of capital accumulation on web 2.0 & show the underlying strategies, mechanisms, & interests as well as the role of surveillance are largely missing in these debates. It is maintained that web 2.0 is dominated by corporate interests & has not brought about a more democratic society or a more democratic media landscape. For analyzing the political economy of surveillance on web 2.0 the notion of the Internet produsage commodity is introduced & the role of targeted advertising is discussed. The results of a survey show that users see a contradiction of surveillance & communication/community at the heart of perceived disadvantages & advantages of web 2.0. As policy conclusion, the perspectives of corporate watch platforms, online protests, opt out solutions, & non-commercial web platforms are discussed. The paper shows that the economic contradictions of modern society shape contemporary Internet usage. The logic of commodification, commerce, & profit maximization is permanently present in Internet usage. The danger is that users' lives become strongly controlled by corporate interests & strategies. The implication for public discourse, civil society, & policy making is that the political economy of web 2.0 corporations & economic surveillance on web 2.0 should be closely observed, documented, & discussed by the public in order to identify political strategies that aim at limiting corporate control of web 2.0 & try to publicly support the creation of a non-corporate web 2.0 sphere. This paper combines critical political economy & surveillance studies & applies this combination to web 2.0. The role of surveillance on web 2.0 has in the academic landscape thus far hardly been discussed. Web 2.0 is a relatively novel topic in surveillance studies. This contribution contributes to overcome the lack of critical insights into the political economy of surveillance on web 2.0.

2010S00855

Fuerstenau, Rita (Educational Science, University of Kassel, Kassel, Germany, 34119 [e-mail: r.fuerstenau@uni-kassel.de]), **Children's Perspectives on Childhood,** *International Sociological Association, Gothenburg, Sweden,*

¶ The presentation focuses on the first results of an empirical study on children's pictures of childhood & the study's position in current discussions at the rate of actor orientation & context analysis. By means of group discussions with children, children's pictures of childhood & generational order are reconstructed. The data acquisition took place in three German primary schools that differed in their catchment areas & social stratification. Altogether 173 third & fourth graders attended the research project. In the first part of the study 250 children's texts and questionnaires concerning their social backgrounds were collected. In the second part 25 group discussions with contrastive groups were held. Considering the children's different social circumstances the documentary reconstruction focuses on structures & processes of collective statements. In the study the children's perspectives and their active construction of reality as well as the social constitution of their approaches are included. Referring to an understanding of childhood as a social construct, pictures of childhood can be seen as particular expression of significant social constructions of childhood & generational order. For the reconstruction of children's pictures of childhood the concrete children's comments & their embedding in social, political, economical & cultural systems have to be connected.

2010S00856

Fuhse, Jan (University of Bielefeld, Faculty of Sociology, Bielefeld, Germany, 33501, PO Box 10 01 31 [tel: +49 521 1063801; e-mail: jan@fuhse.net]), **Structural Equivalence, Established-Outsider Configurations, Allotment Farmers, and Gender–A Network Theoretical View on Social Inequality,** *International Sociological Association, Gothenburg, Sweden,*

¶ Theories of stratification have–following the clues of Marx and Weber–thought of classes & social strata as more or less bounded societal groups with increased internal interaction and very few social relationships in between. This assumption underlies–in various formulations–diverse works of Erik Olin Wright, Nan Lin, Michèle Lamont, & many others. Classes or strata form personal ties mainly within, based on their common socio-economic situation, & on the interaction at the workplace, in class-specific neighbourhoods, & particular leisure activities (e.g. pubs vs. golf clubs). This increased internal interaction (and the particular interests) leads people to form class-specific values, worldviews, & collective identities. We can term this widespread assumption the "interaction group theory" of social strata or classes. The presentation articulates an opposing approach to social inequality from the sociological network tradition of Harrison White & others, which stresses "structural equivalence" instead of "interaction groups". Many dimensions of inequality are not based on increased internal interaction, but on a specific pattering of interaction ties. For example, household slaves, or clients in patronage structures are not necessarily connected to each other, but find themselves in "structurally equivalent" positions in relation to slaveholders or patrons, respectively. The allotment farmers in Marx's analysis of mid-19th century France are a classical example for a class without internal interaction. According to Marx, they formed a class due to their shared socio-economic position–but they lacked the interaction among them to develop class-consciousness & act collectively. Similarly, the genders do not form separate interaction groups (as Simone de Beauvoir observes), but interact quite frequently–albeit in culturally circumscribed & socially sanctioned ways. As a consequence, their personal networks show specific structures and compositions. For example: Women name more kin in their personal ties, men more friends & colleagues. And friendships are still formed mainly with members of the same sex. Thus gender can be seen as a category of structural equivalence, which explains part of the socio-economic inequality associated with it. One theoretical model for this type of socio-structural groups can be found in Norbert Elias's concept of established-outsiders configurations. Here the internal connectivity of the established group made it possible for them to exclude the outsiders, to bar them from scarce resources and opportunities in the community, & to construct a sharp cultural division between the two groups. Elias views this model as applicable to a wide range of examples, from migrant groups to the nobility & gender. However, only some of these instances conform to this model (to varying degrees). Nevertheless, established-outsiders configurations exemplify an important mechanism through which structural equivalence in social structure can lead to material (and symbolic) inequality. Both the interaction group view & the structural equivalence approach start from the assumption of a homologous social structure based on clear-cut categories, with individuals being placed neatly into one of these categories. However, categories like ethnic descent, gender, life-style groups, & class intersect to produce a complex social structure only partially reducible by any clear-cut model. In addition, categories (like gender) might mean different things depending on the socio-cultural context, for example in urban or rural communities, or in different ethnic groups. Accordingly we have to reformulate the strong criteria of "structural equivalence" to a notion of "structural similarity" which is able to incorporate both of these amplifications: (1) the simultaneous effects of more than one category (and of structural conditions) on empirically observable personal networks; & (2) the context-specificity of these effects, when contexts imbue categories with different meanings.

Fujimoto, Masayo (Social Science Department of Doshisha University [tel: Room 314 Keisuikan 601 Genbu-cho Kamigyo-ku Kyoto 611-0002 Japan; fax: +81-75-251-3066; e-mail: mfujimot@mail.doshisha.ac.jp]), **Anomie of Professionals in the Changing Institution,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study examines the adaptation of professionals to a changing institution. The transformation examined is the shift of the National Research Institute of Science & Technology from being a state-run to an independent administrative agency. The conventional theory of professionals is that professionals do not depend on organizations as they have a strong commitment to their occupations; however, in dynamic reforms of organizational systems, we found a different tendency. It was found through the interviews that researchers felt uneasiness & dissatisfaction as clerks did. When we analyzed their uneasiness with the type of work they performed & their position in the organization, the full-time researchers felt the greatest amount of uneasiness regarding this organizational shift, while temporary clerks worried about their job termination. This paper explains the above phenomenon by using concepts such as "relative deprivation," "the conflict caused by the old institution & the new institution", & "the dismantling of the researcher's community". The self-subsistence of a person depends on the social norms of the society. Therefore, we conclude that increased uneasiness is the result of the weakening of their superiority. In addition, because each professional commits to a specific field, it was difficult for the researchers to combine against the control of the managers & directors. This paper concludes this phenomenon is a professional's anomie on dynamic organization.

Fujitani, Tadaaki (Soai University, Osaka Japan 5590033 [tel: 81 6 66125900; e-mail: fujitani.biz@nifty.com]), **The Activity of Civil Ombudspersons in Japan: Changing Organizations and Reflexive Modernization,** *International Sociological Association, Gothenburg, Sweden,*

¶ This presentation aims to show one of the activities of civil Ombudspersons, arguing on the basis of participatory research over five years the significance & potential of a Non-Profit Organization (NPO) to encourage improvements in the environment for tenants in special nursing homes for the elderly in Japan. Members of the NPO call at institutions twice a month, hearing from clients, balancing their purposes in terms of 'views of citizens,' and encouraging improvements in the environment for tenants. In fact, their work takes the role of a 'bridge' between clients and institutions. A comparative analysis of this work & other activities of civil ombudspersons scrutinizing the utilization of taxes since the 1980s will clarify a new perspective on changing society in Japan. In conclusion, these activities suggest new ways of coping with an aging civil society. First, they show new ways for decision-making by the elderly, including those who may be regarded as having "dementia." Secondly, they represent a new social movement by lay people as a form of participatory democracy. Finally, they show the situation of changing organizations in the process of reflexive modernization.

Fukuda, Setsuya (MPIDR, Konrad-zuse 1, 18057 Rostock Germany [fax:; e-mail: fukuda@demogr.mpg.de]), **Shifting Economic Foundation of Marriage in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ Japan is one of few developed countries in which marriage & higher earning potential among women are negatively associated. As the proportion of births occurring outside of marriage remains low in Japan, fertility is still significantly influenced by marriage trends, which are in turn influenced by societal expectations regarding the marriageability of educated women. Previous studies have suggested that the economic independence associated with higher education is at the root of this negative relationship, but how persistent will this relationship prove to be? As women's education rapidly catches up with mens, there is reason to suspect that marriage trends are also in transition. This study examines the latest marriage-related behavior patterns among Japanese women from 2002 onward, focusing on the relationship between women's economic emancipation & marriage in a gender-traditional society. Using a newly available large panel survey on young adults in Japan, it will demonstrate that the effects of women's education have reversed, & are now in fact positive.

Fukuda, Tomoko (Graduate School of Humanities and Social Sciences, Chiba University, Yayoi-cho 1-33, Inage-ku, Chiba-shi, Chiba-ken, Japan. #263-8522 [tel: +81 43 248 4896; fax: +81 43 248 4886; e-mail: cyj05106@nifty.ne.jp]), **The Role of Pakistani Migrants' Associations in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ In Japan, only 1.7% of the population is foreign residents (2007). However, the rate of inter-marriage between foreigners & Japanese is 6.1% (2006). It is apparent that the ratio of multi-ethnic families is increasing in Japan. In the case of Muslim migrants, the population is very small. Nevertheless, they cannot be ignored, because their social activities have a great impact. In particular, Pakistani migrants are very active in religious or economic spheres. These activities are facilitated by their Japanese wives. Most Pakistani migrants came to Japan after the 1985 Plaza Accord. In the same period, a lot of people from continental Asia migrated to Japan irregularly to earn money. Pakistani newcomers without social resources helped each other, & relied on their ethnic networks. The Pakistani Association was established not by newcomers in the 1980s, but by an elite class, like university students, in 1960s. The Pakistani Association had various roles in each period. This presentation is based on sociological field-work research of Pakistani newcomer migrants in Japan since 1998. The goal of this paper is to make clear how Pakistani migrants organize their own associations, & what role these associations have in community formation or the process of integration with the host-society.

Funabashi, Harutoshi (Faculty of Social Sciences, Hosei University, Machida-shi, Tokyo, Japan 194-0298 [tel: +81 463 61 3895; fax: +81 463 61 3895; e-mail: hfunabas@mtj.biglobe.ne.jp]), **Three Theoretical Perspectives for Analyzing Barriers against the Environmental Reform,** *International Sociological Association, Gothenburg, Sweden,*

¶ Three interrelated theoretical perspectives are necessary for understanding the actual situation of environmental problems and orienting an adequate strategy of environmental reform. According to the theory of environmental control system, the macroscopic necessary social change toward a sustainable society can be grasped as a deepening intervention of the environmental control system in the economic system. We distinguish four different stages of this intervention. However, there are many obstacles & resistances against deepening intervention. The second theoretical framework necessary for analyzing such difficulties is a theory on mode of accumulation & circulation. As to Japanese energy policy, the economic control system has adhered to nuclear power as a main energy resource in the post fossil fuel age & resisted against the rapid increase of renewable energy. This policy has raised stagnation concerning anti-warming policy & hindered a necessary change concerning the mode of accumulation & circulation. The implication of such policy can be analyzed from the third theoretical perspective on the dual character of social systems, which attempts to grasp social control systems as a management system & a domination system. Using this theoretical perspective, we can point out clearly the merit & fault of two alternatives in actual energy policy.

Funabashi, Keiko (Shizuoka University, 836, Ohya, Suruga-ku, Shizuoka-shi,Shizuoka-ken,422-8529,Japan [tel: +81 54 238 4500; fax:; e-mail: jkfunab@ipc.shizuoka.ac.jp]), **A Comparative Study of Shared Care in Sweden, France, Japan, and the U.S.,** *International Sociological Association, Gothenburg, Sweden,*

¶ The purpose of my research is to identify some types of shared care among government, market & family as well as between genders by comparing four countries with different welfare regimes: the United States, Sweden, France, & Japan. Field work is the basic method of data collection & two levels of data are required in each country: information regarding family policies at a government level; interviews with families with one or more children under ten. From my qualitative analysis of the interviews with parents, I found four archetypes of combined parental roles. The universal early education & care system & flexible work arrangements with sufficiently paid egalitarian parental leave systems are the key points for equal sharing in a couple.

Funes, María J., Fernández de Mosteyrín, Laura, Monferrer, Jordi, Benedicto, Jorge, Morán, María Luz & Robles, José Manuel (UNED (Spain), C/ Obispo Trejo s/n [tel: 0034913987076; fax: 0034913987653; e-mail: mfunes@poli.uned.es]), **How to Become an Active Citizen in Conditions of Limited Opportunities: The Case of Youth at Risk,** *International Sociological Association, Gothenburg, Sweden,*

¶ Our contribution is based on the empirical evidence according to which social & political participation–understood as an expression of active citizenship–is easier & more foreseeable in some social groups rather than others. Starting from this premise, the paper analyzes the ways in which specific young people adopt & gain access to these citizen's rules. Namely, we will consider the case of young people that, due to their position in the social structure, endure clear conditions of disadvantage & therefore come across considerably high opportunity costs for political action. Accord-

ingly, we will limit our work to those young people facing conditions of resource scarcity, instability & risk of exclusion. We will focus on how, when, & why some among them manage to overcome their situations of disadvantage & carry out fully integrated civic behavior. The analysis will present the preliminary results of a research that has been carried out in Spain during the past three years, employing qualitative methodology (i.e. focus groups & biographical interviews).

Funke, Frederik & Reips, Ulf-Dietrich (University of Tübingen, Tübingen, Germany [tel: ; e-mail: email@frederikfunke.de]), **Detecting Small Effects with Visual Analogue Scales,** *International Sociological Association, Gothenburg, Sweden,*

¶ (1) Subject & Hypotheses: It is common practice to use ordinal rating scales to measure continuous variables. Depending on the number of response options & the distribution of true values this practice produces a considerable amount of formatting errors. The authors hypothesize that measurement with visual analogue scales (VASs, continuous graphical rating scales) reduces formatting errors, as there is a perfectly matching response option for every true value. (2) Methods & Analysis: In a Web experiment respondents (N = 240) were randomly assigned to a questionnaire where ratings were either made on 5-point scales, 7-point scales, 9-point scales, or VASs (created with the free Web service http://vasgenerator.net). For analysis the rating scale was used as an independent variable, the standard error of the mean for each of the 58 items was used as dependent variable. (3) Findings & Conclusions: We found errors to be significantly less frequent with VASs in comparison to every ordinal scale, but in comparison to 9-point scales, producing considerably less formatting errors. This leads to more statistical power and enables detecting small effect sizes that are not observable with ordinal rating scales. The authors suggest considering VASs to measure continuous variables.

Furseth, Inger (KIFO Centre for Church Research, PO Box 45, Vindern, 0353 Oslo, Norway [tel: +47 2333 4724; fax: +47 2333 4729; e-mail: inger.furseth@kifo.no]), **Power and Migrant Muslim Women,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the media, Muslim women in the West are often portrayed either as passive victims of power imposed from above or feminists who challenge power from below. On the one hand, the religion of Islam is a system of power that reinforces & legitimates specific power interests. Islam represents a source that exists outside the individual Muslim woman, as expressed in the Qur'an & the hadiths, & Muslim authoritative male leaders produce and reproduce interpretations of these texts in the mosques & Islamic centers. On the other hand, religiously active Muslim women demonstrate various forms of agency that are not easily placed within the submission/rebellion dichotomy. Muslim women living in the West constitute a heterogeneous group regarding ethnicity, social class, education, & position in the labor market. Some religiously active Muslim women will emphasize the importance of obedience & attempt to comply with religious teachings, whereas others are highly selective in their use & understanding of Islam. A few Muslim women also carve out new roles for themselves as they promote the role of religion in the public sphere. The study of migrant Muslim women in secular Western societies illuminates the different ways in which Islam is used to reinforce existing distributions of power & to change them in various ways and by various means.

Furxhiu, Nevila & Prifti, Amarilda (Department of Education/ University of Vlora, University "Ismail Qemali" of Vlora, Lagja: "Pavaresia" Vlore, Albania [tel: ++355 682231554; fax: ++355 33 224455; e-mail: kocollari@hotmail.com]), **Culture of Poverty and Challenges of Integration of Roma People in South of Albania.,** *International Sociological Association, Gothenburg, Sweden,*

¶ The study introduces the challenges that emerge from Roma tradition and strengthen points that encourage the social integration of Roma people living in Levan commune, the most ancient Roma community in Albania. There are two Roma groups living there each with different experiences & expectations: Meçkara, often connected with integration & Kallbuxh, traditionally ambulant but nowadays with fixed dwelling places. The fundamental point of the study is the dilemma, if Roma social segregation comes out as the production of the perception of an ethnicity, or if it is influenced by the culture of poverty. The findings indicate that the biggest challenge that Roma people report continuously to the integration process is begging, which brings for them enough income to challenge the other employment models. On the other side, the models of socially integrated groups bring an incitement to change the mentality, especially among the Roma's youth which are more attentive towards school and business.

Gabe, Jonathan, Williams, Simon & Martin, Paul (Centre for Criminology and Sociology, Royal Holloway, University of London, Royal Holloway, University of London, Egham Hill, Egham, London [tel: +44 1784 443144; e-mail: j.gabe@rhul.ac.uk]), **The Pharmaceuticalisation of Society: A Framework for Analysis,** *International Sociological Association, Gothenburg, Sweden,*

¶ Drawing on insights from both medical sociology & science and technology studies (STS), this paper provides a critical analysis of the nature & status of "pharmaceuticalisation" in terms of the following key dimensions & dynamics: (i) The redefinition/reconfiguration of health "problems" as having a pharmaceutical "solution"; (ii) changing forms of governance; (iii) mediation; (iv) the creation of new techno-social identities and the mobilisation of patient/consumer groups around drugs; (v) the use of drugs for non-medical purposes & the creation of new consumer markets, & finally: (vi) drug innovation & the colonisation of health futures. Pharmaceuticalisation, we argue, is therefore best viewed in terms of a number of heterogeneous socio-technical processes, which operate at multiple macro and micro levels that are often only partial or incomplete. The paper concludes by drawing out some broader conceptual issues this raises as to how we might best understand pharmaceuticalisation, based on our analysis, as a framework for future sociological work in this field.

Gabriel, Norman ([e-mail: norman.r.gabriel@plymouth.ac.uk]), **Civilizing 'Natural' Childhoods - Similarities and Differences,** *International Sociological Association, Gothenburg, Sweden,*

¶ Are adults better at being children than children are? Or are they expected to relinquish the pleasures of childhood? And what exactly is supposed to develop in development? (Phillips, 2006) This paper will examine the important concept of "nature" by tracing the different versions of childhood that have emerged, especially since Rousseau. The child as "natural", "pure", & "innocent" functioned as a basis for the late eighteenth & early nineteenth century Romantic vision of childhood. The early Romantics drew attention to the ideal of childhood as an area of interior self with a personal history. These writers believed that to grow up into adulthood & "civilized" society was a journey away from the source that was the most valuable aspects of ourselves–the child as vital, full of energy & passionate.

Gadea, Carlos A. (Unisinos, São Leoppoldo, Brazil [e-mail: cgadea@unisinos.br]), **Neo-Zapatista Movement from Chiapas: Identities and Strategies,** *International Sociological Association, Gothenburg, Sweden,*

¶ One of the collective phenomena that has allowed a theoretical debate about social movements in current context is neo-Zapatism from Chiapas. From a discussion of some outstanding events and occasional interpretations on its identities, strategies, demands and speeches, one tries to place the movement in a structural dynamic that has taken different faces. In the apparent conformation of an "identitarian resistance community," neo-Zapatism seems to move into a new scenario, in which "its possibility" takes shape from its structural flexibility and fluidity. So the neo-Zapatista movement seems to confirm that theoretical antinomies on social movements relating to the North American school, & the emphasis on the "strategy" of collective actions, as well as those referring to the European version, emphasizing the "identitarian" dimension, cannot be considered fully contradictory. Neo-Zapatism demonstrated that to each particularly developed "strategy" there is a corresponding specific identity construction & vice versa.

Gaertner, Stefan (Institut for Work and Technology, Gelsenkirchen, NRW, Germany [tel: 0049 209 1707164; e-mail: gaertner@iat.eu]), **The Role of Spatial Proximity for Stable Financial Markets: Should the Space Dimension Matter in Market Regulation?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The role of banks for regional development has been neglected in the last decades, but research on this started in the last years. However, the fact that regional banks, which check capital mobility & have long-term relationships with & obligations to their customers, could stabilise financial markets has been ignored until today. This becomes particularly topi-

cal in the current financial crisis. The suggested paper will focus firstly on theory & ask for the role of space & proximity in economy. Secondly it will present some empirical data in regard to the German situation of regional banks & answer the question if they contribute to stable financial markets. Thirdly it will discuss, if factors such as geographical & mental proximity & a sense of responsibility for staff & the region, in other words factors which are disregarded in financial market theory, are significant for the success of small banks. And fourthly it will suggest, how proximity & regional responsibility could be considered in the financial market regulation.

Gagliardi, Adele Stefania & Squillace, Francesco (ARES - Regional Health Agency, Bari, Italy, 70126 [tel: +39 0805403112; e-mail: as.gagliardi@gmail.com]), **Crime and Deviance in Public Administration: The Case of the Public Employee in Southern Italy,** *International Sociological Association, Gothenburg, Sweden,*

¶ This work is based on around 8 years of "observant participation" by the authors in 8 different offices of public health services in Southern Italy. Beginning with several considerations by the American economist Gary S. Becker on the economic approach to analysing criminal behaviour, we attempt to cast some light on behaviours that are as common & damaging as they are often ignored & tolerated. A qualitative approach requires focusing our attention on the figure of the public employee whose behaviour is analysed from an individual cost/benefit point of view, seen as particularly helpful in explaining human action in the work place. The benefits & costs of the work carried out, both of which are differentiated in material & non-material, provide the basis on which to respectively build individual utility & disutility functions. However, individual utility & disutility are conceived very broadly following Amartya Sen's argument that even altruism can be considered as an objective within the concept of individual utility. This study thus leads to the definition of several types of subjects with reference to the possibility of committing an illegal act–honest, opportunistic, corrupt–as well as allowing several generalisations regarding the relationship between the penalty & the probability of being discovered. Specifically, while starting from the small illegal acts committed by persons in their daily life, theory following the analysis of data made it possible to bring out features that are also applicable to much more dangerous crimes & crimes that are more costly for society, such as those of "white collar" workers.

Gago, Paulo Cortes (UFJF, Juiz de Fora, Brazil, Campus Universitário S/N, Juiz de Fora, Minas Gerais, Brazil, 36036-900 [tel: 0055--21-22242805; fax: 0055--21-22242805; e-mail: pcgago@uol.com.br]), **Fomulations and Neutrality in Family Mediation,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper reports a qualitative study on language, mediation, and social interaction combining tools of qualitative research with the framework of Conversation Analysis. Mediation is an important alternative dispute resolution (ADR) & a good example of sociology on the move. One of its most important tasks is its attempt to remove parties from their antagonistic positions & to get them to reach a settlement. This is done largely through language practices, e.g. paraphrasing, recontextualizing, summarizing, or formulating. On the other hand, the hallmark of a mediation is the neutrality concept, understood as equidistance, not taking sides. How does the mediator balance the tasks of being neutral and interpreting someone's talk? How does neutrality work in this setting? Research shows some specific formulation practices, e.g. problem formulation, understanding check formulation, proposal formulation, etc., where one cannot speak of neutrality in black and white terms. Therefore this concept must be understood under a new basis. In this sense we underscore Taylor's (1997) view of the need of an expanded view of neutrality for some types of mediation, as is the case in family mediation here. The data were generated in Rio de Janeiro, Brazil, & comprise 6 hours of talk from one legal family mediation case.

2010S00873

Gal-Ezer, Miri (Emek Yezrael College, Emek Yezrael Mobile Post 19300 [tel: home +972-9-7409042; e-mail: miri-gal@012.net.il]), **"Pictures in Our Heads": Christian Iconology & Moslem Symbolization in Al-Jazeera's Transnational News of "Operation Cast Lead" in Gaza,** *International Sociological Association, Gothenburg, Sweden,*

¶ This ongoing study focuses mainly on visual analysis of "Operation Cast Lead" Al-Jazeera transnational news from Gaza, its possible deciphering & significations, while attempting to draw some theoretical implications. Analyzing news discourse of the operation revealed that due to strict Israeli military censorship, only Al-Jazeera & a few more Arab satellite channels reported from inside Gaza, while the foreign & Israeli media were located on Israel's border side, gazing at Gaza a few kilometers away as "talking heads", mainly combining broadcasting reports aired by Al-Jazeera. Detecting the time span of "Operation Cast Lead" against Hamas in Gaza (28.12.2008 - 20.1.2009), revealed political and cultural-religious contexts, which could be theorized as liminal phases (Turner, 1969; Van Gennep, 1960 [1909]), at local and global levels. Bush administration's last days; Abu-Mazen's (Fattah Palestinian authority) official presidency in the occupied territories and similarly Israel's Olmert government - heading for elections. The time also coincided with three monotheistic religions' holy liminal phases: Jewish Hanukah; Christmas & New Year; Moslem Eid Al-Idha a Festival of Sacrifice & Muharram or Al-Hijra - Islamic New Year. These findings led to exposure of deep cultural symbols embedded within news texts: Christian Iconology & Moslem Symbolization. Al-Jazeera's visual images of bloody bodies paradoxically echoed Lippmann's (1922) classic "Pictures in our Heads" & Bourdieusian habitus (Bourdieu, 1984; 1996). Based on Agamben (1998), Bauman (2000), Nossek (2009), a common news "Spectatorship of Suffering" is possibly emerging, framed as The "Aestheticization of suffering on Television" (Chouliaraki, 2006; 2006); which could be deciphered and legitimized through Christian Iconology & Moslem Symbolization by divergent audiences, leading mainly to convergent significations.

Gale, Peter M. (Division of Arts, Education, and Social Sciences; David Unaipon College of Indigenous Education and Research, University of South Australia, City West Campus, GPO Box 2471, Adelaide, South Australia 5001, Australia. [tel: +61 8 8302 0564; fax: +61 8 8302 7034; e-mail: peter.gale@unisa.edu.au]), **Students across Borders: Images and Imaginings of Nationalism and Transnationalism,** *International Sociological Association, Gothenburg, Sweden,*

¶ Media images of violence against Indian students studying in Melbourne in 2009 sparked yet another national debate on racism in Australia. Much of the reporting represented such images as further examples of Australian racism & fears across borders, while alongside such representations there were also debates on the significance of the growing number of students across borders, reflective of an important emerging transnational education system, and transnationalism. This paper examines some of the tensions between media representations of exclusive nationalism on the one hand, and alternative transnational imaginings on the other. The paper explores the visibility of students across borders as an expression of transnationalism, as an alternative way of conceptualizing citizenship & nationalism, & the ways in which students across borders can contribute towards addressing issues of security, immigration & multiculturalism, amidst the proliferation of media images of "racial" violence within nation states & continued representations of the threat of terrorism across borders.

2010S00875

Galent, Marcin (Jagiellonian University, Institut of European Studies, Kraków, ul. Jodlowa 13, 30-252 [tel: +48693161656; e-mail: mgalent@gmail.com]), **Polish Migrants' Social Capital and Its Role in Influencing Trust in Institutions,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this paper is to focus on the interdependence between the quality & kind of social capital Polish contemporary migrants have acquired from their sending societies & the level of trust they show towards institutions while living abroad. Most Polish migrants come from a social background where the level & quality of social capital is either very low, or has mainly a bonding character. It was at the beginning of the 1980s, when a prominent sociologist Stefan Nowak used a concept of 'sociological vacuum' to describe this phenomenon. The situation in this respect has not changed much & one may even say that it has deteriorated in the recent years. Polish migrants are obviously carrying most of these social predispositions to new countries. One may assume that without a deep understanding of these conditions, any explanation of the issue of trust among Polish migrants towards institutions will be incomplete. The 'habitus' of the migrants determines their ability to cooperate with official state/and non-state agents. The migrants treat them either indifferently or with suspicion, even if these institutions are supposed to support or help them. This is quite visible when one takes a closer look at the modes of collective actions led by informal leaders of Polish communities. They rarely seek contacts with different kinds of local, regional or national institutions & instead they try to mobilize social activities independently,

inside the diaspora circles. The character of their actions is rather inward-looking and based mostly on traditional institutions which in the Polish case are usually either the family or the "Polish" Catholic Church. This is mainly because many migration patterns have had a chain-like character which have made many Polish migrants dependant on close familial or friendship ties. These close interdependences have been mainly determined by the fact that most Polish migrants had been for a long time living & working in host countries illegally. They had lived for a long time on the margins of the host societies, & their social networks have played an extremely important role in finding accommodation & employment. The Catholic Church, in turn, has been seen for decades as a part of Polishness & as an ally against an alien state. On the other hand, the migrants discover a new social reality, where the solidity of the social order creates more predictability & by this token more trust in it. They also learn that there are other forms of interactions & collaborations between ordinary citizens and official institutional agents like the police, local authorities, NGOs etc. then what they knew in their own country. This culture of trust in the host society is quite visible for them, & creates an important point of reference. Western European societies are perceived by Polish migrants as more advanced and most of them aspire to develop similar patterns of social relations. Moreover, they realize very often that a higher level of trust can improve the quality of their everyday lives. One may point out many interesting examples of this phenomenon. The paper is based on a research project conducted in Leuven (Belgium) in 2007 by Institute of European Studies of the Jagiellonian University & Modernity & Society 1800&2000 Unit at the University of Leuven. The research consisted of 40 semi-structured in-depth interviews with Polish migrants of all ages & social classes, dozens of informal conversations & one month participant observation.

Gallo-Cruz, Selina (Emory University, Atlanta, GA 30033, USA [tel: 404-633-7695; e-mail: scruzch@emory.edu]), **Prescribing Global Nonviolence: How Nonviolence INGOs Identify Communities for Intervention,** *International Sociological Association, Gothenburg, Sweden,*

¶ Today over 300 hundred international nongovernmental organizations systematically diffuse tactics & resources for nonviolence throughout the world. In my paper I discuss in-depth qualitative analysis of these INGOs' conceptualization of risk & conferral of global citizenship among victims of violence. I first draw from an analysis of the nonviolence INGO population demographics utilizing data catalogued in the Union of International Associations Annual Yearbook. I explain that although these INGOs carry a form of nonviolence purportedly global in development and universal in application, they overwhelmingly operate in western countries & draw from an organizational support base that is predominantly western. Yet, their aim is to bring peaceful conflict resolution to "world citizens" at risk of violence, torture, and assassination in peripheral regions throughout Asia, Latin America, and Africa. With numerous cases for intervention, INGOs must choose the populations on whose behalf they will intervene. In interviews with nonviolence INGO organizers & through an examination of INGO archives & reports, I identify & discuss factors shaping the conceptualization of risk & world citizenship in the global nonviolence movement.

Gallon, Luciano (Universidad Pontificia Bolivariana, Medellin, Colombia [tel: ; e-mail: l.gallon@ieee.org]), **Poverty and Artificial Sustainability, A Research on the Structure and Dynamics of South America,** *International Sociological Association, Gothenburg, Sweden,*

¶ In 1950, 113 million people lived in South America. In 2008, 385 million, more than three times as many. Half of them live in poverty. In 2050, about 516 million people will be living there. Population dynamics show, on a global average, that for each birth in a rich family there are 38 in poor families. Then it's necessary to research how new social, ecological & economic systems models are possible & behave & to analyze & synthesize their possible sustainability from two perspectives: natural equilibrium and artificial equilibrium. This paper shows the process of building, with the help of first & second order cybernetics, a theoretical & practical framework for modeling South America using Systems Dynamics. It explores questions such as: Is it possible to reduce poverty following a sustainable path? What is the kind of equilibrium behind the sustainability ideas? In what sense is it possible to talk of artificial sustainability? Which relationship can be found between the scales of space & time of the human perspective & of the sustainability & the dynamics of the new social equilibriums? How does such exploration enrich the understanding of social systems & human behavior? Which contributions can be offered from such analysis & synthesis to contribute to sustainability? How can the structure & dynamics of South America helps to answer those questions? The obtained results help to discover possible inconsistencies & counterintuitive behaviors in traditional conceptions of poverty, development and sustainability.

Gamba, Fiorenza (DISC, Sapienza University, Rome, Rome, Italy,00198 [tel: 00 39 06 85357403/00 39 329 4754107; e-mail: fiorenza.gamba@uniroma1.it]), **Imago Mundi. A Propos des Récits Contemporains** (Imago Mundi. On Present-Day Stories), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ A l'âge moyenne Pierre d'Ailly dessinait des plans presque imaginaires du monde utilisés après par Colombo comme des traces dans ses voyages de découverte. Loin d'être la simple transcription d'un calcul, ces imago mundi étaient aussi bien les descriptions du monde et son imaginaire: un récit entre réalité et imagination. Aujourdhui cette narration visuelle émerge à nouveau au moyen des nouvelles technologies et des nouvelles socialités quelles mêmes favorisent. De facebook à flickr, des système GPS aux vidéophones, le récit qui relie les communautés est tissu par les imago mundi produites et partagés par les usagers. Quil sagit des événements publiques, ou des instantanées personnelles, des commentaires politiques, ou des simples infos, l'image contemporaine, tout à la fois, raconte et imagine le monde, le véhicule et le met en commun dans un récit postmoderne, qui, composé par des fragments, prends la forme d'une mosaïque. A partir de cette Pictorial turn (Mitchell, 1994) un sociologie qui se veuille "en mouvement" peut envisager le défi de la société contemporaine, en s'inscrivant, néanmoins, dans la tradition sociologique la plus pure, laquelle dont Kracauer enquêtait les cas exemplaires déjà dans les années vingt du XX siècle.

Gammone, Mariateresa (Dipartmento di Storia e Metodologie Comparate, Laquila, Italy, 67100 [tel: 0039 3384658305; fax: 0039 0862 319975; e-mail: mgamma@tiscali.it]), **A Sociological Intervention in East and West,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper is based on empirical research given in a project sponsored by the European Union (EU & Turkey: Connecting Identities, Bridging Cultures), conducted by me, Francesco Sidoti, & many scholars in Germany, Italy, Turkey. The hypothesis of the paper is that our modernity is not a liquid modernity (Bauman), but a modernity afflicted by processes of de-modernization (Touraine) & by anti-movements (Wieviorka). The research is based on statistical data, analysis of the World Values Index, sociological intervention made in Turkey and Europe. The research gave an unforeseen insight about the current educational system, both in Europe & in Turkey. Few ordinary people & ordinary students are able to understand the basics about the European Union identity & citizenship. The conclusions are that promoting liberal & democratic values is particularly important in the whole educational system, not only in the schools. There was a European dream; Europe is now a land of opportunity, immigration, social strains, no less than the United States. Constitutional patriotism is the key-word for a good educational intervention & a good popular mobilization on educational issues.

Gangas, Spiros (Deree College (the American College of Greece), 6 Gravias Street, Athens 153 42, Greece [tel: 0030-210-6009800-9; e-mail: sgangas@acg.edu]), **Neo-Modern Cinema and Sociological Theory: Sociologizing Visual Style,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper addresses the impact of cinematic visual style in generating sociological meaning & in serving as a valuable adjunct for illustrating concepts in sociological theory. Inspired by film theory with a socio-philosophical scope (Sergei Eisenstein, Siegfried Kracauer, Gilles Deleuze, Yvette Biró), this paper argues that neo-modern cinema (as developed by film scholar John Orr) renders the filmic image an open but sociologically determined register of meaning. Moreover, neo-modern cinema allows us to reconstruct the social in film style. Neo-modern cinema is, as this paper defends, an apt choice, since among its exponents (e.g. Antonioni, Fassbinder, Rohmer & Bergman among many others) visual style reaches its apogee in order to convey irony, criticism, disillusionment & alienation in modernity. However, it achieves these goals without eschewing claims to complex semantic unities. Modernist aesthetics operate in the case of neo-modern cinema, within tight sociological & philo-

sophical narratives through an economical style, yet highly evocative in offering ample semantic nuances on inter-subjective recognition. Italian modernism, Japanese New Wave, New German Cinema, Scandinavian Cinema, Soviet and Eastern European Cinema offer illuminating syntaxes of synecdochic & metonymic imagery that generates impressive visual service to sociologically relevant filmic narratives. Thus, a double goal is realized: Film image is appreciated as a normatively laden aesthetic object, and, additionally, its aesthetic codes prove semantically rich as they visualize concepts generated by rigorous social & sociological theory (e.g. Hegel, Marx, Weber, Durkheim, Simmel, Goffman, Bourdieu).

2010S00881

Ganguly-Scrase, Ruchira (Sociology program, University of Wollongong, Wollongong, NSW, 2522, Australia [e-mail: rgscrase@uow.edu.au]), **Marginal Workers in the Era of Neoliberal Development: A Case Study of Women in the Indian Garment Industry,** *International Sociological Association, Gothenburg, Sweden,*

¶ Until recently India pursued a dualist path in public policies in relation to economic growth & development. The dualistic development agenda comprised large-scale manufacturing and agricultural modernization together with the promotion of small-scale enterprises. The strategy following independence was characterized by inward-looking, state-regulated policies that were largely protectionist & focused on import-substituting industrialization. Reversal of this approach in 1991 marked the dramatic re-orientation of policies, which aimed to foster increased economic development by shifting resources in favor of the market. The paper examines the implications of the neoliberal reforms for workers in the Indian garment industry in the era of the post Multi Fibre Arrangement. I examine the experiences of women workers & argue that the garment industry epitomizes the contradictory outcomes of post-Independence development strategies. The garment industry in the past thrived due to traditional labor skill & expertise, where women's home-based work comprised largely a part of the domestic economy. The industry on the whole produced fabrics & readymade garments for local consumption and production targets were set to achieve self-sufficiency for local needs. Based on recent fieldwork in West Bengal, this paper will highlight the emerging problems workers face as the Indian garment industry increasingly becomes tied to the global market. Focusing on the uneven impact of liberalization I will show that while garment "exporter-manufacturers" have largely accrued the benefits of the demise of the quota regime there is growing informalisation of labor & a rise in concealed inter-border trade.

Gantzias, George (Cultural Technology and Communication, University of the Aegean [tel: 00306945447166; e-mail: ggantzias@yahoo.gr]), **The Info-Communication Globalization and Cultural Management: Global Control and Local Resistance in the Info-Communication Customized Web Sites (ICCWS),** *International Sociological Association, Gothenburg, Sweden,*

¶ Cultural management, digital content, & digital technology have been important factors for developing global and local cultural customized web sites. In the info-communication globalization cultural management, digital technologies, and digital content increase the probability for stimulating world-wide growth incomes. Cultural management & digital content can be seen as two of the most powerful forces shaping human behavior in the global network society. The Info-Communication Customized Web Sites ICCWS) is a global scientific methodology that provides guidelines for developing & managing culturally customized web sites in the info-communication globalization. This paper examines & analyses how the cultural industries are likely to use the ICCWS model to gain knowledge of specific attributes in a web site in order to attract a particular target group & to manage their cultural content. It also analyses the theories of content management, regulation & the public interest in developing & managing digital content in the global network society. Finally, it suggests guidelines for developing the cultural customized web sites in the info-communication globalization.

Ganuza, Ernesto & Francés, Francisco (Instituto Estudios Aociales Avanzados (IESA/CSIC), Campo Santo de los Mártires, 7, 14004 Córdoba. Spain [tel: 0034.957.760.526; fax: 0034.957. 760.153; e-mail: eganuza@iesa.csic.es]), **How Participatory Democracy Works,** *International Sociological Association, Gothenburg, Sweden,*

¶ Participation theory has undergone a communicative shift which has, during recent years, favoured the organisation of new participatory experiments based on classic principles of deliberation theory, such as the principle of inclusion & the equality of individuals with regard to the act of deliberating. These experiments go beyond traditional protest: they include a proactive element with the aim of defining a kind of public politics, which places them alongside models of participatory democracy. The development of participatory budgets over the last decade provides an excellent analytical framework for finding out how the experiments implement the principle of inclusion & to what extent they allow participants to effectively take advantage of the opportunities for deliberation. The present work sets out the characteristics of these new instruments of participatory democracy in order to find out how they work in Spain. The conclusions tell us that the inequalities in participation are significant & that the mobilisation of individuals or the way in which individuals are invited to take part is important. Nevertheless, in contradiction to what the critical theory asserts about the intellectual demands of deliberative procedures, experiments in participatory democracy enable most participants to make effective use of their opportunities for deliberation.

Garb, Maja (Faculty of Social Sciences, University of Ljubljana, Ljubljana, Slovenia [tel: +386 (0)1 5805 329; e-mail: maja.garb@fdv.uni-lj.si]), **The Image of the Military in the Movies,** *International Sociological Association, Gothenburg, Sweden,*

¶ Do the movies influence the public opinion & public images? This is one of the important questions especially for military recruiters. Also, the image of the military in its parent society could, to a small degree, depend on the film image of the military. Some surveys carried out in Slovenia show that the majority of the Slovenian public does not get the information on the national army from the movies (normal due to the fact that there are only few films on the Slovenian Army, mostly journalistic documentaries). On the other hand, one third of Slovenian youth gets information on military jobs from the movies. But, what kind of image of the military, the soldiers & their job do the movies create? Tone Stimpfel, a graduate of Defence Studies at Faculty of Social Sciences at Ljubljana University, has made an analysis of 40 military & war movies in order to answer that question. He had analysed several elements of the military image in the movies,

namely the presentations of military techniques; women in the military; images of the enemy; ethnical & race diversities; military leadership; cohesion in the units; consequences of stress; veterans; violence; symbols and rituals; training & discipline; & a presentation of a sense of honor. The key finding of the analysis is that the movies mostly do not show a "boring reality", but the extremes, which are interesting for the audience.

García Contreras, Ilyhada Odisea (University of Rome "La Sapienza", Faculty of Political Science. Ph. D. Candidate in Human Rights and International Order, Piazzale Aldo Moro 5, 00185 Rome, Italy [tel: 393461674020; e-mail: legge81@yahoo.com.mx]), **La ProtecciÓN de los Derechos Humanos de los Pueblos IndíGenas en MéXico: Una CuestiÓN Socio- JuríDica** (The Protection of the Human Rights of Indigenous Peoples in Mexico: A Socio-Juridical Question), *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ A pesar de ser reconocidos como sujetos de derecho a nivel internacional, los pueblos indígenas siguen sufriendo la violación sistemática a sus derechos humanos. Prueba de ello es la continua explotación y despojo en que ven sometidas sus tierras con proyectos de "privatización y desarrollo" por parte de los gobiernos de sus países, así como la contaminación ambiental de sus ríos y aguas por parte de empresas nacionales o transnacionales que poco a poco está acabando con sus recursos naturales. México, después de firmar y ratificar el Convenio No. 169 de Pueblos Indígenas y Tribales de la Organización Internacional del Trabajo (OIT), ha implementado con el paso del tiempo una serie de reformas a la Constitución Federal, incluyendo la definición y derechos de las poblaciones indígenas del país, reformas que eran por demás necesarias, en un país donde existen alrededor de 13 millones de indígenas. Es nuestro deseo enfocar pues el presente trabajo de investigación, en el análisis socio-jurídico de los movimientos sociales de las comunidades indígenas de México en los últimos 17 años, que han traido como resultado, una serie modificaciones en el sistema jurídico mexicano en cuanto a la inclusión de derechos colectivos de estas comunidades. Creemos que es aquí donde el derecho y la sociología entrelazan sus caminos, ya que es inevitable que el derecho siga a la realidad social que impera en un determinado territorio, pues el derecho evoluciona, como evoluciona la sociedad. En este último caso, la realidad social que impera en el interior de las comunidades indígenas exige que la normativa mexicana tome rumbo hacia una verdadera protección de los derechos humanos de los Pueblos Indígenas, contenidos en los instrumentos internacionales ratificados por México.

García de Fanelli, Ana M. (Center for the Study of State and Society, Sánchez de Bustamante 27 Buenos Aires (1173) Argentina [tel: 541148651712; fax: 541148651712; e-mail: anafan@cedes.org]), **Linking the Results of Accrediting Procedures and Funding Mechanisms: The Case of Promei in Argentina,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the design & implementation of the Program for the Improvement of Teaching Engineering Programs (PROMEI), an Argentine non-competitive public funding mechanism introduced by the government in 2005. Its principal objective is to address the main weaknesses detected during the mandatory external assessment of professional undergraduate programs coordinated by the National Committee for University Assessment & Accrediting (CONEAU). The paper shows that this funding mechanism, whose institutional arrangements follow similar patterns to the French or Catalonian contract-programs, could be effective at promoting social change in public universities. The features of this program that facilitate the change are three. First, identifying the problem and formulating this policy based on a bottom-up strategy. It began with the Engineering School's problems & the strategies developed to deal with them. Findings show that the causal theory underlying the reform has been suitable. Second, the degree of commitment to the program's objectives is high among the multiple-level actors that participate in its implementation (Ministry of Education, CONEAU, Professional Association of Engineers, & relevant higher education institutions). Finally, the design & implementation of this public policy is consistent with the bottom-heavy organizational characteristics of universities.

Garcia, Ernest (University of Valencia, Valencia, Spain [tel: 34 96 3828463; fax: 34 96 3828450; e-mail: ernest.garcia@uv.es]), **Society, Entropy, and Evolution in an Era of De-Growth,** *International Sociological Association, Gothenburg, Sweden,*

¶ This papers returns, for the umpteenth time, to an old & endlessly debated issue: the relationship between sociology & evolution, or more specifically, between social change & the theory of evolution. It returns to this issue in a specific context: that of the current debate on natural limits to growth & the perspective of a way-down era, a de-growth one. First of all, it comments on some basic differences & similarities between evolution & history, and then introduces on this basis the notion of social evolutionism. Next it maintains that social evolutionism is based on a fallacy, consisting of the assertion that the conditions which require taking into account the evolution (the existence of strong environmental constraints) apply to all technological, institutional & cultural changes, whatever the conditions in which they occur. Following it, it is assumed that humanity is entering a phase of economic & demographic de-growth, as a consequence of having unnecessarily accelerated the entropic degradation of the environment, exceeding thus the limits to growth: a phase, therefore, strongly conditioned by environmental constraints, where evolution could again be relevant. Different visions of the de-growth phase are then summarized. And it is argued that the way to define evolution as well as human nature is crucial to assess these visions. In conclusion, the paper states that an evolutionary perspective supports that there are some potentials for conscious social change, but it does not justify the belief in a particular only line of history (this belief is itself social evolutionism, but it has nothing to do with biological evolution). This conclusion does not satisfy the desire of knowing the future; nevertheless it may be the only one possible. The future is not written. Neither in history nor in evolution; not even in the mixture of history & evolution that conforms us as inhabitants of the Earth.

Garcia, Leticia (Université Paris Descartes, Paris, France, 75006 [tel: 33 0615289849; e-mail: leticiacortellazzi@yahoo.com.br]), **Changes in the Meaning of Schooling in Three Generations of Women in Brazil (1930 a 2000),** *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ The meanings of schooling change depending on the period of time analyzed as well as the student population studied: boys or girls; lower, middle or upper class. Through an empirical research this paper aims to understand the value attached to female schooling in three generations. In the State of Santa Catarina, Brazil, the secondary education (or High School) for girls started in 1935. In this period, the meaning of schooling was mainly decorative for the clientele–women from the local elite. They attended mostly to acquire bourgeois "savoir-faire" & to prepare themselves to make a "good marriage". At that time, in Florianópolis, only the first cycle of the secondary education was offered, so that it was fairly difficult for women to pursue studies at the University. Therefore, for the children of these women, born between the 1950's & the 1960's, to attend high school & go to the university represented a form of achievement, & even emancipation. However, in the 21st century with the "democratic school" the meanings of schooling have changed considerably. Nowadays, the differences between the sexes are not as prevalent as they were. However, attending high school or to the university is not a guarantee to have a good job. Using the tools of gender studies & researches in the socialization of elites, this paper explores the life-stories of these women. Through interviews it seeks to determine how & why the meaning of schooling has change over the years.

Garcia, Marisol (Universitat de Barcelona, Avenida Diagonal, 690 [tel: +34 93 4039848; e-mail: marisolgarcia@ub.edu]), **Social and Territorial Effects of the Global Crisis on the Contemporary Spanish Urban Growth Model,** *International Sociological Association, Gothenburg, Sweden,*

¶ The present global crisis has manifested itself in Spain with special force, but what is happening today has its roots in the recent economic & urban growth model. Spain is once again registering the highest unemployment rate in Europe. Are there territorial consequences? What are the forces at work? This article aims at answering some of these questions by first looking at the recent dynamics of the construction industry–with a brief incursion into the tourism industry–& their territorial economic importance. It points to some of the differences within Spain & singles out the social groups most vulnerable to the breakdown of the growth model. Secondly, it offers a brief look into the government's policies to tackle the crisis & on the pending reforms, such as the labour market reform as part of a new economic model.

Unam, Circuito Interior s/n Entre Facultad de Química y de Ingeniería, Ciudad Universitaria México D.F. [tel: +52 55 56220682; e-mail: garlanster@gmail.com]), **The Changing Role of Women in Language Shift in Mexico,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper our purpose is to show the phenomenon of the changing behavior of women in minority language communities where habitual communication is slowly shifting from the use of the minority language to that of a majority language. As Labov (1979: 243) and others have pointed out, women appear to be more sensitive to certain pressures brought upon by changing prestige patterns than men are. In our data on language shift in various Mexican indigenous communities we have found the same phenomenon, having found that women are more likely to use the national language Spanish than the local indigenous language. However, this seems to be only partly true. In our research we have found that in indigenous communities where a great part of the speakers do not know any Spanish, it is more likely that men are bilingual while women remain mostly monolingual in the minority language & are thus more conservative. At the same time there are communities where this pattern does not occur. So we would like to analyse if this phenomenon could tell us something about the progress of language shift in Mexico.

García-Ojeda, Mauricio O. & Tena-Sánchez, Jordi (Departament of Sociology and Centro de Investigaciones Sociológicas (Universidad de la Frontera, Chile)/ Group of Analytical Sociology and Institutional Design (Universitat Autònoma de Barcelona), Universidad de La Frontera: La Frontera (Chile)/ Universitat Autònoma de Barcelona: Barcelona [tel: +5645230550; e-mail: garciam@ufro.cl]), **Trust as a Rational Expectation. Definition, Building Mechanisms and Implications for Institutional Design,** *International Sociological Association, Gothenburg, Sweden,*

¶ When specialized literature links trust to social capital, it argues that trust contributes to social goods related to economic growth, poverty reduction or democracy improvement. However, there is no agreement on a precise & operational definition of trust, and there is little work (both empirical & theoretical) that tries to offer a systematic account of trust building processes. In this paper, trust is defined as a belief, specifically as an expectation. This expectation is rational when it is built on the information owned by the trustor. We argue that information refers to trustee's trustworthiness, and, after that, we offer an overview of trust building mechanisms (which are related to ways of acquiring this information). These mechanisms are different in the case of interpersonal trust (trust in acquaintances), and generalized trust (trust in strangers). In both cases, we explore the relationship between trust & social capital. Moreover, we make proposals of institutional designs to create, maintain and restore trust.

Gardiner, Jean & Robinson, Andrew (University of Leeds, Leeds, LS2 9JT, UK [tel: +44(0)1133433218; e-mail: j.gardiner@leeds.ac.uk]), **Ethnicity and gender in later life transitions: Evidence from the English Longitudinal Study of Ageing (ELSA),** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction: The paper examines gender inequalities in private pension wealth in England, using data from the English Longitudinal Study of Ageing (ELSA). Gender inequality in pension coverage in the UK is well established, as is the much greater risk of poverty in retirement for women of working age & beyond. However, most research in this area in the UK has used survey data for working age cohorts only, & there has been relatively little research on inequalities in actual pension wealth. Methods: The paper investigates gender inequalities in private pension wealth for individuals aged 50-89 in England, by means of a cross-sectional analysis of ELSA data. We utilize a range of univariate and multivariate techniques to investigate the influence of gender, occupation & marriage on private pension wealth. The first part explores the factors influencing private pension coverage, including both endogenous & exogenous factors. The second part explores how gender interacts with occupation & marital status in influencing private pension wealth. Results & Conclusions This research throws new light on the gender pension gap in England and on the relative effects & interactions of gender, class and marriage in influencing patterns of inequality in later life.

Garg, Sushma (Political Science, R.G.P.G College, Meerut, Uttar Pradesh, India 250002 [tel: +91 9871361375; e-mail: drsushmagarg2110@yahoo.co.in]), **Impact of Growing Violence on Children–Study of Electronic Media,** *International Sociological Association, Gothenburg, Sweden,*

¶ In today's world, the Generation X shows more signs of vulnerability towards aggression, not just in their attitudes but in the physical side of their lives also. One is forced to think of the causes of such behaviour in today's child. What is the factor that we relate to for such aggression? Some experts suggest the major cause for this aggressive behaviour is the exposure to media violence, be it a news flash, or a television programme, or a cartoon show. There are studies that show that one of the causes of such behaviour is the incidence of playing violent video games in childhood. There are other studies revealing the fact that children who are exposed to violent attitudes at home are also affected so they act aggressively in their adulthood, if not in their childhood. The study shows that family attitudes & social class are stronger determinates of attitudes towards aggression than is the amount of the exposure to television, which is nevertheless a significant predictor. There are campaigns to fight against this violence. Steps are being taken by the media: as the caption revealing not to try stunts or certain actions that are precisely being performed by experts, that certain programmes are to be watched in adult's supervision or prohibiting children to watch certain kind of programmes or films. But it is the moral responsibility of parents and school management to ensure the accessibility to such violent programmes & avoid the aftermath resulting in aggressive behaviour & violent actions & reactions in real life by children in their growing years.

Garner, Mark WJ (University of Aberdeen, King's College, Aberdeen AB24 3UB, United Kingdom [tel: 01224 272631; e-mail: m.garner@abdn.ac.uk]), **Teaching Methodology through Engagement with Research,** *International Sociological Association, Gothenburg, Sweden,*

¶ The curriculum for a research methodology course requires much more to be omitted than can be included. At postgraduate level, a full year's course is barely enough to present students with a basic outline of the various stages of designing & conducting a project and even the basic methods of data-gathering & analysis. There is a natural temptation to try to cover more & more in the available time, but any experienced teacher knows that this only results in less & less real learning. A number of writers on methods pedagogy propose an alternative approach: instead of teaching about the ever-expanding field of methodology, to introduce the students to the practical & intellectual challenges of doing research. It is arguable, in fact, that this is how most successful researchers have learned their trade. As Earley (2009, p. 103) writes, "a researcher does not 'do' research by simply following a series of steps. Rather, a researcher engages with these processes researchers both "think about" & "do" research". The RM pedagogy literature does not as yet, however, offer many case-studies of how this approach can work in practice. This paper is a small contribution to filling that gap. The Master's programme in Applied Linguistics at the University of Aberdeen requires students to undertake a two-semester course in research methodology. The first semester consists of an introductory survey of project design, data-gathering techniques, analyses, and research ethics. In the second semester, students work in supervision groups with a lecturer, developing their project design in full. Over the summer they conduct their research & write their dissertations. In 2009 nine non-native speaking students, working with the author & a colleague, decided to conduct a group project on teaching English intonation to foreign learners. The study involved the students as both subjects & researchers. They designed & organised two, five-hour intensive intonation courses, to be taught by Linguistics lecturers, in which the students were themselves the learners. Various forms of pre-, mid-, and post-testing enabled them to measure the extent of their improvement. The students kept journals in which they recorded their reactions to the processes of research design & practice, as well as to the content & the teaching techniques of the intonation courses. This paper discusses the advantages and shortcomings of this approach to teaching research methodology, using as prime sources the students' journals & final dissertations. The general conclusion is that the approach can be highly successful as a means of developing competent & reflective researchers; it does, however, demand a considerable commitment of time & effort by both staff & students. Reference Earley, Mark (2009) "Developing reflective researchers", in Garner, M., Wagner, C., & Kawulich, B. (Eds.) Teaching Research Methods in the Social Sciences, Aldershot: Ashgate.

Gasior, Katrin & Zaidi, Asghar (European Centre for Social Welfare Policy and Research, Vienna, Austria [tel: 0043 319 45 05 - 18; e-mail: gasior@euro.centre.org]), **Well-Being of Older Persons with Disability in Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper studies the well-being of disabled older persons across European countries, by analysing various social dimensions (e.g. respect, social participation, satisfaction with living standards). The particular focus on "social" well-being for disabled older persons is justified in its own right, but also useful in supplementing measures of economic well-being for this group. Our premise is that disability as well as old age are social constructs leading to poverty & social exclusion, largely due to biased public attitudes, the expected social roles & inadequate social services. The European Social Survey has been used for the empirical part of the paper. Multivariate analyses are performed identifying various factors underlying social well-being, & the prime focus has been to show how disability alone affects social well-being of older persons. Results show that disability has a strong negative impact on the social well-being of older people, and this is true after controlling for other relevant factors such as education, gender, marital status & income class. The paper provides insights into social welfare of older disabled persons going beyond the economic welfare concepts. Further research needs to be done in order to address social & economic challenges for social & disability policy in Europe.

Gasouka, Maria & Kladi-Kokkinou, Maria (University of Aegean, Rhodes, Greece, Leoforos Dimokratias 1 [tel: 210 2615331; e-mail: kokkinoukladi@yahoo.gr]), **From Folklore to Sociology: The Evolution of Female Folk Networks into a New Type of Partnership from a Gender Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ For a long, long period there were several types of female traditional networks aimed to support women in their daily lives. Today, because of the phenomenon of the social exclusion of women–& not only–the interest in this whole procedure of tackling female poverty and social exclusion focuses on the establishment of axis, such as partnership & the involvement of aim groups in their implementation, as well as the variety of ways to approach them. Partnerships between the organizations of the public & private sector are proving to be a determining factor for the success of the enterprise. The latter takes on new qualitative characteristics, to the degree that the participation of the aim group is secured & its word in relation to its needs and expectations is articulated. As already mentioned, the networking of human & technical resources with a non-hierarchical structure and philosophical concept, open to the gender dimension of the issues for which it was formed, is a new qualitative fact in the collective action, a New Type Collectiveness (NTC). The question is if the strategies adopted by the NTC, the way they are operated, the results they are seeking & in general the climate they are forming, make them attractive to those women who are experiencing social exclusion, the disappointments & the disbelief accompanying it, in order to accept not only to become users of the services provided by such a network, but also to become relatively active, constituting active members & participating in the forming & decision-making concerning them. So, the problem of the role, the content, the aim & the services provided by a NTC is raised, & indeed collectiveness aimed at supporting the socially excluded women, cultivating the awareness of the local & broader societies, & developing cooperation & partnerships with organizations of a public or private nature.

Gaspar, Sofia (CIES-ISCTE, IUL, Ed. ISCTE - Av. das Forças Armadas, 1649-026 Lisbon, Portugal [tel: +351 217 941 404; fax: +351 217 940 074; e-mail: sofia.gaspar@iscte.pt]), **Family Educational Strategies among European Mixed Couples,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this paper is to cast light on children's upbringing and education in families of mixed EU nationality living in Lisbon. After a brief introduction, I will dedicate the first two parts to the theoretical contextualization of European mixed couples as a new family arrangement born of EU social integration; as to entail, thereafter, an attentive reflection on issues related to transnational children's upbringing. Qualitative evidence from 24 in-depth interviews with three different groups of couples (Portuguese women married to European men; Portuguese men married to European women; married non-Portuguese European couples of different nationalities) will be then presented & discussed. According to the original findings, when certain variables–children's language capabilities (one, two or more languages), type of school (national/international, state/private), & social networks (national/mixed/international)–are taken into account, three types of educational strategies emerge among EU mixed couples: a family assimilation strategy, a bi-national family strategy & a peripatetic family strategy. In the final part, a critical appreciation will be carried out of the role that these family strategies have in the theorizing & research on migration and minority child-raising, not only within an EU socio-political context but also in a wider global environment involving cultural heterogeneity.

Gasteyer, Stephen P., Johansen, Rachel & Benveniste, Elise (Department of Sociology, Michigan State University, 316 Berkey Hall, East Lansing, Michigan, USA 48824 [tel: 00-517-355-3505; fax: 00-517-432-2856; e-mail: gasteyer@msu.edu]), **Social Capital, Service Delivery, and Claiming Spaces: Networks, Neighborhoods, and Community Revitalization,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper attempts to combine the "networked urbanism" literature (Blokland-Potters, Blokland & Savage 2008) with a growing literature on "shrinking cities." Social capital & linkages to municipal government & other resource networks have been key variables in explaining the process of gentrification. But how do these processes impact efforts to revitalize declining urban municipalities? This paper examines the role of social capital and social networks within urban neighborhoods in Flint, Michigan, USA, which exemplifies the "shrinking city" having lost more than half its population & most of its economic base in the last 30 years–leaving miles of abandoned housing. This paper describes a municipal government reaction of devolution of responsibilities, planning, & decision making to neighborhood level groups in partnership with a plethora of city & non-governmental actors. Through content analysis of neighborhood strategic plans, media accounts, interviews & surveys of neighborhood residents and stakeholders, we find that communities envision improved social capital (through reclaimed control of built & natural capital) as a cornerstone to successful revitalization & improved social order. Empowered neighborhoods replace urban services through existing social networks. The question is how this leads to re-imagined urban life, public space, & sustainability?

2010S00902

Gato, Maria, A. (CRIA - FCSH - UNL, Avenida de Berna 26C [tel: +351 21 790 83 08; fax: +351 21 790 83 08; e-mail: saogato@iol.pt]), **The Neighbour Relations in the Lisbon's Parque Das NaçOEs: "This Isn't Our's, But It's Like a Big Gated Community",** *International Sociological Association, Gothenburg, Sweden,*

¶ Parque das Nações is the official name of a new part of the Lisbon city, inherited from the World Exhibition Expo '98. With an extension of three miles of waterfront, this multifunctional urban project, constructed from nothing in barely ten years, was the opportunity to recover obsolete industrial & port land for waterside urban renewal. The geographical situation, the urban and architectural solutions, the scale & quality of public spaces and the symbolic meaning inherited from Expo '98 are responsible for a scenario of quality, socially directed towards upper socio-economic levels. Identified by its residents as a "holiday" place, a space within the city that seems like "countryside", or as a magical sort of place, the Parque das Nações can be seen as an example of a new socio-spatiality & a new culture of dwelling. However, the conditions offered by the quality of the public space and some equipments also exert a high attraction among the population of the neighbourhoods, causing in some residents an attitude that might be understood as a collective wish (though a silent one) to privatise the territory. Focusing analysis solely on the resident's perspective, based in extensive interviews with 20 familiar units, this presentation pretends to discuss the Parque das Nações as a new urban enclave that can

be understood as part of a wider programme of self-ghettoization of daily city life, which the middle & upper middle classes are tending to accept.

Gaytán Alcalá, Felipe (Universidad La Salle Mexico, Benjamín Franklin 47, Col. Condesa, 06140, México, D. F. [tel: 01525552789500 ext. 2386; fax: 01525555157631; e-mail: fgaytan@colmex.mx]), **Municipality or Sacristy, the Secularist Estate in the Municipal Space, Mexico 2006-2009,** *International Sociological Association, Gothenburg, Sweden,*

¶ The discussion on the construction of the secularist State in Mexico has concentrated on the national scope: administrative and political laws & public structures. However, there's very little governmental scope studied that shows the tensions & conflicts between the society, the churches & the policy around the laicism. This scope represents the municipality, first space of contact between the society & the State in which the basic demands of the citizens are solved in the churches, particularly in the catholic church, that have had a decisive influence on the local public policies & in the regulation of the public life. In Mexico, the municipality, without concerning the political party, have negotiated & yielded to the pressures of the catholic hierarchy. The mayors, under the criterion that the majority of its population is catholic yield public resources & properties to the Church, still more, incorporate the moral rules dictated by the priests in health, culture & economic subjects, which they will repel in all the citizens, independent of their ecclesiastical connection. This text presents a comparative study between Merida and Guadalajara, to analyze how the laicism in these two Mexican cities is constructed.

Gazareth, Pascale (Institut de Sociologie, Université de Neuchâtel, Neuchâtel, Switzerland, 2000 [tel: +41 32 718 14 29; e-mail: pascale.gazareth@unine.ch]), **Precarious Occupational Integration: When Employment Leads to Social Exclusion,** *International Sociological Association, Gothenburg, Sweden,*

¶ Employment is a central source of security, social importance and well-being in (post-)industrialised societies. In many discussions, unemployment is seen as the origin for poverty, lack of securities and social exclusion. But precarious occupational situations can lead to the same social disadvantages, especially when it is during over years. Such situations can be summarised in an indicator of occupational integration. Transposing Serges Paugam's typology of "integration professionnelle", this indicator crosses a dimension of employment security with a dimension of work satisfaction. The theoretical background of this indicator & its empirical construction using data from the Swiss Households Panel will be presented. The distribution of favourable & unfavourable occupational situations into social structure will be commented using classical indicators of inequality like education or working position as well as indicators of modern transformations of work like underemployment or unconventional working-time. Comparisons with French, German or English founding will be mentioned. In a second part, consequences of a long lasting exposition to precarious occupational integration on various dimensions of social integration & well-being will be discussed: standard of living, social ties & health.

Geisler, Esther & Kreyenfeld, Michaela (Max Planck Institute for Demographic Research, Konrad-Zuse-Str. 1, 18055 Rostock, Germany [tel: +49-381-2081211; fax: +49-381-2081511; e-mail: geisler@demogr.mpg.de]), **How Does Policy Matter? Fathers' Use of Parental Leave in Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper studies fathers' use of parental leave in Germany. Our main research question is how male education links to men's chances to take leave. Furthermore, we investigate how the family policy reform that was enacted in 2007 & that included an income-related benefit has changed this relationship. Our argumentation rests on the one hand on value change theory which assumes that highly educated individuals are vanguards of new behavior & ideas, including an equal understanding of gender roles (Inglehart 1997). Given this, one would expect that highly educated males are more likely to reduce their working time to care for their children than others. We contrast this assumption with hypotheses derived from economic theory (Lundberg & Pollack 1994, 2003; Amilon 2007) that stipulates that highly educated men should be less likely to take leave. We use the German microcenses of the years 1999-2007. We apply logistic regression models to examine the determinants of men's use of parental leave. Our results show that before the reform men's education did not have a significant impact on behavior per se. However, men were more likely to be on parental leave if they had a highly educated or older partner. After the reform, men from all educational groups have become more likely to be on leave. However, the increase was strongest for highly educated men.

Gensior, Sabine (Brandenburg University of Technology Cottbus, Chair of Economic and Industrial Sociology, PF 101344 D - 03013 Cottbus (Germany) [tel: + 49/355/692544; fax: +49/355/692551; e-mail: sgensior@tu-cottbus.de]), **Practices of Globalisation and Localisation and the Crisis in the Financial Sector - Remarks on a Gender Oriented Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ Financial services covers a wide range of professions, fields of activity, and activities in various sections of the services sector. These include: (1) the banking industry; (2) insurance companies; (3) other independent financial services (such as those in the areas of credit card organisations, financial brokerage, investment advisory services, pawn offices, leasing companies, commercial credit companies, equity investment / investment companies). The key influence impacting on the situation in the financial services sector is obviously the way the major banks develop - An increasing number of foreign banks are struggling to get a foothold in European markets, raising the bar on competition. Faced with this situation banks have begun to focus on their core competencies, to optimise their processes and lower their costs. The impact of this restructuring process can be seen on the one hand in a significant wave of redundancies which mainly affects women, and on the other in the segmentation of value-added chains and the outsourcing of part processes. In summary one can say that there will be a significant decline of both the financial sector, and the branches of the so-called real economy, and also workplaces of women. The paper will focus on empirical research in the financial sector and the 'real economy', as well as on the positioning of women in these processes. The current crisis of economy and society will also be analysed in a theoretical perspective: Is the "crisis" characterised either by systemic traits or more action oriented developments?

Georgieva, Nadezhda Georgieva (Economics Department, Trakia University, Stara Zagora, Bulgaria, Stara Zagora, Bulgaria 6000, Student Campus [tel: +359 42 666689; e-mail: nadyageorgieva@yahoo.com]), **Language and Identity: Minority Language Policy, Turkish Soap Operas and Language in the Bulgarian Mediascape,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper discusses the centrality of language in the construction of Bulgarian national identity, the image of the Turk in Bulgarian nation-building processes & the contemporary Bulgarian private media, represented by the extreme popularity of Turkish soap operas. Critical discourse analysis is applied for audience meaning decoding practices. Dominant discourses are deconstructed and boundary-maintenance analysed together with the institutional limitations concerning media ownership, regulation & control. Indicators are traced to study the effects of popular culture on social structure & the function it performs in everyday interaction in terms of identity construction & value transformation. Conclusions drawn reflect the strong politicisation of the issue concerning the presence of the Turkish language in the Bulgarian media, explained by the very nature of Bulgarian nationalism, the role of language, history & the present political context. Globalisation trends & the laissez-faire media model are seen as allowing for reconsidering a holistic view on national culture. Popular culture is interpreted as functioning as a "toolkit" (Swidler, Ann *Culture in Action: Symbols and Strategies* 1986) for solving present issues related to a recurrent identity crisis, reflecting the nostalgia for certain patriarchal family & gender values & a missing sense of community. It serves an ordering, ritualistic function through signifying practices, focusing on shared cultural values & allowing for new "third spaces" of identity negotiation.

Gerber, Alison (Yale University, New Haven, USA [tel: +12035007846; fax:; e-mail: alison.gerber@yale.edu]), **Public Is Everyone Else,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper, I look at one community's use of the concept of publicness. I focus on artists' writings from the past ten years to illuminate the "public" in public art. I demonstrate that, despite the centrality of place in most definitions of public art, site is generally unconsidered or actively denied as a feature of public art by contemporary practitioners. I show that, for these artists & their community, public is an audience–an audience made up of "everyone else," of strangers. I find that this audience is of par-

ticular interest to contemporary artists & show how claiming an audience made up of everyone else is a way to assert that an artwork has "real" effects. Through careful consideration of a vernacular use of the concept of "public", I consider some problems with the application of theoretical discussions of publicness to empirical evidence, particularly with the conventional binarization of the concept. I show how, for artists, the concept of publicness alters & creates meaning, informs action, & frames practice.

Gerdes, Christer (Swedish Institute for Social Research, SOFI, Stockholm University, SE-106 91 Stockholm [tel: +46 (8) 6747815; fax: +46 (8) 15 46 70; e-mail: christer.gerdes@sofi.su.se]), **Does Immigration Induce 'Native Flight' from Public Schools? Evidence from a Large Scale Voucher Program,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recent studies point to a positive correlation between ethnic heterogeneity due to immigration & the propensity of opting out of public schools for private alternatives. However, immigration across regions is hardly exogenous, which obstructs attempts to reveal causal mechanisms. This paper explores changes in the immigrant population in Danish municipalities 1992-2004, a period marked by a substantial influx of refugees, where a state-sponsored placement policy restricted their initial choice of residence. Besides such demographic changes, for more than one hundred years Denmark has allowed parents to enroll their children into so called 'free schools', i.e. schools that are privately operated. Taken together, this provides a unique opportunity to determine if there has been a 'native flight' from public schools to free schools. Results from OLS estimations on municipality data indicate an increase in native Danes' propensity to enroll their children in free schools as the share of children with immigrant background becomes larger in their municipality of residence. The effect is most pronounced in small & medium sized municipalities, while it seems absent in larger municipalities. One explanation for the latter holds that residential segregation within larger municipalities makes a choice of private alternatives less attractive.

Gerhold, Lars (Freie Universität Berlin, Fabeckstr. 15, 14195 Berlin [tel: 0049 30 83856193; e-mail: lars.gerhold@fu-berlin.de]), **The Future of Research on Safety and Security in Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ This contribution presents the results of a qualitative, exploratively set up Delphi study. The achieved results supply an image of German research on safety & security from the perspective of all relevant disciplines as well as of its future challenges in the next 20 years. Based on developments relevant for safety and security & exemplary research topics, challenges are defined for the future of research on safety & security. In this context, this contribution will deal with the question of using different definitions of the term, alignment of research for different recipients & use of different research strategies & methods.

2010S00911

Ghaneirad, M.Amin (National Research Institute for Science Policy, 9 Soheil Ave.,Shiraz St.,Vanak Sq. P.O.Box 13145-554,Post Code 14358 94461 Tehran-Iran [tel: +98 21 88254774; fax: +98 21 88069760; e-mail: ghaneirad@yahoo.com]), **Indigenization of Social Science as a Cultural Politics,** *International Sociological Association, Gothenburg, Sweden,*

¶ At least since the second half of twentieth century, Third World intellectuals, academicians & Politicians have emphasized on the Indigenization of social science as a socio-cognitive need. The conception of Indigenization, however, has shifted in accordance with political, social, cultural & economic developments at local and global levels & the intellectuals' & academicians' experiences of the ways in which the projects of Indigenization have been defined, proposed or implemented in their countries. This article attempts to track the changing nature of the encounter between Iranian academicians with the Indigenization in recent decades. In this regards, we enumerate five phases. In the paper, the Indigenization project is defined as a project of knowledge management & a practice of cultural politics. The paper presents a set of indicators for evaluating Indigenization projects as knowledge management & cultural politics practices, and, then, utilizes these indicators for assessing the various proposed Iranian Indigenization projects. Keywords: Iranian social science, Indigenization, alternative discourse, knowledge management, cultural politics, knowledge politics, knowledge creation projects, democratic criteria.

Ghanshyam, Saini (Verdhaman Mahaveer Open University, India, V.M.O.U. Campus, Kota, Rajasthan, India [e-mail: sainigs2003@yahoo.co.in]), **Social Problem in India,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction India is one of the developing nations of the modern world. It has become an independent country, a republic, more than a half century ago. During this period the country has been engaged in efforts to attain development & growth in various areas such as building infrastructure, production of food grains, science & technology and spread of education. The life expectancy has increased & many diseases have been controlled. However, there are many areas in which Indian society is experiencing a variety of problems. Some of these problems have their roots in our colonial past while others are related to demographic changes, socio-political conditions and cultural processes. This lesson tries to acquaint you with some of the problems & the psychological factors involved in them. You will learn about some of the possible ways in which psychological interventions can help in dealing with the problems. Poverty A large section of the Indian society is suffering from poverty. Poverty is a phenomenon which is objective as well a subjective. Objectively poverty implies a dehumanizing condition in which people are unable to look after the basic needs. Subjectively poverty stands for perceived deprivation. As such it is relative and anybody can feel poor by comparing himself as herself with a rich person. Poor people lack the necessary resources & capacity to satisfy basic needs like food, shelter, health & education. They live under difficult conditions which are not conducive for development of their human potential. As you have learned earlier in the lesson 10 & 11 that for healthy human development a child needs environmental support for survival & development. Poverty interferes with development in many ways. For instance lack of or inadequate nutrition arrests mental development during early childhood. The unavailability of stimulating environment and absence of effective role models decreases the motivation level. A large section of poor children do not go to school. Even if they go they become drop outs & fail to complete education. In this context it may be pointed out that poverty is also related to the social structure. A number of low caste, scheduled tribe and backward communities have been put to discrimination for many centuries. They are socially disadvantaged & are deprived from the experiences necessary for development on account of their membership of specific groups. In this sense they are doubly deprived. Studies have shown that the children from the background of poverty & social disadvantage lag behind their counterparts from the enriched background. Their cognitive development and performance is found to be at a lower level. Studies of perception, memory and intelligence have demonstrated it several times. The studies have also shown that the performance between the advantaged and disadvantaged children increases with advancing age. It has also been found that the poverty condition is demotivating and makes a person more vulnerable. Low level of achievement motivation and greater need for dependence in these people make them less effective in coping with the problems of everyday life. [Abstract shortened by ProQuest.]

Gharaibeh, Roa'a Hamdan (Department of Sociology, University of Bordeaux II, U.F.R des sciences de l'Homme, 3, ter place de la victoire. Bordeaux France [tel: 00 33 67 37 50 615; fax: 00 33 55 79 58 002; e-mail: roaULg@hotmail.com]), **Feminists' Experiences and Approaches of Subjectivity for Feminisms in Patriarchal Contexts: Jordan, Egypt and Lebanon,** *International Sociological Association, Gothenburg, Sweden,*

¶ Feminism(s) still have difficulties to be defined & unified in this world. Feminists themselves have more than a definition for what they are living as feminists. Thus, Jordanian, Egyptian and Lebanese feminists & activists have different practices, aims, approaches & agendas. How did Arabic women come to be activists and feminists? What does feminisms mean in neo-patriarchal contexts and societies? What are the most important differences about feminists' experiences between these three Arab countries? My paper aims to answer these questions, by juxtaposing the literature review & the fieldwork. Arab feminists advocate gender equality and equity for all levels; from social, juridical, political to economical. The core of the debate about Arabic feminisms was the nation. That led a lot of scholars to describe these movements in their beginnings as a nationalist feminist approach. Now, Arab feminists utilize the formula of gender, race, modernity, nation and religion. The post-colonial approach helps us to reread the feminisms of Arab countries which are on the move. Starting with Islamic feminism, I realized how such approach can make controversies, especially for the norms of universal feminisms. Therefore, feminists whom I reviewed see this approach as a new product of American Islam

that can't help them to accomplish their mission for achieving full rights in their inherent contexts.

Ghasemi, Zahra & Habibi, Maryam (Department of social science and psychology Islamic Azad University, Central Tehran Branch, Valiaser building, Damavand street, Emamhosian Square, Tehran , Iran [tel: (098)511-7286269; e-mail: zahraghasemi9@yahoo.com]), **Study of Changing Level of Participation & Type of Members in Iranian's NGOs (Quantity Research In Supporting NGOs),** *International Sociological Association, Gothenburg, Sweden,*

¶ Because of the transition of the traditional form confronted with anomie, antagonism & disorganization in Iranian society, there are many deficiencies that society could not solve. To change the society decries these needs & dissociation. The voluntary association charity responds to some needs of society during thousands of years in Iran. With social change norm less & disorders these charities go to change their structure to provide & solve no responses people problems. They found new functions & restructure their organizations (attractive volunteers, do election in space of association). These charities NGO's have developed throughout social changes. The type & level of participation & the kind of members in NGOs have changed. The research has studied 41 NGOs out of 180 ones. With case study & participation during 2 years. This study has two parts. 1) The study of 5 kinds of participation in NGOs, quality or level of participation that members are allowed to do. 2) To find the kind of members in NGOs. Frequency distribution of members changed during its establishment up until now. The findings show that we have more ritual participation than active, obligatory, apparent & slight participation. The Selective structure of NGOs has formed to elective. Also little of NGO's have an election structure such as public leagues, we see more interest to voluntary doing work between members.

Ghazi-Tabatabaei, Mahmoud & Karimi, Zeinab (Department of Demography, University of Tehran, Tehran, Iran, 0098 [tel: 0098 9121301091; e-mail: smghazi@ut.ac.ir]), **Socio-Demographic Determinants of Road Traffic Incident Death in Iran,** *International Sociological Association, Gothenburg, Sweden,*

¶ Road traffic incident sustains heavy burden of injuries in Iran, as it currently turns out to be one of the main causes of death, disabilities and losing potential years. The socio-demographic perspective of this article has an overview on Epidemiological Transition of Iran with specific attention to the death rate trend caused by road traffic incident in recent years, as well as its distribution by age, gender, residential & socio-economic characteristics of road traffic victims. Using national survey gathered in hospitals by Ministry of Health & Medical Education of Iran during 2005, 2006 and 2007 has been addressed to the questions of this article. The results indicate unequal burden of road-traffic incidents according to the socio-demographic factors. Also in macro level, data suggests that population in cities which caused by migration can't solely explain the high rate of road traffic death in recent years, while the socio-cultural factors are an important predictor of this phenomenon in Iran.

Ghorbanzadeh, Sakineh & Sharepour, Vadadhir (Tehran; [tel: 01924251251; e-mail: ensi.ghorbanzadeh@gmail.com]), **The Impact of Lifestyle on Road Accidents among Young Adults,** *International Sociological Association, Gothenburg, Sweden,*

¶ Abstract: Lifestyle is a choice of different practices within the structural situation. Healthy behaviors like other forms of social behaviors are affected by agency & structure. Agency is the actors abilities to choice their behaviors whereas structure refers to the regularities in social interaction, symbolic social relationships, & access to resources that may constrain or empower choices. According to Cockerham, the structural situation such as: age, gender, marital status & socio-economic status can limit choices of actors. In this article, using factor analysis, we found 8 factors underlying dimensions of lifestyle among 450 sample of young adults who lived in Tehran. These dimensions are risky driving, car addiction, elegance-pleasure, cultural consumption, interest in social affairs & physical activity, religious activity & alcohol consumption. The findings showed that some of these factors like risky driving, alcohol & car addiction had direct positive impact on the risk of accident, whereas interest in social affairs had negative impact on the risk of accident. It is also found that young adults who consumed alcohol had intensive desire for risky driving & they liked to drive without destination & had no interest in religious affairs. On the contrary, there was little risk of accident among young adult who had interest in social affairs but they were involved in the religious activities & culture consumption. In addition, there were some differences between men & women in the risk of accident.

Giannini, Mirella (Dipartimento Sociologia–Università di Napoli Federico II, Napoli, Italia, Vico Monte della Pietà, 1 -80138 [tel: 39 347 9426963; fax: 39 081 2535 800; e-mail: migianni@unina.it]), **Women in Universities Transforming Professions,** *International Sociological Association, Gothenburg, Sweden,*

¶ The University has been placed in the core of the process of professionalization as well as the reproduction of masculinity of the professions. Nevertheless, more & more women have been entering into the male-dominated professions, breaking through institutional & cultural barriers. Could the relationship between the institutional extension of the higher education & the feminization of professions be focused as important occurrence in moving contemporary society? In Italy, the research on the "academic field" suggest that this relationship could be questioned in the frame of the transformation of values & skills in professional groups. Statistical data show that girls make use of social & educational resources to put up their own professional trajectories. Regarding the professions in the "academic field", the increase of women is observed, although they are still minorities in the academic elites & in the scientific–still male-dominated–disciplines. Our research project on the University of Naples–Faculty of Engineering has collected women's stories & analyzed specific gender relations. It results that combining high social standing & cultural resources, women seem to act on this structured field and contribute to change traditional–i.e. "built upon males"–professional values & marketable skills.

2010S00918

Gieryn, Thomas F. & Oberlin, Kathleen C. (Sociology; Indiana University, 744 Ballantine Hall, 1020 E. Kirkwood Ave., Bloomington, Indiana, 47405 [tel: (812) 855-9973; fax:; e-mail: kcoberli@indiana.edu]), **Place and the Production of Culture: Geographic Clumping in the Emergence of Artistic Schools,** *International Sociological Association, Gothenburg, Sweden,*

¶ In processes of cultural production, does it matter where the producers happen to be–and if so, how? We examine the formative years of 49 twentieth-century schools of painting & our data suggest that in almost every instance, artists identified with a certain school tend to live in the same region or city during its emergent period, & often even in the same neighborhood of a large metropolitan area. This pattern continues throughout the twentieth century, despite changes in communication & transportation that would seem to make physical co-location less vital for the formation of small collaborative circles in the arts. Therefore, we suggest that using a geographic location to name an artistic school is not merely a convenient short-handed way to avoid listing the names of individual members. Rather, we argue that place itself–the co-location of artists at a circumscribed geographical location in the immediate presence of diverse material, social & cultural surrounds–plays a critically important role in the emergence of artistic schools & in the success of member artists in the art market.

Giglia, Angela (Universidad Autonoma Metropolitana, Iztapalapa, Mexico City [tel: 52-55-58044763; fax: 52-55-58044767; e-mail: ag@xanum.uam.mx]), **Residential Segregation, Social Distance and Spatial Proximity in Mexico City,** *International Sociological Association, Gothenburg, Sweden,*

¶ In a large metropolis like Mexico City very different ways of inhabiting coexist, which refer to different ways of producing and using living space, from the most precarious & unplanned to the most modern. Especially in the last 15 years a lot of new residential condominiums have been built by the private sector for the upper classes. The result of this renovation process is a change in the social composition of urban space, which entails an increasing degree of social distance associated with physical propinquity. New upper class residents arrive to live in neighborhoods which are already populated by lower class residents, which often live in self-constructed housing. The architectural and social contrast is evident, but it is considered as "natural". The coexistence of social distance & spatial vicinity does not mean an absence of social relations. Based both on quantitative and qualitative data, the paper will show some recurrent narratives and practice in relationship with neighborhood, focusing specially in the relation between social avoidance & practical utilization.

2010S00920

Giglietto, Fabio (Department of Communication Studies at Università di Urbino "Carlo Bo', Via Saffi, 15 [tel: +393805207820; fax: +39 0722305726; e-mail: fabio.giglietto@uniurb.it]), **From Visibility to Observability: Internet and the Accelerated Process of Self-Observation in Social Systems,** *International Sociological Association, Gothenburg, Sweden,*

¶ During the last few years the Internet is increasingly used by people as a read-write medium. Thanks to the dropped prices & skills necessary to afford & use technologies aimed to create digital contents (camera phones, video, & digital cameras), people are now able to create persistent digital information. A large share of this information is today exposed to so-called networked publics on the Internet. For the first time in history people have access to mass medium not just on the side of the audience but also of the producers, & user generated contents (UCG) have been emerging all over the net. At the same time the rise of social network sites, such as Facebook or MySpace, made it possible to create a digital version of offline social networks. These networks are often browsable. The access we have to the vast amount of UGC available is often largely influenced by the friends we decided to add to our online social networks. Our perspective of the online world is therefore filtered even if it appears an objective view of what is happening around us. This paper will discuss the implication of these limited perspectives of the observer in the online world leveraging on the ideas developed by Heinz von Foerster & Niklas Luhmann.

2010S00921

Gil Alonso, Fernando (University of Barcelona, 08001 Barcelona, Spain [fax:; e-mail: fgil@ub.edu]), **New Europeans or Transnational European Union Citizens with Multiple Citizenship or Cultural Backgrounds. The Spanish Case,** *International Sociological Association, Gothenburg, Sweden,*

¶ Transnational ties are more obvious among the European Union citizens living in another EU country, due to cultural proximity & the political framework built by the European construction process. Indeed, free movement of EU citizens to travel, work & live anywhere in the European Union, increasing worker & student mobility, common European citizenship & other European wide policies have encouraged EU citizens to settle in other member states. Therefore, their numbers have grown & the same should be stated for mixed marriages between EU citizens with different nationality, & for the number of children born from parents from two different European Union countries. As this trans-European group could be closer to a sense of European identity allegiance than to a national one, European institutions are starting to talk about the emergence of the New Europeans, i.e. European citizens with a multiple national or cultural background residing in the EU. The two main objectives of the paper, which will focus on Spain as a study case, are, firstly, to explore & assess the availability of data sources on the various types of New Europeans in order to, secondly, estimate the size, composition & recent evolution of these groups in Spain. This country has been chosen as it is a paradigmatic case of the recent arrival of large numbers of European foreign citizens with potential transnational ties.

2010S00922

Gilad, Noga (Tel-Aviv University, Tel-Aviv, Israel [e-mail: giladnoga@gmail.com]), **Performing Collectivity–The Case of the Israeli Settlers,** *International Sociological Association, Gothenburg, Sweden,*

¶ How is "collective identity" performed? Talking of collective identity means, that we can't talk about individuals as entirely different from each other, yet mentioning individuals means they are not all the same. What is the mechanism that constitutes a sense of collectivity between both aspects of identity a sameness and difference? How can we transcend from the single level of performance to the collective level? Analyzing biographic narrative interviews show how a particular person performs his "identity": at the same time, he performs various aspects in a similar typical manner that is thus different from other interviewees. How then can we formulate a collective identity out of this difference? It is demonstrated in performing movement in space & military performances in the case of Israeli settlers in Gaza. The analysis of five cases showed that these themes were performed distinctly in each life story, framed differently in every case. Thus, each person located them in a different context in his/her entire collection of stories & arguments. However the repeated performances across the cases created a common ground, in fact applicable to all community members that are treated differently than by non-members. A second look made it possible to see how the particular performance of the theme by one person correlated to the particular performance by the other in a way that clarifies the notion of community. While each is a stranger to the others, the distinct performance on the single level accumulates & the multiple levels produce the collective level. It is my claim that the problematic of movement in space under increased militarized conditions can be reconstructed on the community level better from the accumulation of perspectives & performances of different community members, than it would be generated by the conventional "typical" case.

Gilbert, Leah (University of the Witwatersrand, Sociology, Wits, Private Bag 3, WITS 2050, South Africa [tel: +27117174429; fax: +27865536014; e-mail: leah.gilbert@wits.ac.za]), **The 'Social' in HIV/AIDS research–Introductory paper to the session on "Social Aspects of HIV/AIDS",** *International Sociological Association, Gothenburg, Sweden,*

¶ Quite early in the onset of the epidemic it was argued that HIV/AIDS was not merely a medical problem but primarily a social one. More recently this has been demonstrated by its differentiated spread as well as by the inability & inadequacy of the medical establishment to control & curtail its expansion. Unfortunately, since the beginning of the HIV/AIDS epidemic it has been framed and perceived primarily as a medical condition (which it is!) & the focus has been on technical solutions within the bio-medical model. In the quest to find a cure & a vaccine, the social aspects, although acknowledged, have been somewhat neglected and marginalised. As early as 1988, Jonathan Mann, former director of the WHO Global Program on AIDS, stated that the social aspects of HIV/AIDS would be the most difficult to handle world-wide, and consequently stressed the necessity for major inputs of social and behavioural sciences in AIDS research. Later on Paula Treichler emphasised this by arguing that the social dimension of HIV/AIDS is far more pervasive & central than we have been accustomed to believe a this is aptly illustrated by the papers presented and distributed in this session.

Gilding, Michael D. (Institute for Social Research, Swinburne University of Technology, Melbourne, Australia 3122 [tel: +61 3 9214 8102; fax: +61 3 9819 0574; e-mail: mgilding@swin.edu.au]), **Entrepreneurship, Morality and Institutions: The Making of a Private Paternity Testing Market in the United States and Australia,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper examines the creation of a private paternity testing market in the US & Australia during the early 1990s & early 2000s, through the launch of a new product variously described as "peace of mind" tests, "informational" tests & "non-legal" tests. In particular, it identifies the institutional contexts in which the product was launched, & the moral terrains which entrepreneurs had to negotiate. The paper draws upon a combination of industry records & interviews with industry players (17 from each country). It argues that different institutional architecture in the US & Australia gave rise to a different moral terrains, which in turn meant that the tests became a mass market in the US but not in Australia.

Gill, Fiona J. & Elder, Catriona (Department of Sociology and Social Policy, University of Sydney, Sydney, Australia, 2006 [tel: +61 2 9351 6889; e-mail: fiona.gill@sydney.edu.au]), **Space, Place and Connections: Australian Life in the 21st Century Experimenting with New Technologies in a Classic Project,** *International Sociological Association, Gothenburg, Sweden,*

¶ In January 1937, "Mass Observation" was launched in Britain, a project seeking to identify meaning in the mundane, meaningless and routine, & to hinder the tendency of mass society to deaden individuality & creativity through habit. Space, Place and Connections seeks to replicate the initial "mass observation" study within contemporary Australian society. Substantial developments in technology since the 1930s mean that the methods of data collection for contemporary mass observation will differ significantly from the original. This paper presents the results of a pilot study, assessing the efficacy of new technologies in conducting mass observation today. Data will be collected using both "traditional" methods of data collection, such as time use diaries & photography, but will also use technologies such as blogging, text messaging, digital photography & the development of an interactive website where respondents can answer questions by the researchers & discuss among themselves their experiences. Using these methods, the efficacy of different data collection techniques, utilising the available technology will be assessed.

Giorgino, Vincenzo Mario Bruno (University of Torino, Dept. of Social Sciences, Corso Unione Sovietica 218 bis Torino Italy 10134 [tel: +39 11 6706093; e-mail: vincenzo.giorgino@unito.it]), **The AURIGA Program for Smoking Cessation and Reduction, Stress Reduction and Well Being. A Trans-Disciplinary Approach for an Experimental Program in Clinical Sociology.,** *International Sociological Association, Gothenburg, Sweden,*

¶ The AURIGA program is addressed to smoking health workers of two local health agencies in Torino (IT). It is designed as an experiential based research-action program in which the detached observation of oneself is considered a basic social experience. Fundamentally, the programs main idea stems from the ambition to put together biomedical parameters & personal data as elements of the general process of the smoking experience. Methodologically, third person data (questionnaires) & personal inquiries (journals and self-observation) are integrated with observations of the experience emerging from the contemplative practices. Two criteria of selection have been set up–smokers of at least 10 cigarettes on a daily basis & no enrolment in any drug treatment for smoking cessation. During the two-month program, once a week a group meeting took place, in which the group experienced some contemplative practices (sitting meditation, body scan, & others) and dedicated some time to dialogue; participants were expected to do daily home exercises & keep a journal. Pre-post questionnaires and biomedical tests have been used to evaluate the programs effectiveness (before/end of program & three & six month after it). 25 health workers completed the two-month program. At the time of writing this abstract, the data collection is closed and preliminary analysis is undergoing.

Girard, Mélanie I. (Université de Hearst, Timmins, ON, P4N 0A8 [tel: 1 705 267 2144 x 233; fax: 1 705 267 2344; e-mail: melanieULgirard@uhearst.ca]), **Analyse du Pouvoir dans les Groupes** (Analysis of Power in Groups), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Il existe trois théories du pouvoir en sciences sociales: celle qui présente le pouvoir comme détenu, celle qui conçoit le pouvoir de façon relationnelle, celle qui estime que le pouvoir est une catégorie non analytiquement utile. La première nous présente un acteur qui agit dans son monde en faisant faire aux autres en fonction de son pouvoir ; elle est le propre des théories de l'acteur. La deuxième présente le pouvoir à la fois comme se livrant dans la dynamique dont il dépend et comme détenu par l'acteur ; elle est le propre des théories de l'action, mais aussi de celles des systèmes. La troisième insiste sur la socialité plutôt que sur l'action ; elle s'articule notamment à une approche relationnelle, qui remet en question l'appareil usuel des théories de l'action et ses dérivés et qui propose de comprendre l'action sociale en fonction de la socialité, de l'historicité et de l'émoraison. À partir d'un corpus constitué de la transcription de cinq rencontres filmées au sein d'un même comité, sur six mois, il procède à une analyse du pouvoir dans les groupes en soumettant les propos des acteurs sociaux à une grille analytique construite de questions se rattachant à une série d'hypothèses formulées à partir d'indicateurs du pouvoir. Ce faisant, il permet d'effectuer une analyse comparative de la valeur heuristique de deux modélisations : une première qui centre tout sur l'acteur, une seconde qui place la relation au centre de son analyse.

Giufrida, Guilherme (University of Campinas [e-mail: giufridagp@gmail.com]), **Your Life Deserves Credit: The Uses of a Payroll Loans Program to Retirees in Brazil,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper discusses the relationship between old age & money through an ethnographic account. It took place in a consumer finance company specialized in a Brazilian governmental program of payroll loan for seniors, in which interest rates are below the market. The research objective was to explore the social dynamics involved in the interaction of the agents of the financial system and working-class retirees who make use of this loan program. The paper highlights the following issues: (i) the confluence of cordiality & a strong capacity to convince which indicates the manner in which the ethics of treatment matches with economic spirit, (ii) the reasons given by retirees for the loan showing that a significant proportion of cases involves covering the amount spent on education & professional improvement of client's children & grandchildren, (iii) low educational level of the customers makes it hard for them to understand the exponential growth of debt & the pitfalls of the bank language. The main argument is that the program is applauded by its clients in so far as money is the mediator of a series of relationships that seem to elevate the position of working-class retirees at the banks & at their families. At the same time financial groups expand their ability to accumulate capital, & the retirees–confident in their rights to interest rates below the market–transfer their income to the financial sector. The study builds an analysis of the specialized credit for retirees contracts & the agreements in the consumer finance company, not only understanding them as benefits, debt & credit, but also as a symbolic exchange, in which prestige and power are a central part. The analysis show how social policies aimed at improving elderly life condition may serve the financial capital.

Glass, Jennifer, Brainer, Amy & Risman, Barbara J. (University of Iowa, Iowa City, Iowa [tel: 319 621 6304; fax:; e-mail: jennifer-glass@uiowa.edu]), **Becoming Similar or Growing Further Apart? The Effect of Religious Fundamentalism on the Family Lives of Americans,** *International Sociological Association, Gothenburg, Sweden,*

¶ Our research focuses on whether Americans raised in conservative Protestant homes during the rise of the "New Right" politicization of Christianity have adopted more traditional gender attitudes and family behaviors as they form families of their own. Have the differences between conservative Protestants & other Americans increased or decreased between 1977 & 2008? Is religion a more or less potent explanation for women's status in their families in contemporary America than in the 20th Century? We use General Social Survey data to examine change over time in family attitudes and behaviors among women & men ages 18 to 35. Our analyses compare women & men who were conservative Protestants as teenagers to those who were affiliated with mainline religions and those who were unaffiliated. We find that while some differences by religion have remained stable over time, attitudes towards women's roles are growing more dissimilar. We also find a growing gender gap in the attitudes & behaviors of conservative Protestant women and men. Although women who were raised in conservative Protestant traditions are more likely than others to marry & enter motherhood young, & to have more children, they are no less likely than other women to be in the paid workforce. In contrast, men who were raised in conservative Protestantism are more likely than other men to have a spouse who is not in the paid workforce, and when their wives are employed, they earn less than other wives. The increasing labor force participation of young conservative wives & mothers despite the continued preference of men in their communities for the traditional breadwinner-homemaker family, suggest provocative gender politics within religious communities as well as between them.

Godin, Marie & Rea, Andrea (Université Libre de Bruxelles, Avenue F.D. Roosevelt 50, 1050 Bruxelles [e-mail: godinmarie@gmail.com]), **Gender and Clandestine Migration in Belgium: Social Network Theory Analysis Revisited through the**

Observational Window of the 2000 Regularisation Campaign, *International Sociological Association, Gothenburg, Sweden,*

¶ Regularisation programmes have come to play an important role within the irregular/clandestine waves of migration. Astonishingly, while these campaigns flourish, few researchers devoted their time studying their effectiveness. Far from being only a strategy to tackle irregular migration, regularisation programmes have opened the way to new kinds of socio-economic integration for migrants by providing residence & work permits. As a result, there is a need to provide scientifically analyzed data on the various impacts on the trajectories taken by some, especially at a time that sees political discussions on their raison d'être arise. This paper focus only on the Belgian case of 2000; the biggest regularisation campaign that the country ever knew and which granted papers to almost 50.000 people. We will consider this regularisation program as an "observational window" allowing us to explore in depth one specific moment of migrant trajectories on how the social construction of gender may influence men & women differently in their "strategy to stay" (Engbersen, 1999) but also in terms of socio-economic integration after regularisation took place. Men & women migrants come to rely on & to be involved in different types of social networks which lead to different societal incorporation. Inspired by Granovetter's concept of "strong" & "weak" ties (1983) we will shed some new light on the sociological understanding of clandestine population. Social networks are gendered leading to a different sensitivity for men and women in regard to the regularisation program.

Goebel, Jan & Dittmann, Joerg (DIW Berlin, Mohrenstrasse 58 [tel: +49 30 897 89 377; fax: +49 30 897 89 109; e-mail: jgoebel@diw.de]), **Growing Up In the 21st century: Leisure, Lifestyles and Unequal Chances of Children and the Youth,** *International Sociological Association, Gothenburg, Sweden,*

¶ For Germany the PISA & IGLU studies show that adolescents from educationally marginalized & deprived social milieus show on average lower school performance & attain lower graduation and school certificates. This paper uses data from the longitudinal study SOEP to analyze for Germany the educational biography of people between 17 & 25 years of age, who have grown up under rough living conditions & experienced poverty in their childhoods. This study focuses on those socially deprived people who gained successful educational attainments. How do people succeed in seamless transitions to job training & occupation in spite of growing up in poverty? Based on concepts of resilience and personality ('big five') we assume that "successful" people with experience of deprivation & poverty in their childhood and adolescence have more protective factors, individual & social resources, & this fact allows positive developments in different life domains including the school & educational domain. Hence, successful educational attainments of socially discriminated people can be explained by the following resilience factors & resources: a) Individual protective factors like self-esteem & cognitive abilities, b) Intra-familial-factors like positive family climate or positive relations to mother & father, c) Extra-familial-factors: For example a well-functioning relationship system or memberships in associations. Our research aims to deduce empirically tested prevention & intervention measures, which are crucial for successful educational careers. These measures could include parental support to foster the family climate. Prevention and intervention measures could also contain leisure activities which evidentially support intellectual skills & social competencies.

Goerres, Achim & Prinzen, Katrin (University of Cologne, Cologne, Germany [tel: + 49 (0) 221 / 470-2079; e-mail: prinzen@wiso.uni-koeln.de]), **Citizens' Views on Intergenerational Relationships and the Welfare State in an Ageing Society. New Evidence from Focus Groups,** *International Sociological Association, Gothenburg, Sweden,* (GER)

¶ Whereas we know a lot about the factual problems of the welfare state in ageing societies, we know very little about citizens' mind maps of this topic. We conduct the first thorough investigation of what people think about the welfare state & intergenerational relationships in ageing societies. We analyse qualitative data of 12 focus groups conducted in Germany in spring 2009 that were stratified by age & education. The thematic analysis of verbal expressions, interactions & additional standardised survey responses gives a good picture of the heterogeneity of citizens' mind maps. In contrast to the meager findings from survey research, the study yields a multitude of highly relevant themes that occupy German citizens. (1) Individual experience matters for expectations from the welfare state: cohorts' historical circumstances or relationships to family generations framed participants' utterances. (2) Self-interest & solidarity shape intergenerational relationships & are sometimes inconsistent or ambivalent. (3) Participants, even when given information about the exact figures, were unable to relate to problems of financing the welfare state & implications for future generations. (4) Members of recent birth cohorts were frustrated about their insecure and–in comparison to older cohorts– negative future in the welfare state.

Góes, António, Óscar Santos & Carvalho Ferreira, José Maria (University of Technique of Lisbon and SOCIUS, Portugal; UESC Universidade Estadual de Santa Cruz., Rua Miguel Lupi, 21, Lisboa - Portugal - 1249-078 [tel: +00351 213 951 783; fax: +00351 213 825 800; e-mail: oscargoes11@hotmail.com]), **Changes in Worklife: The Multiple Demands in the Qualification of Banking Employees–A Case Study of Banco do Brasil,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper analyzes the program Educação Corporativa (Corporate Education) of the Banco do Brasil, one of Brazil's main financial institutions. It dwells on extensive empirical research (both surveys & semi-structured interviews) conducted on a specific agency of the Bank, with the purpose of evaluating employees' assessment of this program. Accordingly, particular attention is devoted to a comparison between the Bank's official discourse about its "skill development model" & employees' views regarding its actual implementation. In effect, results have shown that the program has been met with mixed feelings, especially in that it fails to address all employees equally. Furthermore, while many employees recognize the program's efforts in supporting qualification & competence development, they report that most of their daily tasks are still characterized by routine and repetition, more attuned with a taylorist world.

2010S00935

Goettlich, Andreas (Sociological Department, University of Konstanz, Konstanz, Germany, 78457 [tel: +49 7531 883399; e-mail: andreas.goettlich@uni-konstanz.de]), **Alfred Schutz's Theory of Relevance–A Way To Conceptualise Power Relations from a Subjective Point of View?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper deals with the question, whether an investigation of the perspective of the subjective actor may be of some help for the sociological analysis of power relations. It does so by analysing a specific theory of subjectivity, namely Alfred Schutz's theory of the life-world, especially his theory of relevance. In his theory Schutz explains the way in which a theme constitutes within the subjective consciousness of the actor, that is, how he selects among its different topics, which stock of knowledge he applies when interpreting it, & which motives stand behind his interpretation. The theory of relevance has an implicit connection to the question of power, disclosed in Schutz's differentiation between "imposed" & "free" relevance. The answer to the question, if Schutz's phenomenological description of the subjective consciousness may provide a basis for an empirical investigation of social power structures, tends to turn out negative. The reason for this scepticism lies in the phenomenological approach as such with its introspective method, which transforms a problem of social relations into a matter of the perception of inner time.

Goffette, Céline (CREST, Sciences Po and INED, 3 Avenue Pierre Larousse [tel: +33683272545; e-mail: celine.goffette@ensae.fr]), **Using Household-Level Predictors to Explain Smoking Disparities Between and Within European Societies,** *International Sociological Association, Gothenburg, Sweden,*

¶ One out of four European Union citizens aged 15 & over is a daily smoker (Flash Eurobarometer 253, European Commission, 2009). Country variations of smoking prevalence are strong. Analyses of smoking practices have hitherto mainly focused on micro (individual level) & macro (national level) determinants of smoking. We aim at investigating the influence of household membership on smoking practices, beyond individual & national factors. We take advantage of data with a hierarchical structure in order to identify & quantify the sources of the variation of smoking practices. Data from the European Community Household Panel (ECHP) are used. The 1999 dataset provides information on smoking practices for 10 countries (Austria, Belgium, Denmark, Finland, France, Greece, Ireland, Italy, Portugal, Spain). All individuals aged more than 16 years were interviewed within the selected households. Individuals are therefore nested within households and country. Logistic multilevel models are implemented on these data, in order to disentangle household-level & individual-level contributions to smoking patterns. Results show that a sub-

stantial part of the variability in the propensity to be a daily smoker can be attributed to the household level.

¶ Brazil & Argentina present, in the first decade of this new century, a series of new social movements. These movements have constructed their identity in a different form from that used by the movements of the 90s. Nowadays they are moving their roots. Some of these movements resulted from collective actions, organized as answers to economic/financial crises which occurred in those countries, such as the "piqueteiros" & the unemployed movement in Argentina & paper recyclers in Brazil. Other movements resulted from the effects of the actual economic model, such as the movement that works with the biodiversity thematic & the movements of Indians. Other resulted as reactions against that model, such as the World Social Forum and other anti-globalization movements. Women have a great participation in all of them. Some movements have participated in the social policies of the government. The aim of this paper is to characterize these movements by asking: which are they, what are their demands, how are they organized & which are their relationships? Who researches these movements? Which theoretical and methodological strategies have been used? The used data sources are books, articles & theses about social movements in the last five years.

2010S00938

Gomes, Eduardo R. & Kirschner, Ana Maria (Fluminnense Federal University, Niterói, RJ, Brazil [tel: + 55 21 2569 2857; fax: +55 21 2569 2856; e-mail: gomeduar@gmail.com]), **Brazil's Pioneering Initiative of a Society-Oriented Business Social Audit and Today's Myriad of Options: A New Business Social Responsibility?,** *International Sociological Association, Gothenburg, Sweden,*

¶ This article is aimed at analyzing a unique Brazilian experience of social report, in the context of the transformation of what business social responsibility has been understood & practiced since the 1950s, when Bowen coined the expression "social responsibility of the businessman" (Bowen, 1953). Although he was thinking of the importance of businessmen as persons, to be tuned to society's values, this is seen as the starting point of the modern conception of "business social responsibility". Since then, consumers, social movements, governments & others began to claim that companies–not their owners–had "obligations" towards society, such as quality, reliability, & safety of the products (or services provided), as well as fair relations with their employees, a non damaging relation with the environment, along with others, beyond the legal ones. As a result, little by little, the idea of Business or Corporate Social Responsibility took shape, & ended up becoming a part of the administrative principles, as "total quality", "just in time", & others, and not "social responsibility of the businessman" as persons (Grayson & Hodges, 2002; Kirschner, 2006). Anyway, the case at stake is a proposal from the Brazilian Institute of Social and Economic Analyses (IBASE) of a one page report of the main dimensions of social responsibility of firms, to be voluntarily presented. Named "IBASE's Social Audit" ("Balanço Social do IBASE"), it was designed in 1997, by this organization that was then the most important Non Governmental Organization (NGO) of the country, & it was aimed at enhancing the accountability of the social responsibility of firms, given its simple format & ample exposure, both inside & outside them, according to IBASE's top officers (Torres, 2007). It was received with great enthusiasm, but it lost importance in recent years, up to the point that IBASE decided to discontinue this activity. By & large, this pioneering initiative was followed by quite elaborated documents such as sustainability reports, social & environmental reports, a sophisticated tool for measuring BSR created by the well known Brazil's Ethos Institute, not to mention other documents with similar goals, such as local & international auditable norms for the social & environmental aspects of business. As a conclusion, we may consider that the myriad of reporting forms existing nowadays correspond to a new "market for virtue", to the changes that BSR has gone through recently, but differently from IBASE's original concerns, they are rather a tool for various economic relations among corporations, & not at all a "society-oriented" instrument towards enhancing societal accountability of business. As in many other realms of the economic life, this will depend on the State regulation, as pointed out by the same Vogel. After recognizing that "labeling, disclosure, auditing, and certification components of civil regulations are not subject to state scrutiny", he concludes that "many 'voluntary' agreements between firms & governments are voluntary in name only, as the state retains final legal authority" (2007:6).

Gomez Schettini, Mariana, Gonzalez Bracco, Mercedes, Almiron, Analia & Zunino, Dhan (Gino Germani Research Institute, Social Sciences School, University of Buenos Aires, Buenos Aires, Argentina [tel: +54 11 3527 5582; e-mail: mariana-gomez@mail.fsoc.uba.ar]), **Local Strategies in Global Contexts: The Role of Urban Culture in the Tourist Policies of Buenos Aires, Argentina (2002-2009),** *International Sociological Association, Gothenburg, Sweden,*

¶ Since the early 1990s urban renewal plans have been applied in the historical centre & waterfront of Buenos Aires. In the context of a "tourist boom," as a consequence of the devaluation of the Argentine currency in 2002, public & private investments in urban renewal have been related to those policies which promote cultural tourism. Several cultural manifestations, strongly linked to renewed spaces, have been protected under heritage legislations for being considered authentic values of local identity threatened by Globalization. The main purpose of this paper is to analyse the role of the tourist, cultural, & urban policies of the Buenos Aires Government in the invention of local identity & the value of the urban culture heritage through two strategies: the Plan of Tourist Marketing for Buenos Aires (2007) & the Nomination of Tango for intangible cultural heritage of humanity (UNESCO, 2009). The paper states that urban heritage has a cultural value as well as an economic one, not to mention the fact that the commercial uses of culture has been the main objective of the local strategy has as its main objective the commercial uses of culture in order to insert Buenos Aires into the global market. All things considered, since the authenticity of places operates as an attraction in the international market of tourism, globalization, far from being a threat, seems to be the condition to revalorize local culture.

Goncalves, Ana (Institute of Social Sciences–University of Lisbon, Lisbon, Portugal [e-mail: ana.goncalves@ics.ul.pt]), **Performing Lisbon: The Entire City in a Brief Song,** *International Sociological Association, Gothenburg, Sweden,*

¶ If understood as a performative expression–both musical and Literary–that evokes images & organizes common discourses on the city, the Grandes Marchas de Lisboa [Lisbon Great Marches] acquire a renewed interest. Once these popular songs are a poetical-musical component of the Marchas Populares de Lisboa [Lisbon's Folk Marches Parade], one of the main cultural events on municipal festivities in June, whose motto is the city & its "traditions", the collection of more than forty lyrics provide a unique opportunity to examine a specific part of Lisbon imaginaries over the last seven & a half decades & its variations, its trajectories & its possible meanings. Briefly, this presentation aim to call attention to the way the city of Lisbon is being conceived & shared as a single & personalized space & thus made into urban culture, as well how those acts of imagination and communication are being shaped by social & political contexts. In order to accomplish those purposes, two themes will be particularly highlighted throughout it: the role of local authorities in the promotion & dissemination of narratives around history & place in urban public space, & the function of musical & cultural expressions as media to spread urban imaginaries.

Un Acercamiento a Viejos y Nuevos Problemas de Violencia en un Mundo Globalizado** (Mental Health and Childhood. An Approach to Old and New Problems of Violence in a Globalized World), *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ El problema de la violencia es un tema que cada vez se hace más complejo al interior de nuestras sociedades, y al que a las expresiones "tradicionales" habrá que sumar nuevas formas de representación, todo esto ante los cambios que ocurren en un mundo globalizado y en el marco de un proyecto económico neoliberal. Los niños son una parte de la población que presenta más grados de vulnerabilidad, con consecuencias socio psicológicas determinantes a lo largo de la vida. Metodología En el presente trabajo se aborda esta problemática desde una perspectiva sociológica y

crítica, recuperando en un primer momento una discusión que abarca desde el replanteamiento histórico contextual de lo que en llamada sociedad moderna ha dado lugar a los conceptos de infancia y de violencia; en ésta parte del trabajo se realiza una revisión documental de las diferentes teorías y perspectivas de investigación que han ido conformando una discusión en torno a estos dos conceptos, y el vínculo que para efectos del trabajo se puede tejer entre ellos. En un segundo momento, se recuperan y analizan estadísticas que en México y en el mundo refieren un panorama de violencia, con expresiones psicológicas que en por lo menos las tres últimas décadas, se traducen en un sensible incremento de registros sobre diagnósticos de padecimientos mentales en los diferentes grupos de la población, y con un particular impacto en ese periodo de la vida llamado infancia. Conclusiones Los contextos sociales, económicos y culturales en los que actualmente tiene lugar la producción de lo social, constituyen la referencia básica no solo para explicar sino para comprender el fenómeno de la violencia, y su lamentable y preocupante expresión en un grupo de la población que muestra una particular condición de vulnerabilidad, ahora agravado por una violencia estructural que se expresa en el deterioro de las condiciones de vida de amplios sectores de la población en México y en el mundo, afectando de manera alarmante a la población infantil. González Morales, Laura (Labcomplex UNAM, DF, México, 04510 [tel: 0445540623496; e-mail: thezin@labcomplex.net]), **The Concept of Development of Social Groups in the Context of Digital Technology,** *International Sociological Association, Gothenburg, Sweden,*

¶ Technological innovation has been an explanatory factor in the historical evolution of societies & has been seen as a premise of social change. However, as noted by the 2001 United Nations program, human development report development entails more than the simple increase or decrease of national income. Means creating an environment in which people can realize fully their potential and live in a creative & productive way in accordance with their needs & interests. This paper presents a proposal to argue a concept of development in the digital technological context based on the autopoietic proposal of Humberto Maturana & Francisco Varela in relation to the existence of third order units approach those who set third order links. These units are characterized by meeting their individual ontogenies primarily through mutual links in the network of reciprocal interactions, is a proposal directed to the recognition of the interaction processes of a social group of members that make possible the permanent rejoining of the environment in which they develop themselves. In this proposal the social groups are considered emerging systems whose interactions are self-observables by the members of the group permanently, allowing them earn degrees of consistency over time & respond to changing & specific needs of their environment, it recognizes that social groups as emerging systems are dynamic and self-organized.

Gonzalez-Perez, Guillermo J., Vega-Lopez, Maria Guadalupe & Cabrera-Pivaral, Carlos (University of Guadalajara, Guadalajara, Mexico, 44630 [tel: 523336411119; e-mail: ggonzal@cencar.udg.mx]), **Social Context and Childhood Homicide in Mexico,** *International Sociological Association, Gothenburg, Sweden,*

¶ Homicide rate in children <15 years old in Mexico is even relatively high; however, the causes of these homicides have been scarcely studied. This paper seeks to analyze the evolution of childhood homicide in recent decades & to identify the socioeconomic conditions that better explain the differences in homicide rates among states in triennial 2006-2008. Information on social indicators & homicides was obtained from Mexican official sources. Homicide rates were calculated for age groups 0-4, 5-9 and 10-14; triennial homicide rates were calculated for each Mexican state; through the use of the multiple regression analysis ("stepwise" method) the variables that better explained the interstate variations in the homicide rates were determined. Findings show a falling trend in the childhood homicide rate, with groups 0-4 & 10-14 presenting the highest rates. The proportion of murders by firearms is increased with age, but among children <5, physical abuse & neglect play an important role as cause of homicides. While in age group 10-14 the variations of homicide rate are explained by variables that reflect the presence of drug trafficking cartels & high levels of impunity in states, in youngest ages the variables that indicate high levels of poverty have a major weight to explain the homicide rate interstate variations. In such sense, results suggest that the context of social violence & social disparities currently prevailing in Mexico is a key element to understand the dynamics of childhood homicide in the country.

Goods, Caleb (Department of Social Science, Curtin University of Technology, Perth, Western Australia, 6845 [e-mail: caleb.goods@postgrad.curtin.edu.au]), **Fusing Labour and the Environment: the 'Green Jobs' Solution,** *International Sociological Association, Gothenburg, Sweden,*

¶ There is a growing scientific consensus that human actions are generating an environmental disaster, particularly in the form of global warming, which demands significant targeted policy action if this ecological crisis is to be averted. This need for action has however coincided with the global financial crisis, potentially the largest economic crisis within capitalism since the Great Depression. Critically, the global financial crisis has placed jobs and economic growth at the forefront of the environmental debate within Australia. The connection between the economic and ecological is consequently becoming an integral aspect of sociological research & inquiry as ecological issues increasingly impact on state policy, economic relations & electoral politics. It is within this economically skewed environmental debate that the concept of green jobs has emerged as an important element of the solution to both economic & ecological concerns. Within Australia the promotion of a green jobs agenda has been broadly welcomed and encouraged by labour unions; however, it has also created tensions between unions who feel threatened by the push to promoted green jobs & industries, & unions who view this changing dynamic as an opportunity for job growth & "industrial renewal". This paper will therefore briefly outline the current state of contestation of the green jobs agenda within the Australian labour movement, the state, business & the environmental movement, while also considering the international context of sustainable employment.

Gopal, Meena (Nehru Memorial Museum & Library, New Delhi, Teenmurti House, New Delhi- 110011 [tel: 00919953721030; e-mail: 4meena@gmail.com]), **Shifts in Women's Identities around Work and Ideology in South Tamil Nadu, India,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores: - shifts that have taken place in different forms of women's labour & their identities around it, in Tirunelveli district over more than a decade, with the labour process of women workers in home based beedi (cheroot) production as a point of departure. - specifically, changes in work processes, migration strategies & organisational efforts in the decade of active liberalisation policies with respect to labour & capital to induce growth in the Indian economy. The analysis indicates that: a) A sexual division of labour is entrenched in the beedi work of women, placed in the centre of household relations, social norms, and the ideology of women's work prevalent in the community. The ideology traverses between a notion of dependence that devalues women's labour in the domestic sphere & women's pride in accumulation born of the power of labour in beedi versus the freedom in agricultural labour. b) Migration induced work such as construction labour, or knitwear factory work, provides the context for women to negotiate between the restrictive work conditions and ideological traps of marriage, & construe it as comparatively liberatory. c) Women workers manage to balance participation between employer backed organising, traditional trade union initiatives & women's entrepreneurial collectives.

Gorbunova, Marina (Department of Sociology, Saratov State Socio-Economic University, 89, Radischeva str., Saratov, Russia 410003 [tel: 7 (8452) 333-173; 734-745; fax: 7 (8452) 332-212; e-mail: margor7@yandex.ru]), **Particularities of Emotional Labour of Social Workers in Russia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Particularities of emotional labour of social workers in Russia In the paper, a work of social workers is considered as process, which includes emotional experiences. Emotions of social workers have an influence on effectiveness & quality of interaction with the clients. The analysis of the place of emotions in the structure of social interactions is based in the article on the works by J.M. Barbalet, W.S. Johnson, J.H. Turner, J.E. Stets.

The role of emotions in labour process is considered with regard to the concept of emotional labour by Arlie Hochschild. Emotional labour is defined as a degree of manipulation by a person their internal feelings or behavior in order to show the proper emotion according to organizational rules or professional norms. The paper considers the results of the research of professional labour of social workers in the context of emotional labour. The method of interview was used in the research. 20 respondents participated in it. They are employees of social services of Saratov (Russia). The work experience of the respondents is from 2 to 8 years; age varies from 24 to 51, 19 respondents are women & 1 respondent is a man. All interviews show the emotional orientation of labour of the social worker. Sensations, feelings, emotional experiences play a greater role in labour of social workers. Interview analysis enables to single out three groups of emotional experiences, which connect with professional of social workers.

Gordon, Judith B, Lopes, Mathew, Pavlis, Shelia D & Raisz, Helen (Psychiatry, Yale School of Medicine, City of New Haven, Department of Public Health, AIDS Division, Ct. Mental Health Center Center, Retired, Department of Sociology, University of Hartford. New Haven, Ct. 06520 [e-mail: judith.gordon@yale.edu]), **Multidisciplinary Perspectives on AIDS Education, Then and Now,** *International Sociological Association, Gothenburg, Sweden,*

¶ This session has created an opportunity for us to reflect together about the ways we have gone about AIDS Education. The methods we applied in different settings include those advocated by Dean Winternitz in his 1931 proposals to establish a Department of Clinical Sociology at Yale School of Medicine and to also support sociological research at the Yale Institute of Human Relations (IHR). One of the first foci of IHR was to link the scholarship and research of the University to the city, state, nation and world via the acts of its undergraduates, graduates and fellows. An example of this process is the creation in 1986 of the New Haven Mayors Task Force on AIDS (MTF), which continues to date. The founding chair, Dr. Alvin Novick, reached out to other organizations. The Ct Society of Gerontology (CSG) responded. We turn to accounts about the IHR, MTF and the CSG to illustrate the complexity and challenges of developing, doing and sustaining AIDS education projects over time. We use archival data. We conclude by considering the relevance of these histories and practices to global understanding and local responses to HIV/AIDS as a health issue in the 21st century.

Gordon, Sara (Inst. Inv. Sociales Universidad Nacional Autónoma de México, Mexico Distrito Federal 04510 [tel: 525556227400; fax: 525556227417; e-mail: gordon@servidor.unam.mx]), **Leadership in Civil Society Organizations,** *International Sociological Association, Gothenburg, Sweden,*

¶ The purpose of our paper is twofold: on one hand, to explore the relationship among authority & leadership in civil society organizations (CSO). On the other hand, to analyze the relationship between decision-making rules & leadership forms. We use some insights about leadership in private enterprises & public administration organizations formulated by organizational theory to analyze a different kind of associations: CSO relying mainly on solidarity & on norms criteria & characterized by voluntary relations. Drawing on a perspective emphasizing the relational character of leadership, we part from organizational theory two main distinctions in order to inquire on the type of leadership which best suits the fulfilment of functions assuring membership commitment; among others, cohesion enhancement, motivation maintenance & consensus building. The first distinction is formulated at an individual level, among "soft" & "hard" leadership, the soft type implying a slight directive form, & the "hard" one, a great control on the organization members. The second distinction refers to an organizational level proposing three leadership categories: centralized, dispersed, rotational. We will analyze information gathered in questionnaires applied to 9 civil society Mexican organizations.

Gorshkov, Mikhail Konstantinovich (Institute of Sociology (Russian Academy of Sciences), Moscow, Russian Federation, Krzhizhanovskogo Street, 24/35, bld. 5, 117218 [tel: +7 (495) 719-0940; fax: +7 (495) 719-0740; e-mail: tiourina@rol.ru]), **Russian Society as a New Social Reality in the Face of the World Financial Crisis,** *International Sociological Association, Gothenburg, Sweden,*

¶ Overcoming the system crisis of 1990th century, Russia has followed the path of step-by-step & stable development. This gives us grounds (in spite of manifestations of world financial-economic crisis) to insist that for almost twenty years, & especially for the latest decade, reforming Russia became a post-reform one with a relatively developed & corroborating state, political & social institutions, supported by the civil majority as well as by stable social frames of mind. Sociologists have good reasons to believe that during the years of reforms the most qualitative new and quantitative widespread changes took place in three spheres of Russian society: social stratification, social inequalities, & social ordinariness. Qualitative & quantitative characteristics, by means of which we could describe the depth of the above changes, let us conclude that in fifteen years of reforms Russian society was formed as a new social reality. Undoubtedly the current situation in Russia as well as chances of its improvement are predetermined today by the present-day financial-economic crisis turned at an edge between 2008 & 2009 from a virtual, manifesting itself in a rather uneasy & panicked state of public opinion, into a real & actual one. The majority of Russian nationals started to a greater or lesser extent to experience its negative consequences directly (unemployment, wage cut) or indirectly (rise in prices). Moreover, there is a kind of risk group (approximately 15% of Russians) suffering extremely considerable–according to their self-appraisals–losses. Against a background of crisis Russians start to perceive the outward social realities otherwise. Confidence in Russia as a successful country taking the lead of long-term step-by-step economic & social development, growth of common wealth gives place to a sense of uncertainty. However, the current crisis is felt less critically & oversensitively than the one of 1998, when it seemed to everybody that the country was at a deadlock. Only about a quarter of Russians see the government & other power structures as responsible for the crisis, & it's an important factor which led to support stability in a situation of crisis. Russians don't expect from crises any serious political shocks, revolutions or even considerable changes in power. Most Russians believes that the crisis will last for a long time, maybe two or three years. At the same time they are not ready yet to change their lives or domiciles and master new professions. Even those social strata which suffered from the crisis a lot prefer to wait, spend savings, cut down their expenses & try to find additional earnings counting at the end of the crisis. Ratings for state officials came down as a result of the crisis, especially if we take as a reference point the most favorable period of spring & summer of 2008. However, a decline in ratings is not dramatic, but is regular and uniform in practically all social & age groups. The crisis demonstrated not only the potential of a political stability, but also the passivity of a national socio-economic system, the inability to take and realize non-standard decisions, transform economic policy and develop new social mechanisms. So, we take the risk of a stagnation of crisis phenomena for a long-range outlook as well as of a step-by-step development of the economic crisis into a system state one. Most likely the way out is not only economic modernization, but social modernization of a social system taken as a whole–the one which led to solve, even if step-by-step, a lot of the most difficult problems & questions–to stand up & counteract global crisis & hardship of competitive struggle, to modernize army & govern a big & complicated country–as regards its national and cultural structure–consolidating its democratic institutions & supporting stability.

Gorski, Philip S. & Sharma, Vivek (Yale University, New Haven, CT 06520-8625 [tel: 203-432-3730; e-mail: philip.gorski@yale.edu]), **Beyond the Tilly Thesis: Why States Didn't Make War, and War Didn't Make States,** *International Sociological Association, Gothenburg, Sweden,*

¶ A quarter-century ago, Charles Tilly famously quipped that "the state makes war, & war makes the state." This claim, rooted in Michael Roberts' contention that the early modern state was the product of the 16th-century military revolution is now the conventional wisdom in the social sciences & policy communities. In this essay, we argue the Tilly thesis rests on a fundamental misunderstanding of premodern war and, indeed, of war tout court. More positively, we contend that the strong states of Western Europe have a dual root: the new family regime established in the 11th & 12th centuries, and the confessionalization processes of the 16th & 17th.

2010S00951

Gottschall, Karin (Centre for Social Policy Research, University of Bremen, 28203 Bremen, Germany [e-mail: k.gottschall@zes.uni-bremen.de]), **Women Friendly Welfare States? Understanding the Role of the State as Employer,** *International Sociological Association, Gothenburg, Sweden,*

¶ Welfare capitalism has been characterized by a gendered division of labour, disadvantaging women. Irrespective of this general trend, women's situations vary substantially across Western European countries. These

differences have been attributed to varieties in welfare state & market systems, with strong welfare states and coordinated market economies seemingly most favourable to women's social status. Obviously, the state plays a crucial role here, in providing services & in acting as an employer. While there is rich evidence on the favourable effect of service provision on women's labour market integration, the gender equality impact of the state as employer is more disputed as strong welfare states and coordinated market economies tend to display relatively high gender segregation & vary in state employment rates. The talk will address this puzzle by investigating the dynamic & profile of state employment in selected European countries. Special attention will be given to problems of definition of state employment & the analysis of its quality & relation to market employment uncovering the often overlooked interaction of class & gender.

Gouda, M Sateesh (Gulbarga University, Sateesh Gouda, Data Analyst, KHPT, IT/BT Park, 1-4. Behind KSSIDC Admin Office, Rajaji Nagar Industrial Town, Rajaji Nagar- Bangalore-560044 [tel: 080-40400200; fax: 080-40400300; e-mail: sateeshgouda@gmail.com]), **Globalisation and Emerging Corporate Social Responsibilities Structures in India,** *International Sociological Association, Gothenburg, Sweden,*

¶ Rational of the study: Globalisation is the slogan that has come to dominate the world since the nineties of the last century with the end of the cold war & the break-up of the former Soviet Union. Globalisation opened up economics world over & offered scope for investment in any part of the world & also brought the new opportunities to developing countries to participate globally in socio-economic & cultural affairs. Globalisation has not only brought new opportunities to developing countries but also has given rise to the practice & concept of Corporate Social responsibility (CSR). CSR is a concept with a growing currency around the globe whereby companies integrate social and environmental concerns in their business operations & in their interaction with their stakeholders on a voluntary basis. Organizations, now, are realizing the need to shift their focus on the interest of society. Many of the thinkers & the experts express their opinion that there are very few studies conducted to understand the practice of CSR in India in a true sense. Therefore an attempt is made in the present study to understand the CSR Structure in Multi National Companies in India. Goals and Objectives: As the scope of CSR increase, the amount of attention and approach increases every year. This has led to some of organisations to change the structure of CSR or hunt for better structure. Moreover the effectiveness of services & the response to organisatioanl responsible activities are depending on the way companies are planned to reach their motto, so it is important to understand the structure of CSR in any organisations. Therefore the effort was made to understand the different structures of CSR bodies to achieve the goal/motto in India. Methodology: In order to service the study purpose, the information about the MNC's CSR structure was collected through available published corporate annual reports gathered for the last few years & data was also used from the surveys conducted from different organisations and individuals. Conclusion: Previously, each division was engaged in its own CSR activities. To integrate such divisional efforts into overall group engagement & develop the efforts even further, the CSR Committee & CSR Department were established in recent times. At meetings of the Committee, chaired by the president & CEO, CSR challenges for the entire company are discussed & the divisions can then tackle such challenges.

Goudsblom, Johan (University of Amsterdam [e-mail: J.Goudsblom@uva.nl]), **Evolution of Culture and Cultures,** *International Sociological Association, Gothenburg, Sweden,*

¶ Cultural evolution is the continuation of biological evolution by other means. This is a familiar allusion to the famous saying attributed to Clausewitz about war & politics. It is an appealing phrase, elegantly put. In my talk I shall explore its implications. In the first two parts I shall discuss the two basic concepts and their history, first evolution, & then culture. In the third part I shall link the idea of cultural evolution to a series of events that I call "the expansion of the anthroposphere"- that is, the increasing human presence in & imprint upon the biosphere

2010S00954

Gourdin, Gregory & Schepers, Rita (Centre for Sociological Research, Katholieke Universiteit Leuven, Belgium [e-mail: Gregory.Gourdin@soc.kuleuven.be]), **A Political Perspective on the Relation Profession - Management. The Medical Council in Belgian Hospitals,** *International Sociological Association, Gothenburg, Sweden,*

¶ Archetype-theory gained prominence in the literature dealing with the "managerialization" of professional organizations. However, this theory has been criticized. Due to its functionalist legacy it underplays the role of agency in the organisational structure or in its change. Following this critique we develop a political perspective on the relation profession - management. Such a view stresses the interlocking of organization & domination. However, control does not just apply to workers & work–"rule by rules" implies rulers are also object of regulation. Agency will be directed at having an impact on rule creation. In the end organizational structure is designed to control the agency of both profession & management. The elaboration of structure is not to be seen as a function of the qualities of work, or of organizational performance. Rather our analysis of the genesis of the medical council in Belgian hospitals suggests that it results out of the actors' agency within a specific policy process.

Gouvias, Dionysios (Department of Pre-school Education and Educational Design, University of the Aegean, Rhodes, Greece, 85100 [tel: +30 22410 99147; fax: +30 22410 99147; e-mail: dgouvias@rhodes.aegean.gr]), **'One Step at a Time': Strategic Planning and Practical Steps in Accountability-driven Reforming of the Greek Higher Education System,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the last few years, dramatic changes have taken place in the Greek Higher-Education sector. New legislation has been gradually introduced, which challenges the traditionally high autonomy of institutions of Higher Education (HE) in matters of administrative regulations, study structures, assessment of students & teachers, financial provisions etc. The Greek State, after a period of a relatively low degree of involvement in issues of "academic quality", is becoming surprisingly "interventionist". The most important feature of this legislation is that its provisions link–for the first time in Greek history–the outcome of the (planned) assessment of the HE Institutes to their future funding. This paper, using a critical-policy analysis framework, examines how the implementation of the new "accountability system" is evolving in terms of strategic planning, as well as of specific practical steps. It also raises issues about the power balance between the State on the one hand, & the–hitherto highly autonomous–academia, on the other. In this endeavour, the use of Bourdieu's concept of the "field" will be operationalised, in the sense that higher education will be examined as a field consisting of cognitive & structural mechanisms that mediate sociopolitical and economic forces.

2010S00956

Govind, Madhav (Centre for Studies in Science Policy, Jawaharlal Nehru University, New Delhi, INDIA, Centre for Studies in Science Policy, School of Social Sciences, Jawaharlal Nehru University, New Delhi-110067, India [tel: 91+9868732956; e-mail: mULgovind120@rediffmail.com]), **Socialization of Science Students in Indian Academia in the Era of Liberalization,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study explores the impact of market forces unleashed by economic liberalization on the pattern of socialization of science students (doctorate) in Indian academia. Many studies have shown that proper socialization mediated through effective mentoring of students during their doctorate training is directly related to their academic success, scholarly productivity & subsequent career achievement. As the preparation for an academic career in science goes beyond a mere understanding of "cognitive dimensions" of scientific principles & laboratory techniques, a researcher is also required to imbibe ethical values, professional standard & expectations of his/her peer groups in the discipline. The lack of these additional professional skills not only hampers the success of researchers in their career but also often compels many potential scholars to abandon the field of scientific research. In India a slew of reports have indicated a steady decline in interest for pure science amongst students showing a discernible stagnation of PhDs & research publications in science. This is a serious concern for a country like India which is moving towards a knowledge-based economy. The researchers in Indian academia are facing new challenges posed by the global and liberalized economic regime. The paper is based on the in-depth interview /observation of 200 research students & their supervisors from three disciplines–Life Sciences, Physical Sciences & Computer Science–from the five academic institutions located in the different parts of India. The process of transmission of knowledge has been examined along four variables: organizational culture, socio-economic background, disciplinary culture & the source of funding for the research group. The study shows that market-oriented commercial research in academic institutions in India is gradually transforming the mentoring practices, the recruitments of students & the selection of research topics.

Grabowska-Lusinska, Izabela (Centre of Migration Research, University of Warsaw, Banacha 2b, 02-097 Warsaw, Poland [tel: + 48 22 6597411; fax: +48 22 822 74 05 e-mail: i.grabowska@uw.edu.pl]), **Post-accession 'Intentionally Undpredicatble' Returns to Poland and Their Selectivities,** *International Sociological Association, Gothenburg, Sweden,*

¶ Poland's accession to the European Union in May 2004 and subsequent emigration to countries, which opened their labor markets for Poles were events widely discussed in migration literature. What has been noticed was that this migration process was a very specific form of mobility, related to the movement of "New Europeans". It featured mechanisms unobserved before. Due to a significant, in terms of quantity, yet relatively short history of post-accession migration, little discussion has been devoted so far to issues related to return migration of this group of migrants though. This paper aims at answering the questions of who is the post-accession return migrant and what are the patterns of Poles' contemporary return migration. The gathered material allows to conclude that returning to one's home country may have either a long-lasting character in the intentionally ended returns or a short-term perspective captured in intentionally unpredictable migrations. The analysis was carried out on both - quantitative data, extracted form public statistics (National Census and specially adjusted data from the Polish Labor Force Survey) and qualitative data, gathered by means of in-depth, individual interviews with experts and return migrants.

Graffe, Gilberto J. (Universidad Central Venezuela, Caracas [tel: 00582126930814; fax: 00582127518452; e-mail: graffeg@cantv.net]), **El Enfoque Pedagógico de Paulo Freire** (The Pedagogical Focus of Paulo Freire), *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ Desde una perspectiva histórico documental, la presente investigación examina la experiencia de las Comunidades Eclesiales de Base (CEB) como expresión de educación social en los sectores cristianos populares comprometidos con el desarrollo de América Latina a partir de finales de la década de los 60. Estos grupos, se caracterizaron por la utilización del enfoque pedagógico de Paulo Freire: El Método de Concientización. Al aplicar este pensamiento pedagógico, las Comunidades Eclesiales de Base (CEB), conscientes de su condición de oprimidos y a la luz de su fe como cristianos de sectores pobres de Latinoamérica, desarrollaron un proceso de reflexión crítica, caracterizado por un proceso de diálogo comunitario sobre las acciones que debían emprender para salir de esta condición humana de opresión. Todo ello desde su propia praxis liberadora, para transformar su realidad histórica, a partir de la reflexión de su praxis concreta, apoyadas en el desarrollo de la Teología de la Liberación, adaptando, además, el método Ver, Juzgar y Actuar, creado por la Juventud Obrera Católica de Europa a los principios esenciales del Método de Concientización de Paulo Freire, que fueron desarrollados fundamentalmente en sus obras "Pedagogía del Oprimido" y la "Educación como Práctica de la Libertad", a saber: El reconocimiento de la condición de oprimido, el diálogo como instrumento esencial de la educación para la libertad y el sujeto que aprende debe apropiarse del conocimiento para transformar su realidad histórica. Palabras Clave: Método de Freire de Concientización, Teología de la Liberación, Educación Social, Comunidades Eclesiales de Base.

Grahn, Karin (Department of Food and Nutrition, and Sport Science, University of Gothenburg, Box 300, Gothenburg, 405 30 [tel: +46-(0)31-7862072; e-mail: karin.grahn@ped.gu.se]), **Bodies, Norms and Gender in Sport–Constructions in Textbooks Used in Coaching Education Programmes,** *International Sociological Association, Gothenburg, Sweden,*

¶ Many young people in Sweden are currently involved in organized sport. They meet norms & ideas about being girls & boys. Some notions state already-established ideas, while other notions are challenging & create new ideas. The paper describes & analyses ideas generated about boys & girls in sport, as they are presented in textbooks used in coaching education programmes. The paper especially focus on discourses of gender in relation to descriptions of the body & bodily development during puberty. Gender theory is adopted. Gender is socially constructed and notions of femininity & masculinity are discursive. Selected parts from 14 textbooks, in six sports, dealing with adolescent years were analysed. Text & discourse analyses were carried out to answer how gender is constructed in relation to the body. Analyses of genre, style & discourse types were done to see how knowledge is formed & stated or challenged by the textbooks. Femininity & masculinity are constructed by treating girls and boys bodies as opposite or as comparable. The paper will present gender in relation to a problem discourse respectively a functional discourse, the former constructing girls as problematic in sport and the latter constructing boys as "normal" & natural athletes.

Gran, Brian K. (Case Western Reserve University, Cleveland, Ohio, USA, 44106-7124 [tel: 2163682694; fax: 2163682676; e-mail: brian.gran@case.edu]), **Advancing Children's Rights? : The Work of Independent Children's Rights Institutions. An International Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ Across the world, independent children's rights institutions (ICRIs), sometimes called children's ombudspersons & children's commissioners, have been established by national governments to implement, promote, & monitor children's rights. Recently, the U.N. Committee on the Rights of the Child has specifically asked leaders of a number of national governments to establish an ICRI in their country. Yet the goals, the organization, & the contexts facing these ICRIs vary widely. Little is known about what attributes of ICRIs aid in the implementation of children's rights, and what characteristics weaken these efforts. This paper will discuss how differences in independence & legal powers, key attributes of these offices, & other characteristics, shape efforts of ICRIs in implementing, promoting, & monitoring children's rights. It will ask to what degree ICRIs are capable of advocating for children in public & private domains. This paper will contribute to research on which institutions are necessary for ensuring rights and are useful for changing children's lives across the world.

2010S00961

Gran, Brian K. (Case Western Reserve University, Cleveland, Ohio, USA, 44106-7124 [tel: 2163682694; fax: 2163682676; e-mail: brian.gran@case.edu]), **Children's Rights: Universal, or Is It All Relative?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Are human rights universal? Or are they western ideals? Children's rights brightly shine a spotlight on universalism v. cultural relativism debates on human rights. At this point, rarely are children given the chance to vote for their rights. Instead, children's rights are imposed from above. After all, the most widely ratified international human rights treaty is the U.N. Convention on the Rights of the Child. This widespread ratification implies children's rights are embraced all over the world,

2010S00962

Gran, Brian K. & Bryant, Rachel (Case Western Reserve University, Cleveland, Ohio, USA, 44106-7124 [tel: 2163682694; fax: 2163682676; e-mail: brian.gran@case.edu]), **The UN Does Not Go It Alone,** *International Sociological Association, Gothenburg, Sweden,*

¶ Does the United Nations serve its purpose? Is the United Nations perhaps a necessary, but by itself insufficient force for implementing human rights? This paper will employ an innovative methodological approach, Fuzzy Set Analysis (FSA), to examine whether the United Nations is capable of implementing human rights in contexts in which national governments are widely breaching citizen's rights. It will ask whether other factors must combine with the work of the United Nations to implement human rights successfully. This paper will also examine failures in implementing human rights: are factors producing failure the opposite of those producing successful human rights implementation? FSA permits an analysis of multiple causal combinations to explain degrees of human rights implementation. It is anticipated that, by demonstrating that other institutions are essential when gross violations occur, this paper will contribute to debates over the utility of the United Nations for implementing human rights.

Grant, Otis B. (Indiana University South Bend, South Bend, IN 46634-7111 [tel: 574.520.4157; fax: 574.520.5031; e-mail: ogrant@iusb.edu]), **Juvenile Identity in Contemporary Society: A Post Structural Approach to Adolescence,** *International Sociological Association, Gothenburg, Sweden,*

¶ Almost by definition, adolescence is a time of development and transition, of significant change in virtually every aspect of the child's functioning. These changes are physical, psychological and social. This is also a period in which many youth have increased behavioral problems. A post structural elucidation of adolescence signifies that human development is a fundamental part of society, and thus, adolescence is a social institution

with a professional prescribed structure & a public presence which operates at both the conscious & unconscious levels. For instance, the fact that African American children were once slaves means that any conjectures of African American adolescence must be conceptualized within a paradigm of White Supremacy. Accordingly, Black identity, although intertwined with White norms & values, actually manifests distinctly from Whites. A juvenile's self knowledge and subsequent identity is shaped within a post structural world that is complex dominated by everyday interaction which is consumer orientated. Consumerism becomes the way of life, a ritualized, almost spiritual aspect of being. It is within this framework that adolescent identity manifests, & as such, behaviors that are aggressive, violent & conflict oriented are not only valid, but expected.

2010S00964

Graser, Leonor (Université Paris 3 Sorbonne nouvelle / Cerlis (Paris Descartes-CNRS), Paris, France [e-mail: leonor.g@free.fr]), **From Socialization to Literary Creation. The Use of the Fiction for a Sociology of Novelists?,** *International Sociological Association, Gothenburg, Sweden,*

¶ What if literature threw light on the practices & social representations of those who present themselves as writers? Can we consider that fiction is a heuristically pertinent object for the scientist? This gamble introduces our study. From a corpus composed by thirty novelists livening up the Parisian literary scene–all generations, all social origins & positions, all literary styles taken together–we have mixed discourses analysis & works interpretation to produce qualitative data about the being & living as a French writer in the twenty-first century. Putting declared representations (produced in interviews) and fictive substance (written works) into perspective, we suggest to examine the interactions between socialization & the creative process. In the context of this session, we will present the theoretical & methodological tracks at the origin of our empirical survey & more particularly the use we made of two hundred contemporary novels, to illustrate how the analysis of literary texts allows the researcher to provide sociological knowledge on the writers.

Grau i Grau, Marc (Social Policy/University of Edinburgh [tel: ; e-mail: marcgraugrau@gmail.com]), **Father's Quality Time with Children: The Cases of France, Spain and Sweden,** *International Sociological Association, Gothenburg, Sweden,*

¶ A large number of studies have tested the hypothesis that positive paternal involvement benefits children. Reading, playing and talking to children has a positive impact to their behavioral and cognitive outcomes. This paper analyses whether the allocation of quality time devoted by fathers to children differs across parental education level, employment status & receiving (or not) help with childcare in three countries: France, Spain & Sweden. The data are based on HETUS (Harmonized European Time Use Surveys). The results show there are substantial differences in the time devoted to children between married males (fathers) & married females; however, the quality of childcare is very similar across genders and countries. Second, Sweden is the country in absolute terms where the time devoted to children by fathers & mothers is more similar. Third, the respective educations of the father & the mother are important indices of the quality time they spend together.

Grausgruber, Alfred, Grausgruber-Berner, Rosemarie, Meise, Ullrich, Koren, Gernot & Schöny, Werner (Department of Sociology, University of Linz, Linz, A-4040 [tel: +43.732.2468.8574; fax: +43.732.2468.8561; e-mail: alfred.grausgruber@jku.at]), **Does Society Matter? Evaluation of the Austrian Anti-Stigma-Campaign "Schizophrenia Has Many Faces",** *International Sociological Association, Gothenburg, Sweden,*

¶ The "Schizophrenia has many Faces" campaign conducted in Austria between 2000-2002 was prompted by World Psychiatric Association's (WPA) campaign "Open the Doors–against Stigma & Discrimination because of Schizophrenia". In order to evaluate the effectiveness of the Austrian campaign, a comparative study was undertaken to assess the possible changes in the general public's attitudes towards issues relating to schizophrenia. In 1998 & again in 2007 a representative survey was conducted to assess these attitudes. The 2007 results suggest that this campaign had not been very effective. Twenty two percent of the population was not familiar with the term "schizophrenia", 81 % did not want further information about the illness, & 64 % agreed with the statement that patients suffering from schizophrenia are dangerous. With the exception of the last indicator, all the others have not substantially changed. A further finding is that there has been an increase in social distancing towards this group of patients. There were also some positive results. There was an improvement in the attitude of the public towards the possibility of a cure for schizophrenia & experts generally agree that the campaign has had a positive influence on psychiatry. Generally these results lead one to question whether a campaign which focuses on schizophrenia is a suitable strategy to diminish social stigma towards mental illnesses.

Grebenyuk, Alexandr Alexandrovich, Ryazantsev, Sergey Vasilievich, Pismennaya, Elena Evgenievna & Manshin, Roman Vladimirovich (Centre of Social Demography and Economic Sociology of Institute of Socio-Political Research of Russian Academy of Science, Moscow, Leninsky Prospect 32A, Russian Federation, 119991 [tel: +79264544942; e-mail: gaamma@mail.ru]), **Immigration of Compatriots to Russia: Potential, Effects and Perfection of State Migration Policy,** *International Sociological Association, Gothenburg, Sweden,*

¶ The stimulation of migration is one of the ways to improvement of the negative demographic situation in the Russian Federation. Compatriots are considered the most favourable migrants, because they know language, culture, traditions & they accommodate better than other migrants do. Now more than 17 million Russian people live in CIS & Baltic States. A part of this population forms the forecasting migratory potential (3-4 million people), which Russia can receive for medium-term outlook. The experience of the last years shows that we can expect a beneficial effect of the migration flow of compatriots on persistence population. There is an interest of the Russian government in return migration. In 2006, the President signed the decree "On the measures to aiding voluntary return of compatriots living abroad to the Russian Federation". The government will give them citizenship, payment for passage and baggage delivery will pay a benefit & travel allowance in accordance with proper governmental scheme. Despite of some weak points of the migration scheme in 2008-2009 more than 17 thousand compatriots have migrated to Russia with the help of this governmental scheme & about 90 thousand are in different stages of resettlement. Our investigation was based on statistic data and used sociological methods. The conclusions contain a analysis of a structure of a migration flow, a forecast of compatriots return in medium & long-term outlook & a survey of migration factors and weak points of the governmental migration scheme.

Green, Brian E. (Keene State College, Department of Sociology and Anthropology, Keene, NH 03435 USA [tel: 1-603-358-2519; e-mail: bgreen@keene.edu]), **Global Governance for Resource Dispute Resolution: Connections between Energy Scarcity, Ecological Conflict, and the Future of International Regimes for Addressing Environmental Crises,** *International Sociological Association, Gothenburg, Sweden,*

¶ Numerous scholars in the social sciences, international relations, and other areas related to public policy have been discussing the evolving regimes of global governance over the last half-century, particularly as they relate to clearly international or global problems such as global warming & energy supplies. Some go so far as to argue that formal, constitutionally established international institutions are necessary to create binding mechanisms for adjudicating between conflicting parties & to seek justice for under-represented groups, such as indigenous peoples or very small countries. Others, recognizing the complexity of establishing such institutions & the traditional bounds of national sovereignty, suggest developing existing global governance mechanisms through the UN & other international political & economic organizations to implement strategies that are both democratic in principle and effective at solving international crises. In terms of environmental concerns, peak oil, global warming, and transboundary water conflicts, for example, all present unique and challenging problems that the societies of the twenty-first century will need to address. Do we have governance mechanisms in place that will prevent these issues from erupting into regional or global conflict? What are the specific mechanisms that are necessary to prepare for potential environmental problems that are unique in comparison to society's past problems? This presentation identifies specific problem areas in international energy and natural resource policies & considers the effectiveness of both existing global governance avenues & alternative models.

Green, Brian E. & Kryszczuk, Maciej D. (Keene State College, Dept of Sociology and Anthropology, Keene, NH 03435 USA [tel: 1-603-358-2519; e-mail: bgreen@keene.edu]), **Social Implica-**

tions of the Digital Divide, *International Sociological Association, Gothenburg, Sweden,*

¶ The most interesting characteristic of the internet, in comparison to other types of contemporary ICTs, such as mobile phones or GPS devices, is the exceptional extent to which it enables the user to access a nearly infinite amount of information, often in an interactive way. While the internet can be used for a wide range of purposes, from professional work like occupational or academic research to pure entertainment like gaming or watching streaming television video, we hypothesize that, in general, internet users attain human & social capital that translates into tangible benefits for social status attainment. This study tests that hypothesis by analyzing data from the Polish Panel Survey (POLPAN) collected in 2003 & 2008 from a representative sample of Poles. Our work is situated in the growing body of work on the digital divide & other work on the social aspects associated with the IT revolution & its resulting impacts on post-modern societies. In previous analyses of POLPAN data, we have documented the evolution of household PC possession & the growth of internet use in a post-communist country. Our results show that there are clear distinctions in access to & use of ICTs in Poland across rural and urban groups, different levels of educational attainment, and occupational groups. Our recent analyses give some preliminary evidence that possessing a PC & using the internet have a small, but statistically significant effect on income. In the current analysis we use regression analysis to compare people who use the internet alone & those who use it with the help of others to those who do not use the internet to determine if there are significant differences in income growth among internet users as compared to those who do not use the internet at all. After controlling for age, educational attainment, pc possession, previous income, previous internet use, sex, & occupation, the results show that internet users do have significantly higher incomes than non-users. The paper also addresses issues of measurement & methodological concerns for a sociology of the internet.

Grieder, Andrea (EHESS, CADIS & University of Zurich, Paris, France and Zurich, Switzerland [e-mail: aULgrieder@access.uzh.ch]), **Exploring the Trustworthiness of the Other,** *International Sociological Association, Gothenburg, Sweden,*

¶ The youth, survivors of the genocide against the Tutsi in Rwanda, have lived with barbaric violence, death & loss. They have been born and grown up with the genocide & they are the generation of the future. How to believe in & construct the future when the past has been marked so heavily by destruction? Official discourses call for social cohesion & unity, but survivors have lived through multiple forms of betrayal. How to trust in the other, the world and in the own being? As many authors have stressed (Luhman Niklaus, Ernst Gellner) trust is one of the pillars of social cohesion, a crucial element in social order to anticipate the future, avoid chaos & reduce complexity. According to Diego Gambetta, trust is the expectation of not being betrayed, deceived again. It may open the possibility to imagine the future. Within the emotional & relation context of post-genocide society, trust is a risky & fragile moment in the process of individual and collective reconstruction. Drawing on my anthropological research in Rwanda (from 2006 - 2008), I focus on socio-cultural meaningful situations to demonstrate how individuals explore the trustworthiness of the others through acts of speaking & how these intersubjective interactions shape their being in the world.

Grigsby, Janet P. (Union College, Schenectady, NY 12308 [tel: 5183888023; fax:; e-mail: grigsbyj@union.edu]), **The Community Service Miniterm: An Effective Innovation in Service Learning,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since Hurricanes Katrina & Rita devastated the American Gulf Coast in 2005, thousands of American college students have donated their time to the recovery efforts. This paper presents a preliminary analysis of an innovative undergraduate sociology course at Union College that combines a service experience in Louisiana with academic study of the 2005 disasters. It argues that embedding a service trip within an academic course maximizes service learning outcomes generally, & is especially effective for helping students cope with the extreme challenges hurricane recovery work presents. The course also benefits from 1) a strong but balanced sociological approach underlying the academic work, 2) strong financial & institutional support, & 3) the urgent and sympathetic situation in south Louisiana that stimulates prepared students to confront the reality of contemporary social problems and develop critical thinking about how to find & implement solutions. It argues that compared to other course formats & to non-academic-based service, this course has greater benefits for students themselves, the communities they serve & the larger academic institution.

Grime, Janet, Richardson, Jane & Ong, Bie Nio (Primary Care Sciences, Keele University, Staffs, UK, ST5 5BG [tel: +44 (0) 1782 734833; fax: +44 (0) 1782 733911; e-mail: j.c.grime@keele.ac.uk]), **"Don't Give Up, Keep Going": A Longitudinal Qualitative Study of Resilience and Wellness in Older People with Osteoarthritis,** *International Sociological Association, Gothenburg, Sweden,*

¶ A rise in the numbers of frail older people in Western society is predicted, & seen as problematical because of anticipated pressure on health care resources. Definitions of frailty are contested. It is considered to involve increased vulnerability to stressors due to physical, age-related decline. Some have criticised the concept for its negativity & argued that older people can be resilient in the face of frailty. In our longitudinal qualitative study we explored resilience amongst 27 older people who had osteoarthritis but rated themselves as healthy. During base line semi-structured interviews we explored respondents' experiences of health over their life course. Diary sheets were sent for 11 months to record changes in circumstances. Respondents decided on further contact with researchers. Apart from osteoarthritis, many respondents had other problems. All felt it important to keep going and not to give up. Many factors helped people cope, including previous experience of overcoming adversity, reciprocal relationships with others, sustaining roles and interests, & having sufficient socioeconomic resources. Frailty and resilience were not mutually exclusive states. Those aged eighty & over, like the younger ones, in our study drew on strengths & resources developed over the life course. Health and social services can affect resilience.

Grodach, Carl W. (University of Texas Arlington, School of Urban and Public Affairs, Arlington, TX 76019 [tel: 2149061806; e-mail: grodach@uta.edu]), **Cultural Economy Planning in Creative Cities: Discourse and Practice,** *International Sociological Association, Gothenburg, Sweden,*

¶ While much research has been devoted to understanding the functional mechanisms of the cultural & creative industries, there has been little attention to how local governments translate this work into policy. Moreover, existing work in this vein tends to focus on the influence of Richard Florida's creative class thesis on urban policies rather than considering the wider body of work that may influence cultural economy planning. This paper seeks to develop a deeper understanding of how municipalities conceptualize & plan for the cultural economy through the lens of two cities held up as model creative cities–Toronto, Ontario & Austin, Texas. The work pays particular attention to how the cities adopt & adapt leading theories, strategies, & discourses on the cultural-creative economy & how the cities are modifying their approach to address the effects of recession on different types of cultural economy activity. While municipal policy documents indicate that the cities have embraced the creative city model, in practice, agencies involved in cultural economy planning predominately adapt conventional economic development strategies for cultural economy activity & appropriate the language of the creative city to suit their own purposes. The recession has had contradictory effects on cultural economy planning & policy.

Grosglik, Rafi (Ben Gurion University, Department of Sociology and Anthropology, Beer-Sheva, Israel [tel: 972523293111; e-mail:

rafig@bgu.ac.il]), **"The Global Ingredient": 'Organic Hummus' and Cultural Glocalization in Israel,** *International Sociological Association, Gothenburg, Sweden,*

¶ "Hummus be-Tahini" is an ancient dish customary in Middle Eastern Cultures. In Israel it is appropriated as an icon of Israeliness. Tracing the production, marketing & consumption of a recent version of the Dish–"Organic Hummus", while focusing on its ingredients–local chickpeas, imported sesame seeds from which 'organic tahini' is made in a Jewish factory situated in the Palestinian authority area, & 'fair trade' Palestinian olive oil–uncovers the social & political layers embedded in it. My claim is that the global socio-economic conditions & ideas embedded in the concept of 'organic' attached to 'hummus' allows an imagined re-localization of the dish. "Organic hummus" is a culinary-ideological-dissonance dish steeped in paradoxical aspects. It is a product which was perceived as representing local simplicity, but nowadays wears an economic & symbolic framework of global values used by the Israeli westernizing elite to demonstrate a widespread-environmental cosmopolitan identity.

Grosjean, Sylvie, Huet, Romain, Bonneville, Luc, Gross, Christiane & Jungbauer-Gans, Monika (Université d\'Ottawa, 554 King Edward, Ottawa, Canada, K1N6N5 [tel: 6135625800; e-mail: sylvie.grosjean@uottawa.ca]), **La Mise en RéCit de l'activité de Travail : Une Activité RéFlexive sur la Pratique Soutenant l'appropriation de Connaissances** (The Effects of Social Capital and Mentor-Mentee Characteristics on Productivity and Success in Academia), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ In this contribution we examine which forms of social capital and characteristics of a mentor-mentee relationship are beneficial for the mentee's productivity & success in the academic labor market. Various social mechanisms have been elaborated to explain the effects of social capital on success in the labor market. It has not yet been investigated though whether the strength of weak ties (Granovetter 1973) & structural holes (Burt 1995), structural autonomy (Burt 1980) & rank prestige by a powerful mentor (Newman 2004) influence opportunities in the academic labor market. In a second step we consider the characteristics of the mentor-mentee relationship. Due to homophily, we expect the relationship to be more intense when the mentor & mentee do not differ strongly in age & gender. The intensity of this relationship is not in all respects favorable for the mentee. To exemplify this, one can bring the Mathew effect back in, arguing that the achievements of a common paper are ascribed to the senior rather than to the junior coauthor. To test the hypotheses we use data from a sample of 713 German academics, who passed their "Habilitation" in one of three different subjects (sociology, mathematics, or law) between 1985-2005. Academic success is measured by the chances of being promoted to an associate or full professor, whereas productivity is quantified by the total number of publications & the number of those publications listed in the Science Citation Index (depending on discipline). We find slight evidence for the beneficial effect of weak ties & dense networks for the subsample of sociologists, whereas mathematicians and jurists benefit most from a mentor with high reputation, underlining the importance of rank prestige. Nevertheless, mathematicians even diminish their academic success by writing papers together with their academic mentor. Male academics are more likely to publish together with their mentor than female academics. The presentation concludes with the results concerning the influences of the mentor-mentee characteristics on success and productivity.

Gross, Jochen & Gross, Christiane (Institute of Sociology, Ludwig-Maximilians-Universität München, 80801 München [tel: +498921806216; fax: +4989218013517; e-mail: jochen.gross@soziologie.uni-muenchen.de]), **Rational Choice Explanations on Smoking Behavior and Empirical Relevance,** *International Sociological Association, Gothenburg, Sweden,*

¶ Smoking related diseases are responsible for millions of cases of death each year. Although smoking can be seen as the most effective causation of mortality & people (at least those in highly educated countries) know about the health danger of smoking, about a third of the German population is a regular smoker. Consequently, the question arises what theories of rational choice can contribute to the explanation of smoking behavior? In order to answer this question, two approaches of the rational choice paradigm are presented: Theories of habit & addiction & the human capital approach. The hypotheses derived from these theories are tested with four datasets (Eurobarometer 1995, Bundesgesundheits-Survey 1998, telefonischer Gesundheitssurvey 2003 & ALLBUS 2004). The Hurdle-Regressions used do not only allow the qualitative discrimination between smokers & non-smokers, but also treat the number of cigarettes consumed as a count variable. As a result, mainly stable effects of age, sex, & education upon the smoking-status (smoker versus non-smoker) & the mean number of cigarettes consumed by smokers are found. Indeed, unemployed persons are more likely to be smokers, but they do not smoke more cigarettes per day. The effects of marital status, income, & size of domicile vary heavily depending on the dataset used, which might explain different findings in previous publications. Although addictive behavior intuitionally appears to be an anomaly of the rational choice paradigm, we can show that this approach provides feasible hypotheses for the explanation of smoking behavior.

Grötsch, Florian & Schnabel, Annette (GSGG University Göttingen, Göttingen, Germany, 37083 [tel: +49 (0)551 3914698; e-mail: florian.groetsch@mail.uni-goettingen.de]), **Integration–What Integration? The Religious Framing of the European Integration Process,** *International Sociological Association, Gothenburg, Sweden,*

¶ For modern western democracies, but especially for the European Union, social cohesion is an important indicator of integration. The presentation asks if religion still plays a role for framing social cohesion: historically, religion became an increasingly important aspect of shaping European identity & thereby social cohesion on the EU-level. But is this mirrored on the individual level as well? In this paper, we empirically test the central assumption of the European Commission that religion possesses special powers for integrating & linking people in the European integration project. We therefore combine a document analysis of the importance of religion for the self-concept of "Europeaness" at a European level with a quantitative multi-level analysis of individual attitudes. For the multi-level analysis we use data from the European Value Survey 1990 & 2000 & include country-level data from different sources to include the nation-state's legal and institutional framework. The data show that in fact over a ten years' period, the European project starts to turn into an identity project with religion as a key factor. The analysis presents a comparison between countries on different levels taking the broader historical context into account. Although limited to Europe the analysis adds to a broader insight into the complex relationship between religion, social integration & social cohesion.

Gruic, Igor & Bartoluci, Suncica (Faculty of Kinesiology University of Zagreb, Zagreb, Croatia, 10000 [tel: +38513658754; fax: +3853634146; e-mail: igruic@kif.hr]), **Reinterpretation of National Identities in Sport: Iztok Puc–Case Study,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the modern top-level sport, national identity ceases to be the only basis for the individual's identification with the community due to the "natural" characteristics of the bond. The examples of athletes who have changed citizenship, thus assuming a new "professional" identity for numerous reasons, such as better training conditions, higher salaries, life partners or refugee situations, etc., are no longer exemptions as they are rather common in recent decades. In this paper the case of the team-handball player Iztok Puc is defined in the framework of national identities associated with career & sport achievements on one hand, & the geopolitical & social dynamics in ex-Yugoslav space on the other. This case is unique because of the fact that Puc participated at three summer Olympic Games representing three different countries; in 1988 in Seoul for the SFR Yugoslavia, in 1996 in Atlanta for the Republic of Croatia, & in 2000 in Sydney for the Republic of Slovenia. This is also a typical case since he was born in Yugoslavia & he played for various clubs from several former Yugoslav republics during his career, therefore his understanding of national identity within the trinity territory-language-community remained within the same contours, which enabled "mobility" in & between citizenships. The described case-study is an attempt of reinterpretation focusing on the dynamic character of the relations between national identity and sport in contemporary society.

Grut, Lisbet, Thorsen, Kirsten & Grant, Abby (SINTEF, Oslo, Norway, NO-0314 [tel: +4799368151; e-mail: lisbet.grut@sintef.no]), **Life Course and Ageing Among People with Rare Disorders. "You Got to Have a Good Life While You Can",** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction: Progress in medical treatment, better quality in training & follow-up have led to longer duration of life & an expected improved quality of life for many living with a rare disorder. The elderly within these groups are experiencing a complex ageing process. Knowledge on life course & ageing processes for people living with a rare disorder is scarce. Methods: The data are collected by qualitative in-depth interviews about life course, focus group interviews & qualitative semi-structured interviews. The sampling method is strategic. Data are analysed within theories on life course & ageing. Results: The interviews reflect wide variations in life course & ageing experiences. This is related to the interplay between type & severity of the disorder & the individual's social life. Some informants belong to the first generation elderly within their group. Family & social life, education & employment have been more important to them than coping with the rare disorder. Still, for some the disorder has represented significant limitations through the life. The signs of ageing seem to appear at a much earlier age than expected. This creates insecurity as they have few others with whom they can share the experience about ageing with a rare disorder. Conclusions: More knowledge is necessary in order to develop relevant services of good quality for persons with rare disorders that are in the second half of life.

Gudmundsson, Henrik (DTU Transport, Kgs. Lyngby, Denmark, 2800 [tel: +45 45266543; e-mail: HGU@transport.dtu.dk]), **Re-Framing the Use and Influence of Indicators,** *International Sociological Association, Gothenburg, Sweden,*

¶ The use of information in policy making has been critically examined in research areas such as evaluation research, planning & policy sciences. This research has moved the understanding of how information is adopted (or not) in policy making beyond assumptions of instrumental use (=knowledge applied to problem solving) towards the recognition of for example symbolic, tactical, or, more broadly, "enlightening functions". "Indicators" is a particular knowledge type with high pretence of relevance & usability for policy. The paper will be written in the context of the research project POINT, which studies how indicators are used in practice, & to what extent & in what way indicators actually influence policy. A preliminary theoretical framework for how to describe, evaluate, and possibly explain how indicators are influencing policies has been developed in POINT. The paper will present this framework, and discuss how to review it, based on emerging lessons from empirical studies of indicator use in areas like sustainability, environment, and transport policies. The aim of the presentation is to seek a dialogue with sociological indicator scholars on how to conceptualize study & interpret the role of indicators in policy making.

2010S00982

Guenter, Sandra (Department of Sociology and Sport, University of Bern, 3012 Bern, Switzerland [tel: 0041 (0)31 631 8324; fax: 0041 (0)31 631 4631; e-mail: sandra.guenter@ispw.unibe.ch]), **Doped Bodies. State of Exception?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Despite the assumption "higher, faster and further" in competitive sports, doping is illegal. Doped bodies or even cases of death are still tabooed & marginalized in the field of (doping) sports. Under the assumption of (re-)construction of social order doping & doping tests establish effective mechanisms of inclusion & exclusion in society. Therein the attempt to sustain the ethos of sports, which are honesty, equality and naturalness, is reflected. This discourse analysis focuses on the question which kinds of bodies are created by society and social subsystems & it will show how marginalization causes normalization (Foucault). The attitude of the community towards death through doping & the acceptance of the responsibility for it will be discussed & then opposed to the doped body as "homo sacer" as described by Agamben. According to Giorgio Agamben the "homo sacer" is bare life, the figure of (in)justice, who was and is existing in almost every society beyond human civilization and was outlawed in medieval times. For him the constant renewal of the borders drawn between what is inside & what is outside is an essential trait of modern biopolitics & produces lethal exclusion and consequences. This theoretical framework will be applied and discussed with respect to doped bodies & the border between inclusion & exclusion in sport.

2010S00983

Guerini, Michela (Department of Sociology, University Milan-Bicocca, Via degli Arcimboldi 8, 20126, Milano [tel: +39 3389256639; e-mail: m.guerini4@campus.unimib.it]), **Social, Cultural and Economic Capital Predict Happiness and Satisfaction of Life,** *International Sociological Association, Gothenburg, Sweden,*

¶ The study focuses on happiness & satisfaction of life in relation with Bourdieu's definition of Capitals (social, cultural and economic) in selected European countries using the dataset of the European Social Survey (ESS-Round 2). The first part of the paper describes how the three indicators are composed, which values ensue from them & which differences exist among the considered countries. The second part of the paper presents the statistical models developed applying logistic regression analysis with the purpose to define how happiness & satisfaction of life are individually influenced by the three types of capital. The results show significant differences between countries on the prediction of how people felt (happy & satisfied by life) in relation with Bourdieu's Capital Indicators. For each result some explanations are proposed to better understand the relations between subjective and objective data & to contribute to the advancing of social studies on wellbeing.

2010S00984

Guerini, Michela & Boffi, Marco (Dep. Sociology, University Milano-Bicocca, Via degli Arcimboldi 8, 20126, Milano [tel: +39 3389256639; e-mail: m.guerini4@campus.unimib.it]), **Degrowth into Political Practice. Wellbeing and Sustainability as Intrinsic Effects,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper focuses on the spread of a degrowth proposal into Italian politics & highlights the results that such proliferation entails. The research emphasizes the individual activity and explains the increasing of degrowth practices not as the result of institutional driving forces but as a consequence of single actions fostering altogether a cultural change. We focused on Virtuous Municipalities' Association (VMA), a network of several Italian municipalities that, since 2007, officially refers to degrowth principles applying locally a decrease of consumptions, wastes and ecological footprint of the administrative establishment and promoting social relations, conviviality & citizens participation. Activism is promoted by subjective well-being, which is the result of intrinsic motivation that allows individuals to experience a state of self-determination & a sense of competence. Individuals mainly reproduce situations connected with their own well-being promotion. In conclusion, the spread of degrowth proposal into Italian politics is due to an individual process and to an activation endorsed by the public administration. Such process reproduced in each municipality, makes the degrowth practices expand. The openness toward society explains the effectiveness in creating a wide network starting from local actions & the achievement of a new model of sustainability for Public Administration.

2010S00985

Guerra, Joao (Institute of Social Sciences - University of Lisbon, Av. Prof. Anibal de Bettencourt, 9 -1600-189 Lisbon [tel: +351 966654148; fax:; e-mail: Joao.Guerra@ics.ul.pt]), **Local Government and Local Sustainability–Local Conditions for Public Involvement in Sustainable Development,** *International Sociological Association, Gothenburg, Sweden,*

¶ The impact of environmental degradation on the quality of life and ecological conditions seems to be a large promoter of some new tools of public engagement, which are gaining room in the area of confluence that this paper sets out to analyse: sustainability and governance. Getting greater public awareness & social significance in the late 1980s, sustainability & governance are sharing basic purposes & characteristics and, consequently, overlapping their main potentials. Based on some particular results of a survey applied to Portuguese municipalities & focusing in particular on the central role of Portuguese local administrations and their openness or reticence to citizenry & civic engagement in local sustainability decision-making, this paper will discus and analyse present conditions for public participation in local sustainability initiatives (Local Agenda 21 Initiatives, Participative Budget; Municipal Environmental Plans; Revision Processes of Municipal Master Plans). The results show that the key to success of those participative initiatives in Portuguese municipalities would reside in a clear engagement of executive municipal administrations & an unreserved involvement of political authorities. Only this can guarantee an effective transfer of power, and, of course, the necessary clarification of deliberative methodologies & efficient regulation of the instruments for sharing decision-making powers.

Guerreiro, M. Dores, Rodrigues, Eduardo & Barroso, Margarida (CIES, Lisbon University Institute, Avenida das Forças Armadas, 1649-026, Lisboa [tel: 00351217903077; fax:

00351217941404; e-mail: cies@iscte.pt]), **Healthy Organizations and Quality of Work in Europe. New Challenges for Organizations and Professional Groups,** *International Sociological Association, Gothenburg, Sweden,*

¶ The study of the quality of life at the workplace constitutes a very dynamic research area in sociology. In a worldwide context shaped by the intensification of global competitive demands and organizational efficiency, the need to identify & recognize the characteristics of the "healthy organizations" has been accentuated, which are understood as the organizations having the dual agenda of pursuing their core business objectives while simultaneously meeting the human resources needs of quality of life & work. This paper aims to present the results of the European project *Quality of Life in a Changing Europe*, which intended to analyze quality of life & work in four sectors of activity (Telecommunications, Retail, Health Services & Finance) in eight European countries (Bulgaria, Finland, Germany, Hungary, The Netherlands, Portugal, Sweden & the UK). This paper will discuss how the organizational demands are influencing the quality of life and work of professionals, highlighting how professional groups are coping with change & how organizations are meeting their need for sustainability. The research project took place from 2006 to 2009 and was developed based on a quantitative & qualitative methodological approach. 32 organizations were surveyed & around 8000 questionnaires were applied to European workers.

Guerreiro, Maria das Dores, Rodrigues, Eduardo, Caetano, Ana, Couto, Ana Isabel, Barroso, Margarida & Oliveira, Ana (CIES, ISCTE-IUL, Lisbon, Portugal [tel: +351 217903077; fax: +351 217940074; e-mail: ana.caetano@iscte.pt]), **Gender and Entrepreneurship in Portugal,** *International Sociological Association, Gothenburg, Sweden,*

¶ The increasing importance of entrepreneurship in European public policies is strongly connected to a growing awareness of Small and Medium-Sized Enterprises' (SME) contribution to central dimensions of contemporary societies: economic growth, quality of life, employment & qualifications. Gender inequalities in entrepreneurship are now in the European agenda, & specific initiatives are being directed at increasing entrepreneurship activities among women. The profile of entrepreneurs in Portugal shows high perception of financial difficulties related to starting business, low risk tolerance & high probability of starting a business out of necessity. This situation is particularly relevant considering the low levels of qualification of the Portuguese population, especially in connection with labour market, quality of work & tensions from reconciling work-family life. Using a gender perspective, the aim of this paper is to examine entrepreneurship patterns in Portugal, how they affect the daily functioning of SME, and how they influence the life course of entrepreneurs. We'll give emphasis to the gendered dynamics of sameness & difference identified from the concrete entrepreneurship experiences found on the field & from the existing indicators on entrepreneurship activity, & also to the way existing policy measures to promote entrepreneurship integrate a gender dimension.

Guerrero, Cristina Joy (NISAL, Linköping University, Kungsgatan 40, 60174 Norrköping, Sweden [tel: +46 11 363402; e-mail: cristina.joy.guerrero@liu.se]), **With This (Disabled) Body,** *International Sociological Association, Gothenburg, Sweden,*

¶ Couplehood is an area of relationship between disabled people that is under-researched in comparison to self-evident family relationships with their parents & siblings. Although there are expanding networks between disabled adults, few texts explore partnerships of love between disabled people. Most texts that discuss disability and relationships usually only describe spousal care by an able-bodied partner to a disabled one. It is also taken for granted that the disability was acquired after the marriage. This paper discusses the preliminary results of a qualitative interview study with couples, where both partners have a long-term disability and have had the opportunity to live long lives together with their impairments. The aim of the study is to contribute to knowledge about disabled people's relationships, as well as to explore the meanings & actualizations of care in these relationships over time, changing bodily states & age. The study is ongoing & is being analyzed using a Grounded Theory approach. Preliminary results indicate that the dichotomy between caregiver & care receiver become less clear as partners usually take on both these roles simultaneously. Care in the relationships might also have different meanings & actualizations depending on the changing needs & bodily states of both partners.

Guerrero, Sandra (Zayed University, P.O. Box 4783 Abu Dhabi, United Arab Emirates [tel: 971 2 599-3614; fax: 971 2 443 4847; e-mail: Sandra.Guerrero@zu.ac.ae]), **Gendering Urban Space in Abu Dhabi,** *International Sociological Association, Gothenburg, Sweden,*

¶ This research started with the premise: the introduction of postmodern spaces, as part of the modernization of the city of Abu Dhabi, has challenged normative behavior regarding strict gender segregation in public places. It attempts to answer the following questions: Are the pressures of the modern world eroding ancient gender spatial segregation practices still taking place in Abu Dhabi? Is the future of the city to be westernized? The following locations where observed: shopping malls, cinemas, cafés, public beaches, beauty salons, events such as concerts, weddings, elevators and means of transportation such as buses & taxis. Researchers gathered data through participant & non-participant observation and interviews with students of Zayed University, over a three year period. Students participating in the course "Gender & Urban Space" taught this spring gathered data over a three month period. Findings were discussed & analyzed in the context of the course. Despite of the apparent mingling of genders in modern public spaces, there are rules that are followed in order to maintain segregation, as there are also strategies that attempt to break those rules. The city struggles with both its identity as a modern metropolis & its past way of life.

Guerrini, Daniel & Oliveira, Renato de (Sociology Department - Federal University of Rio Grande do Sul, Porto Alegre, Brazil, [tel: +55 51-32736283; e-mail: danielULguerrini@hotmail.com]), **Administrative Action in Brazilian Free Software Public Policies,** *International Sociological Association, Gothenburg, Sweden,*

¶ This article discusses the free software implementation policies in Brazil in the federal government, in the state of Rio Grande do Sul and Paraná, from 2002 to 2008. The aim of this study is to comprehend the procedure behind the public legitimation of these policies. In order to develop this analysis, we have observed the action of the policies' managers, whose objectives were to achieve technological autonomy & to establish collaborative practices towards economic growth. As a theoretical framework, the technical innovation debate was placed as part of Habermas' theory about the moral-practical rationalization of a society. Journalistic material available on the Internet which contained those managers' discourse to pursue the public legitimation of the analysed policies was therefore gathered. Thus it was possible to observe an administrative action towards the legitimations of the policies. Among the observed instances that validated such hypothesis are the predominant action of the Executive Branch conforming those policies & the identification of the technical qualities of free software to the solution of social problems. We concluded that these policies were used by a particular group of civil society to achieve political privileges, rather then creating an autonomous environment of innovation in national informational economy.

Gui, Marco & Stanca, Luca (University of Milano-Bicocca, Via Bicocca degli Arcimboldi 8, 20126 MILANO [tel: 02 64487577; e-mail: marco.gui@unimib.it]), **Television Viewing, Satisfaction and Happiness: Facts and Fiction,** *International Sociological Association, Gothenburg, Sweden,*

¶ Despite the increasing consumption of new media, watching television remains the most important leisure activity worldwide. Research on audience reactions has demonstrated that there are major contradictions between television consumption & the satisfaction obtained from this activity. Similar findings have also emerged in the relationship between television consumption & overall well-being. This paper argues that television viewing can provide a major example where consumption choices do not maximize satisfaction. We review the evidence on the welfare effects of TV consumption choices, focusing on two complementary dimensions: consumption satisfaction & overall well-being. Within each of these two dimensions, we consider both absolute & relative over-consumption, referring to quantity & content of television viewing, respectively. We find that research in different social sciences provides evidence of overconsumption in television viewing. We also outline how social & contextual variables can influence the size of overconsumption effects. The relevance of these findings for consumption of new media is discussed in the conclusions.

Guidi, Riccardo (Dipartimento di Scienze Politiche e Sociali - Università di Pisa/Fondazione Volontariato e Partecipazione, Lucca, Italy, 55100 [tel: +39 583 587645; fax: +39 0583 312748; e-mail: riccardoguidi@gmail.com]), **Social Policy at the Crossroad: A Dual Path For a Re-Formulation,** *International Sociological Association, Gothenburg, Sweden,*

¶ Keynes, Polanyi, Marshall, Titmuss, Myrdal. Contemporary social policies were based on the theories & on the proposals of heretical thinkers. Mediated by a rediscovering of their thinking, the current crisis may be used as a chance for a new design of social cohesion. This paper tries to design an approach to social policies that is based on (and renews) the lessons of the classics. First of all I propose a path of crossed re-reading between them that is focused on three key-points: 1. the ineffectiveness of laissez-faire & the consequent need for a new centrality of politics; 2. a definition of equality which is not paternalistic; 3. the need for a dynamic vision of citizenship. This promise can be updated with the reference to the "capabilities approach" (Sen) and to the plural & deliberative theories on democracy (Dahl, Habermas). But another contribution to the reformulation of social politics comes from the collective actions of social movements. In Italy (one of the more distorted welfare systems in Europe), in the '80s, voluntary associations developed a very interesting debate about the need of a new social policy. From the bottom of the organized voluntary action we can find some confirmation to our theoretical effort to found a transformative social policy. The result is an orientation to new social policies based on three interconnected dimensions: 1. empowerment (user), 2. sociability (citizenship), & 3. institutions building (institutions).

Guijarro, Jan (Juan March Institute, Madrid, C/. Castelló 77, 28006 [tel: ; e-mail: jguijarro@march.es]), **The Use of Personal Traits as a Screening Device in Different Educational Settings,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recent research in both economics & sociology has shown that cognitive skills & personal traits play a significant role in the stratification processes. However, there is still uncertainty about the institutional settings, in which the impact of these factors is greater. This paper tests the hypothesis that employers will rely more on educational credentials & less on personal traits in countries where the educational signal is clear, whilst the opposite is expected when signaling is diffuse. In the latter cases, firms will rely more on personal characteristics such as ambition, sociability & creativity as indicators for individual productivity. Hence it is expected that the pay-offs to personal characteristics are larger in low-signaling educational systems. The study will test this hypothesis using data drawn from the European Social Survey, which includes a battery of questions about personality traits together with very rich information on individual, job & firm characteristics. Countries will be selected on the basis of the reliability of the dependent variable (entry into occupational classes) as well as on the characteristics of the signals their educational & training systems provide.

Guillaume, Olivier (EDF R&D / LISE CNAM, Clamart France 92140 [tel: 01 47 65 26 51; e-mail: olivier.guillaume@edf.fr]), **Organization of the Operator's Work and Organization of Nuclear Power Plants,** *International Sociological Association, Gothenburg, Sweden,*

¶ From the analysis of the process operators' work in French nuclear power plants, this communication analyzes connections between the profession of operators & the global organization of nuclear power plants. The omnipresence of risk & the hegemony of the technical culture bring power plants to be strongly centralized and organized into a hierarchy. But uncertainties & technical difficulties weaken the hierarchical organization & infer the teams of operators to adopt a collegial organization. This last one allows the aggregation of specialized knowledge to elaborate consensus within forums. The team leader then evolves from a decision-maker's position towards the driving force of the team. Furthermore, the incapacity of some members to demonstrate their technical skills over the long term or to support the specific working schedules, lead them to go out of the shift teams. The driving services split into segments with space & temporality differentiated. The global organization tries to coordinate the multiple professional segments by a standardization of time in a sequential way. But their work is also punctuated by negotiations with the maintenance professions, emergencies & speed which alternate with phases of looseness & waiting.

Guimaraes, Antonio S. A. (University of Sao Paulo, Av. Luciano Gualberto 315 FFLCH Departamento de Sociologia Sao Paulo SP Brazil [tel: +55 11 30913703; fax: +55 11 30914505; e-mail: asguima@usp.br]), **The Search for African-Descendent in Brazil: New Data on Racial Classification,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Brazilian population for centuries experienced what is called "whitening" in the literature, i.e., a process of racial reclassification through which mixed-blood people were inclined to self-define in lighter colors. In the last decades however there is evidence of an open process of darkening–i.e. the re-classification of whites as *pardos* (brown) & of *pardos* as *pretos* (black)–as suggested by different sources data, such as the census bureau & the PNAD (National Sample Research of Households). Using recent pools on race relations, specifically data on racial classification in Brazil (DataFolha 1995 & 2008; Abramo 2003) as well as administrative data of a public university that adopted a racial quota system of selection, the author explores the ways self-classification & classification by others are changing in the 21st century due to a bunch of new incentives for Blackness: affirmative actions, Black pride, cultural negritude, and political mobilization. This empirical framework will be the basis for a more historical approach to the changing meaning of race in Brazil.

Guimaraes, Nadya A., Hirata, Helena & Sugita, Kurumi (Department of Sociology/University of Sao Paulo, Av. Prof. Luciano Gualberto, 315 - Sao Paulo, SP, Brazil - 05.508-010 [tel: (55-11) 3091-3703; fax: (55-11) 3091-4505; e-mail: nadya@usp.br]), **Care Work in a Comparative Perspective: France, Japan and Brazil,** *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Although situated in contrasting historical contexts, France, Japan and Brazil are all facing the same reality of aging of the population & the tendency of growing professions related to care. Named "auxiliaires de vie", "helpers" or "cuidadoras", it is mostly women who occupy these professions & provide care for elderly & sick, which is carried out as unpaid work in the private sphere. This paper tries to explore the activity of care in the three countries by analyzing the social politics, labor markets and family forms as well as social networks. The authors will discuss the question of female migration (transnational or internal) related to social care work, & will try to analyze how the emergence of paid care work is related (or not) to the process of "de-housewifization". The socialization of care work goes with the formation of the profession. The national definitions of the professional categories, the training & the certification, as well as the potential conflicting situations in the transnational confrontation of these professional categories will also be studied.

Guinteiro, Maria Da Conceição (Núcleo de Pesquisa em Relações Internacionais; Universidade de São Paulo, Brasil; São Paulo, Brasil 05410-002 [tel: 00 55 11 3081 32 07; fax: 00 55 11 3081 32 07; e-mail: mquim@usp.br]), **Portuguese Women in Brazil–Family, Collective Memory, Myth, the Dreamt Dream,** *International Sociological Association, Gothenburg, Sweden,*

¶ Portuguese Women in Brazil a family, collective memory, myth, the dreamt dream Maria da Conceição Quinteiro Abstract/Summary This paper is the result of qualitative research, in which ten Portuguese women's stories were compiled through interviews. These women emigrated to São Paulo, Brazil, in the 50s, when they were still very young, with no parents or relatives. They were born and lived in hamlets located in Trás-os-Montes, Minho & Beira Alta in Portugal. In their native settle-

ments they were taught by their families a mothers, grandmothers, aunts & neighbours, a socialization group of utmost importance, as the hamlets were their hometown, their place of origin. These women acquired from neighbours & villagers knowledge to guarantee their own survival and that of their families, as well as how to reproduce values and rules of their social group, which was hierarchically established within the hamlet at a time when precarious life conditions and pre-modern social relations still existed in those Portuguese small communities. Despite the strong female discrimination, it did not prevent those women from daring & facing adversities that they would encounter on the way, as they emigrated to Brazil on their own, contrary to custom that enhanced individual male or family emigration. If poverty & famine had not swept Portugal at that time, never would a well brought up woman transgress & leave her family behind to emigrate in order to work to support herself and her next of kin. Dreams, legends & myths permeated the collective memory in those hamlets, isolated & distant from dynamic urban centers. Dreams that were forged throughout the centuries, glorious deeds, solutions to misfortunes, such as King Dom Sebastian's return, are still vivid & printed on the dwellers' collective memory. To be able to understand the dreams that triggered those women's decision to "go aboard", I resorted to Bandarra's dreams, whose prophecies were reinterpreted by Father Antonio Vieira and rescued by The Portuguese poet Fernando Pessoa in The Message. The "earth Garden of Eden" myth complements the dream dreamt by these Portuguese women. Key Words: women, migration, collective memory, daily life, dreams.

Gulbrandsen, Liv Mette & Ulvik, Oddbjørg Skjaer (Oslo University College, Faculty of Social Sciences, Box 4, St Olavs plass, 0130 Oslo [tel: + 47 22453655; e-mail: oddbjorgskjar.ulvik@sam.hio.no]), **Sociology of Childhood and Developmental Psychologies: Could They Tango?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Within the sociology of childhood, there has been a comprehensive and relevant critique of traditional developmental psychology. In this critique of the "child as becoming", there is a risk for making the growing & changing child theoretically invisible. There is a need for a reconceptualization which includes the processes of change the child is involved in, that means, an alternative comprehension of development. In this paper, we will discuss how concepts for processes of social participation could be included & developed within childhood research. Within various sociocultural theoretical traditions, the concept of social participation encompasses the child's continuous interplay & interaction with other people, including, amongst others, its parents, teachers and friends. The social participation of children is seen as being a basic premise for human development. In these traditions, the child's interplay & interaction with other people is embedded in the greater socio-cultural context. The everyday life of the child contains the forms of social participation that include the child and its partners in social interaction, & which binds together the stream of experiences that make up the child's developmental potential. The child's participatory opportunities change over time, & are highly regulated by the child's age.

Guliyev, Rufat (Azerbaijanian Sociological Association, Baku, Azerbaijan, AZ1102 [tel: +994 50 3249246; fax: +994 12 4978330; e-mail: azsocas@azdata.net]), **Court Reform in the Mirror of Public Opinion,** *International Sociological Association, Gothenburg, Sweden,*

¶ The conducted survey allowed to determine that one of the main factors that prevents development of the private sector is a lack of knowledge about laws by the entrepreneurs. Many citizens are not informed enough about their rights guaranteed by the law & do not realize the potentially useful role of the judicial system in democratic society. One of the reasons for the judicial power not to be able to fully satisfy demand for the services is the fact that this demand is artificially lowered because of the distrust by the population of the judicial system. The other reason that lowers demand for judicial services is a lack of economic growth, which doesn't foster growth of the need in resolution of economical arguments. A study of the public opinions, analysis of their judgments & proposals allowed to reveal the most relevant problems related to the work of courts & render of the judicial services, to determine the paths for extension of population's and business sector's access to the judicial services, which will help to further improve the judicial system & will become a cause of the more effective implementation of the goals of the judicial reform in Azerbaijan.

Guliyeva, Sveta (Azerbaijanian Sociological Association, Baku, Azerbaijan, AZ1102 [tel: +994 12 5302736; fax: +994 12 4978330; e-mail: sevdaguliyeva@mail.ru]), **Domestic Violence Against Women: Condition and Ways of Resolution,** *International Sociological Association, Gothenburg, Sweden,*

¶ The research has allowed revealing scales of violence against women in society, a degree of probability of susceptibility to violence, which is characteristic for women in the country. Women are exposed to sexual harassments by men frequently. More often these harassments are in a veiled, hidden form. Women are exposed to harassments at work and in the family, on the street and in different public places. Violence against women has the certain traditions in a way of life & mentality of Azerbaijanians. Frequently, children at a young age observe the facts of violence against the women in the family in which they grow up. Some teenagers get used to permanent violence & start to look at it with indifference. The idea of the total submission of women in a men's society has taken a strong place in the consciousness not only of men, but also of women. Therefore, the resolution of gender problems & the problem of eradication of violence against women demands not only influences on a men's society, but also thought over & the effective measures directed on revolutionary changes in the consciousness of women & their clearing of psychological dependence on men.

Gulshetty, Basawraj S. (Gulbarg University, Inamdar MSW PG college, Gulbarga, Plotno, 86, Sangamma-Jaynagar, University Road, Gulbarga 585105 India [tel: +91-8472 245503–009342352517; fax:; e-mail: drbsgul@rediffmail.com]), **Industrial Employees Leisure, Health and Safety–A Case Study of ALSTOM Projects India Ltd,** *International Sociological Association, Gothenburg, Sweden,*

¶ Industrial activities are the key to development of an economy. Managing the labour force is essentially an important factor in containing the negative consequences. Three of such factors are health, leisure, & safety, in the process of gaining high profits through optimum utilization of manpower. These factors are neglected thoroughly. Leisure, health, & safety measure play a vital role in maintaining industrial growth & harmony. The aim of undertaking this study is to find out the importance of leisure and safety measures on health at ALSTOM Project India Ltd. It is important that proper safety & leisure measures involve certain technical as well as non-technical specifications that employers should adhere to, this would help in enforcing a comprehensive procedure that would specify safeguard for employees. Leisure and safety measures improve employees morale & productivity. They help in improving work standards & reduce the fear of ill health. Research design: The methodology adopted for the collection of primary data is a field survey method. We used the technique of questionnaires & oral consultation on a sample of 50 respondents at ALSTOM Project India Ltd. Statistical tools were used for data analysis. Tables are used to represent the percentage at a satisfactory level. This study is totally descriptive and an analytical method is used.

Gun Cuninghame, Patrick (Universidad Autonoma Metropolitana-Xochimilco, Mexico City, Mexico, CP04960 [tel: +52-55-54837000 ext.3110; e-mail: pcuninghame@hotmail.com]), **Cognitive Capitalism, Labour Precarization & Social Conflicts Related to the Production of Knowledge in the Public University: A Comparative Study of Mexico and Italy,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recently, there has been increasing research interest in the effects of long-term crisis, globalization & now of the planetary economic recession on higher education & the public university. However, the creation of a global market in the provision of higher education & regional initiatives such as the Bologna Process in Europe have also begun to have an impact on Mexico & Latin America. While there have been several recent studies on these processes, few have examined the radical changes in work practices and conditions, particularly the precarization of part-time academic, research & administrative staff, one of the main causes of growing conflict within this sector over the issues of the production & distribution of knowledge in the public university. The main objective of this paper, therefore, is to identify the causes & effects of labour precarization in the globalized, commercialized public university, as a social conflict related to the production & dissemination of knowledge & as an integral part of the current transition from industrial to cognitive capitalism. In addition, this paper is part of a research project that is undertaking a comparative study on the impacts of the commercialization & globalization of higher

education both in Mexico, which is at an early stage, & in Italy, where these processes are at an advanced stage, mainly due to the Bologna Process, that has also led to a series of strikes & university occupations in opposition to its proposals, particularly among postgraduate students & researchers about to start an academic career, as well as part-time academic & administrative staff.

Gunderson, Shane (Florida Atlantic University, Boca Raton, FL 33334 [tel: 954-684-7015; e-mail: sgunders@fau.edu]), **Intellectual Work, Transnational Contention, and NGOs,** *International Sociological Association, Gothenburg, Sweden,*

¶ The East Timor transnational peace movement failed to galvanize momentum to intercede & suppress genocide in East Timor until the 1990s because there were competing & conflicting frame disputes that erupted among peace groups within the movement that eventually gained momentum through the media. The US & UN human rights policy debate on East Timor was situated in interstices, acquiescence, & reticence as a result of U.S. relations with Indonesia during the Cold War. Understanding United States relations with East Timor can only be explained by looking at Indonesian relations with the United States & by looking at the relationship of non-governmental organizations, churches & other public intellectuals' work as they successfully intervened to assist policy makers. Sidney Tarrow calls for scholars to "Consider the absence of Non-governmental organizations & unions from the purview of most social movement research on transnational contention: rather than ignore these entities, dismiss them as 'insiders', or place them under the social movement umbrella, we should see them as other forms of contentious politics & examine their relationship to movements, states, & international institutions"(66). This qualitative study is the antidote for this absence in social movement research.

Gunnarsson, Lena (School of Humanities, Education and Social Sciences, Örebro University, Örebro, Sweden, 70182 [e-mail: lena.gunnarsson@oru.se]), **Theorising the Structural Forces of Sociosexuality,** *International Sociological Association, Gothenburg, Sweden,*

¶ In my paper I draw on Anna Jónasdóttir's theory of love power in order to conceptualise the structural forces of sociosexuality. Jónasdóttir's concept of love power is developed as a parallel to the Marxist concept of labour power. It denotes the fundamental human sociosexual capacity to produce persons, not only in the procreative sense but also as the process of recreating existing persons "as socio-sexual individuated an personified existences" (1994, p. 221). Jónasdóttir argues that the fundamental material base of contemporary western patriarchy is to be found in the specific exploitative ways that the productive force of sociosexuality is organised. In the paper I examine a bit closer the parallel that Jónasdóttir makes between the gendered sociosexual power structure & the capitalist structure. Jónasdóttir suggests that women, by virtue of their sociosexual 'poverty', are forced to 'voluntarily' give their love to men to exploit, much like the worker is forced to 'voluntarily' sell her labour to the capitalist. Conversely, men must exploit women's love power if they are to "remain the kind of men that historical circumstances force them to be" (p. 225), like the capitalist must exploit labour in order to stay capitalist. Is this parallel viable? Are the forces compelling women to 'comply' with unequal sociosexual conditions just as based in material necessities as those forcing the worker to enter unequal labour contracts?

Gupta, Avita Khawas (Mrs. Avita; Hotel Management and Tourism/Suresn Gyan Vihar University, Jaipur, Rajasthan, India [tel: +919829064043; e-mail: avitakhawas@yahoo.com]), **Responsible Tourism: The Must for the Changing World,** *International Sociological Association, Gothenburg, Sweden,*

¶ Responsible Tourism " . . . creates better places for people to live in, & better places to visit." We are into an ever changing world with changing economies, social parameters, environment issues, climate, demographic changes (population growth, aging), diseases & epidemics & the various other products of this complex phenomenon of globalization. In this globalised system we cannot expect tourism to remain the same. It is also changing with that of demand & supply. The pillars of responsible tourism are therefore the same as those of sustainable tourism, an environmental integrity, social justice & maximizing local economic benefit. There are a number of forces that are driving the growth in Responsible Tourism, among them few are demographic changes, intellectual levels & so called globalization. Tourism is no more merely a leisure activity these days; rather it is a responsibility to undertake before moving for leisure or pleasure. Countries with tourism as major deciding factors in the GDP have already started various programmes on responsible tourism to understand the very basic concept of Sustainability. The 2002 Cape Town Declaration on Responsible Tourism in Destinations[1] defines Responsible Tourism as follows: 1.generates greater economic benefits for local people & enhances the well being of host communities 2.improves working conditions & access to the industry 3.involves local people in decisions that affect their lives & life chances 4. makes positive contributions to the conservation of natural & cultural heritage embracing diversity 5. provides more enjoyable experiences for tourists through more meaningful connections with local people, & a greater understanding 6. is culturally sensitive, encourages respect between tourists & hosts, & builds local pride & confidence. This paper specifically focuses on the various projects undertaken by various countries for responsible tourism & what are the various factors that initiate it.

Gupta, Kailash Chandra (Emergency Administration and Planning Program, Department of Public Administration, University of North Texas, Denton, TX 76201, USA [tel: +1 408 876 0136; e-mail: kailashgupta@my.unt.edu]), **A Cross-Cultural Analysis of the Disposition of Unidentified Bodies following Sudden Catastrophic Disasters,** *International Sociological Association, Gothenburg, Sweden,*

¶ The mass disposition of unidentified bodies following sudden catastrophic disasters leaves a Zeigarnik effect (prevents closure) on the surviving members of the community. My dissertation will be based on the Quick-Response Research on the disposition of unidentified bodies following (i) the 2004 tsunami in Sri Lanka and India, (ii) the 2009 cyclone Aila in Bangladesh & India, and (iii) the 2010 Haiti earthquake. The methods used included, field observations, document analysis, & interviews. I/we employed convenience sampling method for 155 interviews with family members of the deceased, government officials, forensic experts, morgue administrators, volunteers, priests, & DMORT operations leader. Findings indicate that a Haitian government agency moved bodies from streets by employing earth-moving equipment & buried corpses without attempting identification or performing last rites. In other countries bodies were identified to the extent possible, and rituals were performed. In Haiti people cremated bodies on site with gasoline. I/we observed no discrimination in varied efforts to deal with bodies, except for foreign nationals. This research suggests that improved efforts should be made to identify bodies. The study suggests that the handling of the dead by families could be considered if government resources are overwhelmed in US and Western societies.

Gupta, Mahima Modi & Modi, Ishwar (Freelance Artist, Camp Hill, Pennsylvania , USA [tel: +1-717-319-1519; e-mail: mahimaULg17@yahoo.com]), **Leisure and the Arts through the Ages: A Comparative Study of the Themes on Leisure in Early European and Indian Painting,** *International Sociological Association, Gothenburg, Sweden,*

¶ Leisure, it would be no exaggeration to say, is life itself. Whatever is beautiful & aesthetic pertains to leisure. The re-invigorating spirit of leisure is unparalleled. It is the fountain-head of all creativity including the arts, particularly the art of painting. It not only has a direct bearing on the creative process of painting but also a source of inspiration to the artists. Since leisure is so close to life, including that of painters, it is but natural that painters all through the ages ranging from prehistoric rock art to the present, mainly from Renaissance to the beginning of the abstract art in the twentieth century have painted on innumerable themes related to leisure. In the present paper an effort has been made to spell out the relationship & the interface between leisure & the arts particularly the visual art of painting. Any comparison between the themes on leisure painted in the Western & Indian painting is a Herculean task since both these art traditions not only apparently but also in their essence are very different from each other. In spite of the fact that a very large number of themes on leisure & related to leisure have been painted both in the Western & Indian art, in all their major categories & 'isms' or 'kalams', the theme selection is vastly different & common themes hardly exist. The only common leisure themes that have been painted both by the Western & Indian painters mainly pertain to the depiction of the months, hunting scenes, leisurely standing women, feasting scenes, flute players, children's games, music & dance scenes, playing cards, smoking, leisurely conversations, & of course the depiction of sensuous leisure, pleasure & entertainments.

Gupta, Priya (Institute for Social and Economic Change, Bangalore, Karnataka, India, 560072 [tel: 91-9980520842; fax: 91-80-23217008; e-mail: priya.knotty@gmail.com]), **Disasters and Vulnerability, Survival and Resilience of Two Village Communities in Coastal Orissa, India,** *International Sociological Association, Gothenburg, Sweden,*

¶ Regularly striking the east coast of India, cyclones hit coastal inhabitants the hardest. Two villages, one of fishermen, & the other of agriculturists, living near the sea, were selected to study the adaptation practices of people who have to face recurring disasters in the form of cyclones & occasional floods. Their occupations, which provide their livelihood, also add to the risks (more among the fishermen) of surviving the effects of cyclones, and their poverty (more so among the fishermen) increases the stressful conditions & vulnerability of their existence. Caste ethnicity & solidarity are strong among the fishermen due to their precarious existence, & is less visible among the agriculturists. A caste panchayat (council) is found in the fishing village, which moderates their fishing activities & life in general. Village councils are found in both villages (they are statutory bodies, unlike the caste council), though the caste council takes precedence in the fishing village. The agricultural village does not have any caste council. Despite a poor living standard, life goes on, & the villagers survive & endure the disasters that they face every year.

Gustafsson, Karin M. & Lidskog, Rolf (School of Humanities, Education and Social Sciences, Örebro University, SE-701 82 Örebro, Sweden [tel: +4619303184; fax: +4619303484; e-mail: karin.m.gustafsson@oru.se]), **Acknowledging Risk, Trusting Expertise, and Coping with Uncertainty: Lay People's Deliberations on Spraying an Insect Population,** *International Sociological Association, Gothenburg, Sweden,*

¶ In southern Gotland in the Baltic Sea, a moth outbreak has caused human nuisance & possible long-term effects on the tourist industry, prompting demands for intervention to reduce the insect population. At the same time, there have been warnings concerning the broader ecological consequences of spraying, not least for biodiversity. Through an interview study using a sample of local residents, their deliberations on the spraying are analyzed. In particular, the analysis focuses on the lay understanding of the situation & how this relates to a scientific understanding of it, its causes, & possible remedies. The study focuses on the narratives residents created to make sense of the situation and guide action, on the risks they associated with different action options, & on how these narratives relate to the expert view of the problem. The analysis shows that trust & distrust should not be seen as dichotomous, but must be more differentiated. Simultaneously, as the residents criticize specific knowledge claims & specific experts, their trust in science can strengthen. Furthermore, the analysis shows that citizen knowledge does not merely passively reflect science. Instead, citizens create meaning and construct knowledge by organizing personal experience and articulated knowledge claims into coherent narratives.

Gustafsson, Päer L. ([e-mail: paer.gustafsson@googlemail.com]), **Commercial Courts in Russia of the Late 1990s. Pillars of the Market Transition?,** *International Sociological Association, Gothenburg, Sweden,*

¶ A considerable number of economic actors gravitated towards Russia's commercial courts in the 1990s because of (rather than in spite of) the fact that the judicial outcome could be influenced with bribes. While it is largely undisputed that aspects of Russia's judiciary deteriorated in Putin's Russia between 2000 & 2008, some observers assume that the Yeltsin years of the 1990s were rosier for the rule of law. I argue that the commercial courts of the 1990s were blighted by corruption to a greater extent than is widely recognised. A logistic regression model shows that managers who accepted corruption at the time of market entry were three times more likely to trust the commercial courts for conflict resolution than managers who rejected corruption at the time of market entry. The counterintuitive correlation between the use of bribes outside the judiciary & self-reported trust in the commercial courts puts into perspective the notion that Russian courts of the late 1990s were in better shape than the corrupt and politicized courts of Putin's Russia.

Gustavo, Alonso González Valencia (Department of Language and Literature Education and Social Science Education of Universitat Autònoma de Barcelona, Bellaterra (Cerdanyola del Vallès), Building G-5, office G5-115. 08193. Spain [e-mail: gustavo.gonzalez@uab.cat]), **Ideas about the Citizenship and Citizenship Education in Student Teachers of Social Studies in a Public University in Colombia,** *International Sociological Association, Gothenburg, Sweden,*

¶ The ideas about citizenship & citizenship education are two aspects that reflect or can be an example of social representations. This matter is very important in citizenship, but it is more important in the teacher of Social Studies & citizenship education. This research is an approach to social representations of student teachers of Social Studies about citizenship & citizenship education in a public university in Colombia. The study, carried out during the first semester of 2009 in Colombia, combines different methods to collect information (a questionnaire, interviews, discussion groups, & class observations). The conclusions demonstrate the existence of continuities & ruptures. For example, for the student teachers the principal goal of Social Studies is the analysis & transformation of social reality. This perspective is coherent with the learning strategies they use, but there are breaks with the content selected & the classroom practice. The research tries to contribute to qualify the initial formation of teachers in topics such as citizenship education in the Colombian and in the Latin American context.

Gustavsson, Martin, Börjesson, Mikael & Melldahl, Andreas (Department of Education, Culture and Media, Box 2136, 75002 Uppsala [e-mail: martin.gustavsson@edu.uu.se]), **The Art of Success in Art. Social Origins, Educational Trajectories, and Artistic Careers in Sweden, 1938-2007,** *International Sociological Association, Gothenburg, Sweden,*

¶ What inherited & acquired resources do individuals, who are admitted to the most exclusive areas of the educational system or who establish themselves at the most prominent positions within professional fields, possess? How do these possessions change over time? In the paper, we try to answer these questions by focusing on the fine arts. We examine, on the one hand, the most dominant school of fine arts in Sweden, and, on the other hand, the field of artists. Our empirical data are constructed as collective biographies of the 1,100 students attending the school between 1938 & 1986 (information from the school archives concerning for example admission, prizes, study travels abroad) & of 13,500 artists (data on exhibitions, stipends, prizes, teaching positions, etc.) for the years 1945 to 2007. The main statistical technique employed is specific multiple correspondence analysis, enabling us to study the structures of the students' & the artists' properties as well as the relations between the two populations. We show that there is a strong relation between the leading school & dominant positions in the field of artists. One striking preliminary result a in a social democratic ruled country with a strong emphasis on equity in education a is that art students & artists increasingly are recruited from the upper middle classes.

Gutiérrez Resa, Antonio (Trabajo Social. Universidad Nacional de Educación a Distancia (UNED), Obispo Trejo S/N Facultad de Derecho. Madrid 28040 [tel: 630072166 y 91-3989071; fax: 91-3989051; e-mail: agutierrez@poli.uned.es]), **Gestión Transparente de la Solidaridad** (Transparent Management of Solidarity), *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ We have to start under consideration that the Solidarity Concept can not reduce at a simple definition; neither may identify it with what is doing this o that non-profit-making entity. More than this, it plans the transparent management of the Solidarity, requires the combination of the different categories of the solidarity, the same way as the multiple actions in were it may manifest itself. All things considered, to carry out a transparent management of the Solidarity supposes to assume complex levels of management, whose results have to be contrasted as effect of a structure clear designed for such proposal. The steps which we made to support, defence this position were consisted from a short revision of the solidarity supposed for different authors. So, from the solidarity this benefices who realises it without count with the beneficiary (Aristotle), o the charity as avarice corrective, taking care of to collocate well the benefit (Juan Luis Vives), a solidarity to avoid the suffering (R. Rorty) o of putting on limits to solidarity (Susan Sontag), such route permits us to think about the complexity of the solidarity y the possibilities for its transparent management. Our conclusion is it debs go beyond the economical transparency & balances, to development a management complex of the values which identifies the organizations. In this way, the management of the type of practiced solidarity, according the identifying values of the organisation, will be

favourable to a major & profounder transparent management of the solidarity.

2010S01015

Gutman, Yifat, Brown, Adam & Sodaro, Amy (New School for Social Research, 6 East 16th Street, 9th Floor, New York, NY 10003 [tel: 212.229.5737, x 3125; e-mail: yifat.gutman@gmail.com]), **Memory Studies from Past to Future,** *International Sociological Association, Gothenburg, Sweden,*

¶ For social scientists who study memory, there is a nagging concern that memory studies is inherently backward-looking, & that memory itself–how it is deployed, invoked, & utilized–can hinder efforts to move forward. It is the purpose of this paper to challenge this assumption by looking at the ways in which the study and practice of memory are ultimately about the present & future. This Janus-faced view of memory as looking to the past in order to shape the present & future is the basis for the increasingly relevant concerns & scholarship about the relationship of memory to democratic politics, human rights & transitional justice, and conflict resolution. This paper argues that in order to develop a full understanding of how individuals & societies remember, memory scholars must consider the influence of the future–as it is imagined & desired–on how the past is remembered, mobilized, & dealt with. This change of focus from past to future raises critical questions about the field of memory studies as a whole, on how temporality shapes our current conceptions and assumptions, & about particular issues regarding collective and individual memory. The paper discusses these questions & makes suggestions for developing a focus on the future in memory studies.

2010S01016

Guzzo, Pietro Paolo (Faculty of Communication Sciences University of Palermo, Viale delle Scienze Ed.15 - 90100 Palermo (Italy) [tel: +39 333 2637553 (Mob); fax: +39 984 893201; e-mail: pp.guzzo@unical.it]), **Italians Self-Help Groups in the Shadow of Law: Associations of Anticoagulant Patients between Embodiment of Illness and Health Community Governance.,** *International Sociological Association, Gothenburg, Sweden,*

¶ Abstract: e-health-revolution is everyday use of the Internet for therapy & diagnosis by the general public or by Self-Help-Care Groups (SHCG). In Italy SHCG (gruppi di auto-mutuo-aiuto: a-m-a) are more present in the North & the Center, less in the South. Those support & not substitute instead for Anglo-Saxons SHCG an institutional help offered by Welfare State (Devoto, 1999; Albanesi, 2004; Focardi e Raspini, 2008; Ingrosso 2008). Many a-m-a groups do not use legal system, despite recent national (State Act passed in 1999: D.P.R. 1 Novembre 1999) & regional (Veneto Act 7 November 2008, n°14) specific legislation. To the contrary a-m-a groups could play a double institutional role: sensors of embodied identities of illness, promotional channels of citizens critical participation to Health Community Governance (Giarelli 2009; Shortell et al. 2002; Lassler & Weiss, 2003; Scambler & Keller, 2006). So co-therapy patterns is a fruitful application of health co-governance: i.e. patients in Anticoagulant Oral therapy (TAO) for different critical pathologies (stroke, chronic arthritis, maintenance or substitution of cardiac valves). Those 70 a-m-a groups, joined in Anticoagulant Italians Patient Associations (Associazione Italiana Pazienti Anticoagulati A.I.P.A.), represented around 700.000 of anticoagulant patients, only 25% enrolled & assisted by Public Hospitals, Monitoring Centers, General Practitioners. Federation of local AIPA has obtained from Italian Health Ministry the institution of a Commission for enacting TAO Guide Lines, which will be presented to Commission for Essential Level of Health Assistance (LEA) & to State-Regions Conference. Meanwhile few Regions (Emilia-Romagna, Toscana) enacted theirs TAO guidelines with different operational methods. The study mixed analysis of legal documents, interviews to privileged witness, self-administered questionnaire used to measure law awareness, health status, psychological states, & health service utilization submitted to Cosenza's AIPA members/non members, at Cosenza's Regional Hospital in Calabria. So this preliminary research identify legal consciousness & double institutional role of AIPA.

Haanpää, Leena & Ehrs, Camilla (Turku Centre for Child and Youth Studies, University of Turku, 20014 University of Turku [e-mail: lehaan@utu.fi]), **Experts of Their Own Lives: Political Representation of Children and Young Adults,** *International Sociological Association, Gothenburg, Sweden,*

¶ Lately, both political & societal interest has been devoted to participation of children & young adults. This is directed to civics, hearing, leisure activities & voluntary participation of children & youngsters. They have a right to take part in decision making that promotes development of the society. Children's and youngsters' right to influence the decisions that concern them is emphasized in several legal instruments. First of all, respect for the views of the child is one of the core principles of the United Nations Convention on the Rights of the Child. According to the Constitution of Finland (731/1999) the public authorities shall promote the opportunities for the individual to participate in societal activity & to influence the decisions that concerns him or her. This obligation naturally applies to children and youngsters as well. The importance of children's & youngsters' views is also emphasized in the Finnish Government policy program for the well-being of children, youth & families (2007). The main goals of this policy program are to strengthen children's & young adults' citizenship, participation & possibilities to influence. Two data sets are utilized in order to be able to take stand in this national societal & political demand. The first data are collected at Turku Institute for Child & Youth Research (Cyri) at the University of Turku in a project "Youngsters in focus," the second data origins from Sweden from the Swedish National Board for Youth Affairs. Both data produce information about the living conditions, thoughts & desires of children & youth. Finnish research was carried out at schools of Southwest Finland in November 2008 & it aims to strengthen the participation of children & youth. The survey was targeted to pupils at 6th and 9th grades at schools of Southwest Finland; the amount of respondents is 2700 (6th grade: n=1426; 9th grade: n=1320). Swedish data "Under Lupp" were collected respectively in 2008 in 21 municipalities from different parts of Sweden (9th grade, N=1349). The paper focuses on both Finnish & Swedish children's & young Adults' opinions on their possibilities to participate and influence on their own lives. In the focus of the study are the national differences in participation. The preliminary results show that interest in politics & societal questions is lower in Sweden than in Finland & Finnish youngsters have a more positive outlook on influencing on the municipal level than Swedish youngsters. Are there any structural or socio-demographic differences between the two countries that could explain the difference between two societies?

2010S01018

Hadas, Mandel ([e-mail: hadasm@post.tau.ac.il]), **The Consequences of Welfare State Policies for Gender Wage Inequality,** *International Sociological Association, Gothenburg, Sweden,*

¶ Cross-national studies of the impact of welfare states on gender inequality tend to overlook socioeconomic divisions among women. This research challenges the implicit assumption that welfare states have uniform effects on the labour market attainments of all women, arguing that the impact of state intervention is necessarily conditioned by women's relative advantage or disadvantage in the labour market. Based on micro-datasets from 21 advanced countries, the findings suggest that welfare state policies interact with socioeconomic position in determining the economic rewards of women a tending to penalize highly skilled women while benefiting the less-skilled. Highlighting the advantages & disadvantages of social schemes in light of the particular groups they benefit, as well as their implications for other groups, the paper concludes that more research is needed to explore the differential solutions for reconciling work with family, rather than the universal tension between work & family.

2010S01019

Haddad, Saïd (Ecoles de Saint Cyr Coëtquidan, Ecoles de Saint Cyr Coëtquidan 56381 GUER Cedex France [tel: + 33 2 97 70 76 50; fax: + 33 2 97 70 76 15; e-mail: said.haddad@st-cyr.terre-net.defense.gouv.fr]), **Interviewing a Group: Dynamics and Stakes of Focus (Military) Groups,** *International Sociological Association, Gothenburg, Sweden,*

¶ Based mainly on a recent research on the French military's perception of a multinational operation, this paper aims to discuss the specificity of the focused interviews technique. This paper will deal with the following factors or questions which affect the research dynamics & results such the position of the researcher: its autonomy in the selection of the interviewed & its responsibility in the material organization of such interviews; the data reliability & the legitimacy of the groups; the real purpose of the interview; & the taking account of the non verbal elements which shape an interview

Hadiprayitno, Irene (Wageningen University, Hollandseweg 1, 6706 KN Wageningen [tel: +31317481026; e-mail: irene.hadiprayitno@yahoo.com]), **Human Rights Activism in Indonesia, with a Case Study of the Sidoardjo Hot Mud Tragedy in East Java,** *International Sociological Association, Gothenburg, Sweden,*

¶ The article aims to depict the trajectory of activating human rights discourses in addressing development processes in Indonesia. Of particular interest is to describe the explorative efforts taken to interpret human rights from below. Here attention will be paid to the relationship between graveness of negative consequences resulted from misinterpreted development & the lack of judiciary mechanism to treat the cases. Empirically, the article will use the case of Sidoardjo Hot Mud Tragedy, in East Java, Indonesia in which the National Commission of human rights declared the adversity as a gross violation of human rights, based from the findings that at least 15 economic, social & cultural rights were violated during the displacement process. With that recommendation, theoretically, the case could be treated by the Indonesian Human Rights Court, which according to the Law No. 26 of 2006 only has jurisdictions over genocide & gross violations of human rights, & not economic, social & cultural rights. Yet whether this recommendation would actually affect the entitlement positions of people and/or improve victims' access to justice are not straightforward matters.

Hadjar, Andreas & Beck, Michael (Department of Sociology of Education, University of Bern, Muesmattstrasse 27, CH-3012 Bern [tel: +41 31 631 5356; e-mail: andreas.hadjar@edu.unibe.ch]), **Who Does Not Participate in Elections in Europe and Why Is This? A Multilevel Analysis of Social Mechanisms Behind Non-Voting,** *International Sociological Association, Gothenburg, Sweden,*

¶ Dealing with the research question "Who does not vote & why?" regarding national elections in 24 European countries, we analyse determinants of non-voting employing a multilevel design. On the individual level, the sociological determinants under consideration are education, cohort & gender. Regarding psychological or motivational factors, we include in the analyses political efficacy, political interest, political trust & satisfaction with politics. On the societal level, we analyse characteristics of the electoral system, including opportunities for "direct democracy", maturity of democracy, disproportionality factor, & if the participation in elections is compulsory. The data source of the analyses is the European Social Survey 2006. A first main finding is the fact that the probability of non-voting is higher among people with a low level of education & among younger cohorts. The motivational factors have similar impacts on non-voting across all analysed societies. Lack of political efficacy, lack of political interest, lack of political trust & dissatisfaction with politicians & the political system increase the probability of non-voting. Regarding macro influences, countries with compulsory voting & "old democracies" turn out to have a lower rate of non-voting, although these effects vanish when simultaneously modelled with the social psychological micro level indicators.

2010S01023

Hafford-Letchfield, Trish (Middlesex University, Archway Campus, 2 - 10 Highgate Hill, London, UK, N11 5LW [tel: 02084114506; e-mail: p.hafford-letchfield@mdx.ac.uk]), **'I'm not Political': An Exploration of Older People's Perception of Policy in Relation to UK Policies,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines issues concerned with increasing participation, citizenship & social justice for older people using social care services. UK public policies have sought to improve the quality of life of all older people through increasing participation in leisure, education, improved health, & valuing their contribution within communities. Simultaneously, older people using social care services are conceptualised as an enormous challenge in relation to growing social & economic dependence on welfare expenditure. Concepts of "transformation" within traditional welfare services have introduced notions of "self-directed care" and "individualised budgets" to further personalise services. According to some, this rhetorical focus of deficiency has shifted from structures to individuals thus contesting the illusion of choice & potential for change in older people's lives. Methods–A qualitative study involving individual interviews with 20 older people using social care services was undertaken in England. Utilising a topic guide; participant's personal knowledge and experiences of government policies were explored. Content and discourse analysis were used to examine the nature of older people's perceived relationships with the state during the process of becoming dependent on welfare. Results–The findings are considered within Habermas" framework of communicative rationality and discursive democracy in later life. Recommendations are made about the extent to which service users' citizenship can be achieved within care services, the roles of welfare professionals and the development of their skills within social care context.

2010S01024

Hafford-Letchfield, Trish, Couchman, Wendy, Leonard, Kate, Leiba, Tony, Woods, Sandie, Avery, Peter & Webster, Maxine (Middlesex University, Archway Campus, 2-10 Highgate Hill, London, UK, N11 5LW [tel: 0208 411 4506; e-mail: p.hafford-letchfield@mdx.ac.uk]), **'Opening Doors': Developing Learning Materials to Promote Positive Interaction with People with Dementia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Literature on the care of people with dementia is still sparse and this is reflected in the professional education curriculum such as social work, nursing & other health care professionals. This paper describes an educational partnership between social work and nurse educators, carers of people with dementia & an older people's theatre project. This collaboration sought to build on cultural theories from the arts & humanities to provide a more political lens for change & reform in approaches to dementia care. Using storytelling techniques, a number of case studies were developed to inform arts based approaches such as drama & music to develop learning materials for professional & carer education. Digital images enacted by an older people's theatre group also drew on research evidence of good practice in communication with people with dementia & a number of digital stories were developed. The paper will present some of the findings from the evaluation of the project & will illustrate this by showing some of the 3-4 minute clips from materials developed to facilitate further participant discussion.

2010S01025

Hafting, Tore & Hermanrud, Inge (Hedmark University College, Dept. of Business and Management, P.O.Box 104, N-2451 Rena [tel: ++ 47 62 43 00 00; fax: ++ 47 62 43 05 00; e-mail: Tore.Hafting@hihm.no]), **Decentralisation and Co-Ordination: Fragmented and Multiple Identities–A Conceptual Overview and Case Studies,** *International Sociological Association, Gothenburg, Sweden,*

¶ The topic is the relationship between co-ordination and identities of members of organisations. The research question is why co-ordination is a problem in decentralised organisations, and how actors handle it. The purpose is twofold: Firstly, to explore by a literature review the link between principles of co-ordination hierarchy, market & networks, & multiple and fragmented identities. Large organisations have hybrid characteristics representing different logics of action, which have impact on identities. Secondly, to elucidate by two case studies the emergence & development of identities. Multiple and fragmented identities are most successfully handled by management when dialogue is practiced in established fora as a means of co-ordination with their associates. The data in the case studies are qualitative interviews, document analysis, & participant observation of physical & virtual meetings. Case 1 is drawn from a municipality, & we found three types of identities: The administrator, the

business manager & the professional, which in specific situations will cause conflicts with each other. Case 2 is drawn from a public agency, & three identities are found: The supervisor, "the man of rules," & the professional.

2010S01026

Hagen, Malfrid Irene (Buskerud University College, School of Business and Social Sciences, Box 235, 3603 Kongsberg, Norway [tel: +47 977 222 96; fax:; e-mail: malfrid.hagen@hibu.no]), **Sociological Interpretation of Art Works,** *International Sociological Association, Gothenburg, Sweden,*

¶ I am interested in the connection between art & society, & how the political, ideological & technological development manifests within art, whether the artist is aware of this or not. I am also interested in how the reflection of society in visual art can be analyzed & interpreted sociologically in a similar way as photographs within visual sociology, as this is described by Becker. (Becker, 2007) In this paper I try to outline how art can be sociologically interpreted by analyzing two etchings from about 1979/80. In the seventies most Norwegian artists were working with graphic art, such as etchings & woodcuts, & were highly engaged in political problems, particularly with a national character, although they were also concerned about global problems. Besides being judged aesthetically as art works, the two etchings can tell something about the Norwegian art world in the seventies, as they are representative for what was called "the graphic art boom" that was overflowing Norway during the decade. As both of the etchings have got their motifs from a fishing village in the North of Norway, which in the seventies were highly threatened by depopulation, they also tell a territorial & political story, as well as the motifs can tell independent stories about the harsh everyday life within the village. Sociological art interpretations are not limited to figurative motifs, but can be applied independent of styles & techniques, to figurative & abstract art, as well as to new art expressions that is also reflecting new technology, politics, ideologies & beliefs. While new technologies literally can make some new art expressions possible, new ideologies & beliefs reflected in art may raise interesting sociological problems, for instance new art expressions that is tearing down ethical borders, but which few dare to question in fear of weakening their position as an art connoisseur, or as liberal to new ideologies. Such cases also show the symbolic power which is embedded in works of art.

2010S01027

Häger, Andreas (Department of Sociology, Åbo Akademi University, Åbo, Finland [e-mail: andreas.hager@abo.fi]), **A Religious Group in its Local Society: A Finnish Case Study,** *International Sociological Association, Gothenburg, Sweden,*

¶ My paper presents some results from a locality study in a small town and a neighbouring rural municipality on the Western coast of Finland. The aim of the study is to look at the role of one particular religious group in the life of this community. The group in question is a conservative, Lutheran revival movement, the 'Laestadian' movement, originating from Sweden in the 19th century, but spread also in the Northern parts of Norway and Finland. The group is known for strict lifestyle choices as well as a high birth rate. In the rural municipality, the members of the group make up almost half of the population, & their presence is significant also in town & in other surrounding municipalities. The study analyses various qualitative material: interviews, media material, documents, etc. The paper presents some of the central findings of the study. The central issue of the paper is how the Laestadian movement in this region is able to maintain a strong plausibility structure for values that sometimes differ greatly from the surrounding society, while still being integrated in society regarding education, business life & local politics a and not merely being integrated, but asserting significant influence in these areas.

2010S01028

Häger, Andreas (Department of Sociology, Åbo Akademi University, Åbo, Finland [e-mail: andreas.hager@abo.fi]), **Sociology of Religion and Popular Culture: Some Theoretical Issues,** *International Sociological Association, Gothenburg, Sweden,*

¶ The study of religion & popular culture has been a growing field for the past decade. Much of the study is conducted within (systematic) theology, while sociology of religion has been less involved in the field. The argument of my paper is that not only would research on religion & popular culture be helped by sociological insights, but that the sociology of religion can also benefit from looking more closely at popular culture. This is partly a matter of expanding the empirical field to an area of truly "public religion", where many people today have their most frequent–and sometimes most profound–encounters with religion. But it is also the case, & this will be the main topic of the paper, that a closer look at the relations between religion & popular culture can provide the sociology of religion with new ideas on some central theoretical & definitional issues. The paper discusses how issues regarding the definition of religion & the relations between the substantive & the functional, the sacred & the profane can be illuminated by a closer study of the relation between religion & popular culture.

Hagestad, Gunhild O. & Herlofson, Katharina (Agder University, 4604 Kristiansand, Norway [tel: 47 92898278; e-mail: gunhild.hagestad@uia.no]), **Transformations in the Role of Grandparents across Welfare States,** *International Sociological Association, Gothenburg, Sweden,*

¶ Longer lives, reduced fertility & changing work patterns have Reshaped grandparent roles. Yet, images of contemporary grandparents show strong contrasts. In North America, they have been declared child-savers, but also called redundant. In some European societies, they seem to serve as mother-savers; in others they might be labelled family-savers. Do these descriptions reflect differences in social policies? Can welfare regimes help us account for variations in role perceptions & role enactment? These are questions explored in this presentation. With an emphasis on European data, we examine perceptions of the grandparent role and reports of grandparental behaviour in different societies. We find more consensus regarding role expectations than we observe uniformities in grandparent behaviours. The availability of parental leave & public child care seem to be crucial in shaping how grandparent roles are enacted. In societies with few public supports for parents of young children, help from grandparents is often crucial in enabling mothers to be active in the work force. In such cases, grandparent responsibilities are regular and extensive. In societies where welfare policies help reduce work-family conflict, grandparents often serve a 'reserve army' function by being available at times when extra help & support are needed.

Hagino, Córa Hisae (Centro de Estudos Sociais, Universidade de Coimbra [tel: 00351-916379355; e-mail: corahisae@hotmail.com]), **Legal Education and Sociology of Law in Portugal,** *International Sociological Association, Gothenburg, Sweden,*

¶ The judicial system since the years 1980 became a central role in several countries in the world. In this context, the respectability of legal professions & a better legal education were necessary. To study legal professions it is important to analyze how law has been taught in the universities, if the knowledge produced in law schools permit an humanist & critical education or if law studies talk just about "law in books." For this research, we analyzed the syllabus of the most important law universities in Portugal to discover if there were critical disciplines like Sociology of Law or others (History, Anthropology, etc). On the results, we observe that the discipline Sociology of Law is not present in the most part of the syllabus. And when it is present, it is considered less relevant than technical disciplines or it is optional with less hours & credits. On this way, the law schools in Portugal do not prepare the students to know issues of law in society and their cultural & politic contexts.

Haglund, Björn & Klerfelt, Anna ([e-mail: bjorn.haglund@ped.gu.se]), **To Research the Leisure-Time Centre,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper highlights the social & discursive practice in Swedish leisure-time centres. A leisure-time centre provides activities, before, during & after school, directed to children between six and twelve years old. This institution is closely connected to primary school, staffed with university-educated pedagogues and supposed to give children a meaningful leisure. What meaningful leisure comprises is, however, not clearly defined in the Swedish curriculum (cf. Haglund, 2009, Klerfelt, 2007). Our theoretical point of departure origins from a social constructionist perspective, which emphasizes that reality is constructed by people who interact (Berger & Luckmann, 1966). Within this theoretical perspective a meaningful leisure in leisure-time centres is mutually constructed by staff & children in their everyday practice (cf. Fairclough & Wodak, 1997). There is a need to develop methodological tools to study how a meaningful leisure practice, defined & constituted by children & leisure-time pedagogues, could be explored. We investigate methodologies that make children's perspectives visible & reflect the pedagogues' intentions with their work. The data production consists of observations of the everyday life in leisure-time centres including narrative interviews & artefacts that highlight the social practice (cf. Mischler, 1986; Beach 2005). As this is a work-in-progress analysis

will be carried out during spring 2010 and initial results will be shared & reflected upon in the presentation.

Håkan, Löfgren & Pérez, Prieto Héctor (Utbildningsvetenskap Karlstad University, Universitetsgatan 2, 651 88 Karlstad, Sweden [tel: 054-7001920; e-mail: hakan.lofgren@kau.se]), **Institutional Memories in School–Narratives from a Closed School,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper focuses on how educational policy changes take shape in a local school-context. Specifically, the aim is to show how discursive fragments (Ball, 2007) and/or nested narratives (Linde, 2009) stand out in teachers' institutional memories. The new 'meta-narrative' about education is characterized by neoliberal's ideas about privatization & marketization. To catch and understand these changes, from the teacher's perspectives, we focus on institutional memories (Linde, op cit). These working memories are told & retold by teachers, & in times of change, they are guides to future actions. New versions of memories of past events are produced & reshaped in the time of the telling. Empirically, this study is anchored in 15 life-history interviews conducted with 8 teachers who have been working at the same secondary high-school in a Swedish middle-sized town. The school was recently shut down. The narratives cover a 40-year period of school-history. All interviews have been transcribed & screened for institutional memories. Results show how versions of institutional memories, framed by different discursive fragments & nested narratives, form a new local mosaic of narratives about education.

Hakim Fernandez, Nadia, Latorre, Andrea, Alzetta, Roberto, Back, Les & Sinha, Shamser ([e-mail: nadiahakim@yahoo.com]), **Migration Paths, Life Goals and the Question of Identity.,** *International Sociological Association, Gothenburg, Sweden,*

¶ The construction of an "Us/Them" logic in different European countries can control those who may be included in this "We" and conversely those who are excluded from it & remain itinerant outsiders. This logic is manifested in different ways, from which we will highlight the legal & juridical frameworks of citizens and also the discursive processes–often xenoracist–put in place. These constraints influence the construction of identities of young immigrants or young children of immigrants, & the feeling of belonging. In turn, this bio-dimensional process –because it is imposed from the outside & recreated by the individual- has an impact on the way in which they project their future. Migratory paths tending towards social exclusion, where different barriers have marked the youngsters' opportunities to find a place of agency through the reconstruction of identity & modes of participation in the host society, promote fragile or non-existent future life-projections in the host society. We have used a qualitative methodology that aims at understanding these migration-related phenomena through the discursive production of the subjects of analysis (interviews, ethnographic observation, lifestories), that will be cross-analysed. The population under analysis are young people living in the European Union & in particular in Italy, Spain & the UK.

Halcli, Abigail (Oxford Brookes University, Department of International Relations, Politics and Sociology, Headington, Oxford, UK, OX3 0BP [tel: +44 1865 48 3754; e-mail: ahalcli@brookes.ac.uk]), **Gendering Transnationalism: Rethinking Gender Relations and Gender Inequalities in a Transnational Context,** *International Sociological Association, Gothenburg, Sweden,*

¶ The varied & uneven impact of global social change on gender relations at the local, national, international, & transnational levels is an important topic for social science researchers. Transnational processes including migration, the international transfer of caretaking & changing economic relations & labour markets are also gendered processes with significant outcomes for the configuration of gender relations in a variety of settings. In this paper I explore the interconnections between transnationalism and gender relations/inequalities in order to highlight the gendered nature of global social change & to draw attention to some of the limits of existing frameworks which seek to explain these transformations. I will suggest that some well-established ways of analysing both gender & transnationalism can be critically interrogated & further developed in light of contemporary thinking about the multidimensional components of gender relations, & by more fully integrating accounts of gender which recognise the importance of agency & subjectivity & which see women & men as actors in transnational processes. I will show how further theoretical development in these areas can be advanced by adopting an approach which moves between disciplinary boundaries and draws together key conceptual developments & empirical findings across the social sciences, particularly Sociology, Political Science & International Relations. By drawing on the range of cross-disciplinary thinking on gender relations in a transnational context, this paper will address two key questions: 1) What are the consequences of situating gender relations on a transnational scale, & how might this unsettle some of our understandings of gender, "the global," & transnationalism?, and 2) Can concepts such as transnational gender relations & the transnational gender arena provide useful avenues for theorising the differential effects of global social change on women & men?

Hall, C. Margaret (Sociology Department, Georgetown University, Washington, DC 20057, USA [tel: 202-687-3983; fax: 202-333-9262; e-mail: hallcm1@georgetown.edu]), **Social Intelligence as Sociological Theory/Method in Clinical Sociology for Individual and Social Changes,** *International Sociological Association, Gothenburg, Sweden,*

Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (858) 571-8979. Fax: (858) 571-8694. E-mail: info@csa.com

¶ Social intelligence is defined as a distillation of sociological theories & methods used in a wide range of clinical sociology practices & strategies. Building on the structural functional theories of Durkheim, the conflict theories of Marx, and the cultural theories of Weber, broad socially intelligent perspectives are new ways to think about societies & individual or social changes, as well as new practices which deal with the power & complexities of the strongest social influences in our lives. For example, we confront the dominance of social systems, social classes, & specific values through socially intelligent micro- & macro-negotiations with individuals, groups, political parties, & social institutions. Social intelligence sheds new light on how we gain control over varied social situations, because social intelligence is based on a deep understanding of the five major social & emotional influences of families, beliefs, social classes, cultures, & societies. Using a knowledge of social facts about these five social influences strengthens our social intelligence, & at the same time yields broad perspectives from which to more realistically assess possibilities for individual and social changes. For example, C. Wright Mills's call for sociological imagination to make social innovations, by becoming historical actors, is made more feasible by problem-solving through social intelligence. Clinical sociology exchanges among selected individuals, communities, political parties, & nations are enhanced by deliberately applying principles of social intelligence. For example, we use families, beliefs, social classes, cultures, & societies to inform strategies that deal with problematic social issues. Consequently, we design more effective methods to achieve socially intelligent goals that increase the common good & social justice through establishing new priorities & different value choices. Thus, making deliberate value choices of equality, inclusiveness, diversity, cooperation, and openness creates new social realities that sustain stronger present & future societies to address the needs of all.

Hall, Michelle (Institute of Creative Industries and Innovation, Queensland University of Technology, Brisbane, Queensland, Australia [fax:; e-mail: ml.hall@qut.edu.au]), **Imagining a place-based tribe through co-created consumer value experiences in consumption spaces,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper outlines research that explores the potential of consumer communities within the context of the gentrifying inner city, an area where concerns of consumption-based lifestyles & community often clash. This research contends that consumption spaces in gentrifying areas can play an important role, both individually and cumulatively, in the construction of a consumption-based tribal identity that can also be place-based. It proposes that the co-created consumer value experiences that can occur within these servicescapes may offer a means through which to construct consumer communities, by creating opportunities to experience the shared ethic & aesthetic of the tribe. This paper outlines research that has explored the potential of such an approach, focusing specifically on an autoethnographic exploration of the individual experience of that process. Drawing on that data this paper describes how value experiences in a neighbourhood's servicescapes shaped my identification processes, both as an individual, & in relation to place, & then considers the implications for businesses & government place-making programs.

Hall, Steve (Dept. Social Sciences, Northumbria University, Newcastle upon Tyne, Tyne and Wear, NE1 8ST [tel: 0191 2273042;

e-mail: steve.hall@northumbria.ac.uk]), **Relieving the Tension: Rebellion, Conformity and Criminality in Late Modernity,** *International Sociological Association, Gothenburg, Sweden,*

¶ In criminological theory the time has come to move beyond the myths that associate crime with transgression, co-option & social exclusion. In this paper I will suggest that we might conceptualise the totalitarian disobedience fostered by the counterculture as something other than transgression, conformity or a form of proto-political rebellion first generated in authentic interstitial spaces & later co-opted by the system. Repositioning the "counterculture" as a product of the marketing industry, this analysis investigates in detail the double bind imposed upon subjects by consumer capitalism's rebellion / conformity hybrid. Through the lens of updated Lacanian theory it is possible to see that consumer culture & the consumption-driven economy are energised by the social diffusion of the master signifier of "cool individualism," the subject-position achieved by acquiring and displaying the symbols that putatively distinguish the self from the reviled "herd" of conformists. The overall result is an economically dynamic force that can be highly criminogenic where the subject's internalisation of hidden core values is strong but commitment to vital normative strategies is weak. Research into this dynamic tension could lead to a fundamental revision of the way we conceptualise social exclusion, criminality & the relationship between them.

Halley, Jeffrey A. (Department of Sociology, the University of Texas San Antonio, 1 UTSA Circle, San Antonio, Texas, 78249 [tel: 1-210-458-4626; fax: -; e-mail: jeffrey.halley@utsa.edu]), **Reason and Resistance within Cultural Practice,** *International Sociological Association, Gothenburg, Sweden,*

¶ In examining reason & resistance within cultural practice, art and culture is seen as part of a society's total development. In contrast to much work in the sociology of art that confines itself to institutions, the effectivity of cultural activities is not seen as simply determined by their specific individual & institutional origins. Weber, Lukacs & theorists of the Frankfurt school conceive cultural production as part of the societal rationalizing process & as an ideological response to this social situation. Both of these features are constitutive of the social situation. Not only is cultural practice influenced by these broader historical processes, it can also react against them. I formulate this as the problem of rationalization & the forms of resistance which develop to it in the domains of art & culture. I develop the argument that rationalization breeds a response of resistance, generated by needs & interests not fulfilled by the process of rationalization.

Hallgrimsdottir, Helga Kristin & Einarsdottir, Þorgður (University of Victoria, Victoria, BC, Canada V8W 3P5 [tel: +2504724723; e-mail: hkbenedi@uvic.ca]), **After the Crash, There was the Fall: The Effect of Movement Success on Radicalism and Diversity Within the Icelandic Social Movement Sector,** *International Sociological Association, Gothenburg, Sweden,*

¶ The question of how social movement outcomes shape subsequent social movement activity has received little attention. This paper addresses this deficit through studying how achieving one set of aims shapes the formulation & articulation of subsequent social movement aims. Our case study is the grassroots political movement that sprung up in Iceland in the wake of the economic crash of 2008. This heterogenous coalition of social movement organizations coalesced for a brief time period around a single goal: the overthrow of the conservative government & new elections. We examine discursive diversity within the social movement sector both before & after the resignation of the government, through the examination of web-pages, blogs, newspapers & pamphlets. We find that social movement activity after the overthrow of the government is characterized by declining radicalism as well as a shift from language that articulates goals of general social change to more political demands that are much more concrete & discrete to particular constituencies.

Halvorsen, Rune (NOVA Norwegian Social Research, P.O. Box 3223 Elisenberg, 0208 Oslo [tel: +4722541200; e-mail: rha@nova.no]), **Digital Freedom for Persons with Disabilities: The Paradox of Social Regulation and Redistribution in Europe and the US,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper compares policy measures to promote inclusion of persons with disabilities in information society in Europe & the US. While the US has been leading the way in adopting statutory accessibility requirements for employers & providers of goods and services, European countries have developed relatively generous national systems for the distribution of assistive technology, and the provision of practical assistance, education & economic support. However, the last decade European countries have adopted more US style regulations to promote accessibility to information and communication technology. Institutional differences between Europe & the US have prevented a radical change in policy profile and may explain why we continue to find systematic differences in policy design. Nevertheless, the European Union & European disability rights advocates have achieved gradual institutional change that amounts to convergence in policy design between Europe and the US.

Hamad, Mohammad, M (Kenyon College, Gambier, OH 43022 [tel: 216-631-1611; fax:; e-mail: Hamadm@kenyon.edu]), **What Factors Cause Poverty to Prevail in Rural America?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Rural Americans are more likely to be poor, in comparison to their metropolitan counterparts. Although sociologists report that the general explanation for this trend involves disproportionate economic & social opportunities, the investigation of poverty in rural America continues to be a neglected topic in the field of sociology. This study sheds light on the factors contributing to persistent poverty in rural America, & to help community policy makers examine the real challenges faced by their communities. Rural American poverty can be linked to the human capital theory, which is the outcome of educational & economic struggle. Many rural communities lack stable employment, investment in higher education & opportunities for mobility & change. This quantitative study examines the perceptions of a sample of Knox County residents (n=250) regarding their employment, household income, general health & health care status, family structure and mobility. Results of this study suggest that family structure, educational & societal concerns were the main contributing factors to poverty in the rural community studied. In general, participants were satisfied with their health status & took advantage of the services provided to them. However, significant concerns such as single-headed families, low household incomes, and low education & employment levels, were issues that may be the cause of rural poverty's ongoing cycle. Policies to improve educational opportunities, family cohesion & to increase the availability of community assistance, could supply critical support in order for struggling rural Americans to escape poverty.

Hamada, Hiroshi (Arts and Letters, Tohoku University, 27-1, Kawauchi, Aoba-ku, Sendai 980-8576, JAPAN [tel: +81(22)795-6035; e-mail: hamada@sal.tohoku.ac.jp]), **A Model of Class Differentials in Educational Attainment,** *International Sociological Association, Gothenburg, Sweden,*

¶ We attempt to explain class differentials in educational attainment by formalizing a simple mathematical model. A model represents rational choices of children & their parents under institutional and structural constraint such as admission capacity & entrance examination of higher education or distribution of occupation in a labor market. In order to express the correlation between children's ability & economic status of their parents on the class differentials, in other words primary effect proposed by Boudon, the joint distribution of children's ability & income level of their parents is defined by a bivariate normal distribution. This expression facilitates us to analyze accurately the effect of the correlation on inequality in educational attainment. We show the following counterintuitive implications. First, as primary effect increases class differentials decrease. Second, as financial cost for higher education decreases class differentials increases. Third, there is the condition where decline of class inequality & relative risk aversion hypothesis do not contradict each other.

2010S01043

Hamanishi, Eiji (Sociology, University of Kyoto, Kyoto, Japan [fax:; e-mail: cbt25360@pop21.odn.ne.jp]), **Lobal Movements around G8: Cross-national Organizational Characteristics,** *International Sociological Association, Gothenburg, Sweden,*

¶ GMs are constructed by many transnational / multi-issued / various, often conflictual, organizations & individuals. Because of this feature they have the advantage that they can cause a huge mobilization like 1999 Seattle & 2001 Genoa. This heterogeneous character is often evaluated as a representation of the recognition-culture of a globalizing world. But, recently, this point has become problematic. Some researchers discussed that this heterogeneous character has become the main weak point of GMs, because they cannot come to a consensus about identity/adversary/ purpose/ And this leads to the continual internal-conflicts around hege-

mony, especially after 2005 Gleneagles G8 summit. The research question is: What was the 2008 G8 summit like? Specifically, what actors took part & how did they collaborate? And why? The actor-configuration of the 2008 G8 summit had some uniqueness in comparison with the Genoa summit. First, there were not left-centered but equal size conflictual networks by Leftists and NGOs. Second, local networks functioned as local platforms, not top-down platforms, for the collaboration between conflictual networks. We can explain some parts of this uniqueness from Japanese movement historical background, comparing other developed countries.

Hamel, Pierre (Département de sociologie, Université de Montréal, C.P. 6128, succ. Centre-ville, Montréal, Qc, H3C J7 [tel: 514-343-6423; fax: 514-343-5722; e-mail: pierre.hamel@umontreal.ca]), **Deliberative Governance and Social Movements. How to Assess the Impact of Collective Action?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Over the last decades, collective actors have been concerned with deliberative governance in different ways. This can be explained by changes in public policies. The planning & management of these policies were more open to citizen participation than before. Another explanation could be directly related to actors of social movements. These actors came to accept more frequent interactions with decision makers on the terrain of institutions compared to their previous attitude towards the political system. However, this acknowledgment does not tell us anything about the consequences of such a connection among these two factors. For collective action, it also raises the issue of success. In this paper I will review the recent literature on social movements in order to better understand how it is possible to assess the contribution of collective action to social & political change. I will then refer to the findings highlighted in the literature review in order to consider from a new perspective the interaction between social movements & deliberative governance.

Hammer, Raphaël, P. (University of Geneva, Switzerland [e-mail: raphael.hammer@unige.ch]), **Emotions and Narratives as a Means of Raising Public Awareness of Organ Donation: The Case of Transplant Stories in the Swiss Press,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the context of organ shortage, the role played by media information conveyed to the public has become an important issue. Emotions are commonly considered as a means of raising awareness of organ donation & of convincing people to sign a donor card. Based on a corpus of articles from newspapers in French-speaking Switzerland (1998-2007), this proposal aims to focus on how emotions are present in general information articles & particularly in transplant patients stories. We will analyse the discursive operations (designation, qualification & assignment of characteristics) taking as example the protagonists involved in organ transplants, & examine how patients & physicians are represented by journalists ever ready to stimulate emotional performances. We will also show how these stories may be related to stable narrative patterns, thereby increasing their potential emotional effects. Transplant patients stories produce a global message in favor of organ donation that is mainly based on the effects of identification & closeness with the reader. As a result, legitimation of organ donation tends to be more related to emotions & lay persons" experiences than to scientific discourse. Moreover, it raises the question: to what extent stories-oriented information about organ donation may be considered as rational & ethical?

Hammer, Raphaël, P., Burton-Jeangros, Claudine & Cavalli, Samuele (University of Geneva, Switzerland [e-mail: raphael.hammer@unige.ch]), **Pregnant Bodies: Between Medicalisation and Healthism,** *International Sociological Association, Gothenburg, Sweden,*

¶ Pregnancy constitutes a most significant sociological situation to analyse the role played by the medical institution in modern societies. Due to routinisation & multiplication of prenatal tests & preventive recommandations on daily behaviour, issues related to medical risk play a large part in how the experience of expecting a baby is nowadays shaped. In the current medical context the experience of pregnancy oscillates between the process of healthism (Crawford, 1980) & the process of medicalisation (Clarke, 1983). Based on 50 semi-directive interviews with women met during the first half of their pregnancy in Geneva (Switzerland), we examine how their expectations & demands are reflecting the medical discourse & to what extent their attitudes fit the mould of the technical language of risk. We will particularly focus on two issues of their experience of medical follow-up: What meanings & importance pregnant women give to the prenatal tests on one side, how far their attitudes & behaviours challenge medical perspective & professional discourse on the other side. Whereas screening procedures & risk prevention in daily life are weakly challenged or even assumed by most of our interviewees, the medically-oriented pregnancy experience deeply remains a necessary evil on the path to the most healthy baby.

2010S01047

Hammerli, Maria (Institut de sociologie de Neuchâtel, Faubourg de l\'Hôpital 27, 2000 Neuchâtel, Switzerland [e-mail: maria.haemmerli@unine.ch]), **The Orthodox Churches in Switzerland: Their Impact on Migrant Integration,** *International Sociological Association, Gothenburg, Sweden,*

¶ The call for papers of the present conference states that 'religion often plays a role in adapting immigrants to–or buffering them from–their new socio-cultural homes'. I track two readings of "religion" in this context: first, a set of spiritual values & prescriptions & second, religious practice in a worship community engendered by shared faith. I propose to explore the way in which (Christian) Orthodox spiritual teachings and participation to the life of an Orthodox parish affect the integration process of four migrant communities in Switzerland: Greek, Romanian, Russian & Serb. This paper focuses specifically on economic & socio-cultural aspects of integration that we approach in terms of Portes & Zhou's "segmented assimilation" theory. A comparative perspective between four ethnic communities will reveal the unevenness of this process & the factors that cause it. Methodologically speaking, this is a qualitative research based on semi-structured interviews with clergy & parish members and on participative observation to parish activities. Orthodox spiritual teachings provide individuals with instruments for adapting to & transcending economic, social & cultural difficulties inherent to migrants" integration: self discipline (ascesis), permanent self evaluation (through preparing for confession) & self renewal (metanoia, repentance), forgiveness, patience, altruism, detachment from the pressures of the world ('be in the world, but not of the world'). But on the other hand, Orthodox churches encourage ethnic heritage preservation . This can facilitate integration in early stages of migration, as they serve attenuating the cultural estrangement for newly arrived immigrants. But on the long term, churches run the risk of transforming themselves into ethnic enclaves. We question the ambivalence of this practice & the solutions the four ethnic communities mentioned above provide for it, in a specific migration context. Affiliation to an Orthodox parish provides its members also with a space for developing social capital. More precisely, we try to analyze the impact of church-based networks on the integration process. What integration resources can newcomers benefit from through exchange with already integrated co-ethnics or with local converts in the parish? How does involvement in the parish organization & administration become a venue of interaction with the host country's legal, social, political institutions and structures? Orthodox parishes in the Western context pay ecclesiastical allegiance to their Mother Churches back home, which places them in a situation of transnationalism. Recent research has shown that such contexts stimulate integration of migrant religious institutions rather than brake it. We will try to answer for the case of Orthodox churches in Switzerland. Finally, we will examine some of the factors that influence the integration capacity of parishes: -their social composition & the migration context that caused migrants to seek a new home (highly diverse through the four mentioned ethnic communities), -the size of the parish & the duration of its implantation, -the orientation of the parish life (focus on liturgical matters, on community building, etc.), -cantonal traditional state-church relationship & the status of minority religious communities, which determine the parishes" access to larger resources & support for their activities and programs.

2010S01048

Hammershoej, Lars Geer (School of Education, Aarhus University, Copenhagen, Denmark, 2400 [tel: +45 8888 9431; fax: +45 8888 9724; e-mail: lgha@dpu.dk]), **Diagnosis of the Times v. Description of Society,** *International Sociological Association, Gothenburg, Sweden,*

¶ Today, researchers from the social sciences & humanities are normally able, if asked, to provide diagnosis of the times based on their existing research. However, they seldom if ever reflect methodologically upon this kind of analysis strategy, just as there is a striking absence of methodological reflection upon diagnosis of the times in general (Reese-Schäfer). The hypothesis of the paper is, however, that diagnosis of the times & description of society are two diametrically opposed kinds of analysis strategies: To diagnose the times is not about describing the existing society, but about diagnosing transformations which are underway or made possible

(L.-H. Schmidt). The object of this diagnosis is thus indications in the times (tendencies) of transformations of the field of possibility for the times (conditions); whereas the object of description of society in the social sciences is the actual social institutions & structures & the actual social actors. The paper argues that the problem is that today diagnosis of the times is often confused with projected descriptions of society (e.g. U. Beck), or researchers attempts to substantiate their diagnosis with descriptions (e.g. R. Florida).

2010S01049

Hampton, Kay (Glasgow Caledonian University, Glasgow G4 0BA [tel: +4401413313896; e-mail: k.hampton@gcal.ac.uk]), **Part of the Problem or Part of the Solution? Commissioned Research and the Political Creation of "Race" Meaning,** *International Sociological Association, Gothenburg, Sweden,*

¶ Drawing on twelve personal publications arising from eight empirical contract research projects in Scotland, the paper will illuminate ways in which applied research, commissioned by state institutions, shape & sustain political notions of "race". Arguing from a Race Formation perspective (Winant), the paper will explain how "race" as a process, is continually created, destroyed & re-invented in policy directed research processes, structures & relationships. A central argument in this paper will be that in an absence of an agreed "common-sense" meaning of "race" in Britain, local research participants' understandings of "race" & racialised inequalities are principally influenced by state driven ideologies. In Britain, state sponsored, specialist, "equality" institutions and power elites (so-called "race" experts) assist in keeping theses ideologies alive. Using evidence generated by commissioned research projects, the paper will illustrate how the formation of social policies & structures aimed at eradicating "racial" inequality in Britain, inadvertently sustain & create understandings of "race" that do not necessarily reflect the reality of lived racial experiences. The paper will reflect on the development of mainstream "race" policies in Britain, to highlight how racially defined minorities are regularly problematised and compromised by a state orchestrated "race" industry. By using certain incentives, the state with the consent of sections of marginalised communities in Britain are successful in retaining a superficial version of "race" meaning that presents little challenge to the majority communities. The paper will conclude that a more realistic & non-partisan understanding of "race" can only be reached by analysing the latent processes that form & sustain racialised inequalities in situ.

2010S01050

Hampton, Kay (Glasgow Caledonian University, Glasgow G4 0BA [tel: +4401413313896; e-mail: k.hampton@gcal.ac.uk]), **The Good, the Bad and the Ugly: Specialised Bodies and Racial Discrimination in Britain, 10 years on…,** *International Sociological Association, Gothenburg, Sweden,*

¶ It is not enough to have legal protections without independent, specialised bodies to ensure that people's rights are being effectively realised. So what happens when specialised bodies become compromised? This paper will reflect on the British experience over the last 10 years, highlighting how protection against racial discrimination, which was in place for over 40 years, is in danger of being diluted by changing political contexts and local power elites. The paper will argue that despite the increase in racial discrimination post 9/11, concerns in this regard is shadowed by real or imagined threats of terrorism and misconceptions around competing rights. More recently, institutions in Britain have tended to use the economic recession & a belief in notions of a "post-race" society as reasons for taking a so-called "modernising approach" towards racial discrimination. So plausible are the arguments, despite it being academically flawed, that even members of racially marginalised communities in Britain are duped into believing that racial discrimination is no longer a problem in Britain. While some argue that the replacement of the CRE (established to enforce the Race Relations Act, 1976, 2000) with the British Equality & Human Rights Commission is a step in the right direction, others feel that this move has led to a weakening of protection for racial minorities in Britain. This paper will reflect on these developments & conclude that the rights of racial minorities can still be successfully protected via the EHRC but that the body itself needs to demonstrate its independence from political interference. Additionally it must be committed to working in a principled, value driven, even-handed way and to balance competing inequalities & priorities in an evidenced based manner.

Han, Gyounghae & Kim, Sang-Wook (Seoul National University, Seoul, Korea [tel: +82 2 880 8748; fax: +82 2 880 8748; e-mail: ghhan1970@hanmail.net]), **Generation in the Middle: Support Provisions Up and Down in Korea and Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ The question concerning whether & to what extent the provision of support to the adult children (G3) by the so-called "generation in the middle" (G2) has impacts on the provision of support to their elderly parents (G1) has never been properly explored in East Asia. The problem was particularly acute in cross-cultural contexts. This study provides a cross-cultural explanation & assessment of the issue. Data collected from national sample surveys in Korea and Japan, respectively, as part of the 2006 EASS Family module studies are analyzed & show some interesting patterns of similarities, as well as dissimilarities, in intergenerational support exchanges among G1, G2, & G3 between the two countries. Results are interpreted & a few implications, theoretical & empirical, are suggested for further studies.

2010S01052

Han, Sang-Jin (Seoul National University, Seoul, Korea, 151-742 [tel: 82-2-875-8474; fax: 82-2-875-8474; e-mail: hansjin@snu.ac.kr]), **Individual Sovereignty, Confucian Challenge and Human Rights Community: Why do we Need a New Sociological Imagination?,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper aims at a balanced development of human rights with respect to individual sovereignty & community wellbeing by examining the possible contributions of Confucianism to human rights community. A human rights community makes sense only when the multiple actors with different orientations who constitute a community whether it be family, school, friends, working places, neighbors, or political community, are given equal chances to enjoy basic rights and freedom, not simply as a principle, but as embedded in their everyday life. A flourishing community requires individual sovereignty as well as justice & equality as an indispensable condition for living together peacefully. With this position, and against the neo-liberal preoccupation in the West with individuality, this paper shows: 1) why individual sovereignty is crucial for a human rights community; 2) where the significance of Confucian challenge to an excessive version of individual self-determination lies; 3) yet how we can overcome the danger of the authoritarian trends of traditional Confucianism; & 4) how we can reasonably combine individuality & sociality as two equally important dimensions of human rights when we want to construct school as an example of human rights community. The author argues that such a balanced development today calls for a new sociological imagination.

Hanafi, Sari (American University of Beirut, Beirut, Lebanon [fax:; e-mail: sh41@aub.edu.lb]), **Modes of Incorporation of the Palestinian protracted refugees: Some Theoretical Considerations,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper I will address the case of the Palestinian protracted refugees in the Arab region. Drawn on material collected over 14 years, through unstructured interviews with different categories of Palestinians living in the Palestinian Territory & in the diaspora, the objective of this paper is to discuss the interplay between three key factors which impact the construction of "palestinian-ness" & will impact the process of return: geographical borders, social boundaries, & nation-state policies in the region. The study of the interplay between them will be used to depict: 1- the problematic relationship between the diaspora & the center (the Palestinian Territory) in the current/eventual return movement of Palestinian refugees & the absence of the diaspora as a social space; 2- the flexibility of transnational strategies adopted by the Palestinians, whether citizens, refugees, current returnees, or transmigrants; 3- the inflexibility of the policies of the nation-states in the region.

Hanh, Nguyen Thi Van (Department of Sociology, Hanoi University of Social Sciences and Humanities, 336 Nguyen Trai, Thanh Xuan, Hanoi, Vietnam [tel: 84-4-38582540; e-mail: hanhjiu@gmail.com]), **Changes in Vietnamese Family under the Impact of Industrialization and Urbanization,** *International Sociological Association, Gothenburg, Sweden,*

¶ Family is a social institution. It is a product of history defined by the economic, political, cultural & social conditions of a given society. In Vietnam, industrialization & urbanization have considerably affected the family, changing its size, structure, relationship & quality. The conception on family & marriage are altering gradually. Phenomenon like having sex before having married, gay & lesbian relations, cohabitation, single living, separation, divorce are continuously increasing. These are manifestations

which haven't appeared in Vietnamese traditional family. This paper has the objective of studying the changes of Vietnamese family through the below factors: - Conception of family & marriage - Family's size & structure - Family's function - Relation among family members - Gender equality in family. Main methods used are secondary data analyzing & in-depth interview. Figures on Vietnamese family used in this paper are taken from National Survey on Family 2006 carried out by Family Department of the Population, Family & Children Committee, the General Statistics Office, the Family & Gender research Institute & the United Nation Children's Fund. We can see from the result that Vietnamese family has been varying rapidly. There have never been such profound changes inside the family. Progressive in conception of equality, power & the rejection of backward norms create good conditions for family members, especially women, develop and strengthen their social status. However, the dark side of the market economy has also affected quite a lot to Vietnamese family. In fact, Vietnamese family is facing lots of challenges & has to decide a suitable model balancing between reserving traditional values & keeping up with changes of modern society. In conclusion, Vietnamese family's changes are not completely apart from its traditional characters but are the adjustment to adapt with new social conditions. Having high ability of adaptation under a traditional cultural foundation, Vietnamese family can absolutely conserve its specific fine characters in the condition of the moving world.

Hanley, Caroline (Department of Sociology, College of William and Mary, Williamsburg, VA USA [e-mail: cehanl@wm.edu]), **A Spatial Perspective on Rising Earnings Inequality in the United States,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recent research overlooks changing spatial dynamics within the United States as a source of rising earnings inequality. This paper articulates a spatial perspective on recent trends & applies the theory by decomposing national earnings inequality into its within- and between-place components. While within-place inequality accounts for the vast majority of total earnings inequality, inequality between places in the United States narrowed dramatically during the 1970s. The analysis then considers how reduced inequality between places from 1970 to 2000 may have contributed to rising inequality within places using archival and case study methods. I hypothesize that in response to the economic crises of the early 1970s, firms leveraged existing inequalities between regions to reduce labor costs, initiating a new spatial division of labor that weakened collective bargaining and organizing, & heightened employment insecurity, ultimately contributing to rising earnings inequality nationwide. The hypothesis is evaluated with a case study of one large firm's spatial restructuring strategies & inequality trends in the metropolitan areas most affected by the firm's restructuring. Examining firm-level restructuring strategies from the perspective of local labor markets contextualizes recent research on rising earnings inequality, & brings globalization back to the center of the analysis.

Hansen, Jessica (Institution of Social Science Linnéus University, 351 95, Växjö, Sweden [tel: 0470-708215; e-mail: jessica.hansen@vxu.se]), **Resource Mobilisation. Networks, Organisations and Positions,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper aims to explain how a voluntary organisation in a small village mobilised collective resources "by channelling resources" from other organisations through networks using individual's different organisational positions. The paper is a part of a larger study that explains how a local community mobilised & organised resources to build a multifunctional centre by starting a voluntary organisation for the purpose. The study explains how combining and converting different kinds of 'social, political & economic resources' resulted in the building of a multifunctional centre. This paper focuses in detail how resource mobilisation can be explained when it is analysed as relations between individuals and the organisations they are a part of. The result showed that member's ability to identify other individuals in multiplex networks & their ability to shift between different types of locally embedded networks was the key to resource mobilisation.

Hansen, Karen V. (Dept. of Sociology, Brandeis University, Waltham, MA 02454-9110 [tel: 781-736-2651; fax: 781-736-2653; e-mail: khansen@brandeis.edu]), **Shooting the Arrow and Planning the Picnic: Citizenship and Landownership among Dakota and Norwegian Women, 1900-1930,** *International Sociological Association, Gothenburg, Sweden,*

¶ Through very different paths, Dakota Sioux & Norwegian immigrant women in early twentieth century North Dakota came to exercise political agency. Examining their coexistence & proximate land ownership on the Spirit Lake Dakota Indian Reservation highlights the similarities & contradictions in their struggles for citizenship & enfranchisement. In 1916 eight Dakota women 'shot the arrow' in a ritual contrived by the Bureau of Indian Affairs to shed their tribal affiliations & embrace U.S. citizenship. At the same moment, Norwegian women were planning picnics & other events for the Nonpartisan League, a populist farmers organization whose candidates came to dominate state government. Using a transnational & comparative lens, this paper analyzes profiles of the 1,543 landowners on the reservation. Further, it theorizes the meanings of gendered landowning & the contradictory ways it prompted women to exercise political voice.

Hansen, Melissa (Lund University, LUCID PhD Programme, Geocentrum 1, Sölvegatan 10, P.O. Box 170, SE-221 00 Lund [tel: + 46-46-222-0470; e-mail: melissa.hansen@lucid.lu.se]), **Legislative Framework and Implementation Challenges in Wetland Conservation in South Africa: Case Study Focus on the Isimangaliso Wetland Park,** *International Sociological Association, Gothenburg, Sweden,*

¶ Water scarcity is a critical sustainability challenge in South Africa– water being one of the country's most limiting natural resources. In this context, one of the major concerns facing the South African water sector is the degradation & loss of wetland resources. Between 40 & 60% of South Africa's wetlands have been lost, mainly due to infrastructure & urban development & mining (DWAF, 2006). These losses bring to the fore conflicts between economic & social development & natural resource conservation in South Africa. Although legislation protecting South Africa's water resources is widely regarded as amongst the most progressive in the world[challenges in the implementation of policy frameworks are significant. This paper will centre on a critical assessment of the traditional policy paradigm for wetland conservation in South Africa. The hypothesis that traditional government policy paradigms remain reactive, piecemeal & tactical will be explored. The question will be addressed specifically with regard to the limitations of a legal regulation towards natural resource conservation, in the context of pressing social development needs. The case study focus will be on the iSimangaliso Wetland Park, in northern KwaZulu Natal. The iSimangaliso Wetland Park was listed in 1999 as South Africa's first UNESCO World Heritage Site. Although iSimangaliso is a protected area, the catchment extends beyond the boundaries of the Park. Economic and social development priorities for the region mean that impacts from forestry, mining & farming have a significant cumulative impact on the catchment. The paper questions to what extent a purely legislative framework for wetland conservation is effective in a wider context of pressing economic & social development priorities, where concerns around economic growth take precedence over those of sustainability.

Hanser, Amy (University of British Columbia, Vancouver, BC Canada [tel: ; e-mail: hanser@interchange.ubc.ca]), **Yellow Peril Consumerism: China, North America, and Media Imagery in an Era of Global Trade,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores recent North American media accounts of China-made goods, noting the persistent themes of pollution & danger evocative of the yellow peril rhetoric of an earlier era. But whereas over a century ago it was the flow of Chinese people that gave rise to alarmist speech & protectionist legislation in North America, today it is the flow of goods (and money) that causes concern. The paper argues that contemporary North American media accounts about imported goods from China produce a narrative steeped in anxiety about social & economic proximity, much like the earlier era of 'yellow peril' discourse, at the turn of the 20th century. In both cases, we find narratives of threatened domesticity through potentially contaminating forms of contact. In particular, contemporary reporting on China tends to reproduce themes related to pollution, contamination, & a flood of low-quality things out of China. As a narrative case study, I begin with the March, 2007 scare over tainted pet food in North America, a series of events that was quickly followed by other product scares linked to China: toxic toys, tainted toothpaste, & suspect food products. I hope to show how, in an era of so-called 'free trade' & accelerated globalization, the global movement of goods becomes bearing of racializing discourses in contemporary media narratives.

Harayama, Tetsu & Mosse, Philippe (Toyo University, 5-28-20 Hakusan, Bunkyo-ku, Tokyo 112-8606, Japan [tel: +81 03 39457743; e-mail: tULharayama@toyonet.toyo.ac.jp]), **Worlds of Work and the Emerging Convention in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the 1950s, some aspects of the Japanese world of work, such as life time commitment to a company, promotion by seniority & collective in-house training (OJT), were criticized because they reflected a paternalistic approach to company management. Since the 1990s, due to the introduction of increasingly precarious conditions of employment, both young men & women are finding it difficult to obtain stable jobs. The question which now arises is what new convention is going to be adopted. To attempt to answer this question, we will present the results of a survey conducted in Tokyo in the year 2008, in which comparisons were made between the worlds of work of young men & women attending a Job Café (youth employment agency), car life advisers (car dealers), the majority of whom are males & hospital nurses who are mostly females. As we see, a new convention seems to be emerging, which focuses on human relations, especially in the case of young men and women: this recently emerging convention is shaping the world of work both inside & outside companies. It seems to be based partly on market conventions (in the case of car life advisers) & partly on industrial conventions (& on methods of hospital management in the case of nurses).

2010S01061

Hardyns, Wim (Department of Penal Law and Criminology; Ghent University, Ghent, Belgium [e-mail: wim.hardyns@ugent.be]), **Area Concentrations of Collective Efficacy and Individual Differences in Avoidance Behaviour: A Multilevel Study of 40 Municipalities in Belgium,** *International Sociological Association, Gothenburg, Sweden,*

¶ Area differences in crime, victimisation & fear of crime have repeatedly be shown to co-vary with structural characteristics such as economic disadvantage, ethnic heterogeneity & residential instability & with social cohesion processes in the community. Since 1997 'collective efficacy', as a macro-social process, has been studied extensively in sociological & criminological research. US studies have shown that areas with high levels of collective efficacy predict low levels of crime, victimisation and fear of crime, & that individuals too benefit from these collective efficacy concentrations. The collective efficacy model has hardly been tested in the Western European context. In the present study a contextual model was tested on a 2009 survey of 2080 residents of 40 municipalities in Flanders (Belgium). Using multilevel analyses we discuss the contextual effects of area characteristics on individual differences in avoidance behaviour, controlling for demographic background characteristics.

2010S01062

Haring, Sabine A. (Karl-Franzens-Universität Graz [e-mail: sabine.haring@uni-graz.at]), **The Development of the Images of Allies and Enemies among Habsburg Soldiers before, during and after the First World War,** *International Sociological Association, Gothenburg, Sweden,*

¶ Compared to the scientific efforts of other countries, research on the First World War, undertaken in Austria, has been rather limited. Even official editions of files were published rather late & its size & range cannot be compared to that of Germany, England, or France (Österreich-Ungarns Aussenpolitik, 1930; Österreich-Ungarns letzter Krieg, 1930a38). Austria, as the centre of the perished "vielvölkerstaat" seemed to have only limited options to investigate the complex role of the former Habsburg territories that were to become the new states of Yugoslavia, Czechoslovakia, & Poland after the war. Finally, the traumas of World War One were overshadowed by National Socialism and the Second World War. Therefore, a clear & lasting analysis of the war experience of Austrian soldiers is still very much in need. The goal of the research project "autobiographies of Austrian Soldiers", undertaken together with Helmut Kuzmics, is to fill these research gaps.

2010S01063

Harley, Bill, Gahan, Peter & Sewell, Graham (The University of Melbourne, Melbourne, Victoria, Australia, 3010 [tel: +61 3 83444214; fax: +61 3 9349 4293; e-mail: bharley@unimelb.edu.au]), **When and How Do 'High Performance' Work Practices Deliver 'Good Work' and Performance Gains? Towards an Explanatory Framework and Research Agenda,** *International Sociological Association, Gothenburg, Sweden,*

¶ A large & growing number of (mostly cross-sectional) studies suggest that 'high performance work systems' (HPWS) have a significant positive effect on organisational performance (Coombs et al 2006). Although HPWS have attracted some critical investigation from labour process scholars (Thompson & Harley 2007), it is generally asserted that performance gains arise through the positive impact of HPWS on employee effort & motivation, particularly through increasing employee discretion & commitment (Bowen & Ostroff 2007). Yet, there is little empirical or conceptual understanding of the processes through which HPWS generate these effects (Bosalie et al 2006). This paper provides a critical review of the HPWS research and, drawing on recent work on 'social mechanisms' (see Gross 2009), outlines a conceptual framework for making sense of the causal processes involving HPWS & organisational outcomes. The critical insight drawn from this work highlights the constitutive role of the social & political context of the employment relation in setting limits on the extent to which HPWS deliver mutual gains. This framework also provides a means to explain a number of paradoxes noted in the HPWS literature, concerning the questions of when & under what conditions particular employee & organisational outcomes emerge.

2010S01064

Harley, Kirsten, S. J. (Faculty of Health Sciences, The University of Sydney, Lidcombe, NSW, Australia, 2141 [tel: +61407449500; e-mail: kirsten.harley@sydney.edu.au]), **Questioning the Historical Trajectory of Australian Sociology,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper outlines how a careful institutional history can challenge the convention-ally agreed historical trajectory of a national sociology. In historical accounts of Australian sociology, the University of Sydney commonly figures as both the earliest, & one of the latest, sites for the discipline's introduction. Early twentieth-century attempts to introduce sociology teaching at Sydney via philosophy & Workers' Educational Association tutorial classes have been seen as "abortive," with a department of sociology only established there in the late twentieth century, some three decades after sociology found its feet at other Australian universities (Zubrzycki 2005: 220). However, evidence gathered from systematic examination of course descriptions in University of Sydney calendars & handbooks & related archival material shows both a longer, & in some ways more substantial, "pre-history" than has previously been understood, & continuous teaching of sociological content in a host of departmental contexts throughout the twentieth century. Thus for this institution, the ex-planandum becomes not the disappearance and longstanding absence of sociology, but its endurance and proliferation within other departmental contexts & (yet/hence) de-layed establishment as an independent discipline. For the history of Australian sociol-ogy this suggests that its so-called "pre-history" must be taken more seriously, so as to shed light on matters of disciplinary competition, the legacy of sociology's disci-plinary hosts, the role of theory, & intersections with other national sociologies.

2010S01065

Harman, Vicki (Centre for Criminology and Sociology, Royal Holloway, University of London, Egham, Surrey TW20 0EX [e-mail: v.harman@rhul.ac.uk]), **White British Families, 'Race' and Place: Comparing Attitudes and Practices in Mainly White and Ethnically Diverse Neighbourhoods,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper seeks to explore how attitudes towards 'race' & racism in white British families are influenced by the diversity of the local area. Previous research has suggested that diverse city locations offer different experiences in terms of 'race', ethnicity & racism than those in mainly white rural settings. This paper asks: how do white British families in different types of location communicate to their children about ethnic diversity and difference? This paper aims to compare & contrast attitudes and practices in mainly white & ethnically diverse neighbourhoods, including attitudes to ethnic diversity at school and amongst children's friendship groups. Such an exploration has implications for understandings of whiteness, racism, narratives of home & belonging & community cohesion.

2010S01066

Harnisch, Svetlana I. (ORAS Institute of Sociology RAS, Moscow, Russian Federation, 117218 [tel: +7 499 1288601; fax: +7 495 7190740; e-mail: svethy@gmail.com]), **Code Switching Practice in the Inner & Expanding Circles,** *International Sociological Association, Gothenburg, Sweden,*

¶ Aims of the paper are: to analyze code switching practice in multilingual networks; to emphasize social & pragmatic problems of English, French,

Spanish, Russian, Chinese & Arabic used as working languages of networks; to argue language proficiency as a part of the information literacy & to deal with language expansion in real & virtual flows of information within the framework of the UNESCO Program 'Information for All'. Braj Kachru's notions of inner, outer & expanding circles of English usage are extrapolated as models of languages spread in the space and time. Three questions arise: whether or not language expansion is determined? What factors underlie a language expansion? How language & culture contacts affect a person & a community? In pre-industrial & industrial ages the territorial & functional types of language expansion occurred due to wars & colonization. A post-industrial society faces a virtual expansion of languages in the cyberspace flows that have neither territorial nor national borders. Sociolinguistics & linguistic sociology have moved from analysis & description of verbal behavior & bilingual code switching practice in the outer circles to studies of cross-cultural communication in networks of the expanding & inner circles. Code switching practice came into a focus of sociolinguistics, ethnomethodology, pragmatics, semiotics, languages education & socio-cultural approaches dealing with a global spread of Internet & international organizations; labour migration; international education; expansion of transnational corporations; internalization of trade, commerce, mass media and advertizing; international tourism etc. The unification of technical devices of communication & the multiplication of networks & their links & languages in all three circles are seen as the challenges of the future civilization. The role of Russia as a bridge over the gaps in languages & cultures of the West & East is discussed.

Harrington, Meyer, Madonna (Syracuse University, 426 Eggers Hall, Syracuse NY, 13244 [tel: 315-443-9440; e-mail: mhm@maxwell.syr.edu]), **Grandmothers at Work: Juggling Paid and Unpaid Work Over the Life Course,** *International Sociological Association, Gothenburg, Sweden,*

¶ We tend to think of juggling work & family as something only relatively young families contend with, yet many juggle well into middle age because they provide routine childcare for their grandchildren while they are still employed. Scholars in the US and Northern Ireland report that as many as 43% of grandmothers care for grandchildren weekly, but these studies do not differentiate grandmothers who are also employed. I have conducted in-depth interviews with (n=40) grandmothers in the US who are both employed and providing grandchild care to understand their strategies for balancing. What is the impact on their economic security, physical and emotional health, social relationships, & capacity to care for others? I draw on a diverse, albeit convenience, sample, finding that while nearly all grandmothers are pleased to mind the grandchildren, many feel pinched between paid & unpaid work. Some wish they could do more grandparenting & less parenting. Unlike the Irish grandparents, the US grandmothers are generally not trying to reduce time with grandchildren. But many are readjusting work schedules, using vacation & sick leave time, gutting retirement accounts, postponing retirement, reducing hobbies and times with friends, & caring for frail parents or husbands.

2010S01068

Harris, Craig K (Department of Sociology Michigan State University, East Lansing Michigan Usa 48824-1111 [e-mail: harrisc@msu.edu]), **The Pufferfish and the Paneid Shrimp: Assuring the Safety of Commercial Seafood,** *International Sociological Association, Gothenburg, Sweden,*

¶ Seafood commodities pose a unique combination of problems for food safety. On the one hand, effective long distance trade in seafood depends on solving the problem of preservation. Fresh seafood is a highly perishable commodity, so ways have had to be found of preserving the fish & shellfish. Initially these consisted largely of drying & salt drying, pickling & salt curing, and smoking. Subsequently reliable canning was developed, followed by refrigeration & freezing. Today roughly half of the seafood harvested is frozen to balance the seasonality of supply & to make possible long distance trade. While earlier forms of preservation may have decreased the likelihood of foodborne illnesses, they have increasingly run up against the desire of consumers for fresh fish & the desire of intermediaries to service that demand. In general this has made government assurance of food safety more important. In the U.S., seafood was one of the first sectors where the HACCP approach to food safety was mandated by governments. The EU has required that seafood exporting nations have competent authorities & effective procedures to ensure the safety of the fish & shellfish exported to Europe. The involvement of foreign governments in the safety of exported fish has raised suspicions that food safety is being used as a trade barrier. Current efforts by U.S. shrimp & catfish producers exemplify this situation. As noted, earlier forms of preservation (drying, salting, pickling) may have decreased the likelihood of foodborne illnesses. With canning & then refrigeration and freezing, seafood preservation moved more toward industrial organization, with greater likelihood of pathogen contamination. Increasing toxicological knowledge has made the contamination of seafood with heavy metals more significant. The increasing emphasis on fresh products has increased problems of foodborne illness due to time & temperature abuse. Greater awareness of naturally occurring toxins in fish & shellfish (e.g., ciguatera, paralytic shellfish poisoning) have added to the complexity of assuring seafood safety. This paper will look both at government efforts, and at industry efforts, to assure the safety of seafood products. Special attention will be paid to the efficacy & equity of public-private partnerships. The paper will discuss the different ways in which threats to food safety occur at all stages of the value chain, & the different ways of dealing with these risks. Finally, the paper will discuss emerging trends in the safety of commercial shellfish.

2010S01069

Harris, Kevan & Bonini, Astra (Johns Hopkins University [e-mail: astra@jhu.edu]), **Welfare, Wealth, and the World System: Basic Needs Convergence and the Persistence of the Inequality Gap,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper has two objectives. The first objective is to show that although the wealth gap between the global North & the global South in the post WWII era has persisted, the gap between measures of basic welfare in the North & South has followed a trend toward convergence due to basic welfare improvements in the global South. The second objective is to explain the significance of the trend toward basic welfare convergence from a world-systems perspective. World-systems scholars agree that the global hierarchy of wealth in the capitalist system is structured such that the system cannot accommodate the upward mobility of more than a few countries at any one time; hence the persistence of the income inequality gap. However, attaining universal basic welfare levels of the North is indeed theoretically possible, & although 'developmental states' in the global South may not be able to reduce global wealth inequalities, they can vastly improve basic welfare. Borrowing from Fred Hirsch & Roy Harrod's notions of 'oligarchic' and 'democratic' forms of wealth, we make a theoretical case for why basic welfare levels of the North can be generalized to the South even though income levels of the North cannot be generalized. We also differentiate between those forms of welfare, like literacy, that can be generalized to all; & forms of welfare like educational credentials that are distributed in a hierarchical manner. We believe that improvements in 'democratic' forms of welfare deserve attention in terms of what 'developmental states' in the global South can accomplish within the structure of the capitalist world system, even if they cannot achieve wealth equality with the global North.

Harris, Magdalena (Centre for Research on Drugs and Health Behaviour, London School of Hygiene and Tropical Medicine, Keppel Street, London, WC1E 7HT [tel: +44 2079272172; e-mail: magdalena.harris@lshtm.ac.uk]), **Injecting, Infection, Illness: Abjection and Hepatitis C Stigma,** *International Sociological Association, Gothenburg, Sweden,*

¶ While social research has documented the prevalence & ill effects of hepatitis C related stigma, there has been little analysis of the ways in which this stigma is constituted. This paper addresses this gap in the literature by providing a phenomenologically informed account of the ways in which societal attitudes & regulations draw from & feed back into corporeal processes & experiences of embodiment in the creation of hepatitis C related stigma. The case is made that three components are central to hepatitis C stigma: associations with illicit drug injecting, infectiousness and societal aversion to chronic illness. The paper draws upon qualitative interviews with 40 people living with chronic hepatitis C in New Zealand & Australia, as well as the researchers embodied experience of living with the virus. The works of Julia Kristeva and Mary Douglas are utilised to provide an analysis that moves beyond acknowledgement of societal reenforcers of stigma, such as prohibitory drug laws, to address underlying notions of boundary crossing in the production of stigma & exclusionary practices.

Harutyunyan, Lyudmila (Department of Sociology, Yerevan State University (Armenia), Yerevan, Armenia 0009 [tel: + 374 10 525 380; fax: + 374 10 559 397; e-mail: lyudmilah@gmail.com]), **Unsolved Violent Conflict: Visible and Sightless Social Dimensions,** *International Sociological Association, Gothenburg, Sweden,*

¶ Severe ethnic conflicts are able to change not only the course of history but also the societies of the countries involved. Societal changes that happen during military stages of severe ethnic conflicts are well known. Less known are societal changes in the period when the active phase of war or violence is in past, but the search for peace & reconciliation has not been crowned with successes yet. The coexistence of war & peace differs these societies from not only military, but also peaceful societies. A particular quality of such a society is form due to abnormal social structure, domination of military elite, specific institutional & value systems. Comparative strength of potential for conflict in these societies is much higher that peace potential since they are frizzed at the stage of readiness for quick military mobilization that is a matter of vital importance to them. Collective memory constantly reproduces & sharpens the image of enemy, & social identity is based on narratives that contain memory of ethnic suffering & unhealed trauma. All this factors are constantly reproducing the specific state of these societies and leveling opportunities for reconciliation & peace building. Author argues that there is no possibility to reach reconciliation and peace without profound changes in institutional & structural systems, without resolving the problems of collective memory and identity.

Harvey, Rachel (Committee on Global Thought, Columbia University [fax:; e-mail: rmharvey@uchicago.edu]), **The Genteel Regulator: The Bank of England and the London Gold Market,** *International Sociological Association, Gothenburg, Sweden,*

¶ My historical research on the London gold market during the twentieth century shows that even in the heart of what are often presumed to be one of the most instrumentally rational social formation, financial markets, explicitly moral action existed. As late as the 1980s the Bank of England relied upon the values of loyalty, duty, and honor to regulate the London gold market. This governance approach was not adopted because it was considered the most efficient means to regulate markets. Rather, archival materials collected at the Bank of England Archives suggests that the central bank's senior staff believed that such values were the proper way to act. While revealing how even the most stereotypical instrumentally rational economic formations contain diverse cultures & moral orders, my focus on the urban-based regulatory practices of the Bank of England research also challenges the traditional, homogeneous characterization of Anglo-American capitalism. The regulatory structures of the United Kingdom & the United States might be characterized by strong similarities, but the embeddedness of each system in different institutional milieus and historical trajectories requires that the idea of Anglo-American capitalism receive a more nuanced treatment.

Hasan Khan, Mehedi (Department of Population Sciences, University of Dhaka, Dhaka-1000, Bangladesh [tel: 88-02-01711829501; fax: 88-02-8615583; e-mail: mehediULdps@yahoo.com]), **Socio-demographics of the Elderly Population in Bangladesh: Evidences from a Developing Country,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this paper is to explore some of the basic socio-demographics of the emerging elderly population in Bangladesh. Information of the major population data collecting bodies is analyzed in this purpose. Bangladesh population has entered this millennium with new demographic trends of increased number & proportion of elderly people. The dramatic fertility decline & the declining mortality trends have impacted the age structure & the pre-condition of emergence of population ageing was set in. The growth rate of elderly population was quite higher than the national population growth rate. Although the percentage is not very high, the 9.42 million elderly people in 2008 are absolutely phenomenal in the country's population and underdevelopment context. The life expectancy has increased by 18.68 years during 1961-2008 periods. Higher female life expectancy for the first time since 2001 is indicating a feminization of ageing in the future. Bangladesh population is projected to have 43.12 million elderly people which will constitute 17 percent of the total population in 2050 & would have severe socio-economic impacts. Socio-demographic analysis of this emerging sheer number of vulnerable population is extremely important for policy direction for the overall population & development scenario of the country.

2010S01075

Hasegawa, Koichi & Broadbent, Jeffrey (Department of Sociology, Tohoku University, 27-1, Kawauchi, Aoba-ku, Sendai, Japan, 980-8576 [tel: +81-22-795-6032; fax: +81-22-795-6034; e-mail: k-hase@sal.tohoku.ac.jp]), **Actors for Sustainable Law Carbon Society: Japan, the US and Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ The purpose of this study is to compare the awareness, attitudes and activities of environmental NGO members in Japan, the United States and Germany. To maximize their similarity, this project selected typical & very active environmental NGOs located in progressive middle-sized metro areas in these three countries: Sendai, Japan, St. Paul, Minnesota, the US & Freiburg, Germany. The–NGOs perform–lot of tasks including outreach, advocacy, education, support of local or community level activities, consulting, research, data collection & so on. The common mailing survey focused on member's commitment level, attitude toward global warming, renewable energies & other environmental issues, personal social capital & networks, other personal background information & the relationship with local government. This paper presents the major results of the surveys. Typical similarities of the members are very high education & very liberal political attitudes. We found some differences. For instance, in case of the US NGO, many members are new comers joined within 8 years or less. They are isolated donators. On the other hand, the Japanese NGO is functioning more as a kind of social capital. Many of them are less isolated, knowing each other & committing for long years more than ten years.

2010S01076

Hasmath, Reza (Department of Sociology, University of Toronto [fax:; e-mail: rhasmath@gmail.com]), **The Interactions and Representation of Ethnic Minorities in Beijing, China,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the development of the ethnic minority population in Beijing, with a focus on their identification, settlement and contemporary representation & interactions with the dominant majority Hans. It will draw upon fieldwork conducted in Beijing in 2008, including interviews & participant observation. The paper will first present a brief history of ethnic minorities' settlement in the capital city, & thereafter proceed to discuss their integration. This will be followed by a discussion about the growth & decline of Beijing's ethnic enclaves, & the increasing commodification & exoticization of ethnic minorities in daily life.

2010S01077

Hattersley, Libby (The Australian National University, Canberrra, ACT 2602, Australia [tel: +61 404 783 476; e-mail: libby.hattersley@anu.edu.au]), **Reconceptualising Ethics in Supermarket Food Supply,** *International Sociological Association, Gothenburg, Sweden,*

¶ Significant social, economic & ecological costs remain embedded in supermarket food despite the proliferation of retailer-driven standards relating to ethical & sustainable trade. In imposing such conditions of trade onto their supply chains, supermarkets are arguably offering to deliver on society's ethical-food expectations and, in doing so, are open to criticism of their own practices. Yet what does an ethical food supply look like, & what role should supermarkets play in this? This paper uses an interdisciplinary framework to advance the ethical food debate by recognising the complex interdependence between food system activities, food security, & ecological & human wellbeing. Utilising this expanded framework, recent research conducted within the Australian and South African deciduous fruit sectors is drawn on to explore the contradictory implications of current ethical trading requirements. The paper concludes that there is a

critical need for an expanded whole-of-system food ethics agenda, & discusses the constraints to, & opportunities for implementing this.

Haudenhuyse, R. & Theeboom, M. (Sport Policy and Management, Vrije Universiteit Brussel, Pleinlaan 2, 1050, Belgium [tel: 0032479813703; e-mail: rhaudenh@vub.ac.be]), **Sport+ and Socially Vulnerable Youth: Demythologizing the Storylines,** *International Sociological Association, Gothenburg, Sweden,*

¶ There is a long history of viewing sports to achieve a variety of outcomes relating to the individual & the wider community. In this perspective, sports are recognized as an opportunity to engage young people in a positive alternative & not just in terms of participation in sports activities, but across a range of issues including education, employment & training, community leadership and healthy lifestyles. More recently this approach became known as 'sport+', because of the proclaimed added value beyond 'mere' participation. Some have referred to these beliefs about sports as deeply entrenched storylines (Houlihan et al., 2009) with a mythopoeic character (Coalter, 2007). Data was collected through activity-observations, in-depth interviews & questionnaires with participants (11 - 21 years), parents & coaches in a 'sport+' boxing-project in Belgium. The aim was to generate insights in the used organizational & didactical methodologies, & how these are viewed & experienced by those involved. Preliminary results shed light on the social climate, organizational culture, specificity of the sport & instructional principles that favor the development of beneficial outcomes for socially vulnerable youth. Suggestions for further fundamental epistemological & methodological research are formulated, to grasp the underlying instigating mechanisms allowing these outcomes to occur.

Havekes, Esther, Dekker, Karien & Coenders, Marcel (Department of Sociology Utrecht Universitty, Heidelberglaan 2 ,3584 CS, Utrecht, The Netherlands [tel: +31 30 253 1457; e-mail: e.a.havekes@uu.nl]), **Interethnic Attitudes in Ethnically Diverse Neighbourhoods: A Multigroup Approach,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines how living in an ethnically diverse neighbourhood affects interethnic attitudes among neighbourhood residents of various ethnic backgrounds in the Netherlands. Testing predictions from intergroup contact & conflict theory, previous studies mainly investigated the impact of the share of ethnic minorities in the neighbourhood on the attitudes of the native majority population towards ethnic minorities. However, by doing so, they neglect the diverse character of the neighbourhood minority population, & they assume that the process via which the neighbourhood affects interethnic attitudes manifests itself uniformly across ethnic majority & minority groups. In this paper we propose that the impact of the ethnic composition of the neighbourhood depends on cultural & status differences between ethnic groups. Using large scale survey data (LAS, 2004, N=4.000), we analyse the attitudes of the native majority population & the four largest non-western minority groups in the Netherlands (i.e., Turks, Moroccans, Surinamese, & Antilleans) towards each of these ethnic groups. The Netherlands is an interesting test case as the kind & degree of ethnic mix varies over urban neighbourhoods, and minority groups differ in cultural & economic status position. Furthermore, we take into account the socioeconomic status of the neighbourhood & residential population shifts in the neighbourhood, to capture the diverse & dynamic character of urban neighbourhoods. This study contributes to the ongoing societal & scientific debate if population composition of urban neighbourhoods determines tolerance between ethnic groups.

2010S01080

Hayashi, Yusuke (Department of Behavioral Science, Tohoku University, 27-1 Kawauchi Aoba-ku Sendai 980-8576 [tel: +81 22 795 6037; fax: +81 22 795 5972; e-mail: hayashi@sal.tohoku.ac.jp]), **Job Mobility after the Economic Transformation: Cross-national Comparison of Japan and Korea,** *International Sociological Association, Gothenburg, Sweden,*

¶ I investigate the differences & similarities of the structure of job mobility in contemporary Japan & Korea utilizing work history data during 1998-2005 from Japanese SSM (Social Stratification and Social Mobility Survey) & Korean KLIPS (Korean Labor & Income Panel Study). The fluidity of Korean labor market is higher than Japanese one. In both countries, there are seemingly similar patterns in differences in fluidity between social backgrounds. However, the event history analysis shows that the occupational strata & the academic background have significant influences on job mobility only in Korea. The percentage of decline in income associated with job mobility in Japan is higher than that in Korea. Another event history analysis reveals that the effects of age and self-employed worker positively influence to decline in income in Japan, while there are significant effects of educational backgrounds, occupational strata, employment status, & firm sizes in Korea. In conclusion, the structure of job mobility & change in income are determined by different mechanisms in both countries. The labor market in Japan & Korea have peculiar problems, which are the absolute high percentage of income decrease in Japan, and big gaps in the consequence of job mobility between social backgrounds in Korea.

Haycock, David & Smith, Andy (Chester Centre for Research into Sport and Society, University of Chester, Parkgate Road, Chester, Cheshire, CH1 4BJ [tel: 01244 513465; fax: +44(0)1244 511337; e-mail: d.haycock@chester.ac.uk]), **Sport, Health and Risk: Exploring the Risks of Life Transitions to Adults' Sporting and Leisure Careers,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the risks that significant life transitions (e.g. getting married, buying a house, having children, changing jobs) have on the sporting biographies & leisure careers of adults in north-west England, & explores the implications of these for health. In doing so, the paper reports on data generated by questionnaires completed between June & July 2009 by 60 30-35-year-olds who were asked questions about their involvement in a range of home-based leisure & out-of-home leisure activities. Follow-up semi-structured interviews–which explored the sporting & leisure careers of adults–were also conducted with 19 of the survey respondents during August 2009. The findings of the study suggest that the extent to which adults' leisure, health behaviours & sporting biographies changed over the life course from childhood, through to youth & then young adulthood, was significantly related to the risks posed by the numbers & kinds of transitions experienced (especially since age 16), family relationships & cultures, the development of sporting habitus, and the construction of 'wide sporting repertoires' during youth.

Hayrapetyan, Zaruhi E. (Yerevan State University [e-mail: zaraULhayrapetyan@yahoo.com]), **Dynamics of Tradition and Modernity in the Images of Advertisements' Heroes and Theirs Perceptions,** *International Sociological Association, Gothenburg, Sweden,*

¶ Armenian society today is the society of contrasts in social and cultural sense; it is a dynamic interaction of tradition and modernity. After Soviet Union collapse & opening of iron curtain processes of nationalization, modernization & cultural globalization developed, that influenced on the dynamic of social identity. One of identity dimension is the visual image of ours and others in the ethnic, gender & age sense; its construction in the public discourses & interpretation in social interaction processes. Advertising discourse as one of public discourses not only flexible reflects social & cultural processes in the society but socializes & represents the correct image of the person (the hero). In the first part of my paper images of ourselves & others constructed in Armenian advertising discourse in ethnic, gender and age dimension will be presented. Then, on the bases of the in-depth interviews using photo-elicitation technique with young people from the capital & rural places spread images perceptions, constructed narratives & interactions with such kinds of "heroes" will be presented. As a result main tendencies of modern Armenian youth identity development will be presented in the perspective of tradition & modernity; wide scale of interpretation with the mainstream will be discussed.

Heap, Josephine, Lennartsson, Carin & Thorslund, Mats (Aging Research Center, Karolinska Institutet / Stockholm university, Stockholm, Sweden, S- 113 30 [tel: +4686905302; e-mail: josephine.heap@ki.se]), **Coexisting Disadvantages among Older Adults,** *International Sociological Association, Gothenburg, Sweden,*

¶ When describing people's overall living situation, it is important to consider several indicators of well-being simultaneously. From a policy perspective, it is crucial to map out the coexistence of different disadvantages such as ill-health & economic problems. The aim of this article is to study the prevalence of two or more coexisting disadvantages among older as well as younger age groups, which has rarely been examined in previous research. Also, to analyse how the different disadvantages are associated with each other. Using data from a Swedish nationally representative survey (year 2000/2002), including people aged 19 years & older (n= 5411), it was found that that the prevalence of two or more coexisting disadvan-

tage is highest from age 75 & upwards. In all age groups, women have a higher prevalence than men. The biggest gender differences are found from age group 70-74 & upwards. Logistic regression analysis showed that there are more correlations between different disadvantages among older adults than among young adults. The variation of different combinations of disadvantages is greater among people aged 66 & upwards compared to people aged 19-29. Results are discussed from a policy perspective, as well as an inequality perspective regarding age- and gender differences.

Hearn, Jeff (Huddersfield, Linköping, Hanken, FLO, Hanken, PO Box 479, FIN-00101, Helsinki, Finland [tel: +358 9 431 33206; fax: +358 9 431 33275; e-mail: hearn@hanken.fi]), **'It Just Happened': Elements of a Transnational Sociology of Men's Violence to Women in Intimate Relationships,** *International Sociological Association, Gothenburg, Sweden,*

¶ Sociology has been effective in analysing conflict, but less so the specifics of violence. In this presentation I address men's violence to known women as both a social problem & a sociological problem. Interestingly, this particular matter, the convergence and contradiction of violence & 'intimacy', has not figured strongly in sociological theorising. To focus on men's violence in intimate relationships is not to attribute an essentialism to men or violence enacted by men. On the contrary, it is to consider the social contextualisations of & variations in men's violence across & within societies, including how men can often be understood as the specialists in violence in many contexts. So, what can sociology learn from the study of men's violence to known women, & the intersections of violence & 'intimacy'? I approach this question a & such issues as naming, defining, framing, explanation, agency, structure, process a from the experience of living & researching in different countries. Drawing on this, the relations of violence/'intimacy', local/national context and transnational linkages are highlighted, including those beyond the immediate confines of intimate relationships. These relations constitute relatively unexplored elements of a transnational sociology of men's violence to women, & transnational sociology more generally.

2010S01085

Héas, Stéphane (Université of Rennes, UFR APS Avenue Charles Tillon, 35 044 Rennes, FRANCE [tel: 0630934865; e-mail: stephaneheas@orange.fr]), **Sports and Diseases Stigma,** *International Sociological Association, Gothenburg, Sweden,*

¶ The cultural prejudice & discriminations into sports are common. Different authors explain the importance of stigmatization process. A negative label can affect each participation in sport. Here we analyze the place of diseases & illness situations in sports. Two inquiries underline these phenomena: the first about AIDS's sportsmen or sportswomen, the second on skin diseases or epidermis affections. These two types of diseases are opposite: on one hand a relatively rare affection in Europe coupled with a high level of mediates of AIDS epidemics, on the other hand more common skin affection but less "mediatized." The first results are proposed: to be HIV infected is always difficult & underground in France, suffering of skin inflammations is common but nevertheless rarely these affections are exposed in public's spheres. Three sources are used: sportsmen' interviews, discourses on Internet forum and interviews with medical practitioners, specialized or not in sports. The social process of pollution & of hygienic are combined. Fear is often present into discourses of these three types of population. The human interactions seem to be limited but also to be boosted by disease.

Heath, Sue & Calvert, Emma (University of Southampton, Southampton, UK, SO17 1BJ [tel: ; e-mail: E.Calvert@soton.ac.uk]), **Changing Interdependencies, Changing Biographies: Young People's Strategies in Pursuit of Residential Independence,** *International Sociological Association, Gothenburg, Sweden,*

¶ British young people today experience pathways to residential independence marked by considerable risk & uncertainty. As in other transitional areas, access to material resources & to formal & informal support are key factors in understanding unfolding housing pathways, with social class background being a key determinant of access to such resources. Ready access to financial resources is particularly critical, & many young people seeking to live independently of their parents in the physical sense may, paradoxically, find themselves increasingly financially reliant on family members in order to achieve this. Others achieve residential independence only through renting or buying houses with friends, thus creating potentially complex forms of interdependency. This paper draws on early data from a qualitative study of the living arrangements of young people aged 25 to 34 years old living in non-family households. It explores the degree to which they are able to access resources provided by peers and family members in achieving their ambitions in relation to housing and household/family formation. The paper focuses on the interdependencies thus created & their implications for the changing nature of youth biographies.

Hedayat, Ali (Institute for Advanced Studies Lucca, San Ponziano 6, Lucca, Italy 55100 [tel: +39 347 1900 896; e-mail: hedayat.ali@gmail.com]), **Protest Movements and the Mobilization of Activism: A Frame Analysis Approach of the Contemporary Right-Wing Extremists and Islamic Activists in Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ My paper attempts to investigate to what extent the right-wing & the Islamic movement have been able to mobilize protest in Germany. These movements enlarge the number of issues covered by frames, to mobilize a greater range of social groups. Therefore, I use the frame analysis approach to describe how both movements perceive their reality & environment. Some of these movements benefit from societal support. Others decline because of a lack of adherents, economic constraints & state repression. The state uses different repression methods towards these two movements, combing a mixture of institutional pressure (legal ban), with police & internal security forces. Thus, the outcome of protest mobilization for the right-wing & Islamic movement is going to be different. Methodologically, my analysis is based on a qualitative comparative research, involving documentary & discursive analyses to illustrate mobilization processes. I will also employ secondary sources, existing literature & official documents from political and institutional authorities.

2010S01088

Heidegren, Carl-Göran & Lundberg, Henrik (Department of Sociology, Lund University, Box 114, 221 00, Lund, Sweden [tel: +46 46 222 88 45; e-mail: carl-goran.heidegren@soc.lu.se]), **Towards a Sociology of Philosophy,** *International Sociological Association, Gothenburg, Sweden,*

¶ We will present & discuss the sociology of philosophy as a theory-based empirically practiced sociological subdivision that came to the fore in the 1980s. To begin with the type of empirical material & the forms of data presentation that are available to the sociology of philosophy are discussed. Next we focus on two important attempts, those of Randall Collins & Pierre Bourdieu, to develop general sociological theories about the relationship between social being & thought. The main lesson to be drawn from them is, in our view, that in normal circumstances philosophical thought cannot be reduced to socio-political conditions outside the attention space (Collins) or the philosophical field (Bourdieu). In conclusion we tentatively sketch a program for at future sociology of philosophy. All in all, the sociology of philosophy is seen as a lately emerging new subdivision within sociology whose potential is far from exhausted, both with respect to theoretical development as well as empirical approaches.

2010S01089

Heikkinen, Satu & Levin, Lena (Swedish National Road and Transport Research Institute, 581 95 Linköping [tel: (0)13-204000; fax: (0)13-131436; e-mail: satu.heikkinen@vti.se]), **Journeys of Life in a Neighbourhood–Mobility, Life Stories And Ageing,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores the heterogeneity of a neighbourhood by focusing on older people's narratives of mobility i.e. everyday mobility/transportation & residential mobility during the life course. As these forms of mobility are intertwined with other issues of life such as family, employment & leisure, the narratives were told as well as analysed within a frame of wider life stories. The aim of this paper was 1) to analyse older people's narratives about lived mobility in a specific neighbourhood 2) to analyse the interplay of ageing/changing neighbourhoods & the ageing & mobility of individuals. 18 interviewees 65 years & older were asked to retell their lived everyday mobility. All interviewees lived in the same neighbourhood, Ljura in Norrköping, Sweden. In this way all stories converged in time & space, in Ljura, at the time of the interview. Some interviewees had grown up in Norrköping while others originated from the very north & south of Sweden, as well as from abroad, thus illustrating how very different life trajectories & experiences came together in the same neighbourhood. A polyphony about moving to & living in Ljura, the changing & ageing of Ljura & everyday mobility came about.

2010S01090

Heinich, Nathalie ([e-mail: heinich@ehess.fr]), **From Heroes to**

'People': Fame in a Long-Lasting Perspective, *International Sociological Association, Gothenburg, Sweden,*

¶ For centuries, in western civilisation, fame used to be reserved either to sovereigns or popes, or to "saints, geniuses and heroes", according to Max Scheler's well-known categorization : that is, individuals who deserved special admiration through their extraordinary sacrifices, skills or military exploits. Since the beginning of the 19th century, with the development of photography, cinema, radio, television, & now the Internet, great men may be not anymore heroes (because of their outstanding acts), saints (because of their extraordinary sacrifices) or geniuses (because of their exceptional skills), but simply famous "people": personalities that almost everyone can "recognize", that is, identify by putting a name on a face. The novelty of such a situation can be noticed through the new words that appeared to name them: "stars", "vedettes", "celebrities", "personalities", or even today, "people". While this new value seems to be deeply emotionally involved, its axiological status is rather low in the hierarchy of values, especially in the intellectual or academic world. This is probably why it has not yet been given all the attention it deserves, although it shows a deep change in the modern conception of merit within the civilizing process.

2010S01091

Heinze, Eike (Department of Sociology, University of Bremen, Germany, Bremen, Germany, 28334 [tel: 004942172986; e-mail: eike.heinze@gmx.net]), **Strengths and Weaknesses of World-Systems Analysis,** *International Sociological Association, Gothenburg, Sweden,*

¶ World-Systems Analysis is one of the most interesting approaches in social science at present. It has not reached its limits yet and still has a huge potential. Unfortunately in many countries, e.g. Germany, it is only known to very few social scientists. Therefore, in this presentation the strengths & weaknesses of world-systems analysis will be discussed & we will try to answer the question how this approach can be developed furthermore. Finally we will discuss what world-systems analysis can contribute to social movement & social change making the new world-system more democratic & egalitarian than the old one.

2010S01092

Heisig, Jan Paul (Wissenschaftszentrum Berlin, Reichpietschufer 50 [fax:; e-mail: heisig@wzb.eu]), **Income Dynamics around Retirement–A Comparison of Germany and the United States since the 1980s,** *International Sociological Association, Gothenburg, Sweden,*

¶ I investigate how welfare states shape the well-being of older individuals by studying income dynamics around retirement in the United States & Germany. Who are the 'winners' & who are the 'losers' of the retirement transition & are existing inequalities reinforced, preserved, or attenuated, as individuals withdraw from the labor market? The country comparison is complemented by an analysis of changes over time to address the notion that a 'Great Risk Shift' (Jacob Hacker) has increased the likelihood of financial hardship in old age. Following a synoptic review of the countries' changing institutional frameworks, I analyze longitudinal data from the Panel Study of Income Dynamics and the German Socio-Economic Panel. Conceptualizing retirement as an extended transitional period marked by a–possibly incomplete–withdrawal from paid work & the take-up of retirement benefits, I employ sequence analysis to identify a limited number of ideal typical employment-benefit trajectories. I then explore the socio-economic correlates of & income trajectories associated with these employment-benefit sequences. In a final step, I estimate fixed-effects models to study the individual and household-level dynamics underlying the observed income trajectories.

2010S01093

Helbing, Dirk (ETH Zurich, Clausiusstr. 50, 8092 Zurich [tel: +41 44 632 8880; fax: +41 44 632 1767; e-mail: dhelbing@ethz.ch]), **Cooperation, Norms, and Conflict: Towards Simulating the Foundations of Society,** *International Sociological Association, Gothenburg, Sweden,*

¶ In order to understand social systems, it is essential to identify the circumstances under which individuals spontaneously start cooperating or developing shared behaviors, norms, & culture. In this connection, it is important to study the role of social mechanisms such as repeated interactions, group selection, network formation, costly punishment & group pressure, & how they allow to transform social dilemmas into interactive situations that promote the social system. Furthermore, it is interesting to study the role that social inequality, the protection of private property, or the on-going globalization play for the resulting 'character' of a social system (cooperative or not). It is well-known that social cooperation can suddenly break down, giving rise to poverty or conflict. The decline of high cultures & the outbreak of civil wars or revolutions are well-known examples. The more surprising is that one can develop an integrated game-theoretical description of phenomena as different as the outbreak & breakdown of cooperation, the formation of norms or subcultures, & the occurrence of conflicts.

2010S01094

Helmut, Kuzmics (Karl-Franzens-Universität Graz [e-mail: helmut.kuzmics@uni-graz.at]), **Affects and Sentiments as a By-Product of Mechanized Warfare on the Battlefields of the Great War 1914-1918: In Autobiographies by Officers and Soldiers of the Habsburg Army,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper, I focus on the remembrance of Austrian soldiers (collected in more than twenty autobiographical documents and gained in a research-project undertaken together with Sabine Haring) in the First World War with respect to their perception of affects & sentiments on the battlefield. I try to sketch the highly ambivalent development of the emotional experience of war, depending on the process of armed struggle, its length and bitterness, on the perceived distance or closeness to one's own humanness & on the balance of anonymity/impersonality and intimacy between friend & foe. One of the surprising results is one non-intentional consequence of bureaucratized, planned warfare that shaped the experience of millions of Austrian soldiers: the rising importance of ancient 'fate' & of good or bad military leadership. Does this help us to solve the persistent puzzle of an 'age of extremes' which, with rising Fascism & Stalinism, appears to us as more barbarous than the savage middle-ages?

2010S01095

Helve, Helena (Dept. of Social Work, Univ. of Tampere, Tampere, Finland, 33014 [tel: + 358 50 420 1517; e-mail: helena.helve@uta.fi]), **The Change in Values as a Challenge for Education,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the paper education is discussed from the point of view of what educators should know about maturing processes & attitudes of young people today. It examines the significance of ideologies and changes they have undergone in so called postmodern time. These changes are discussed in the empirical studies of Finnish young people's values & world views & World Value Surveys. The impact of global culture on education & the effect of education on multiculturalism & young people's identity work are discussed. The paper concludes with an analysis of the values & ethical priorities in society, & the ways in which these have affected educators' values over the last decades, which in turn has an impact on education.

2010S01096

Henaff, Nolwen & Lange, Marie-France (Institut de recherche pour le développement [fax:; e-mail: nolwen.henaff@orange.fr]), **Globalization and Working Pupils in Vietnam,** *International Sociological Association, Gothenburg, Sweden,*

¶ The presentation offers an analysis of the impact of globalization on the situation of working primary & lower secondary pupils based on qualitative data collected by the authors & their partners in Central & South Vietnam in 2007 & 2008. The effects of the opening up & development of the country after the mid 1990s have not been homogeneous throughout the country. In the areas that have witnessed a diversification in employment, globalization provides incentives for children to remain at school until they get the minimum level of education required to be recruited. Other areas have not been touched by globalization to the same extent & keep to their traditional activities, offering lesser prospects in terms of return to schooling. Everywhere in the country, children from poor families have to work to help their family generating income and/or to pay for their schooling. The presentation will look at how children & their families cope to combine work & schooling in those different contexts.

Henricks, Thomas (Elon University, Campus Box 2035, Elon, North Carolina, 27244 [tel: 1-336-278-6446; e-mail: henricks@elon.edu]), **Framing the Emotions,** *International Sociological Association, Gothenburg, Sweden,*

¶ In his 1974 work, Frame Analysis, Erving Goffman attempts to develop a 'sociology of experience' by showing how people's participation in social encounters is organized in terms of a number of pre-existing (and socially supported) cultural formats or frameworks. In the current paper, the author shows how the idea of framing can be applied to several other aspects of social experience, including the emotions. Building on a con-

ception of emotion as the 'awareness of self in circumstance', the author argues that emotions can be seen as composite forms of awareness that result from a series of five 'framing-judgments' that people make about the character of those circumstances & about their own roles in them. Different emotions are said to be the end-points of distinctive narratives or rhetorics, effectively accounts that orient people in response to the question that Goffman saw as preliminary to all social inquiry: 'What is it that is going on here?' In the paper, the author locates individual emotions in terms of this judgment process. In addition, he explores the notion of positive & negative emotions– essentially affirmations and disaffirmations of circumstances–as two 'emotion-streams' that lead toward action. Final comments address the status of emotions as 'frames' in themselves, that is, as publicly recognized forms that alert all actors (including the possessors of those emotions) to what is likely to occur in the moments ahead.

Heo, Hyunmi & Lee, Bona (Kyungin Women's College, Gyesangil 101, Gyeyanggu, Incheon, South Korea, 407-740 [tel: 82-010-3649-4562; e-mail: bona0209@hotmail.com]), **Policy Issues for the Prevention of Sexual Harassment in Women's Sports in South Korea,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper we present results from a large-scale research project that investigated sexual harassment in elite sport in South Korea. This research had two broad purposes: first, to uncover the incidence, type, situational context, & emotional & behavioral responses to sexual harassment; & second, to develop practical countermeasures & policy guidelines for the prevention of sexual harassment within South Korean sport organizations. Data reported here were drawn from two surveys of 2,152 female elite female athletes participating in 55 sports registered under the Korean Olympic Committee. Athletes returned 333 responses to our first on-line survey & 213 responses to a follow-up, which consisted of direct mailings & personal interviews. We found that a) 20% of our respondents had experienced sexual harassment, which b) most frequently occurred in training locations by c) coaches or managers with whom they had high contact frequency, & that d) athletes experienced both emotional (e.g, rage) & physical (e.g, headaches) as a result of the harassing experience, but e) responded passively by accepting jokes or by keeping quiet. We suggest a number of policy guidelines for the prevention of sexual harassment & urge the establishment emotional counseling and legal support systems for sexual harassment victims.

Herding, Maruta (Department of Sociology, University of Cambridge, Free School Lane, Cambridge, CB2 3RQ, United Kingdom [e-mail: mh525@cam.ac.uk]), **The Conservative Avant-Garde: Islamic Youth Culture in Contemporary Western Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ Islam & youth culture have rarely been associated within & outside academia. Especially in the European context, young German, French or British Muslims are assumed to live a life entirely devoted to religion or to be secular & to consume European youth culture. In the 2000s, however, a new trend has emerged that combines Western forms of pop culture with Islamic substance, e.g. religious hip-hop, sportswear with Islamic slogans or media catering for 'cool' religious Muslim youths. The empirical basis of this research are qualitative data collected in Germany, France and Britain in 2008-2009, comprising in-depth interviews with producers of Islamic youth culture & ethnographies investigating the consumer side. The results will be discussed in light of the societal context of the movement & the tools for grasping it from a subcultural point of view. The data suggest that there are four main types of motivation among the producers of Islamic youth culture: political, educational/proselytizing, artistic and business motives. Young Muslims are negotiating their having a say, confounding their own community by innovative forms of expression and bewildering subcultural scenes by strong moralistic values a which is why they could be referred to as a 'conservative avant-garde'.

Herkle, Holger (University Duisburg-Essen, Duisburg, Germany, 47048 [tel: 49 203 3792744; e-mail: holger.herkle@uni-due.de]), **The Identity of the Organization and the Organization of Identity a Self-Descriptions and Their Impact on Human Resource Policies,** *International Sociological Association, Gothenburg, Sweden,*

¶ The relations between organizations & their members are influenced by the decisions of an organization's HR department. The article shows how organizational identities shape those decisions. It presents a case study conducted in a German steel mill, revealing three different organizational identities called actor, agent and arena. The article focuses on the relations between these different identities & the techniques to mediate possible conflicts between them. As a consequence of the empirical findings the opposition between mono & multiple identities common in the literature is challenged & replaced by the idea that organizations oscillate between these two extremes. They are able to be both fragmented and unified.

Hermansen, Jens Christian (Department of Sociology, University of Copenhagen, Copenhagen, 1014 [tel: +45 35323267; e-mail: jch@soc.ku.dk]), **An Outline of a Neo-Wittgensteinan Sociology of Mind,** *International Sociological Association, Gothenburg, Sweden,*

¶ In my presentation I shall deal with the social competencies of agents, in particular what these competencies consist in & how agents mediate between them & what I shall call orders of validity. I shall argue the following. First, that the minds of social agents are forcefully conceived of as repositories of conceptual (but not necessarily linguistic) competencies in the sense that we need to conceive of agents as 'thoughtful agents', capable of inferences & of holding one another accountable. Second, I shall argue that we cannot reduce these competencies to 'theories in the head', rather they are of a very fine-grained perceptual or practical form i.e. they are exercised & displayed in social practices that are historically & logically prior to the abstract descriptions or theories of agents. Finally, and contrary to much linguistic philosophy & sociology, I shall argue that this does not necessarily imply that "minds are a gift of society" (or a construct of social practice): in practice, the social competencies of agents are woven into the de facto orders in which agents are situated & which involve not only social but also, for example, psychological, economic & material phenomena.

Hermo, Javier Pablo & Pittelli, Cecilia A. (Carrera de Sociología, Facultad de Ciencias Sociales; Universidad de Buenos Aires, Marcelo T. de Alvear 2230, Ciudad de Buenos Aires, Argentina, C1029AAF [tel: +5491150108965; e-mail: jphermo@mail.fsoc.uba.ar]), **New Professions on a Global World: The Case of Global Professors,** *International Sociological Association, Gothenburg, Sweden,*

¶ Globalization has changed the world in many aspects which are relevant for professionals & all kind of 'knowledge workers' such as professors & teachers. One of them is linked with Higher Education & its internationalization process. It is possible to understand globalization as a complex phenomenon with a logic that supposes radical changes in the way that assumes production and reproduction of the society as a whole, including production of goods & services. The configuration of the educational sector such like another market, the increasing necessity of symbolic analysts & other "knowledge workers" who can manipulate and manage the suitable codes required for production today, are part from a scene where permanent & higher education become essential for production & social reproduction. These global processes are dramatically increasing the need of "knowledge workers" and thus, the need of higher education availability through borders where local education institutions must compete with transnational providers. Besides, more & more of permanent education is required, such as postgraduate & professional courses in a wide variety of issues. That is the main reason why a new kind of "global professors" are appearing since the beginning of 21st. century. An increasing number of Higher Education professors are working in different countries or without moving but working as virtual tutors or professors such as other teleworkers in the information society. This paper will center on this new reality in Latin America, specifically focusing on a case: the Curso de Experto Universitario de Administradores de la Educación (CADE) made by Universidad Nacional de Educación a Distancia (UNED) from Spain & Organización Iberoamericana para la Educación, la Ciencia y la Cultura (OEI).

Herrera Vega, Eliana (University of Ottawa, Philosophy and Sociology Departments, 1 Stewart room 130 K1N 6N5 [tel: 1 613 8200962; e-mail: eherrera@uottawa.ca]), **What Is Left For Humans in a Technologically-Made Life? Relevance of N. Luhmann's Theory of Social Systems,** *International Sociological Association, Gothenburg, Sweden,*

¶ Technological advancement has dramatically changed the praxis of agency. Nowadays, human agents share the phenomenological ground with a variety of social systems, gadgets, cyborgs, & human extensions,

which modify the conditions of freedom & ethical responsibility. Classical ethical approaches are besieged by the material development of society, as the place of subjectivity is no longer restricted to the human individual. This paper address the questions: What is the remaining space for humans within a technologically made society? And how could ethical boundaries be included within the functioning of specialised social systems and technological agents? How can operational restraints & modulators be of assistance to systems to circumvent ecological boundaries? The description of a society without men, as N. Luhmann posits, can be useful to preserve the human space, in the midst of a radically different notion of alterity.

Herrera, Florencia (Escuela de Sociología, Universidad Diego Portales, Ejército Libertador 333, 8370127,Santiago, Chile [tel: 56 2 6768412; e-mail: florencia.herrera@udp.cl]), **The Building of Parental Bonds: Adoption and Assisted Reproduction in Chile,** *International Sociological Association, Gothenburg, Sweden,*

¶ This article aims to analyze the building of bonds between parents and children in Chile. In keeping with the same, the cultural elements upon which mothers & fathers who have adopted children or had children using assisted reproduction techniques base their parenthood relationships are identified. The article is based on results of a qualitative research project completed in Santiago, Chile between 2008 & 2009. Forty-six in-depth interviews were conducted with women & men who had become parents through adoption & assisted reproduction, representing the complete range of social classes. People who have required assistance for their reproductive process have had to make implicit multiples underlying parental relations explicit. The analysis of parents' narratives enables identification of the following cultural elements: 1) Blood, biology & genetics, 2) care, love & time, 3) destiny, God & the unexplainable & 4) sensory aspects or relationships between bodies. The article attempts to bring the analysis of parenthood relations closer to the real experiences of people by accounting for creativity deployed in their desire to establish their relationships.

Herrschaft, Felicia (Herrschaft, Felicia; Faculty of Social Science, Goethe-University, Frankfurt, Germany, D-60054 [tel: 004917662006867; fax:; e-mail: F.Herrschaft@soz.uni-frankfurt.de]), **Dissolution of Art as an Artistic Practice,** *International Sociological Association, Gothenburg, Sweden,*

¶ The discourse on dissolving boundaries in Art history initiated by George Kubler in his essay "The Shape of Time: Remarks on the History of Things"(1962) shows delimitations in the approach of art history in its potential while doing interpretation of concrete objects for work-immanent & aesthetic analyses. If artistic practices are in the meantime marked by dissolving the notion of art without having any objects anymore is there a possibility to describe through sociology of art how the dissolution of art is enacted by artists? What kind of strategies are chosen by artists to react on processes of transnationalisation that affect the forming of identity & socialisation within existing nation states? Can these forms be considered as a dissolution affecting the relation between art & sociology, given that these faculties have changed their subjects, have approached or rejected each other or have built bridges? Does the manifestation of transnational social spaces change within global civil societies? Does the dissolution of the social extend itself on all fields of living environment & is this dissolving a subject of art & sociology? Another motive for the paper on Dissolution in Art & Sociology is a seminar that will be held in the Summer 2010 at the Goethe University related to the 35th Congress of the Deutsche Gesellschaft für Soziologie (German Association of Sociology), October 2010 in Frankfurt, centered on the subject of "Transnational Societies." I would like to present in the paper results of the working process with students of sociology & visual arts on these topics. The ambition of the seminar is to develop cooperative projects with students from both faculties for a new form of exhibition.

Hertzog, Anne (Department of Geography Cergy Pontoise University, 33 boulevard du Port 95011 CERGY FRANCE [tel: 33 (1) 34 25 61 64; fax: 33 (1) 34 25 61 47; e-mail: hertzog.anne@wanadoo.fr]), **Great War Battlefields Tourism and Violence,** *International Sociological Association, Gothenburg, Sweden,*

¶ As the question of war violence becomes very significant in the recent French historiography of the Great War, we may question about the place & the status of war violence in the process of making battlefields touristic places, that implies a great multiplicity of actors in the case of Somme-France. We will show how the treatment of violence in the process of tourism development deals with politics, culture & identity. When tourism is seen as a means for territorial development & planning, as an agent of spatial & social change, can a specific use of war violence be observed in the process of attraction in order to make the places "appealing?" Thus, peace or "shared memory" are frequently put forward in the process of making battlefields touristic places. The rise of such registers, that doesn't dismiss war violence, but grants it a specific aspect, can be linked to the pacification function frequently assigned to tourism. This positive vision of the touristic phenomenon nevertheless clashes with a mistrust from other actors about battlefield tourism which they associate with merchandizing or entertainment, & construe a kind of symbolic violence against what should be considered as sites of sacrifice and mourning.

Hester, Marianne (Centre for Gender & Violence Research, University of Bristol, UK, 8 Priory Road, Bristol, BS8 1TZ [tel: +44 117 9546755; fax: +44 117 9546755; e-mail: marianne.hester@bristol.ac.uk]), **Who Does What to Whom? The Construction of Male Victims and Perpetrators of Domestic Violence in Police Records,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper draws on analysis of police domestic violence records in England. The research tracked over six years 128 men & women recorded by the police as domestic violence perpetrators, establishing longitudinal comparative samples of 96 cases (with a single perpetrator or where both partners were recorded as perpetrators). While the data is limited to what is reported to, and recorded by, the police, it none the less provides a set of 96 heterosexual "stories" that could not be gleaned by using a snapshot approach, & allows detailed exploration of gender in the presentation of cases. A small number of victim interviews provide further perspectives on the cases. The paper focuses on the men in the sample, exploring some of the findings related to their construction as victims. For instance, while men & women were using different approaches to managing their own safety, linked to their gendered positions of power, male victims appeared to take an especially active approach, removing themselves from the vicinity of the violent partner, removing weapons or imposing restraints. Intersection of gender & age also appeared key in cases where male victims appeared to experience fear & control from female perpetrators.

Hesters, Delphine (Ceso, Kuleuven, 3000 Leuven, Belgium [tel: +32 486240311; e-mail: delphine.hesters@soc.kuleuven.be]), **Integrating Cultural Sociology into Integration Research,** *International Sociological Association, Gothenburg, Sweden,*

¶ In my research, I want to demonstrate how insights developed within cultural sociology can be applied in the context of integration research, in order to complement the research results & to critically assess the conceptualisation & measurement of 'culture' in the predominant research on the integration of second generation migrants. I this paper, I focus on the phenomenon of 'ethnic identity' within the second generation of Moroccan descent in Belgium, studied on the basis of in-depth interviews. When studying ethnic identity, the predominant stream of integration research today focuses mainly on what (ethnic) categories ethnic minorities identify themselves with & to what extend they do so. I, however, focus on the different meanings of the same categories and on the dynamics between identification & categorization at play in the accounts of the second-generation members. Based on my research result, I can demonstrate how the focus of integration research may lead to a misunderstanding of non-identification with host society identity markers as disloyalty or non-integration.

Hetzler, Antoinette (Lund University, Lund, Sweden S 222 21 [tel: +46 46 129214; e-mail: antoinette.hetzler@soc.lu.se]), **"Opting Out" or "Shown the Door?"–Women on their Way Home,** *International Sociological Association, Gothenburg, Sweden,*

¶ A strong but silent consequence of globalization is the re-structuring of the labor market. As both the political & sociological focus of globalization & the labor market has been placed on the phenomenon of outsourcing & the growing unemployment of the young, the plight of women in the workforce has remained hidden. This paper throws light on the subtle changes in the relationship between women & work in various developed countries as they leave their jobs. In particular it looks at the accompanying cultural narratives presented by women as being needed at home or as becoming too disabled through sickness to maintain their employment. Yet research suggests that despite the narratives produced, it is mechanisms of re-structuring work & the work place that push a woman

into deciding to leave the workforce. The paper analyzes the consequence of this trend in developed countries for gender equality & processes of re-familization.

2010S01110

Hevenstone, Debra (Policy Studies Institute, 50 Hanson Street, London, W1W 6UP [tel: +44 (0)20 7911 7500; fax: +44 (0)20 7911 7501; e-mail: hevensd@psi.org.uk]), **Labor Market Policy: Flexicurity, Unemployment, and Worker Satisfaction,** *International Sociological Association, Gothenburg, Sweden,*

¶ "Flexicurity" can be defined as a policy approach that de-links workers' protections from the employee-employer relationship. Flexicurity advocates argue that protections delivered through the worker-employer relationship distort firms' decisions & lead to longer unemployment spells while government provided benefits offer protection without distortion. Critics counter that employer-provided protections do not distort the market & that safety nets are not a substitute for dismissal protection. This paper codes two policy indices, one measuring the government-provided safety net & another measuring dismissal protection. The indices are used to test these competing claims. First, the indices are used with data from the Luxembourg Income Study data to examine policy's impact on workers' employment status & then they are used with data from the World Values Survey to examine policy's impact on workers' & unemployed individuals' satisfaction. Findings suggest that dismissal protection & safety nets need to be balanced as to not disproportionately favour one sector of the work force over another with respect to employment outcomes & that flexicurity does seem optimal in terms of worker satisfaction. Results also suggest that strict dismissal protection should be accompanied by a generous social safety net & active labour market policy.

Heylen, Leen, Mortelmans, Dimitri & Boudiny, Kim (Department of Sociology, University of Antwerp, Antwerp, Belgium, 2000 [e-mail: leen.heylen@ua.ac.be]), **A Micro and Macro Perspective on the Intermediate Effect of Geographic Proximity on Intergenerational Support,** *International Sociological Association, Gothenburg, Sweden,*

¶ The geographic proximity between parents & their adult children is a key element of intergenerational solidarity. Not only does the actual level of support between parents & adult children depend on this geographic proximity. The geographical distance can itself be considered as an expression of intergenerational solidarity. In this paper, we explicitly take into account this endogenous nature of the geographical distance. More specifically, we focus on the indirect effect of the determinants of the actual level of intergenerational support through the geographical distance. For the analyses, data from the Generations & Gender Survey are used. Previous analyses on this data confirmed the endogenous nature of geographic proximity. In this paper, we raise the question what this means in terms of actual support. For example, can the relationship between single parenthood & intergenerational support be explained by the fact that single parents tend to live closer to their parents as an adaptive strategy? The indirect effect of other features is taken into account as well by means of structural equation modelling. Both instrumental support given to & received from parents will be considered. In general, the results point to the importance of estimating this intermediate effect.

Hicks, Alexander (Emory University, 1555 Dickey Dr., Rm 225, Atlanta GA 30322 [tel: 404-727-0832; fax: 404-727-7532; e-mail: ahicks@emory.edu]), **Intruder in the Dust,** *International Sociological Association, Gothenburg, Sweden,*

¶ I extend Bartels'(2008) examination of Krugman's (2002, 2007) claim for political sources of basis of increasing inequality in the post-War U.S. in several ways. Conservative Congressional power, as measured with on Republican House & Senate seat shares and Republican House & Senate redistributive conservatism is central to the extension, as is a systematic consideration of changing Unionization rates. So analysis of stratum-specific income shares as well as stratum-specific income growth. Consideration of Congressional & union factors add nothing to Bartels' (2008) analyses of stratum-specific income growth. However, Congressional and union factors appear more powerfully, consistently and systematically relevant to income shares than does Presidential partisanship. President seem most relevant to stratified economic growth, perhaps because only executives can steer macroeconomic growth policy. Congress & unions appear most relevant to income shares, perhaps because their policy limitation render them more short-sight. Consistent with their narrower citizen constituencies and more limited policy tool kits Congress & unions appear also appear more divisive. In particular, Democratic Presidents affect growth I ways to beneficial to large majorities of lower- and middle-income populations & damaging to none, whereas Democratic legislative clout & labor unions appear to augment the income shares of lower income strata & diminish those of higher ones in true, conflictual, zero-sum form.

Hideaki, Sasajima (Tohoku University, 27-1 Kawauchi Aobaku Miyagi Japan [tel: +81-22-795-6034; e-mail: sasajima@sal.tohoku.ac.jp]), **Changing Relationship between the Local Authority and Nonprofit Art Organizations in Creative City Yokohama after the Crisis,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper deals with the changing conditions of nonprofit art organizations operating in creative city policies after the financial crisis in 2008-9. Social concern with creative city theories for urban management has been growing for several years. Many cities have recently tried to initiate cultural activities by means of constructing new museums & distributing public subsidies for art activities, in order to construct innovative & creative environments. In creative city policies, collaboration projects between local authorities & nonprofit art organizations are really important because nonprofit art organizations have abilities to energize local communities through their grass-roots activities. But, at the same time, these partnerships tend to be fragile because local authorities usually cut off such marginal expenditure in their financial crisis. In this presentation, I focus on the case study of "BankART1929," which is a nonprofit art organization operating in creative city policies in Yokohama, Japan. BankART1929 organizes historical architecture renovation projects in inner city areas. I analyze BankART1929 using the frameworks provided by some theories of urban sociology & then reveal the transition of the relationship between the local authority in Yokohama and BankART1929 around the global financial crisis in 2008-9.

2010S01114

Hidehiro, Yamamoto (Yamagata University, 1-4-12 Kojirakawa-machi Yamagata-city Yamagata-prefecture Japan 990-8560 [tel: +81-23-628-4389; fax: +81-23-628-4389; e-mail: hide-y@e.yamagata-u.ac.jp]), **How Did Citizens React to the Anti-G8 Movement?: Analysis Based on Sapporo's Citizens' Survey,** *International Sociological Association, Gothenburg, Sweden,*

¶ Although many people participate in anti-globalization protests, much fewer people do so in Japan. Why don't Japanese people participate in protest? In this paper, we try to challenge this question focusing on view of protests held by Japanese non-participants. Based on survey of Sapporo residents conducted in 2008 (Toyako Summit year), we try to clarify the relationship between view of protests & willingness to participate. According to survey data, about half of respondents think of protests as ineffective and dangerous actions. People who hold these negative views of protests are less willing to participate in protests & regard protests as a socially intolerant action. In particular, social unrest occurred by protests have more effects on attitude & willingness of Japanese non-participants. While protests in Japan are not as radical as in other countries, it is interesting for many Japanese to think of protests as dangerous actions.

2010S01115

Higo, Masa & Williamson, John B. (Department of Sociology, Boston College, Chestnut Hill, MA, 02467 USA [tel: +1(617)38-2504; e-mail: higo@bc.edu]), **The Japanese Model of Older Worker Labor Force Participation,** *International Sociological Association, Gothenburg, Sweden,*

¶ Workers in Japan remain in the labor force substantially longer than those of most other industrialized nations. We examine why workers in Japan remain in the labor force so long & discuss whether or not the Japanese model of older worker labor force participation has been resilient during the recent global economic recession. Our discussion is based on a review of relevant government surveys and findings from semi-structured interview data drawn from 26 national stakeholders in Tokyo (July-August, 2006). We have found five factors which help explain why Japanese workers remain in the labor force so long: (1) the large fraction of workers who are self-employed; (2) perceived economic necessity; (3) a national culture placing a high value on remaining economically active throughout the life course; (4) the long healthy life expectancy; and (5) the government's active role in facilitating the labor force participation of older workers. Despite the recent global recession, in the case of Japan, the government has prioritized promoting older worker labor force participation rather than encouraging them to leave the labor force. Projected

severe workforce shortages due to rapid population aging have pressured the government to increase the aggregate hours worked by older workers.

Higuchi, Takuro (Kyoto University Global COE Next Generation Unit Research, Kyoto, Japan [tel: 0081 90 4157 1696; fax: 0081 59 234 4162; e-mail: takurockULh@hotmail.com]), **Global Activist Network Involving Asia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Global movements since the late 90s have been the core trend of movements worldwide & continuing beyond time & space after 1999 Seattle. Yet, its spatial expanse has actually been limited to the Western world. In this context, 2008 G8 summit in Japan was a significant occasion for global movements to encounter the Eastern world. This paper aims at clarifying that spatial expanse of global movements expanded to the Asian region through 2008 G8 summit in Japan with an attention to global activist network, based on field studies & deep participation in the movements around 2008 Toyako, 2009 l'Aquilla G8 summit & 2009 Copenhagen Cop15. In addition, this paper examines what kinds of characteristics such a network has. In the process of mobilization for anti-G8 struggles & reception of international activists, some Japanese activists employed repertoires of protest invented after the Seattle which experienced German activists told them. Communication of the kind, between Japanese activists & German activists, occurred in an individual level. It suggests that transition of basic group of actors from organized social movement organizations to small affinity groups. Importantly, global activist network is mediated by such small affinity groups & it became to involve Asian activists.

Hill, Beverley & Currie, Jan (University of Western Australia, Stirling Hgwy [tel: Crawley, WA, Australia 6009; fax: 61893606280; e-mail: Beverley.Hill@uwa.edu.au]), **Undertaking a Pay Equity Audit at an Australian University: A Step towards Equity in a Gendered Profession,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores the use of a pay equity audit as a political tool in The University of Western Australia (UWA). This pay equity audit determined if a gender pay gap (GPG) existed between the average annual salaries of males & females at UWA. Although operating within employment classification structures & salary scales that largely regulate the level of remuneration received by staff, UWA recognised that a GPG was the likely product of historic and structural factors that resulted in women's underrepresentation in the academic stream (39%) & "compression" into lower classification levels in the academic & professional streams. What the analysis established was that there were overall GPGs of 15% for academics & 12% for professionals & that pay gaps were more pronounced among older & part time female employees. The more interesting findings came from the analysis of allowances, especially discretionary allowances. There were GPGs of 29% for academic staff & 55% for professional staff across all the allowances. Importantly, this paper analyses the micropolitics of how key players reacted to these findings & how female actors attempted to gain authority in encouraging the university to take action & reduce the differences, particularly in the gender allowance gaps.

2010S01118

Hiltunen, Linda (School of Social Sciences, Linnaeus University, SE-351 95 Växjö, Sweden [tel: 004673 - 846 29 56; e-mail: linda.hiltunen@lnu.se]), **The Hidden Dimension: Young Men Describing Their Own Health Status,** *International Sociological Association, Gothenburg, Sweden,*

¶ The declining self-rated health status among young people in Sweden has been the focus of public & scholarly debate. According to survey data, health status relates to structural inequalities, particularly gender. Thus, it is commonly asserted that young women have worse health status than young men. Consequently, the actual health status of young men has not been explored as intensely. However, this paper argues that a combination of surveys and ethnographic methods is suitable in order to understand the actual health status of young men. The aim of the paper is to explore not only the self-rated health of young men, as expressed in their own words, but also to search for an alternative way of understanding the health status of this previously neglected group. The paper combines survey data with an explorative approach, & studies how young men in upper secondary school describe their own health status. The explorative approach of the paper is based on essays from 300 young pupils, men & women, who were asked to write about their own health status. In conclusion, the paper argues that the health status of young men could be understood in relation to hidden dimensions, which are not easily detected in surveys. Young men discuss health, & express their distress, differently than young women. Accordingly, the paper suggests that surveys needs to be informed of this hidden dimension in order to understand the health status among young men. Moreover, it is argued that it is imperative to also give voice to the self-understanding of the group being scrutinized. The results suggest that new understandings may arise if young men are allowed to describe their own situation, in their own words. Maybe, young men do not feel better than young women. It might be that they just express their distress differently.

2010S01119

Hirata, Tomohisa (Graduate School of Letters, Kyoto University, Yoshida Honmachi, Sakyo-ku, Kyoto-shi, Japan, 606-8501 [tel: +81-75-753-2808; fax:; e-mail: nous@nyc.odn.ne.jp]), **A Comparative Research on Internet CaféS in East and Southeast Asian Countries: Their Current Situation and Future,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper aims to clarify the relationships between the internet and urban life in Japan, Korea, China, Taiwan, Singapore, Thailand, and the Philippines via empirical research on internet cafés. The first reason why this paper focuses on internet cafés is that they reflect different internet cultures & images of the urban area in each Asian country. The second reason is that they not only play an important role to provide the internet infrastructure for low income groups but also show diverse ways of internet usage. That is to say, especially in Asian countries, internet cafés can be a significant basis of the comparative sociological study of the relationships between the internet & urban life. While introducing the number of internet cafés & their locations in each Asian country, firstly I will point out the close relationships among internet cafés, characteristics of their users & regions. Secondly, by analyzing interviews at internet cafés I will examine the differences of business forms and strategies, images & usages of them. Finally I will explore cultural backgrounds of these differences & discuss the relationships in focus, in their contemporary & prospective forms.

Hiremath, Siddharamesh L (Dept. of Sociology, Gulbarga University,, Jnana Ganga, Gulbarga - 585 106, Karnataka, INDIA [tel: 00 91 8472 245839; fax: 00 91 8472 263206; e-mail: slhiremath@rediffmail.com]), **Interfacing Community Initiatives with Business Operations: Structural Constraints and Innovations,** *International Sociological Association, Gothenburg, Sweden,*

¶ Changing Economic trends & business milieu have significant structural implications for work organizations world over. Growing community orientation of corporate operations have necessitated systemic realignments that were not envisaged at the inception of some of the leading business organizations established in early years for whom Corporate Social Responsibility (CSR) is an innovative intervention & obligation called upon or at least expected to be attended to seriously in the right earnest, lest they are rated poorly on corporate governance. Further, the functioning of the divisions established for CSR initiatives depends on their own internal structure & how best they are integrated with the business firm as a whole. An attempt, hence, is made in the paper to focus empirically on the structural response to the CSR initiatives in Public & Private Sector Units in Indian context. The findings are based on a study of ten public & ten private sector units of different sizes operating in different sectors of economy as capital goods, telecommunication, metals and power. The major focus was on the structural features of the divisions or departments established for CSR operations & how well they are integrated with business organization as a whole which is ascertained on the basis of the data gathered from the respondents belonging to both CSR & non CSR divisions. The data are gathered from four hundred employees through administering an integration scale for those in CSR divisions & acceptance scale to those from non-CSR divisions. Twenty respondents were selected from each organization of which five were from CSR divisions and fifteen were from non-CSR divisions. Combining both categories, synergy index was evolved to measure how best the units have adapted & integrated into the structural interventions represented by CSR initiatives. The findings seem to indicate that the private sector units have evolved more streamlined & refined structures like foundations, trusts & such other registered bodies to carry out CSR functions whereas the public sector units tend to assign CSR operations to existing divisions like HR, Public Relations/Liaisoning Depts. & as such, the need for adaptation and integration of CSR initiatives appears to be greater in private sector units than their public sector counterparts. Further, commiserating with the structural contingencies stated above, the degree of adaptation & integration of CSR divisions with the

firm as a whole appear to be higher in public sector units than it is found with private sector units. The findings also indicate that CSR structures in larger units, both in terms of employee size and capital outlay integrate themselves into the system of the firm as a whole with greater ease than do the smaller ones & units established recently are more likely to adapt to CSR interventions with ease than those established relatively earlier, whereas, such integration appears to be varying independent of the sector or area of operation.

Hiroko, Yamamoto (Kyoto University, Kyoto, Japan [e-mail: yamamoto@socio.kyoto-u.ac.jp]), **Toward a Better Explaining of "Value-Rational Action" and "The Unintended Consequences",** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this study is to reconsider Max Weber's methodology in which "instrument-rational action" is predominant over the other types of action. The frame-selection model (Esser, H.) in Rational Choice which is based on the assumption that a human being acts completely rationally is suitable for this subject. And the frame-selection model is centered on the orientation & intention of actions without its consequences as similar as Weber's social action's theory. 'Divorce', which Esser explains using his own model, is indeed "the unintended consequences" for a newly married couple, but it is a 'probability'. I want to add the concept of "structual homology" in the frame at each time to foresee further "the unintended consequences"(especially resulting from "value-rational action"). I hope that my study is of a little use understanding & explaining "value-rational action," which has contradictory factors on rationality: it makes rationally an intention to a valued goal , but irrationally with no thought of its consequences & often without consideration of the appropriateness of the means chosen to achieve it. SU: D914800 |s Weber, Max

Hirsch, Anita, Professional Behavior of Students, Professors and Program Coordinators in two Mexican Universities, *International Sociological Association, Gothenburg, Sweden,*

¶ Throughout the research work about professional ethics being carried out since 2003, in the National Autonomous University of Mexico (UNAM), with the main actors of the masters & doctor in philosophy levels: students, professors & program coordinators, we have detected serious critiques regarding non-ethical actions observed in university life. Based on the information gathered, we consider important to find out which are these actions & to classify them by categories & traits. Besides learning the types of ethical problems & dilemmas expressed by the three subjects of our research, we consider important to include this issue in the programs of value training, within the subject matter of professional ethics. We applied an instrument to gather information to postgraduate students & professors, in order to understand the situation of professional ethics in the university. There is a common component for both groups, which is an open question regarding the main traits of "being a good professional." A scale of attitudes with 55 propositions is also included. The questionnaire built & applied to the professors, also includes some other open & closed questions. An interview guide was applied to the 40 coordinators of the postgraduate programs in UNAM. We have the description & analysis of all the information and results obtained. For the presentation, the detection and classification of non-ethical ethical behavior described by students, professors & program coordinators will be emphasized. Also, as a complement, the non ethical actions detected and classified at the Autonomous University of Yucatan (in Mexico), in their own research project on professional ethics among post graduate students & professors, will also be presented. We consider that there should be more regulation in the university training of students, in order to combat these non acceptable actions of professional behavior.

Hlebec, Valentina & Bernik, Ivan (Faculty of Social Sciences, University of Ljubljana, Ljubljana, Slovenia, 1000 [tel: +386 1 5805 284; fax: +386 1 5805 101; e-mail: valentina.hlebec@fdv.uni-lj.si]), **Welfare System and Ageing in Slovenia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Many contemporary debates about welfare state recognize the role of family, informal networks & voluntary organizations in provision of welfare, especially in relation to demographic ageing of societies. The main question we will raise in this paper is how the care for older people was placed between state & family & what changes occurred in the last 18 years in Slovenia? We will use analysis of policy measures with regard to role of state & family to examine the policy level; official statistics data about institutional care & new forms of care provision for older people living at home. The welfare system now recognizes the role of family in care provision & supports family care with policy measures & development of new forms of care. State still enhances the development of institutional care. New forms care provisions for older people are not available for everyone owing to unequal geographic dispersion of services & variability of price for service. Changes in welfare system in Slovenia owing to ageing have affected both the role of state & the role family. However, new forms of care provision may increase inequalities among older people.

Hodge, Robert I (Centre for Cultural Research, University of Western Sydney, Locked Bag 1797, S Penrith DC 1797, NSW, Australia [tel: 61-2-9685 9606; fax: 61-2-9685 9610; e-mail: b.hodge@uws.edu.au]), **Complex Order Out of Confusing Chaos: Constructing Hexalogues in Virtual Space,** *International Sociological Association, Gothenburg, Sweden,*

¶ Sydney's rail & transport system are constantly accused of being in crisis with problems typical of the complex, dysfunctional systems designed in the 20th century to deal with problems of the 21st. This paper diagnoses a core problem, understanding common threads in a bewildering variety of views & weaving them together into possible outcomes for action, in a common tendency to react against the seemingly chaotic by imposing restrictive, unilateral forms of order. The more rigid the order that any party seeks to impose, the more relevant meanings it excludes, & the more voices it ignores. This project draws on the idea of three-body analysis, drawing on Poincaré, to structure the mass of materials & players into three groups, each incorporating core oppositions, to make up a set of six interactants (a hexalogue). It uses a software program, Leximancer, that is able to identify emergent concepts & themes in large amounts of data in order to see what core meanings, related to this structure of players, provide a potential basis for a common understanding, what pathways exist across the data, crossing what semantic obstacles, & what key themes may be blocking potential alliances & networks across current contending groups.

Hodgetts, Darrin, Gabe, Jon, Chamberlain, Kerry, Radley, Alan, Norris, Pauline, Dew, Kevin, Nikora, Linda & Madden, Helen (University of Waikato, School of Psychology, Faculty of Arts and Social Sciences [tel: +64 7 8384466; e-mail: dhdgetts@waikato.ac.nz]), **Locating Drugs in Domestic Settings,** *International Sociological Association, Gothenburg, Sweden,*

¶ As well as being pharmacological objects, medications are complex socially embedded objects that take on meaning within familial relations, everyday practices, & physical settings. Domestic environments contain a range of 'medicative' forms including prescription drugs (both over-the-counter & prescription), alternative or complementary remedies, dietary supplements, enhanced foods, & homegrown herbs. These objects are located across medicine cabinets, fridges, trunks, drawers, boxes, gardens, garages, & handbags. Their location within the therapeutic landscape provided by contemporary domestic dwellings speaks to practices of loaning, sharing, caring, stockpiling, consuming and producing. Stability & portability in the situating of medications also invokes the blurring of boundaries between what we have traditionally seen as sites for healthcare. This paper explores the human geography of medications in domestic settings by drawing on ethnographic field work in twenty homes in New Zealand.

Hoever, André ([e-mail: a.hoever@fu-berlin.de]), **Profiles as Emotional Novels: A Perspective for Identity Construction on Social Network Sites,** *International Sociological Association, Gothenburg, Sweden,*

¶ Social Network Services (SNS) like Facebook free individuals from the constraint of face-to-face interactions, thus, giving them a wider latitude in presenting themselves. At the same time, this description is presented to an invisible audience, that is 'friends'. Users are free to describe themselves however they wish, but do so with this audience in mind & seek positive reactions from them. This suggests there must be implicit motives, strategies & goals when describing oneself using SNS. It is the goal of my project to reconstruct these elements. A special focus is on which emotions are presented & how they are coded. I am doing interviews with users of Facebook concerning the background of their profile information. Because the project is still in progress it is too early to present verified findings or final conclusions. Instead, I hope to provide some ideas of motives, strategies & goals that are lying behind the presentation of self via facebook profiles.

Hofbauer, Andreas (Dep. of Sociology and Anthropology–UNESP–Campus Marília, Av. Hygino Muzzi Filho, 737–Caixa Postal: 181 -17.525-900 - Marília–SP–Brazil [tel: 55 (14) 3402-1300; fax: 55 (14) 3402-1300; e-mail: andreas.hofbauer@uol.com.br]), **Race and Whitening in Brazil: Perspectives from Within Two Historical Black Movements,** *International Sociological Association, Gothenburg, Sweden,*

¶ Today, major parts of the black movements are struggling for the implementation of race-specific policies. This was not always so. In Brazil, differently from the USA & Europe, in the end of the 19th century the concept of race was still largely thought as a not completely essentialized (biologized) category. Not only intellectuals & politicians, but also ordinary people (whites and blacks) believed that climate and/or 'racial' mixture would transform blacks into white–i.e. one race into Another–within a relatively short period. As I argued in earlier studies (2006), this malleable conception of colour/race-frontiers can be understood as interrelated to the power relations which characterized Brazilian's patrimonialistic social order. The leaders of one of the first important black movements, the "Brazilian Black Front" (Frente Negra Brasileira–1931-1937), saw themselves as legitimate representatives of the "black race", but at the same times, they conceived their group as a inseparable part of the "Brazilian race". Based on strong nationalistic and right-wing ideas, they tried to attest themselves & the Brazilian state that blacks are as intellectually, socially & morally competent as white people. A "new" black movement emerged in the moment when Brazil overcame more than 20 years of military dictatorship. Strongly influenced by marxist ideas, the "Unified Black Movement" (Movimento Negro Unificado, founded in 1978) conceived blackness quite differently. They saw the blacks primarily as victims of a perverse economic system & the state as an opponent of the black population. At the latest in the beginning of the 1990ies, a majority of the black activists began to argue that race, more than class, is the determinant factor which explains the continuing discrimination of Brazilian's black population. This shift of view opened the way for claiming the implementation of multiculturalist projects. If in some statements race is implicitly understood as a natural category, other leaders began to incorporate a more post-colonial vision of race into their discourses.

Hoff, Andreas & Principi, Andrea (Oxford Institute of Ageing, University of Oxford, 66 Banbury Road, Oxford OX2 6PR, UK [tel: +44-1865-612816; fax: +44-1865-612801; e-mail: andreas.hoff@ageing.ox.ac.uk]), **Carers@Work–Reconciling Employment and Care for Older Family Members in Germany, Italy, Poland, and the UK,** *International Sociological Association, Gothenburg, Sweden,*

¶ European societies are ageing, with people aged 80 years & over, i.e. those most likely to need care, being the most rapidly growing age group. At the same time, European economies increasingly rely on older workers to generate the wealth of their societies. This inevitably aggravates the care giving dilemma in our ageing societies: The majority of people providing care to older family members are 45-64 years old & thus in employment, many of them being older workers (55-64 years)–a fact that the EU Lisbon Strategy target to increase the share of older workers fails to address. Pressure on working carers is set to increase even further with the proposed extension of working lives to relieve public pension systems. This paper will present findings from "Carers@Work. Between Job & Care– Conflict or Opportunity?", an international research project with partners in Germany, Italy, Poland, & the UK, funded by the Volkswagen Foundation. The project combines 60 semi-structured interviews with working carers with a number of expert interviews with employers & other stakeholders in each country. Additionally, secondary statistical analysis of EUROFAMCARE data is carried out. Typical conflict patterns between work & care commitments, as well as the most successful reconciliation strategies will be presented for each country. This will be followed by the analysis of factors determining success (or failure) of these strategies. Crucially, it will be discussed to what extent the findings vary across the countries studied. Concluding, examples of best practice as well as policy implications of the findings will be discussed.

Hoffman, Lily M. (CCNY/CUNY, New York, NY, 10025, US [tel: 1-212-866-8058; fax:; e-mail: Lilymhoff@gmail.com]), **NYC and the H1N1 Pandemic: Public Health as a Planning Arena,** *International Sociological Association, Gothenburg, Sweden,*

¶ Although recent focus has been on cities as 'magnets' for terrorism, the threat to cities from epidemics & infectious disease remains underexamined in the urban literature. The vulnerability of cities resides in their density, shared physical infrastructure & social institutions, as well as racial & economic inequality that leads to spatial/social segregation & exclusion. The threat is not only to physical safety, but of fear & panic. Both can disrupt the stability & functioning of the city. This paper examines New York City's response to the challenge of H1N1 in 2009. It discusses the institutional & intellectual context for pandemic policy and planning along with some governance issues this has raised. We argue that the renewed importance of large scale emergencies has made public health an increasingly important function of urban policy & planning; that it once again illustrates how security is a local issue; & that despite fears to the contrary, NYC's Department of Health & Mental Health Policy has been able to hold its own in regard to emergency preparedness, & in some cases coopt emergency preparedness programs & funding.
