¶ Early research in disaster generally promoted the point of view that calamities bring little social or cultural change. Studies tended to be ahistorical. They looked at disasters within a short span of time, with narrow topics & an eye to major shifts, rather than viewing calamities as processes that continue long after initial upheaval that affect almost every arena of human existence. Anthropology, through its tradition of long & on-sight field research & emphasis on social & cultural process, has added new considerations to the question of calamity & socio-cultural change. Anthropology brings to the forum issues of magnitude, how those affected are articulated into larger social wholes, & the matter of long-run developments in such areas as social, organizational, political factions, leadership, ideologies, knowledge & psychological state. Anthropology asks such questions as, are the changes consequent to disaster such to transform the implicit character of the culture or society or are they auxiliary and incidental? What does calamity reveal about what was hidden prior to the event & expose about vulnerability? As social and cultural change is constantly in operation, does calamity merely exacerbate change already in process or initiate wholly new innovation? Calamities inevitably present challenges & cause conflict, exactly the situation that brings about transformation. Equally anthropological investigation into disaster must acknowledge cultural continuity, the fixedness of society and culture & their resistance to change. In some ways small groups and entire social cultural systems steel against the alterations calamity ushers in & persist in their prior course. Still, there are many kinds of shifts that alter a society's composition without threatening continuity. Each of the above topics will be addressed in the paper, & examples from Turkey, Greece, & the United States will be cited. Edification about the question of social-cultural change or continuity can facilitate all persons involved in or affected by a calamity & all those facing the potential of future catastrophe.

Hoffmeyer-Zlotnik, Juergen H.P. & Warner, Uwe (GESIS–Leibniz-Institute for the Social Sciences, Mannheim, Germany [e-mail: juergen.hoffmeyer-zlotik@gesis.org]), **Nationality, Citizenship, Race, Ethnicity and Migration as Socio-demographic Background Variables in Comparative Social Surveys,** *International Sociological Association, Gothenburg, Sweden,*

¶ In comparative surveys, we are interested in the social stratification of the European countries. The mobility of people across the national borders raises the probability to include non-nationals in samples for social surveys. The position of foreigners in stratified social structures & the different chances of integration into the host societies become an important issue in comparative survey research. Our survey instrument covers five dimensions measuring the ethnical inequality in the societies across Europe. The first dimension is citizenship: the respondent's right to participate in life of the state of residence. This is coded as the interviewee's nationality. For non-nationals, this information is completed by the residential status the respondent holds. The second element covers race & ethnicity: the self attributed membership of the respondent to the minority groups. The third dimension collects information on the origin of the surveyed person: the country of birth. In addition the year of arrival in the host society & the naturalization are of interest. The forth useful variable informs about the use of languages at home: this is an indicator on 'assimilation' to the host culture. The fifth block of questions collects the information about the migration background of the survey respondent.

Höglund, Jenny, Lindhult, Erik, Rådmark, Johan, Ståldal, Bosse & Hamrefors, Sven (Mälardalen University, P.O Box 325; SE-631 05 Eskilstuna; Sweden [tel: +46 16 153600; fax: +46 16 153610; e-mail: jenny.hoglund@mdh.se]), **Societal Entrepreneurship Education as Driver in Community Transformation,** *International Sociological Association, Gothenburg, Sweden,*

¶ The background of the paper is the visionary project of a collaborative development team of practitioners & academics in a municipality in the vicinity of Stockholm a Nacka–developing education in societal entrepreneurship. The aim is to make a difference not only in individual learning but also in community transformation for improving social inclusion of youth in the community. The role of education in & for social change is not a new theme. It goes back to Greek paideia–citizen participation in community governance as a learning process. But women, slaves and foreigners were excluded from these processes, & it is still a challenge to achieve social inclusion in multicultural municipalities like Nacka. The formal educational & democratic systems are insufficient in this respect. Also the field of entrepreneurship has been restricted to the business development domain & commercial relations. The broadening of entrepreneurship perspectives in recent years towards social & societal perspective opens up for the potentials of building & recreating community relations & societal institutions through entrepreneurial initiatives in order to create value. The project is building educational platforms & processes based on innovative, entrepreneurial pedagogy which is opportunity and action oriented. In the design educational approaches like Freirean liberating pedagogy, Kolbian experiential learning & Blooms taxonomy is drawn upon, as well as a process of citizen participation. The purpose of the paper is to investigate how societal oriented entrepreneurship education can be a force in community transformation towards inclusion. It is made through action research efforts for mobilizing community agencies and citizens in the process of development & implementation entrepreneurial education. Comparative study & networking with other actors in the field is an additional element. Furthermore, the rich found experience of the development team & its network both in community development & entrepreneurship education in higher education is drawn upon. The contribution will reflect on processes of development as well as their results in terms of ideas & design for entrepreneurial educational efforts. This is made as a step towards the aim to show how societal oriented entrepreneurial approaches furthered through innovative educational efforts can positively contribute to inclusion in multicultural communities.

Høgsbro, Kjeld (Department of Sociology, Social Work and Organisation, Aalborg University, Krogstr. 7, DK-9220 Aalborg ø [tel: 99408197; e-mail: Kjeldh@socsci.aau.dk]), **Stigma and Interaction in the Relation between Psychiatric Patients and the Public Services Offered To People with Severe Mental Illness,** *International Sociological Association, Gothenburg, Sweden,* (DAN)

¶ The paper will give a brief review of the theoretical approaches and empirical data emphasizing stigma & its influence on exclusion/inclusion of people with severe mental illness. The discussion & results will be compared with results from a qualitative study comprising 80 interviews with inpatients and outpatients as well as professionals related to treatment and social care in psychiatric hospitals as well as day centers and apartments within community psychiatry. The aim of this investigation is to reach a more comprehensive concept of stigma and stigmatization, which comprises its links to social interaction forms & their cultural context as well as the social discourses that determine the way people conceive mental illness.

Holemans, Dirk, L (Oikos. Think Tank for Social-ecological Change, Ghent, Belgium, 9031 [tel: 003292363482; fax: 0476 799970; e-mail: dirk.holemans@telenet.be]), **How to Stop the Flight(S) From the City,** *International Sociological Association, Gothenburg, Sweden,*

¶ Facing the local problem of congestion & global challenges like climate change, European cities are developing a new mobility paradigm. The old paradigm with its goals of speed & free car flow proved destructive for the urban fabric. By diminishing the quality of living & installing car mobility, it stimulated a flight from the city. The new mobility paradigm is part of the search for a convivial city, with pre-eminence of cycling, walking and public transport. Goals are now restricted car access & a slow city. So are cities achieving low carbon futures? Reality shows a divergence between the new paradigm & the mobility culture of inhabitants. Studies indicate that the ecological footprint of urban citizens is bigger than people living in the countryside, because city inhabitants have become addicted to flying. The new cultural form implied in the new paradigm realised in the city is combined with the one installed by global consumer society with its focus on global mobility. If urban citizens want to contribute to sustainability, they will have to tackle this paradox between the local & the global. A really sustainable urban mobility culture cannot stay blind for this new form of flight(s) of the city.

Holgersson, Helena (Department of Sociology, University of Gothenburg, Box 720, SE 405 30 Gothenburg, Sweden [tel: +46 31 786 49 81; e-mail: helena.holgersson@sociology.gu.se]), **'Hidden Refugees' as Municipal Headache,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this short essay, published in the anthology (Re)Searching Gothenburg (Holgersson et al. 2010), I discuss how the presence of 'hidden refugees' (as people who live under the threat of deportation is often called in Sweden) are dealt with within the Swedish welfare state. It is argued that because of the level of general welfare it is in many respects more difficult to live in Sweden without legal permission than it is in other countries. Here human & citizen rights most clearly clash. And more specifically, it is in big cities that these issues are being negotiated; are non-citizens to be considered inhabitants, guests, or intruders? Today the municipalities in Gothenburg are trying to convince the government to take away the possibility for asylum-seekers to organize their own housing (since many do this in cities) and have introduced local laws on how many people can live in each flat. They are, however, at the same time making it possible for 'hidden' children to go to school. At this level principles are not very helpful.

2010S01136

Hollander, Wim (Uj Sport, University of Johannesburg, P O Box 524 Auckland Park South Africa 2006 [tel: +27115592665; fax: +27115592671; e-mail: whollander@uj.ac.za]), **Managing Sport-for-Development for Strategic Outcomes in the Africa Context,** *International Sociological Association, Gothenburg, Sweden,*

¶ Utilising the Sport-in-Development Impact Assessment Tool (Sac-DIAT) (Burnett & Hollander, 2007), a comparative analysis of the strategy, programme design, management & delivery of the Active Community Club (ACC) Initiative of the Australian Sports Commission and the Youth Development through Football (YDF) programme of the Deutsche Gesellschaft fur Technische Züsammenarbeit (GTZ) in different African countries was undertaken. Where the strategic model & programme design of the ACC Initiative is in essence that of a bottom-up & the YDF an outside-in approach (Mintzberg, 2006) the question arises to what extent the strategic approach of a sport-for-development programme impacts on management & delivery on the development continuum of the institutionalized manifestation of the programme. Results reflect differentiation in programme dynamics & country Indicator Monitoring Score (IMS) with a causal relationship that emerged between management variables.

2010S01137

Holt, Martin (National Centre in HIV Social Research, The University of New South Wales, Sydney, Australia, NSW 2052 [tel: +61 2 9385 6410; fax: +61 2 9385 6455; e-mail: m.holt@unsw.edu.au]), **Revisiting the Concept of 'Gay Community' in HIV Social Research: Using Sociology to Reinvigorate HIV Prevention,** *International Sociological Association, Gothenburg, Sweden,*

¶ The concept of 'gay community', & specifically gay men's attachment to & involvement in gay community activities, has held both a symbolic & practical role in understanding & guiding responses to HIV in developed world contexts. In the West, the HIV epidemic disproportionately affected (and continues to affect) gay men. Being involved in & connected to gay community activities (what, in Australia, is described as 'gay community attachment') became a marker of accessibility for education & predicted the adoption of safe sex practices. However, it is apparent that the meaning of gay community is changing, & no longer predisposes men to a uniform sense of shared values or collective purpose in the face of HIV. This presents a challenge to those working in HIV prevention to adapt to changing circumstances. With reference to survey data and qualitative interviews conducted with Australian gay men, I analyse what 'gay community' means to researchers, educators & gay men. I argue that survey measures often give a misleading picture of 'attachment' to gay communities & that, when asked to discuss them, gay men are often ambivalent about gay communities. These findings suggest a need for greater subtlety in the ways that we think about & approach gay men for HIV education & health pro-

motion. Sociological research on people's relationships to community (such as the literature on social capital & 'personal communities') offers insights here, as does research on the evolving nature of (gay) identities in the postmodern, post-gay and post-AIDS eras. These sociological models suggest different ways to engage with men for whom sexuality (and HIV) may only become important at certain times & in specific contexts. Recognising and responding to the changing nature of gay life will ensure that the flexibility & pragmatism of HIV programs aimed at gay men are maintained.

2010S01138

Holzer, Boris (Dep. of Sociology, University of Bielefeld, 33501 Bielefeld, Germany [tel: +49 521 106 4627; fax: +49 521 106 6019; e-mail: boris.holzer@uni-bielefeld.de]), **Tourism as Communication: From the Tourist Gaze to Tourist Observation,** *International Sociological Association, Gothenburg, Sweden,*

¶ A large part of tourists' activities appears to evade classical sociological categories. Tourism involves agency, but also physical travel, sensory perception & a particular 'tourist gaze' (Urry). Analyses of tourism seek to combine interests in institutions, social cleavages & societal change with socio-psychological concepts of tourists' motives & perceptions. Yet a particularly promising route toward a sociological understanding of tourism has remained largely unexplored: the fact that tourism becomes a social activity by way of communication. Before, during & after traveling, there is information-gathering, talk & debate about the sights & situations that constitute the tourist experience. Based on the history of travel writing & the institutionalization of tourist sites, I argue that the global 'tourist system' is not simply an assemblage of organizations that facilitate the transportation & accommodation of people. Rather, it has emerged as a global social system of communication focused on sights and destinations.

2010S01139

Hom, Stephanie Malia (Dept. of Modern Languages, University of Oklahoma, Norman, OK 73019 [tel: 1-405-325-3887; fax: 1-405-325-0103; e-mail: stephaniemaliahom@gmail.com]), **The World(s) of the Text: Modern Tourist Guidebooks,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores the most influential form of tourist text: the guidebook. It takes the guidebook to be a force of touristic 'world-making' insofar as these 'natural' texts are ideologically predisposed to transforming the worlds that they describe into realities. By declaring what to see & do, guidebooks have the capacity to openly dictate & control the behavior of their readers, therefore determining what constitutes both experience and destination, respectively, as well as manipulating tourists' experiences of those destinations. The first part of my talk examines the salient textual characteristics of the mass tourist guidebook that stage the text's authority– a disciplining, parental narrative voice; a negation of competing guidebooks' authority; a disclaimer against change; an emphasis on the quantity of published editions; & an appeal to published travel experts. It analyzes a wide cross-section of English-language guidebooks to various destinations–including Sweden, the site of the 2010 ISA World Congress–to demonstrate the universality of the guidebook's textual features & its capacity to 'make worlds'. The second part of my talk explores the text's features that stage a destination's value–a how-to-use section; a division of the destination into practical, consumable units (i.e., regions or cities); & a system of representation to classify value. By evaluating attractions, the guidebook establishes what is worthy of being seen, & directs its tourist/readers toward these more 'valuable' sights, putting what they read into practice, & as a result, producing a 'world' constructed by the ideological operations of tourism.

Homma, Mieko, Yamazaki, Yoshihiko & Park, MJ (Graduate School of Medicine, the University of Tokyo, 7-3-1 Hongo Bunkyo-ku Tokyo 113-0033, Japan [tel: +81-3-5841-3514; fax: +81-3-5684-6083; e-mail: mieko.u.tokyo@gmail.com]), **Delegitimization toward Identity Re-Construction in a Self-Help Group: The Case of Fibromyalgia Patients in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ People with Fibromyalgia Syndrome (FMS) have chronic, severe physical pain, but no demonstrable physiological abnormalities. Patient's morality is questioned, resulting in serious identity crisis. Identity reconstruction through self-help group among stigmatized patients is, however, expected. The purpose was to examine their identity disruption & reconstruction by participating in a self-help group. We interviewed 13 FMS patients who had participated in a Chronic Disease Self-Management Program & the members of the Japanese Fibromyalgia Support Association. Qualitative data were analyzed according to a phenomenological approach. In Japanese FMS patients, experience of "lacking in understanding for suffering" is found, which means that they cannot have legitimate sick role especially before they get the diagnosis. Getting diagnosis means "identity card" for patients. On the other hand, because FMS is neither recognized well nor regarded legitimate diagnosis in Japan, many patients are downplayed as non-fatal disease by doctors in spite of their severe pain, which lead to serious identity disruption like suicidal ideation. Through participation of self-help group, patients gain "coherent explanation what is happening," that is, biographical re-construction. It is considered that patients confirm their illness experience as "real" by listening to other patient's life story.

Honda, Yuki, Hiratsuka, Maki, Kidoguchi,Masahiro, Higuchi, Akihiko & Arikai, Takumi (Graduate School of Education, The University of Tokyo, 7-3-1 Hingo, Bunkyo-ku, Tokyo, Japan 113-0033 [tel: +81-3-5841-3942; fax: +81-3-5841-3918; e-mail: yuki@p.u-tokyo.ac.jp]), **The Differentiation of Trajectories from School to Work in Present-Day Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Japanese youth labor market changed drastically since the mid-1990s. With the remarkable increase of young precarious workers and jobless youth, the risk of poverty, social isolation and despair have grown among youth in Japan. Although some new youth policies have been enforced as countermeasures against these situations, their effects are questionable because of the limitedness of their scopes & the inadequacy of their contents. What is needed is to grasp the actuality of young people, especially the precise processes of the transition from school to work in recent years & the factors which have influence on the differentiation of trajectories among them. The Youth Cohort Study Japan (YCSJ), which has been conducted by The Japanese Educational Research Association, monitors the educational & vocational trajectories of young people. Our analyses of YCSJ data focus on the fluctuations of job status & the working conditions, influenced by their familial & educational background, the social networks & human relations ('social capital'), regional factors and their attitudes towards society. Through these analyses we aim to explore the obstacles & gaps between policies & the actual lives of young people.

Hong, Dayong (Department of Sociology, Renmin University of China, Beijing, China, 100872 [tel: 8610-62511182; fax: 8610-62511143; e-mail: hongdy@ruc.edu.cn]), **Understanding the Sustainability of Chinese Society: A Cultural Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ In Chinese traditional mainstream culture, people's understanding of sustainability has four basic points: one is anthropocentrism, the second focuses on the family's continuation, the third is relationship(Guanxi)-based trust, & the fourth is to seek the public authority for private interest. This kind of understanding for sustainability actually exacerbates social competition and environmental pressures, damages institutional performance, twists people's innovation activities, & leads to unsustainability of society as a whole. However, the Chinese traditional culture is very complex, in particular situations, other parts of the Chinese culture can afford support for the sustainability of society as a whole. China is now in rapid economic growth while facing risks such as a widening wealth gap between rich & poor, energy shortages, pollution, publicizing corruption, crime, & the formality of institution. This article aims to discuss the extent to which they are associated with traditional culture. What kind of new understanding of sustainability does risk control require? Can other parts of Chinese traditional culture provide new support for Chinese sustainable development again? If so, what kind of condition does such support need?

2010S01143

Hooghe, Marc (Ku Leuven, E van Evenstraat 2B, 3000 Louvain [fax:; e-mail: Marc.Hooghe@soc.kuleuven.be]), **"I am Happy, I Hope they are Happy too." Individual and Collective Attributions of Subjective Well-Being,** *International Sociological Association, Gothenburg, Sweden,*

¶ Previous research has indicated that while most inhabitants of Western European societies tend to be quite satisfied with their own personal living conditions, they are far less satisfied about the way they perceive their society to be functioning. When asked about cultural norms or the functioning of the political system, most respondents seem to agree that a sense of cultural malaise is present in contemporary Western societies. From a theoretical perspective, this contradiction is quite puzzling, since, after all,

aggregate or societal levels of well-being are simply the sum of individual well-being scores. In this analysis, we want to ascertain whether individual SWB (i.e., satisfaction with one's life, one's social & family life, & one's sexual life) is determined by different indicators than social SWB (i.e., satisfaction about one's neighborhood, about "society", & about the political system). In a recent representative survey of the Belgian population (n=2,080), all these questions have been included simultaneously. The survey allows us to assess both individual level determinants of SWB, as society level determinants, as the respondents were sampled in 40 distinct communities, & information about these communities (deprivation, crime, income, unemployment, …) can be included in the analysis. The hypothesis is that while individual SWB is strongly determined by individual level characteristics, this is not the case for community SWB. It remains to be ascertained however, what kind of community level characteristics will have the strongest impact on community SWB. A preliminary analysis of the data suggests that: - satisfaction with one's own individual life is much higher than satisfaction with one's community; - satisfaction with one's sexual life is an important element of individual SWB scores; - both forms of SWB clearly belong to two different factors or latent variables; - on the community level, unemployment seems to be the main determinant. The analysis will be based on the SCIF (Social Cohesion Indicators Flanders) survey that was conducted in 2009, and the results of this survey have not yet been published.

2010S01144

Horejes, Thomas (Gallaudet University [e-mail: Thomas.Horejes@Gallaudet.edu]), **Social Constructions of Normalcy, Deviance, Deafness, and Language; an Examination of American Sign Language in Deaf Education.,** *International Sociological Association, Gothenburg, Sweden,*

Presented by Dr. Sharon Barnartt.

¶ Social control institutions, such as schools, provide deaf children with a unique opportunity to obtain a valuable education & to establish a foundation in linguistics; however, the challenges in defining appropriate linguistic & cultural pedagogy for deaf children in deaf schools are contested by divergent ideologies of oralism & American Sign Language (ASL). This research examines what it means to be deaf under the guise of normalcy & deviance as a hegemonic process in the larger American society as well. This research examines the larger issue of deafness in two different types of deaf education classrooms to uncover emergent ideologies, paradigms, identity formations, & everyday social constructions. The findings suggest that discussions of the contrasting ideologies of normalcy & language choices in deaf education may have important implications when examining the diverse ways that deafness & deaf students are constructed. Some possible research strategies are presented to develop a positive construction of deafness & ways to discuss the diverse ideologies of deaf education through critical, yet collaborative inquiry. Larger critical justice issues related to deafness have important implications influencing the types of knowledge & identities produced not just for deaf students, but for a greater understanding of human diversity.

2010S01145

Horgan, Mervyn P. (Sociology, Acadia University, Nova Scotia, Canada, B4P 2R6 [tel: 902-585-1432; e-mail: mervyn.horgan@acadiau.ca]), **From the Stranger to Strangership: Suggestions for Reconceptualising Difference and Inequality,** *International Sociological Association, Gothenburg, Sweden,*

¶ Over a century ago, Georg Simmel observed that the figure of the stranger is characterized by the peculiar mixture of physical proximity & social distance. Since then social scientists have tended to treat the stranger as equivalent to the immigrant, the unknown Other, and/or an urban social type. This paper develops the above observation from a classical sociologist in a different direction to ground a wide-ranging theoretical reconsideration of inequality & difference in contemporary society. Inequality and difference are relational terms rather than conditions of any particular person or group: a person or a group is unequal to another, or different from another. Therefore, theorizing inequality & difference requires concepts that are also relational. Using Simmel's century old thought as a springboard, this paper elaborates the concept of strangership as a form of relation rather than an inherent characteristic of a person or group, & outlines how this concept is alive to difference, and useful in thickening the ways we think about inequality.

2010S01146

Horiguchi, Ryoichi (Department of Law and Policy, Kinki University, 3-4-1 Kowakae, Higashi-Osaka City, 577-8502 Osaka, Japan [tel: +81.6.6721.2332; fax:; e-mail: ryoichi.horiguchi@gmail.com]), **Safety Culture on the Move: Who Made the Use of Seatbelt Compulsory?,** *International Sociological Association, Gothenburg, Sweden,*

Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (858) 571-8979. Fax: (858) 571-8694. E-mail: info@csa.com

¶ This paper aims at showing some serious obstacles to the pursuit of safety in the current safety culture & suggesting in which direction a new safety culture should move in. We begin by examining briefly a seat belt law in Japan, & then argue historically the close relation between the safety culture which has given birth to seat belt laws & the 'safety first' campaign which began a hundred years ago, followed by the mention of three components intrinsic to the safety culture (the determinist triad consisting of no accident, no liability & no choice), referring to figures in the field of work safety T. Gamo & H. W. Heinrich. It is argued that the safety culture is a sort of determinism which is defined as controlling us through external factors, in particular, organizational factors contributing to accidents, not human influences. Such a facet of the safety culture faces two non-negligible obstacles to improving safety: an individualist culture based on 'sovereignty' & a blame culture. Therefore, we are expected to seek a new safety culture towards the twenty-first century. Finally, not an alternative, but its prototype, will be suggested to overcome the obstacles which come from the safety culture determinism.

2010S01147

Hornung, Bernd R. (Data Protection Office, Giessen and Marburg University Hospital, D-35037 Marburg, Germany [tel: +6421-58-6-63-95; fax: +6421-58-6-65-72; e-mail: hornung@med.uni-marburg.de]), **Emotion and Experience as Key Elements in Art–From Adorno to System Theory and Sociocybernetics,** *International Sociological Association, Gothenburg, Sweden,*

¶ Art is conceived as being essentially experience, which is often extended to communication. This holds both for sociocybernetic and conventional art theory. Art is a quite particular kind of expression, a language without vocabulary, grammar, & a in a way a without meaning. Under this premise concepts like creativity, intuition, inspiration, subconsciousness, and emotionality become relevant. Taking a sociocybernetic approach they can be formulated with scientific & theoretical rigor. In musicology there is a lively discussion based on Adorno's critical theory [11]. For the understanding of art (especially music) Adorno's theories provide valuable insights still today. Discussing art & the "art system" Adorno's views seem not far away from a sociocybernetic approach. Yet his philosophical and paradigmatic presuppositions, (essentialism, dialectics, & the "critical" aspect of critical theory, i.e. neo-marxist theory) are barely tenable today. The paper argues that a sociocybernetic approach can provide a more explicit, more precise, and interdisciplinarily more compatible theory, without discarding substantial insights of Adorno. Interdisciplinarity refers to connections with psychology & the neurosciences, concerning subconsciousness & emotionality, & to connections with information, communication, & media theory, concerning social dimensions of artistic production. It is concluded that sociocybernetics is suitable to provide downward compatibility with Adorno's sociology of art.

2010S01148

Horrigmo, Kirsten, Johansen (Dep. of Sociology, Social Work and Welfare Studies/University of Agder, Kristiansand, Norway, 4604 [tel: 004799423342; e-mail: Kirsten.j.horrigmo@uia.no]), **Education Between Care and Subject. Kindergarten as Part of the System of Education.,** *International Sociological Association, Gothenburg, Sweden,*

¶ Norwegian kindergartens fulfil two objectives according to their mandate, one being a care and educational system for children & secondly playing a key role for working parents. Since 2006 political matters regarding kindergartens have been administrated from the Ministry of Education. Kindergartens issues were transferred from the Ministry of Children & Family Affairs. There are reasons to believe that the educational academic skills-focused & content- or teacher-centered pedagogies will challenge the child centered tradition. About 90% of all Norwegian children attend a type of child care institution. Almost 85% of the children spend 41 hours or more per week in kindergartens. The institution of child care have become an essential agent for socialisation of children. It is a political goal to prevent the tradition & incorporate the curriculum subjects into the existing tradition. A child centered perspective has had a tendency to under communicate the broader culture surrounding them as important to children, and kindergartens to be school-like have been seen as a threat to the preschool teachers. So the question to be examined is; how to develop subjects in the curriculum & at the same time preserve the child centered tradi-

tion. The curriculum has seven different subjects & Naermiljø og Samfunn (Neighbourhood & society) is one of the subjects, & the one to be questioned in this paper.

2010S01149

Horta, Ana & Schmidt, Luisa (ICS/UL, Av. Prof. Anibal de Bettencourt, 9 1600-189 Lisboa Portugal [e-mail: ana.horta@ics.ul.pt]), **Portuguese Media Coverage of the Energy Problem,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the last years energy issues have raised to the top of the international political agenda. The attention given to this theme reveals a growing awareness of the need to develop a new energy production & consumption paradigm. But these issues are very complex, involving several dimensions a social, economic, political, environmental, scientific–& many times requiring some levels of technical knowledge. In a country with high levels of energy inefficiency like Portugal, the economic crisis accentuates the need to rapidly change the patterns of energy use. Yet, a previous study about television news coverage of energy in the first half of 2006, showed energy issues reported in a dramatized & narrow way, mostly associated with the oil prices, and failing to address deeper issues (Horta, 2007). After the oil crisis, it is expected that media coverage may frame the public debate about the energy problem in a more thorough way. In this paper, we use a larger collection of data to analyse the agenda-setting & framing of energy issues by Portuguese television news & newspapers over the last three years (2006-2009).

2010S01150

Hosoda, Miwako (Harvard School of Public Health, Boston, USA, 02467 [tel: 617-935-7919; fax: 617-734-0617; e-mail: miwhosoda@gmail.com]), **Towards a Syncretistic Approach: Japanese Bioethics Through The Lens of Creating Medical Care Guidelines for Newborns with Severe Diseases,** *International Sociological Association, Gothenburg, Sweden,*

¶ "Guidelines for Healthcare Providers & Parents to Follow in Determining the Medical Care of Newborns," released in Japan in 2004, provides guidelines for conversations among healthcare providers & parents when faced with a decision about providing life-saving medical care to newborns with severe diseases. This study examines the process of creating the Guidelines & explores what happens when there are conflicts among healthcare providers related to determining who makes the decision whether to provide or withhold life-saving care. Qualitative data were collected through interviews with neonatal physicians & nurses & through participant observation at the Guidelines meeting & at a neonatal intensive care unit in Tokyo. The process of creating the Guidelines appears to be a major crossroad in both the strengthening & abandonment of the professional autonomy of healthcare providers working in the neonatal healthcare domain.

Hotchkiss, Nikole & Smith, Shawna N. (Kenyon College, Gambier, Ohio, USA 43050 [tel: 812-361-4312; e-mail: hotchkissn@kenyon.edu]), **A Thin Line Between Terror and Hate: Legal Distinctions and Disparate Outcomes,** *International Sociological Association, Gothenburg, Sweden,*

¶ As violent manifestations symbolic of political disapproval, hate crimes & acts of terrorism are often difficult to distinguish. Multiple law enforcement & security agencies tasked with investigating & apprehending suspected offenders of such crimes do not operate under one standard definition of these offenses. Rather, acts are classified based on specific organizational norms and definitions, which can lead to disparate experiences for the accused. Suspected terrorists, in particular, are treated significantly differently from other suspected criminals in terms of interrogation, detention, & the type of trial they receive. This paper examines the legal distinctions between hate crime and counter-terrorism legislation in the United States. Specifically, we examine how these potentially overlapping categories operate very differently within the law, thereby structuring the legal framework within which citizens operate. In order to explore these questions, construct a data set of criminals who have committed acts deemed to be either hate crimes or acts of terrorism over the past 20 years & use qualitative comparative analysis (QCA) to isolate key differentiating factors.

Hovden, Jorid (Departement of Sociology and Political Science, The Norwegian University of Science and Technology, Dragvoll, 7491 Trondheim, Norway [tel: +47 91582171; fax: 73591564; e-mail: joridh@svt.ntnu.no]), **Discourses and Strategies for the Inclusion of Women in Sport,** *International Sociological Association, Gothenburg, Sweden,*

¶ In modern societies gender is interpreted as a dichotomized split based on a hierarchy, where masculinity in most situations is higher ranked than femininity and seen as the general & gender neutral. This paper will explore how gender is interpreted & coded in discourses & strategies aiming to include & equalize women in sports. I will examine which interpretations of gender & principles of equality are at play when diagnoses of women's underrepresentation are discussed and strategies for a higher inclusion of women proposed. The study is a case study of Norwegian sport organizations in the time period 1970 - 2007. The study is based on document analyses as well as research texts on gender politics conducted in the actual time period. Theory of equalization & gender constitute the theoretical framework. The analyses indicate that different strategies for the inclusion of women in sport are based on different discourses & meanings of gender & equalization and these seem to vary in line with the dominant gender political climate in sport as well as in the society as whole

Howard-Wagner, Deirdre (Department of Sociology, University of Sydney, Sydney, NSW 2006 Australia [tel: +61293516679; e-mail: deirdre.howard-wagner@sydney.edu.au]), **Fortress Australia, Zones of Indistinction, Exceptionalism: Maritime Interception, Detention and Expulsion of Asylum Seekers,** *International Sociological Association, Gothenburg, Sweden,*

¶ The draws on Agamben's (1995) work on "states of exception" & zones of indistinction" & Lentin's (2007) work on routinised technologies of governmentality (constitution, law, policy, border controls, cultural imaginings) to examine the Australian federal legislature & Australian federal & high courts response to asylum issues. In Australia, in the process of reasserting state sovereignty over domestic issues, which includes the state using its constitutional powers to asserts its all powerful ability to limit the rights of asylum seekers, the state renders the asylum seeker placeless, beyond citizenship & therefore without the right to have a right. This qualitatively different state governmentality has rested upon the operative biopolitical categorisation of asylum seekers into the state of exception in which the "other" is routinely reordered within the broader social order. This was evidenced, for example, with the former Australian federal Howard government's indefinite mandatory incommunicado detention of asylum seekers & border protection laws. It has also been evidenced more recently with the Australian federal Rudd government's suspension of the processing of Afghan & Sri Lankan asylum applications in its attempt to prevent people smuggling. Importantly though, in the Australian context, such episodic developments evidence a particular historical juncture in state governmentality of asylum seeker issues. A state governmentality that is decontextualised from the backdrop of violent practices that operated through different modes of social ordering & one that ignored the indelible state of anomie endemic to placelessness of asylum seekers & its consequent effects (Havemann 2005: 78). Subject to government control, institutionalized in refugee camps, returned to their countries of origin & denied rights in Australia; the so-called "suspected" asylum seeker" or "illegal immigrant" becomes the stateless homo sacer (Havemann & Agamben) who is beyond the "right to have rights." What is also noteworthy is the judiciaries role in protecting the sovereign space of exception, which is a key consideration of the paper.

2010S01154

Hrenjak, Majda (Peace Institute–Institute for Contemporary Social and Political Studies, Metelkova 6, 1000 Ljubljana, Slovenia [tel: 0038612347720; fax: 0038612347722; e-mail: majda.hrzenjak@guest.arnes.si]), **Revival of Paid Domestic and Care Workers in Middle Class Families: The Case of Slovenia,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper is based on a two year quantitative & qualitative research on the supply of & demand for informal paid care work in Slovenia in the field of child care, elderly care & household maintenance. In addition to the analysis of descriptive indicators of the care, migration & labour regimes, providing the interpretative framework, the article assesses the intersections of gender, ethnicity & class in this field of work. The research results showed that in the field of informal paid care work in private homes in Slovenia exist considerable differences. While child and elderly care are provided not by global but mainly by local care chains & are ethnicised in that way that child care is occupied almost exclusively by care workers of Slovenian ethnic background and elderly care is mostly occupied by well integrated internal migrants from the former Yugoslavia, the area of cleaning is globalized with participation of the so called Third Countries female migrants. Cleaning as the most unregulated, unrespected and physi-

cally demanding work in the area of informal paid care work is fully structured according to the intersectionality of 'other' ethnicity, female gender & economic poverty, which is largely transmitted from generation to generation.

Hsieh, Michelle F. (Institute of Sociology, Academia Sinica, 128 Academia Rd. Section 2, Taipei, Taiwan 11529 [tel: +886-2-2652-5108; fax: +886-2-2652-5050; e-mail: mhsieh17@gate.sinica.edu.tw]), **The Ascent of Latecomers in the Global Value Chains,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper focuses on the strategies of latecomers in moving upward in the global value chains (GVC). The earlier assumption of the GVC analysis focuses on the power of the multinationals (MNCs) in dictating the direction of sourcing & reaping much of the technological rent. Empirically, the rise of the East Asian Tigers and other newly industrialized countries have led to an increasing consensus that incorporation into the chain marks the first step for learning and, subsequently, upgrading. Yet, the literature does not say much about the upgrading process in the chains nor about the variations among different countries despite incorporation in the global production network. At the same time, another strand of the literature suggests that large corporations are the key for latecomers to catch up since they are able to carry out large scale R&D & marketing so as to compete head to head with MNCs. Using a case study of the Taiwanese bicycle industry, I show how under a certain social structure, a system of small & medium enterprises (SMEs) with networks among themselves are able to negotiate with the MNCs & move upward in the value chains. This is contrary to the pessimistic view of the "hollowing out" thesis. The upgrade involves two processes simultaneously: learning & innovation in the existing locales where SMEs are clustered, and internationalization of production & coordinating the global production network. In other words, while the recipients of the first wave of international outsourcing have participated in the current wave of internationalization of production, they have also continued to thrive at home. The choice of the latecomers' offshore production sites will be discussed using Taiwanese bicycle production in China as an example. Lastly, the findings will contribute to the debate on the relevance of clusters in the face of globalization.

Hsu, Jennifer, YJ (Institute of Social Sciences, University of Sydney, Sydney, NSW, Australia, 2006 [tel: +61 422590331; e-mail: jenniferhsu@cantab.net]), **Changing State-Society Relations in Contemporary China: A Study of Migrant Organizations in Beijing and Shanghai,** *International Sociological Association, Gothenburg, Sweden,*

¶ State & society relationships in China have changed significantly since the late 1970s with economic reforms heralding new dynamics and outcomes. This research addresses central questions in China's state-society relations, civil society & state corporatism theory. Specifically, it explores the relationship between Beijing's & Shanghai's migrant civil society organizations (CSOs) and the government to understand how both interact with each other and the impact on state-society relations. A comparative examination of the work & environs of migrant organizations in Beijing & Shanghai provides an understanding of the different forms of state-society relationship emerging in China. The emergence of migrant CSOs & the general pluralization of Chinese society can be understood within China's economic reforms, which has led to unprecedented levels of internal migration. In the case of migrant CSOs, they have surfaced to tackle the diverse challenges migrant workers face, given the failure of central and local states to address their welfare needs. Considering the sheer number of migrants (120 to 200 million) & their importance to economic development, migrant CSOs represent a fruitful object of study for the analysis of Chinese state-society relations. By locating this research within the perspectives of migrant CSOs in Beijing & Shanghai, it presents a window into China's state-society relationship & how the state will deal with an ever more pluralistic society.

2010S01157

Huang, Ronggui (Department of public and social administration, City University of Hong Kong, Hong Kong [tel: (852) 68010976; e-mail: ronggui.huang@gmail.com]), **Litigation as a Strategy of Housing Activism,** *International Sociological Association, Gothenburg, Sweden,*

¶ Laws & policies have been widely recognized as vital resource of resistance in China, which has been conceptualized as "rightful resistance." In rights-defending activities by home-owners or Home-owners' Association, litigation is not uncommon as a non-confrontational alternative. Administrative litigation, a judiciary review against administrative decisions, is even more popular due to its comparatively low-cost, financially and technically. In the meantime, we know little about legal mobilization in China, especially by home-owners. This paper aims to expand our understanding on 1) what factors influence home-owners' litigation strategy & 2) how litigation contributes to the outcome of rights-defending activities. Based on analysis of newspaper reports & interviews in a case in Shanghai, the author finds that characteristics of litigants matter, but in a less significant way. On the contrary, political-legal-opportunities are the most important factors. First, the interplay between political and legal opportunities will influence the chosen strategies. Litigation is not the first choice for most home-owners because it is relatively costly compared to other political strategies, such as negotiation, letter petition & visit to government. Litigation usually happens when home-owners fail to defend their rights and interests through political strategies. Second, court cost is a major constraint, which is determined by the legal system. It explains why home-owners are not willing to resort to litigation by and large. Besides, it also explains why administrative litigation is preferred to ordinary litigation. Third, enactment of new laws and new interpretation of laws is a significant dimension of legal opportunity. It influences not only the legal standing of a case, but also the result of the litigation. Fourth, there is an interaction effect between political strategies & litigation on the outcome of resistance. Litigation can overcome the information asymmetry & secure favorable evidence. Thus, litigants can better secure government responsiveness after litigation.

Hudson, Nicky & Culley, Lorraine (Applied Social Sciences, De Montfort University, Leicester, UK. LE1 9BH [tel: 0116 2078766; e-mail: nhudson@dmu.ac.uk]), **"She Has What I Want and I've Perhaps Got a Little Bit of What She Wants": Constructing the Egg Donor in Transnational Reproduction,** *International Sociological Association, Gothenburg, Sweden,*

¶ Developments in assisted reproductive technologies have engendered new and, for many, somewhat unsettling methods of family formation. Postmenopausal women may give birth, grandmothers deliver their own grandchild & children may have up to 3 sets of "parents"; practices which radically transform our notion of intergenerational relations & challenge basic kinship categories. Whereas the use of IVF with own gametes (eggs & sperm) is now widely accepted socially & culturally, reproductive technologies which involve third party gametes remain contentious. Nevertheless the use of such technologies is growing & has opened up the possibility of motherhood to many women previously denied this status. This process is increasingly being played out in a global arena; a phenomenon that has been characterised as "reproductive tourism." There is a substantial & growing global market in reproductive material, fertility treatment & surrogacy which amounts to millions of dollars annually. The shortage of egg (and increasingly sperm) donors & the high cost of treatment, has resulted in many UK based women travelling aboard in their quest for a child–a phenomenon often referred to as "reproductive tourism." The process of using the genetic material of others in human reproduction has received relatively little attention from sociologists, although there is significant media interest and bioethical/theoretical commentary. These debates have focused on issues of commodification, power differentials, economic inequity between donor & recipient & the consequent exploitation of poor and vulnerable women by more affluent Western women in a global market in the basic elements of human life. Such a market is seen as an extreme form of body commodification which is regarded as inherently problematic. In such accounts the perspectives of women engaged in this process, as recipients or "donors" are rarely considered. This paper is drawn from an ESRC funded research study which explores the ways in which personal landscapes of infertility are intertwined with transnational aspects of reproductive technologies. (1) The paper will discuss data from indepth qualitative interviews with women who have sought treatment overseas using donated eggs, sperm or embryos & in particular focuses on how women construct the "donor" & the process of baby making using the genetic material of unknown & often anonymous third parties. We interrogate perceptions of commodification, discourses of donor selection & "matching," the performance of normalisation, control & agency & the ways in which women perceive the potential consequences of creating families with "donated" gametes across borders.

Huf, Christina (Goethe University Frankfurt Dep. for Education, Senckenbergallee 15 60054 Frankfurt [tel: 0049 69 798 23712; e-mail: huf@em.uni-frankfurt.de]), **Reducing Children's Agency?–Children's Social Practices During Transition in the**

English and German Educational System, *International Sociological Association, Gothenburg, Sweden,*

¶ Debating transition, continuity & progression in the early years, Dunlop & Fabian have raised the question whether–through the laudable aim of ensuring quality of early childhood experiences–curriculum guidances are in fact reducing children's agency. Approaching children from the perspective on an "assumed shortfall of competence, reason or significance," curriculum guidances are judged to be in danger of enculturing children into passive and compliant practices rather than treating them as social actors. The German & the English educational system take very different (curricular) approaches to children's transition from ECCE to Primary School. Drawing on material & data from a longitudinal, comparative ethnography on children's transition in England and Germany, the paper will discuss the different forms of agency children developed during transition in English & German educational settings. The paper will focus on the paradox finding that, although ECCE in the UK has seen unprecendented attempts to define what children from birth to five should experience, do and understand, the children who visited English settings were far less compliant with their teachers expectations than the German children who participated in the study.

Hughes, Jason ([e-mail: jrah1@me.com]), **Elias, Bourdieu and the Practice of Sociology,** *International Sociological Association, Gothenburg, Sweden,*

¶ To date there have been few systematic comparisons of the sociology of Norbert Elias & Pierre Bourdieu. This is perhaps surprising given some remarkable similarities between the work of the two authors, in particular their common stress upon relational concepts; their explicit identification with the enterprise of developing a "scientific" sociology; their rejection of dualistic theorising; and, indeed, their shared interest in everyday, quotidian aspects of social life. In this paper I seek to explore the similarities between Elias's & Bourdieu's approach, as well as key sources of disagreement & points of intellectual departure. I propose that the greatest source of common ground between these authors relates to their sociological practice–the alternative theoretico-empirical vehicle for doing sociology that is enshrined in their respective work. Conversely, I propose that the principal differences between their approaches stem from residual elements of Kantian & structuralist theorising in Bourdieu's approach, and the explicit rejection of these in Elias's. Ultimately, I argue that when considered together, Elias & Bourdieu offer a potentially complementary set of principles, concepts, and practices in which the contributions of one author in part compensate for the limitations of the other. In particular, whilst Elias arguably offers a more radically relational & processual sociological orientation than Bourdieu, Bourdieu is rather more sensitive than Elias to the political dynamics of sociology, offering more concrete strategies for how these might be negotiated by individual researchers.

Hung, Elias Said (Communication Department, Universidad del Norte, Barranquilla, Colombia, 00000 [tel: 573014819654; e-mail: saide@uninorte.edu.co]), **The Role and Commitment of Researchers/Intellectuals in the Digital and Global Age. The Experience of the Virtual Center for High Energies (CEVALE2) for Colombia,** *International Sociological Association, Gothenburg, Sweden,*

¶ This communication wants to illustrate how the role and commitment by Latin-American researchers/intellectuals is assumed in the digital & global age, taking as a case the experience of the Virtual Center for High Energies (CEVALE2) for Colombia, a project approved by the Colombia Academic Advanced Technology National Net (RENATA) in September 2009 for development of e-action/research in high-energy physics & associated disciplines with an intensive use of advanced nets in alliance with institutions from Venezuela, Ecuador, & Peru, through the articulation of actions linked to three action dimensions: diffusion, follow up & research around projects such as Babar, Atlas & Lago as well as the approach of perspectives coming from social sciences for the inter-disciplinary development of this proposal.

2010S01163

Hunter, S. (University of Leeds UK, Leeds [tel: +44(0)113 343 4422; fax:; e-mail: s.d.j.hunter@leeds.ac.uk]), **Enacting Power and Structuring Separation: Speaking About and Speaking Through 'Race' and 'Gender',** *International Sociological Association, Gothenburg, Sweden,*

¶ Many multicultural societies pride themselves on being more & more explicitly 'race' cognisant. What Sara Ahmed (2004) would think of as the 'declaratory mode' is increasingly important at international, national & institutional levels. Recent trends view this 'race' cognisance as intersecting with cognisance around other sets of social relations, such as gender, class, generation and sexuality. Coupled with this declaratory mode however is the paradoxical recognition that racialisation happens at a number of levels, not all of which are known. For example in the UK charges of 'unwitting' (Macpherson, 1999) reproduction of racist institutional norms in public policy definitions of institutional racism heighten anxiety & confusion in public debate around ethnicity. What do these contradictions mean for how racialisations get lived out; how 'race' gets enacted through multiple interconnected social relations of power & inequality? Crucially what do they mean for people enacting racialised power through positioning as white? This paper explores this question with reference to those working in public policy contexts who experience "a recurrent, & disconcertingly unpredictable, encounter with self," where values, behaviour & professional practice are rendered visible & problematic (Husband, 1996:46).

Hurd, Clarke, Laura & Bundon, Andrea (School of Human Kinetics, University of British Columbia, 156-1924 West Mall, Vancouver, BC, Canada, V6T 1Z2 [tel: 1 (604) 822-4281; fax: 1 (604) 822-5884; e-mail: laura.hurd.clarke@ubc.ca]), **Gendered Narratives of Health, Aging, and Dying: Older Canadian Men and Women and Their Experiences of Multiple Chronic Conditions,** *International Sociological Association, Gothenburg, Sweden,*

¶ Drawing on data from interviews with 35 older adults (aged 75+) who had a range of three to 14 chronic conditions (average of six), this paper examines older men's & women's narratives of aging with multiple chronic conditions & their reflections on death and dying. Our findings suggest that while the ways that older adults narrated their health experiences were shaped by gender norms and ageist & healthist discourses, their stories were underscored by pragmatic views on the health realities of growing older. Having considered the probable progression of their various chronic conditions, most participants had made plans for their final days, including funeral arrangements, long term care decisions, the distribution of their possessions, & living wills. Additionally, some participants had established plans for committing suicide should their lives become untenable. In this way, the men & women maintained a sense of agency over their destinies despite the increasing sense of loss of independence & control over their health & daily lives. We discuss our findings in relation to the literature concerning chronic conditions, identity, & death and dying.

2010S01165

Huschek, Doreen, de Valk, Helga A.G. & Liefbroer, Aart C. (Netherlands Interdisciplinary Demographic Institute, Den Haag, 2511 CV, The Netherlands [e-mail: huschek@nidi.nl]), **Partner Choice between Preferences and Structural Constraints: The Case of the Turkish Second Generation in Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ Among migrants & their descendants, it may not be sufficient to simply contrast exogamous & endogamous unions to draw conclusions on social distance or integration trends. A second-generation partner may constitute an important alternative, e.g. may represent an in-between choice between a first-generation & a native partner in terms of orientation toward the country of origin or the host country. Using TIES data (2007-08), this paper aims to contribute to the study of intermarriage by giving a comparative picture of the partner choice among second-generation Turks in 13 European cities in 7 countries. Specific attention is paid to the role of pref-

erences, parents & non-coethnic peers as well as context factors such as group size & the type of integration policies. Competing risk models suggest that second-generation Turks with a propensity for a second-generation partner may be located on a continuum between the 'poles' of the other two partner choices in terms of family values & orientation toward the host country. The findings suggest furthermore that a shortage of suitable second-generation partners does not increase intermarriage rates, but rather leads to an increased pressure to find a suitable first-generation partner.

2010S01166

Hyden, Margareta (Linköping University, 581 83 Linköping, Sweden [tel: +46709632963; e-mail: margareta.hyden@liu.se]), **Practices of Exclusion or Inclusion. Battered Women's Narratives of Their Social Network's Responses,** *International Sociological Association, Gothenburg, Sweden,*

¶ Men's violence against women in close relationships take place in specific social contexts, formed by the social relationships that constitute the man's & the woman's social networks. These networks will respond to the violence & the responses may be of vital importance for ending the violence, or they may even contribute to its perpetuation. The paper presents a narrative analysis of two battered women's stories. The first story contains extreme tension between the social network's structure & the woman's agency. Evaluating her position in her social network, the woman concludes that she is positioned as the strong & competent in the family, with hostility & enviousness attributed to this position. The women in her family of origin met her by repudiation; her father with withdrawal. These responses have made her unable to deal with the situation. The second story contains examples of effective negotiations between the network members when the violence was disclosed. The men in the violent man's family positioned themselves as the strong & responsible in the social network & developed a way of dealing with him. These responses caused no tension between the network structure & the woman's agency. In her evaluation, she concluded that it backed her up and helped her to regain ability to act.

2010S01167

Hyunmi, Heo & Shinwook, Kang (Kyungin Women's College, Gyesangil 101, Gyeyang-gu, Incheon 407-740, Rep. of Korea [tel: +82 32 540 0155; fax: +82 32 555 2610; e-mail: rosa1965@hanmail.net]), **The Sports NGO Movement in South Korea,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Citizen's Alliance for Sports is the first NGO for sports in South Korea. Founded May, 18 2002 by 187 citizens including athletes, professors, teachers, journalists, lawyers, workers & housewives, its goal was to make sports accessible for all. The Citizen's Alliance for Sports is a public institution with the responsibility to monitor & criticize government sports policies & to propose a reasonable alternative such as sports system improvement, school physical education, protecting human rights & welfare for athletes, & reasonable management of and democratization for sports organizations. The purpose of this study is to evaluate a variety of activities of Citizen's Alliance for Sports conducted over the last 10 years & to suggest future plans. We scrutinize the organization's efforts to be a good role model for student athletes in harmonious connection with school, elite & leisure sports, to promote reasonable management and democratization of sports organizations, & the settlement of healthy sports culture. Ultimately, the goal of this study is to contribute to system improvement & to human rights in sports.

2010S01168

Ibanez-Angulo, Monica (University of Burgos, Facultad de Humanidades y Educación C/ Villadiego s/n 09001 Burgos, Spain [tel: +34 947 279 340; fax: +34 947 258 702; e-mail: miban@ubu.es]), **When Home is no Longer There: Flaws and Gaps of Return Migration in a Time of Crisis,** *International Sociological Association, Gothenburg, Sweden,*

¶ Return migration constitutes a problematic issue regarding the variety of migratory flows included under such a rubric, including voluntary & involuntary return as well as all these flows that fall in between, such as migration after retirement & pendular migration where migrants engage in a more or less continuous "return" to & "departure" from what Marc Augé denominated "anthropological place." Moreover, to situate return migration in a time of crisis also calls for a further analysis regarding our understandings of what constitutes a "crisis." In this paper I would like to address the implicit statements that we take for granted when talking about "return migration in a time of crisis": (i) To assume that there is a place to come back, to return to: How do we conceptualize the locale where migrants return? Is it the place where one was born, the place where one grew up, the place where close relatives still live or the place where they just moved to? (iii) To assume that there is a time of crisis: can we consider the current economic crisis as an "unexpected" development of western capitalist economies or rather should we consider it as a "recurrent" stage? How do migrants understand it & how do they respond to it? (iii) To assume that there is a relationship between return migration & economic crisis: to what extent economic reasoning plays a central role in return migration? What is the role played by other kinds of crisis which also generate large numbers of migrants & displaced populations, such as climate change, ethnic conflict & forced/involuntary return?

2010S01169

Ichijo, Atsuko ([e-mail: A.Ichijo@kingston.ac.uk]), **Dissection of 'Modernity': A Comparative Analysis of Instances of "Anti-Modernity",** *International Sociological Association, Gothenburg, Sweden,*

¶ Modernity may take different forms & there are many ways of being modern, but being modern always entails exercise of one's agency to self-reflect. Drawing from research carried out for the "Identities & Modernities in Europe" (IME) project, the proposed paper examines two instances of dissection of modernity, the Art & Craft movement in the 19th Britain & the "overcoming modernity" symposium of 1942 in Japan. In both cases, what was seen as a dominant & overwhelming form of modernity was examined and critiqued by a wide range of intellectuals who then strove to present alternatives to the conventional model of being modern. By examining these intellectuals thinking & discourse with reference to civilisational thinking, the paper aims to highlight the utility of concept of "civilising processes" in explaining different ways of modernisation.

2010S01170

Ichijo, Atsuko (Faculty of Arts and Social Sciences, Kingston University London, Kingston-upon-Thames, Surrey, KT1 2EE, UK [e-mail: a.ichijo@kingston.ac.uk]), **Questioning 'Modernity': Agency and Self-Reflexivity in Multiple Modernities,** *International Sociological Association, Gothenburg, Sweden,*

¶ Human agency & its self-reflexive capacity are at the core of the theory of multiple modernities. Modernity may take different forms and there are many ways of being modern, but being modern always entails to be an agent with a capacity of self-reflection. Questioning is an expression of such a capacity: when one questions, one is exercising its agency & self-reflexivity. Based on these basic premises, the proposed paper examines two instances of questioning of modernity, the Art & Craft movement in the 19th Britain & the "overcoming modernity" symposium of 1942 in Japan. In both cases, there was a conscious engagement with what was seen as an overwhelming tide of "modernity" on the part of a wide range intellectuals who questioned it & sought alternatives. By examining their discourse with reference to geopolitics as well as civilisational discourse, the paper aims to shed light on the possible meeting points of civilisational analysis & historical sociology.

2010S01171

Ichou, Mathieu & Vallet, Louis-André (Sciences Po/CNRS [e-mail: mathieu.ichou@sciences-po.org]), **The Relative Importance of Achievement and Tracking Decisions in Creating Educational Inequalities: Change over Four Decades in France,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper assesses the relative importance of academic achievement, i.e. "primary effects" in Boudon's (1974) term, & tracking decisions controlling for prior academic achievement, i.e. "secondary effects," in creating social class educational inequalities in France. Five school transitions are studied: the first three correspond to the educational career of pupils born around 1951, while the last two apply to pupils born around 1984. Erikson et al. (2005) & Fairlie (2005) counterfactual approaches, as well as Karlson et al. (2009) method, are used on two nationally representative longitudinal studies: the 1962-1972 INED survey (N=15,178) & the 1995-2006 Panel study of the Ministry of Education (N=17,830). On the one hand, we demonstrate a clear historical rise in the share of primary effects at a given transition. On the other hand, we show that secondary effects generally increase, as pupils progress through the educational system. In addition to class, other sources of inequality, i.e. gender, ethnicity & parent's education, are also discussed.

2010S01172

Ido, Satoshi & Habuchi, Ichiyo (Aichi Prefectual University, Aichi-gun, Aichi-prefecture, Japan, 480-1198 [tel: +81 561 64

1111; e-mail: ido@jps.aichi-pu.ac.jp]), **Local Community in a Mountain Village and the Life Course of Youth in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Japanese local community "mura" has long been considered to be a feudal system. This particular social fact is inconsistent with the idea of democracy & modernity. Since the end of WW2, many Japanese thinkers had generally criticized the local community in terms of its customs & behaviors as remnants of feudalism in order to realize equalization & individualization from the past collectivism in Japan. Some previous studies argued that remnants of feudalism had no longer been effective, as a result, the society was individualized & modernized. Giddens (1991:80), however, argued: modernity confronts the individual with a complex diversity of choices and, because it is non-foundational, at the same time offers little help as to which options should be selected. In this presentation, we will discuss on the social change in terms of the correlation between young seasonal labors in Hakuba mura & life courses of Japanese youth. Hakuba mura is famous for a leisure industry, especially many winter sports, & this leisure industry is based on Japanese traditional family institution "ie". In addition, this service industry is supported by the Japanese youth who are from urban areas. We will give a data concerning both the actors in leisure service industry & the family business based on the social structure in rural areas. How had youth & others in this local community developed the leisure sphere? We will also show that this employment system gives an important opportunity to maintain & simultaneously acquire a cultural diversity for Hakuba mura.

Igel, Corinne (University of Zurich, Institute of Sociology, Zurich [tel: ; e-mail: igel@soziologie.uzh.ch]), **Grandparenthood in Europe: Feelings of Obligations towards the Younger Generation,** *International Sociological Association, Gothenburg, Sweden,*

¶ As a consequence of a higher expectancy of life & a better state of health from elderly people, grandparents & grandchildren share actively a longer period of life. Sociological studies analysing the role of grandparents within the family label grandparents as so called "family watchdogs" or "silent saviours." These expressions refer to the fact, that grandparents often feel responsible for the wellbeing of the younger generation & provide important emotional, practical or financial support. Consequently, grandparents are not only emotionally attached to their grandchildren but also often occupy a central position in the support network of young parents. The presence of young children generally intensifies intergenerational transfers from the older to the younger generation & strengthens family cohesion. However, we know that the role perception of grandparenthood underlies no clear regulations or societal expectations & is individually lived and perceived. Different styles of grandparenting exist & feelings of obligation toward grandchildren & their families vary strongly. Our research focus on the following questions: How pronounced are grandparental feelings of obligation in Europe? Do grandparents feel responsible for the economic wellbeing of grandchildren and their families? To what extend are grandparents willing to help grandchildren's parents in looking after young grandchildren? What factors influence these different dimensions of normative solidarity? And are gender differences substantial? Furthermore, by using the Survey of Health, Aging & Retirement we are able to show country specific differences of grandparental normative solidarity in Europe which we can trace back to different cultural and institutional backgrounds. In order to accurately analyse grandparental feelings of obligation, we will apply a three-generation perspective & take into account the characteristics of the grandparents, parents & grandchildren simultaneously.

Ikeda, Yoshifusa (School of Literature, Waseda University [e-mail: yoshifusa.ikeda@aoni.waseda.jp]), **The Theory of Imitation by Gabriel Tarde and Contemporary Japanese Society: Assimilation or Differentiation?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The purpose of this paper is to use Tarde's imitation theory to analyze both the rapid modernization of Japan in 19th century as well as its present condition. We focus on two points of view with regards to his 'Laws of Imitation': the flow of imitation 'from the superior to the inferior' & 'the transition from the unilateral to the reciprocal'. At the end of 19th century, Tarde thought that Japan was unilaterally influenced by the Occident, but at present, Japan exports its product & its ideas to other countries, including to the West. Mutual imitation plays an important role in contemporary Japanese society. Within the domain of industry, newly industrialized countries in Asia, which used to imitate Japanese products, began to increase their share of electronic devices that now can even be found in Japan. In the world of subculture, some eager consumers of Japanese comics produce various "derivative works" based on their favorite original works.

Ileri, Esin (Okan University, Akfirat Kampüsü Formula 1 Yani. 34959 Tuzla - Istanbul / Turkey [tel: +90 532 4649569; fax: +90 216 6771647; e-mail: esinileri@gmail.com]), **Mobilizations in the Period of Crisis–Protests and Strikes in Turkey,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines two cases of protests against the consequences of the crisis in Turkey. The first one is the "warning strike" of 25th November, with 650 thousand participants in 81 cities, held by the invitation of KESK (Confederation of Public Employees Trade Unions) & DADGSK (Confederation for Progressive Trade Unions of Turkey). The second case is the strike of the TEKEL (Turkish tobacco company) workers against the privatization of their companies which is the most powerful labor struggle in the last 30 years of Turkey. Despite many mobilizations that were organized against the consequences of the crisis in Turkey since last year, our choice of studying these two particular ones is based on the fact that they are not only the most remarkable ones in this crisis context but also because if we consider the last 40 years of Turkey, they are the ones with biggest number of participants.

2010S01176

Imbrasaite, Jurate (Vytautas Magnus University, K. Donelaicio 52-309, LT 44244 Kaunas, Lithuania [tel: +37037327822; fax: +370 37 327823; e-mail: J.imbrasaite@smf.vdu.lt]), **The Search of Postmodern Citizenship in Lithuania. Does Monitorial Citizen Exist?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Most researchers indicated that postmodern concepts of citizenship are getting more important in contemporary Western societies. According to them, new generations of citizens are interested in politics and social life, but are less likely to participate in traditional forms of politics. The concepts of the "monitorial citizen" refers to an individual, who is interested in politics, has high levels of political efficacy, participates in political acts only, when it is necessary & does not participate in traditional political organizations. The focus of this article is to investigate whether this type of citizenship actually occurs in Lithuania. Based on the survey conducted in Lithuania in 2006, the article draws conclusions that this form of citizenship occurs in Lithuania, but it does not confirm theoretical expectations. From theoretical perspective of the postmodern citizenship, the characteristics of identified groups (the traditional citizens, the monitorial citizens, the opportunistic citizens & the bold citizens) are mixed, because of socio-economic & cultural conditions in Lithuania.

Imdorf, Christian (Institute of Sociology, University of Basel, Basel, Switzerland, 4051 [e-mail: christian.imdorf@unibas.ch]), **Equal Employment Opportunity in Apprenticeship–How Training Networks Enhance Fair Hiring Practices,** *International Sociological Association, Gothenburg, Sweden,*

¶ To reduce the lack of apprenticeships at the beginning of this millennium, Swiss VET-policy has promoted training networks as a new organisational form of vocational education & training (VET). Amongst others, training networks disburden the individual training company from the time-consuming task of recruiting new apprentices. We ask if & how training networks favour equal employment opportunity in apprenticeship compared to traditional training companies which tend to exclude disadvantaged school leavers, e.g. some youth with immigrant background. Referring to the French sociology of conventions & to two interview-based case studies of training networks in the German part of Switzerland, we reconstructed the main conventions of coordination which structure the recruitment of new apprentices. Our results show that training companies mostly accept the assigned new apprentices, even if considered as potentially problematic. This is, amongst others, because they understand the limited organisational capacity of the training network to allocate a pool of preselected candidates to a restricted number of companies. We conclude that the transformation of company-based VET towards training networks provides promising organisational tools not only to offer up to date vocational training, but also to enable better equal opportunities in access to VET.

Indergaard, Michael (Department of Sociology, St. John's University, New York, New York, 11439 [tel: 718-990-5665; e-mail:

indergam@stjohns.edu]), **Another Washington-New York Consensus? Progressives Back in Contention,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the wake of financial crisis, many societies & cities are considering how much they should rely on finance as a source of comparative advantage & markets as mechanisms to address social needs. This paper examines these issues through a study of the post-crisis development & exchange of polices between the activist administration in Washington & what had been a 'third way' neoliberal regime in New York City. The Obama Administration has taken advantage of crisis to not only institute a national healthcare policy but also to promote a 'new foundation' for growth that supports innovation in energy industries while reigning in finance. This has brought some new directions to New York's regime although it remain at odds with Obama's initiatives to regulate finance. In general, legacies of 30 years of neoliberal rule are constraining Obama's ability to institutionalize new federal roles & relationships. What now seems likely is not a restoration of some sort of Keynesianism, but a heterodox regime that combines market & state mechanisms & a policy network that is open to heterogeneous influences.

Ingham, Valerie, Islam, Rabiul, Sappey,Richard, Hicks, John & Manock, Ian (Charles Sturt University, CSU, Building C6, Panorama Avenue, Bathurst, NSW, 2795, Australia [tel: +61 2 63384639; fax: +61 2 6334401; e-mail: vingham@csu.edu.au]), **The Commodification of Risk and Response: A Transdisciplinary Study of Emergency Management Within Molong, NSW and Three Bangladeshi Communities.,** *International Sociological Association, Gothenburg, Sweden,*

¶ Our aim is to research community expectations & experiences of emergency management, risk perception & social capital, in order to develop a multi-disciplinary & cross-cultural model which will strengthen community resilience. A key component of building resilient communities in Australia involves deconstructing the commodification of risk & the contingent community dependence upon emergency management professionals. We intend adding a fresh dimension to building community resilience through investigating three Bangladeshi communities dependent upon their own social capital. In the developed world, do we feel that we have "bought" risk reduction, simply through a payment transaction? As we have recently experienced in the Victorian bushfires, when people are not saved there is a strong public outcry. In the developing world social capital is still supreme. There is an expectation that community networks will mobilise in response to disasters (perhaps aided by government agencies, but not reliant on them). To this end we have coined the term "disaster capital," meaning the cooperative connections between people & community groups which contribute to social cohesion while preparing, responding and recovering from disaster.

Ingold, Jo (University of Sheffield, Department of Sociological Studies, Elmfield, Northumberland Road, Sheffield S10 2TU, UK [e-mail: j.ingold@sheffield.ac.uk]), **Policy Responses to Partnered Women Outside The Labour Market in the UK, Australia and Denmark,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper draws on a comparative study of activation policies relating to partnered women in Australia & Denmark, with a focus on policy learning for the UK. Data was constructed through in-depth case studies, comprising elite interviews with policy actors & documentary analysis. The framework of recalibration is used to examine the similarities & differences of the policy changes in the three countries. The Australian & British approaches have involved changes in the conceptualisation of partnered women's roles as wives & mothers. In Denmark activation has been recalibrated in response to challenges posed by immigration. The paper argues that, although convergence can be seen in the promotion of the adult worker model & in increasing workfare in all three countries, the activation responses are differently constituted, particularly in relation to childcare. The paper concludes that the Australian & Danish cases can provide policy learning for the UK in the form of partial individualisation of benefits, childcare provision as a prerequisite for activation, and individually responsive employment services.

Inhetveen, Katharina (Department of Sociology, Ludwig-Maximilians-University Munich, Konradstr. 6, D-80801 München, Germany [tel: +49-89-2180-6315; fax:; e-mail: katharina.inhetveen@soziologie.uni-muenchen.de]), **Democratizing Camp Refugees: Democracy-Building Practices as Education and Legitimation in Long-Term Refugee Camps,** *International Sociological Association, Gothenburg, Sweden,*

¶ Refugee camps typically serve as middle- to long-term installations with a mission not only to host, but also to educate its inhabitants, the refugees. These camps thus classify as "people-changing organizations." They pursue a policy of educating, sensitizing, & empowering refugees with the aim to have them return to their country of origin as "better" citizens one day. Democratization is a core element of this educational mission. In particular, camp refugees are to democratically elect community representatives. The paper analyzes these democratic elections of refugee representatives instigated by the camp administration. Based on observations made during a six months field research in two Zambian refugee camps, it is discussed how such elections are part of an undertaking to disseminate Western values around the world via the international refugee regime. At the same time, such democratic practices are an important element of the humanitarian organizations' endeavor to legitimize their work vis-à-vis the public and, most notably, the donors. The paper shows how these efforts in legitimation generate an orientation towards outside actors & shape the criteria for structuring & evaluating camp elections accordingly. It argues that the exercises in democratizing camp refugees are not, after all, about democratizing refugee camps.

Ioannidou, Anastasia (Employment Observatory, 6-8 K PALAMA ATHENS GREECE 11141 [tel: 030 210 2120744; fax: 030 210 2285122; e-mail: aioannidou@paep.org.gr]), **Democratisation and Globalisation of Labour Markets With or Without Rights?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Over the last decade & in particular over the last five years economic ephesis & crisis brought in the public dialogue the need to enforce basic rights & at the same time the decline of basic rights in the name of competitiveness, subsidiarity & survival. On the other side is been argued that this discussion, in the context of emergencies due to economic reasons, civil conflicts and war situations, has lead to a serious decline of basic rights in specific parts of the world for specific groups & social classes, which makes globalisation markets rights & professional services impossible. From a liberal view point, democratisation & rights are the characteristic of the modern era & the condition for globalisation of markets, labour markets, goods & services. On the other side, increase of competition & economic crisis have lead to the deterioration of basic rights such as employment rights, professional rights, access to health & health services, clean air, decrease of income for specific social groups. New models of industrialisation have lead globally to paid slavery for working classes & the "new poverty" & deterioration of living standards for masses of populations & the European middle classes.

2010S01183

Ipek, Demir (University of Leicester, University Road, Leicester, Le1 7rh United Kingdom [e-mail: id34@le.ac.uk]), **Spatial and Temporal Untranslatability,** *International Sociological Association, Gothenburg, Sweden,*

¶ By paying attention to both 'strategies of containment' and 'strategies of involvement', the paper will draw similarities between what I call 'spatial translatability & temporal untranslatability'. Whilst the first refers to how one learns and engages with a contemporaneous 'other' framework (culture, discipline, political ideology etc.), the latter is focused on how one moves back in time & engages with ideas & practices from one's past. The 'Second Language Learning Thesis' will be employed as an epistemological tool to uncover, depict & lay bare the socially constituted nature of borders, & discuss the similarities between temporal & spatial bordermaking.

2010S01184

ISAAC, Rami (NHTV Breda University of Applied Sciences, Centre for Cross-cultural Understanding, Mgr. Hopmansstraat 1, Breda, 4817 JT [tel: +31 076 5302203; fax: +31 076 530 2295; e-mail: Isaac.r@nhtv.nl]), **Moving From Pilgrimage to 'Dark' Tourism: Reinventing Palestine,** *International Sociological Association, Gothenburg, Sweden,*

¶ Travelling to places associated with death is not a new phenomenon. People have long been drawn, purposefully or otherwise, towards sites, attractions & events linked in one way or another with death, suffering, violence or disaster. War-related attractions, though diverse, are a subset of the totality of tourist sites associated with death & suffering. The perception of safety and security is also a major determinant in the travelers'

decision to visit a place. Any conflict where people are dying means definitely a negative impact on the local tourism businesses. The perception of a personal threat to the visitor is crucial. Tourists go happily to poor countries where people are routinely dying. The daily diet of war & conflict stories that have emanated from the second uprising (Intifada), give the impression that the tourism industry is the least likely sector to flourish. The spatial context of this paper– Palestine–is crucial. The Holy Land has always been an important destination for Christian, Jewish and Moslem pilgrims from all over the World. Pilgrimage to the Holy Land, & its sites, especially Jerusalem, Bethlehem & Nazareth are known to have been visited as early as the second century. Pilgrimage & hospitality have been defining features of the economy & society of the Holy Land & Palestine for 2000 years. This paper assesses how a subset of "dark" & possibly other forms of tourism such as "justice" tourism may play role in providing different forms of tourism as an "adds on" to the existing dominant a pilgrim-type of tourism. This article investigates the potential for developing new forms of tourism, since Palestine has been undergoing violence, tension and political instability since 1948 & arguably for a generation earlier between & among Jews & Arabs, Israelis & the Palestinians. This paper also attempts to shed light on how tourism and tourist practices in Palestine endorse to legitimize the Palestinian "right of return," & the acknowledgement of "Nakba" in 1948.

2010S01185

Isengard, Bettina & Szydlik, Marc (Institute of Sociology, University of Zurich, Zurich, Switzerland, 8050 [tel: +41 44 635 23 51; e-mail: isengard@soziologie.uzh.ch]), **Living Apart (or) Together? Co-residence of Parents and Adult Children in Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ Co-residence between parents & their adult children is a frequent phenomenon in Europe. But why do adult children live with their parents? The objective of this paper is to investigate the causes of co-residence on the basis of the SHARE data for fourteen European countries. This article concentrates on individual characteristics, family structures & on differences between countries. The findings indicate that it is primarily the individual needs and opportunities of the children which lead to co-residence. The comparisons between the countries show that welfare state arrangements have a substantial effect on the rate of co-residence. Co-residence thus appears to be a response to economic insecurities at both individual & societal levels.

Ishida, Atsushi (School of Sociology, Kwansei Gakuin University [fax:; e-mail: aishida@kwansei.ac.jp]), **An Initial Condition Game of the Richardson Model of Arms Races,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Richardson model of arms races, a sort of simple differential equation model firstly proposed by Lewis F. Richardson, has been the most popular mathematical model for describing arms races between nations. In this study, I try to extend the Richardson model & conduct a strategic form game where two players interdependently choose an initial point of deterministic stream of interaction in arms races, assuming that each of whom has a different preference for outcomes of the following arms races. This game can represent a fictional situation such that an agent or planner of the one side nation who prefer mutual arms reduction faces to an agent or planner of the other side nation who rather wants to stimulate the race for his/her own benefit. In addition, other situations such as educational process can be considered in this game. I will analyze this game focusing on the relationship Nash equilibriums & the parameters of the Richardson model, and discuss that a ceiling on arm production of each nation plays a crucial role in determining types of game & equilibriums. It can be interpreted that this game is a situation where players play a microscopic game on the premise of a macro or general tendency of interaction. Therefore, there is a kind of macro-micro link under the situation. In this study, I would like to attack not only the question how macro tendency affects players' rational choices and its consequent outcomes, hopefully but also the question how macro tendency is affected by such microscopic initial condition games.

Ishida, Hiroshi & Miwa, Satoshi (Institute of Social Science, University of Tokyo, Tokyo, Japan 113-0033 [tel: (+81)3-5841-4965; fax: (+81)3-5841-4905; e-mail: ishida@iss.u-tokyo.ac.jp]), **Social Mobility among Late-Industrializing Nations,** *International Sociological Association, Gothenburg, Sweden,*

¶ Social Mobility has been a central concern among sociologists for a long time. Important progress has been made in international collaboration in the comparative study of social mobility since the 1980s. Our study will focus on social mobility among late-industrializing nations, following the footsteps of the CASMIN (Comparative Analysis of Social Mobility in Industrial Nations) project, since the CASMIN project did not include a range of late-industrializing nations. This paper attempts to offer a comparative overview of the pattern of intergenerational class mobility among both industrial & late-industrializing nations. The hypothesis behind our project concerns whether late-industrialization produces distinctive patterns of intergenerational mobility & reproduction. This hypothesis was not entirely supported by the empirical analyses so far because each nation had a particular course of industrialization imbedded in its historical context. Late-industrializing nations do not clearly form a cluster that can be distinguished from early industrializing nations, either in the case of absolute mobility or relative mobility rates. We plot the total mobility (absolute mobility) as well as the uni-diff parameters (relative mobility) by the level of industrialization. We present various log-linear and log-multiplicative models assessing the similarity of the pattern of relative rates, using both the full-association & the Core Social Fluidity model (Erikson & Goldthrope, The Constant Flux, 1992).

Isik, Oguz (Middle East Technical University, Inonu Bulvari, Ankara 06531, Turkey [tel: +90-312-2107262; fax: +90-312-2107265; e-mail: ioguz@metu.edu.tr]), **Class, Religion and Politics in a Late-Modernising Country: The Geography of the Justice and Development Party in Turkey,** *International Sociological Association, Gothenburg, Sweden,*

¶ Justice & Development Party, set up in 2001 by the relatively young and moderate cadres of the Islamist movement of the 1990s, won two consecutive elections in 2002 & 2007. It represented in peculiar ways the new attitude of the Islamist movement to the market economy, human rights & the long-debated EU matter. They managed to gain the support of lower-middle-class state bureaucrats & the unskilled urban poor that were victimized by the waves of globalization & the small & medium sized traders and manufacturers. This paper is an attempt to explain the diverse geographies of the Justice & Development Party in both 2002 and 2007 general elections, in both of which they were victorious. Using in the case of Istanbul the neighbourhood, & in the case of Turkey, the district level results of 2002 & 2007 general elections, & merging these results with a number socio-economic indicators, this paper tries to understand the geography of popular support behind the success of JDP, with reference to the wider changes that took place in Turkish society.

2010S01189

Islam, Md Saidul (Sociology, Nanyang Technological University in Singapore, HSS 05-44, 14 Nanyang Drive, Singapore 637332 [tel: +65 81824184; fax: +65 67946303; e-mail: msaidul@ntu.edu.sg]), **Tipaimukh Dam in India: Environmental Resistance beyond Borders,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Indian government recently resumed construction of the Tipaimukh Dam on the Barak River just one kilometer north of Bangladesh. The construction work was stalled in March 2007 in the face of protests from within & outside of India. A number of experts argue that the completion of the dam in 2012 will virtually dry up the Surma and the Kushiara rivers of Bangladesh, thus choking the north-eastern regions of the country. This controversial dam has therefore generated a massive movement in Bangladesh, India, & in other countries. The movement has taken different shapes starting from simple protest to submitting petition to the United Nations. The paper will explore this single movement to show how environmental resistance against Tipaimukh Dam transcend national borders & took a global & transnational form; who are protesting, why, in what ways, & with what effects.

2010S01190

Iso, Naoki (Centre de sociologie européenne, EHESS, Paris, France, 75270 [tel: 0671433336; e-mail: sd061003@g.hit-u.ac.jp]), **Japanese Society as Diverse and Transnational Society : A Japanese Reading of Norbert Elias and Pierre Bourdieu,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this presentation, I frame Japanese society as diverse and transnational in interpreting Sociology of Norbert Elias & of Pierre Bourdieu. How can we understand Japanese society without falling in the methodological nationalism & the myth of the homogeneous Japanese society? Giving two cases, I propose a theoretical framework to analyze the diverse

& transnational characters of Japanese society. The fist case is a history of Judo, which is considered as very Japanese by the wider public both in Japan & abroad but in fact is not. The second case is on the social positions of transmigrants who are temporarily residing in Japan & of immigrants. This case raises a question on the social stratification research in Japan based on the national survey because it has ignored most of the foreign residents in Japan. These two cases are specific examples but they can be a key to propound a theoretical framework. Examining the cases & combining the theories of Norbert Elias & of Pierre Bourdieu, I make an attempt to construct a theory to frame the Japanese society as diverse & transnational society.

2010S01191

Ito, Kenichi (Faculty of Social and Information Studies, Gunma University, 4-2 Aramaki-Machi, Maebashi, Japan, 371-8510 [tel: +81-(0)27-220-7464; fax: +81-(0)27-220-7464; e-mail: itoken@si.gunma-u.ac.jp]), **The Mobile Internet Use in Japan: Cyber-bullying through Mobile Phones,** *International Sociological Association, Gothenburg, Sweden,*

¶ Cyber-bullying is one of the most remarkable problems of the digital age. In this paper we want to describe current trends of cyber-bullying among Japanese schoolchildren based on the survey our research team exercised on 2008 - 2009 in Gunma & Saitama prefecture. The outstanding property of Japanese cyber-bullying is that it is exercised not through PCs but through mobile phones. In Japan it is quite common among teenagers that they use the internet through their mobile phones, & at the same time, they are exposed to various kinds of net business ads & seduced to spend their time and money for SNSs or on-line games. Accessed not from PCs in their living room but from their mobile phones in their own rooms or on the streets, digital troubles including cyber-bullying, defaming or incitement to some other illegal activities are very difficult to find out for the teachers or the parents in Japan. We want to describe what Japanese teachers or parents suffer from & what Japanese schools or citizens do in order to protect the schoolchildren from these cyber troubles.

2010S01192

Ivanchenko, Antonina (St. Petersburg State University of Service and Economy, St. Petersburg, Russia [e-mail: antonina-bittel@rambler.ru]), **The Challenge of Social Construction of Objects for Ecotourism.,** *International Sociological Association, Gothenburg, Sweden,*

¶ Interest of tourists in eco-tourism promotes, in turn, to interest of local population in the activity directed on improvement and maintenance of favorable ecological conditions. But development of ecotourism can face certain difficulties arising from already-established tourist image of the region. Travel agencies play an important role in shaping perceptions of attractiveness of the region for eco-tourists. Providing their clients with maximum information sufficient to make a decision about buying the tour, they shape the image of the region; serve as a sort of advertising site for it. But often they continue to use stereotypes about the region, which reduces opportunities for development of new forms of tourism. Thus the main research questions are: What factors determine the attractiveness of the region for eco-tourists? What tools are used for social construction of ecotourism objects? Can large cities (megacities) use the development of this type of tourism, both for improving the environmental situation & to provide opportunities for safety recreation for people? The answers to these questions will be developed with reference to development of ecotourism in St. Petersburg & in its suburbs.

2010S01193

Ivanov, Dmitry (St. Petersburg State University [e-mail: dvi1967@gmail.com]), **Transformation after Globalization: Glam-Capitalism and Alter-Capitalism,** *International Sociological Association, Gothenburg, Sweden,*

¶ Globalization has resulted not in the world society but rather in networked enclaves of globality where intensive flows of consumer goods, technologies, money, media-generated images transform capitalism into glam-capitalism being in sharp contrast with social reality outside that much localized globality. Intensive commoditization & capitalization of images has led to overbranding & triviality of the virtualization strategy that has provoked shift of competitive advantages to hypervirtuality of glamour. Being since the 1930s specific life style or aesthetic form, glamour has become now rationality of newest version of capitalism. Glam-capitalism raises when producers in hyper-competitive market place must glamour consumers & when goods/services must be aggressively beautiful to be intensively attractive for targeted groups. Value creation process now is related more to trends, than to brands, not only in traditional fashion industry & show business but also in high-tech and financial industries. Owners & creators of trends compose new status groups a glam-capitalists & glam-professionals, which are core of new middle strata above shrinking traditional middle class. Alternative movements like "copy left," "open source," "creative commons," & "pirates" violating "intellectual" property rights challenge regime of glam-capitalism & represent the authenticity revolt against hypervirtuality of glamour not only in economic domain but also in politics & culture. Reaction of glam-capitalism to alter-social movements, which are reinforcing functionality & competition against imagery & monopolization, is initially oppression & then absorption like making "open source" & "free access" corporate business models, commercialization of torrents, "guerrilla marketing" etc. Creators of trends converging attitudes & patterns of glam-capitalism and alter-social movements are on the move towards alter-capitalism as an "after Baudrillard" regime: capitalization of flow of originals without copies.

2010S01194

Ivanova, Elena (Sociological Institute, Russian Academy of Sciences, 25/14 7th Krasnoarmeyskay, St Petersburg, 190005, Russia [tel: +7 812 323 30 54; fax: +7 812 323 30 54; e-mail: eivanova@spbrc.nw.ru]), **Assessment of State Foundations' Influence on the Advancement of Science In Russia Between 1992 and 2008,** *International Sociological Association, Gothenburg, Sweden,*

¶ Russia's transition to the market started in 1992 with the price liberalization. Competition-based funding of researches through the Russian Foundation for Basic Research (RFBR) became an important part of the national science & technological policy in 1993. Individual scientists or research teams were able to win additional funding for their researches through a competition. The author collected data on all the RFBR's research grants received by scientists in St Petersburg from 1993 to 2008. The analysis of the data made possible to determine the level of the scientists' participation in the new competition mechanism, identify St Petersburg's research specialization & the research activity of individual scientists, organizations & institutional sectors, as well as extent & tempo of emergence of the new scientist leaders who run the grants. The analysis has suggested that since the first years St Petersburg researchers have learned quickly how to deal with the competition-based allocation method of funding, new in Russia. The most active in getting grants are the government sector researchers & doing research in physics & biology. The least extent & a low tempo of emergence of new leaders in charge of grants point to big difficulties in attracting new researcher generations into science.

2010S01195

Ivanova, Elena N. (Ivanova, Elena, Department of Socio-Economic Systems and Social Policy, State University Higher School of Economics, Moscow, Russia, 101000, Moscow, Miasnitskya str, 20 [tel: +7 926 574 85 41; e-mail: Enivanova.do@gmail.com]), **Russian Public Sphere and Professionalization of Internet Journalism,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper discusses the role of public & private spheres in the professionalization of online citizen journalists in Russia. Public sphere has a considerable impact on the professionalization of news and political bloggers as well as facilitates the movement of citizen journalism to consumerist model. But new media have led to the revision of the traditional concepts of the public sphere. Potential ways of the development of professional mechanisms, and the nature of their activities largely depend on the actual state spheres of social interaction. This paper presents the results of a comparative analysis of the most influential criticisms of the current state of public & private spheres & their impact on the re-institutionalization of new media. As the main aspects of analysis are of current state of public sphere, role intellectuals and cyber elites, transparency & total control by means of cloud computing, imitation or veritable discourse, illusion of interaction & communication, expansion of political power public sphere. According to the critical analysis of the actual state of public & private spheres in the Internet, the future of journalism in Russia lies in hybrid models of political recruitment, Public relations & the new model of journalism.

Ivanova, Victoria (Novgorod University, 173003 Veliky Novgorod, Russia [tel: +7 (816 2) 62 06 91; e-mail: vikaULkoenig@mail.ru]), **Approaching Practical Outputs of Sociology of Education,** *International Sociological Association, Gothenburg, Sweden,*

¶ Practical output of sociology of education is important to determine its status inside the specter of educational studies. Unlike in the U.S., it is hardly heard by educators & politicians in Russia. Practical application of sociology of education is viewed in two aspects: social-institutional & political. Institutional aspect refers to macro-level concepts that had been hardly evolved further since Durkheimian & structural-functionalist views. Rethinking the functions of education resulted in a new concept according to which reaching societal & social efficiency of education systems requires a sound correspondence between its functions and organizational & managerial structures. This recognition brought to relevant introductions in organizational structure of university, it also called for developing adequate research tools to monitor the functioning of education in communities, thus focusing on necessary corrections in educational policy in cases of institutional dysfunctions.

Iversen, Clara (The Department of Sociology, Uppsala University, Box 624, 751 26 Uppsala [tel: +46184717846; e-mail: clara.iversen@soc.uu.se]), **Subjects of Evaluation: Negotiating Profession in Evaluation-Interviews about Interventions for Children,** *International Sociological Association, Gothenburg, Sweden,*

¶ Evaluations are increasingly used in the pursuit of evidence-based practice in social work with children. Parallel in time, children's participation & the empowerment of service-users are emphasized. This article explores how these two tendencies are managed by professionals. The focus is the construction of outcome in 35 evaluative interviews with social workers, concerning interventions for children who have experienced domestic violence. The findings suggest that a positive outcome is only explained with reference to children's competence when they are described as willing to participate on the terms of the social worker. In cases where children are described as unwilling to do what the social worker advises, children are described as childish, or as governed by external forces. These findings suggest that evaluative interviews produce children & social workers as having essentially the same interests, despite different wishes. Furthermore, consistency in the intervention seems to overshadow flexible responses to children's wishes.

Iveta, Briska (Riga Stradins University, Tilta 24-k.1-18, LV-1005, Riga, Latvia [tel: +37129208924; e-mail: bri888@inbox.lv]), **Transformation of Environmental Values Discourse. Latvian Case Study,** *International Sociological Association, Gothenburg, Sweden,*

¶ The subject of the paper is transformation of environmental values discourse in Latvia with the main focus on transformations that took place over the last twenty years. The paper depicts three spheres of environmental values discourse–environmental values in the traditional Latvian culture, transformation of environmental values in comparison with other values, the role of environmental values in the formation of civil society. First, the paper emphasises that environmental values are deep-rooted in the traditional Latvian culture. The Latvians have emotional attitudes to environment, & their environmental values are well established in folklore. Further, the paper compares the transformations of environmental & other values in Latvia on the basis of the World Values Survey data. Finally, the paper analyses the role of environmental values in the formation of civil society with emphasis on environmental values as a mobilising factor for mass social & political activities. In this aspect, the beginning of national awakening may be regarded, initially, as movement for environmental values rather than independence.

Iwai, Hachiro (Kyoto University, Yoshida-honmachi, Kyoto, 606-8501 [tel: 075-753-3068; e-mail: akcef829@tcn.zaq.ne.jp]), **Changing Patterns of the Course of Women's Lives in Japan's Lost Decade,** *International Sociological Association, Gothenburg, Sweden,*

¶ In Japan, the period from the early 1990s to the early 2000s is known as the "lost" decade. It is said that the life patterns dominant in the postwar Japanese society began to collapse in the decade. During that period, women born in the early 1970s, who belong to the second generation of the postwar Baby Boomers, completed their education & entered into the labor market. Using work history data of Social Stratification & Mobility Survey in 2005, this paper clarifies how Japanese women's life course has changed from the cohort born in 1970-74. Although M-shaped pattern of women's labor force participation still characterizes women's life course, the work-life patterns in their twenties & early thirties have changed from the 1970-74 birth cohort. Fulltime employment is declining & the number of part-time or irregular employees is growing. Mobility between workplaces becomes increasingly frequent. Few women follow the transition pattern form clerical workers to homemakers. The linkage between university education & work career for women has strengthened. Using the graphic presentation, this paper shows the differentiation of women's life course in Japan. Based on the empirical results, this paper also discusses changes in the Japanese welfare regime characterized as family-oriented.

Iwai, Noriko (Faculty of Business Administration, Osaka University of Commerce, Higashiosaka, Osaka, Japan, 577-8505 [tel: 81-6-6758-6013; fax: 81-6-6785-6011; e-mail: n-iwai@tcn.zaq.ne.jp]), **Housework in Japan: In Comparison with Taiwan, Korea, and China based on the EASS 2006 Data,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper, I examined frequency of housework done by Japanese husband & wife & factors affecting them in comparison with South Korea, Taiwan, & China with national samples. Work situations of wives & husbands in these societies were especially focused & whether factors identified by previous studies are universal or culture specific is examined. The main results are :1) Japanese husbands do housework far less than Korean, Taiwanese, and Chinese; 2) In China both frequency & proportion of husbands' housework are the highest among four societies; 3) Some factors are influential across societies, while other factors are society-specific; some factors are influential across three kinds of housework, while others are housework-specific; 4) Husband's housework frequency is affected by wife's working hours, not wife's income (time availability), but his support is strongly influenced by his own income (except for Japan), is hindered by the presence of alternative Resource (mother), & by his working hours; 5) Wife's housework performance is strongly linked to her own employment condition & family structure, but unrelated to her husband's condition; 6) The longer a husband works, the lower his proportion of housework is; the longer a wife works, the higher the husband's proportion of housework is, except for China.

Izadi, Samad & Ghorbani, Ghahraman Raziyeh (Education/Mazandaran University, Babolsar,Iran,011252 [tel: 0098 112534 2682; fax: 0098 112534 2878; e-mail: s.izadi@umz.ac.ir]), **A Survey the Role of Hidden Curriculum in the Formation of Attitudes Towards Authority, National Identity and Globalization(Case Study: Secondary School Students),** *International Sociological Association, Gothenburg, Sweden,*

¶ This research is based on the descriptive study of the structure of social relations in Mazandaran's high school in 2007 from the student's viewpoint & educational staff. The aims of this research are: to identify the role of the social structure in making student's attitude to authority, role of high school in students attention globalization & finally the recognition of the role of hidden curriculum in strengthening student's national identity. In this present research had been used from descriptive method, & also it has been done among 384 samples of students and 377 educational staff. The research's tools are two types of questionnaires for students & staff that have been used after determining their validity & reliability. The results of the research is achieved by SPSS software & X2 test. Some of the results are: The students (more than the staff) believe that the structure of the existing social relations in high school have an effective role on making student's attitude to majesty. About half of the students & staff believe that role of hidden curriculum of schools is high in strengthening national identity. The students (nearly more than the staff) believe that the hidden curriculum have an effective role on student's globalization. Key words: The Structure of the Social Relations

Jablonska, Barbara (Jagiellonian University, Krakow, Poland [tel: +48-12-422-10-33; e-mail: b.jablonska@uj.edu.pl]), **Political Communication as a Part of Deliberative Democracy or Symbolic Power?,** *International Sociological Association, Gothenburg, Sweden,*

¶ In my paper, I will reflect on the problem of political communication from the critical perspective (CDA a critical discourse analysis), taking into consideration the role of symbolic elites in the creation of political discourse. In particular, I will concentrate on the relation between discourse, knowledge & power, using theoretical frames proposed by two French authors: Michel Foucault & Pierre Bourdieu, & on the problem of deliberative democracy & its conditions in Habermasian meaning (postulates of public sphere functioning, such as its openness & accessibility,

symmetry of participants' position, strategies of argumentation, validity claims used in rational debates, etc). The fundamental problems considered in my presentation are: a) Is political knowledge of symbolic elites an element of deliberative democracy or symbolic power? (How politicians use their knowledge to realize political goals within public sphere?) b) What is the role of citizens in the process of political communication? (active participation or passive cognitive participation) c) What is the role of media in the political communication (media as a gatekeeper or a platform for rational debate)? In conclusion, I will discuss the fundamental problems of the public sphere functioning & the role of its elements in different conceptions of public sphere, such as representative model (repräsentative Öffentlichkeit), ideal model (autochtone Öffentlichkeit) and media model of public sphere in Winfried Schulz meaning, taking into consideration chosen examples of Polish & European political debates.

2010S01203

Jackson, Pamela Irving & Doerschler, Peter (Department of Sociology, Rhode Island College, Providence, RI 02908 United States [tel: 401-456-8734; fax: 401-456-8665; e-mail: Pjackson@ric.edu]), **Benchmarking Muslim Integration in Europe through the European Community Statistics Initiative: Implications for Criminal Justice Policymaking,** *International Sociological Association, Gothenburg, Sweden,*

¶ The public image of Muslims as outsiders threatening to the cultural and existential security of European states is supported by the assumption that they deliberately fail to integrate, choosing instead to live in parallel societies within the host nations. We examine this assumption using available data on Muslim integration in eight key areas of life delineated by the Council of Europe (2003: 7) & put forward by the European Parliament (2007: 139) as important in benchmarking immigrant integration: employment, housing, health care, nutrition, education, information, culture, and basic public functions (which include equality, anti-discrimination & self-organization). Incendiary problems, such as the tension between Muslim youth & the police, & the overlapping inequalities that lead to violent crime, can be addressed through tracking & improvement of the integration of Muslim minority groups. Despite its potential for minority inclusion & crime reduction, data on the integration of Muslims is not collected in some European states, including Germany and France. Legislative & constitutional barriers are cited by national policy-makers as preventing official data gathering on the religion of citizens. While European fact-finding agencies such as the European Monitoring Centre on Racism & Xenophobia (http://fra.europea.eu) have urged collection of anonymous data relevant to the social situation of Muslim communities, even these study groups have had to rely on "proxy" data based on nationality or ethnicity (cf. EUMC, 2006, Muslims in the European Union.). The inequality of Muslims in key areas of integration, including treatment by criminal justice agencies, can be expected to engender the religious minority's profound frustration in light of the deliberate role played by European states in the well-being of residents (cf. Haller, 2002; Blau & Blau 1982; Blau, 1977). This paper examines Muslim integration in Germany, France, the Netherlands & the United Kingdom, states with an instructive range of alternative relationships between religion & the state as well as strategies for coordinating individuals' ethnic and state identities. Using the European Parliament's benchmarking guidelines, & relying where necessary on surveys such as EU-Midas 2008/9 & other non-official data, we assess the implications of the results for European Union minority protection initiatives, especially those relating to criminal justice processes and policy-making.

Jackson, Stewart M (Government & International Relations, University of Sydney, Sydney, NSW, Australia 2006 [tel: +61 419 965 068; e-mail: stewart.jackson@sydney.edu.au]), **Organizing the Australian Greens: Comparing Party Organizational Activists and Staff,** *International Sociological Association, Gothenburg, Sweden,*

¶ In 2007 I undertook a survey of Australian Greens organizational activists (defined as members occupying positions across the party), & then following completion of the survey conducted interviews with party & MP staff members. This involved constructing a survey instrument for use with organizational activists within the Australian Greens, modeled on previous instruments used with Green Party members (Rudig 1990, Bale 2003, Vromen 2005), with the interview questions derived from (but not exclusive to) the questionnaire. The rationale for the two groups is that they are key actors within the organizational development of the Australian Greens. The results show a relative correlation between the attitudes of staff & organizational activists on issues & attitudes towards joining & maintaining activity within the party. Staff did note an acute awareness of the role and position they played in respect of policy formulation and information flows. This was manifest in discussions regarding policy development & leadership of the party, as was a divergence in the interpretation & of leaders & leadership between party and MP staff. This divergence was mirrored amongst organizational activists, suggesting that key tensions within the party are reflected within these two groups.

Jacobsen, Jens (Norwegian School of Hotel Management, University of Stavanger, NO 4036 Stavanger, Norway [fax: +47 22609200; e-mail: jens.s.jacobsen@uis.no]), **Tourists or Residents? Long-term Visitors in Mediterranean Spain,** *International Sociological Association, Gothenburg, Sweden,*

¶ Various international leisure mobilities & lifestyle & retirement relocations are increasingly central features of contemporary European life, the mass influx to the Mediterranean littoral of Spain being one of the most salient illustrations of such phenomena. Certain parts of such flows of people are related to vanishing distance & advances of internationalisation of societies in general, where tourism & other long-distance mobilities are not only an outcome but also a crucial catalyst. Based on fieldwork & surveys in the international and consolidated holidaymaking context of Costa Blanca (Spain), this paper examines long-term visits in this area & how international residential tourists & similar long-term foreign arrivals adapt. While previous studies of foreigners' long-term stays in Mediterranean Spain have concentrated on retirees & persons with health problems & mainly also Anglophone arrivals, the present paper concentrates on all kinds of Norwegian long-term visitors, among whom there are fewer monolinguals & a considerable proportion who have adequate command of the Spanish language. The paper also discusses the assumingly blurring precincts between home and away & between holidaymakers & residents in this tourism and holidaymaking context, which might be seen as examples of both globalisation & glocalisation.

Jacobsson, Kerstin & Garsten, Christina (Södertörn University, 141 89 Huddinge, Sweden [tel: +46 8 608 41 34; e-mail: kerstin.jacobsson@sh.se]), **Empowerment or Disempowerment? Practices of Detecting and Governing 'Work Ability' and 'Employability' in Swedish Public Employment Services,** *International Sociological Association, Gothenburg, Sweden,*

¶ Employability has gained salience as a policy category the last decades. Public authorities & education institutions as well as enterprises & trade unions perceive as their task to support the employability of individuals, by in various ways equipping them for a dynamic & competitive labour market. What happens with individuals who, for various reasons, have difficulties in fulfilling the contemporary labour market ideals? In this paper, we study the work of the Public Employment Services in Sweden in relation to people who have turned out to be difficult to place or even non-employable. Our attention is specifically on the practices involved in detecting & governing their "work ability" and "employability." The paper identifies & critically analyzes the classificatory schemes & governance technologies in use in this work, as well as effects on clients' subjectivity (where the individual is taught to see him or herself through the evaluative template of the agency. Drawing on a Foucauldian framework, we give special attention to practices of normalcy & normalization, and we show the tensions involved in the classifications as well as the practices, between empowerment on the one hand & disempowerment, passivity & disciplining on the other.

Jae-Kyoung, Lee (Department of Sociology, Korea University, Korea Univ., Anam-dong 5-ga, Seongbuk-gu, Seoul, Korea, 136-701 [e-mail: tomboy0930@gmail.com]), **A Study on Movement of Civil Legislation and Political Process in Governance,** *International Sociological Association, Gothenburg, Sweden,*

¶ Law & social movement are very important resources in social change. However, they are different in actor; for example, law is only made by Government, the other side social movements' act by civilian or NGOs. These two resources-law & social movement-are very basic elements in Society, but in these two area, they have different actor & eventually different point of view. These occurs social struggle as an inevitable consequences. In Korea, there was no institutional alternative because of military regime for several years. So, a social movement was only option in order to overthrow the dictatorship. That was important to change the Korea from military regime to democracy. In this situation, between Government and civil society relationship was conflict & opposition. However

after military regime, they achieved democratic regime & they wanted constitutionalism. NGOs were effort to participate in public policy, but it was not enough with social movements. They needed institutional participation, though the law was almost dead or didn't exist. That is attracted civilian's attention; bring necessity about movements of civil legislation. It is very unique case in Korea because it use institutional & non-institutional methods together & in this progress appear Governance. In this paper, we need to focus about how political progress of governance is appearing in these movements.

Jaeger, Mads M. (Zentrum Gender Studies, Universität Basel, Steinengraben 5, CH-4051 Basel [tel: xx41-61-2670873; fax: xx41-61-2670874; e-mail: ulle.jaeger@unibas.ch]), **Mentoring at Swiss Universities and the Paradox of Discrimination: Theoretical and Political Implications of an Empirical Analysis,** *International Sociological Association, Gothenburg, Sweden,*

¶ Mentoring for women was introduced at Swiss Universities under the Federal Programme for Gender Equality in 2000. The positive effects on the individual participants have been described in several evaluations. The structural impact of mentoring, however, is rarely taken into account. This was the starting point of a project commissioned by the Equal Opportunities Office of Basel University. Two mentoring programmes were analysed with regard to their structural impact. I conducted expert interviews & interviews with a selection of participants. Furthermore, a questionnaire was sent to all professors of Basel University. Based on a grounded theory approach, three types of structural effects were differentiated: 1. long-term establishment of mentoring in university institutions, 2. awareness of gender-specific career questions within the programmes, 3. changes of career rules in the academic field. A rather unexpected additional result of the study was that many of the participating mentors & a lot of mentees hold the opinion that women are no longer discriminated in academia. My data turned out to be yet another documentation of this so-called paradox of discrimination. The individual experiences of the participants in my study & the results of structural analyses of gender relations & inequality the academic field are contradictory. Generally, this contradiction is interpreted as evidence of "false consciousness." Instead, I would like to suggest that they are evidence of a change in current gender relations. My hypothesis is that this paradoxical relation between the individual & the structural is a specific feature of the current state of gender relations in academia.

Jaeger, Mads Meir (Danish School of Education, Aarhus University, Tuborgvej 164, 2400 Copenhagen NV [tel: 0045 30237882; fax: 0045 88889725; e-mail: mmj@dpu.dk]), **Is There A Causal Effect of Cultural Capital on Academic Achievement? New Evidence from Combined Sibling and Panel Data,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper seeks to estimate the causal effect of cultural capital on academic achievement. I analyze data which includes information on cultural capital & academic achievement for multiple siblings from the same family & for the same siblings over time. The richness of the data means that I can address the problem of omitted variable bias which has led to too optimistic estimates of the effect of cultural capital on educational success in previous research. I estimate models which account for both family and individual fixed effects & report three findings: (1) cultural capital (measured by indicators of cultural participation, reading climate, & extracurricular activities) has a positive causal effect on children's reading & math test scores; (2) the causal effect of cultural capital is much smaller than previously reported; & (3) the effect of cultural capital varies to some extent by children's sex & race.

Jafari Siavashani, Fatemeh, Zarei, Ali & Kamani, Somayeh (Azad University, Tehran Central Branch, Tehran, Iran, [tel: 00982122714068; e-mail: drULalizarei@yahoo.com]), **The Effect of Socioeconomic Condition on Status of Physical Activities in Leisure Time of Girls of Low-income and High-income in Tehran,** *International Sociological Association, Gothenburg, Sweden,*

¶ The study aims at comparing the place of physical activities in leisure time of young girls aged 20 to 25 of low-income and high-income classes of Tehran concerning their socioeconomic status. The data collected from 384 young girls aged 20 to 25. The findings indicated that although physical activities scored 3 & 7 among girls of low-incomes & high-incomes, respectively, girls of high-incomes Families spend more time on physical activities than those belong to low-incomes. Girls of low-income avoid physical activities due to economic status of their families and unemployment & about half of them(forty eight percent) claimed that their financial status is effective on their participation in physical activities. However, there is no difference among girls of low-incomes & high-incomes concerning participation in physical activities. The results show that there is no meaningful difference among manner of spending leisure time by girls of low-income & high-income classes, their economic status, & the effect of income of families on choosing type of physical activity. Social level is not effective on manner of spending leisure time as well. However, there is a meaningful difference between manner of spending leisure time by girls of low-income & high-income families & role of physical activity in spending their leisure time.

Jaime, Pedro (Universidade de São Paulo and Université Lumière Lyon 2 [e-mail: pedrojaime@uol.com.br]), **Recycling Discourses About "Race": Socio-Political Agenda, Business Transnational Culture and Diversity Management in Brazil,** *International Sociological Association, Gothenburg, Sweden,*

¶ The article presents a socio-anthropological study of racism and diversity conducted in São Paulo, Brazil. It starts from the premise that capitalism has a capacity to formulate & reformulate justification schemes recycling the anti-capitalist critique. Such capacity is in the center of the business transnational culture that permeate the discourse & the practices of multinational corporations. One of the characteristics of this culture is the search for translating, in terms of managerial technology, the contemporaneous social & political agenda. Two kinds of materials were used in the research: a) a selection of the bibliographical production about diversity management; b) empirical data constructed in the ethnographical fieldwork a participant observation in a transnational company of the financial sector and interviews with representatives of distinct agents who brought up the entrepreneurial diversity issue to the public sphere. The paper has three objects: 1) to map the discourses on diversity management produced by business schools, specially the American ones; 2) to interpret its reception in Brazil, noticeably among management professors & consultants; 3) to analyze its entry into the Brazilian entrepreneurial world. The results point to the advances and limits of diversity management towards the democratizing moves in both organizational & societal levels.

2010S01212

Jaime-Castillo, Antonio M. (University of Granada, Granada, Spain, 18071 [tel: +34 958 244140; e-mail: amjaime@ugr.es]), **Group-Identity and Preferences for Redistribution,** *International Sociological Association, Gothenburg, Sweden,*

¶ The classical economic approach to redistribution states that preferences for redistributive policies depend almost entirely on the position on the income ladder. However, several recent studies have shown that group-identities shape preferences for redistribution. At the aggregate level, it has been found that redistribution has to be lower in highly fragmented societies because of groups' resistance to distribute in favor of the other groups. At the individual level, the notion of "group loyalty" implies that individual support for welfare spending will increase as the share of recipients from the same group rises & vice versa. In this paper I propose a model to analyze how group-identities translate into preferences for redistributive preferences, taking into account the identity to which an individual attach himself & the saliency of this identity. Specifically, I focus on the role of national identities. Furthermore, I test empirically the predictions of the model using data from the European Social Survey. Multilevel techniques have been used to test the impact of contextual variables (such as national fragmentation) as well as individual identities on preferences for redistribution. Empirical results basically confirm theoretical predictions. Individuals who attach to national identities are less in favor of redistribution, but only when this dimension of identity is highly salient. Interestingly also, negative feelings about other nationalities have a strong impact over preferences for redistribution. It is shown that the impact of identity over preferences for redistribution is stronger when identities are defined in a negative way (against other groups). Results lead to conclude that the redistributive conflict is also an identity conflict.

Jaimes, Ramiro (Instituto de Investigaciones Históricas, Universidad Autónoma de Baja California, Tijuana, Baja California, 22390 [tel: +(664)682-16-96; fax: +(664)682-16-96; e-mail: rjaimesm@yahoo.com]), **Secularization and Neo-Pentecostal Paradox in Mexico,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper revisits some of the theoretical & methodological considerations that are used to explain religious change in Mexico and Latin America, specifically about the so-called Neo-Pentecostalism. First, some assumptions related to secularization's theory (predominance of anomie as a fundamental factor of religious affiliation's change, misuse of the term "Historical Protestantism" as an analytic tool, & the centrality of a "pentecostalization" process on an entirely Mexican religious field). In this sense, this paper proposes to reformulate Bourdieu's religious field as a conceptual resource (considering a wider range of relations between specialists & lay people in addition to domain, & incorporating ecclesiastical & regional particularities that are important to explain the patterns of religious change). Second, about methodological implications, it is necessary to pursue multidisciplinary approaches, drawing on disciplines such as history & geography. With this in mind, this research started from a different perspective. Neo-Pentecostals are not Pentecostalism's extension on middle classes, but a similar religious movement, emergent in the religious marketplace of the United States, that has impacted both the religious field and evangelical denominations in Mexico.

Jain, Rashmi (Department of Sociology, University of Rajasthan,, Jaipur, Rajasthan, India,302055 [tel: 91-141-2361759; fax: 91-141-5105051; e-mail: rushme14@yahoo.com]), **Resistance to Migration–A Cause for Concern,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Human Development Report states that "being able to decide where to live is a key element of human freedom." This human freedom is guaranteed by the Indian constitution where in it allows for free movement of people in any part of the country. This constitutional guarantee is challenged time & again by the host population. The North eastern sisters have always raised a voice against the migrant population whether it is the poor Bangladeshi or the more prosperous Marwaris. Recently India has been witness to protests against the migrants in the state of Maharashtra. Trends in migration show that largely it is poor & unskilled which migrate in search of better opportunities. India is a country with varying levels of development. A large number of migrants come from BIMARU states which have lower economic indicators. Internal migration is seen as major mechanism for redistribution of resources from richer to poorer localities & a vital means of raising the incomes of poor. After 62 years of independence India is witnessing 2 forms of internal migration, one of poor & unskilled & the other of highly skilled. The movement of both these migrants is towards resource rich & opportunity rich areas whether it is in the country or outside. A large number of skilled manpower migrates to the greener shores of western world but there too they face resistance by the local population. The recent recession in the world economy saw a large number of Indian software engineers returning to the homeland. This paper attempts to examine the issue of resistance & equity in a socio-legal perspective.

Jalal, Safipour, Schopflocher, Donald, Higginbottom, Gina & Emami, Azita (Department of Neurobiology, Caring Sciences and Society; Karolinska Institutet, Alfred Nobels alle 23, 23 300, 141 83, Huddinge, Stckholm-Sweden [tel: +46 (0)8 52483775; e-mail: jalal.safipour@ki.se]), **Health Related-Social Alienation in Adolescents: Finding From Study among Swedish High School Students,** *International Sociological Association, Gothenburg, Sweden,*

¶ In health research also some of the variation of social alienation identified as a risk factor on negative health outcomes, and damaging health behaviors. This study aimed to clarify the relationship between feeling alienation & self reported health. Method: For measuring self reported health Nottingham health profile (NHP) has been used. NHP includes 38 item for measuring six aspect of health: physical mobility, pain, sleep, social isolation, emotional reaction & energy level. For measuring feeling of social alienation Jessor & Jessor alienation scale has been used. The sample of the study was 446 high school students in Stockholm aged 15 to 19. Result: The relationship between feeling of social alienation & self reported health was analyzed by structural equation modeling. The Chi-square was 605,571 (df=15) and probability .000. We found feeling of social alienation more related to isolation, emotional reaction & energy level. We also found close relationship between some aspects of mental health with sense of alienation. Those who reported more feeling of social alienation reported also more problems in health in term of emotional reaction, energy level & social isolation. The pathway analysis also showed the same results.

Jamal, Tazim & Shandley, Robert (Dept. of Recreation, Park and Tourism, Texas A&M University, TAMU 2261, College Station, Texas, 77843-2261 [tel: +1 979 845-6454; fax:; e-mail: tjamal@tamu.edu]), **Film, Journeys, and Ethnic Turks in Germany: Synergistic Methodologies,** *International Sociological Association, Gothenburg, Sweden,*

¶ Our paper addresses issues of cultural identification, "home" and belonging, through a joint excavation of journeys in film & the lived world of ethnic Turks in Germany (the largest minority group), from sub-national niches to transnational spaces over the past five decades (since the "guest worker" (Gastarbeiter) migrations in the 1960s. A rich compilation of films on this migrant population, the emergence of ethnic Turkish filmmakers, the proximity of Germany to Turkey, the increasingly easy travel possibilities, & the general fluidity of movement back & forth, provide for a careful excavation of journeys & "journeying" in film & in the lived world of Turks residing in Germany. We examine in these virtual & physical realms the "in-between" spaces of the first & second generation (children not born in Germany) & the "tourism" oriented journeys of the new (born in Germany) third generation. Journeys "home" in the physical (lived) world & in film provide rich insights into cultural identification & dynamic expressions of "inter-generational homage" by the ethnic Turks & diasporic ethnic filmmakers in Germany. This joint approach thus offers a synergistic methodology to studying the intersections of film, tourism, diaspora and migrations.

James, Côté (Department of Sociology, The University of Western Ontario, London, Ontario, Canada N6A 5C2 [tel: (519) 661-2111; fax: (519) 661-3200; e-mail: cote@uwo.ca]), **Technology and Academic Engagement,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper evaluates claims regarding the need for revolutionary changes in pedagogical approaches for a new generation of "digital natives" with 'Web2.0' technologies (e.g., Tapscott, 2008). These claims are evaluated with respect to how academic disengagement might be ameliorated.

2010S01218

Janalizadeh, Choobbasti Heydar, Babazadeh Bae, Ali & Ebrahimi, Samane (University of Mazandaran, Babolsar, Iran, Main Campus of the University of Mazandaran, Social Sciences Department [tel: 0098 (0) 1125342655; fax: 0098 (0) 1125342602; e-mail: hjc@umz.ac.ir]), **Tendency toward Superstition: A Sociological Inquiry,** *International Sociological Association, Gothenburg, Sweden,*

¶ Sociological study of superstition is scant. Utilizing a sociological approach, the basic aim of this article is to investigate the Universities students' tendency toward superstition. In this survey, among 14548 of the Universities students (Academic Year: 2008-2009), based on Morgan Table & using proportional stratified sampling, 375 people were chosen. This research data was collected by a constructed questionnaire & analyzed through SPSS. Some significant findings of the survey are: 1. Reliability Coefficient of the superstition scale is high (i! > .80). 2. Less than a quarter of the students have been superstitious (about %23). 3. There is a significant difference between the rate of Universities students' tendency toward superstition based on their gender and degree in university education, but not on their university and field affiliation. 4. Applying regression analysis revealed that about 18 percent of the changes of dependent variable (the rate of the Universities students' tendency toward superstition) can be explained by three independent variables: religiousness rate, gender & education level (R2 = .18). 5. And more importantly, among the three variables, their religiousness rate has been the most important variable influentially.

Jann, Ben, Jerke, Julia & Krumpal, Ivar (Department of Sociology, ETH Zurich, 8092 Zürich, Switzerland [e-mail: ben.jann@soz.gess.ethz.ch]), **Asking Sensitive Questions Using the Crosswise Model: Some Experimental Results,** *International Sociological Association, Gothenburg, Sweden,*

¶ Yu, Tian, & Tang (2008, Metrika 67: 251-263) proposed two new techniques for asking questions on sensitive topics in population surveys: the triangular model & the crosswise model. The two new models can be used as alternatives to the well known randomized response technique (RRT) & are meant to overcome some of the drawbacks of the RRT. Although Yu et al. provide a promising analysis of the theoretical properties of the

proposed models, it remains unclear how the procedures will perform in empirical practice. Apparently, Yu et al. did not test their proposals in any real applications. We will therefore provide results from an experimental survey in which one of the techniques, the crosswise model, was implemented & compared to direct questioning. To our knowledge, this is the first empirical study in which the crosswise technique was employed. We focus on the crosswise model in this study because it seems better suited to overcome the 'self-protective no' bias known from the RRT than the triangular model. Our survey was conducted in class-room settings with Swiss and German university students as subjects, using a pen-and-pencil questionnaire on plagiarism in student papers.

Jansen, Zanetta L. (University of South Africa, Pretoria, South Africa, 0003 [tel: +27 12 4296322; fax: +27 12 4296491; e-mail: JANSEZL@unisa.ac.za]), **The "Postmodern World" of New Knowledge Constructs and the Information Society,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper reflects on the evolution of modern(-ity) to post modern society. It addresses the emergence of new knowledge constructs in, what Manuel Castell's previously described as, the information society. It reflects on how the interfacing of new information and communications technology with human societies is transforming the acquisition & development of new knowledge, who may access this knowledge, & who has no access to this knowledge. It presents the NEPAD (New Partnership for Africa's Development) E-School program as a case study of addressing some educational needs in Africa. It asserts that the postmodern society is post-industrial, information-and service-based.

2010S01221

Japp, Klaus P. (Faculty of Sociology, University of Bielefeld, PO Box 100131, 33501 Bielefeld, Germany [tel: ++49 521 106 3867; e-mail: klaus.japp@uni-bielefeld.de]), **Risk and Systems Theory,** *International Sociological Association, Gothenburg, Sweden,*

¶ Systems theory regards risk as a constitutive feature of modern society instead of attributing it to new technologies, globalisation or individualisation. Modernity is characterized by contingency and therefore there is a constant need for decisions in modern society. Systems theory argues that risk is not a feature objectively associated with certain objects or developments but a special mode of observation. When observing something as risk one attributes possible (often negative) future effects to a decision and not to external causes. Systems theory thus distinguishes between self-attributed risks and externally attributed dangers. Both forms of attribution are ways to observe the irreducible uncertainty of the future. This theoretical perspective implies the impossibility of safety. Furthermore, it points to the social consequences of differences in attribution. Self-attribution as risk also means that one assumes responsibility for possible negative outcomes. In contrast, external attribution may involve blaming others for those results. In risk research, this distinction is particularly relevant for explaining conflicts between decision-makers and those affected by the decisions, but not involved in the decision process. Whereas the former deal with risks, the latter regard themselves as exposed to dangers caused by the decision-makers and tend to oppose the decisions. As the conflict is rooted in different modes of observations it cannot be overcome by referring to expert opinions or other supposedly rational arguments. This theoretical framework does not only allow to link the analysis of classical topics of risk research with a general theory of modern society, but also to extend the concept of risk to various situations that involve decisions, e.g. international conflicts or the 'war on terror'. The paper will present the main aspects of the theoretical approach and illustrate its potential by referring to the question whether "suicide missions" within religious terrorism imply risks or interpretive dramas in order to avoid risks. The point may be seen in an understanding of religiously framed "suicide missions" by a sociological theory of risk. Psychological theories of irrational behaviour or sociological theories of relative deprivation could be made unnecessary.

Jardim, Gabriel de Sena & D'Ávila Neto, Maria Inácia (Psychology Institute/Federal University of Rio de Janeiro, Av. Pasteur, 250 - Rio de Janeiro - Brazil - Zip Code 22290-240 [tel: +55 21 2225-7091; e-mail: gabrielsenajardim@yahoo.com.br]), **Women, Water and Migration: Vulnerable Territories in Development Projects,** *International Sociological Association, Gothenburg, Sweden,*

¶ Although its close contact with water, women are not contemplated as protagonists of development. Their conditions of vulnerability are reinforced by roles carried traditionally, preventing their mobility. Almost always associated with climate change & the scarcity of vital natural resources, female migrations have increased in several regions of the planet, which is also observed in Brazil. This paper aims to discuss this phenomenon, in relation to women, on environmental issues, & in particular, management of resources such as water & its significance in everyday life and cultural imagery. This research is justified on the study of the vulnerability of local & global projects, in face of the feminization of migration, as well as the importance of gender mainstreaming water policies for development ("Gender & Water", UNDP, 2006). This work is inserted in the contemporary debate of women on struggle for recognition, discussed by social justice theoreticians (Fraser, 2001; Honneth, 2003), feminism (D´avila Neto, 2004, 2005; Butler, 2007; Braidotti, 2000, 2004), cultural studies (Said, 2007; Hall, 2003), Post-Colonialism (Gilroy, 2001; Santos, 2006) & subaltern studies (Spivak, 2007).

Jasinska-Kania, Aleksandra & Wloch, Renata (Institute of Sociology, Warsaw University, Warsaw, Poland, 00-927 [tel: + 48 22 55 20 885; fax: +48 22 827 85 99; e-mail: aleksandra.kania@uw.edu.pl]), **Alternative Visions of the Roads to Democratic Global Governance,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper considers two different approaches to the problem of democratizing the global system. The first one adopts the perspective of individual actors who could serve as leaders of the democratic reorganization of the system. It looks for values contributing to the development of a democratic global identity. It is based on an analysis of findings from cross-national surveys (WVS, EVS). The second approach is guided by an institutional perspective. It identifies the agency of national states and explores strategies of small & medium sized national states (e.g. Poland). These states are striving to equalize the redistribution of resources & influence within international institutions during the global economic crisis. We shall discuss how these approaches may be combined & recognized as complementary.

Javadi Yeganeh, Mohammad Reza (Depatment of sociology, University of Tehran, Tehran, Iran [tel: 009821 88012221; fax: 009821 88012221; e-mail: myeganeh@ut.ac.ir]), **Non-modern Modernity; The Analysis of Successive Periods of Modernity Acceptance and Rejection in Iran in the Recent Two Centuries,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recent changes of the Iranian society are not detached from its history in two recent centuries. It is possible to understand them based on a scheme of the historical sociology of the Iranian social movements & Iranian development periods. Since the time Iran has been pursuing modernity (after was defeated in the Iran-Russia wars in 1828), it has never been able to adopt a stable & a transparent approach towards modernity. In short periods of time, serious & multifaceted efforts have been made to achieve modernity & modernization, but after that, with the expansion of the scope of modernity in different dimensions of the society and changes in the image of the society, gradually certain disagreement have been started to emerge in a dialectic process towards that in traditional & conservative parts of the society. Soon after, with the culmination of conflict between the above-mentioned two sectors, the general atmosphere of the society has gradually become more radical & both modernists & conservatives have placed more emphasize on extreme points. This very issue has placed the Iranian society on a junction in which the society was forced to choose one of the two ways. The historical experience of the Iranian society shows that the Iranian society in all its periods has always chosen tradition & religion amid these dilemmas & has ignored the acquisition of modernity temporarily (which in its radical form has asked for the removal of tradition) & then (after one decade, approximately) has made a new effort & experience another period towards the acquisition of modernity. This article is an attempt to show these dilemmas & its dimensions & features in two centuries of the Iranian history. It also tries to find points in which falling into the trap of dilemmas have been avoided consciously. Finally, comparing these two dimensions, a new scheme of historical changes of the Iranian society will be presented.

Javidan, Pantea (London School of Economics and Political Science, Houghton Street, London WC2A 2AE [tel: +44 00 (0)20 7405 7686; e-mail: pantea.javidan@gmail.com]), **The Social and Legal Construction of the Child Object and the Commercial-**

Sexual Exploitation of Children, *International Sociological Association, Gothenburg, Sweden,*

¶ The purpose of this paper is to devise a conceptual & theoretical framework that will be most useful in analyzing the commercial sexual exploitation of children (CSEC), including what is commonly referred to as child prostitution or child sex trafficking. It compares the phenomenon of CSEC in the United States & United Kingdom, using examples of how children involved in prostitution are characterized & treated. The primary concern is the role of social & legal practice in constructing a dominant ideology of childhood through legislation & policy related to CSEC in each country, & to explore the extent to which treatment in the US and UK agree or disagree. The aim of this approach is to sensitize future research to a child-centered perspective on CSEC, meaning here one that integrates the identity of those who fall beneath the age of majority into broader discourses regarding the re/production of inequality along other lines of identity; to move research away from circular socio-legal reasoning that justifies the subordination of children based on incoherent & contradictory presumptions of their traits & lacks, as often demonstrated in CSEC legislation & policy; & move research toward approaches that facilitate the use of law as a tool for social justice in the context of human trafficking.

Jaworsky, B. Nadya & Drori, Israel (Yale University, New Haven, CT 06511 [tel: 617-320-2968; fax:; e-mail: bernadette.jaworsky@yale.edu]), **'Terrorists at the Gates'? How Irregular Migrants Cope with Discourses of Danger,** *International Sociological Association, Gothenburg, Sweden,*

¶ Many migrant-receiving countries echo a common public discourse about the 'dark side' of migration–the idea that immigrants somehow represent an "extreme threat." It is not simply that they are potential terrorists–in reality, they are also imagined as violent criminals, murderers & invaders. Such narratives tap into a polity's primordial fears & foster the social, political, and cultural exclusion of foreign-born Others–creating an atmosphere of fear & insecurity among migrant communities. Our study aims at understanding these "discourses of danger" & migrants' responses to them. We explore how individuals and Groups–including activists & advocates–cope with the increasingly pervasive portrayal of immigrants as dangerous Others. How do they frame & construct claims for social & political acceptance? What sorts of survival strategies do they employ? Utilizing a cultural sociological lens, we find two primary dimensions of meaning making underlying these processes–"emotive politics" & "family ties." Through a multi-scalar, qualitative analysis of two communities, one in the United States & one in Israel, we elaborate patterns that connect the dots between migration & danger, state & society, & inclusion and exclusion within the nation state.

Jderu, Gabriel (Department of Sociology and Social Work, University of Bucharest, Str. Schitu Magureanu 9, 010108, Bucharest, Romania [tel: 0040728070087; fax: 0040213158391; e-mail: gjderu@yahoo.com]), **Bikes, Body and Emotions: Motorcycling as Social and Emotional Career,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper I approach motorcycling as a social phenomenon. The main concept that I use is that of social career, as advanced by Erving Goffman. Goffman has suggested that the social career is represented by the lifetime changes which are essential & common for the members of a certain social group, even if they occur independently in individuals' life. Combined with David Matza's insights about "deviant career" (which is applicable to non-deviant groups as well), I highlight the specific emotions which occur in the successive stages of one's motorcyclist career. Throughout their social career as bikers, they learn how to manage emotions generated by this social practice. I describe each stage and the specific emotions generated at each such stage of the social emotional career. I conclude by comparing the motorcycling emotions to the automobile emotions, as depicted by Mimi Sheller's (2004) analysis of "automotive emotions," i.e. specific emotions determined by body's self-mobility. The study is based on data gathered from various motorcycling forums in Romania, participant observation carried out among bikers in Bucharest, Romania in 2008 and 2009, conversations & interviews with 24 bikers, as well as analysis of various Romanian motorcycling magazines.

Jebunnessa, Chapola & Ranjan, Datta, K (University of Bergen, Department of Gender and Development, Bergen, Norway [tel: 001-647-703-2042; e-mail: jebunnessa@gmail.com]), **Labour Migration, Inter-ethnic Relations and Empowerment: A Study of Khyang Indigenous Garments Workers, Chittagong Hill Tracts, Bangladesh,** *International Sociological Association, Gothenburg, Sweden,*

¶ There has been a growing trend among indigenous people of Chittagong Hill Tracts (CHT), Bangladesh to migrate from their traditional occupation & take up new occupations in the big cities. These changes have led to critical shifts in the social & gender relations, institutions of the indigenous people & in the indigenous women's empowerment. The study will discuss, why indigenous people have migrated from their traditional occupations to the big cities, & how the factors (resettlement policy, counter-insurgency, political oppression & administrative pressure, displacement, deforestation prosperous labor markets, and search for better living condition) are interconnected in this process.

2010S01229

Jenkins, J. Craig, Robison, Kristopher & Crenshaw, Edward (Sociology, Ohio State University, Columbus OH 43210 USA [tel: +1 614 2925452; fax: +1 614 2926687; e-mail: jenkins.12@osu.edu]), **A Fourth Wave of International Terror: International Terrorism in the Middle East, 1968-2008,** *International Sociological Association, Gothenburg, Sweden,*

¶ Has '4th wave' Islamist terrorism displaced traditional leftist and ethnoseparatist insurgency? We use the ITERATE project data to map the evolution of Islamist & other forms of terrorist attacks in the Middle East between 1968 & 2008. We find that leftist and ethnoseparatist attacks remain the majority of international terrorist attacks but Islamist attacks have greater lethality and are more likely to attack U.S. & Western targets. In part, this is because Islamists are more likely to attack soft targets which entail more casualties & injuries, which combined with the targeting of Westerners imparts greater visibility to these Islamist attacks for Western audiences. This selection of targets seems driven by Islamist ideology rather than religion in general or the political objectives of specific Islamist groups & may be in part a learned tactic endemic to specific conflict locations.

Jennison, Karen M. (Sociology Department, School of Sociology and Criminal Justice, University Northern Colorado, Greeley, CO 80639 [tel: 970-351-2169; fax: 970-351-1527; e-mail: karen.jennison@unco.edu]), **Alcohol and Older Adults: Revisiting the Health-Related Benefits of Moderate Drinking Controversy,** *International Sociological Association, Gothenburg, Sweden,*

¶ Objectives: Although moderate drinking is believed to sometimes have beneficial effects which contribute to longevity among older adults, the claims of benign or positive effects for moderate consumption levels are presently controversial. This research examined the relationship between moderate drinking and cardiovascular diseases (CVD), the leading cause of morbidity and mortality in the United States. Sample: Data consisted of a sample of older American adults ages 50-74 (n=109,410) from the 1997-to-2008 National Health Interview Survey (NHIS). Results: Weighted logistic regression models, adjusted for confounders, supported previous clinical & epidemiological studies regarding ageing, alcohol & health. Light-to-moderate alcohol consumption provided a beneficial & protective health effect which decreased the probability of cardiovascular disease. However, the positive effects of moderate drinking varied with the overall physical condition of the drinker. Former drinkers, teetotalers and occasional drinkers, both males & females, seemed to lose the alcohol advantage, partly because of inconsistent consumption and sedentary lifestyles evidenced by infrequent exercise & lack of participation in leisure time activities like sports & physically active hobbies. Cohort effects (predominantly 1935-1959: Pre-and- post World War II cohorts), in concert with period effects (years 2005 -to-2008) were also contributing factors.

2010S01231

Jensen, Knud & Michel-Schertges, Dirk (Aarhus University/DPU, Tuborgvej 164, Department of Education [tel: +45 8888 9432; e-mail: knud@dpu.dk]), **The Freedom of Arbitrariness and the New Transformation of the Public Sectors,** *International Sociological Association, Gothenburg, Sweden,*

¶ Organizations are both a way of coordination of human co-operation and a way of social domination. In contemporary (Western) societies organizational structures & practices are ubiquitously. According to Klaus Türk organizations are a historical specific form of domination &–with respect to modern societies–organizations are the essential aspect of domination. The aim of the paper is to analyze contemporary changes of this historical specific form of domination. The starting point will be to point out Weber's bureaucracy model as well as contingence theoretical 'updates'.

In the following part, contemporary changes of the organization, as such, are analyzed due to the specific formation of society. Organizations have become more 'flexible' & thus exercise power & domination via specific forms of arbitrariness. Hence the 'freedom of arbitrariness' will be discussed with respect to contemporary organizations & socio-political reforms.

2010S01233

Jeong, Min Lee ([e-mail: monnani00@naver.com]), **The Aspect of the Consumer Society observed through the Online Clothing Shopping Malls,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recently, there is a rapid growth in online shopping. Clothing, books, electronics & a variety of products are being sold over the Internet. The growth of online shopping shows that the internet became important means of today's consumer society. It is true that the interpretations of online shopping just have been focused on the technical & economic aspects. But the consumption is the daily life & culture of individual subjects. And it is also the essential economic activity for the reproduction of personal lives & moreover, it is the positive action which consists one's mode of life. To explore social changes caused by the increase in online shopping, it is needed to approach by means of the sociology of consumption. To do so, the internet should be perceived as a place to consume rather than a tool. So this paper tries to interpret online clothing shopping malls in means of the sociology of consumption rather than merely understanding the economic implications. Modern consumer society consumes the preference. This leads to the image consuming & the dynamic process of a trend-leading & a trend-following group. These processes will be examined by the theory of Simmel. And subsequently, analysed how the consumer-object-become body appears through online clothing shops & consider the active side of consumers' role in online shopping. I prove these facts by research that investigates shopping malls ranked 1th to 50th. Lastly this paper will conclude with the limitations & possibilities of consumer as a principal agent in a consumer society which would emerge through the sociological implications of consumption of online clothing shops.

Jerabek, Hynek (Charles University in Prague, Fac. Soc. Sci., Inst. Soc. Stu., Dep. Sociology, U Krize 8, 158 00 Prague 5–Jinonice, Czech Republic [tel: ++ 420 251 080 313 ; fax: ++ 420 251 080 310; e-mail: hynek.jerabek@gmail.com]), **Three Stages of the Institutionalisation of Empirical Social Research,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper analyses the process of the development of research methodology. This development occurred in three steps in the institutionalisation of empirical social research in the first half of the 20th century. The first stage of this process is most comprehensively represented by the Chicago School at the start of the 20th century. Ten key decisions were made in Chicago that built up the Department of Sociology as one of the most important sociological research centres of its day in the United States: 1) generous funding; 2) the foundation of the department of sociology; 3) PhD. studies; 4) AJS; 5) R.E. Park; 6) Chicago as a "social laboratory"; 7) "the green bible"; 8) PhD. seminar; 9) publication series; 10) service centre. The second stage in the institutionalisation process was initiated by the use of mass data on social units. The character of this kind of data processing was usually descriptive. Four demands brought about this development: 1) organized teamwork; 2) sample techniques; 3) standardization and 4) technological development. In the third stage a decisive turning point was reached when the creators of the "survey analysis" model began to use the same data to test hypotheses about causal relationships between relevant research variables. Two projects and two names are connected with these changes: "The Princeton Radio Project" (P. F. Lazarsfeld) & BASR as its continuation at Columbia University, & a large-scale project "The American Soldier" (S. A. Stouffer). These two sociological workshops led to the development of research methodology as a tool for causal analysis. An entire series of practical & organizational changes had to be carried out & new methods of data analysis were introduced into practice. This institutionalisation of empirical social research as part of academic sociology then formed the natural foundation for cumulative social science. Keywords: institutionalisation, empirical social research, survey analysis, cumulative social science

Jevne, Kari Sjøhelle (Oslo University College, Pb 4, St.Olavs Plass, 0130 Oslo [tel: +4722453507; e-mail: kari.jevne@sam.hio.no]), **Talking About Participation: Child Welfare Workers Dealing with High Conflict Divorce Families,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores active child participation in their own cases within the Norwegian child welfare services through an analysis of child welfare cases concerning high conflict divorce families. A major issue in these cases concerns conflicts about the child's care, residence or contact. The child welfare service is obliged to assist these children if the conflicts create conditions that may be harmful for the child's heath or development. However, the child welfare workers do not have the authority to make decisions concerning change of residence or contact in custodial cases. This legal limitation makes professional practice in these cases an interesting context within which to explore child participation in meaning making & decision making processes. The paper identifies varying constructions of participation among social workers. Furthermore, it draws on empirical examples from interviews with social workers dealing with high conflict divorce families to explore several dilemmas, possibilities & constraints concerning children's active participation in these cases. From a theoretical point of view, the paper questions weather perspectives on participation from socio-cultural psychological theories can enhance the child's right to participate in his or her own cases.

Jimenez, Jaime, Escalante, Juan, C, Rodríguez, Carlos & Sandstrom, Gregory (Instituto de Investigaciones en Matemáticas Aplicadas y en Sistemas, Universidad Nacional Autónoma de México, Ciudad Universitaria, Mécico City, México, 04310 [tel: 52 55 5622 3597; fax: 52 55 5616 2670; e-mail: jjimen@servidor.unam.mx]), **Alternative Ways of Learning and Research Conducive to Development,** *International Sociological Association, Gothenburg, Sweden,*

¶ A social experience of learning & research that combines learning based on problems, self-study, flexible curriculum, intensive use of the new communication & information technologies, & the acquisition of generic competencies for research, has been going on in Mexico for about 25 years. This experience is being conducted by the CIDE (Center for Innovation & Educational Development), an association of public university professors with long-standing experience in teaching & research, that throughout the years has attracted several hundreds of students & produced some eight to ten PhD's in the areas of agronomy, ecology, health and phyto-mining. One of the Center's features is its low cost since it has no physical infrastructure, tutors have no salary, there are no laboratories & there is no tuition to be paid. However, the quality of alumni is comparable to that of any national or foreign university. How this is made possible? The aim of this paper is to describe the nature of this model & to propose ways to take advantage of this learning experience for the benefit of mainstream teaching & research.

2010S01237

Jin, Lei (Dept of Sociology, the Chinese University of Hong Kong [tel: ; e-mail: ljin@cuhk.edu.hk]), **Intra-professional Stratification and the Rationalization of Clinical Practice,** *International Sociological Association, Gothenburg, Sweden,*

¶ Concerns for cost saving & demand for high-quality healthcare have led to the proliferation of measures that sought to rationalize and standardize clinical practice. The implementation of these measures has been a highly contested terrain in the healthcare system and resulted in disturbances in the practice environment of the medical profession. The theories of professions suggest that intra-professional stratification often serves to absorb system disturbances. This paper investigates the relationship between dimensions of intra-professional stratification & the implementation of the rationalizing measures. I examine the distribution of five widespread measures using nationally representative survey data of physicians in the US. I found that these five measures represented two strategies to rationalize clinical practice; they can be loosely termed as knowledge provision & practice monitoring. The strategy of knowledge provision served to strengthen clinical autonomy while practice monitoring tended to weaken it. These two strategies were not evenly distributed within the medical profession. High-status physicians were more likely to be affected by the strategy of knowledge provision & less likely to be affected by practice moni-

toring. Contrary to the expectation, physicians in more "corporatised" practice settings were not more likely to be affected by practice monitoring, but were more likely to be affected by knowledge provision. The implications of these findings for intra-professional stratification, the status of the medical profession, & the implementation of rationalizing processes are then discussed.

2010S01238

Jing, Shaoli (Ginling College, Nanjing Normal University, No.122 Ninghai Road, Jiangsu Province, CHINA,210097 [tel: 13951018459; e-mail: shaoliULjing@yahoo.com.cn]), **The Global Financial Crisis in the Context of Changes on Family Functions and Women's Development,** *International Sociological Association, Gothenburg, Sweden,*

¶ Abstract: The family, as a social group, is built on the foundations of marriage, blood relationship & socio-economic ties. Human society is composed of a large number of families, & there is a close relation between families & the development of society, especially it is very closely related between women's development and society civilizations & progresses. So the family is the basis of human social life & an indispensable component. With the development of modern society & the scientific & technological progress, especially, in the context of the global financial crisis, as the global financial crisis erupted & spread, it not only directly results in economic development slowdown and recession in western societies, but also the economic developments in China have been seriously affected. The impact of the financial crisis has been infiltrated into all aspects of social & economic life in China. While it has undergone tremendous change on the structures & functions of family, & the practice of the family is going through a major functional changes. Meanwhile, not only are educational functions of the family playing an important role and effectiveness on the relations between family & social, but also continue to meet the survival needs of people, as well as efforts to adapt & change the social environment. The changes on Production function & emotional function of the family are taking place. Women's development & women education have been the hot topic focus in modern society. Even though there are some differences about the researches & studies on women's development in many countries in the world, but women's importance in family and social development in any state & society should not be underestimated, & for all to see. This paper applies research methods of, questionnaire survey, interviewing survey, observing survey, & so on. And by choosing some families as my survey objects, by choosing some people from different kinds of families as my interview objects, by taking the evolution cased by social development & change on the family function & women's development & equal opportunity in education as my main research subject, & by taking the unique perspective, viewpoint and analysis way of Feminism as my research methodology foundation to investigate & analyze the issue of social development how to affect on family functions changes & how to affect on women's development & the equal opportunity in education. The paper socializes the issue of family functions & women's development and the equal opportunity in education under Gender Perspective of Feminism, so as to hope for providing referable proposals and experiences to conduct effective social inform & to promote the equal opportunity in China. This paper attempts to expose, examine and analyze the male-centered thinking & awareness in the development of traditional family functions from the perspective of Feminism & Gender Theory, propose thoughts/views/ideas on how family functions' changes to affect women's development in China, and think about some questions on the relation between family functions & women's development, & efforts to promote the development of social harmony & equality. (Abstract shortened by ProQuest)

Joas, Hans (Max Weber Centre, University of Erfurt, Am Huegel 1, 99084 Erfurt, Germany [e-mail: hans.joas@uni-erfurt.de]), **Waves of Secularization,** *International Sociological Association, Gothenburg, Sweden,*

¶ The growing insight that the conventional secularization thesis, i.e. the assumption that modernization in the sense of economic growth and scientific progress leads more or less automatically to religious decline, is no longer tenable should make the question of what the causes of secularization are even more acute. Studies of the rise of a secular option are important for the understanding of the preconditions for secularization but cannot explain the different degrees to which this option is being chosen. In my contribution I try to show that secularization is not a unitary, linear, continuous process at all. We can rather identify three historical waves in which this process took place. Two of them (the 1790's & the time around 1968) are very condensed & highly contingent constellations; one of them takes place at different points in the second half of the 19th century in different societies. This analysis allows some conclusions for causal explanation & entails consequences for our theories of social change.

Johansson, Johan Mikael (Center for Nanotechnology in Society, UCSB, Santa Barbara, CA, 93106 [tel: 805-679-3990; e-mail: jmjoha@cns.ucsb.edu]), **"Risky Business" A How Toxicologists Negotiate the Potential Danger of Nanoparticles,** *International Sociological Association, Gothenburg, Sweden,*

¶ Nanomaterials are becoming more & more widespread in household products all around the world. It is therefore no surprise that toxicologists take an increased interest in the adverse effects of these new materials. Interest groups in industry, politics, different NGOs & to some extend nanoscientists, follow with great anticipation the results of the toxicologists. Based on ethnographic fieldwork this paper explores how a community of toxicologists' negotiation & navigation between different interest groups that want to use the toxicologists results for their own agenda. This negotiation takes place on two levels, locally amongst the toxicologists themselves & globally between toxicologist and other interest groups. There is according to toxicologists a fine line between "scaring the public" & "ignoring potential danger to the public." A concern for the toxicologists is that different interest groups & the public do not share the scientists' conceptualization of danger & risk. Which often leads to misinterpretations & misunderstandings of the toxicologists' scientific results. In a common layperson perspective harmful materials are dangerous in themselves, while the toxicologists' claims it to be the dosage that creates the poison. When it comes to nano-materials the size of the particles play a crucial role, as it is their miniscule nano-size that can make otherwise non-toxic substances toxic & vice versa. Risk & potential dangers of nano-particles, from the toxicologists' perspective, thus exist as local scientific knowledge but also as global folk models which the toxicologists need to take under consideration when they present their results outside the realm of science.

Johnson, John Chandler (Stanford University [tel: 1.650.938. 2053; e-mail: chandler.johnson@stanford.edu]), **Settling the Auctioneer's Coordination Debt: Structuration and Knowledge Coordination,** *International Sociological Association, Gothenburg, Sweden,*

¶ As an extraordinary popular delusion, the present economic crisis illustrates the need for micro-to-macro theory capable of explaining disorder. Economic theory subtly requires exogenous order as a structural predicate, while economic sociology generally explores structural determinants of individual actions and outcomes. Neither is sufficient to explain the nature of system-level coordination. Integrating sociological theory and economics' system-level theoretical frame, this paper uses information theory to formalize knowledge coordination as a micro-to-macro bridge emergent in structuration (Giddens, 1979). This methodologically individualistic theoretical frame offers opportunities for computationally modeling dynamic system-level behavior as a consequence of interdependent, socially contextualized, & subjectively purposive individual actions.

Jokinen, Pekka, Kupsala, Saara & Vinnari, Markus (Dept. of Geographical and Historical Studies, Univ. of Eastern Finland, FI-80101 Joensuu, Finland [tel: +358-40-8358650; e-mail: pekka.jokinen@uef.fi]), **Consumer Trust in Animal-Farming Practices. The Case of Finland 1980-2009.,** *International Sociological Association, Gothenburg, Sweden,*

¶ The consumption of animal originated foodstuffs has become a central issue in the politicisation of food consumption. This is partly because of the large usage of environmental resources (such as energy, land area & water) needed to produce these products. Animal welfare issues have also been much debated in the public discussions. It has been often claimed that consumer worries about the treatment of animals in modern agricultural systems would be widely spread in the European Union area. This does not seem to be always true. According to a recent Eurobarometer study, in all the EU countries the highest trust in animal welfare is to be found in Finland. Finland is often considered to be a high trust society alongside other Nordic countries. This article identifies a variety of sources of such trust in emotional, institutional, habitual, and reflexive spheres & changes in these spheres in 1980-2009 in the case of animal welfare issue. The paper concludes that there are changes taking place in the different trust spheres in Finland and this can have profound implications for consumer behavior in the case of animal originated foodstuff consumption.

Joncheray, Hélène & Tlili, Haïfa (Sociology department, Paris Descartes University, Sorbonne, Paris, France, 75006 [tel: 00 33 6 87 22 34 00; e-mail: helenejoncheray@yahoo.fr]), **Women's Rugby and Dangerousness,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is about women's rugby & dangerousness. These two themes are often associated. When women say they play rugby, a lot of people instantly think about danger. The research is based upon 197 questionnaires filled out by rugby women who play in the French first division. If the analysis (SphinxA2 software) of some results does not encourage practicing (75% of the players said they had been injured), social explanations have to be found. Collard (1998) helps us by affirming that "in a given sport, our perception of risk is inversely proportional to the skill we have for it." Furthermore, it seems that violence, which still is a central component of the men's game (Elias & Dunning, 1986), does not express itself in a satisfying way in the women's sport, as if women authorized less tension.

Jones, Graham R. (Flinders Business School, Flinders University, GPO Box 2100, Adelaide, SA, 2001, AUSTRALIA [tel: +61-8-8201-2006; fax: +61-8-8201-2644; e-mail: Graham.Jones@flinders.edu.au]), **Corporate Social Investment: A Transparent Model for South African Corporations–Accountability in Practice,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since 1994 South Africa has undergone immense political, economic and social change but there is ongoing evidence of widespread poverty on the streets of the major cities. The Institute of Race Relations Surveys (2007) makes it clear that the life chances of many South Africans still remains limited & their recently published data indicates that the inequality in South Africa is rising. Various areas of South African legislation require corporations to make a significant contribution to charitable causes under the umbrella of their nation's broad policy on Corporate Social Investment. The Black Economic Empowerment Act, 2004 & various industry charters lay down required levels of contributions to the nation's social up-light agenda. The researcher's view is that there is a lack of accountability with regard to much of the nation's corporate social investment. Black Economic Empowerment Act, 2004 is not having the positive impact on the living standards of the poor that the legislators had hoped, notwithstanding that it incorporates a balanced scorecard as a part of its accountability processes. From the researcher's perspective this scorecard is not having the desired effect. The Johannesburg Stock Exchange Socially Responsible Investment (SRI) Index does bring some measure disclosure. However, there is still a lack of transparency and community involvement in the process of corporate philanthropy / corporate social investment. Corporate donations to charitable causes involve many stakeholders, both primary & secondary who are being ignored by current practice. Key Words: Corporate social investment, Black Economic Empowerment, Corporate Philanthropy, Stakeholders

Jones, Lauren Ila (UCLA/Paulo Freire Institute, Los Angeles, California 90025 [e-mail: laurenilajones@gmail.com]), **Theology "On The Move": A Critical Sociology of Theology from a Freirean Perspective: A Case Study of Women Popular Educators in El Salvador, Nicaragua, Bolivia, and Brazil,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper, I will present arguments for a critical sociology of theology from a Freirean perspective. These arguments are based on my recent field work funded by the World Council of Churches with over three dozen women educators in social movements in four countries-El Salvador, Nicaragua, Bolivia, & Argentina. These cases highlight the impact of women adapting such concepts as theology, liberation, & community development "on the move" to constantly fit the changing realities of their communities. In these communities, theology is not held captive by the constraints within which scholars from many disciplines would prefer that it remain. Instead, in educational programs in which Freirean thought is woven, theology is (re-)claimed as a tool of action & reflection against race, ethnic, class, & gender inequality. I argue that a critical sociology of theology based on Freire frames a new discussion of what constitutes holistic community development. These women, in their work against forces of "globalization from above" a la Torres, are redefining what constitutes "religion" and "education." I call upon Kathleen O'Gorman's analysis of the way in which philosopher Maxine Greene's work can be utilized to reinterpret the connections between religion & education. This work is rooted in a complex "meeting" of the beliefs of these women creating an ecumenical space that speaks to the deepest needs of women in communities-whether they may be economical, emotional, physical, social, spiritual, religious, or otherwise. I conclude by discussing implications of this work for U.S. & Latin American scholars & practitioners & for insiders & outsiders in these communities who are engaging in "development" work.

Jones, Paul K. (Social Sciences; University of NSW, Sydney, NSW, 2052, Australia [e-mail: P.Jones@unsw.edu.au]), **Rearticulating Mediated Political Communication and Populism,** *International Sociological Association, Gothenburg, Sweden,*

¶ The concept of populism has recently undergone an upsurge in usage. Mediated political communication research too has experienced a renewal, often normatively configured via the public sphere thesis. Each of these developments can be seen as responding to a crisis of "democratic disengagement," whether understood as falling turnout within non-compulsory electoral systems or as the rise in support for (neo)populist parties. Yet with rare exceptions (e.g. Mazzoleni et al, 2003), the recent populism & mediated political communication literatures do not speak to each other. Public sphere theory has little to say explicitly about ("right wing") populism. Stuart Hall's Gramscian/Laclauian authoritarian populism thesis has not figured significantly in recent mediated political communication research. Most notably, Laclau's & Mouffe's later work is quite hostile to the public sphere thesis. This paper thus tracks potentially productive points of re-articulation between these approaches including Calhoun's (1988) under-utilized social theoretical work on populism, indirect social relations & public spheres & the curious relationship between agonistic populism and media regulation.

2010S01247

Jonkers, Koen (CSIC, Institute of Public Goods and Policies (SPRI research group), C/ Albasanz 26-28. E-28037 Madrid (ESPAÑA) [tel: 0034 916022937; e-mail: koen.jonkers@cchs.csic.es]), **Mobility, Publication Behaviour and Career Development of Argentinean Life Scientists,** *International Sociological Association, Gothenburg, Sweden,*

¶ This project studies the impact of the international mobility of Argentinean life scientists on their publication & co-publication behaviour & career development in Argentinean CONICET research institutes. The study aims to test whether the findings of a previous study of the Chinese research system can be generalised [Jonkers & Tijssen, 2008]. While the approach to data collection is different some of the analytical approaches adopted in the literature on the analysis of CVs can be used for this study of scientific mobility [Woolley & Turpin, 2009] & career development [Dietz & Bozeman, 2005]. Time spent abroad is expected to be significantly positively correlated to the number of SCI publications published per year, the number of co-publications with the former host country as well as steps in career development after return to Argentina.

2010S01248

Jönsson, Ingrid, Tallberg-Broman, Ingegerd & Sandell, Anna (Department of Sociology, Lund University, Sweden, P.O. Box 114, S-221 00 Lund [tel: +46-46-222 88 31; fax: +46-46-222 41 00; e-mail: Ingrid.Jonsson@soc.lu.se]), **The Swedish Pre-school under Transition?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Is there a paradigm shift taking place within the Swedish preschool? The paper will explore whether this is the case by discussing the development of the Swedish preschool since the 1970s departing from Hall's (1993) requirements of a paradigmatic shift. Since the establishment of the Swedish public preschool in the 1970s, education & care became integrated & the expansion was related to gender equality, increased female labour market participation, the wellbeing of children as well as to the psychological development of children. Over the following decades, the number of places has been expanding although the demand of places was not satisfied until the 1990s. The goals of the pre-school have been adjusted & reformulated over the years & although "educare" is still the foremost characteristic of the Swedish preschool, new trends are noticed, e.g. a larger emphasis on lifelong learning, extended inclusion of groups of children & a larger incorporation of parents into pre-school activities. In the paper, we will explore these recent trends with the aim of identifying changes in goals, policy instruments & settings by studying the impact of international actors, changes in official documents & possible effects on everyday life in pre-schools. The latter will be discussed in relation to an explorative study of two pre-schools situated in the southern part of Sweden.

Jonsson, Rickard (CEIFO, Stockholm university, 106 91 Stockholm, Sweden [tel: +46 733 694741; e-mail: rickard.jonsson@ceifo.su.se]), **The Sexist Language of the Other? Media Representations and Classroom Practices,** *International Sociological Association, Gothenburg, Sweden,*

¶ The point of departure of this paper is public debates of the so-called "blattesvenska," an allegedly variety of Swedish spoken by young people of multiethnic descent. Part of these debates has focused specifically on how adolescents in Swedish multi-ethnic suburbs speak poor Swedish or what has been described as an "unintelligible" & inappropriate sexist language. The paper argues that comments about others' sexist language contribute to both the construction of a normative swedishness & to the creation of the immigrant young man stereotype. Although it is not possible to accuse "young immigrant men" to be sexist in Swedish public discourse, without being perceived as discriminative, through discussions of young immigrant mens' sexist language use a divide between Swedes & Non-Swedes may be established. On the basis of ethnographic observations in a school in a suburb of Stockholm, the paper further examines how & why some teenage boys actually use the language which has been target for moral concern in public debates. Here attention is paid to these adolescents' actual use of "prohibited" language, & to the masculine identities that these linguistic activities produce in daily school life.

Jørgen, Lerche Nielsen, Bodington, Malene, Lerche, Søren & Meyer, Kirsten (Roskilde University, Universitetsvej 1, 4000 Roskilde, Denmark [e-mail: kirsten@rabbe.dk]), **Social Media, Deliberative Democracy and Social Mobilisation,** *International Sociological Association, Gothenburg, Sweden,*

¶ Over the past 20 years, researchers have studied how the Internet frames deliberative processes. What is needed to create a framework for dialogue & engagement, & how can the Internet be used to create & support social communities? (Castells 2001, Dyson 1997, Rheingold 1993). However, these approaches have all taken a normative & meta-theoretical approach to the subject & are rarely grounded in empirical research. Much has been written about using social media in a rationally, purpose-driven or strategic way, relating it to corporations, political organisations, and the latest in relation to the Obama presidential campaign in 2008, where deliberative features were successfully used to mobilise and organise 2 millions activists through his social network, Mybo.com. However, very little literature addresses the deliberative processes, nor does much past research build on cases that have successfully used social media to mobilise people. An examination of Kirkeasyl (Church Asylum), a Danish social movement that mobilised people through social media, allows a better understanding of how social media can be used but also of how social media impacts the movements that use them. Kirkeasyl had no political affiliation, & activists across the political and social spectrum engaged in the movement to help reject, soon-to-be-deported, & deported Iraqi refugees. The movement was largely driven by value-based politics, action, political protest focused on the government, & actions directed towards the police that carried out political decisions. By employing social media, volunteers were found & mobilised for blockades and demonstrations when Iraqi refugees were deported, a large amount of money was collected in a very short time, & traditional mass media & politicians were engaged in the debate surrounding the Iraqi refugees. Based on the theories of Castells, Dyson, Rheingold, Ganz, & Habermas, this paper analyses Kirkeasyl as a case where social media was successfully used for dialogue, engagement, mobilisation, & as a springboard to spread the movement's message & affect the political debate.

Jottier, Dimi & Heyndels, Bruno (Vrije Universiteit Brussel, Pleinlaan 2, 1050 Brussels, Belgium [tel: +32 3 629 30 68; e-mail: dimi.jottier@vub.ac.be]), **Does Social Capital Increase Political Accountability?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Social capital has been shown to positively influence government performance. Boix & Posner (1998) suggest a possible explanation: social capital makes citizens "sophisticated consumers of politics" who monitor the government closely. Such monitoring will be more explicit to the extent that instrumental voting motivations outweigh expressive considerations. We identify social capital as a source that facilitates instrumental voting & thus political accountability. We present an empirical test of the Boix & Posner hypothesis. We use data on Flemish elections for 2000-2006. The "quality of government" data give–for Flemish municipalities–an assessment by (a sample of) voters of the policy by the incumbent parties. We find a positive link between perceived quality of government & election results of the incumbent parties. Crucially, we find this link to be stronger in municipalities high in social capital. We take this as evidence for Boix & Posner's hypothesis supporting the idea that social capital increases government accountability

2010S01252

Joye, Dominique, Sapin, Marlène & Pollien, Alexandre (MISC-SSP University of Lausanne, Lausanne, Switzerland, 1015 [e-mail: dominique.joye@unil.ch]), **Does Methodology Matter? An Exploration Based on the Swiss Side of International Survey,** *International Sociological Association, Gothenburg, Sweden,*

¶ The world of surveys is sometime divided between surveys suspected to do "quick & dirty" exploration of the opinion world & other, mostly academic & official, trying to have high standards of quality & methodological excellence. In the case of pre-eletoral or pre-referendum polls, the debate comes back, at least if the result of the consultation differs from the one predicted by a survey. In Switzerland, this was clearly the case for the referendum about "minarets" in the Autumn of 2009. If this particular question about minarets was not asked in academic surveys, we have many indicators about political behaviour and attitude related to migrants & immigration. Furthermore, the contact forms used by the ESS allows to differentiate between "easy respondents," probably the most frequent type of respondent in "quick & dirty surveys," "hard to reach" & "reluctant" and see the impact of the methodology on opinions. In some cases, we can go a step further: even with a strong effort, the response rate of the academic surveys in Switzerland is around 50%, leaving some places for a potential non-respondent biases. In two cases (ESS, 2006 & EVS 2008) we have realised a "non-respondent" survey, giving substantial information on more than half of the non-respondents. This will allow to explore more systematically the potential non-response bias by topics, particularly the one of political behaviour & attitude about immigrants, thus giving some indication on the impact of survey methodology on the quality of answers.

2010S01253

Jung-Nim, Kim (Tokyo University and Graduate of Social Welfare, 2020 Sanocho, Isesaki City, Gamaken, Japan [tel: 81-270-20-3764; fax: 81-270-20-3678; e-mail: daab2000@gmail.com]), **A Study of the Socioeconomic Status and Health Inequalities of the Elderly at Home,** *International Sociological Association, Gothenburg, Sweden,*

¶ Although the aging process brings with it some common challenges to older men & women, there has been little attention to gender and age cohorts differences in patterns of socioeconomic status and health inequalities which links to adaptive outcome in Japan and South Korea. The purpose of this study was to examine whether "health status" within particular gender & age cohorts in Japan and South Korea was influenced by socioeconomic status. The first hypothesis predicts in inequality of health status based on socioeconomic status level of men & women in Japan & South Korea (high level of social sates & low level of social states). Subsequent hypotheses predict that similar paterns of inequality of health status within age cohorts of men & women were influenced by socioeconomic status. All subjects were aged 60 years and older living at home either Japan or South Korea in 2001. The analysis was restricted to 550 men & 602 women in Japan, 397 men and 590 women in South Korea. A multiple regression analysis of socioeconomic status on health inequalities was undertaken. Key results are as follows: 1) Within specific gender of all subjects, variables with a significant effect on health status were: "years of education" for men or women in Korea & men in Japan, "financial status" for men & women in Japan & Korea. 2) Within specific age cohorts, variables that had a significant effect on health inequalities are: among 60-64 year-old men & women, & 65 years & older men & women in Japan & Korean, "financial status," among 60-64 year-old men & women in Japan, & 65 years and older men or women in Korea, "years of education." Using data on 2 countries of Japan & Korea survey, the empirical analysis support for the hypothesized relationship of socioeconomic status and health inequalities in either South Korea & Japan. This results show that health inequality exists in Japan & South Korea, even if either countries guarantees public health care for all its citizens. Social & political initiatives will be needed to correct these inequities between different socioeconomic status in Japan & South Korea. Key words: health status, social statuses, elderly, Japan & Korea

Jurczyszyn, Lukasz (EHESS, 54, bd Raspail, Paris, France [tel: +33 666915152; e-mail: jurluk@ehess.fr]), **The Collective Vio-**

lence: A "Test" for the Local Social Environment. The Comparative Analysis of the Riots in France, Russia and Poland, *International Sociological Association, Gothenburg, Sweden,*

¶ The research on the riots & their effects on the social environment reported in this paper is based on the analysis of empirical data collected between December 2005 & November 2009. One of the main motivations behind our investigation is to go beyond strict national research frames, & go towards more "global" perspectives analysing three societies, which are not habitually compared. Therefore, I have led a total of 63 individual & 20 collective interviews, three focus groups & the participative observations in all towns & neighbourhoods, where have recently taken place the analysed riots; in France, the investigation concerns the "urban violence" within Paris suburb, firstly in Val-Fourré in November 2005, secondly in Villiers-le-Bel in November 2007; in Russia a the racist riots against the local migrants in Kondopoga (Republic of Karelia, 300 km from Saint Petersburg) in September 2006; & in Poland–the racist riots against the local Roma community in the town of Brzeg in January 2008. In spite of differences of national contexts we observe that the two types of collective violence–social in French and nationalist/racist in both "post-communist" cases, could appear as a result of the lack of the conflictualisation the local tensions, which radicalise part of the "difficult" young people due to lack of, or to inappropriate resolutions offered by the representatives of social order (institutions, associations), who seem to be disconnected with the youth social experience. Apparently, part of the local young people act violently as a lack of other means to express their disappointment because of inability to envisage their expectations & their demands turned into actions. In this context, it is significant that the social actors from all three fieldworks defined the rising tensions (social or racial) in terms of "explosive device which bursts up from time to time"–in the form of urban riots. It is important to underline that the youth, especially those more "difficult," from all three fieldworks studied seem to be disconnected in particular with the local & national politicians, which is expressed by very week attendance at local & national elections. Moreover, in both "post-communist" contexts the phenomenon of disconnection is articulated through a direct involvement of the radical nationalists in the local tensions, who try to instrumentalize the area abandoned by the civil society & the authorities (in Poland - the nationalists grouped around the National-Radical Camp, in Russia–the activists of the Movement Against Illegal Immigration from Moscow). However, both social & nationalist/racist collective violence constituted a real "test" for the local social environment & provoked the various mediation activities aimed to counteract the tensions (social & racial) & the violence, which were also proposed by local youth including the so called "difficult." One association was created in Val-Fourré, a team of specialised social educators was introduced in Villiers-le-Bel, five associations was founded in Kondopoga & in Brzeg, the riots made that Roma Association really started working with the first precise help from the local authorities.

2010S01255

Juvan, Jelena (Faculty of Social Sciences University of Ljubljana, Kardeljeva ploscad 5, Ljubljana, 1000 [tel: +38641694639; e-mail: jelena.juvan@fdv.uni-lj.si]), **Slovene Military Families: Institutional Support,** *International Sociological Association, Gothenburg, Sweden,*

¶ Much was expected from the new Act on service in Slovene Armed Forces (SAF), also in the area of institutional care for families of the members of the SAF, when it was accepted in 2007. Although SAF became fully professionalized armed forces in 2003, when some form of care for the families was supposed to be established, however the idea of family care seemed to get lost, & the low importance given to the families was proven once again. With the 2007 Act families of the members of the SAF were for the first time officially mentioned in any formal document. The Act introduced few novelties not only for the families but also for the members of the SAF alone. More than two years have passed since & the question arises which provisions of the Act were actually brought into effect, if any. The paper will present latest developments & possible achievements in the area of institutional care for the families of the members of SAF.

Jwalamukhi, Moen Haider (Lehigh University USA, bethlehem [tel: 347-935-4706; fax:; e-mail: moenhaiderjwalamukhi@gmail.com]), **The Pedagogy of the Fool, a Critical Case Study of the Education System of Pakistan,** *International Sociological Association, Gothenburg, Sweden,*

¶ My research paper The Pedagogy of the Fool, a critical case study of the Education system of Pakistan, brain child of Taliban and religious fanaticism. As a case study through my own personal pedagogical reminiscences during my childhood & latter as a Professor, I will deconstruct & challenge the conventional and traditional wisdom which is a brutalizing restraint & a systematic form of control against scientific reasoning and critical learning. Marx has already predicted that the final phase of a world historical form is its comedy. Pakistani education system is a mockery of education & universities of Pakistan are windows of learning where students & professors are not allowed to challenge the mechanical falsehood & intellectual ignorance in the name of education & if they challenge they are considered as subversive elements of society. Pakistani education system is directly responsible for Talibanization & religious extremism. In 2008 I along with my wife Professor Shirn tried to launch a consciousness raising moment in one of the most conservative universities of Pakistan & we were both banned & humiliated. I will present images of my hunger strike & some clips of my docu drama of my hunger strike against barbaric & ridiculous education system of Pakistan.

Kaasch, Alexandra & Starke, Peter (Collaborative Research Center 597 "Transformations of the State," University of Bremen, Postfach 33 04 40, D-28334 Bremen, Germany [tel: +49 421 218 4084; e-mail: alexandra.kaasch@zes.uni-bremen.de]), **The Welfare State as Crisis Manager? Tracking the Responses of Australian and Swedish Social Policy to Three Major Economic Crises,** *International Sociological Association, Gothenburg, Sweden,*

¶ Times of economic crisis are also times of a redefinition of the state-market relationship. Nevertheless, crises may provoke different responses. The current financial crisis prompted policy-makers to call for increased regulation, emergency spending and transfers towards firms & citizens & thus stands in sharp contrast to earlier periods of crisis. At the same time, the short-term spending spree may lead to welfare state cutbacks in the medium term. This paper highlights social policy reactions to economic crises in Sweden & Australia, & compares how governments responded to three major economic crisis episodes (1970s, 1990s, current). We look at reforms of pension, unemployment, family policy & health programmes & attempt to develop an analytical framework combining (welfare state) comparative approaches, with transnational policy perspectives. We argue that some parts of the public welfare package are cut back in times of economic crisis while other social protection mechanisms are continued or even expanded. There is also variation over time: governments used the 199s crisis to justify welfare state cutbacks, while currently no such "bold" measures can be identified. Similarly, the 1970s were not a time of universal cutbacks in response to the two Oil Crises.

2010S01258

Kabakchieva, Petya L. & Boyadjieva, Pepka A. (Sofia University, Department of Sociology, 15 "Tsar Osvoboditel," Sofia 1504 [tel: +359887746929; e-mail: petiakab2001@yahoo.com]), **Conceptualizing Overlapping Modernities–A Glance from Post-communist Eastern Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ The authors argue that the specific development of Southeast countries in the recent 150 years could be conceptualized as "overlapping modernities." For this short period of time several different models of modernization were played out: Ottoman, national-emancipatory, capitalist, national versions of the Soviet communist model, neo-liberal models after 1989. Furthermore, this occurred in the context of different cultures: of the Ottoman Empire, of the Habsburg Empire, of the former communist Soviet block, etc. The fact that so many alternative models were introduced in such a short period of time made it impossible for each of them to take root–every subsequent model overlapped with the unstable previous one. Thus, the region, seen through the prism of "overlapping modernities," poses several methodological challenges which the present paper addresses: 1) It is obvious that "transition paradigm" is ineffective because what we have here is a co-existence & competition of models. 2) This overlapping makes it impossible to think of the region in the categories of linear, consecutive changes, be they regressive or progressive. 3) Due to this institutions can no longer be defined as stable structures. Dynamic reconfiguration of norms & rules itself becomes a norm. Hence the question arises: Should these (re)configurations be thought to be a deviation, as they have been until now, or are they rather the key to understanding the dynamic, globalizing contemporary world?

Kahlert, Heike (Department of Sociology and Demography, University of Rostock, Ulmenstr. 69, D-18057 Rostock, Germany [tel:

++49 (0)381 498-4365; fax: ++49 (0)381 498-4364; e-mail: heike.kahlert@uni-rostock.de]), **The Shift from a Women's Problem to an Organizational Problem: Revisiting the Concept of 'Cooling-Out' in Academic Careers–An Intersectional Analysis,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the paper, I will follow Burton R. Clark's ideas on "cooling-out" by giving a brief look at "cooling-out"-processes in academic careers of young, female & male, political scientists and chemists in the German system of science & higher education. Based on empirical results from 60 qualitative interviews with 30 female & 30 male political scientists & chemists in the transition phase after having finished their doctorates, I will argue, that "cooling-out"-processes in academia contribute to subjective career orientations of the new generation of academics and complete the structural & institutional risks of academic careers in a decisive manner: Especially in phases of career transition– like, for example, the transition between finishing a doctorate & becoming a post-doc–they are of heavy weight. While analysing "cooling-out"-processes in academic careers, in addition to Clark special attention will be paid to questions of gender & intersectionality by transferring Joan Ackers (2006) idea of "inequality regimes" in organizations to the academic context & to a comparison between the two disciplines. The main interest of the paper is to work out, what role gender & other inequalities like e.g. class or different life styles play in the interrelations between individual careers & academic organizations.

Kahlina, Katja (Department of Gender Studies, Central European University, Budapest, Hungary [tel: +36 70 6688798; e-mail: katja.kahlina@gmail.com]), **Citizenship Re-Imagined: Ethnosexual Belongings in the Life Narratives of Non-Heterosexual People in Croatia,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores the intersection of nationalism & sexuality in the newly emerged Croatian nation-state. After mapping the dominant articulations of citizenship formulated within a heterosexualized frame by the state practices in the past twenty years, I turn to the ways the meanings of 'being a citizen' are re-articulated in the life narratives of non-heterosexual people diversely self-identified as lesbians, gays & trans, both out & closeted activists & non-activists. By focusing on the ethnosexual self-identification, which indicates the intersection of sexuality and nation on the level of identity & belonging, this paper demarcates four main strategies of resolving the paradox of being simultaneously 'lesbian/gay/trans' & 'citizen' that has been created by the dominance of heterosexualized citizenship. On the grounds of prevailing discourses informing the narratives, these strategies can be identified as 'privacy', 'normalcy', 'queer', and 'pan-balkanism'. While 'privacy' & 'normalcy' strategies reveal rather assimilationist tendencies of inclusion into the existing (nationalist) logic of citizenship & nation, 'queer' and 'pan-balkanism' can be regarded as transgressions of the dominant discourses of sexual identity, sexual citizenship & belonging.

Kaiser, Claudia (Centre for Research on Ageing and Society, Vechta University, 49377 Vechta, Germany [e-mail: claudia.kaiser@uni-vechta.de]), **Retirement Migration and Ageing Abroad: Transnational Networks, Ethnic Economies and the Health Care Sector,** *International Sociological Association, Gothenburg, Sweden,*

¶ International retirement migration to places with climate benefits and attractive landscapes is a growing phenomenon of the ageing populations of industrialized countries. Since the rapid increase of globalisation, of international mobility in general and international tourism in particular places in the Mediterranean but also around the world like Thailand, South Africa, Florida or Mexico have become attractive retirement destinations for the elderly. Some of them use their new homes permanently, others only seasonally. In many cases, the migration decision has been guided by experiences as tourists & by the desires & requirements of younger stages of old age. But what does it mean for the retirement migrants to grow older in their new environments abroad? What kind of potentials & risks do they face when experiencing age-related problems? This paper investigates retirement migration in a transnational perspective by focussing on the individual and collective networks & social spaces encompassing both the origin and destination countries. With the example of elderly Germans in Spain, the paper will look closer at the health care sector, the migrants' different eligibility to health care entitlements both in Germany & in Spain & at the role of ethnic economies in providing adequate health care for German retirement migrants abroad.

Kajdanek, Katarzyna (Department of Urban and Rural Sociology, University of WrocAaw, Koszarowa 3, WrocAaw, Polska, 51-149 [tel: +48 71 375 53 14; fax: +48 71 326 10 08; e-mail: k.kajdanek@uni.wroc.pl]), **Together–Apart. Cooperation and Conflicts in Suburban Neighbourhoods in Poland (On the Example of the City of Wrocaaw),** *International Sociological Association, Gothenburg, Sweden,*

¶ The study focuses on the social relations between newcomers & old inhabitants of the villages in the suburban fringe of the city of WrocAaw, Poland. They have been analyzed using cooperation–conflict continuum. The aim of the study was to show most important axes around which cooperative behaviours revolve (e.g. improvement of technical infrastructure, minor crises, social life of children and adults, exchange of services). An attempt to trace the roots of conflicts & uncover the real meaning ascribed to the widely used division of inhabitants into "old inhabitants" & "newcomers" was also made. The study interconnects social characteristics of inhabitants & spatial characteristics of the neighbourhoods as they are important factors stimulating the conflict. The field study was conducted in the form of questionnaire interviews with 260 inhabitants (new a living there not longer than 5 years and old a born there or living there for at least 30 years) of the chosen suburban villages.

Kalaylioglu, Mahir & Akis, Yasemin (Department of Sociology / Middle East Technical University, Orta DoAu Teknik Üniversitesi, ADGnönü Blv. 06531 Ankara/TÜRKADGYE [tel: +90 312 2103124; e-mail: mahirULkalaylioglu@yahoo.com]), **Turkish Associations in Metropolitan Stockholm: An Analysis of Differentiation and Organizational Patterns,** *International Sociological Association, Gothenburg, Sweden,*

¶ Considering itself as a multi-ethnic society, Sweden encourages immigrants to organize themselves along ethnic lines since the 1970s & ethnic migrant organizations are considered as one of the channels for immigrants' social & political participation to the Swedish society. This study aims to explore the general characteristics of the Turkish migrant associations in Stockholm and associational differentiation process since the beginning of 1990s. We also aim to find out to what extent national & local Turkish associations function as the channels of political and social participation for Turkish migrants. Methodologically, the study is a qualitative analysis based on in-depth interviews. Forty semi-structured in-depth interviews were conducted in Stockholm with the representatives of the Turkish associations between the dates of March-June 2008. The results of the study reveal that national federations (including also that of women & youth) are close to act as a spokesman for their constituency, however, local associations do not assume a particular role in the social and political participation of Turkish migrants. Yet, as a whole, they face serious problems such as financial difficulties & the absence of active members. Moreover, the study also contends that, in explaining the decline of associational activities among (Turkish) migrants, special attention is also to be given to the Swedish state, which has always assumed an active role in the development of migrant associations in Sweden through certain mechanisms. It seems that the decline of corporatism in Sweden in 1990s eroded the principle of partnership a one of the aims introduced by the multiculturalist immigration policy of the 1970s. And this, in turn, has been echoed more or less in the decline of associational activities among Turkish migrants.

Kalekin-Fishman, Devorah (University of Haifa, Faculty of Education, Mount Carmel, Haifa 31905, Israel [tel: +972-4-8123605; fax: +972-4-8240891; e-mail: dkalekin@univ.haifa.ac.il]), **Ideology in Everyday Life: The Uses of Sounds,** *International Sociological Association, Gothenburg, Sweden,*

¶ Tracing the development of the concept of ideology, A12iA34ek (1994, pp. 1-33) surveys conceptualizations that make it possible for us to trace connections between the study of sound & the study of ideology. He cites Hegel on religion ('which, for Marx, was ideology par excellence',), & points out that Hegel analyzed religion as comprised of doctrine, belief, & ritual. This is the basis for a 'map' of ideology. But these ideas have implications for theorizations of everyday life as well. The modes of production and the relations they require have a detailed impact on how people live in & out of the workplace (Braudel, 1972; De Certeau, 1988; Lefebvre, 1991). The realization of capitalist forms at all levels of experience is expedited by the framework of a 'worldview', at the heart of which is a grasp of how reality is imbued with ideology. Focusing on sound as an externality of ideology, which is a 'spontaneous' phenomenon in the

experience of everyday 'reality', I will point out some features through which sound is manipulated by looking at how sound is implicated in shaping a worldview that sustains a regime. From ranges of sounds–from sounds that seem to be completely neutral to sounds that convey more or less explicit instructions I describe rituals embodied in the sounds of everyday life in Israel & aspects of rituals which are embodied in sound displays that obliterate the everyday. Touching on the dialectic of sound & silence in rituals, I claim that sound can be seen as a link among places, technologies, & relationships in the macro as well as in the micro.

Kalkowski, Peter & Paul, Gerd (Soziologisches Forschungsinstitut, 37085 Göttingen [tel: 49 551 5220528; fax: 49 551 52205 88; e-mail: gpaul@gwdg.de]), **Professionalisation in New and Old Health-Related Jobs in the Wellness-Sector in Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ More & more tourism & other sectors providing personal services mark them with a wellness-label. The wellness-business has a broad range of offers, either stressing the passive side of relaxation and well-being or concentrating on active prevention & health and body management. For the latter, the "second" health sector, often traditional health professionals like physiotherapists & masseurs are providing independent health-services (without a physicians prescription). For these professions there is a tendency for increasing academic formation in Germany. We look at the chances of a further professionalization of the old (e.g. physiotherapist) and new (e.g. wellness-manager) professions in these careers. In our ongoing research we are interviewing suppliers, customers and workers in the wellness-sector with personal & semi-structured interviews. Our preliminary results of in-depth interviews with suppliers of wellness-services seem to show that for most of them a positive patients-feedback & the experience of the effectiveness of their treatment is the core of their self-image as "health-experts"–regardless of their professional background. A systematic reflection of their practices & accompanying supervision is neither delivered by professional associations nor by vocational training institutions. Other organisational and labour-market related obstacles to a professionalization are presented in the paper.

Kamani, Somayeh & Jafari Siavashani, Fatemeh, The Effect of Socioeconomic Condition on Job Satisfaction of Low-income and High-income Sport Managers of City of Tehran, *International Sociological Association, Gothenburg, Sweden,*

¶ Studies show that dissatisfaction of managers in a number of societies is influenced by socioeconomic factors. Low income may lead to increasing dissatisfaction of managers. The present study aims at identifying the effect of socioeconomic condition on job satisfaction of low-income & high-income sport managers of Tehran. This study has been conducted by stratified random sampling method on 305 sport managers who have been selected from all male and female sport managers in organizations, federations, boards, and sport clubs of Tehran. To this end, R. Stertes & D. Brown Steen Personality Traits Questionnaire was used to identify personality traits (success-seeking, power-seeking, sense of belonging) of sport managers & Minnesota Job Satisfaction Questionnaire was used to identify job satisfaction of sport managers. The questionnaire developed by the researcher was used as well. The samples were classified into three low-income, average-income & high-income classes. Independent t-test was used for evaluation of relation of variables. Success-seeking & sense of belonging in low-income managers was more than high-income ones. Therefore, success-seeking & sense of belonging was more obvious in low-income managers in comparison with high-income managers in a meaningful way. In addition, sense of power-seeking in low-income managers was a bit more than high-income ones. However, this difference was not meaningful statistically. Low-income managers were more satisfied with their jobs than high-income managers. Thus, there is a meaningful relation between different levels of socio-economic condition & managers' job satisfaction. Results of the present study indicated a meaningful relation between different levels of socio-economic condition & job satisfaction of sport managers of Tehran. Therefore, it seems that job satisfaction of sport managers highly depends on socio-economic condition

Kammerbauer, Mark (Bauhaus University Weimar, Weimar, Germany, 99423 [tel: 0049-0160-96645062; e-mail: Mark.Kammerbauer@uni-weimar.de]), **Schismourbanism: Cities, Natural Disaster, and Urban Sociology,** *International Sociological Association, Gothenburg, Sweden,*

¶ The purpose of this contribution is to address "urban" planning in relation to natural disaster & climate change, how this complex affects sociospatial patterns of class & ethnicity, and corresponding theoretical/methodological post-disciplinary application. This complex is relevant in the context of city and natural disaster. The author's doctorate research deals with this subject in the case of long-term recovery in New Orleans following Hurricane Katrina. The theoretical framework is based in the sociospatial perspective (Gottdiener & Hutchison 2006) and combined with the urbanist/historical perspective of concepts of "urban fabric" (Lefebvre 1996) & "tessuto urbano" (Muratori, in Rossi 1982). The methodology reflects this approach with both horizontal (quantitative questionnaire-based survey among residents/evacuees in New Orleans & Houston in 2007) & vertical (qualitative interviews with key actors in 2009) case study research. Return to New Orleans is incomplete, leading to sociospatial fragmentation between cities. Current recovery plans miscalculate needs of urban populations. This complex is rooted in differential access to resources based in history, class, and ethnicity. Natural disaster may trigger inter-urban dynamics that cities need to prepare for. Return cannot be "mandated" by recovery plans & urban planning strategies. The question arises: Who do planners plan for?

Kamphorst, T.J. (WICE-DSL, P.O. Box 544, 4100AM Culemborg, The Netherlands [tel: + 31 6 42976435; e-mail: teus.kamphorst@wice-dsl.nl]), **Leisure and Life though the Ages: The Special Case of Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ It is argued that leisure of Europeans, indeed, to a certain degree, is distinctive from leisure of inhabitants of other parts of the world. The explanation for that has to be found in the differences in the respective histories of the continents. Analysed are a number of historic features that gave European leisure its specific characteristics. The question is addressed in what direction European leisure can be expected to develop.

2010S01271

Kamphorst, Teus J. (WICE-DSL, P.O. Box 544, 4100AM Culemborg, The Netherlands [tel: + 31 6 42976435; e-mail: teus.kamphorst@wice-dsl.nl]), **Leisure: the Public–Private Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ Addressed is the issue why in certain parts of the world leisure and free time have developed into more individualistic pursuits that are considered

to primarily belong to the private sphere of life and the locus of control of which primarily is with the individual, while in other societies leisure & free time, to a greater extent, seem to be located more in the public sphere, more intense embedded in processes of social directed governance and subject to social control. An attempt is made to analyze the drawbacks & benefits of both approaches. Concluded is that the two options lead to totally different outcomes, none of them deserving the qualification 'optimal'. Leisure's role in the world may increase when the positive aspects of both approaches are being combined. Yet the remaining question to be answered is where to find the optimum balance between individualistic & societal aims regarding leisure time, defined as belonging to the public sphere.

2010S01272

Kanai, Masayuki (School of Human Sciences, Senshu University, Kawasaki, Kanagawa, 214-8580 [tel: +81-44-911-0595; fax: +81-44-900-7814; e-mail: mkanai@isc.senshu-u.ac.jp]), **Interaction between Individual and Collective Social Capital along Dynamical Social Process,** *International Sociological Association, Gothenburg, Sweden,*

¶ Tourist destination development has cooperative but competitive aspects. While solidarity among stakeholders are indispensable for providing collective goods such as promotion activities, individual organization will have an incentive to free-ride. Organizations seem to be rational if they invest in individual social capital (outside of community) rather than in collective social capital (colleague organizations), resulting in no provision of collective capital. A new idea to solve this puzzle lies in the dynamic nature of community development. The present empirical study on Japanese hot-spring destinations showed that whether outward or inward investment was more profitable to an organization depended on whether collective social capital did exist or not in a community. The amount of collective capital varied along upgrading stages of tourist destination development. At the first stage (organizations did not unite), making outward connection was beneficial to performance of each organization. While in the second stage (organizations had begun to cooperate), socializing with colleague organizations had become a better strategy for each organization. Data were collected by the questionnaire surveys of Japanese hot-spring inns & inns associations conducted in January to February 2007. Population was 1,515 inns & 55 associations. 779 inns returned questionnaires (51.4%), & 51 associations returned questionnaire (88.7%).

2010S01273

Kanckos, Lise (Department of Sociology, Åbo Akademi University, Turku, Finland, 20700 [tel: +35822153288; e-mail: lkanckos@abo.fi]), **Consensus or Conflict? Religion, Values and Party Discipline,** *International Sociological Association, Gothenburg, Sweden,*

¶ In Finnish party politics some issues, which either are considered moral issues or issues belonging to a private sphere, are generally treated without party discipline. In this paper I will give examples of how these political issues are defined subjectively with reference to religious or moral values. Furthermore, I will discuss the position of churches as institutions involved in the political process, & which discursive role statements by religious institutions might have in parliamentary debates concerning issues with relaxed party discipline. I will address how lack of party discipline affects political debates, e.g. the use of religious or moral language. On the other hand, there are also examples of instrumental reasons for defining some political issues as private matters. Another aim of this paper is to discuss how religious & moral discourses in party politics are related to some theoretical discussions on consensus (e.g. Habermas) and conflict (e.g. Mouffe) in political discourse. Jürgen Habermas claims that European societies can be describes as post-secular, in which religious & secular groups should reach consensus through learning-processes. Chantal Mouffe questions the idea of a "post-political" vision, according to which party disagreements belong to the past & consensus can be reached through dialogue. Mouffe claims that antagonism is necessary in democratic politics.

Kaneko, Masahiko (National Defense Medical College, Tokorozawa-shi, Japan, 359-8513 [tel: +81-4-2995-1726; fax: +81-4-2996-5181; e-mail: hca00546@nifty.com]), **Sociological Studies of Medical Institutions in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ This presentation examines sociological studies of medical institutions in Japan from the standpoint of national contexts. Japan has the highest number of hospital beds per 1000 population among OECD countries. Historical studies of medical institutions in Japan have examined how this situation has occurred. Japan, which had adopted traditional Chinese medicine, established diplomatic relations with Western countries & introduced Western medicine in the late 19th century. According to Western medical sociologists and historians, the then hospitals in Western countries changed from deathhouses into centers of medical technology. Historical records in Japan show that the Meiji government officials inspected Western countries & felt hospitals as big medical institutions. The sickbed capacity has mainly sorted hospitals from clinics to date from those days in Japan's medical care law. In addition, people have been able to consult doctors in hospital as primary care. Under such circumstances, popular clinics (small medical institutions) became hospitals (big medical institutions) one after another. Thus, hospitals & hospital beds increased in Japan.

Kang, Ting-Yu (Oxford University Centre for the Environment, 62 Banbury Road, Oxford, OX2 6PN, UK [e-mail: ting-yu.kang@ouce.ox.ac.uk]), **Virtual Homeland: The Online Construction of Home, Landscape, and Culture Among Chinese Migrants in Britain,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines migrants' use of the internet to strengthen their ties with their homeland online, exploring the resurging role of territories, landscapes, & places of the origin in making and maintaining ethnic identity in the digital age. The potential of the internet to aid communication across borders has largely been theorised as weakening the significance of place-based, geographical experiences in forming culture & ethnic identity. However, focusing on the London-based Chinese community, this paper demonstrates how the supposedly de-territorialised communication technology serves to reify the territorial & spatial attachment to home & homeland among migrants. Based on ethnographic methods, the findings demonstrate a variety of online cultural practices that re-territorialise the migrants' homeland on the internet. First, the diasporic subjects reproduce the virtual landscape of their home territories through sharing & discussing photos and other images of their families. Secondly, in addition to the visual experiences of the homeland, the subjects use various real-time internet tools to reproduce the temporal experiences of those in their homeland by participating live in events taking place in China & nearby Asian countries. Thirdly, they also produce virtual bodily experiences by organising & participating in collective online social events & virtual bodily contact. This paper argues that through these practices, the use of the internet facilitates & reinforces rather than undermines the territorial attachment to the country of origin among migrants.

2010S01276

Kania-Lundholm, Magdalena (Department of Sociology; Uppsala University, Uppsala, Sweden 75126 [tel: +46184711196; e-mail: magdalena.kania@soc.uu.se]), **Young, Polish and Proud: Discourse of the New Patriotism and Popular Culture in Poland,** *International Sociological Association, Gothenburg, Sweden,*

¶ In recent years in Poland there have been increasing public and scholarly discussions about the need to introduce the vision of civic patriotism that would be an attractive anchor of collective loyalty & identity for the young generation. Among driving forces of the national discourse is that knowledge about country's past heritage is necessary to build up collective consciousness and strong national identity for future generations. One way of doing it is through popular culture, process that sometimes is referred to as "making patriotism trendy". In my presentation I discuss two specific cases; first state-agency promoted series of comic books about Polish history & second- more independent initiatives, such as hip hop & rock songs with patriotic message. I suggest that these initiatives contribute to introduction of the new aesthetics of patriotism, in line with brand postmodern culture, youth, irony and pastish. At the same time some of them offer a specific limited political rather than social/cultural vision of collective remembering. The overall discourse of this "new patriotism" in Poland points to an interesting dynamic between official state-sponsored & more critical bottom-up initiatives mainly directed to & created by youth. I argue that popular culture is not only a vehicle in disseminating individual hedonistic identities & lifestyles but can also be a factor in constructing national identity & collective consciousness. This can be seen as a strategy of the youth to deal with issues such as up-rootedness, alienation & globalization in contemporary Western societies, as Polish case shows.

Kanitkar Tara Sharad, Shukla Sharvari Rahul (Retd Professor, International Institute for Population Sciences, Deonar, Mumbai. Member of the Executive Council, International Longevity Centre (ILC), Pune, India. [e-mail: tarakanitkar@hotmail.com]), **Ageing of the Population in Japan and India: A Comparison Between Elderly Policy of Japan and India,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction: In the past 100-150 years tremendous changes have taken place in the age structures of populations. The fertility declined and life expectancy went up. As a result the population became aged. Rapid increase in the life expectancy is one of the greatest achievements of mankind. At the same time it poses many challenges before the national governments. Methods: Using the estimates and projections provided by United Nations Population Prospects, the comparative study of Japan & India on ageing & policies on ageing was carried out. Results: Japan is the most aged country in the world & India has quite young population. Both the countries have policies for elderly persons. The fundamental objective of Japan's policy is, "the creation of prosperous society with equitable & vibrant local communities that are characterized by a spirit of independence & solidarity." Japan's policy also follows the suggestion "Society for all ages." The Japan has used mainly the developmental approach. India has mostly used the welfarist approach. Japan's policy tries to follow the MIPAA guidelines. Although, India's NPOP was formulated prior to Madrid Policy, no amendment was carried in India's NPOP in subsequent years. Conclusions: In India, the poverty is associated with old age. Although the policy expresses its concern for elderly but not much effort have been made. The reason for this could be that India is only 8% aged population. It seems that the demographic realities prevail while formulating elderly policies.

2010S01278

Kankava, Giorgi (Independent scholar, 24a Simon Chiqovani str. apt. 89 [tel: 99532333415; e-mail: gkankava@gmail.com]), **Globalization and Modernity Decline: A Euro-Centric Bias,** *International Sociological Association, Gothenburg, Sweden,*

¶ There is a view by transnationality/ism theories that "recent innovations in transportation & communications have made possible a density & intensity of links not previously possible between the country of origin & of settlement. This, in turn, has allowed for these communities to live simultaneously in two or more worlds or to create & live in 'transnational social spaces' to a degree not previously known". However, where transnationalism observes the "transnational community" with "inclusive identities", there the comparative literature finds the incompatibility of cultural identities producing communications gap threatening to be converted into violence eventually. The attempt to overcome Euro-centrism started by sociocultural evolution proves powerless. Moreover, transnationality/ism itself turns out to be influenced by the bias excluding the cultural other from a dialog. Theoretically, that makes it impossible to be aware of social changes initiated by a culture collision, as well as of development patterns. Practically, that unintentionally replaces an opening of peace within the conflict. Eventually, those appear to be a trap promoting the conversion of modernity, a civilization based on the Enlightenment innovations, into post-modernity, seeming a notable content of globalization.

Kannabiran, Kalpana (Chityala Ailamma Centre for Interdisciplinary Research and Asmita Resource Centre for Women, Hyderabad, India, Teachers\' Colony, E.Marredpally, Secunderabad 500026, AP, India [tel: +91 40 27733251; fax: +91 40 27733745; e-mail: kalpana.kannabiran@gmail.com]), **Gender, Sexual Violence and the Idea of Intimacy,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the relationship between intimacy -- representations of intimacy, claims to intimacy, perceptions of intimacy– legitimacy/recognition, violence & gender. The idea of intimacy is intermeshed with multiple levels of normativity, so that sexual violence may in some instances form the conduit through which intimacy is legitimately expressed & transmitted [as in the case of marital rape which is not a criminal offence in India]; in other instances sexual violence may form a central part of the exercise of authority which includes the provision of material needs by a spiritual leader who shares the living space; in yet other instances, sexual violence by public authorities may form part of the attempt to police women found with male companions/escorts in public & suspected of prostitution, where the perception of intimacy as "illegitimate" or "illicit" provides the justification for sexual violence; another set of instances foregrounds the relationship between disability, intimacy and sexual violence; & finally the ways in which traditionally transgender communities are targeted by the state through punitive laws, throws up the complex relationship between state violence and heteronormativity. This paper, through an examination of specific cases in India, will reflect on the different ways in which intimacy, sexual violence & gender intersect, in the hope that the idea of intimacy itself will be opened out in the process.

Kantasalmi, Kari (Faculty of Behavioural Sciences, University of Helsinki, 00014 University of Helsinki, Finland [tel: +358 9 19120503; e-mail: kari.kantasalmi@helsinki.fi]), **Critical and Reform Pedagogy: How to Conceive Sociologically Such Phenomena within Educational Change?,** *International Sociological Association, Gothenburg, Sweden,*

¶ During the thirty years since her (1979) book on "Social Origins of Educational Systems" Margaret Archer has developed a morphogenetic approach on long term & large scale educational change. In time dimension, her cyclic model includes interactive middle phase between structural conditioning & structural elaboration. The middle phase is basically conceived in form of negotiations between interest groups. These negotiations are located in the cultural domain. Archer's approach suggests conceiving variety of pedagogical thinking & theorizing about education as part of this mechanism. Her approach also draws upon systems theoretical sources. Thus, in this paper I would contrast Archer's systems theoretical thinking devices with those of Niklas Luhmann's dynamic systems theory. Luhmann wrote a lot on education system, but for him, culture as a separate domain did never become operational as in Archer's conceptuality. My paper discusses these two alternative ways of thinking education system & the grasping of the cultural in its change. This is done by focusing on those forms of theorizing education that are often called critical pedagogy and reform pedagogy. Such pedagogies as modes of thinking educational practices and/or as forms of educational knowledge are included within the processes of educational change, but how to conceive them? This key question of my paper can be complemented by epistemic doubt which Luhmann (1997a, 47) expressed by asking, that does one see everything that is to be seen if one observes with a scheme of action & resistance? This formulation adds to the intended theory comparison a questioning of the bases of dealing with the "cultural domain" in the agency based (Archer) and communication based (Luhmann) understanding of the dynamics in educational change. While searching intellectual and epistemological advantages, the paper discusses differences and possible complementing aspects between Archer's morphogenetic approach & Luhmann's dynamic systems theory.

Kappler, Karolin Eva (Department of Sociology and Organizational Analysis, University of Barcelona, Barcelona, Spain, 08034 [tel: +34 972334013; fax: +34934021804; e-mail: karolinkappler@web.de]), **"The Cathedral of the Sea": Looked at from a Feminist Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ The current & global popularity of historical novels stirs up curiosity & raises several questions regarding their impact on gender construction. Novels of internationally successful authors like Ken Follett or Idelfonso Falcones present gender (in)equality and gender-based violence as social & historical facts in their novels, only sometimes putting them into the perspective of a different legal or moral context. In this sense, they partly work to disseminate a traditional image of the female, & are thus joined to a long tradition of female representations both in literature & art. This paper concentrates on one specific way of representing women: victimhood. Parting from previous studies such as Wolfthal's analysis on rape images & Künzel's study on readings on rape, our research question is the following: for today's readers, what impact does the frequent description of rape as a common social action have? In a case study on the women characters in Idelfonso Falcones's "The Cathedral of the Sea," which is presented as "the story of young Arnau, a peasant who flees his feudal lord & takes refuge in Barcelona where he becomes a free & rich man," the present paper rewrites the women's side of the story, marked by rape & violence. It is the sensitively described rape of Arnau's mother, Francesca, which provides the central motif of the whole novel, & it is Francesca who, living a life of victimization, exclusion & stigmatization, appears in the novel's central moments. According to traditional role models, she sacrifices her female identity & motherhood, in order to protect her son, selling her own body in order to survive. Although life circumstances & life events force her into this role, she manages to take on an active role, albeit one that is partly hidden by the male-dominated main storyline of the

novel. In this sense, she indirectly offers a new model for gender roles. Furthermore, we suggest that the novel could be rewritten as her story.

Karapehlivan Senel, Funda (Sociology, Marmara University, Marmara Üniversitesi Göztepe Kampüsü 34722 KadA-köy/ ADGSTANBUL Turkey [tel: +902164186638; fax: +90216347 87 83; e-mail: fundakarapehlivan@gmail.com]), **Neoliberal Restructuring of Education and Its Implications at the Micro Level: Community Financing of Primary Education in Turkey,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper will examine the scope of neoliberal educational policies with a specific focus on decentralisation & their implications on educational inequalities by drawing on the case of Turkey. It aims to analyze this issue from a human rights perspective. It will look at the restructuring of education by focusing on the community financing of education as a type of decentralisation policy. With the introduction of neoliberal policies through structural adjustment programmes in the Third World, public services, including education went into a process of transformation from being public goods to commodities. In this paper it will be argued that decentralisation policies as a part of this transformation have created new forms of inequalities in education & had implications for the provision & the enjoyment of the right to education. This paper will illustrate the effects of neoliberal policies on educational inequalities at the micro level by drawing on the qualitative data collected from two schools in Ankara. The paper aims to show how under funding of education & increasingly used "private" funding from communities & families to support education create inequalities particularly in the quality of education. The paper will have a critical approach to liberal-individualist theory of human rights arguing that economic, social & cultural rights have been reduced to "consumer rights" with the withdrawing of the state from the provision of the public services & the introduction of the market system in these services since the late 1970s. The paper will discuss the possibility of provision & enjoyment of the right to education within the current neoliberal socio-economic structure. Its specific concern, in this process of neoliberalisation, is the introduction of decentralisation practices like the community financing into primary education & their implications on the right to education in Turkey.

Kardam, Filiz & Cengiz, Kurtulus (Department of Economics, Cankaya University, Ankara, Turkey, 06530, Ogretmenler Caddesi No:14, Balgat [tel: +90 312 284 45 00 /Ext.207; fax: (Faculty): +90 312 286 48 73; e-mail: kardam@cankaya.edu.tr]), **The Practice of Citizenship in Turkey,** *International Sociological Association, Gothenburg, Sweden,*

¶ As a combination of German & French models Turkish citizenship is generally defined in the literature as a republican (universalistic), state centric, passive, homogeneous, discriminative & top down practice, which has been historically developed on the centre-periphery conflict & based on the rejection of differences. However, in the last 20 years, the citizenship regime of Turkey is under the increasing pressure of religious, ethnic & sectarian movements & identity claims and also under the tension of the democratization efforts encouraged by Turkey's accession process into the EU. So, the conventional conception of citizenship is under challenge. However, there are very few research studies shedding light on the practical aspects of the Turkish citizenship. In this presentation, based on the findings of a qualitative research in Ankara, we will try to depict how this republican understanding is reflected on the daily citizenship practices, perceptions & behaviour patterns of people in the following domains: the perceptions of citizenship, state, rights & responsibilities; the culture of living together; problem solving; participation & the standpoint with respect to "others" & the world outside. While doing this, we will also focus on the divergences, convergences & articulations of the republican position & values with more traditional tendencies and socio-cultural patterns of Turkish society.

Karjalainen, Timo P, Luoma, Pentti & Järvikoski, Timo (Thule Institute; University of Oulu, Finland [fax:; e-mail: timo.p. karjalainen@oulu.fi]), **Modelling Climate Change as a Societal Problem: Comparing Finns' And Estonians' Attitudes Toward Climate Change,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recent Eurobarometer surveys indicate that European citizens living in different countries have different sensitivities towards climate change. Almost 70 per cent of Finns consider climate change as the most serious problem currently facing the world as a whole while only 37 per cent of Estonians see it in that way in 2009. Based on the Eurobarometer data & the national survey data from Finland and Estonia, this paper argues that in Finland climate change is already regarded as a serious societal & environmental problem in the different levels or sectors of society. This is also reflected in the people's attitudes in Finland. Estonians are not as concerned on climate change, which may also reflect the inadequacies in the media concern & maybe even in administration. Finland & Estonia are culturally & geographically close to each other although differences in welfare are sharp. The clear differences in attitudes toward climate change & possible reasons for these are studied using multidimensional scaling. According to survey results the perception of climate change issues in Finland changed quite dramatically from 2004 to 2007, which could perhaps be explained by using John Hannigan's model of the formation of an environmental problem as a societal problem.

Karklina, Ieva, Koroleva, Ilze, Rungule, Ritma, Snikere, Sigita & Aleksandrovs, Aleksandrs (Riga Stradins University, Riga, Dzirciema 16, Latvia, LV1007 [tel: +371 67409105; e-mail: ieva@petijums.lv]), **The Problem of Social Exclusion in Latvia: Analysis of Risk Factors and Future Challenges,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper describes the mechanisms of differentiation & social exclusion in post-soviet Latvia. The discourse of social exclusion has its origins in the objective of explaining social cleavage that developed in the end of 20th century in relation to various globalisation processes, changes in employment, & welfare state social policies. In our study we employ the theoretical approach by Duncan Gallie, which emphasizes that despite differences in definitions & perspectives on social exclusion they all are united by three major components: unemployment, poverty, & social isolation. In order to identify these components & to calculate indexes, firstly, indicators in each of aforementioned dimensions were selected. Our analysis is based on wide empirical material (quantitative population surveys (n=8000), labour force surveys, and qualitative interviews with social exclusion risk groups). By employing such methods as factor analysis, logistic regression, and cluster analysis, we unveil the character & expressions of social exclusion in Latvia. Analysis of the impact of the social exclusion factors (components) leads us to identification of groups that are subjects to higher social exclusion risk: disabled persons, pensioners, single parent, & large families. Finally, we turn to the means that may lower the risk of social exclusion for other groups in the society as well.

2010S01286

Karlis, Litaunieks (Riga Stradin's University, Riga, Latvia, LV-1007 [tel: +371 29410113; e-mail: consultation7@gmail.com]), **Global Financial Crisis and Its Impact on Social Processes in Latvia,** *International Sociological Association, Gothenburg, Sweden,*

¶ In a situation of a global financial crisis, an essential part of employers got into the "shadow" economy & started paying taxes only partially, or not paying them at all. The acquisition of illegal funds as a social deviance, due to the "shadow" economy, is driving the society towards social conflicts and, consequently, the problem under study at the current period becomes a vitally important status of topicality. Aim of research. To study the consequences of the global financial crisis & their impact on social processes in Latvia, as well as to offer suggestions for the improvement of the current situation. Research Methods. In the research theoretical research methods were used–a survey of Latvian & foreign literature & the analysis of the study. Concurrently, study was done on theoretical & practical links of deviance, social norms, social groups, etc. to the process of illegal acquisition of funds & the consequences due to it in various strata of the society in Latvia. Results & Conclusions. In Latvia the proportion of the "shadow" economy is the highest in the EU, reaching 39,4% of GDP. There is no money in the state budget, the society gets stratified, illegal acquisition of funds and tax evasion are becoming social norms and, namely, the existing social norms are ignored. The national socially-economic policy has to be changed & moved towards poverty reduction, strengthening of the middle class of society & increase of social capital. One has to shape public opinion in order the acquisition of illegal funds did not turn into a social norm but remain in the status of social deviance.

Karlson, Kristian Bernt & Holm, Anders (Danish School of Education, Aarhus University, Tuborgvej 164, DK-2400 Copenhagen NV, Denmark [tel: +4523369285; e-mail: kristian. karlson@gmail.com]), **Do Primary Effects Really Exist? A**

Panel Fixed Effect Study, *International Sociological Association, Gothenburg, Sweden,*

¶ Most social stratification researchers acknowledge that the effect of parental social class on academic ability is strong & persistent across cohorts & countries. Numerous studies point to the existence of these "primary effects," i.e., the influence of social class origin on ability, even net of confounding factors such as gender, family structure, ethnicity, & cultural resources. However, no research has previously studied the correlation between social class & academic ability measures in which all individual-specific unobserved heterogeneity is held constant. Using a panel fixed effects model on the longitudinal data of the National Child Development Study we show that the effect of social class on both mathematics & reading abilities is spurious in the sense that social class is correlated with unobserved factors that "explain away" the significant association between social class & academic abilities. Our surprising results suggest that possible reproduction mechanisms in school achievements are not related to social class per se, & we discuss whether other reproduction mechanisms might be at play.

Karupiah, Premalatha (School of Social Sciences, Universiti Sains Malaysia, 11800 Penang, Malaysia [tel: 60125242322; fax: 6046570918; e-mail: prema@usm.my]), **A Study on Social Construction of Beauty among Students at Universiti Sains Malaysia, Penang, Malaysia: a Preliminary Analysis,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is based on an ongoing study on social construction of beauty among students at Universiti Sains Malaysia, Penang, Malaysia. This paper describes how beauty is defined & beauty standards identified by students at the university. Fifteen students were selected for this study using the purposive sampling method. Data for this study were collected by conducting semi-structured interviews. These interviews were transcribed and the text was later analyzed using qualitative data analysis software. Respondents defined beauty as physical characteristics (thin, tall, & fair-skinned) or a combination of physical characteristics & personality of a person (kind, caring, and self-sacrificing). Respondents differentiated between "inner" and "outer" beauty & gave relative importance to one or the other. Respondents identified physical characteristics as beauty standards for women however were unable to give similar standards for men. For men, respondents emphasized the importance of "inner beauty" rather than "outer beauty." They agreed that common beauty standards have changed over the years. Respondents also described that media influences their idea of beauty especially among the younger generation.

Kashida, Yoshio & Ujiie, Yasuhiro (University of Tokushima, Tokushima-city, Tokushima pref. Japan, 770-8502 [tel: i1481 88 656 9512; fax: i1481 88 656 9512; e-mail: kashida@ias.tokushima-u.ac.jp]), **Lived Experience of Developmental Disorder: The Clarification of Two Institutional Orders by Video-Based Ethnography,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper, we want to clarify the Lived–experience–of–developmental–disorder by the method of video-based ethnography. For example, in the first half of this paper, the body-distance-social-order between individuals is paid attention. Generally, a developmental disorder person could not receive simultaneous plural layered communication access. Plenty of sensory stimulation will confuse developmental disorder child. At the X elementary school, we had observed & video-taped the class of first grade that was consisted by 33 pupils within 1 doubted developmental disorder pupil & 1 teacher. There was a little trouble in the class on Monday morning. The doubted developmental disorder student was not able to answer the question issued by a teacher. Some classmates encouraged him, some classmates criticized him noisily. But several minutes later, the pupil was able to answer the right word. What tools were used? How was teacher performed? Those questions are the problems of this research. We had checked four angled videotapes. And we examined them closely with some interviewed data. This type of combined method named "video-based ethnography" in Japan. We reached below two findings. Firstly, the teacher is not only-one-commander in the classroom. There are some pupil's utterances which direct other pupils' actions. Secondary, In spite of the First finding, the teacher's short-body-distance-technique for the doubted developmental disorder student is very effective. The group dynamic cannot be disregarded in this situation, but individual teacher's technique is good for solving the doubted developmental disorder student problem. In the latter half of this paper, we found two more findings. The second data is "Some Reactions by developmental disorder high school student(Mr.S) in the situation of sentence complete test(SCT)." Firstly, we find that the "response" is not only the product of the respondent; In reality, it is the result of interaction with the questioner. Secondary, an autism highscool student's interaction style(S communication style)is the style of transforming from abstract to concrete. In general, we easily answer the question about the concrete things but extremely the abstract questions or highly general things. However, in this case, he seems to answer easily the question "what about that man is?" (His answer is "male" without any hesitation). The reason why he can answer so quickly is this question has the same pattern of the question of "what about that woman is?" Therefore we can tell that he has the answering pattern & when he answers some questions, he tends to follow this pattern (he regards the pattern of previous Q & A). In conclusion, we find the lived experience of Developmental disorder through The Clarification of two institutional orders by Video-based ethnography.

Kasi, Eswarappa (University of Hyderabad, Department of Anthropology, School of Social Sciences, Central University (Post), Hyderabad-500046, Andhra Pradesh, India [tel: 91-040-23133055; e-mail: kasieswar@gmail.com]), **Construction of Social Capital among Sugalis of South India,** *International Sociological Association, Gothenburg, Sweden,*

¶ Role of Third Sector in the development of marginal groups is increasing vehemently after the post liberalisation and globalisation in India & also some of the Asian countries. Liberalisation & globalisation paved the way for the emergence of the Third Sector as an agency where earlier the State used to play this role. Hence, there is a need to study the role of the Third Sector in the Construction of social capital among the Sugalis of Andhra Pradesh, South India. The present paper is basically a qualitative micro-level study, of Sugalis, aimed at understanding the livelihood systems of the marginal communities & within which inter-play of political processes among Sugalis in understanding the social capital. The paper tries to unveil how the Sugalis construct their social capital in the changing nature of the developmental sphere. The paper also tries to see the response of the third sector in changing the lives & providing basic minimum facilities to the Sugalis. There is an NGO intervention in the village looking after their livelihoods. Other side there are political parties which are trying to mould youth to their party fold & by offering them to take up local level party positions. Within the community, there is division according to party lines & kinship networks are being disturbed due to this party politics. However, the paper concludes that inspite of the efforts made by the Third Sector & also partially by the State & parties, there is still unhappiness among the marginal groups in the village. Thus, the paper ends with a positive feeling, how far the construction of social capital helps them to come up socially, economically, politically and other wise in the village/ society.

KatA-rcA-, Hakan & Kauffenstein, Evelyn (Anadolu University, Physical Education and Sport Department, Eskisehir, Turkey, 26470 [tel: 00902223350580-6736; fax: 00902223213564; e-mail: hakankatirci@anadolu.edu.tr]), **Marketing in Turkish Football: Licensed Products and Distribution Strategies Visualising Regional Identity–An Analysis of the TV-Series "Geschichte Mitteldeutschlands",** *International Sociological Association, Gothenburg, Sweden,*

¶ Within the debate on the re-emergence of the local in the midst of increasing globalisation, articulations of regional identities have (re-)gained attention. Conscious of the various pitfalls of the term "identity," this study focuses on visual presentations of history as one prominent form of regional representation. Unlike the vast majority of research concerning articulations of identity, this study puts the analytical stress on visualisation. Within the noticeable trend of German regional TV stations producing historical documentaries which narrate a history of the according catchment area, this study chooses the continuous serial "Geschichte Mitteldeutschlands" (History of Middle-Germany), reading it as a case of region-building promoting & shaping a middle-German-identity. It explores the connections between visualisation strategies, the narration of the history of the region, & the shaping of regional identity. The analysis proves the chosen case to be highly instructive. Since its launching in 1999, the series has undergone profound changes regarding the narrative style accompanied by a shift in the dominant visualisation strategies, which also allows conclusions regarding the serials aim to actively promote a regional identity. The study stresses the relevance of visual data & its important role in understanding the social world.

Kato, Gentaro (Poole Gakuin University, Sakai, Osaka, Japan [tel: +81-72-292-7201; fax: +81-72-293-5525; e-mail: gen@sociologist.com]), **Acceptance and Development of the Arguments on Scientific Knowledge in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ This presentation is intended to show the framework of the recent arguments on scientific knowledge in Japan. After the Science Wars, STS has turned to the practical aspects, which is clearly influenced by discussions about civil society. Especially in experimental studies about risks or environmental issues, they advocate that the legitimacy of decision making is to be in the domain of public opinion. Some examples of consensus conferences have been introduced & many young researchers agree with the arguments on public understandings of science such as Brian Wynne's "misunderstood misunderstandings." In that mood, recent discussions tend to be more practical, for example, reports on operating science cafe, & practical researches have increased instead of political criticisms on scientific- technological problems. It can be said that theoretical development has slumbered. This presentation underscores the division between political communication (between experts & lay people) and anecdotal, therefore educational or sometimes illuminative, communication. The concept, "science for the public," has attracted new polemicists from museology, pedagogy & practical workers from public outreach of scientific researchers, so that the political aspects of the public, which are the original focus of the concept, are becoming less important.

2010S01293

Katrňák, Tomáš & Fónadová, Laura (Masaryk University, Faculty of Social Studies, Joštova 10, 60200 Brno, Czech Republic [tel: 00420 54949 4025; fax: 00420 54949 1920; e-mail: katrnak@fss.muni.cz]), **Age, Period and Cohorts in Social Fluidity in the Czech Republic between 1989 and 2009,** *International Sociological Association, Gothenburg, Sweden,*

¶ The article analyzes the trends in (absolute as well as relative) social mobility in the Czech Republic between years 1989 & 2009. The author uses 25 surveys realized in last 20 years in Czech society (N = 24 642 cases) to identify age, period & cohort effects controlled for respondents' sex & education in social mobility process (apcULcglim procedure is used). Social mobility is measured as a relationship between father's & respondent's ISEI (the propriety of continuous approach versus categorical/class approach in using APC model in the analysis of social fluidity is discussed). Results support Breen's & Jonsson's (2007) findings about cohort replacement as an explanation of the trends in social fluidity. But contrary to Breen & Jonsson the analysis shows that the age effect is not neglectable in the measuring of the relationship between father's & respondent's ISEI (later age on the labor market in the time of survey means also weaker age effect). And contrary to Breen & Jonsson the period effect is not completely consumed by cohort replacement in Czech society between 1989 & 2009; the effects of economic, political & social changes are identifiable in changes of social fluidity. This is expectable because Breen's & Jonsson's results are formulated for societies without outstanding social & economic changes. This has not been a case of the Czech Republic in the last 20 years.

2010S01294

Katz, Stephen (Sociology, Trent University, Peterborough, Ontario K9J 7B8 Canada [tel: 1-705-748-1011; fax: 1-705-748-1213; e-mail: Skatz@Trentu.ca]), **Hold On! Falling, Embodiment and the Materiality of Old Age,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores falls & falling for older adults, emphasizing social as well as physical consequences. A "hard" fall can dislocate a person from their environments, disrupt routines and reconfigure social supports. Falls create "fallers," a label that potentially hastens the identification of a person as old. Thus falls involve important negotiations of age-based identities between subjective experiences & professional care. The research critically examines the literatures in the sociology of the body and the gerontology of falls/falling, as well assessments of fall-prevention programs. In pursuing a multidisciplinary perspective, the paper locates the treatment of falls as a microcosm of larger issues involving social support & the medicalization of the aging body. Taking into account the growing costs & injuries incurred by falls, the paper's conclusions advocate an advanced theoretical conversation, between aging studies & body studies, to bear on the embodied meaning of falls and their materialist contexts, whilst making a contribution to the wider critique of dominant cultural narratives about aging.

2010S01295

Katz-Gerri, Tally (Department of Sociology and Anthropology, University of Haifa, Israel 31905 [e-mail: tkatz@soc.haifa.ac.il]), **Environmental Risk Perception and Environmental Justice in Israel,** *International Sociological Association, Gothenburg, Sweden,*

¶ The proposed paper aims at studying perceptions of environmental risks among Israelis & the way these perceptions are associated by social position. Environmental risk perception is defined in this research as individuals' judgments & assessment of hazards or dangers that might pose both immediate & long-term threats to their health & well being (Adeola 2007). I use a measure of risk that emphasizes environmental threats, which are derived from natural or human-driven hazards associated with global & local environmental change. Environmental risk perception is associated with environmental justice because environmental risk tends to develop in conjunction with inequalities of place, race/ethnicity, and social class. This means, for example, that some groups (e.g., immigrants, ethnic minorities) are more susceptible to exposure to environmental hazards than others, & that there is inequality in the spatial allocation of wanted facilities (such as public urban services), & unwanted facilities (such as factories) among minority & low-income populations. A non-egalitarian spatial allocation of public goods & environmental hazards reflects the social structure & power relations in society. Existing research tends to favor the objective assessment of risk & neglect the subjective perception. However, because risks are socially constructed & amplified, risk assessment is inherently subjective and represents a blending of science & subjective judgment shaped by psychological, social, cultural, & political factors. The Israeli context provides an interesting setting. Israel is characterized by economic & technological development but the main issues on the public agenda relate to security, economic growth, & immigration. Although environmentalism is gradually but consistently being adopted by Israelis, it is still at odds with the emphasis on economic development & receives marginal relevance on the public & academic agenda. Analyses are based on data drawn from the Israeli component of the International Social Justice Project (ISJP). Face to face interviews were conducted with a stratified random sample of 1200 respondents, representative of Israeli society, in 2006. Environmental risk perception is measured by 13 questions on issues that are perceived as a problem in the area where the individual lives. Social position variables include socioeconomic variables & demographic variables. Findings suggest that there are two clusters of perceived environmental risk; one pertains to urban issues & the other to non-urban issues. Risk perception is distributed unequally in Israeli society. Immigration status & nationality (Jews & Arabs) are the major correlates of perceived environmental risk, in addition to gender & size of community. Socio-economic characteristics are not central in shaping risk perception. The results are interpreted in the context of existing research on environmental justice & are juxtaposed with evidence from research on objective environmental risk.

2010S01296

Kaufman, Gayle, Lyonette, Clare & Crompton, Rosemary (Department of Sociology, Davidson College, Davidson, NC 28035 [e-mail: gakaufman@davidson.edu]), **Parental Leave among Fathers in Britain and the United States,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study examines fathers' use of family leave in Britain & the US. Using data from interviews with 83 working fathers in Britain and the United States, we consider how men take on their new role as father while maintaining their role as worker by studying family leave patterns. Our findings suggest that almost all fathers take some leave, but British fathers take more leave on average while American fathers demonstrate a wider range of leave time. Much of this has to do with the national context within which these men experience becoming a father. British fathers commonly took one week of paid leave, a taken for granted benefit. There was much more variation among American fathers in the amount of leave time. Most American fathers, faced with unpaid leave, used vacation days to take time off around the birth of their child. Many relied on their wives' greater ability to take leave. Other themes include difficulties with "family unfriendly" employers & the desire for more time off & better leave policies.

2010S01297

Kavedzija, Iza (Institute fro Social and Cultural Anthropology, University of Oxford, Oxford OX2 6PE, United Kingdom [e-mail: iza.kavedzija@anthro.ox.ac.uk]), **Difficult Roles: Insecurity, Danger and Risk in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ As a highly industrialized non-Western society, Japan provides a stimulating environment for evaluating & rethinking theories of modernization & risk (e.g. Beck 1992; Giddens 1991). The tension between individualism & traditional communal values is acutely felt in the personal life course, for example in the form of constraints imposed by the powerful dominant life model & the uncertainties brought about by the diversification of lifestyles. As part of a larger, ongoing research project into how people conceptualize the "good life" under these circumstances, this paper attempts to link personal insecurities with public representations of societal risks & dangers. Using an ethnographic approach & semi-structured interviews, it explores how these various risks are conceptualized by people in their daily lives, & their positioning within "hierarchies of threat." This permits a re-assessment of how notions of risk relate to social roles in the context of "late modernity."

Kawanishi, Masashi, Kitamura, Takahiro, Hagi, Yumiko & Nogawa, Haruo (c/o Kawanishi–National Institute of Fitness & Sports in Kanoya, 1 shiromizu, Kanoya, Kagoshima 891-2393 Japan [tel: +81994465311; fax: +81994465311; e-mail: kawanisi@nifs-k.ac.jp]; Kitamura–National Institute of Fitness & Sports in Kanoya, Kanoya, Kagoshima 891-2393 Japan; Hagi–Dept. of Sport & Leisure Management, Tokai University; Nogawa–Dept. Sport Management, Juntendo University), **The Social Impacts and Evaluation of the Promotion Policy as Practical Projects to Improve Child Physical Fitness by the Japanese Ministry of Education, Culture, Sports, Science and Technology(MEXT),** *International Sociological Association, Gothenburg, Sweden,*

¶ The Japanese Ministry of Education, Culture, Sports, Science and Technology had developed the practical model policy to improving the child physical fitness & motor ability in forty two districts across the country from April 2004 to March 2007. From this policy report by the MEXT, main results were the improvement in increased physical fitness & in custom of exercise & daily life and willingness, & the reduction of the absence rate of a school. The purpose of this study was to examine the policy evaluation on the improvement of physical fitness & the continuity of exercise program & promotion system in these areas. In this study, the interview & questionnaire survey methods were conducted for the governmental conductor of the practiced in the forty two districts after the model projects in Feb. 2009. From main results, each districts conductor positively evaluated the improvement of physical fitness & the co-operation between the school and community agency. However, these developed programs were only continuity at 15 districts supported by them. For the promotion of this policy, & the continuing development of a practice organization, it is suggested that the further human strengthening in community & school is desired.

Kawulich, Barbara B. (University of West Georgia, Carrollton, GA, USA 30118 [tel: 1-678-839-6135; fax: 1-678-839-6097; e-mail: bkawulic@westga.edu]), **Students' Conceptions of Teaching and Learning Research Methods,** *International Sociological Association, Gothenburg, Sweden,*

¶ As Research Methods (RM) instructors, we are interested in having our students build on their existing knowledge base & learn research methods to implement quality research. Knowing what to teach and how best to teach it are of interest to the instructors. This paper illustrates the research conducted with two classes of graduate, specialist-level students to determine their conceptions of research & their experience of learning RM. A combination of data collection methods are used to determine how the students conceive of research & what their experience is of learning RM through various teaching methods a that is, what they learn & how they learn it. Using interviews & pre- & post- qualitative surveys to collect data, I analyzed data phenomenographically to determine the range of perceptions students hold about research & about the process of learning RM through various pedagogical tools. Results indicate that students' conceptions of research were expanded throughout the course. Building on the works of Marton (1981), Kawulich, Garner, & Wagner (2010), & others, this study furthers the conceptions research by addressing students' conceptions of the usefulness of pedagogical aspects of the classroom.

Kaya, Ayhan, Thea, Boldt & Schwab, Eva (Istanbul Bilgi University, Dolapdere Campus, Istanbul [tel: +90.212.3115306; e-mail: ayhank@bilgi.edu.tr]), **Europe and the World: How State Actors Have Been Framing Europe in Relation to the Global Dimension in Germany and Turkey,** *International Sociological Association, Gothenburg, Sweden,*

¶ Given the simple fact that the reinforcement of European integration has been occurring concomitantly with globalization, considering the links between Europeanization and globalization is of crucial importance and indeed represents a growing trend in the literature about Europe (Rumford, 2005). The proposed paper will explore the relationship between Europe and globalization through a specific issue: the examination of European identities. It is based on the approach developed and data collected in the comparative European research project funded by the European Commission: *Identities and Modernities in Europe* (IME). Following C. Tilly's approach of identities, European identities are understood here as discursive constructs, as stories suggesting definitions of 'us, the Europeans' that are proposed and acted upon by different actors. The paper will investigate narratives about Europe in two national cases: Germany and Turkey. The focus is on state actors' narratives. Although we assume that there is a wide variety of identity narratives in each country and that those from state actors do not necessarily match those produced by other actors in society (civil society organizations, private individuals notably), we have chosen, in order to limit our area of investigation, to focus on state actors, who are prominent actors with important symbolic power in encouraging citizens' identification with collective entities. Our approach is then empirically based and not only theoretical: it investigates how state actors have been framing European identities through different types of materials, especially interviews with state officials and policy documents. The paper will address the following questions: (1) In each national case, what is the role of the global dimension in the definition of European identities proposed by state actors? (2) How are these European narratives related to the way national identity is constructed in each country: may we also identify a similar global dimension in the construction of national identity, which reflects on the definition of Europe? (3) How can we account for the differences and commonalities between the three national cases? The general aim is thus to study in a comparative way the relationship between the national, the European and the global dimensions in state actors' identity narratives in three countries. The European political community has a paradoxical status while considering its relationship with globalization. Some authors have argued that Europe represents a form of further integration of the world since it is opening up identities to globality and to a cosmopolitan belonging (Habermas, 1998 ; Balibar, 2003 ; Delanty and Rumford, 2005). This feature of Europe has been particularly emphasized with enlargement policies that made the EU moving eastwards and with the eventual entry of Turkey, all leading to a stronger consideration of the role of inter-civilizational encounters in shaping the identity of Europe (Delanty, 2006). But at the same time, Europe may also be considered as a new form of segmentation of the world if it is meant to limit the negative effects of globalization (in its economic aspects in particular) and if it contributes to reinforce symbolic boundaries with the rest of the world, leading to the identification of different figures of "Others". [Abstract shortened by ProQuest.]

Keiko, Yamaguchi (Faculty of Humanities, Hirosaki University, 1 Bunkyocho, Hirosaki, Aomori, Japan, 036-8560 [tel: +81172393207; fax: +81172393207; e-mail: ykeiko@cc.hirosaki-u.ac.jp]), **Difficulty and Adaptation of In-Migrant Youth in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ From a historical perspective, in-migration from rural areas to big cities within a country is a constant tendency. However, under the current economic slowdown in contemporary Japan, in-migrant youths looking for employment are facing greater difficulties. The aim of this paper is to discuss what difficulties provincial young people face when they move to big cities under a changing employment structure, & how they adapt to the new circumstances using resources. It utilizes a survey conducted in 2008 by an online resource which surveyed 2,800 people who were 20-34 years old. It focuses on young adults who moved from the country side & are presently residents of the Tokyo metropolitan area. Additionally, 16 interviews of young adults who have experienced long-range in-migration were conducted. It is discussed the process of relocation on the biographical construction of the youths in Japan.

Keim, Wiebke, Connell, Raewyn, Adesina, Jimi, Alatas, Syed Farid & Valdes, Teresa (Institut für Soziologie, Freiburg University, Rempartstrasse 15, 79100 Freiburg [e-mail: wiebke.keim@web.de]), **Re-appropriating Matrifocality: Endogeneity**

and African Gender Scholarship, *International Sociological Association, Gothenburg, Sweden,*

¶ A central concern of many Southern sociologists has been the crisis 'intellectual dependence' (Alatas 2000). Averting what Hountondji (1997) refers to as 'extraversion' involves separating what is idiographic in the dominant Western social science scholarship from its nomothetic aspirations; what Chakrabathy (2000)called 'provincializing Europe'. It involves excavating local 'libraries' (Zeleza 2006); it requires scholarship that takes its 'locale' or research site on its own terms. 'The study of Africa', Oyewumi (2004) argues, 'must start with Africa'. In this paper, we explore the works of Ifi Amadiume and Oyeronke Oyewumi as such ventures in endogeneity and as examples of the contribution that African sociologists make when they take their ethnographic data on its own terms. We examine the contributions of Amadiume and Oyewumi to gender scholarship, focusing on the idea of matrifocality or matricentricity. While not a new concept, the idea of matrifocal or matricentric societies acquires distinct valency in their epistemic framework and as the basis for theorising matriarchy. Rather than an exercise in the archaeology of a 'mythical pre-historic past' (Eller 2000), matricentricity in Amadiume's works accounts for the structural and ideological conditions of many African societies. It affords us the basis for transcending the 'bio-logic' (Oyewumi 1997) of the dominant feminist discourses. Beyond the epistemic rupture that it produces in Gender Studies, we argue that the concept of matrifocality has wider heuristic value. We illustrate its theoretical value for rethinking 'Identity', beyond the prevailing patricentric framing, and in allowing us to make sense of contemporary African data.

Kelman, Ilan (CICERO (Center for International Climate and Environmental Research - Oslo), P.O. Box 1129, Blindern, Oslo, Norway, N-0318 [tel: +47-2285-8566; fax: +47-2285-8751; e-mail: ilanULkelman@hotmail.com]), **Climate Change Diplomacy for Islands: Analysing Ethical and Legal Themes,** *International Sociological Association, Gothenburg, Sweden,*

¶ Disasters such as climate change frequently affect peace & conflict at many levels & in varied ways. Disaster diplomacy http://www.disasterdiplomacy.org is one framework for exploring such interactions, especially since disaster diplomacy conclusions to date suggest that disaster-related activities can catalyze and influence ongoing diplomatic processes but cannot create new peace without a pre-existing basis. Such conclusions also need to be further investigated for long-term disasters such as climate change. One example is the potential for the destruction of low-lying islands through sea-level rise & associated phenomena. Possibilities are inundation or storms, freshwater, geomorphology, ocean acidity, or fisheries changing in such a way islands become uninhabitable. While none of these impacts is inevitable & large uncertainties remain, exploring the planning consequences resulting from them is prudent, which must include the potential need to evacuate islands permanently. Four themes related to the ethics and legalities of island evacuation are examined: (i) decision-making responsibility & authority; (ii) funding the implementation of decisions made; (iii) prioritization of sovereignty; & (iv) preservation of cultural & natural heritage. The results show that preventing conflict is both feasible & desirable, but realistically such steps are not likely to be taken until it is too late.

Kels, Peter (Berne University of Applied Sciences Business and Adminstration, Morgartenstrasse 2c, Postfach 305, 3000 Berne 22 [tel: +41 31 848 3443; e-mail: peter.kels@bfh.ch]), **Identity construction and career politics of ICT-Professionals in Switzerland. Mediating between professional and organizational ethics.,** *International Sociological Association, Gothenburg, Sweden,*

¶ The ICT-Industry emerged to a significant employer for high-skilled professionals working in knowledge-intensive, complex and customer-centric projects. Looking at the case of Switzerland, activities towards a standardization of the heterogeneous set of occupational groups in ICT have been pushed forward. But if this youngest push for professionalization may lead to a breakthrough and consolidation of professional standards in organizational structures, career paths & allocations practices of human resources is unclear yet. The working environment of IT-Professionals is often driven by short-term projects, time pressure, unclear organizational roles & less space for realizing professional standards. Based on own empirical data from a case study (16 qualitative interviews with IT-Professionals working in a medium sized Swiss IT-service provider) we are analyzing how these IT-Professionals deal with conflicts & tensions between professional, organizational & market driven ethics on the level of identity work & career politics (Kels 2008). We identity different types of career politics which highlight the rationalities of professional identity work & career tactics of IT-Professionals.

Kempf, Andreas (Goethe-University Frankfurt, Frankfurt/Main Germany [tel: +611/2409434; e-mail: andreasoskarkempf@gmx.de]), **Biographical Meanings of Migration for Migrants and Their Families under Shifting Conditions of Mobility,** *International Sociological Association, Gothenburg, Sweden,*

¶ Abstract: Since the collapse of the communist regimes migration flows from Eastern Europe have increased & during the last twenty years constantly new patterns of migration have emerged. While at the beginning of the 1990s mobility had been highly regulated today due to the removal of visa regulations & the EU enlargement process migrants from Eastern Europe oftentimes circulate embedded in strong & durable social networks between their country of origin and their country of destination. This leads to the question on the relation between the structure of the migration process on the one hand & the biographical meanings of migration experiences for the life-courses of migrants & their families on the other hand. In my presentation I want to focus on migration from Romania to Italy since the beginning of the 1990s. On the basis of multi-sited and longitudinal field research in the country of origin as well as in the country of destination living within several migrant families conducting biographical narrative interviews, additional, semi-structured interviews & participant observation I attempt to show the dynamic interplay & interconnectedness inherent to the migration process among individual biographies, family strategies and their narratives & recent changes of mobility within this context.

Kenichi, Kawasaki (Faculty of Global Media Studies, Komazawa University, 1-23-1 Komazawa, Setagaya-ku, Tokyo, Japan 1548525 [tel: *81-33418-9300; fax: *81-33418-9535; e-mail: kken@komazawa-u.ac.jp]), **Everyday Cosmopolitanisms in Two Creative Cities: Singapore and Tokyo,** *International Sociological Association, Gothenburg, Sweden,*

¶ Originally cosmopolitanism has been developed from Western tradition. Based on Greek philosophy & Christian tradition, in modern societies, an idea of human basic rights & cultural tolerance has made some types of cosmopolitanisms. Quite recently we have just reached at the level of "multi-cosmopolitanisms" based on multiculturalism. Now among most global cities we can see some kinds of cosmopolitanisms. I would try to pick up different types of everyday cosmopolitanisms, that is to say, both Singaporean and Tokyo case. The former case has been driven a global transformation and inter-ethnic relation in Singapore. And the latter one has been formed by "Odorless urban culture" in Tokyo. In my presentation, I would approach with cultural policies, particularly global cultural policies, to it in each global city. We can indicate interesting developmental patterns in both cities, Singapore: "A Global City for the Arts" & Tokyo: "Unique Popular Culture," different with American pattern & Western pattern. At last I would clear in both cases, (1) characteristics of each everyday cosmopolitanisms, (2) functions, (3) limitations & possibilities.

Kenis, Anneleen & Mathijs, Erik (KULeuven, Department of Earth and Environmental Sciences, Belgium, 3001 Heverlee [e-mail: Anneleen.Kenis@ees.kuleuven.be]), **Politicising Climate Change: The Case of the Transition Towns Movement in Flanders (Belgium),** *International Sociological Association, Gothenburg, Sweden,*

¶ The current policy approaches to tackling climate change bear the hallmark of a dominant "post-political" consensus: climate change is conceived in market or technical terms or as a matter of individual behaviour change, rather than as a question requiring fundamental social & political change. It is against this background that new grassroots environmental movements recently arose. One of these movements is Transition Towns. The development of resilient local communities (especially local food, energy and currency systems) is central to the movement. In this, they explicitly present themselves as a break with conventional practices. However, Transition Towns seems to make only a partial turn towards politicisation. For example, they conceive of social change in psychological terms, & give a quite apolitical content to the central notions of localisation, resilience & inclusion. The research question of this paper is how such processes of politicisation & depoliticisation arise, & what their consequences are for the possibilities of movements to realise change. To

explore answers on this question, we engaged in qualitative research, composed of participant observation of 52 meetings & activities of Transition Towns groups, 40 in-depth interviews & document analysis of books, leaflets, emails and websites.

Kerins, Pat & Carragher, Lucia., Marron, Ann (Kerin, Pat., Netwell Centre, Dundalk Institute of Technology, Ireland, Dublin Road, Dundalk, Ireland [tel: ++ 353 (0) 42 9370347 ; fax:; e-mail: patrick.kerins@dkit.ie]), **Civic Engagement and Older Adults; How Effective are Older People,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction: More people are living longer into later life and, for the most part, also enjoying good health & active retirement. Yet society still predominantly sees old age as a time of problems linked to declining capacity. Older people's fora are considered to be the mechanism for change across the country & around the world, with older people's issues highlighted as never before. Yet, there is little evidence to support the belief that civil society organisations are important routes for the development and implementation of public policy. This study aims to explore the processes around the established & growth of the older people's forum established as part of the development & implementation of Ireland's first Age Friendly Strategy. Method: A case study approach is adopted focusing on issues relating to older people who are members of the Age Friendly Forum, & how statutory & voluntary organisations input to the policy process. Results Society benefits when older people are given the opportunity to share wisdom gained over a lifetime of experience. Preliminary results suggest the challenge remains one of communications & engagement between local authorities, central government & the not-for-profit sector working together to tackle issues identified as important by older people.

Kerschgens, Anke (Fachbereich Gesellschaftswissenschaften, J.W.Goethe-Universität, Frankfurt, Fach 100, Robert-Mayer-Str. 5, 60054 Frankfurt, [tel: 0049-69-79823868; fax: 0049-69-79828063; e-mail: kerschgens@soz.uni-frankfurt.de]), **The Contradictory Change of the Division of Labour Within Families,** *International Sociological Association, Gothenburg, Sweden,*

¶ How do families with toddlers live today in the tension between a traditional gendered division of professional & family work and modernized ideals of an integration of work sphere & the family for women & men? The methodological basis of my recent research on the relation between paid work & childcare within a familial constellation is a hermeneutical & reconstructive analysis of interviews with German parents of a first child of the age between 18 & 30 months. Topics of the open conversations were the daily routines, feelings & values concerning parental relations, family life & professional work outside the family. Results show that the societal "modernization" of the gender-relations concerning work & family is not unambiguous & in addition to this transpositions into daily routines depend on biographically opened or closed personal inner resources. It becomes clear, that there are complex links between the different dimensions of parental life scripts; (social) interpretative patterns, daily practice & their conscious interpretation as well as the unconscious, biographical scripts are interwoven not in a linear way, but with contradictions, overlappings & exclusions. Furthermore there are new modes of conflict with re-traditionalizing effects in the transitional family-scripts.

Kes, Erkul, Aysu (Sociology, Hacettepe University, Ankara, Turkey, 06800 [tel: +90 312 2978425; e-mail: aysukes@hacettepe.edu.tr]), **Revisiting Bourdieu's Capitals in the Urban Context: Housing Consumption,** *International Sociological Association, Gothenburg, Sweden,*

¶ Housing, which is a major element of urban space has at least two aspects: physical aspect & social aspect. For the examination of the intersection of these two aspects, the factors determining the consumption of housing plays an important role. Its residents consume the house both as a material object, or shelter, & as a socio- cultural asset revealing one's social position (Bourdieu, 1999: 124-125). To understand the particularity of this relationship between the two sides, the concepts of "capitals" can be used. The capitals (social, cultural & economic) cover key factors that shape peoples' choices with regard to housing. The aim of this paper is to examine the housing preferences of the residents of new urban areas of Ankara, Turkey from the perspective of capitals. The data that will be consisting of the semi- structured interviews with the residents of at least three new neighborhoods in Ankara. These interviews will be examining the combination of the three types of capitals the residents have, as well as the personal histories in terms of urban mobility. The data will be discussed from a comparative perspective with respect to the preferences of the residents in different neighborhoods & the relationship of these preferences with the capitals.

2010S01312

Keskinen, Suvi (Department of Social Research, University of Turku, 20014 University of Turku, Finland [tel: +358503624598; e-mail: suvkes@utu.fi]), **Gender, Ethnicity and Discourses of Violence in Families a Comparison between Denmark and Finland,** *International Sociological Association, Gothenburg, Sweden,*

¶ Violence in ethnic minority families, especially sc. honour-killings, forced marriages & female genital cutting, have become markers of difference in the present Western societies–not the least in the Nordic countries that build their national self-image on (achieved) gender equality. Violence in ethnic minority families is used to make distinctions between the "nation" & its "others," between "us" & "them." The intensification of such discourses in the media occurs at the same time as the Western countries engage in anti-terrorism acts & stricter immigration control, and images linking threat of violence to Muslim groups have become part of everyday media flow. Discussions around violence in minority families show that gender & family relations play an essential role in the symbolic construction of the nation (eg. Yuval-Davis 1997). For example in the public debate following an "honour-killing" in Sweden in 2002 clear distinctions were made between "equal Swedes" & "patriarchal immigrants" (de los Reyes, Molina & Mulinari 2003). In Norway & Denmark discussions have evolved around "forced marriages" & resulted in restrictions to immigration regulations (Bredal 2005). In Finland public discussions & policies at first focused on domestic violence introducing also ethnically Finnish men as perpetrators, but have recently shifted towards "honour-related violence" and migrant perpetrators. This paper presents findings from an ongoing comparative research between Denmark & Finland focusing on the formation of discourses of violence in minority families, as well as how gender & ethnicity are used to construct borders of the nation & national belonging. Data from 1) media texts, 2) policy documents & 3) interviews with representatives of political parties, women's organizations & migrant organizations is used to analyse what are the central discourses, how were they shaped and how has politicization of the issue affected ethnic relations in the two societies. While Denmark is an example of a country in which violence in minority families is a highly politicized issue directly connected to immigration policies, in Finland the matter has mainly been dealt with by welfare practices. Recently however, the issue has started to be politicized in Finland too, following the anti-immigration turn in Finnish politics since autumn 2008.

Kevin, J. A. Thomas (Pennsylvania State University, 133 Willard Building, University Park, PA 16801, USA [e-mail: kjt11@psu.edu]), **Family Dynamics and the Well-Being of Migrant Orphans in Post-Genocide Rwanda,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study uses data from Rwanda to situate the discourse on the well-being of migrant orphans within the context of the household. The results indicate that migrant orphans are more likely to live in households with less adverse structural characteristics, e.g. in female-headed or single-parent households, than non-migrant orphans. Significant differences are also found in the implied gains to living standards & schooling associated with migration, among paternal, maternal, & double orphans. Additionally, the study finds that, on average, the higher living standards and schooling attainment of orphan migrants, relative to their non-migrant counterparts, disappear among children living in child-headed households. More generally, the results suggest that the higher living standards of migrant orphans are, in part, driven by the fact that they mostly live in households with other migrant household-heads or migrant spouses. Yet the analysis also suggests that orphans living within these contexts experience higher levels of intra-household discrimination in investments in their schooling relative to orphans who live in non-migrant households.

Kharchenko, Irina I. (Institute of Economics & Industrial Engineering Siberian Branch of Russian Academy of Sciences, Novosibirsk, Russian Federation, 630090, av.Lavrentieva,17, Institute of Economics [tel: +7 383 3301425; fax: +7 383 3302580; e-mail: kharchen@ieie.nsc.ru]), **Transformations in the Russian System of Professional Education,** *International Sociological Association, Gothenburg, Sweden,*

¶ In order to study a state of the Russian system of professional education (higher, secondary special & primary vocational ones), analyze changes, that took place in it in the last decade and evaluate efficiency of its functioning, - "two-waves" sociological research was conducted. First survey took place in 2001 (2450 students of professional educational institutions of Novosibirsk region were asked by questionnaire, also experts were interviewed) and second–in 2007-2008 (3600 students correspondingly and experts also). Data obtained from 2 surveys show that students' satisfaction with conditions & arrangement of process of studying has grown. However, students' estimations about quality of obtained knowledge remain the same. Besides, we see substantial gap between considerably high students' valuation of theoretical knowledge, general & specific competencies & their skills to use these competences & knowledge for resolving particular tasks or problems. Currently primary & secondary vocational educational system is in considerably worse conditions than higher educational system (particularly in Novosibirsk region). While higher education develops in a stream of modernization, vocational educational system is still being reorganized & is still in a process of searching of its pattern in a general system of education in society with market relations in economy.

Kharlamov, Nikita, A. (Department of Psychology, Clark University, 950 Main Street, Worcester MA 01610 USA [tel: 15083148085; e-mail: nkharlamov@clarku.edu]), **Space of 'The Marginal' vs. Space of 'The Marginal Man': Two Concepts of 'Marginality' in Urban Theory,** *International Sociological Association, Gothenburg, Sweden,*

¶ Contemporary academic discourse on social life & particularly on urban life & migration often utilizes the notion of "marginality." However, it is frequently used as a given and surprisingly little attention is devoted to content, structure, and conceptual implications of this notion. Arguably the most commonly invoked meaning of "marginality" is that of "state of being a social outcast," or "of belonging to the fringes of social structure." In order to analyze the structure of the notion of "marginality" the proposed paper recovers the original formulation of "the Marginal Man" introduced by Robert E. Park in 1928 to account for the culture of migrant populations. Drawing on Lakoff and Johnson's theory of metaphor, I attempt to show that there are at least two different ways of constructing the notion: one involves the metaphor of "center-periphery" ("marginal as outcast," e.g. as used by Loïc Wacquant in his theory of advanced marginality) & the other involves the metaphor of "boundary" ("marginal as between multiple cultures," as in Park's original concept). I explore the uses of the concept in classical and contemporary urban research to show that these two divergent metaphorical bases of the concept have wide ranging implications for our understanding of urban culture, migration & mobility, and the nature of urban spatiality.

Khodyakov, Dmitry, Friedberg, Mark & Shortell, Stephen (The RAND Corporation, Santa Monica, CA, USA, 90401 [tel: +1-310-393-0411; e-mail: DmitryULKhodyakov@rand.org]), **Beyond the Usual Incentives: What the Conductorless Orchestra Can Teach the Accountable Care Organization,** *International Sociological Association, Gothenburg, Sweden,*

¶ Current health care reform proposals in the United States advocate the creation of accountable care organizations (ACOs). However, ACOs may produce undesirable results if new financial incentives are imposed on physicians who do not collectively accept accountability for performance. We argue that formal strategies of managing physicians (e.g., financial incentives) should be balanced by informal strategies (e.g., organizational culture) in creating successful ACOs. Drawing lessons from the conductorless orchestra, an organization that exemplifies the importance of informal managerial strategies, we argue that ACOs with inclusive governance, moderate size, highly-developed communications capabilities, & voluntary, selective physician membership will have the best chance of success.

Khondker, Habibul Haque (Department of Humanities and Social Sciences, Zayed University, Zayed University, Abu Dhabi, UAE [tel: 971-2-599 2850 ; fax: 971-2-443 4847; e-mail: habib.khondker@gmail.com]), **Inequality, Poverty and Food Security in the Middle East,** *International Sociological Association, Gothenburg, Sweden,*

¶ Although Middle East often evokes the idea of wealth generated from oil or military conflict depending on what region one is looking at, there are problems of food scarcity & food security in certain parts of the Middle East. Middle East is very diverse; at the one end, there are oil-rich Gulf States where food security in not an issue unless there is a major market fluctuation, at the other end there are countries like Yemen & Egypt, where hunger is a common problem. In 2008, in the wake of rising fuel price and preceding the world economic crisis, there was a sharp increase in food prices world-wide. Even in rich United Arab Emirates basic food prices soared by 36% with Basmati rice price jumped by 80%. The food price inflation, had little bearing on the Emirati nationals who enjoy one of the highest per capita incomes in the world, but for a large number of low-income foreign workers that was a difficult time. Although no one starved, the price inflation hurt the low-income groups badly enough. Following the crisis, the government launched a food security strategy & during the crisis took steps to rein in prices of essential food in supermarkets. In Egypt in March 2008, there were riots over rising bread prices. Yemen, with the lowest per capita income in the Middle East and with 90% food imports, has a segment of undernourished population, who suffer from food scarcity. There were news reports in 2009 predicting famine because of a dangerous mix of drought induced food scarcity & political instability. This paper examines the political & economic context of food security in the region Author Profile Dr. Habibul H. Khondker is Chairman & Professor of the Department of Social & Behavioral Sciences at the Zayed University, Abu Dhabi (UAE). He did his MA & PhD from the University of Pittsburgh (USA). He has several publications to his credit. His areas of specialization are Inequality, Poverty and Food Insecurity.

Khoshfar, Gholamreza (University of Mazandaran, Babolsar, Mazandaran, Iran. [tel: 00989113714782; fax: 00981712266755; e-mail: khoshfarf@yahoo.com]), **Effects of Social Capital on Political Participation(Case Study: Golestan Province, Iran),** *International Sociological Association, Gothenburg, Sweden,*

¶ There are different reasons why social capital are important and considered as the main theme of this study accordingly. Firstly, social capital & its different aspects like network and association, trust, social interaction & altruistic actions are significantly underpinning human & social interactions. Secondly, fluctuation in political situation of Iran is influenced by diverse factors & social capital is one of them which deserved to be considered in a research study. For the purpose of this study, survey method was used & 502 individuals (above 19 years old) were selected as the sample of the survey. Stratified random sampling method was applied & the data collection was made by using questionnaire. The result of this study shows that level of electoral political participation in Iran generally and specifically in Golestan is strong. The result also shows that political participation was influenced by different aspects of social capital including social network & association at the level of formal relation, trust at the personal level, social interaction & altruistic actions at social level. In sum, social capital & its dimensions as a theory is playing a significant role in explaining social & political actions which needs to be considered in future research.

Kida, Michiko (Graduate School of Social Sciences, Hitotsubashi

University, Tokyo, Japan, 186-8601 [tel: +81 80 6660 6072; e-mail: michiko827@gmail.com]), **Dynamics of and Conflicts in Paradigm Change on Diet in Modern Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ Against the background of a growing consensus that legitimacy of current (but declining) food provision system is declining in the face of series of crisis, global agri-food studies are increasingly interested in the way how new agri-food system would be organized, and thus in ongoing competition between different paradigms and movements about it. Various types of social movements are attracting attention as alternative coalitions, however, few researches examine change & paradigm shift in diet. Under this situation, this paper examines the process of legitimatization of modern nutritional diet in Japan since the late 19th century, and competing local paradigm left behind. Japanese modernization was a process in which Japan accepted the modern state system which emerged in Europe & decided to be included in modern world system through it, & to become one of imperial powers. Japanese diet and health were to be directly integrated to Japanese state and reorganized through a paradigm of modern nutritional science which was imported from the west as an instrument for rapid growth. At the same time, parallel to this legitimatizing process, there also emerged alternative movement on diet based on traditional knowledge and practices which were pushed away in modernization process. The "macrobiotics" movement born in Japan as early as 1920s was one of them. Under the recent declination of legitimacy of modern nutritional paradigm, it now revived & receives growing attention inside & outside Japan. This research on dual development of state-led & enduring alternative paradigm on diet would not only provide a potential alternative to now-declining dietary paradigm but also help relativize the modern perceptions of body & nature through dietary perspectives.

Kilian, Reinhold, Kalkan, Rana & Becker, Thomas (Dept. Psychiatry II, University of Ulm, Günzburg, Germany, D-89312 [tel: 00498221962861; fax: 004982219628160; e-mail: reinhold.kilian@bkh-guenzburg.de]), **Latent Growth Curve Modeling in Mental Health Services Research,** *International Sociological Association, Gothenburg, Sweden,*

¶ The identification of selection & causation processes is an ongoing problem in analysis of statistical associations between employment and clinical status in people with severe mental illness. In this analysis an autoregressive latent trajectory (ALT) model has been applied to identify selection & causation processes between employment status, clinical status & hospital admissions in 312 persons with severe mental illness who participated in the EQOLISE study, an RCT comparing the effectiveness of Individual Placement and Support (IPS) with conventional vocational services (VS) in six study settings across Europe. Results of the ALT model indicate that study participants who received the IPS intervention had a higher chance of obtaining employment during the first six months of the study. While job status during a given follow-up interval did not depend on previous measures of psychopathology, job status during a particular period was found to be related to reduced psychopathology at two (out of three) subsequent follow-up assessments. The risk of hospitalization during a particular study period was positively related to prior levels of psychopathology at two (out of three) follow-up assessments. These results support the hypothesis that employment may have positive effects on psychopathology & decrease the risk of psychiatric hospital admission.

Kim, Chul-Kyoo & Park, Minsu (Sociology Dept. Korea University, Seoul, Korea [tel: 822 3290 2077; e-mail: ckkim@korea.ac.kr]), **The Rise of Local Food Movement in South Korea,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper attempts to historically analyze how the local food movement developed & began to attract wide public attention in South Korea. We examine the role of key actors such as the media, local governments, NGOs, & academic researchers & their interaction in making local food an important alternative & a key concept in remaking Korean agro-food sector. The historical analysis is followed by case studies of YWCA Community Supported Agriculture & Wonju farmers market, which have been quite successful but in a different way in terms of organizing & social implication. We try to find out what are the factors for their successes & what are future challenges.

Kim, Jee Young & Park, Gil-Sung (Department of Sociology, The Chinese University of Hong Kong, Hong Kong SAR [e-mail: jykim@cuhk.edu.hk]), **Indigenizing Neoliberalism in Korea: Anti-Business Sentiment Discourse in the Aftermath of the Economic Crisis,** *International Sociological Association, Gothenburg, Sweden,*

¶ What are the responses of capital in the aftermath of economic crisis? What are their implications for the shape of capitalism and social inequality? We address these questions by investigating the responses of South Korea's big business after the country's economic crisis in the late 1990s. Our focus is on its ideological strategies that are aimed at gaining popular support for warding off government control and justifying rapidly growing social inequality. Relatively low social inequality coupled with strong state intervention has been characteristic of Korea's economic growth. Economic crisis that broke out in 1997 rapidly increased social inequality and it also positioned the state to reclaim its power from capital that had increased its bargaining power vis-à-vis the former since the early 1990s. Against this backdrop, Korean big business began to mount offensives through what came to coalesce into a full-blown ideological campaign. Central to that campaign are the neologism "anti-business sentiment" and the decrying of its allegedly adverse economic impacts. In doing so, big business interests joined forces with conservative press and intellectuals to remove the obstacles to business interests, including the country's supposedly excessive egalitarianism. We closely investigate the role of anti-business sentiment discourse in restoring the power of big business interests in the aftermath of the economic crisis and leading the country in a neoliberal direction. We do so through content analysis of all 1,710 articles that mentioned "anti-business sentiment" in six Korean-language newspapers for the period of 1999 to 2008. The newspapers were chosen to reflect their differences in public visibility and political-economic orientations in order to ensure a full spectrum of views on anti-business sentiment will be represented in our study. We discern central claims about anti-business sentiment and key participants in the discourse that have pressed for the dismantling of government control over business–especially big business–and the justification of growing social inequality. We argue that the business-led ideological campaign significantly altered the climate of public opinion, thereby paving the way for the country's neoliberalization. Our research redresses the view of neoliberalization that stresses its externally-driven, top-down character in developing countries by specifying the role of domestic forces that facilitate the rebound of capital's power after economic crisis. Our research also suggests that one should scrutinize capital's defensive strategies in the aftermath of economic crisis and their implications for the shape of capitalism and social inequality in different political-economic contexts.

Kim, Jeehun (Institute for East Asian Studies, Sogang University, Seoul, Korea, 121-742 [tel: +82-2-705-4729; fax: +82-2-718-4353; e-mail: jeehkim@sogang.ac.kr]), **Remitting 'Filial Co-Habitation': Transnational 'Actual' and 'Virtual' Co-Residence for Support Between Korean Professional Migrant Adult Children Couples in Singapore and Their Elderly Parents,** *International Sociological Association, Gothenburg, Sweden,*

¶ Based on in-depth interviews with middle-class Korean professional sojourner migrant couples in Singapore & the elderly parents of both husbands & wives, the author examines how the cultural meaning & social practice of filial co-habitation & support have been transformed in an international migration context. The author examines transnational co-residence & visiting among these families & proposes a differentiated & patterned organization of support by sons versus daughters for their own elderly parents. Although immigration regulations & community environments for older Koreans in Singapore pose a challenge to elderly parents, the family remains the most important nexus of care & support among Korean families. Through adopting "virtual" & "actual" co-residence strategies & deploying multi-purpose long-term visits by wives & children in Singapore to their elderly parents in Korea, as well as remitting regular financial support, these families are able to maintain the cultural ideal of filial co-residence & support. However, the gendered traditional co-habitation ideal differentiates between actual & virtual co-residence. The actual co-residence pattern was mainly adopted by first sons/daughters-in-law couples & the elderly parents of the first sons whereas the virtual co-residence pattern was mainly adopted by sons-in-law/daughters couples & the elderly parents of the daughters. These results show that patterned two-way transnational mobility for providing care & support is shaped by cultural norms & the practical negotiation of family obligations.

Kim, Na Kyoung & Maguire, Joseph (School of Sport, Exercise and Health Sciences, Loughborough University, Loughborough, Leicestershire, UK, LE11 3TU [tel: +44 79 08593912; e-mail:

nakyoungkim0202@google.com]), **Where Has Unitary Korean Nationalism Gone?: The Case Study of the South Korean Media Portrayals of the Opening Ceremony of 2008 Beijing Olympic Games,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study examines the global-national trend of South Korean nationalism & unitary Korean nationalism in the media portrayals of the Olympic Games in a sociological perspective. This research focuses upon the way in which the South Korean media coverage differently portray North & South Korean participants in the opening ceremony of 2008 Beijing Olympic Games. Attention is given to the way in which the issue of North & South Korean teams and athletes" failure in co-march into the Olympic Stadium was reported & telecasted. Data are collected from both TV telecasters & newspapers in the period of Beijing Olympic Games and a week before & after the Games. The qualitative media content analysis, including thematic analysis, discourse analysis and image/visual analysis, is used to analyze the data. Using the theoretical framework of the established & outsider figuration, it was established that the South Korean media coverage tended to depict South Korean participants as "the established group" and North Korean participants as "the outsider group." By doing so, the South Korean nationalism against North Korea was highlighted whilst the notion of unitary Korean nationalism was hardly reported in this case.

Kim, S. & Lee, M., & Gu, J. (Sejong University, Gunja-dong, Gwangjin-gu, Seoul 143-747 [tel: 82-2-3408-3716; fax: 82-2-3408-4314; e-mail: sskim@sejong.ac.kr]), **A Study on Service Quality, Satisfaction, Expectation, and Attitude by Type of Study Motivation: Focusing on Students in the Tourism & Hospitality Management Departments at Cyber-University,** *International Sociological Association, Gothenburg, Sweden,*

¶ The development of information & communication technologies & the internet is redesigning communication between universities & students. The purpose of this study was to examine study motivation of students at cyber-university, service quality, satisfaction, expectation, and attitude & whether motivation makes a significant difference in. Hypothesis 1: There is a significant difference in career and demographic characteristics according to type of study motivation. Hypothesis 2: There is a significant difference in e-learning service quality according to type of study motivation. Hypothesis 3: There is a significant difference in satisfaction between prior and post entrance into cyber-university by type of study motivation. Hypothesis 4: There is a significant difference in attitude toward cyber-university education according to type of study motivation. A total of 328 students responded to the online and off-line survey for this research. In order to explore hypotheses of this research, this study conducted a hierarchical cluster analysis using Ward's method. Although our research focus is on examining motivation, satisfaction, expectation, & attitude of learners in the online tourism & hospitality program, the ideas we present are transferable to a broader learning environment and are suitable for practical implications & suggestions for effective e-learning strategies in all university education.

2010S01326

Kim, Sang-Wook & Han, Gyounghae (Sungkyunkwan University, Seoul, 110-745, Korea [tel: +82 2 760 0412; fax: +82 2 744 6169; e-mail: swkim0412@hanmail.net]), **Intergenerational Support Exchanges in Korea and Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ The question concerning how lineage difference operates in intergenerational support relationships has never been properly explored in East Asia. The problem was particularly acute in cross-cultural contexts. This study provides a cross-cultural explanation & assessment of the issue. Data collected from national sample surveys in Korea & Japan, respectively, as part of the 2006 EASS Family module studies are analyzed & show some interesting patterns of similarities, as well as dissimilarities, in intergenerational support exchanges between the two countries. Results are interpreted & a few implications, theoretical and empirical, are suggested for further studies.

Kim, Seung Kuk & Chun, Jeong Hun (Dep't of Sociology, Pusan National University, Pusan 609-735, South Korea [tel: 82-51-756-4327; fax: 82-51-583-0211; e-mail: skkim21@pusan.ac.kr]), **Hybridization of Social Movement and Postmodern Politics of Project Identity: The Case of Candlelight Demonstrations in South Korea,** *International Sociological Association, Gothenburg, Sweden,*

¶ In our paper, we'll try to critically reconsider the thesis of a homogenous & coherent social movement, especially in this post-modern era & to propose a hybridized movement model of heterogeneity & fragmentation. On this theoretical base, a new strategy of developing "project identity" will be explored to facilitate alternative globalization movement. The Candlelight Movement (CLM), a series of anti-governmental demonstrations in 2008 in South Korea, will be analyzed as a hybrid movement composed of old & new style mobilizations, local/national & global implications, & political-radical & cultural-theatrical strategies. It will be proposed that the strength of the CLM has come from the mixture of politics with fun & play while the weakness has directly arisen from the entanglement of conventional political oppositions which became increasingly dubious and incredible due to their misplaced & overused strategies of "politics of aggression & confrontation" rather than "politics of project identity."

2010S01328

Kim, Y., Kim, S. S. & Oh, H. (Department of Hospitality & Tourism Management and Sejong University, Seoul, Gwangjin-Gu, Gunja-Dong, 98 143747 [tel: 82-2-3408-3930; e-mail: ymkim78@hanmail.net]), **A Study of Exploring Networks Established by Convention Suppliers Using Social Network Analysis,** *International Sociological Association, Gothenburg, Sweden,*

¶ In recent years, many of metropolitan or big cities in Korea have been eager to revitalize themselves as convention destinations. However, some regions face the difficulties of poor infrastructure & low reputations in becoming successful convention destinations. To overcome these weaknesses, the concept of cooperative relationship among convention related organizations becomes an important issue. Therefore, this study is to discuss following objectives: First, it attempts to examine the characteristics of organizations or corporations that are registered as members of CVB in Busan. Second, it aims to investigate the structural characteristics of the current network formed by members of CVB. For this, the visualization of network is to be illustrated & specific industrial sectors are identified. In addition, important actors with roles & positions within a network are to be discussed by measuring three important centralities such as degree centrality, closeness centrality & betweenness centrality. In sum, a variety of industrial sectors were engaged in networks for convention business in Busan. There is a tendency to show stronger relationship among CVB, BEXCO, hotels, PCOs, & rental equipment. Meanwhile, a number of entities with low level of centrality measurements were situated in the periphery of the network. However, they are still regarded as an important tourism attraction for the success of convention business in Busan: for example, cruise tour, a lighthouse, & Busan Tower.

Kim, Young Jeong ([e-mail: youngjeong.kim@gmail.com]), **Presentation, Interaction, and Everyday Negotiation in "Foreigners' Town" in Itaewon, Seoul,** *International Sociological Association, Gothenburg, Sweden,*

¶ Can public spaces enhance inter-ethnic understanding, or do these spaces merely serve as vehicles for commercialisation & other stereotypical approaches to ethnic cultures? To approach these questions, this paper will explore the interplay of identity, place, & ethnicity through an examination of the Itaewon area, the longest-standing & best known "foreigners' town" in Seoul, South Korea. The various perspectives of diverse groups related to Itaewon will be under study, with the space under examination firstly with regard to ethnic-majority Koreans -- how they use the space, apply governmental policies to it, & describe and represent it in the media, with particular attention paid to the desire for a "global city." Secondly, the paper will examine how foreigners/ethnic minorities use the space & respond to public discourse & policies related to it. Finally, the paper will examine how these two groups of people interact in the space, focusing on everyday negotiations concerning ethnic differences in relation to social/cultural/economic status. Given the possibilities of global fantasy & racism, as well as social cohesion & division, the paper undertakes to examine the influence of cross-cultural practices on the formation of new cultural identities in the urban space.

Kimura, Kimuhiro (Tohoku University, Sendai, Japan, 980-8576 [tel: 81 22 795 5967; fax: 81 22 795 5967; e-mail: kkimura@sal.tohoku.ac.jp]), **Social Stratification and Relative Risk Aversion in the Japanese Context,** *International Sociological Association, Gothenburg, Sweden,*

¶ Many students of social stratification have focused on the process in which the aggregation of individual decisions reproduces the structure of

social stratification. This process may correspond to the third arrow in the macro-micro-macro transition of the "Coleman boat." One of the most influential studies in this area is Breen and Goldthorpe's (1997) work that proposed "relative risk aversion" hypothesis to explain the class differentials in educational attainment from the rational choice perspective. Following the previous "direct" attempts to measure the risk aversion, this study analyzes the data of Japanese high school students & their parents, focusing on the role of the relationship between the class origin & the risk aversion in the process of the formation of the high school students' educational aspirations. The analysis using logistic regression shows that, contrary to the implication from the original version of the hypothesis, risk aversion affects high school students' educational aspirations regardless of their fathers' occupations. The analysis also suggests that risk aversion can be interpreted as a kind of habitus so that the distinction between the primary effect (the effect of cultural capital on achievement) & the secondary effect (the effect of risk aversion on aspiration) is obscure in Japan.

Kindblad, Christopher (University of Halmstad, Halmstad, Sweden, 301 18 [tel: +46 35 167716; e-mail: christopher.kindblad@hh.se]), **Ethical Reflexion in Sociological Education,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper suggests that the cultural history of the Western world has been shaped by a patriarchal/matriarchal culture, which since the rise of the modern industrial-capitalist society has led to the ecological crisis we live today. There is an urgent need for ethical reflexion about how we live & relate to each other, and to our ecological environment, which could be introduced to a larger extent in our educational systems, like the family, the school & higher education. However, our educational systems seem to be conservative, & have developed as a response to the industrial-capitalist society. There appears to be blind spots. I argue that there is a potential for sociological education to constitute an adequate space for ethical reflexion concerning our ways of living, since it addresses the questions of how we live together in society. In order to avoid some of the blind spots I propose the acceptance of the change of question a from being to doing–as suggested in cultural-biology by Dr. Humberto Maturana Romesín & Ximena Dávila Yáñez. This paper explores some of the consequences that this change may have for sociological didactics.

2010S01332

Kindblad, Christopher (University of Halmstad [tel: 035-167716; e-mail: christopher.kindblad@hh.se]), **The Role of Leadership and Collaboration in Sustainable Development,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper deals with the social & ecological risks involved in global climate changes, which may require new ways of doing research, action & education in social sciences in general, and sociology in particular. The main problem is found in the conservation of a patriarchal culture & capitalist economy in Western societies, which after the transition to the modern, and post-modern eras, have led to a separation of the individual and the social, & to a situation that may be understood as a "tragedy of the commons" (Hardin) with relation to forests, seas, fishing waters & air, etc. I suggest that collaboration is rapidly becoming a key issue in this situation. However, there is a gap in our understanding of collaboration in sociology. The debate concerning the commons, & the work of Ostrom (1990) concerning local self-regulation should be considered here. In consequence, I propose that a conceptual framework concerning collaboration in sociology may require a recognition of our human nature as social beings.

2010S01333

King, Andrew & Cronin, Ann (Kingston University; School of Social Science, Penryhn Road, Kingston upon Thames, Surrey, KT1 2EE [tel: 0208 547 2000; e-mail: a.king@kingston.ac.uk]), **Building Bridges? Social Capital, Sexuality and Ageing in a British City,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since the social movements of the 1960s, the notion of communities based around sexuality have become familiar in many areas of the world, including the UK. The call to a lesbian, gay & bisexual and transgender (LGBT) community is often used as a means of political engagement & the fight for human rights. Whilst not eschewing these important issues, this paper is focused on the interrelationship between community, social networks & local government. Specifically, it considers the interrelationship between social capital, sexuality, & ageing in a major city in the UK. The paper explores how a local government authority has attempted to "build bridges" with its older LGBT communities and discusses the role of academic research in examining and facilitating this process. By presenting data from a qualitative study of the experiences of older LGB adults who live or work in a major city in the UK, the paper argues that local government authorities need to develop policies that encourage both "bonding" and "bridging" social capital; the former means supporting social networks that exist within a group/community, whilst the latter refers to developing social networks with wider society. Furthermore, it suggests that encouraging civic participation and active citizenship amongst older LGBT communities means addressing issues related to the social regulation of sexuality more widely, especially how this impacts upon older LGBT adults everyday lives. The paper concludes with a number of recommendations for policy makers & for further research.

King, Neal M. & Calasanti, Toni M. (Virginia Tech, 560 McBryde (0137) Blacksburg, VA 24061 [tel: 540 231 8174; e-mail: nmking@vt.edu]), **Ageism, from Personal Talk to Corporate Policy,** *International Sociological Association, Gothenburg, Sweden,*

¶ Representations of aging bodies are central to ageism, which operates at the interrelated levels of self-reflection & the marketing of a major industry. We critique scholarly treatments of ageism as attitude, stereotype, or prejudice, which result in such conceptions as "third age" & "positive ageism." We do this by analyzing public & personal representations of aging bodies, and thus demonstrate ageism to be policy & maintenance of inequality. We first employ content analysis of anti-aging internet ads that present old age as disease, uselessness, & an enemy to be fought, and show how that ageism amounts to the medical policy of a privately-owned industry worth billions. We then examine pilot data gathered through in-depth interviews with 20 women & men aged 43-61, delineating a comparable ageist discourse through which respondents comment on their changing bodies.

Kingori, Patricia (Anthropologies of African Biosciences, London School of Hygiene and Tropical Medicine, Keppel Street, London, WC1E 7HT, UK [tel: +44 207 927 2060 ; e-mail: patricia.kingori@lshtm.ac.uk]), **The Challenges of Implementing Bioethical Principles from a Fieldworkers Perspective in a Rural African Context,** *International Sociological Association, Gothenburg, Sweden,*

¶ Medical research in economically deprived countries is increasingly a subject of public & scholarly debate. Research in such contexts often employs the prescribed bioethical principles as a safeguard against unethical practice. Anthropological studies of medical research in Africa, point at the importance of the practice of fieldwork, for our understanding of the ethical challenges in these circumstances. Fieldworkers are the "middlemen" in the research enterprise & are at the forefront of interactions with research participants. As such, they are one of the primary practitioners of bioethics. They are often recruited from the communities in which they work & are familiar with local notions of rights and obligations. Universal bioethical principles present numerous ethical challenges in their implementation. These dilemmas are felt most acutely by those who have to implement them. The fieldworkers must apply these principles in contexts where, for example, notion of individual autonomy but also the resource-poor context dictates that other non-bioethical standards are equal, if not more important. This paper seeks to extend the discussions of cross-cultural bioethics through the examination of the practice of ethics in a medical research context in Africa.

Kings, Lisa (Huddinge,Sweden, 141 89 [tel: +46 8 608 48 46; e-mail: lisa.kings@sh.se]), **In Defence of the Local: The Organisations of 'Everyday Life' in the Stockholm Periphery,** *International Sociological Association, Gothenburg, Sweden,*

¶ The implications of the new global restructuring process under the neoliberal flag have been described in terms of parallel processes of increased integration & greater fragmentation among different regions & scales. The limited ability of nation states to regulate & control this unequal development has led to a rediscovery of civil society as an alternative political arena. The novelty of the contemporary civil society discourse is that civil society has "gone global," that is, through transnational networks, the global spatial scale has become the primary one for resistance & alternative visions. Using a critical & analytical perspective of the unilateral focus of contemporary civil society research as a starting point, the aim of this article is to discuss how urban grassroots in the Swedish context respond to the overall processes of fragmentation through collective civic activism.

This article develops a conceptual model of the three pillars of simultaneousness. It argues that the configuration of civil society in the Swedish urban periphery is identified as the organisations of everyday life. The result should be seen in relation to both stability & change, where an overall rescaling & the emergence of subscales lead to a renegotiation of the structure of Swedish civil society.

Kirbiš, Andrej (Dept Sociology, U Maribor, Slovenia [e-mail: andrej.kirbis@uni-mb.si]), **Political Inequality and Social Structure: A Comparative Study of Political Voice among Students in Post-Yugoslav Societies,** *International Sociological Association, Gothenburg, Sweden,*

¶ Active citizen participation is considered a central element of a stable democracy. Over recent decades studies in both Western and post-communist countries have shown dramatic changes in the nature of citizen participation, with a decline in voter turnout, non-electoral participation and civic participation, especially among youth. Since the post-communist countries cannot rely on extensive past experience with the democratic process and values, citizen engagement is the main source of legitimacy for the democratic system. The present paper draws on data collected in the YUSTA study, carried out in spring 2009 in eight Yugoslavian successor states, to examine the nature, patterns and determinants of youth citizen engagement, using a sample of 2,178 social science students (M age = 19.35 years, SD = 2.35). The individual level analyses indicated that young people have higher levels of electoral and civic participation in comparison to their non-electoral political participation, with all three being positively associated. Political culture and the agency model proved to be the most potent predictors of youth participation, while the socio-economic model had only marginal predictive power. The aggregate level analysis demonstrated significant between-country differences with higher levels of youth participation found in countries that were socio-economically less developed.

2010S01338

Kirbis, Andrej & Flere, Sergej (Department of Sociology, University of Maribor, Maribor 2000, Slovenia [e-mail: andrej.kirbis@uni-mb.si]), **Youth Citizen Engagement in Post-Communist Societies: The Case of Post-Yugoslav Entities,** *International Sociological Association, Gothenburg, Sweden,*

¶ Active citizen participation is considered a central element of a stable democracy. Over recent decades studies in both Western and post-communist countries have shown dramatic changes in the nature of citizen participation, with a decline in voter turnout, non-electoral participation & civic participation, especially among youth. Since the post-communist countries cannot rely on extensive past experience with the democratic process & values, citizen engagement is the main source of legitimacy for the democratic system. The present paper draws on data collected in the YUSTA study, carried out in spring 2009 in eight Yugoslavian successor states, to examine the nature, patterns & determinants of youth citizen engagement, using a sample of 2,178 social science students (M age = 19.35 years, SD = 2.35). The individual level analyses indicated that young people have higher levels of electoral & civic participation in comparison to their non-electoral political participation, with all three being positively associated. Political culture & the agency model proved to be the most potent predictors of youth participation, while the socio-economic model had only marginal predictive power. Kirdina, Svetlana (Institute of Economics, Russian Academy of Sciences, Moscow Russia 117219 [tel: +79165046742; e-mail: kirdina@bk.ru]), **Limits and Prospects of Institutional Liberalization,** *International Sociological Association, Gothenburg, Sweden,*

¶ The objective of the paper is to define the trajectory of economic institutional reforms in Russia as a framework of High-Tech policy. The methodology of this research is based upon the institutional matrices theory (Kirdina, 2001). The hypothesis that the "institutional nature" of Russia fixes limits of liberalization & needs the active implementation of liberal market institutions policy only within the frameworks of modernization of redistributive state economic system, is considered. Modern High-Tech policy in Russia demonstrates the implications of such kind of development. The new institutional form of State Corporation that is non-profit organization under government regulation has been widely developed for last years. The main sphere of State Corporations activity is high-tech development. The share of State Corporations in the state budget is more than 20% & it is constantly increasing.

Kireev, Yegor (Russian State Social University, Moscow, Russia, 129226 [tel: +79269679788; e-mail: yegorkireev@gmail.com]), **Moscow City Migration Policy,** *International Sociological Association, Gothenburg, Sweden,*

¶ Life of virtually any megalopolis is inconceivable without migrant labor & Moscow is no exception from this rule. In past years migration to Moscow has been caused by decrease of birthrate among the indigenous population as well as by processes related to ageing and natural loss of the population, rapid economic growth & the consequent expansion of labor market & the pressing demand for labor. However it should be emphasized that a great volume of migration flows implies the necessity to solve a large variety of problems. It is normally assumed that the term "migration policy" encompasses an aggregate of rules, measures & restrictions aimed at normalization & regulation of civil & public relations in the sphere of individual movements across the Russian Federation borders (in as well as out of Russia's boundaries). In conditions of migrant abundance social aspects of migration policy acquire a particular importance for Moscow. Social aspects of migration policy traditionally include measures aimed at provision with employment, health service & acceptable living standards for migrants. Integration policy contributing to an easy incorporation of foreign workers into Moscow society should become an important component of migration policy.

Kirilenko, Olesya (Rivne State Humanitarian University, Department of Political Science, Street Ostafova, 31 Rivne, UKRAINE 33000 [tel: +38 (0362) 22 21 91; e-mail: olesyaULkirilenko@mail.ru]), **Gender Specific of Sport Participation in Ukraine,** *International Sociological Association, Gothenburg, Sweden,*

¶ Sociological research of level forms & motivations of sports activities in the Ukraine, conducted in recent years, have revealed gender differences inclusion of people in sporting activities. Women show less interest & involvement in sporting activities in comparison with men. Analysis of the results of research allow to select biological, psychological, social, economic & cultural determinants, as well as the macrosocial & institutional factors that explains gender-specific sporting activity. In the field of the highest achievements sports, there are also gender differences in quantitative & qualitative indicators of sporting achievements and records. However, in the Ukrainian elite sport women significantly increased their representation & have succeeded in traditionally male sports. Thus, in the Olympic team of Ukraine at the Beijing Olympics, women accounted for 48% of 254 members. The team of Ukraine in wrestling freestyle included 4 women & 6 men, weightlifting team included 4 women & 5 men, teams of tennis consisted entirely of women. This was facilitated by several factors: the international recognition of the rights of women to participate in competitions in men's sports, fast reaction sport organizations in Ukraine to these changes, as well as high levels of social activity of the Ukrainian girls & women.

Kirkpatrick, Ian & Hoque, Kim (University of Leeds, Leeds, United Kingdom [tel: 441133432611; e-mail: ik@lubs.leeds.ac.uk]), **Re-Connecting Contingent Professionals and Organisations–An Impossible Task?,** *International Sociological Association, Gothenburg, Sweden,*

¶ In recent years there has been a marked grow in the outsourcing of business services in the number professionals who are self employed or contingent. In the human resource management literature it is suggested that employers should try to address this challenge by adopting what Fisher et al. (2008) describe as "internalisation" strategies. These involve a "special attention" approach towards contingent workers, making limited investments in training & development to ensure desired levels of affective commitment & performance. However, significant questions remain concerning the necessity & feasibility of these policies. In this paper we address this matter focusing on the growing use of professional agency workers in two areas of the English public sector: NHS acute trusts & local authority social services. Specifically we compare the experience of managing two groups of organisational professions: nurses & social workers. In both sectors we find elements of a special attention approach (including focused training, induction & support) aimed at re-connecting agency professionals with organisations. However, the findings also raise questions about the

long-term sustainability of this hybrid, internalisation model & throw into sharp relief the benefits of "standard" employment where groups of core professional workers are concerned.

Kirschenbaum,Alan Avi & Link, Sharon (S.Neanman Institute, Technion, Haifa 32000 [fax:; e-mail: avik@tx.technion.ac.il]), **Do Disasters Induce Community Disruption? A Study of Communities Under Attack,** *International Sociological Association, Gothenburg, Sweden,*

¶ Conditions of continuous & extreme threats to lives & property can theoretically lead to a possible breakdown of existing social structures or toward enhancing community social cohesiveness. To examine these possibilities, a research strategy was chosen to evaluate the impact of continuous extreme terror attacks on community social life. The study design compared community behaviors prior to ongoing terror attacks with community behaviors after five years of ongoing terror attacks. The study incorporated two Israeli communities in & near the Gaza Strip, based on a random sample of 370 household heads responding to a structured interview questionnaire. Pre-terror behaviors from a national random sample were compared to corresponding behaviors in the communities under terror attacks. Employing a "Community Social Cohesion" composite of social network densities, levels of risk perceptions, information flow networks & disaster preparedness components, the results pointed toward a general strengthening of community oriented behaviors. While risk perceptions rose dramatically, reflecting the reality of five years of terror, key measures of social network densities also increased in strength. Interestingly, the levels of preparedness generally declined. A detailed examination showed that religious beliefs, self-reliance, and an intense community social network acted to foster adaptation behaviors without loosing sight of a realistic risk perception of death & harm. These adaptive survival strategies provided proof that even under extreme conditions, social capital inherent in individuals, families & communities can, & do, enhance community cohesiveness & ameliorate the reality of annihilation

Kisembe, Lynn (Humanities and Social Sciences Dept All Nations University, Koforidua, Ghana, 1908 [tel: 233 81 26924; e-mail: lynn.kisembe@allnationsuniversity.org]), **Local Language Maintenance: The Case of the Twi Language in Ghana,** *International Sociological Association, Gothenburg, Sweden,*

¶ What accounts for the dominance of the local language Twi in Ghana is a question this paper seeks to address. English is the official language in Ghana, & is used as a medium of instruction in education institutions, commerce & government. It is estimated that 60 local languages are spoken in Ghana (Dzameshie 1988). The target population is born speaking other local languages as first languages & English is introduced at school going age. Because English is used in education, a status that gives it the most sought after language in the country, one would expect that it would repress, dominate & disempower other languages used. Twi, is widely used among the population. This paper examines the extent to which Twi dominates the English language as well as other local languages & the contributing factors to this phenomenon. A total of 2500 Senior High School Students were interviewed, the public were observed, analysis of print & electronic media highlights include methods used in collecting data. Results indicate that poor performance of the English subject, local language teaching, cultural practices, shift to a language of wider communication as a consequence of settlement in the urban areas & attitude form contributing factors.

Kitagawa, Susumu (Division of Sustainable Society Studies, University of Yamanashi, 4-3-11 Takeda, Kofu, Japan, 400-8511 [tel: +81-55-220-8337; fax: +81-55-220-8337; e-mail: kitagawa@yamanashi.ac.jp]), **Toward Environmental Policy History in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ The term "environmental policy history" has been used only to describe, chronologically, the related legal systems & policies in introductory lectures of environmental economics, environmental policy, & so on. Environmental policy history has therefore scarcely been recognized as a full-fledged academic discipline. Although historical examination of the emerging background, policy processes, & subsequent transition of environmental policy in political, social, & economic contexts is important, it has received little attention to date. The author therefore proposes a new field of study–environmental policy history–for historical discussion of the formulation & development of environmental policy. This paper first presents an outline and methodological characteristics of Environmental Policy History. First, the author defines environmental policy history as the "field that studies the formulation & development of environmental policy historically." Methods: in environmental policy history are classified broadly as follows: A) Description and/or narration-oriented study, A1) Study placing importance on the use of primary sources, A2) Study using mainly secondary sources, A3) Study using other resources such as oral sources, B) Theory and/or model-oriented study, B1) Study with a historical perspective, but placing importance on theory and/or models, and B2) Quantitative study. Furthermore, the author demonstrates the usefulness of environmental policy history through investigation of case studies related to packaging waste policies in Japan and Germany. Finally, the author examines the importance & salient implications of environmental policy history.

Kitamura, Takahiro, Kawanishi, Masashi, Hamada, Hatsuyuki & Maesaka, Shigeki (National Institute of Fitness and Sports, 1 Shiromizu Kanoya, Kagoshima 891-2393 Japan [tel: +81 994 46 4968; fax: +81 994 46 4968; e-mail: kitamura@nifs-k.ac.jp]), **The Globalization and Essentials of Japanese Martial Arts, Budo,** *International Sociological Association, Gothenburg, Sweden,*

¶ Judo is the most globalized Japanese martial arts. The International Judo Federation (IJF) has been established since 1951, & Judo became an Olympic sport for men in the 1964 Games in Tokyo. The Ministry of Education, Culture, Sports, Science & Technology (MEXT) has announced revised curriculum guidelines for junior high school in Japan. In this renewal, martial arts have been made compulsory at physical education course from 2012. Its goals are dissemination of Japanese tradition & culture to young people. Furthermore, because Japanese martial arts called Budo esteems the courtesy rather than to beat another, educational effect is expected. On the other hand, some Budo affiliates fear the loss of its essentials which cause by the globalization of Budo. The purpose of this research is to examine globalization of Japanese martial arts through current circumstances of Budo education in Japan and surveys between Japan & Canada. As a result of a statistics analysis, it was indicated that Japanese martial arts participants have higher ego-orientation & lower task-orientation than Canadian. This means that Budo have been globalized along with its essence & it has been getting weak in Japan. Furthermore, globalization of Budo will be considered with Japanese youth's perceptions of Budo.

Kivinen, Osmo, Kaipainen, Päivi & Hedman, Juha (Research Unit for the Sociology of Education (RUSE), University of Turku, Turku, Finland, FIN-20014 [tel: +358 2 333 5878; fax: +358 2 333 6524; e-mail: osmo.kivinen@utu.fi]), **Relations Between Education and Knowledge Economy–Beyond Pure Human Capital Rhetoric,** *International Sociological Association, Gothenburg, Sweden,*

¶ Human capital ideology, inscribed in the idea of knowledge economy promoted by OECD, has given guidelines for education policies in countries all over the world. In this model, knowledge is seen as a prime factor for economic growth in which expansive education is a necessary component. But does educational expansion cause economic growth, or could it actually be the other way around so that wealthy economy makes expansion of education possible. No doubt, educational qualifications allocate people via labour market queues to jobs, but it is not as clear how well education can keep up with changing work life & meet the demands of technology driven new skills. At its best education produces generic qualifications while work-related skills have to be learned in work life, much leaning on module-based lifelong learning. As big companies are able to recruit the talents from all over the world & labour markets are becoming ever more global, the role of education within nation states has to be thought over in the new situation. Although human capital would turn into risk capital, still at least investments to primary & secondary education, meant for all, are something that no country can afford to compromise.

Kiwalabye, Frank (Youth Crime Watch Uganda, p.o.box 11281 [tel: 256754051991; e-mail: ycwuganda@yahoo.com]), **Juvenile Justice and Diversion,** *International Sociological Association, Gothenburg, Sweden,*

¶ From the strict legal sense, juvenile justice is handling and treatment of children in conflict with the law in the justice system, this definition lives out child victims in appropriate action by children, adults & institutions,

however the social definition of juvenile justice takes care of both children in conflict with the law as well as the victims of abuse, neglect, exploitation, & violence in conflict with the law. The purpose of this paper is to raise awareness & build capacity on youth violence prevention & reduction by providing a menu of specific activities for communities to undertake plus a framework for putting those activities effectively into place The living conditions in slums, characterized by inadequate shelter and related infrastructure & services, are further compounded by the lack of physical space & social facilities for poor urban youth to develop themselves physically, mentally & emotionally. Faced by the challenges of daily survival, the lure of the quick rewards offered by drugs & crime, ranging from petty crime to sophisticated & organized crime, often prove more attractive. Despite this potentially explosive situation, the issues of urban youth living in slums & inner cities are not only largely absent in public policies, urban youth are often perceived by public authorities as a problem rather than a part of any effective solutions.

Kjellman, Arne (Stockholm University and KTH; Dept. of Computer and Systems Sciences, S-164 40 Kista SWEDEN [tel: +46 6036430; e-mail: kjellman@dsv.su.se]), **Sketches Towards a Theory of Every Thin/Kin/G–The Subject Oriented Approach (SOA),** *International Sociological Association, Gothenburg, Sweden,*

¶ The status of the social & human sciences as genuine sciences on a par with the natural sciences has widely been held in doubt, and SOA shows the traditional scientific view to be misleading. Its shows it is mandatory to dismiss the idea that personal knowledge is a representation of a common world created by some God, & also the mistake to take the seductive noun/verb structure as for given. We need a new methodological paradigm of science–an approach that avoids the pitfalls of dualism & realism–& take the effort to couch its thinking in a reinterpretation of natural language. This line of reasoning paves the way for the SOA–a new epistemology that takes the individual knower & its feelings as the coherent point of departure. The traits of a new foundation are sketched & to that end a bootstrap model is proposed that departs from the early man's first experience. In doing so we in a subject-oriented manner can bring man's living experience–his pre-verse–under the collective umbrella of a consensual science. This approach brings the promise to provide a sound theory of everything–or rather a theory of every thin/kin/g–which in one step removes the cleft between the natural & social sciences.

Klaus, Daniela & Steinbach, Anja (Chemnitz University of Technology, Institute of Sociology, Chemnitz, Germany, 09107 [tel: 0049 371 53132122; e-mail: Daniela.klaus@soziologie.tu-chemnitz.de]), **Intergenerational Closeness in Germany. Any Evidence for Weakening Ties Between Adult Children and Their Parents?,** *International Sociological Association, Gothenburg, Sweden,*

¶ There is a persistent debate about the impact of societal modernization on intergenerational relations. The assumptions are highly contradictory & empirical studies provide no conclusive picture. The present paper aims to contribute to this controversial discussion by examining the intergenerational closeness between adult children & their parents in dependence of most recent trends in Western societies. The leading research question is if increasing demands for job-related mobility, growing participation of women in higher occupational positions, declining fertility, growing marital instability, changing family related attitudes, and the rising importance of extra-familial relationships weaken the frequency of intergenerational contact and/ or the degree of emotional closeness. The empirical analysis is explicitly based on micro-data, more precisely on nearly 14.000 parent-child dyads drawn from the first wave of the German 2008/2009 pairfamfile (Panel Analysis of Intimate Relationships & Family Dynamics). It is tested if most modern segments of the population (defined according to the trends mentioned above) face lower intergenerational closeness than their counterparts. The analyses pay special attention on the sex-constellation of the parent-child relations.

Klein, Ricardo (Department of Social Work, Faculty of Social Sciences, University of the Republic, Montevideo, Uruguay [e-mail: rklein@fcs.edu.uy]), **Youth and Social Exclusion: A View from the Construction of Citizenship and Cultural Policy from the Accessibility of Cultural Goods and Services,** *International Sociological Association, Gothenburg, Sweden,*

¶ Nowadays, the relation between the accessibility to goods & cultural services linked to the Youth is a topic in construction. From this point of view it is necessary to respond to the following question: do the young people who live in social exclusion territories incorporate mechanisms for the scope & the production of searching & accesses into goods & cultural services? Among other priorities, it is necessary from the State to support a political interest in the decentralization & zone decentralization of the cultural activities. A discussion is proposed about the place that the Cultural policies fulfill as a builder of citizenship of the young people & the accessibility to goods & cultural services as a cultural right. The present analysis takes the experience of Uruguay taking into consideration that, in this country, the field of the art & the culture is in constant growth from the last five years, generating & stretching mechanisms of cultural accessibility. At the same time, an important territorial segregation appears regarding cultural consumption. In this country, even though, there are some levels of offer, consumption & very diverse cultural infrastructure, exist very different realities, for instance, the geographical areas that are considered. The habitat where one is born & the Youth is reproduced is a determinant issue to explain the phenomenon.

Klein, Stefan (Programa de Pos-Graduacao em Sociologia - USP (Universidade de Sao Paulo), Sao Paulo, Brazil [e-mail: sfkstefk@yahoo.com]), **Critical Theory's "Sociological Deficit" Revisited: Horkheimer, Social Theory and Dialectics,** *International Sociological Association, Gothenburg, Sweden,*

¶ The hereby proposed presentation aims at discussing the idea raised by Axel Honneth that the theory developed in Max Horkheimer's writings suffers from a sociological deficit. The presupposition of his hypothesis is the "disparity between its epistemological characterization & the philosophy of history that underlies it," being the former presented as revolving around the (rational) domination of nature as derived from the labor appropriation and the latter as constituted by a move towards a critical activity (praxis). Accordingly to Honneth, the lack of a critique of everyday-life-basis of a sociological standpoint–is the main cause for the claimed disparity. I shall argue that this judgment partially relies on a misinterpretation of Horkheimer's theoretical view. Honneth addresses this theory as a sociological one and therefore oversees (or at least shortens) the central aspect proclaimed from the beginning on: delineating an interdisciplinary research programme that would be able to congregate varied disciplines so as to recover the critical capacity associated with a specific kind of scientific thinking, namely the one represented by a dialectical critique. Therefore the distance sought to classical sociology has to be understood as an important topic of his approach. Under these circumstances, the sociological traits of this theoretical outline can only be understood in terms of a reading that incorporates the materialist & dialectical sociology contained in the work of Karl Marx, an essential (if not the most important) reference for this critical theory of society, around which the other disciplines should assemble.

Kleiner, Tuuli-Marja (Tuuli-Marja Kleiner; Soziologie II, FernUniversität in Hagen, Universitätsstrasse 11, Hagen, Germany, 58084 [tel: 02331-987-4742; e-mail: tuuli-marja.kleiner@fernuni-hagen.de]), **Mechanisms of Mutual Transnational Perceptions. Why Societies Trust Each Other,** *International Sociological Association, Gothenburg, Sweden,*

¶ In a globalized world, cooperation across national borders become more and more meaningful concerning international integration processes as well as the positions of the societies in the international system. Particularly one important dimension, transnational social trust, facilitates cooperation between nations. The question is why citizens of one nation trust other nations? Two possible mechanisms come into consideration: (1) Sense of community: Social trust is based upon cultural proximity in terms of political & societal values. It is hypothesized that perceptions of cultural similarities & differences influence the image of other social groups & is associated with the ascription of trustworthiness. (2) Admiration: The perceived status of a social group influences its image. Societies which embody favoured goals in a morally acceptable way seem inspiring & admirable. It is assumed that Europeans trust in nations that come close to the "European ideal" consisting of democracy, political equality, respect for human rights, tolerance etc. Using data from the European Election Studies (2004) & the European Value Survey (2000) these two hypotheses are tested. Multi-level fixed effects regressions are conducted. Results show that both mechanisms make a contribution in explaining transnational trust, even when controlling for economic performance (GDP).

Kleining, Gerhard & Prester, Hans-Georg (University of Hamburg/Germany, Elbchaussee 159 D-22605 Hamburg/Germany [tel: + 49 40 - 8801977; e-mail: kleining@sozialwiss.uni-hamburg.de]), **Life Worlds in Germany,** *International Sociological Association, Gothenburg, Sweden,*

Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (858) 571-8979. Fax: (858) 571-8694. E-mail: info@csa.com

¶ The paper presents segmentation of (a) individuals & (b) "families" (living in one household)representative of total population as the second phase of a long range empirical research project on social structure. Cluster analyses based on up to 422 descriptive variables (values, behavioral items, media & product preferences, demographics etc.) suggested a pattern of 14 Biographic & 14 Family Life Worlds as best differentiating between clusters. Data come from ad-hoc & panel samples up to 100 thousand per year. Some results: - Demographic variables are key factors to define behavioral patterns: age, sex, occupational status/income, family size, community size. They have to be related to each other however. - The societal core is its "vertical" system of production with differential distribution of power & privileges. Related to it is the "horizontal" passage within the occupational system as well as the stages before entering & after leaving the productive phase. Overlapping are the stages of the reproductive system. - The occupational system shows high stability over time and resistance toward structural change. The reproductive system however is changing. The research methodology was an explorative or heuristic use of quantitative data.

Klemelä Juha-Matti, K (University of Turku, 20014 University of Turku, Finland [tel: +358-50-5171170; e-mail: jklemela@utu.fi]), **Managing Mixed Emotions in the Layered Ritual Reality of Networking Events,** *International Sociological Association, Gothenburg, Sweden,*

¶ My presentation deals with face-to-face networking events, a common phenomenon in especially the business world, but also in the academia (though not always under the title of "networking"). I will look into the rituality of networking, its dramaturgy, & the need & contents of emotion management. Floor-level networking is often staged to look like friendly socializing. Nevertheless, it has an instrumental goal: useful contacts. Every networker knows this, so the instrumentality is not latent. It is not completely manifest, either. I presume that there is a mutual implicit contract of not breeching the situation by stating the instrumental goal aloud. The getting of contacts is a conscious but tacit function of socializing. Networking may be studied from the viewpoint of Durkheimian-Goffmanian-Collinsian conversation rituals. Due to the double agenda in the situations the rituality is layered. We have a ritual with physical proximity, boundaries for outsiders, discussion topics as totems, & a shared and happy emotional mood of casualness. In addition, we have the ritual layer of networking proper. On this embedded level the ritual totems are the sought-after contacts: potential customers, employers, research associates, referees, or whatnot. The emotional mood is probably one of slight anxiety & the atmosphere is mildly competitive. The rituality is layered, & so are the emotions both layered & mixed. The conversation partners are both objects of politeness, competitors, & "trophies." It is clear that there may be a discrepancy between how one feels about networking & how he or she is supposed & obliged to act. The nature of networking activity may call for emotion management (i.e. emotion work) (c.f. Hochschild). This may have a strategical aim: to not to let the interaction be disturbed by the display of the "wrong" emotions. But there may also be deeper emotional needs served: insulating one's "soul", the core self, from the potentially damaging effects of being forced to play the multiply double-dealing ritual game of networking. It will be an interesting task to probe these possibilities empirically. My empirical materials will consist of observations from networking events in Finland & interviews of networkers.

Kley, Stefanie, A. (University of Hamburg, Institute for Sociology, Allende Platz 1, 20146 Hamburg [tel: 0049 40 42838 4819; e-mail: stefanie.kley@uni-hamburg.de]), **Explaining Migration as a Process of Cumulative Causation in the Life Course,** *International Sociological Association, Gothenburg, Sweden,*

¶ Despite manifold studies in the field of migration, the process of migration decision-making & succeeding migration behaviour is still not fully understood. In this paper a more elaborated theoretical framework for the explanation of migration decision-making & behaviour is proposed by including a life-course perspective on goal formation into a psychological model of action phases. Hypotheses derived from this framework in regard to the influence of all relevant groups of predictors on certain stages of the migration process are empirically tested. The results support an explanation of the migration process within a three-stage model, in that perceived opportunity differentials between the place of living & alternative places, the influences of "significant others," life-course events, & resources are prominent. Varieties in the importance of those factors in different phases of the life course are analyzed & interpreted referring to the changing importance of instrumental goals within the theoretical framework. The data come from a tailor-made panel study with initially 2,400 respondents in Germany.

2010S01357

Klimovitskiy, Sergey (Institute of Sociopolitical Research, Moscow [fax:; e-mail: Serkl@mail.ru]), **Social Reality as Language,** *International Sociological Association, Gothenburg, Sweden,*

¶ One of the major problems in sociological theory is the problem of coherence, i.e. of overcoming a theoretical gap between different levels of social reality conceptualized in dichotomic terms such as micro-macro, agency-structure, subjectivity-objectivity, ideality-materiality & so on. A coherent or integrative perspective would convey the specific nature of social reality as dialectical totality. One of possible approaches to this problem consists in reconceptualizing the notion of the social in linguistic terms as proposed by William Sewell Jr. in his book Logics of History: Social Theory & Social Transformation (Chicago, 2005). The social action can be understood as linguistic because people in interactions constantly use language in the strict sense or language-like systems of meaningful symbols having a kind of semantics & a syntax. Social reality appears, in this view, as a complex network of semiotic practices with different spatial scale & resources used thus solving the micro-macro problem. The enduring consequences of social activities are explained by supplementing this model with the concept of social construction & "objective" or "material" factors are accounted for by the introduction of the concept of built environment. As a result a coherent multidimensional model of social reality is constructed integrated in micro-macro, agency-structure and ideality-materiality aspects.

2010S01358

Knigge, Antonie (ICS/Sociology Utrecht University, Utrecht, The Netherlands, 3584CS [tel: +31(0)30 2538811; e-mail: a.knigge@uu.nl]), **Total Family Impact on Status Attainment–Sources of Sibling (Dis)Similarity,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper we examine whether sibling models are a valid tool for assessing trends in the total impact that families have on the status attainment of their children. Sibling models are based on the simplifying assumption that siblings do not benefit systematically different from the resources of their parents. We argue that such systematic dissimilarity between siblings does exist, especially in historical contexts (for example because of unequal inheritance practices). Our main argument is that, as this systematic dissimilarity may differ between regions and/or over time, it may confound the trends in the total family impact on status attainment. To empirically assess the significance of this problem, we use as our main source the high quality database Genlias, which contains information from 632.912 linked Dutch marriage acts stretching the 1842-1922 period. Although (preliminary) multilevel analyses show differences in systematic status dissimilarity between siblings, they are often in opposite direction as expected. If these results are valid, we would still have to conclude that we cannot use siblings models directly as a measure for total family impact. However, before concluding this, we should first establish that the results are not driven by other factors, such as non-random missing values or the method of analyses.

2010S01359

Knight, Kelly, R., Cohen, Jennifer, Comfort, Megan & Riley, Elise (San Francisco General Hospital, UCSF, San Francisco, CA 94110 [tel: 415-867-8405; e-mail: kelly.knight@ucsf.edu]), **The Health Consequences of Structural, Intimate Partner and Street-Based Violence Among US Indigent, Unstably Housed Women,** *International Sociological Association, Gothenburg, Sweden,*

¶ Background: Epidemiologic data consistently correlate violence, victimization, & health disparities among women. Yet, less is understood about the specific processes by which structural violence (US laws, policies & practices that contribute to sexism, racism, & poverty) interact with other forms of violence to produce poor mental & physical health outcomes. Methods: Results draw on four years of on-going ethnographic &

qualitative interview studies (N = 100) with high risk HIV negative & HIV positive indigent women in a major US city. Results: Structural violence a specifically gendered discrimination in housing policies - exacerbated women's vulnerabilities to street-based violence. Loss of housing, unsafe temporary housing situations, and subordinate roles in drug-sex economies placed women at high risk for poor health outcomes such as unintended pregnancies, sexually transmitted infections (STIs), HIV infection, depression, severe anxiety, & blunt trauma requiring hospitalization. Conclusions: Findings suggest that understanding the reciprocal relationship between structural, street-based & intimate partner violence can benefit health prevention & care efforts. Policies designed to alleviate health disparities for unstably housed women must consider the ways structural factors undermine personal attempts at healthier behaviors, while intimate relationship bonds can jeopardize otherwise sound, & well-intended health & housing policies.

2010S01360

Ko, Chyong-fang (Institute of European and American Studies/ Academia Sinica, Taipei, Taiwan 11529 [tel: +886(0)237897252; fax: +886 2 27827616; e-mail: ko@sinica.edu.tw]), **Comparing Familial Lives of Vietnamese Wives in Taiwan and USA,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper aims to investigate the familial lives & cultural values of Vietnamese wives of Taiwanese men & American men via in-depth interviews. The data indicate that even though a large majority of Vietnamese wives now living in Taiwan met their husbands through marriage agencies, they were not necessarily reluctant to marry into overseas families because marrying abroad, sometimes, is recognized as a means of breaking out of poverty & gaining some semblance of upward mobility or marital equality. Most of the Vietnamese wives of Taiwanese are handicapped by language or social norms during the early stages of their marriages, but become socialized to new cultural values over time. Gradually, they recognize that home is not as a place where natal parents reside, but where their children are located. The majority of the Vietnamese wives of American that I interviewed were forced to move to the United States due to the Vietnam War. For them, intermarriage was both a personal choice & a way of life that is not affected by the pressure of hypergamy. All of the informants emphasized the merits of forming a family with American men and residing in the United States. They acknowledge & respect their Vietnamese heritage, & intermix it with American cultural values in daily lives. They seem to view America as home, & Vietnam as a memory.

Ko, Lisanne & Chui, Ernest (The Nethersole School of Nursing, The Chinese University of Hong Kong, Shatin, N.T., Hong Kong [tel: 2609 6230; fax: 2603 5935; e-mail: lisanne@cuhk.edu.hk]), **An Exploratory Study on Grandparent-Grandchild Relationship of Chinese Families in Hong Kong,** *International Sociological Association, Gothenburg, Sweden,*

¶ Reducing co-residence among grandparents, their married children, and grandchildren may lessen grandparent-grandchild contact and relationship, & thence the filial piety, a virtue of respecting one's seniors. There is little research on familial roles of grandparents, & their views on grandparent-grandchild co-residence & relationship. This exploratory study aimed at investigating the extent & pattern of grandparent-grandchild co-residence, & examining how grandparents perceive their familial roles, co-residence & relationship with their grandchildren. A survey with 299 elderly grandparents & 189 adolescent grandchildren selected on convenience sampling was firstly adopted. Two post-survey focus groups & 16 in-depth interviews with grandparents were conducted to solicit views and experiences in grandparent-grandchildren co-residence and relationship. This paper presents the findings gathered from the focus-groups & interviews. Findings show that co-residence provides grandparent & grandchild with a platform to develop long-lasting relationship. Yet grandparents are quite ambivalent on this three-generation household. On one hand, three-generation households are still regarded as a blessing to the Chinese grandparents in Hong Kong. But on the other hand, three-generation households occur either because the co-residing parents cannot afford housing elsewhere or need grandparents' help on housekeeping. This latter familial role is analogous to that of paid domestic helpers.

Kobayashi, Jun (Seikei University, 3-3-1, Kichijoji-Kitamachi, Musasino-shi, Tokyo 180-8633, Japan [tel: +81-422-37-3663; fax: +81-422-37-3875; e-mail: jun.kobayashi@fh.seikei.ac.jp]), **Return of social capital: Effects of networks on occupational attainment,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper evaluates return of social capital on occupational attainment. For this purpose, I used the Social Stratification and Social Mobility Survey in Japan, 2005. The population was adult males & females. I examined the effects of networks at different educational levels. The dependent variable was the occupational prestige of the first job & the current job. I showed the following findings. (1) Education consistently increased the prestige both of the first job & the current job. (2) However, networks played different roles at different educational levels. For high school graduates & lower, networks sometimes worked. For college graduates & higher, they provided no benefits. (3) Networks played different roles at the first job & the current job. For high school graduates & lower, personal networks worked at the first job. To obtain the current job, relatives increased the prestige. (4) Therefore, social capital as networks functions, based on human capital as education.

Koc, Mustafa (Department of Sociology, Ryerson University, 350 Victoria Street, Toronto, Ontario, Canada, M5B 2K3 [tel: 1 416 979 5000 ext. 6210; e-mail: mkoc@ryerson.ca]), **Conceptual Perplexity of Food Security: A Critical Examination of Alternative Food Discourses,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since the accumulation crisis of the mid-1970s, a significant body of alternative food discourses emerged seeking equitable, sustainable, safe & healthy ways of producing, distributing & consuming food. Sustainable agriculture, food security, food citizenship, food justice, food democracy, right to food, food localism, slow food & food sovereignty are among a large list of alternatives aiming transform the structures & institutional practices of the modern food system. This paper will be focusing on changing discourses of "food security" since mid 1970s with a short historical background in dominant paradigms of food provisioning in capitalist societies in the 20th Century. The paper argues that the "food security" as a concept, needs to be seen as a tool used by different actors in a discursive engagement, for concurrently transforming & legitimizing the current practices in the food system. With multiple competing & often contradictory definitions, food security is a descriptive plastic notion, implying different things to different people, depending on their political & ideological perspectives. While admitting that "food security" has little analytical significance, the paper argues, however, that a critical review of ever changing discourses of food security can offer insights on how debates around food provisioning have been evolving over time in the context of the prevailing regimes of accumulation, dominant ideological perspectives and discourses of conjuncture. Such evaluation offers us insights on tensions between defenders of change & status-quo, & tensions between reformist & radical interpretations of food system change. The paper concludes that despite their analytical usefulness, alternative food discourses, such as food security, are important tools for transforming the agri-food system & existing social institutions & practices of modern society by creating spaces for democratic engagement.

Koch, Max (Lund University, Department of Social Work and Social Welfare, Lund, Sweden, Box 23, 22100 Lund [tel: 0046462221268; fax: 0046462229412; e-mail: max.koch@soch.lu.se]), **Transnationalisation, Financialisation and the Destandardisation of Employment,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper deals with some of the main structural processes against the background of which the destandardisation of employment can be interpreted. Taking a regulation theoretical perspective, its point of departure is a review of Atlantic Fordism with its focus on long-term economic planning, class compromise, full employment of the (mainly male) economically active, rising real wages, industrialisation, the increasing percentage of dependent employment, & the dominance of full-time jobs. The paper then describes the pillars of a finance-dominated accumulation regime, which has gradually replaced the Fordist one, & the corresponding modified hierarchy of institutional forms: the privileging of the shareholder value & the short-term perspective in relation to companies' profitability; the modification of management techniques & the increase in the number of transnational production networks & in foreign direct investment; the priority of financial capital & the decrease in productive investment; a modified system of industrial relations where the need for flexibility is reflected in the use of new & often non-standard forms of employment contracts. Special emphasis is placed on the link between the logic of short-term profitability & employment relations that tend to exhibit a

higher degree of fragility than previously: temporary work & part-time work as well as self-employment tend to increase, while income inequalities rise. Particularly in the circumstances of the current financial crisis, short-term work, alongside unemployment, is also increasing.

Koeller, Regine (Institute for Social Research and Social Policy, Cologne, Germany, 50674 [tel: 004922113065528; e-mail: koeller@isg-institut.de]), **Advocacies for Frail and Cognitively Impaired Older People in Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ In ageing societies, questions of participation of elderly in social life & the possibility of a self-determined life in old age are of high importance. The requirements concerning advocacies for elderly, who are in need of provisions to secure their legal participation, increase. The family more often adopts a background position in this context. Thus, the state increasingly is confronted with the task of protecting personal rights of elderly. Societies have developed diverse institutions of advocacies (e.g. guardianship, power of attorney). With the rising needs, they are under pressure to fulfil the growing demand & improve the use of alternative resources. We compare how different European states secure legal participation of elderly. Therefore legal systems, organisational performance, & reform concepts in five countries (Austria, Czech Republic, Denmark, Germany, Spain) are compared. Main problems as well as examples of good solutions & promising innovative approaches will be worked out. A first comparison of the countries shows more differences than similarities. A common development is the increase of advocacies & a growth of costs. Striking, & so far not accountable for, are the differences in the age structure of people in need of legal protection. In Austria mainly older people (over 69 years) are under guardianship while in the Czech Republic almost 50% of all wards are under 40 years a despite similar age structure of the population in both countries. At this point socio-demographic aspects can not explain the differences & further analysis is required.

Koenig, Tomke & Jaeger, Ulle (Zentrum Gender Studies, Universität Basel, Steinengraben 5, CH-4051 Basel [tel: xx41-61-2670873; fax: xx41-61-2670874; e-mail: tomke.koenig@unibas.ch]), **The Intertwining of Private Gender Arrangements and Gendered Career Patterns of Junior Academics at Swiss Universities,** *International Sociological Association, Gothenburg, Sweden,*

¶ In our presentation we will discuss the persistence of gender relations at Swiss universities in the context of current institutional reforms & changes in current gender arrangements in private life. Our paper is based on a secondary analysis of a) personal accounts of male & female professors on their experiences with parenthood & career development & b) qualitative interviews we conducted in our individual research projects dealing with related topics (division of labour in couples, dual career couples). These preliminary results belong to a larger work-in-progress. The aim of our paper is to show the relationships between the hegemonic logic of the academic field, the current changes in the university as an institution & the various career options for women & men at university. We also consider the impact of the various forms of private gender arrangements on the careers of women & men. And finally, we deal with the question of how the logic of the academic field must change structurally, & go beyond individual promotion of women, in order to reflect the current social organization of gender relations at university. In our paper, we want to present some initial results & discuss new paths to equality.

Koettig, Michaela (University of Applied Sciences, Nibelungenplatz 1, 60318 Frankfurt a. M. [tel: +49 69 1533 2647; fax: +49 691533 2809; e-mail: michaela.koettig@gmx.de]), **Researching Conflicts: Self-Location and Viewing the Others in Investigating the Coexistence of Israelis and Palestinians in Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the context of a Lehrforschung (teaching & research project with students) at the University of Goettingen we examined the coexistence of Israelis & Palestinians in Germany. We have focused on the dealing with the Middle East conflict. In my paper I would like to introduce the research project & show the social contexts we explored; which empirical methods we used & how we undertook the analysis of the empirical data. Furthermore I would like to show how the researchers & the students prepared for entering the research field. Particularly I would like to explore our approach to the Middle East conflict by inviting experts & by using different materials for becoming aware of the different perspectives on the conflict. Doing this I will also include the sensitivity of our background & the genesis of our location in the conflict & its relevance for entering the research field. In general, I will discuss the handling of "delicate issues" such as conflicts during the research process & its influence on the sense of the field, the research process & the results of the study.

2010S01368

Kogan, Irena & Anna Baranowska, Michael Gebel, Teo Matkovic (University of Mannheim, Mannheim, Germany, 68131 [tel: 0621-181-2015; fax: 0621-181-2016; e-mail: ikogan@mail.uni-mannheim.de]), **Tell Me Whom You Know: Personal Contacts and Job Entry in Eastern European Countries,** *International Sociological Association, Gothenburg, Sweden,*

¶ Social networks are known to be effective sources of information on job vacancies, & hence means of reducing job search costs (Granovetter 1973, 1974). Compared to formal methods, informal contacts are better channels for the transmission of information between job applicants & potential employers, & should therefore lead to matches with better quality & wages (Pellizzari 2004). On the other hand, Bentolila et al. (2004) argue that jobs found through contacts are obtained quicker & hence they should also pay lower wages, since at least some of them are filled by workers who sacrificed their productive advantages. Mouw (2003) and Pellizzari (2004) however, find little consistent evidence that using contacts affects the wages or prestige of the given job. The proposed paper looks at the role of the social contacts for a possible trade off between the speed of the labour market entry and the quality of the first employment in five Central & Eastern European countries: Serbia, Croatia, Poland, Ukraine & Estonia. The countries analysed in the paper represent the variety in starting conditions, transformation trajectories & institutions observed in the region. Among the countries emerging from the Soviet Union, we focus on Estonia & Ukraine, which, despite a shared heritage, underwent very different developments after 1991. We also study two countries emerging from the Socialist Federal Republic of Yugoslavia (SFRY), which experienced quite troubled transformation processes, Serbia & Croatia. Finally, we study Poland, which belonged to the more developed socialist economies in 1989. As education has increasingly become a decisive factor structuring the transition from school to work in CEE countries after transformation to capitalism (Nee 1989; Noelke & Müller forthcoming), we expect that other means of job allocation, including personal contact, to play a lesser role to the extent that liberal market reforms are effectively implemented. If market reforms are delayed, economic restructuring proceeds slowly, socialist allocation patterns persist & governments continue to regulate labor market mobility & earnings, inequalities between education groups in terms of labor market outcomes might not change significantly (Gerber & Hout, 1998), whereas social contacts continue to play an important role for the job allocation. Hence we expect social contacts to have a stronger independent effect on job search duration in countries with the delayed transitions, like Ukraine & Serbia, whereas such effect should be lower in Estonia and Poland with Croatia being placed in-between. To test our hypotheses we use school-leaver-surveys for all countries included in the study apart of Estonia, for which a retrospective life history data are used. In the first step of the analyses we estimate a propensity of searching for the first job relying on personal contacts as opposed to the formal means of the job search as a function of the demographic & human capital characteristics of young people & their socio-economic background. In the second step by means of the propensity score matching technique we compare outcomes of the job search in terms of the speed of finding first significant employment 6, 12 & 24 months after leaving education, as well as the quality of the first job measured against the ISEI scale between those school leavers who adhered to personal contacts versus those who relied solely on formal methods of job search. Thus are able to estimate a causal effect of the job search means on the probability of landing the first significant job & its quality & compare this effect across the countries analyzed.

Koh, Eunha & Kim, Hanjoo (Dept. of Policy Research & Development, Korea Institute of Sport Science, Seoul 139-242 [tel: +82-2-9709567; e-mail: ehkoh@sports.re.kr]), **The Queen on Ice: Yuna Kim, Media and Corporate Nationalism in Korea,** *International Sociological Association, Gothenburg, Sweden,*

¶ Yuna Kim achieved the first grand slam in female figure skating history winning the gold medal at Vancouver 2010 Winter Olympic Games. Beyond her domestic brand value worth /BFM2X4B|ENDUS8 million yearly income including /BFM2X4B|END7.5 million from sponsors such as Nike, Samsung Electronics, Hyundai Motors, & Proctor & Gamble, Yuna Kim ranked 2nd in the Most Marketable Winter Olympians list by

CNBC. On the other hand, she is a national icon leading a number of fan sites and enthusiastic followers who act collectively against commercialism & anti-fans. The authors pay attention to the uniqueness of Yuna Kim's celebrityhood that distinguishes her from conventional Korean sport celebrities, focusing on the ways in which she penetrated into public sensibility through diverse media. Through an extensive review of news, commentaries, commercials, and websites & blog site contents, the study shows how different ideologies were blended into Yuna Kim's public persona while leaving space for public resistance.

2010S01370

Kohler, Ulrich (Social Science Research Center Berlin, Berlin, Germany, 10785 [tel: +49 30 25491361; fax: +49 30 25491360; e-mail: kohler@wzb.eu]), **The Economic Consequences of Getting Ill in Germany and the United States,** *International Sociological Association, Gothenburg, Sweden,*

¶ The event of long term illness is regulated differently in Germany and the United States. While most Germans are members of the compulsory health funds which pay for medical treatments & medication, U.S.' health care arrangements consist of a complex compound of fragmented schemes creating a number of distinct "transfer classes," some of them with very limited access to contributions of the welfare state. Moreover, while both countries protect employees against dismissal, only the German welfare state also provides continued payment of wages during absence from work. Starting from a description of such welfare state arrangements we develop several hypotheses about the economic consequences of getting seriously ill, which are then tested using data of the German Socio Economic Panel & the American Panel Study of Income Dynamics. For example, we expect that sick persons in Germany by and large rely on the contributions of the welfare state to secure their standard of living, while many Americans must combine the welfare state contributions with continued work despite illness, increased work load of other household members, & resort to the capital marked; thereby the specific combination co-varies with the transfer classes created by the American health care arrangements. Hence, although we expect little overall effects of getting ill on household income in both countries, we expect (a) differences in the major source of income between both counties, (b) higher variation of income packages in the U.S., & (c) an increase of depts due to long term illness in the U.S.

Köhrsen, Jens (University of Bielefeld, Bielefeld, Germany [fax:; e-mail: Jenskoe@gmx.de]), **How Disparities of Power shape Religious Practice–The Impact of Social Stratification on the Practice of Religion in Argentinean Pentecostalism,** *International Sociological Association, Gothenburg, Sweden,*

¶ Explaining individual behaviour in the social sphere of religion has become an increasingly discussed topic during the last years; as for instance the popularity of the rational choice theory of religion shows. But since Weber, the sociology of religion has paid little attention to social stratification as an explanatory variable for religious behaviour. My paper wants to address this blank & discuss the impact of social stratification on the field of religion. Therefore, I will analyze the findings of an empirical investigation on Argentina's Pentecostalism in the light of the sociology of Pierre Bourdieu. Bourdieu's sociology offers an efficient approach to analyze & explain the relationship between an actor's position according to the social distribution of power (capital) & his practice in different social fields of action. Applying Bourdieu's concepts of habitus & taste to the scientific study of religion can contribute to a deeper understanding of individual religious behaviour by indicating how the social position can shape the practice of religion. In correspondence to Bourdieu's theory, my findings indicate for the case of Argentina that religious practice is significantly influenced by social disparities: Individuals from different social backgrounds tend to particular types of religious practice in Argentinean Pentecostalism. The findings on Argentinean Pentecostalism allow for assessing advantages & disadvantages of Bourdieu's theory for the sociological study of religious practice.

Köker, Eser, DoAanay, Ülkü, Keskin, Fatih & Özdemir-Taştan, ADGnan (University of Ankara, Faculty of Communication, Department of Public Relations, Ankara University Communication Faculty, Cebeci, Ankara, Turkey [tel: +90 3123197714; fax: +90 3123622717; e-mail: koker@media.ankara.edu.tr]), **Competition of Nationalism in Media at General Elections 2007 in Turkey,** *International Sociological Association, Gothenburg, Sweden,*

¶ Throughout the political campaigns previous to the general elections 2007 of Turkey, both the political parties & the media made an effort to keep nationalism fresh in the agenda. This article dwells on how the media incorporates nationalistic themes into the electoral competition of the political parties & aims to demonstrate the proximity between the way in which the state of addressing the nation was naturalized throughout election campaigns, & the mode of the media "to prepare the elector to the election scene." For this purpose, the news reports of newspapers and TV channels have been analysed on the basis of official election campaign period (21 June-21 July). The analysis focused on the three newspapers with the highest circulation & three TV channels with the highest ratings in the first six months of 2007. A total of 664 news reports of the newspapers & 360 news of TV channels examined throughout the qualitative content analysis within the scope of the following questions; "What, by whom (which actors), how often presented?" The results indicate that the media established nationalist elements predominantly through references to the nation state & national security & indivisible integrity of the state.

Kolankiewicz, Marta (Department of Sociology, Lund University, Box 114, 22100 Lund, Sweden [tel: (+46) 46 2229571; fax: (+46) 46 2224100; e-mail: marta.kolankiewicz@soc.lu.se]), **In Whose Name? Ayaan Hirsi Ali in the Shadow of Islamophobia and in the Context of Contemporary Feminist Debates,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the last decades, Muslim minorities have been repeatedly presented as unwilling or unable to integrate in "Western" societies. One frequently used argument is that Islam is a threat to women's rights. This argument gives the impression that feminism is complicit in the spread of Islamophobic ideas. In my paper, I present the figure of Ayaan Hirsi Ali, by some considered to be an outspoken defender of women's rights & the voice of an authentic insider, by others seen as a danger to the multicultural model. My starting point is Hirsi Ali treated as a feminist. I try to locate her ideas in the feminist tradition, & point out places where she ignores or rejects the developments of contemporary feminism. This is done by tracking the presence or absence of some of the crucial concepts & debates of feminism in Hirsi Ali's line of thought. Through this contextualization, I seek to answer the question "In whose name?", i.e. to identify the subjects of Hirsi Ali's emancipatory project as well as her audience. Furthermore, I point to those currents of feminism which are vulnerable to the use proposed by Hirsi Ali & those which resist it.

2010S01374

Kolibiki, Hamid Mehrabi (Lumière Lyon 2 University, France [e-mail: hamid.mehrabi@univ-lyon2.fr]), **The Role of Self-Esteem among Adolescent Girls in Sex Free,** *International Sociological Association, Gothenburg, Sweden,*

¶ Research shows that under the influence of social and cultural change in recent decades, the sexual behavior of adolescents in contemporary society of Iran has changed dramatically. Currently, most teenagers and young girls being approached in an adult sex carelessly and it is themselves, offering to have sex. Among them, there are some who, despite of them, and begin the legally binding sexual relations and there are others who have confidence in themselves, control their sexual aspects in relationships with men. The perception of research in this area of life of young girls, for a traditional society like Iran as the dominant ideology that permits no sex outside marriage is very important. This article has been the study of the influence of the self esteem of adolescent girls in Tehran and the manner of their treatment with sexual issues of their surroundings and their ways of communicating with the opposite sex; this search is based on the interview we conducted with 78 adolescents and young people. For this study, we used as qualitative research as 'the basic theory'. The results showed that girls in whom the sense of self-love is stronger, longer control their sexual desires and sexual orientation that girls feel less sense of pride and they did not allow any behavior sexual friends of the opposite sex. Also their vision regarding sex was quite different from reports in which the girls' self-esteem is less strong. Keywords: Dignity, Sexual Relationship, Teen, Youth, Iran.

Kolnberger, Thomas (Kolnberger, Thomas; IPSE University of Luxembourg, Walferdange (Route de Diekirch), Luxembourg, L-7220 [e-mail: thomas.kolnberger@uni.lu]), **Between Swampy Backwaters and "Golden" Riverside: The Water Frontiers of Phnom Penh, Cambodia in Historical Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ Colonial Phnom Penh used to be an amphibious urban landscape, tucked between canals & the riversides of the Mekong, Tonle Sap and Bassac. Periodically filled up lakes & swamps during the monsoon a a kind of marshland locally called boeung a still dot the town area. However, the agricultural lands around the swamps and the sites of "floating villages" (motley throngs of boats & houses on stilts) along the riversides, once neglected, are now a golden playground for developers' extravaganzas. Today in Cambodia, power is money & money (and not land-property) is power. The rapid expansion of the city in all directions is driven by the need for construction plots to attract direct investments. As in the past, the role & meaning of the urban waterscape is changing. The history of Phnom Penh offers a unique case study for persistency and adaptation in the interaction of people, water, & land. This paper will present the transforming perspectives, & the symbolic and social connotations of the urban waterscapes of this Southeast Asian city since its (re)founding in French colonial times (with references to the "hydraulic cities" of the ancient Khmer) providing insights to today's changes in a longue durée.

2010S01376

Kolosova, Elena A. (Sociological Department, Russian State University for the Humanities, Moscow, Russia, 125993 [tel: +7-916-782-9109; e-mail: theULshmiga@mail.ru]), **Major Trends Transforming the Practice of Child Reading in the Family,** *International Sociological Association, Gothenburg, Sweden,*

¶ The subject of study is family reading. The method used to obtain the data was Internet-survey, sample was 100 respondents. The basic sources of the information on education of children at modern mums the special literature (the books-72 of %) & the Internet (84 %) act. Whereas actually councils of contemporaries, parents & other experts, in answers of respondents, use on the average half of interrogated mums. And on the last place special TV & radio programs, & also special newspapers & magazines. Possibly this type of the information is accessible today in networks, therefore the reference to them is not allocated in the separate answer with respondents. "Strong" books from a thick cardboard, on plastic are in house library of the majority of modern Russian children (94 %). Merits of such books parents name durability, presence of bright drawings, possibility of use of books from plastic in a bathroom, safety for the child. Whereas lacks of such books admits, along with that is included into the strong book less than the substantial text, its dearness, weight & not mobility, & also not schooling of the child to accurate the reference with the book. But despite of everything, the family role in formation of the relation to the book, reading is extremely great. If reading is included into a way of life of adult members of a family, the child catches it & absorbs.

Komendant-Brodowska, Agata (Institute of Sociology, University of Warsaw, Warsaw, Poland, 00-927 [tel: 506051347; e-mail: komendanta@is.uw.edu.pl]), **It takes a group to fight the tyrant. Behaviour of school violence bystanders in game theoretical perspective.,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of the conference paper is to describe group-related factors related to the behaviour of a peer group faced with a problem of bullying by using a structurally embedded public goods game. In order to analyse how different group-related factors influence the reaction of bystanders I use models from the scope of rational choice theory (RCT). I treat the decision-making process of a bystander as rational. Observers take into account both the possible gains & costs of their decision & the presence of other observers, making a similar decision as themselves. They are not only aware of the presence of others but they seek confirmation for their own decisions among their friends & classmates. Social control operates via a network of relations. It is worth underlining that young people struggle to be accepted by their peers & they often express tendencies to conform to group norms both in general (norms concerning young people) & in particular social context (norms among groups of friends). In addition, students are involved in different social relations, they have friends & can be members of cliques. The network of these relations influences the reaction of onlookers to bullying.

2010S01378

Kominek, Jasmin (Sociology, University of Hamburg, Hamburg, Germany [tel: ; e-mail: jasminULkominek@yahoo.com]), **How do actors decide when facing uncertainty as in the example of migration?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Rational choice theory suggests that on each of the different levels micro, meso, or macro the outcome of migration can be described as resulting from goal oriented decision making weighting different criteria, gathering necessary information & sorting it out. Due to bounded rationality & imperfect information it can be assumed that objectively the optimum can not be reached that way or if it by chance is met, the agent can not know this fact for sure. Thus more relevant than special criteria or abstract heuristic models to predict the likelihood of future events might be the decision process itself. Due to the least effort principle (social psychology) when following paths (as observable on macro level) the decision process changes towards using more & more routines and standards. So the more an agent is used to deciding path dependently & therefore his decision processes resembles an "ideal type path dependent" the more likely he is to decide in the following way: If the related personal decision instance says go he migrates & if it says stay the agent is likely to stay.

Komlik, Oleg (Ben-Gurion University, Beer-Sheba, ISRAEL, 84105 [tel: +972-54-4895845; fax: +972-8-6472932; e-mail: komlik@gmail.com]), **Translation in Action: the Institutionalization of the Global Anti-Money Laundering Legal Norms in Israel,** *International Sociological Association, Gothenburg, Sweden,*

¶ Over the years, Israel has been a very paradise for Money Laundering. The Age of Globalization has entailed significant developments in global & local levels, which have even increased the attractiveness of Israel as a shelter for "dirty" money. This paper traces the actors & mechanisms involved in the complex process in which the global legal norms & practices against Money Laundering became part & parcel of the Israeli Prohibition on Money Laundering Law. By analyzing its contents & its legislative process, one core question of the contemporary theoretical debate is hereby addressed: how the global has been institutionalizing into the local. The research reveals that the pressures of the global organizations & foreign states' agencies, with the US government as the ringleader, have played a decisive role all-through the legislative stages, by putting an extensive pressure on Israel to push forward the legislation. Moreover, the global actors also de-facto participated in its drafting. Nevertheless, the State of Israel has not been a passive rule-taker in relation to the global governance, but rather the cardinal agent as regards the way in which foreign legal norms were adopted in the local field, as well as the velocity of this process. And this process has been inherently political & characterized by endless conflicts among all local institutional factors: the state bureaucrats, the interest groups & politicians. These conflicts among local actors & the international actors' pressures, interacted dialectically, have jointly begot the legal creation that has institutionalized Anti-Money Laundering global norms in Israel, accordingly to the particular local societal arrangements. By bringing globalization into the sociology of law that, so far generally has limited itself to the boundaries of the nation-state, this paper elaborates a comprehensive theoretical framework to explain the mode of institutionalization of the global into the local through the mechanism of translation.

2010S01380

Komp, Kathrin (Department of Sociology, VU University Amsterdam, De Boelelaan 1081, 1081 HV Amsterdam, The Netherlands [tel: +31-(0)20-5986921; fax:; e-mail: k.komp@fsw.vu.nl]), **The Political Economy of the Third Age,** *International Sociological Association, Gothenburg, Sweden,*

¶ The older population in Western societies is increasing & becoming more heterogeneous. To capture the heterogeneity, older persons are currently labelled either "healthy & active third agers" or "inactive fourth agers in poor health." The notion of the third age puts welfare policies in a new perspective. Third agers represent a resource for welfare production, particularly when they volunteer or provide informal care. Moreover, they represent a new clientele for welfare policies and, thus, modify welfare state activities. This paper explicates the challenges & opportunities third agers present to European welfare states. For this purpose, it presents conceptual considerations as well as macro-level data. The results show that third agers provide welfare states with a considerable resource for welfare production, particularly in Continental & Southern Europe. Governments address this development in different ways: they delay retirement almost universally, strengthen volunteering in later life particularly in the United Kingdom & Scandinavia, but hardly ever tackle informal care-giving in later life. Interestingly, the countries with the highest number of third agers take the weakest approach to activating them. This suggests that the third age has a country-specific relevance for the welfare state.

2010S01381

Konak, Nahide (Abant Izzet Baysal University Sociology, Bolu

Turkey [tel: 011 90 374 275 2050; e-mail: nkonak@hotmail.com]), **Politics of Nature and Citizenship: How to Use Water As a Source of Energy and Carbon Trade or Eco-tourism and Sustainability?,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the case of a conflict over the development of hydroelectric facilities on ADGkizdere Valley's rivers in Rize, Turkey in order to document how the nature is constructed vis-à-vis the country's hegemonic citizenship regime, & to identify the counter-hegemonic voices of alternate green citizenships. This is achieved by comparing the discourses of nature & citizenship employed by various actors in this conflict, including proponents of the development of hydroelectric facilities and opponent's--- members of the Ikizdere Organization & others. The analysis of narratives over nature construction & protection reveal the fact that opponents, while addressing the issues and their concerns (such as, hydroelectric development are seen to be a threat to the sensitive eco-system & environment as well as cultural, social & economic structures of the region), constructed the counter-hegemonic sustainable citizenship. This counter-hegemonic sustainable citizenship insists on an eco-tourism-based development model for the region. Thus, this article argues that opponents not only have advanced significant challenges to the neo-liberal capitalist hegemonic citizenship regime, which treats nature as a set of resources for exploitation in the course of "development," & water as commodity, but also have fostered a hybridized conception of green citizenship, that is, counter-hegemonic sustainable citizenship.

König, Tomk (Zentrum Gender Studies, Universität Basel, Steinengraben 5, 4051 Basel, Schweiz [tel: 0049 221 42 080 19; fax: 0049 221 42 66 84; e-mail: Tomke.Koenig@unibas.ch]), **The Current Gender Order Seen From the Perspective of Couples: A Paradoxical Combination of Persistence and Change,** *International Sociological Association, Gothenburg, Sweden,*

¶ The development of gender relations has long been described in terms of linear change. But today it presents itself as an ambivalent process in which fundamental changes are opposed by traditional tendencies, especially in the division of labour between the sexes. However, in many studies, arrangements between couples are labelled in broad terms as either "modern" or "traditional." The traditional patterns–according to a widespread theory–seem to re-assert themselves behind the back of the person. These studies suggest that the couples only think they live in partnerships on equal terms, but their actions fall back into traditional arrangements. In my paper, I will critically review this assessment and refer to a research project funded by the Swiss National Science Foundation (Nov. 06 - Feb. 10). The data consists of qualitative interviews with 40 cross-sex & same-sex couples who live in shared households with & without children & belong to different social milieus. The material was evaluated using a discourse-analytical method. This perspective allows elements of continuity & discontinuity to become equally apparent, shaping actions & self concepts as well. Both, men & women have to clarify & balance their roles for themselves as individuals and as part of a couple.

Konstantinovskiy, David (Institute of Sociology RAS, Moscow, Russia, 117218 [tel: 7 499 1286901; fax: 7 495 7190740; e-mail: dav.konstant@gmail.com]), **Education–for whom? And what for?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Desire to get university diploma is the most general characteristic of youth aspirations. The reason is: only people with higher education have higher wages & unemployment among them is the least. Demand for higher education generates an education system answer: suggestions from universities. Demand is differentiated. Some need for education–that is knowledge, profession allowing get a job requiring high qualification & giving adequate remuneration. Others need for only a diploma. Correspondingly a suggestion is differentiated too. Some universities provide education, others give diplomas. First are oriented on international cooperation (including Bologna process), second are oriented firstly on financial performance measures. At the same time both demonstrate their utilitarian orientation. In future it is prognosticated that differentiation of universities will increase & accordingly differentiation of diplomas as a result of growth of differentiation of population demands. It is not meant this situation will fit to all & will be stable. What are social consequences? Differentiation of diplomas is social differentiation of their receivers. Various diplomas a various destines. Young people who do not get good education can see differences between their life chances & possibilities of those who have other ways in life.

Kontula, Anna (Department of Social Research, University of Tampere, Kalevantie 5, FI-33014 University of Tampere [tel: +358 50 3429928; fax:; e-mail: anna.kontula@uta.fi]), **Status of Migrant Workers in Finnish Construction Sector,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Finnish government has announced its support for labour immigration & integration services for migrants. The goal is to guarantee sufficient labour force by controlled immigration of young educated adults in the circumstances of aging population. According to the government's Migration Policy Program, newcomers are welcomed with their families to live permanently in Finland. The Finnish migration policy looks very different when we look at it from the perspective of migrant workers in informal or semi-informal construction sector. Unfavourable residence permit practices, illegal working conditions & citizenship-based social security lead to a situation in which men are not able to integrate in the Finnish society. Migration with families seems also to be a middle-class privilege: because of the uncertain status & bad living conditions, migrant construction workers are forced to leave their wives & children in their countries of origin. The purpose of my presentation is to describe these mechanisms that make it possible for officials & employers to maximize the benefits of labour migration & to minimize the expenses. The presentation is based on my study on informal work in construction sector and especially on my ethnographic fieldwork & interviews among Polish migrant workers.

Konzen, Lucas Pizzolatto (Università degli Studi di Milano, Milan, Italy [tel: ; e-mail: lucas.pizzolatto@unimi.it]), **Postcards of Exclusion and Places Off the Map: The Legal Dimension of Conflicts Over Public Spaces in the Case of Donostia-San SebastiáN, Basque Country,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper discusses the legal dimension of public spaces in tourist cities, taking the Basque city of Donostia-San Sebastián as a case. Empirical evidence was gathered through qualitative methods, such as observation & analyses of newspaper reports, documents and tourist materials. In Donostia some places are selected to become attractions, whereas others are kept outside the tourist market. The process raises a duality between the tourist enclave and the rest of the city that results in two patterns of exclusion concerning public spaces. The first is metaphorically named "postcards of exclusion." Within the tourist zone, non-profitable presences, actions & discourses are subjected to a series of mechanisms of control in order to favour the ones encouraged by the tourism industry. The second is called "places off the map." Not only private entrepreneurs, but also agencies of the state bureaucracy address relevant financial & non-financial resources to promote public uses in places situated within the tourist enclave, while other places remain neglected. As a closer analysis of some exemplary situations of conflict found in Donostia reveals, in order to understand how those patterns of exclusion successfully work in everyday life it is necessary to unpack the property arrangements governing public spaces.

Korolczuk, Elzbieta (Department of Sociology, Södertorns Högskola, Huddinge Sweden 141 89 [tel: +48602754565; e-mail: elzbieta.korolczuk@sh.se]), **Gendering Poland? Few Comments on Initiatives and Strategies for Social Mobilization of Women,** *International Sociological Association, Gothenburg, Sweden,*

¶ Joanna Regulska & Magda Grabowska (forthcoming), claim that women's groups & organizations in Poland subscribe to different & often contradictory views on how to articulate women's subjectivities and interests. Some embrace more traditionally defined models of women's identities & try to re-define it, some adopt a European version of equality that stresses success & individualism, while others attempt at reconciling their feminist identities with the Catholic ones. The authors conclude that 'confrontation among these conflicting images & positions have created new in-between spaces, the third space where hybrid identities are performed' (p. 119). I will discuss two cases of women's mobilization in Poland that seem to support Regulska & Grabowska's arguments: the movement for the reestablishment of Alimony Fund (2003-2007) and the Congress of Polish Women (2009). I place women's collective agency at the center of the analysis taking under consideration the context of post-communist transformation & EU-integration process, drawing my conclusions from content analysis of information provided by the activists themselves (web sites, interviews, demonstrations & public statements), as well as the public discourse on both initiatives (media coverage, internet forums, government responses). It is worth stressing, that my aim is not to decide which

strategy is more efficient in fostering gender equality. Rather, I am interested in scrutinizing how women's agency translates into citizenship practices, how women confront state actions, how they gain public visibility & try to win support of the general public.

Koroleva, Ilze, Rungule, Ritma, Aleksandrovs, Aleksandrs & Snikere ,Sigita (Institute of Philosophy and Sociology, University of Latvia, Akademijas laukums 1, Riga, Latvia, LV-1940 [tel: + 371 67227920; fax: +371 67210806; e-mail: Ilzek@petijums.lv]), **Changes in the Structure of Leisure Time and It's Impact on Addictions Among Youth,** *International Sociological Association, Gothenburg, Sweden,*

¶ Leisure is the time when one can concentrate on their interests, self-expression, & various other forms of physical & mental development. In this aspect leisure of adolescents is of special importance. However, the number of young people who can't or aren't willing to find pleasant activities for themselves is increasing. The utilization of leisure depends not only on interests and abilities but also on the skills of personal time-management. Recently Latvia has become highly affected by the economic and thereafter social crisis, the inevitable consequences of these developments were significantly decreased possibilities of organized leisure & interest education on all levels. Thus, the amount of time for young people to spend on surfing the net, playing computer games, & aimless loitering with friends has rapidly increased. In our paper we analyse the relation between leisure activities & forms of risk behaviour. Surveys on the use of addictive substances (ESPAD 2003 & 2007, & ECAD 2006 and 2008) show that peers compose the strongest risk factor that correlates with the experience of tries & use of addictive substances, & other forms of risky behaviour. The use of addictive substances & the prerequisites for addictions are analysed within the context of both peers, & wider social environment risk factors.

Korotchenko, Alexandra & Hurd Clarke, Laura (The University of British Columbia, 2329 West Mall, Vancouver, BC Canada V6T 1Z4 [e-mail: aULkorotchenko@yahoo.ca]), **Russian Immigrant Women and the Negotiation of Social Class and Feminine Identity through Fashion,** *International Sociological Association, Gothenburg, Sweden,*

¶ Women learn to do gender (West & Zimmerman, 1987) & femininity through everyday beauty work practices, such as the use of fashion. Building on the growing body of literature that examines the doing of gender through clothing, this paper uses data from in-depth interviews with 10 women aged 52 to 75 to examine how Russian immigrant women's experiences of fashion, beauty, & femininity in later life are culturally & historically situated. Each woman was interviewed twice for a total of 20 interview hours. The data were analyzed using Strauss & Corbin's (1998) concepts of open and axial coding. Our findings reveal that the women's beauty work choices were framed by their socialization within Russian cultural values that privileged feminine appearance, their assimilation into Canadian culture, their resistance to Canadian views of beauty and femininity, & their feelings about their aging bodies. Similar to white North American women, older Russian immigrant women held negative attitudes towards their bodies, & utilized clothing to conceal & correct their bodies' deviations from the slim and youthful beauty ideal. Additionally, the women's clothing choices reflected their desires to assimilate, or alternately, differentiate themselves from their newfound cultural surroundings. These findings are discussed in relation to the extant research and theorizing regarding beauty work & aging.

Kortam, Marie (Université Paris 7/ CSPRP, Dalle les Olympiades - Immeuble Montréal - 3ème étage, 105 rue de tolbiac, 75013 paris, case 7101 [tel: 01 57 27 66 84 ; e-mail: mariekortam@hotmail.fr]), **Violences du Pouvoir et Pouvoir des Violences** (Violence of Power and Authority of Violence), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Ma communication est tirée d'une thèse de doctorat en cours en sociologie du pouvoir, intitulée: sociologie pratique de violences : une mise en perspective comparative entre camps de réfugiés palestiniens et banlieues françaises. Je propose de discuter la situation des réfugiés palestiniens au Liban, à travers les jeunes du camp de Baddawi, en se basant sur un travail de terrain (entretiens, observations, etc.) effectué durant l'été 2008. Les Palestiniens du Liban sont, à travers leurs corps, l'objet et la cible principale de la stratégie du pouvoir. Ce pouvoir agit sur eux, indirectement par des méthodes "douces" : ils sont assujettis, enfermés dans les camps. En effet, pour que la discipline dans la société libanaise soit réalisable, l'Etat multiplie les machines à contrôler les Palestiniens, à dresser les corps, à travers le "pouvoir juridique". En premier temps, je survole la discrimination des Palestiniens au Liban par le pouvoir juridique exercée par l'Etat libanais. Comment ce pouvoir utilise la violence pour maintenir l'ordre. Ensuite, je m'attarde plus sur le pouvoir disciplinaire, comment fonctionne-ti-il pour dresser et fabriquer des individus agissant dans diverses institutions. J'étudie trois règles de contrôle des opérations du corps pour analyser le contrôle et la fabrication, par l'Etat libanais, des "corps Palestiniens soumis" : La répartition dans l'espace ou la ségrégation spatiale, l'entre-soi ou la peur de l'extérieur, le contrôle de l'activité, et la tactique.

Kosaka, Kenji (Kwansei Gakuin Universityh, Nishinomiya-shi, Japan, 662-8501 [tel: 81+90-3719-2694; fax: 81+798-51-0955; e-mail: kkosaka@kwansei.ac.jp]), **Towards Broadening the Scope of 'Mechanism-based Explanations',** *International Sociological Association, Gothenburg, Sweden,*

¶ Commentary on P. Hedström's "Dissecting the Social"–Kenji Kosaka (Kwansei Gakuin University, Japan) The book presents succinctly & persuasively the way theoretical sociologists should pursue by addressing mechanism-based explanations, the DBO(=Desire, Belief, Opportunity) theory, & the Coleman micro-macro link diagram, which is exactly what I want to claim in the existing academic sociology where inductive (rather than deductive) and/or mystifying studies are haunting. The author, however, seems to have narrowed the scope of mechanism-based explanations by focusing on the ECA(=Empirically Calibrated Agent-based) models toward the end and stressing excessively the significance of Mertonian type of theory-research consolidation. I want to suggest a way to broaden the potential scope of mechanism-based explanations by way of illustrating my own work with T. J. Fararo (Fararo & Kosaka, 2003. Generating Images of Stratification: A Formal Theory, Kluwer Academic Publishers)

Kosinski, Robert A., Gradowski, T & Mrowinski, M (Faculty of Physics, Warsaw University of Technology ;, Warsaw, Poland, 00-662 [e-mail: kosinski@if.pw.edu.pl]), **Peer-To-Peer Networks in Internet Community,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Internet has become one of the most important means of social communication of our century. A substantial volume of Internet traffic can be attributed to that part of the Internet society that forms peer-to-peer networks, in which users can exchange data directly. Such networks are an effective way of distributing files to a large group of users at virtually no cost to the publisher. Peer-to-peer networks are as reliable (in terms of file availability) as their users, & cooperation between file sharers plays a crucial role in distributing files over the network. In our work we propose a simple model to study the cooperative & dynamical phenomena in peer-to-peer networks. By mathematical calculations based on the master equation & extensive computer simulations we study the efficiency & stability of this file sharing mechanism. In the operation of such a network an important problem is a phenomenon of free-riding i.e. the presence among all users persons who download files without sharing them. If the number of such users increases above a certain critical value the effectiveness of the network functioning decreases rapidly. In our investigations we look for the conditions in which such perturbations may appear and discuss the ways of preventing such critical situations.

Koski, Pasi, J. (Centre for Research on Lifelong Learning and

Education (CELE), Assistentinkatu 5, FI-20014 Turun yliopisto, Finland [e-mail: pasi.koski@utu.fi]), **Professional: The rescuer of the voluntary sport system?,** *International Sociological Association, Gothenburg, Sweden,*

¶ In many countries such as Finland, the role of voluntary sports clubs is fundamental in the organised system of sport & physical activity. Societal & cultural changes have shifted the use of time among people & the attitude to the voluntary work is different than two decades ago. Individualisation & the demands of working life, for instance, have created a setting of new kind for the voluntary potential. At the same time the level of demands & expectations from the sports clubs have increased. Professionals have seen as one of the solutions in this challenging setting. In 2009 the Finnish government launched a pilot project. It is the first time in the history when the government directly supports the sports clubs financially. The project gives to 200 sports clubs an opportunity to hire an official. The public support covers mostly 50 per cent of the labour cost. The pilot which will be evaluated rests for 22 months. In this paper, the problems of the first phase are analysed.

Kosuke, Hishiyama (Faculty of law, economics and humanities, Kagoshima university, kagoshima, kagoshima, Japan, 890-0065 [tel: +81-99-285-7594; e-mail: hishiyam@gmail.com]), **Policing Local Security of Southeast Asia in the Era of Mobility: The Case Study of Bali, Indonesia,** *International Sociological Association, Gothenburg, Sweden,*

¶ This presentation will clarify the character of the techniques of policing local security in Southeast Asia. Especially, we will pay attention to the strategy of community policing & gated community in Bali, Indonesia. Now, accelerated social mobility leads the trial of re-bordering & regulating mobility. We can see three tendencies. First, the sanction of traditional community is strengthened to keep the cohesiveness of it. Second, local people and the police try to establish the new policing strategy. Third, among the people who belong to new middle class, we can see the creation of the gated community. Considering them, first, this presentation will use the way of the comparison among the type of community policing & gated community in US, Europe, Japan & SE Asia. Second, Balinease case will be proposed as another one possessing the different factors, which is the cross-bordering relation between inside & outside of the community, market and tradition & so on. In other words, it means the impossibility of creating complete border remains in Bali. Third, to clarify the detail situation of it will also contribute to think more universally about community, the arts of security, mobility and border.

Kouchy, Jan & Bartusek, Ales (Education Policy Centre, Charles University in Prague, Malátova 17, 15000 Prague 5, Czech Republic [e-mail: jan.koucky@pedf.cuni.cz]), **Higher Education between Origin and Destination,** *International Sociological Association, Gothenburg, Sweden,*

¶ The comparative study "Higher Education between Origin and Destination" will be 2010 output of the fourth stage of the project "Inequality in Access to Higher & Tertiary Education in the Czech Republic & Other European Countries", carried out since 2007 by the Education Policy Centre (EPC), Faculty of Education, Charles University in Prague. In 2009 authors published 3rd report of the project (http://svp.pedf.cuni.cz/download/Whoismoreequal.pdf) "Who is more equal? Access to tertiary education in Europe". The EPC approach uses data gathered in four rounds of the European Social Survey (ESS 1-4), conducted in 2002-2009 in more than twenty European countries. Although the ESS is not primarily focused on education, it contains data which can be used very well for the study. The analysis concerns on 25 countries & the overall set has about 160 thousand respondents & the size of individual country sets is ranging from 4 to 8 thousand respondents. The study will draw attention to the change in character of inequalities. As higher/tertiary education has entered mass & later even universal phase, inequalities have become more subtle & less discernible as they changed their focus from quantitative to qualitative characteristics. Today they affect predominantly access to preferred fields of studies & to prestigious institutions, and later on, also the position on the labour market. Hence the importance of focusing not only on access to tertiary education in European countries but on providing a comprehensive analysis of the relationships between family background, access to education, the position of graduates on the labour market & their social status, that is on including also the effects of tertiary education.

Kowalska, Marta (School of Social Sciences, Bangor University, Bangor, UK, LL57 2DG [tel: +44 1248 383834; e-mail: m.j.kowalska@bangor.ac.uk]), **Between the Local and the Global: A Biographical Adjustment Strategies in Transnational Narratives,** *International Sociological Association, Gothenburg, Sweden,*

¶ The most prominent feature of biographical research is its focus on individuals & their local contexts though time. Biographical narratives give the researcher rich & detailed accounts of the personal life span within a specific social, cultural, political and an economic setting & give the opportunity, rare in social sciences, to observe how everyday life attitudes & practices adapt to changing circumstances. Local contexts in the contemporary world are strongly influenced by global factors. These aspects and the mobilities associated with them are especially interesting as well as theoretically & methodologically challenging opportunity for biographical research. Mobile populations, such as students, transnational workers & more global economic, political and cultural elites dynamically adjust to global circumstances, often paying considerable biographical costs for their contextual discontinuity. Mobility disrupts the local, natural rhythm of life. By moving within the global space & leaving the safe port of locality behind, the individual breaks life continuity with one place & needs to form new social, cultural & economic attachments to another. This paper aims to explore the ways in which mobile individual deal with disrupted time continuum which is caused by physical mobility within the European & global context. It is based on autobiographic narrative interviews gathered within the Euro Identities project & illustrates adjustment strategies such as: re-creating localities in a different place; building and engaging with international rather than local spaces; & investing into international & cosmopolitan capital. Those individual strategies which are reviled in individual biographies are important indicators of how the global context influences individual life & how individuals themselves attempt to find way to reconcile their local & global worlds. Key words: biographical research, local & global context, adjustment strategies

Kowzan, Piotr, Zielinska, Malgorzata & Prusinowska, Magdalena (University of Gdansk, Faculty of Social Sciences, Institute of Education, ul. BaA14yAskiego 4; 80-952 GdaAsk; Poland [e-mail: satkow@gmail.com]), **Struggling to Get United. Contemporary Student Movements in Poland as a Part of International Networks.,** *International Sociological Association, Gothenburg, Sweden,*

¶ Year 2009 has been a very active time for student movements in Europe. Many universities have been occupied & numerous student movements appeared as response to the Bologna Process & reforms commercializing higher education. In Poland students were not very active, partly because of the characteristics of the reforms and partly due to the cultural & socio-political context. However, two major student movements appeared in WrocAaw & in GdaAsk (OKUPÉ–Open Committee for Liberation of the Educational Space). Using international student networks as background for our analysis, we focus on OKUPÉ, which the authors were active participants of. The movement had an active beginning & managed to gather a considerable number of people demanding changes at the university,

including the relations of power, surveillance policy, equality issues, lack of participation in decision-making processes and spatial planning at the new campus. However, the promising beginning has not yet led to a continuous mobilization & the movement had to face internal conflicts, burning out of the members, fragmentalisation of interest & problems with decision-making & communication. The methods of decision-making brought from other European movements have not worked properly in the local context. In our paper we take into consideration the cultural, socio-political & educational context & compare OKUPÉ to other student movements in Europe, e.g., the Icelandic movement which two of us took part in. We hope that these perspectives will allow us not only to analyze OKUPÉ's life-cycle & the possible reasons for the organizational crisis we faced, but also to contribute to a better understanding of social movements in Poland & East-Central Europe.

KrA=tilová, Veronika, Kuhlmann, Ellen & Annandale, Ellen (Faculty of Economics and Administration, Masaryk University, Brno, 602 00, Czech Republic [e-mail: krutilova@econ.muni.cz]), **Impact of User Fees in Health Care System on Health Care Consumption the Politics of Mainstreaming Gender into Healthcare: Learning From Cross-Country Comparison,** *International Sociological Association, Gothenburg, Sweden,*

¶ Across the globe the concept of gender mainstreaming is indicative of substantive political & social change, & healthcare is a particularly important policy arena. Existing research reveals however only meagre success in the implementation of gender policies in national contexts, despite clear supranational guidelines. This paper aims to map out the spaces for gender policies within a fluid environment of the changing governance of healthcare by using cross-country comparison. We choose England and Germany as case studies that will serve to develop a robust methodological framework for an expanded cross-country comparison. Both countries have introduced extensive modernisation agendas with new managerial regimes as a particular facilitator towards improved performance of providers & quality of care. Our results highlight that changes in the governance of healthcare do provide opportunities for integrating gender sensitive approaches. However, opportunities are heavily shaped by national configurations of the "healthcare state" & the specific intersections between institutional, organisational & professional governance practices. Our comparative study also raises more general questions on health policy convergence & the tensions between supranational policies & national healthcare states.

Kraemer, Klaus (Klaus Kraemer; Department of Sociology/ University of Graz, Graz, Austria, 8010 [tel: +43 316 380-3546; e-mail: klaus.kraemer@uni-graz.at]), **Irrational Exuberance? A Sociological Explanation of Decisions on Financial Markets Under Extreme Uncertainty,** *International Sociological Association, Gothenburg, Sweden,*

¶ Financial markets are marked by considerable uncertainty. Actors in financial markets are nevertheless constantly forced to make decisions. This paper pursues the question of how they cope with this problem of decision-making. Based on a critical discussion of the concept of "expectations of expectations," I suggest turning to Max Weber's concept of charisma, which can be fruitfully applied to better understand the influence of "stock market prophets" on investment decisions & explain such influence as a social process.

2010S01401

Krebs, Dagmar & Bachner, Yaacov G. (Justus-Liebig-University of Giessen, Giessen, Germany [tel: ; e-mail: dagmar.krebs@sowi.uni-giessen.de]), **Direction of Response Scale Format and Response Behavior in Two Different Nations,** *International Sociological Association, Gothenburg, Sweden,*

¶ Formatting an answer means to map the selected answer to the categories on a response scale. In this process the direction of a response scale (beginning with the positive or the negative response category) provides information for respondents. The first category of a scale might result in different subjective hypotheses that respondents form about the "most frequent" or "most accepted" behavior. This would imply that direction of reading is important in reacting to response scales if this principle applies in general, then it should be observable in response behavior of respondents in different contexts whereby context means here: direction of reading: from left to right or from right to left. In the latter context, the right side of the scale would carry the meaning of "top" & response behavior can be expected to vary accordingly a comparable to response behavior on scales running from left to right. Data of two samples from Germany & Israel are compared. This paper tests the hypothesis that scales beginning with the positive pole bring about different responses than scales starting with the negative pole within each sample. A split-ballot design was combined with repeated measurement using different scale formats for identical items.

Krekula, Clary (Dept.of Social Studies, Karlstad University, 651 88 Karlstad, Sweden [tel: +46 54 700 16 62; fax: +46 54 700 14 60; e-mail: clary.krekula@kau.se]), **Age Coded Bodied: When Conceptions of Ageing Become Age Markers,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is on how conceptions of ageing are intrinsic to the embodied identity processes within which engendered age is done. Departing from twelve qualitative interviews with women aged 75 years or older & from three focus group interviews I illustrate how we interpret bodies through a screen that consist of conceptions of ageing. As embodied individuals we find ourselves in an ongoing negotiation over how our bodies shall be judged. In everyday interactions we seldom have knowledge of an individual's chronological age. When age-based differences are created the point of departure is instead the age identities individuals are ascribed. Accordingly, the markers that are used to ascribe age to individuals are central aspects in those processes in which age relations are created, challenged & negotiated. The empirical data is analyzed by the concept age coding a practices of distinction that are based on & preserve representations of actions, phenomena & characteristics as associated with & applicable to defined age. I illustrate that descriptions of body images depend upon conceptions of categories & that age codings of characteristics can be used as age markers. Hence, age codings appear as central aspects in those processes where embodied gendered ageing is done. Departing from these results I discus theoretical frameworks & argue that bodies & age identities should be analyses within a perspective of diversity and ambivalence.

2010S01403

Krell, Claudia & Vogl, Susanne (Catholic University of Eichstaett-Ingolstadt, 85071 Eichstaett, Germany [tel: +49 8421 93 1278; e-mail: susanne.vogl@ku-eichstaett.de]), **Parental Leave, Parenting Benefits and Male Participation in Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ Challenged by declining birth rates & demographic change, a new law, the so called "Elterngeld-Gesetz" ("parenting benefit law") was introduced in Germany in 2007. This change in family policy had mainly two aims: (1) to reduce financial loss in the first year after birth & therefore encourage people (particularly with high incomes) to start a family & (2) to encourage fathers to actively participate in childcare by taking parental leave. Parenting benefits guarantee up to 67% of the former average income for the first 12 months after birth. If the second parent takes a leave for at least two months the parenting benefit can be obtained up to 14 months. But how is the new law perceived by men & women in Germany? Can financial benefits facilitate decisions to have a baby and male participation in childcare? What are reasons for females and males (not) to take parental leave? Are men willing to take parental leave? How could their general willingness be reduced in practice? On the basis of 1.200 German wide CATI-interviews of women & men aged 18 to 70 we found an overall positive perception of the impact of the law both on the desire to have children and the motivation of fathers to take parental leave. 60% of interviewed men & nearly 90% of women would be prepared to take parental leave. But so far the high male motivation does not manifest itself in official statistics, according to which only 16% of fathers indeed take parental leave. Reasons for not taking parental leave are mainly job-related, especially for men. We conclude that financial benefits & more flexible regulations regarding parental leave cannot reduce male motivation to participate in childcare. Moreover, taking into account a declining birth rate during 2008, no actual impact on the desire to have children can be found (so far).

2010S01404

Kreyenfeld, Michaela, Andersson, Gunnar & Mika, Tatjana (Max Planck Institute for Demographic Research, Konrad-Zuse-Str. 1, 18057 Rostock [tel: +49-(0)381-2081-136; fax: +49-(0)381-2081-436; e-mail: kreyenfeld@demogr.mpg.de]), **Welfare State Context, Female Earnings and Childbearing,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper investigates the role of female earnings in childbearing decisions in two very different European contexts. By applying event history techniques to German & Danish register data during 1981-2001, we demonstrate how female earnings relate to first, second & third birth rates. Our

study shows that female earnings are rather positively associated with fertility in Denmark, while the relationship is the opposite in West Germany. We interpret our findings based on our observation that Danish social policies tend to encourage Danish women to become established in the labor market before having children, while German policies during the 1980s and 1990s were not designed to encourage maternal employment.

2010S01405

Kritsch, Raquel (Departamento de Ciências Sociais - Universidade Estadual de Londrina, PR, Brasil, Londrina, PR, Brasil - 86051-990 [tel: +5543/33245010; fax: +5543/33245010; e-mail: kritsch@uel.br]), **Human Rights, Rule of Law and National States: Oppositions and Complementarity,** *International Sociological Association, Gothenburg, Sweden,*

¶ The idea of human rights, a desired objective for many, becomes extremely complex & hardly consensual when the matter is defining it conceptually. Is it possible to talk about universal human rights and, at the same time, respect the particularities of each community? Is the coexistence of apparently exclusionary institutional arrangements possible, for instance the coexistence between sovereign national states (which presuppose a centralized control by the state of coertion & binding legislation) and political organizations with an inter- or supranational character (as the UN, CSOs or NGOs, some of which are also aiming at ensuing commands) as well as declarations with a binding character? Such questions do not seem to yield easy answers. The very term 'human rights' is attached to many presuppositions, as, for example, the connection between the concept & the political & juridical institutions of the modern world, among them, the Rule of Law: without specific constitutional rights, guaranteed, as a last resort, by state coercion, it seems impossible to think of binding commands capable of assuring such rights. On the other hand, the international juridical system of human rights has been expanded through multilateral conventions that adopt implementation mechanisms whose nature cannot be clearly defined. H. Arendt holds that universal human rights should coexist with national states, so that the lawful commands of the human rights charter can be enforced in fact. Habermas, agreeing with her, argues that positive law can only be enforced by coercive modern states; however, he goes a step further when he tries try to explain that the apparently contradictory "logic" which opposes the universal aspect of the human rights to its particular application by states can be better understood if we differentiate between the moral meaning of the human rights postulate & its legal aspect a effectiveness a which is connected to local particularities. Do such an understanding of the question really solve this apparent paradox? The aim of this presentation is to discuss the extent of this interpretation & its capacity to answer to the complex reality of human social diversity & organization.

Kriwy, Peter (University of Kiel, Kiel 24098, Germany [tel: +49 431 880 4373; fax: +49 431 880 3467; e-mail: pkriwy@soziologie.uni-kiel.de]), **Is Gary S. Becker right? The Division of Labor in Households re-examined,** *International Sociological Association, Gothenburg, Sweden,*

¶ The division of labor of married couples is examined in this presentation, more specifically whether relative educational differences affect the probability of being employed in the labor market. Following Becker (1981) in an efficient household only the one spouse showing comparatively greater advantages in the market specializes completely, e.g. in earning income from employment. Relative advantages in human capital should enhance the probability of being employed. However, traditional gender-specific role models may prohibit rational decisions concerning the division of labor in households. Is the resolution of traditional gender-specific role models able to increase the probability of female employment, if these women possess a higher education than their husbands? Data of the German Mikrozensus (1976-2005) are used to test these hypotheses. It was found that marriage partners showing educational advantages are more likely to be employed. However, especially for women this mechanism asserts only with time. Traditional role models inhibit rational decisions concerning the division of labor in households.

Kröger, Teppo (Department of Social Sciences and Philosophy, University of Jyväskylä, 40014 University of Jyväskylä [fax:; e-mail: teppo.kroger@jyu.fi]), **Care Work and the Strengthening of Economic Principles: Tensions Caused by the Introduction of Market-Based Practices Within the Nordic Social Care Systems,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper will analyse the effects of the current strengthening of economic principles–including the introduction of purchaser-provider models, consumer choice & competitive tendering–on the basic features of formal care work that is performed in Finland, Denmark, Norway & Sweden. The data to be used come from the NORDCARE survey that was conducted by a Nordic researcher group among 1200 care workers in each of the four countries. The paper will describe the progress & adoption of market-inspired practices within social care systems of the four Nordic countries & analyse the consequences of their adoption on the working conditions of care workers as well as on workers' capability to meet the needs of their service users. New tensions that have risen between the "rationality of care" and cost-efficiency & their potential effects on the quality of care and recruitment of care workers will be discussed. Similarities and dissimilarities between the developments of the four Nordic countries will be highlighted.

Kroll, Christian (Dep. of Sociology / London School of Economics, Houghton Street, London WC1N 2AE, UK [tel: +44 7547 44 04 23; e-mail: c.kroll@lse.ac.uk]), **Social Capital and Subjective Well-Being from a Life Course Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ Background: Since Durkheim we know that social connectedness is crucial to human well-being–a finding that was often confirmed by modern happiness research. However, the recent literature also shows that, paradoxically, "subjective well-being appears to be lowest in the phase of life where participation in public life is highest" (Veenhoven 2008c: 10). The following paper addresses this puzzle. Aim: This article compares how various age groups benefit differently from social capital. Thus, it applies a life course perspective to the social context of SWB. Drawing on role-identity theory, an important addition to the SWB literature shall be made by challenging the assumption of homogeneity in the social determinants of SWB over the life cycle. Method: Using data from the European Social Survey for the UK, the effects of trust, as well as formal (civic engagement) & informal (socialising) social capital on life satisfaction are analysed whilst controlling for socio-demographic factors. OLS regressions featuring interaction terms systematically examine slope heterogeneity across age groups (young, middle aged, old). Results: Socialising is less strongly associated with SWB among the mid-age group. Hence, benefits from informal social capital are more likely to occur in very young or old age. Additional analyses show that the diminished effect of social capital during the middle life years is actually mainly due to the men & parents in that age group, with further fluctuations if marital status is taken into the equation. Conclusion: In line with the life course perspective, the social context of well-being changes as people grow older. The societal roles of young, middle aged & old people are different, resulting in varying benefits from social capital. In the case of the mid-age group, social activities (that may be simply the outcome of other social roles as parent or work colleague) are less rewarding in terms of life satisfaction. This evidence might account for the puzzle of decreased SWB despite increased participation in public life for the middle age group.

Kronegger, Luka (University of Ljubljana, Faculty of Social Sciences, Kardeljeva ploA!ğad 5, SI-1000 Ljubljana, Slovenia [tel: +386 31 88 64 80; e-mail: luka.kronegger@fdv.uni-lj.si]), **Structures of Collaboration among Slovenian Sociologists,** *International Sociological Association, Gothenburg, Sweden,*

¶ Co-authorship, a form of scientific collaboration presents one major interaction mechanism between actors at the micro-level of individual scientists. A wide range of mechanisms fostering collaboration produces different local patterns within general networks. These can be described in terms of research groups, research topics & intensiveness of collaboration. Such comparisons of entire research disciplines provide enough information to make some conclusions on driving forces and mechanisms that constitute patterns of scientific collaboration. We observed & compared collaborative structures in complete longitudinal co-authorship network of Slovenian researchers who work on the field of Sociology. Data was examined as four consecutive five-year intervals. Analysis was performed using two approaches: SIENA modeling & blockmodeling to which we added some additional information on researchers & their ties. The main focus of the research was to compare results of both approaches using the same dataset.

Transdisciplinary, Context-Sensitive Ethics Project on Issues at the Beginning of Human Life, *International Sociological Association, Gothenburg, Sweden,*

¶ In regard to issues at the beginning & the end of life, many disciplines are players in the field to describe, explain, & reflect the topics at stake, among these medicine, sciences, the social sciences and, since the last 30 years, a relatively new academic hybrid, the discipline of bioethics. Empirical & moral issues, facts & values are closely interwoven as can be especially demonstrated in the realm of controversies at the beginning of human life. We will present results of our so called empirical-reflexive, context sensitive ethics approach to illuminate the different views & influence factors on the attitudes towards abortion, IVF & PGD in Germany. Methods We used a multi method qualitative-quantitative approach to examine and compare the view of the media, attitudes & experiences of the general public, affected couples of German & Turkish origin (couples undergoing IVF, couples with a high genetic risk) and expert views (gynecologicsts, human geneticists, pediatricians, midwifes, ethicists) towards Prenatal Diagnosis, PGD, Abortion, IVF and stem cell research. All in all, more than 2000 persons were surveyed in qualitative, problem focused interviews & in quantitative surveys; over 600 articles were analysed in a print media analysis. Results: We found fundamental differences in regard to attitudes & influence factors on attitudes among the different groups surveyed. We also observed a gap between the official debate and arguments put forward in the bioethical debate on the one hand and the views of those affected, practitioners & the general public on the other which have to be discussed in a transdisciplinary manner. Discussion Research in the area of bio-psycho-social issues at the beginning of life point to central questions of more general importance on the methodological and theory of science level: the relationship of facts & values and the question, how we can make "Social science matter" in cutting edge issues of bioethics & biopolitics that are widely discussed in society & in the scientific branches.

2010S01411

Krotz, Friedrich, L. (University of Erfurt, D-99089 Erfurt [tel: +493617374171; e-mail: friedrich.Krotz@uni-erfurt.de]), **The Concept "Mediatization" as an Instrument to Study the Ongoing Development of Social and Cultural Life,** *International Sociological Association, Gothenburg, Sweden,*

¶ The world & the different cultures & societies are part of a huge and rapid development–concepts & discourses like Globalization, Individualization, network society, neoliberal economy or clash of civilizations are an expression of that. The contribution to an understanding of these developments from the area of media & communication research comes on the one hand from an understanding of the growing use & meaning of digital media, on the other hand from the observation of economic developments in the media sector, in which soft- & hardware enterprises, Media content producers & distributors, cable & satellite companies and others try to place themselves into a powerful position. This historical process that we call Mediatization is a process of differentiation of the Media & takes place since the invention of language –in different ways in different historical phases in different cultures. Today, Mediatization describes the changing everyday life of the people by changing media environments and media meaning, especially by the Internet, mobile communication and the upcoming interactive media. It takes into account the growing role of media & media content for democracy & economy, changes in working structures, institutions, churches & the social relations of the people in societies in general. By the differentiation of media people use these media for different goals such that media & mediated communication become part of society, and this changes their social relations, their identity, their everyday life & society, culture & work, politics & forms of growing up. Such a theoretical concept may be used in order to theoretically grasp the ongoing development in the field of media and communication & its meaning for all areas of everyday life, culture & society. The presentation will define Mediatization as a framing concept (Krotz 2007, Lundby 2009) report some studies on that & show how they can ordered & will relate the concept with existing sociological theories like the civilization approach of Norbert Elias, George Herbert Mead, Pierre Bourdiex & the Cultural Studies)

2010S01412

Kruczynska, Katarzyna (Edinburgh University, Edinburgh, United Kingdom, EH8 9LD [tel: 0046 762 972540; e-mail: kasia.kruczynska@gmail..com]), **Higher Education in Sweden: Alienation and Stigmatization of those who Fail,** *International Sociological Association, Gothenburg, Sweden,*

¶ The subject of my research are students whose relation & attitude to the welfare state, education & own identity changes when they fail their coursework & lose the right to basic student aid provided by the government. The data for the study was collected via interviews that focused on the possible impact that failing and losing the aid may have on the social status of students, on his or her own perception, on his or her feeling of alienation within the bigger student community. Findings determined to what extent students, whose grades & lack of studying progress prevented them from receiving financial aid, are affected by the fact of "falling out" of the welfare system that everybody is encouraged to be the part of. The conclusions showed that while failing & losing the eligibility does not affect the attitude to the welfare state as such it does have consequences for the perception "self" & leads to a certain degree of stigmatization within a student community.

2010S01413

Krumm, Silvia (Ulm University, Depratment for Psychiatry and Psychotherapy, 89312 Günzburg, Germany [tel: 0049 8221 962876; fax: 0049 8221 9628160; e-mail: silvia.krumm@bkh-guenzburg.de]), **The Concept of Narrative Identity and Its Usefulness in Mental Health Research,** *International Sociological Association, Gothenburg, Sweden,* (GER)

¶ The concept of narrative identity refers to the story a person constructs about him/herself as a person (construction of self) against the background of culturally transmitted narrative conventions. Individual characteristics & biographical motives and aims are central aspects of the narration & facilitate an understanding of the current self-concept of the narrator a rather than the precise reconstruction of past life course. Narrative psychologists assume, that a person's identity may be threaten by a severe (mental) illness & that narrative identity work enables a person to reconstruct a meaningful identity (narrative illness coping). Thus, the narrative approach offers a unique insight into individual coping processes of people with mental disorders beyond traditional (standardised) coping research. In this presentation, the author reflects theoretical background, sociological implications as well as methodic implications of this promising concept for user oriented mental health research.

Krumpal, Ivar & Poppe, Stephan (Institute of Sociology, University of Leipzig, 04107 Leipzig, Germany [tel: +49-(0)341-9735693; e-mail: krumpal@sozio.uni-leipzig.de]), **A Unified Bayesian Framework for Asking Sensitive Questions via the Randomized Response Technique,** *International Sociological Association, Gothenburg, Sweden,*

¶ The randomized response technique (RRT) was designed to obtain more reliable answers in surveys involving sensitive questions. Previous empirical studies indicate that RRT does achieve this objective in comparison to direct questioning (DQ) methods. Nevertheless, RRT suffers also from problems such as finite sampling, missing data and noncompliance of respondents which in turn makes it difficult to compare RRT with DQ in an unbiased reliable way. A better approach would be to integrate both survey methods into a multimode survey model providing insightful new conclusions. In this paper we present a new unified Bayesian perspective by embedding both survey methods into a coherent probabilistic graphical model, where the underlying graph explicates causal structure. Our model allows one to deal with the above mentioned problems in a consistent and straight forward manner enabling us to examine various possible statistical & causal queries. We study the effectiveness of single survey modes & the emergent potential of combining survey methods into integrated multimode surveys. All considerations are demonstrated by using empirical data from a large-scale survey on xenophobia & antisemitism in Germany.

Krzyzowski, Lukasz & Mucha, Janusz (Department of Sociology and Anthropology, AGH University of Science and Technology, Krakow, Poland, 30-071 [e-mail: lkrzyzowsk@gmail.com]), **Strategies of Retirement in Post-1989 Poland,** *International Sociological Association, Gothenburg, Sweden,*

¶ Research problem: How do the different categories of older employees react to the job market situation in Poland & to cultural patterns shaping the status & social roles of older people within the family structure. Contexts: Pre-1989 retirement legislation in Poland in non-agricultural sectors. Its dynamics. Post-1989 retirement legislation in Poland & its dynamics. The issue of "early retirement" as the state's anti-unemployment strategy. Demography & retirement in Poland in the EU context. Poland as the country of people inactive on the job market. Example of two phenomena of cultural demand for retired persons: --Privatization of the public sector

(in particular a pre-schools) & the growing demand for retired persons (grandparents) outside of the job market. --Migration panic & demand for retired persons (grandparents) outside of the job market. "Euro-orphans" & the issue of the care system. Cultures of retirement a cohorts, education, gender. Job markets, legislation value systems & the perception of the role of older people in society. Research methodology: Retirement & demographic statistics; European Social Survey; Polish General Social Survey; in-depth narrative interviews with "early retired" workers & employed workers over 55. The field research will take place in early Spring of 2010. Hypothetical results: Legal aspects of retirement transition, Socio-cultural aspects of retirement transition, Diversity of strategies among cohorts, & due to gender & education.

Ku, Do-Wan (Environment and Society Research Institute, Seoul, Korea [e-mail: kudowan@korea.com]), **Ecological Democracy in South Korea,** *International Sociological Association, Gothenburg, Sweden,*

¶ This article aims to find the development and retreat of ecological democracy in South Korea by socio-historical research. First, this article reviews the theory of ecological democracy comparing liberal democracy, deliberative democracy, and radical democracy. Second, this paper tackles the characteristics of Korean environmental movements and policies in terms of ecological democracy. Korean environmental movement started to develop as one of democratization movement in the 1980s. In the 1990s, it has been developed as an independent social movement along with feminist movement and the other minority movements. "Ecology" has been equally important issue, comparing "democracy" issue since the 1990s. However ecological democracy has not been improved in Korea. It is in crisis of retreat of democracy and ecological democracy in the late 2000s. This paper addresses these issues by analyzing important environmental movement cases. In conclusion, though democracy is essential for ecological movement and conservation, it should be transformed to ecological democracy in order to survive global risk society. Key words: ecological democracy, South Korea, environmental movement, ecology.

2010S01417

Ku, Dowan (Environment and Society Research Institute, LGsinbongXi-1-cha 103-1001, Sinbong-dong, Suji-gu, Yongin-si, Gyunggi-do, South Korea, 448-533 [tel: 82-10-8704-7678; e-mail: kudowan@korea.com]), **The Korean Environmental Movement: Green Politics through Social Movement,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper analyzes the characteristics of the Korean environmental movement by examining cases of environmental problems and conducting a cross-country comparison. It addresses two main issues. The first revolves around the question of the origins of the environmental movement in Korea. Rejecting the simple, linear reflection hypothesis that environmental problems produce environmental movements, the paper stresses the importance of the process by which environmental problems are socially constructed. Second, the paper addresses differences within the Korean environmental movement in a comparative framework with other countries. It argues that the Korean environmental movement not only socially constructs environmental problems, but has become a political power that is dynamically reconstructing & transforming political, social, & cultural structures. The characteristics of this dynamic process are analyzed through case studies and consideration of their theoretical implications. The unique characteristics of the Korean environmental movement are also compared with those of the United States, Germany, Japan, and Taiwan.

2010S01418

Kuipers, Giselende (University of Amsterdam/Erasmus University Rotterdam [tel: ; e-mail: G.M.M.Kuipers@uva.nl]), **The National Habitus in the 21st Century: Transnational Figurations, the Formation of National Culture, and the Rationale of Comparative Research,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this paper is twofold. First, it is a critique of cross-national comparisons as they currently dominate mainstream sociology, & a plea for more process-oriented, relational approaches to comparative sociological research. The systematic contrasting of developments in several countries has always been the hallmark of figurational sociology, but it was quite marginal in sociology as a whole. But today mainstream sociology, especially in Europe, is very much built on comparative analyses of large international datasets. Such studies rather uncritically accept "national background" as a variable, thus presenting an atomized and static view of social life. Second, this paper explores and analyzes the social processes underlying this central variable in comparative research: the formation of a national habitus. The basis assumption of comparative sociological analyses is that people in a specific country have something in common, which can be detected on the individual level: a national culture, character, habitus, or for more voluntaristically oriented sociologists–a "tool kit" (Swidler) or "national repertoires" (Lamont). Indeed, many studies, also in figurational sociology (e.g. Wouters 2007), find systematic differences between inhabitants of different countries. Drawing on research materials from my own studies in several European countries as well as the US, this paper will ask: how does "national culture" happen? What social processes stimulate or hamper the development of figurations that stop at national boundaries, but surpass other social cleavages within these boundaries? I will discuss two mechanisms that are central to such nationally delineated figurations, both of which appear to be in decline, at least in Europe today. The first of these is vertical diffusion of standards & tastes, either through "trickle down" or through "civilizing offensives". The second mechanism in the creation of national habitus is the cumulation of institutions & figurations delineated by national borders (e.g. education, health care, law, government, media, language, religion…). Such vertical diffusion & "stacked" institutions and figurations do not only create national "imagined communities" but stimulate the emergence of actual national patterns of behavior. However, the impact & strength of these processes varies significantly between countries & over time, and in present-day Europe (and probably elsewhere) both appear to be in decline. Nationally delineated figurations are increasingly supplemented & supplanted by other figurations, organizations and institutions that bypass the national, especially transnational figurations. Using materials from my research on transnational television in France, Italy, Poland, & the Netherlands, I will illustrate how both vertical cultural diffusion & the stacking of national institutions in these countries is transformed or diminished. Although there is no reason to fear the end of national culture, or the nation-state, as some have argued, processes of informalization & globalization certainly lead to lasting changes in the formation of a national habitus.

2010S01419

Kulakowski, Krzysztof, Krawczyk, Malgorzata & Gawronski, Przemyslaw (Faculty of Physics and Applied Computer Science, AGH-UST, Cracow, Poland, 30-059 [tel: +48 12 6173539; fax: +48 12 6340010; e-mail: kulakowski@novell.ftj.agh.edu.pl]), **Hate: No Choice. Agent Simulations,** *International Sociological Association, Gothenburg, Sweden,*

¶ We treat hate as a socially mediated state of mind. From this point of view, hate as a topic overlaps with themes which are well established in socially oriented simulations: social norms, cooperation & public opinion. Their common content is a picture of a heterogeneous community, where seemingly unimportant differences can lead to a split into groups. As a consequence, cooperation & contact between the groups is deteriorated, mutual understanding is substituted by ignorance, finally the social labeling & hostility emerge between members of different groups. These processes lie at the bottom of hate. We are going to report our recent simulations [1] on these social processes. First simulation deals with the so-called Heider balance where initial purely random preferences split the community into two mutually hostile groups. Second simulation shows that once these groups are formed, the cooperation between them is going to fail. Third simulation provides a numerical illustration of the process of biased learning; the model indicates that lack of objective information is a barrier to new information. Fourth simulation is devoted to the possibility of cooperation with enemies in the presence of a strong conflict.

2010S01420

Kulkarni, Jayashree Vinayakrao (JSW Steel Ltd. (JSW Foundation), IInd Floor, OPJ Centre, Toranagallu-583 123, Dist. Bellary, Karnataka, INDIA [tel: 00 91 8472 245839; fax: 00 91 8472 263206; e-mail: jaya1581@rediffmail.com]), **Corporate Social Responsibility in Multinational Corporations (MNCs),** *International Sociological Association, Gothenburg, Sweden,*

¶ The expansion of trade & investment across the nations world over has led the increasing integration of the world economy in recent years which is referred to as the process of "globalization." Some view globalization as instrumental in economic growth & improving living standards in both developed & developing nations. On the contrary, globalization is viewed by others as resulting in negative social implications warranting concern about the exponentially increasing economic activities of multinational corporations, particularly in developing nations. One means or mechanism through which such concern is attempted to be warded off is through adoption of innovative ameliorative & developmental measures under CSR ini-

tiatives. In view of its role in enhancing the brand image as well as its acceptance on an alien soil, CSR has come to be viewed by MNCs as of high relevance & making great business sense resulting in large allocations of monitory & human resources & which also calls for efficient management of these structures organically integrated into the corporate system. This paper deals with the management of CSR activities focusing on the nature, scope & structures evolved for execution of CSR initiatives in 10 units belonging to multinational corporations operating in India in diverse industries, having diverse stakeholders. Data are gathered through an organizational information schedule specifically devised to elicit relevant information to address the research questions stated above. The findings indicate that the CSR policies are formulated at levels above the national units & CSR allocations are made from the corporate head offices, whereas, the CSR activities are evolved and executed locally. The MNCs appear to be having efficient CSR divisions with human resources competent enough to envisage relevant CSR initiatives to elicit adequate funding from the corporate head offices & execute the CSR programmes with high degree of efficiency, effectiveness & tangible outcomes. However, what is being felt in CSR circles in MNC units in India is that there is a greater need for decentralization of CSR policy initiatives & resource allocation with further strengthening of CSR reporting based on objective & scientific assessment and appraisal of CSR performance.

Kumbetoglu, Belkis, User, Inci & Akpinar, Aylin (Department of Sociology, Marmara University, 34 722 Kadikoy, Istanbul, TURKEY [tel: +90 216 345 11 86; fax: +90 216 347 87 83; e-mail: aakpinar@marmara.edu.tr]), **Can Work Empower Women? A Study of Unregistered Women Workers in Turkey,** *International Sociological Association, Gothenburg, Sweden,*

¶ Paid work is supposed to provide the person with economic power, independence from other breadwinners & an identity of her own. In Turkey the rate of women's employment has been falling as an unchanged trend since the 1950s. This trend is considered to be a major obstacle to women's emancipation. This presentation will be based on the analysis of the research data & it will discuss the significance of work for women's lives as well as the different dimensions of empowerment under insecure working conditions. A qualitative field research has been carried out in five relatively industrialized provinces in northwestern Turkey. The participants (230 women) are unregistered workers of the textile, food and service sectors. These three sectors are known to harbour the majority of the nonagricultural women workers in the country as well as a large amount of hidden work. The interview questions cover women's employment histories, working conditions, attitudes toward & experiences with work, the perceived significance of work & the way work has affected the participants' lives as women, wives & mothers.

2010S01422

Kumpulainen, Kaisu Maria (Department of social sciences and philosophy, University of Jyväskylä, Jyväskylä, Finland [e-mail: kaisu.kumpulainen@jyu.fi]), **The Relationship of Village Association and Municipalities in The Construction of Village Associations' Subjectivity,** *International Sociological Association, Gothenburg, Sweden,*

¶ There is a trend to establish village associations in the Finnish countryside to fight against the local decline. In Finnish rural policy there is an objective to increase the obligations of local communities in producing services. It is a part of broader active citizenship rationality, which assumes the activation of individuals & communities in taking more responsibility of their wellbeing. In this paper I study how the local active rural communities define their subjectivity–& practice the active citizenship. I interviewed 12 chairmen of three village associations in Middle-Finland. Subjectivity is never developed in a vacuum, & the municipality is the central "other" in constructing the village community. I analyzed by discourse analysis how the village-municipality relationship constructs the local community subjectivity. The result of my analysis is that the village associations found the relationship between villages and municipalities unsteady, which produces certain confrontations. Municipalities were constructed in the interviews as passive and inefficient space & village associations as spaces of activeness and development. These representations of confrontation produce local active subjectivity, but at the same time by producing the incapability of public sector, they justify the politics to run down the public services in the name of enhancement of active citizenship.

2010S01423

Künemund, Harald & Okken, Petra-Karin (University of Vechta, D-49377 Vechta, Driverstr. 22, Germany [tel: +49 4441 15 608; fax: +49 4441 15 620; e-mail: harald.kuenemund@uni-vechta.de]), **Technology Acceptance and Usage in Old Age,** *International Sociological Association, Gothenburg, Sweden,*

¶ The development of technology to support older people (and their carers) has become a mushrooming trend: Numerous research activities focus, for example, on "Ambient assisted living" (AAL) or the "smart home for the elderly." However, sociological research has repeatedly shown that older people have less experience with technology, express reservation & sometimes fears, & in general show less technology acceptance compared to younger cohorts. Nevertheless, most of the technology driven research projects in the field report surprisingly high levels of technology acceptance among older people. How can this contradiction be explained? The paper briefly discusses possible explanations & addresses three possible hypotheses regarding the well-known finding of the decrease in technology acceptance with increasing age: composition effect, cohort effect, & aging effect. Survey data & statistical analyses are used to identify the relevance of these effects. Both the composition effect & the cohort effect contribute to the explanation of the observed age gradient, so that the simple assumption of an aging effect a technology acceptance declines with increasing age a is not sufficient & may be misleading. Consequently, the answer to the question whether older people will make use of "Gerontechnology" or not in the future may be given more adequately be taking the pitfalls of former survey research in the field into account. However, the extremely positive findings from evaluation research may be too optimistic (due to, for example, sample selection bias).

Kung, Hsiang-Ming, Justine (Shih Hsin University, Taipei, Taiwan, 11604 [tel: 886-2-2236-8225~3531; fax: 886-2-2236-7746; e-mail: hmkung@cc.shu.edu.tw]), **Taiwanese Adolescents' Future Orientation in Having Children,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study is designed to examine Taiwanese adolescents' future orientation in having children from a social psychological perspective. Various aspects of the respondents' family experiences & attitudes toward current social environment are considered. The first aspect is to clarify if the numbers of siblings (including adolescents' own siblings & their parents' siblings) have any influence on adolescents' orientation (in having children). Moreover, effects of adolescents' relationships with their parents & siblings are also analyzed. The second aspect is to examine the effect of adolescents' own prospects of old-age care on their future orientation. In supplement, this includes the consistency in or difference between mothers' and adolescents' prospects on old-age care. The third aspect, experience of helping household chores, is approached to delineate gender effect & its interaction effect with birth order found in the author's previous researches. This study also examines if a negative effect of pessimistic attitude toward current social states on adolescents' orientation exists. The applied data set comes from the first (2005) & the second (2006) wave of Taiwan VOC project. The study utilizes logistic regression to analyze the dichotomous dependent variable. Survey data from both adolescents and their mothers are paired accordingly in analyzation.

Kuntner, Wilhelm, A., Schneider, Thomas & Weber, Wolfgang, G. (Institute of Psychology, University of Innsbruck [fax:; e-mail: WilhelmULKuntner@lavabit.com]), **Alienation, Globalization and the Fragmentation of the Social,** *International Sociological Association, Gothenburg, Sweden,*

¶ We contrast two models of alienation, one knitted from the Economic and Philosophical Manuscripts of 1844 (Zurek, 2007), the other derived from the Theory of Communicative Action by Habermas (1981) in order to discuss recent assumptions of shift from alienated work to social alienation (Weber, 2006). Although working conditions have evolved massively since Marx & Engels, the old alienation model apparently retains its usefulness for analyses of a broad range of working conditions. On the other hand sociologists like Bourdieu (1982) or Beck (1986) have brought to evidence a differentiated class concept & the generalized notion that to some extent new work related problems have evolved with the rise of the globalized business strategies. The "old" alienation model possibly fails to explain the fragmentation of the social sphere in spite of the gain of workers autonomy described recently (e.g. Moldaschl, 2003). So we outline a model of social alienation derived from Habermas & the assumption of an internalized class conflict as stated by Marcuse (1967). The proposed analytical framework is illustrated by interim results of an ongoing exploratory analysis of value debates in open source communities.

Kuo, Shou Jen (Department of Nursing, California State University, Fullerton, Fullerton, CA 92834, The United States of America [tel: +1 657 2787536; fax: +1 657 2783338; e-mail: skuo@fullerton.edu]), **The Oneness of Human Nature and its Origins in Society: A Buddhist Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ Emile Durkheim's intellectual heritage in studying religion is a powerful paradigm for doing sociological research today. However, his thoughts on the notion of the sacred/profane binary & the human being as homo duplex have been challenged from the Durkheim age to the present. In particular, his positivist perspective on the dichotomous nature of social things generated critics from every standpoint. Drawing from the Buddhist perspective of dependent origination, this paper renews the genes of Durkheim's theoretical structure with his early notion of scientific objectivity, arguing that human nature is entirely originated and conditioned by the society. Following the introduction, the paper is divided into three sections. The first & second briefly present Durkheim's & the Buddhist standpoints on the origin of human nature by exploring the diverse meanings of the sacred/profane binary as developed by these two traditions. The application of the Buddhist standpoint for reappraising Durkheim's thesis in understanding the religious nature of society is provided at the end of the discussion. The sociological imagination resulting from such cross-cultural dialogue between Christian and Buddhist civilizations contributes to a new breakthrough point of developing contemporary sociological theories.

Kupsala, Saara, Jokinen, Pekka & Vinnari, Markus (University of Eastern Finland, Department of Geographical and Historical Studies, Joensuu, Finland, 80130 [tel: +358 40 351 3448; fax:; e-mail: saara.kupsala@ymparisto.fi]), **Ethical/Green Consumerism and Animal Farming: Exploring Consumers' Moral Views about Livestock Production,** *International Sociological Association, Gothenburg, Sweden,*

¶ Consumption is a strengthening public arena of activism, & markets are used more prominently than before as a political tool to express other-regarding concerns, solidarity & care. Consumption politics has become particularly heightened in food issues as can be seen for instance in the growing popularity of alternative food networks. As the global effects of food production are becoming more acknowledged, there is a need to understand how consumers deal with moral dilemmas concerning food production & how they express their moral views in consumption practices. This paper connects consumer understandings to the broad context of globalised food chains, industrialised agriculture & greening of consumption. We focus on farm animal concerns, which have become increasingly important in the field of political consumerism. We are exploring how consumers view the moral standing of animals & the utilisation of animals in food production. The analysis draws on eight group interviews with citizen-consumers carried out in Finland in 2009 & 2010. The analysis shows that consumers feel much moral ambiguity on meat consumption since they have become increasingly disconnected from livestock production & since they encounter highly contradictory information on animal farming. To respond to these moral ambiguities, consumers can take various citizen-consumer positions & moral strategies to influence animal welfare in everyday contexts.

2010S01428

Kurashima, Akira (Department of Sociology, Kwansei Gakuin University, 1-155 Uegahara Ichibancho, Nishinomiya, 662-8501 [tel: 798-53-7085+ADs- fax: 798-53-7085; e-mail: intercorporality+AEA-kwansei.ac.jp]), **Temporality and Subjectivity of Form Training in Asian Martial Art: Based on Case Studies of Tai Chi Classes in Japan and the UK,** *International Sociological Association, Gothenburg, Sweden,*

¶ Form training is a training method practiced widely in the Asian martial arts, wherein students perform a set of predetermined movements alone or in turn with a partner. While it is commonly considered an impractical & authoritarian training method, I shall propose to understand it as a form of bodily activity distinct from modern sport, & rediscover its potential in overcoming the major problems that face sport, especially with respect to exclusion & over-competition. This paper is based on empirical data gathered from extended participant observation of two Tai Chi (Taijiquan) Classes: a 6-year study in Kyoto, Japan and a 2-year study in Manchester, UK. The results show that while Tai Chi forms are predetermined, the standard by which a performance of a form is evaluated is not. It not only differs between students but also changes many times during the course of training. This personal & temporal variation of standard is both subjective and objective, & promotes effective improvement of each student. This is in contrast to sport rules, which also are a standard by which bodily performance is evaluated but are constant. I shall further argue the advantages & drawbacks of the two body cultures in the presentation.

Kurihara, Wataru ([e-mail: w.kurihara1008@gmail.com]), **Power and Subjectivity after Structuralism: Beyond Determinism,** *International Sociological Association, Gothenburg, Sweden,*

¶ Under the influence of Structuralism, many theorists took the deterministic views & denied the "subjectivity" of individuals, insisting the absolute superiority of the structure over the subjectivity. For example, Louis Althusser, the French neo-Marxist, is one of the most typical persons who argued in the way that the subjectivity is completely conquered (even produced) by structure. Many arguments concerning the concept of power got much influenced by structuralistic views like mentioned above, & some even regard structure itself as power & wholly abandon the place of the subjectivity. However, there are also some arguments that re-affirm the importance of subjectivity & try to relocate it into the contexts given by structuralism which cannot be reduced to individuals & their intentions. For instance, there are two typical & eminent theorists; Steven Lukes & Michel Foucault. Although they both were strongly influenced by Althusser's view, each of them tried to get over the deterministic view that abandoned the subjectivity completely. Now, the purpose of this presentation is as follows; by focusing mainly on the views given by Lukes & Foucault (and their followers), this presentation will show how the deterministic views of power brought by Structuralism have been tried to be solved & what kind of problem still left behind for us.

2010S01430

Kuroda, Koichiro (Ryukoku University, Otsu, Japan, 520-2194 [tel: +81-77-543-7601; fax: +81-77-543-7615; e-mail: sttng-commander-data@mail.ryukoku.ac.jp]), **Are We a Healthist Society?: The Myth of Growing Healthism in Post-War Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ It is believed that so-called 'health boom' began in the late 1970's and has lasted until now in Japan. It is asserted that this boom has been reflected in people's elevated concern about their own health & their increased health-maintaining & -promoting behaviours during this period. They have also argued that the primary factor contributing to this boom has been increase in healthism. The purpose of this paper is to test this hypothesis by secondary analysis of extant surveys periodically administered to the people nationwide in Japan. These surveys have included questions about value of health in life, concern about health and health-maintaining & -promoting behaviours. These items are used as indices of healthism in this analysis. By this analysis, it is discovered that healthism decreased in the late 1970's & the early 1980's, & that thereafter this reduced level of healthism has continued until now. It is also discovered that the female have become more & more healthiest in comparison with the male, and that so have the older in comparison with the younger. These findings will lead to not simply modification of the above-mentioned hypothesis, but also reformulation of the whole discussion on the 'health boom' & healthism.

Kurt, Dauer Keller (Department of Economy, Politics & Public Administration, Aalborg University, Fibigerstraede 3, DK-9220 Aalborg [tel: +45 9940 8186; fax: +45 9815 5346; e-mail: kdk@epa.aau.dk]), **The Social Logic of Professionalism,** *International Sociological Association, Gothenburg, Sweden,*

¶ With his theory of professionalism as an ideal type different from bureaucracy as well as marked, Freidson has opened a new and important discussion of professionalism. Extracting an essence of decades of inductive empirical research to specify the main characteristics of professions & professionalism, he also turns the research agenda into a direction where deductive clarification is in focus. If the power position & status of a profession is associated with autonomy in the work performance & labour marked monopoly, the basis of these social relations is the sociocultural principle of a good work that reflects theoretical knowledge and self-discipline through the maintenance of occupational & ethical standards. The logic or rationale of professionalism is first and foremost associated with this occupationally determined control of the work performance, which contrasts the ways in which a bureaucracy or marked organizes & controls work. However, Freidson does not really fulfil the ambition to explicate professional expertise as closely associated with both micro and macro levels of society. Another limitation in his approach is a rather nar-

row & traditional focus on labour marked and occupational policy issues (division of work, specialisation, etc.) at the cost of the more profound discussion of how professionalism is associated with the very notion of modernity. A third problem is about Freidson's somewhat loose distinction between the three ideal types, which leaves it very open how we must proceed methodologically from theoretical to empirical studies of professionalism. My paper sketches an attempt to tackle these shortcomings in Freidson's position on the basis of a sociological approach, which is anchored in Merleau-Ponty's social phenomenology and includes closely related concepts from Bourdieu & others to clarify in what sense the ethical character of spontaneous social interplay is set aside in the modern work life through political and economical power.

2010S01432

Kusumadewi, Lucia Ratih (Ecole des Hautes Etudes en Sciences Sociales, 54 Bd Raspail 75006 Paris [tel: +33671314696; e-mail: lucia.ratih@ehess.fr]), **What is Social Movements Today? Transformation of Social Movements in Contemporary Indonesia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Nowadays, social movements as the ammunition of social change have found its new form. The return of the idea of "the Subject" in Sociology signified that "the birth of the Subject" is the important factor that gives fundament to the changes. Through "subjectivation," the Subject redefines social actor. As a consequence, the decomposition of social movements is inevitable. As the third biggest democratic country, Indonesia is also experiencing a social movement transformation. The new form of movement, enable civil society (not only activists) to find other path to support the democratization. The birth of civil society and its confidence grow stronger not only because of an incessant endeavor of civil society empowerment since the "Reformation" 1998, but also because of the emergence of "communal reinvention" of the social network as the main Indonesian's social capital. The social network that eventually has been able to manifest itself in public sphere shows that "public pressure" become the important power that should be reckoned not only in democratization process but also in delimiting the market's arbitrariness.

Kýnlý, Irem Özgören & Isaev, Kusein (Sociology department, Kyrgyz-Turkish Manas University [tel: ; e-mail: iremozg@yahoo.com]), **Ottoman court festivals as instruments of power,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper draws from research into the changing role of the Ottoman imperial ceremonies and celebrations as "prestige consumption," a concept outlined by Norbert Elias in his book "The Court Society" [1983]. As an essential mechanism of imperial domination, Ottoman court festivals from the fifteenth to the nineteenth centuries have demonstrated the Empire's glorious power by providing a simulacrum of a political order responding to a realm of the sublime. Exchange of prestigious gifts (gemstones, luxurious fabrics and furs), ostentatious demonstrations (shows of "wedding palms" and artificial gardens, fireworks and illuminations) and sumptuous feasts during these festivities were instruments of absolute rule. The Empire's spectacular expenditure of wealth in court festivals sustained an image of a transcendent empire, which in turn warranted an untrammeled exercise of power. Ritual, verbal, and artistic expressions of the court as a theater of power persisted till the mid-nineteenth century. Then, as a consequence of the Empire's political decline, court festivals were adapted according to the new demands and influences of new political conjunctures. For understanding the shifts of the display of Ottoman court's prestige consumption, this project includes a study of festival books and archives. Drawing on these data, this paper aims at opening a window on the connection between Ottoman "court-rationality" and changes in the balances of power and control.

La Brooy, Camille, Amanda (The University of Melbourne, Australia, Melbourne, Victoria, Australia, 3010 [tel: +61 421 374 571; e-mail: clabrooy@unimelb.edu.au]), **British Muslim Youth and Identity Politics.,** *International Sociological Association, Gothenburg, Sweden,*

¶ Despite the existence of an abundance of sociological literature dismissing the idea that identities are unitary, pre-given, or holistically constituted; for some reason, Muslim identities continue to be conflated in both discourse & practice by Muslims and non-Muslims alike. It appeared striking that unlike other identity politics movements, British Muslim identity politics seems to be trapped in its "second wave." The existence of "others" within this movement, that is the marginal identity categories within the broader movement, unlike most other identity politics movement, have not appeared to pose an overall challenge to the broad rubric of the movement representing the interests of British Muslims. As such, this paper seeks to explore the disciplinary and discursive regulatory norms inscribing Muslim identities. In order to do this, data obtained from twenty semi-structured interviews taken with Muslim youths will be used in order to ascertain the role of the individual & youth organisations in the normalising of these identity-inscribing regulatory norms. In this vein, the work of Foucault & leading poststructural feminists will be employed to challenge essentialist construction of what it is to be Muslim.

La Rocca, Gevisa (University of Palermo [tel: +39 3497573311; e-mail: gevisa.larocca@unipa.it]), **Self Remediation: The Importance to Attend at the Big Brothers. An Italian's Experience,** *International Sociological Association, Gothenburg, Sweden,*

¶ Several scholars have noticed that we tend to see ourselves within and through the media. Therefore we can use the media to define our cultural identity (Bolter & Grusin 1999). Media's experience has become an integral part of the construction of our lives; now when we are thinking about something we imagine the window of facebook that asks us to share our thoughts. Now whether the objects are old or new media, the experience through them has become an integral part of our real life. Through media's experience the individual builds himself. Media's experience has become so important that many individuals are willing to sacrifice just to be able to live it. The research results presented here have as their goals to investigate these aspects in the competitors for *Big Brother* (BB). Why is participating in BB such an important 'experience'? What significance do aspiring competitors attach to it? These questions guided our research, which is composed of two phases: 1) a purely ethnographic observation & 2) interviews of 120 "possible" competitors that we met in nine different towns of Italy (3 per each geographical area), where castings were held.

Laborgne, Pia & Wilts, Henning (IWAR, Technical University of Darmstadt and Eifer/Kit, Petersenstrasse 13, D- 64287 Darmstadt [tel: +49(0)6151 1670962; fax:; e-mail: p.laborgne@iwar.tu-darmstadt.de]), **Transformations of Urban Energy Infrastructure and Sustainability Transitions in the Field of Energy,** *International Sociological Association, Gothenburg, Sweden,*

¶ Urban energy infrastructure is a key element for coping with global environmental changes & for a sustainable development of cities. Its forms & usages are decisive for resource consumption but it also has important impacts on social & economical development. Cities are major context for the consumption of resources as well as centers for innovation. They are thus starting points for sustainability transitions. The paper will present results of ongoing work on a PhD thesis on the political ecology of urban energy infrastructures in the framework of an interdisciplinary research group. The starting point is that urban energy infrastructure faces major transformations concerning the technical structures of energy provision & consumption as well as the social organization of energy provision & governing structures. Technological transformations create opportunities for decentralization, the use of renewable resources & higher energy efficiency. Policies of privatization & market liberalization restrain the role of local level governing & enhance the need for new governance & planning mechanisms & the integration of new social actors. The transition beyond incremental improvements to more sustainable energy production & use has significant effects in ecological but also economical & social aspects of sustainability. These processes are significantly shaped by their local context. The paper will present a conceptual framework for analyzing transformation processes in urban energy systems, linking approaches from sociological innovation theory & social ecology to space related ones. Starting from a multi-level system approach, the question of the development & role of local socio-technical niches will be a focal point of the further empirical work on three case studies

Lace, Tana & Lake, Anda (Faculty of Communication, Riga Stradins University, Riga, Latvia, LV-1007 [tel: +37167409169; e-mail: Tana.Lace@rsu.lv]), **Perceptions of Cultural Values in Communities and Priorities of Cultural Policy in Latvia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Various communities have sometimes contradicting views about national cultural values & which cultural sectors' values maintenance is the competence of the state cultural politics. This diversity of the political demand means a certain freedom of argumentation for the decision makers & also makes more difficult the definition of priorities of cultural policy

according to the interests of communities. Aim of the research: to establish the concepts and structure of most significant national cultural values of Latvian community. Research is done using mixed methodology: qualitative (expert interviews & focus groups) & quantitative (self-administered questionnaires) research methods. The Latvian society's perceptions of the national cultural values are vague, flexible & even contradictory in various communities. The knowledge of history & development of specific cultural sectors has a substantial role in the differentiation of concepts of cultural values. It is possible to speak about concrete cultural sectors' community of experts & professionals that represents and stresses the diverse, specific views of the most relevant and substantial national cultural values & emphasizes this on elitist, professional knowledge based concept's special and important meaning in the political argumentation. The experts' identified values in various cultural sectors do not acknowledge specific youth groups.

Laflamme, Diane (Université du Québec à Montréal, Montréal, Québec, Canada, H3C 3P8 [tel: 514-931-7750; e-mail: ad.laflamme@sympatico.ca]), **Esteem or Contempt in Moralized Communication: An Example of Binary Coding Involving Emotions in Luhmann's Theory of Meaning-Constituting Systems,** *International Sociological Association, Gothenburg, Sweden,*

¶ The link between emotions & moral judgments is a growing field of investigation in cognitive sciences. Numerous empirical studies confirm the interrelation between emotions & moral judgments. Luhmann's theory of meaning-constituting systems can also provide some insight on this link. Luhmann describes how moralized themes emerge in thoughts within psychic systems, & how moralized themes of communication emerge within the various social systems (interactions, organizations & societies). Connectivity between thoughts & between communicative events is necessary for the constitution of meaning within a psychic system or within a social system. Emotions such as esteem & contempt will facilitate or impair the connection from one moralized thought to the next one or from one moralized communicative event to the next one. With the aim to clarify how emotions such as esteem & contempt contribute to the constitution of meaning, we will review in this paper some of Luhmann's contributions to the topic of moralized communications. A better understanding of this conditioning of communication through emotions could allow us to improve our capacity to include more & more of each other's complexity in our thoughts & communications.

2010S01439

Laflamme, Simon (Université Laurentienne, Sudbury, Ontario, Canada, P3E 2C6 [tel: 1 705 675 1151; fax: 1 705 671 6683; e-mail: slaflamme@laurentienne.ca]), **Phenomenological Sociology and Sociology of Subject,** *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ The phenomenological approach has a quasi-monopoly in the individual and subjectivity analyses in social sciences. However, the conceptual apparatus associated with this approach is very restrictive. The human being has to be understood as rational, conscious, intentional, interested, & autonomous. Because of this, a large dimension of human activity cannot be taken into consideration: all that does not fit into the analytical categories (non-rational, non-conscious, etc.). Moreover, this approach cannot really move toward a relational analysis unless it is between individuals predefined by its conceptual apparatus. This lack of complexity makes difficult the establishment of links between phenomenology & systemic analysis, in which relation (and its derivatives such as recursiveness, dialectic, correlation) plays an essential role. This communication intends to propose a way for systemic analysis to apprehend the individual with respect for his complexity.

2010S01440

Lafontaine, Céline (University of Montreal, Montreal, Canada, H3C 3J7 [tel: 02 40 48 30 90; e-mail: celine.lafontaine@umontreal.ca]), **The Postmortal Body,** *International Sociological Association, Gothenburg, Sweden,*

¶ Deferring death, addressing its causes, altering its boundaries, controlling all of its parameters & understanding its process in order to prolong life as long as possible or even surpass the temporal limits of human existence–such is the objective that the scientific & political authorities are pursuing so doggedly that health has become one of our societies' major concerns. Starting with the biomedical deconstruction of death, this paper will look at the new technoscientific representations of death & longevity. In the theoretical extension of the theses on biopower and bioeconomics, particular attention will be paid to the issue of the perfectibility & the reengineering of the body, as expressed in the life extension movement & in discourses accompanying biomedical advances. This permeates the theoretical debates surrounding genetic immortality, the development of regenerative medicine & of nanomedicine, artificial prolongation of life and cryonics. Drawing a parallel between the status of older people and biomedical advances' fight against ageing, this article will investigate the social & ethical consequences of this marked desire to conquer death scientifically, to live without ageing and even to extend life indefinitely

2010S01441

Laganà, Francesco (Institute of Social Sciences, University of Lausanne, Lausanne, Switzerland, Ch1015 [tel: +41 (0)216923853 ; e-mail: francesco.lagana@unil.ch]), **Immigrants and Unskilled Service Class Formation in Switzerland,** *International Sociological Association, Gothenburg, Sweden,*

¶ In many European countries, post-industrial growth has led to a polarization of employment structures between high-skilled jobs and low-skilled service positions. This has also been the case of Switzerland, whose employment structure is in fact increasingly polarized into low-skilled & high-skilled sectors and characterized by a high concentration of immigrants in low-skilled positions. Against such a background, this paper firstly aims at verifying the existence of an unskilled service class as a distinct class through the analysis of entrapment & outward mobility from unskilled service positions. Secondly, the paper aims at determining whether in the mechanism of social class formation there are differences between immigrants & natives. Using dynamic random effect probit models, the five years panel built from Swiss National Labour Force Survey is analyzed in order to assess state dependence in unskilled service positions compared to unskilled manual positions. If from one side the models show higher state dependency in unskilled service positions, thus confirming the hypothesis of the existence of an unskilled service class as a distinct class, from the other side models also show the absence of differences between immigrant & natives men but an higher state dependency for immigrant with respect to Swiss women.

2010S01442

Lahsen, Myanna (INPE, São José dos Campos, SP 12227-010 Brazil [tel: +55 12 3431-2903; e-mail: myannal@gmail.com]), **The Social Status of Environmental Knowledge: Why It is Lacking and What is Needed to Meet the Sustainability Challenge,** *International Sociological Association, Gothenburg, Sweden,*

¶ Contemporary societies are being transformed by growing preoccupation with global environmental risks & the need to find ways to render societies environmentally sustainable. The scientific basis for worries about threats such as human-induced climate change has consolidated, but many implications remain uncertain & imprecise. In this area of what has been called "post-normal" science, facts are uncertain, values in dispute, stakes high, & decisions urgent. Plurality is its essence, & meaning-making fills gaps left by uncertainties. The fields of sociology & anthropology have paid insufficient attention to the associated knowledge politics, including their cultural dimensions & their impact on national & international decision-making processes. This presentation evaluates the state of research in this area of scholarship & offers specific examples from the US & Brazil to illustrate the importance of redirecting disciplinary tendencies and filling present lacunas of knowledge about knowledge politics which bear centrally on how societies face global environmental risks.

2010S01443

Lai, Gina, Ruan, Danching & Wong, Odalia (Department of Sociology, Hong Kong Baptist University, Kowloon Tong, Hong Kong [tel: 852-3411-7122; e-mail: ginalai@hkbu.edu.hk]), **Gendered Effects of Marriage on Access to Social Capital,** *International Sociological Association, Gothenburg, Sweden,*

¶ The present paper examines the structure (e.g., extent, upper bound, and composition) of social capital of married couples associated with personal network changes due to marriage (e.g., changes in network size & composition of network ties, as well as structural and relational network integration) as well as the mobilization of resources embedded in the spouse's network. Data are drawn from a territory-wide household face-to-face survey of 801 Chinese married couples in Hong Kong. Preliminary findings show that respondents tend to experience an expansion rather than contraction of friendship network after marriage. Status homophily generally encourages integration of social life among married couples. However, gendered changes in network composition associated with marriage are observed. Husbands are more likely to gain male friends than wives after

marriage whereas wives gain more female friends than husbands after marriage. Further, sharing social life and network integration tend to facilitate the access to social capital. Yet, compositional changes in social ties due to marriage would bring differential impacts on the access to social capital through spouse for men & women. Moreover, the access to social capital through spouse may not necessarily encourage the use of it.

2010S01444

Lai, Ming-yan (Department of Cultural & Religious Studies, Chinese University of Hong Kong [e-mail: mylai@cuhk.edu.hk]), **Talking Sex with Migrant Domestic Workers: How is it Feminist?,** *International Sociological Association, Gothenburg, Sweden,*

¶ As transnational border-crossers between the Global North & Global South, migrant domestic workers pose significant questions for feminist inquiry. Their border-crossing puts them in intimate interaction with the Global North while carrying on activities and embodying experiences of the Global South. Such a transnational and intersectional situation complicates the North-South divide which has long troubled feminists in their search for solidarity and collective struggle. Drawing on extensive fieldwork with migrant domestic workers in Hong Kong, this paper seeks to reflect on the challenges & possibilities of feminist engagement in the study of these border-crossing women. The paper will first discuss how migrant domestic workers articulate gender issues in their struggle for justice & social change, & how these articulations (re)define the meaning of feminism in their lives & struggles. On the basis of this discussion, the paper will explore how an academic researcher can employ feminist perspectives to engage with these articulations & advance the possibilities of solidarity struggle through feminist scholarship. Informing the exploration is the argument that the political engagement of feminist scholarship entails both enabling critique & empathetic affirmation of diverse women's experiences which are consistently marginalized, denigrated, & denied in dominant social formations. To the extent that matters of sex & sexuality are marginalized and, at best, relegated to secondary importance in migrant domestic workers' organized struggle for justice & social change, the paper further argues, addressing these matters & their feminist import with migrant domestic workers is a critical part of a transversal feminist knowledge production that will contribute to solidarity building between the researcher & the disadvantaged migrant women.

Lall, Priya (Oxford University, Department of Social Policy and Social Work, Barnett House, 32 Wellington Square, Oxford, OX1 2ER, UK [tel: ; e-mail: priya.lall@sant.ox.ac.uk]), **How do HIV-Positive Women from Poor Socio-Economic Backgrounds in India Access Health Facilities for their Condition?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Objective: To determine how culturally-specific gendered forms of discrimination, structural & socio-economic factors influence HIV-positive women's ability to reach the necessary services for their condition. Research Design: Research for this doctoral paper consisted of two stages of data analysis. The first stage was a secondary statistical analysis of the National Family Health Survey that collected quantitative data on demographic & socio-economic determinates for utilisation of healthcare & emerging health issues. It provided state level estimates on the HIV serostatus of the general population in India as most participants were tested for HIV. This data was used to create a profile of female HIV-positive participants in order to evaluate factors which could affect their ability to access services. The second stage of research was composed of semi-structured qualitative interviews with 43 female HIV-positive patients living in Andhra Pradesh. This stage of research was conducted with the collaboration of VMM (NGO that treats HIV-positive women & children). Participants were sampled from a population of female HIV-infected patients who are clients of services at VMM. Results: Results from the first stage of analysis indicated that HIV-positive women are significantly (/BFM1XC8|END.001) more likely to belong to the older sections of the population than their HIV-negative counterparts. A higher percentage of these respondents belonged to the "richer" wealth quintile (33%) in comparison to the general population (21%). However, a large proportion of HIV-positive women are uneducated with over half of these respondents being illiterate. The results in the second stage of analysis were similar to that of the first. Most of the respondents had a low level of education, which impeded their ability to access necessary healthcare services. Conversely, many of these participants belonged to poorer sections of society, which could be attributed to the direct & indirect costs of healthcare.

Lamprecht, Markus & Stamm, Hanspeter (L&S Sozialforschung und Beratung, Zürich, Switzerland, CH-8032 [tel: +41 44 2606760; fax: +41 44 2606761; e-mail: info@lssfb.ch]), **Participation and Social Differentiation in Swiss Sports,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper presents results from a current large-scale Swiss survey on sports (Sport Schweiz 2008, n=10'262). The data suggest that sports participation rates are further increasing as they have been doing since the 1970s. Currently, about three quarters of the Swiss population participate in sports at least occasionally. However, the analyses also show that a number of differences and differentiations within sports persist. Sports participation varies greatly between the linguistic regions with the German speaking population containing more regular sportspeople than the other two regions. In addition, there are also a number of substantial differences with respect to age, gender, citizenship and socio-economic status as well as to the popularity of single sports in different subpopulations. Overall, cycling, hiking & walking, swimming, skiing, jogging, fitness training & gymnastics are the most popular sports in Switzerland, but preferences vary according to age, gender, linguistic region & social status. Thus, even though sports have become quite accessible at a general level in Switzerland, they still offer a large number of opportunities for social distinction & exclusion.

¶ La migración marco de exclusión y discriminación El proceso migratorio sea nacional o internacional está asociado a un inter juego intenso de identidades y territorios, entre los que llegan y la población local. El hecho de que el lugar de llegada sea una comunidad rural-urbana, no libra a los inmigrantes de enfrentar prejuicios y discriminación comunes en la gran ciudad, hacia los miembros de los grupos étnicos que llegan en busca de trabajo. No hay duda de que los migrantes de origen indígena han sido los excluidos de los ya de por sí excluidos por relaciones asimétricas impuestas por el capital. El caso de discriminación y exclusión al que proponemos aproximarnos tiene la peculiaridad de darse en el marco de la migración rural a un espacio rural-urbano: San Gregorio Atlapulco. El encuentro entre originarios y avecindados de San Gregorio Atlapulco ha conducido a dinámicas conflictivas y contradictorias. Frente al otro, al extraño, se defienden mediante la exclusión, el rechazo y la discriminación. La información empírica para este texto se obtuvo a partir de entrevistas abiertas a los migrantes y a la población local.

Landert, Daniela (English Department, University of Zurich, Zurich, Switzerland [e-mail: daniela.landert@es.uzh.ch]), **The Personalization of Mass Media Communication on the Internet: Communicative Settings and Technological Factors,** *International Sociological Association, Gothenburg, Sweden,*

¶ Through the Internet, the dominant communication direction in mass media–from text producers to mass audiences–is increasingly being supplemented by the possibility for readers to "talk back," comment, provide their own opinions & experiences, & even to contribute content. Moreover, digital publication allows new forms of multimodal texts. On the Internet texts are not only enriched with static images, but there is an integration of texts with images, slide shows & videos. One of the effects of this development is the personalization of mass media communication. The increased interaction between text producers & text recipients through comment sections & other forms of feedback leads to a partial deaanonymization of mass audiences. The personalization of text producers & text recipients is further intensified by the tendency to make personal information on journalists & readers available, for instance through the use of personal profiles. Furthermore, the prominence of visual material (images, videos) with a strong focus on persons rather than abstract concepts has an impact on the personalization of news events. This is even more the case for images & videos contributed by eyewitnesses, which are increasingly used by news media alongside professionally produced visual material. The personalization of mass media communication through technological factors related to the Internet as the medium of publication will be discussed on the basis of data from several online sites of British news media (The Times, The Guardian, BBC, Daily Mail, The Sun). The analy-

sis of this data shows that the communicative setting of these online sites leads to new forms of mass media communication, including new forms of personalizing news events, text producers & their audiences.

Landstedt, Evelina (Mid Sweden University, Dept of Health Sciences, 85170 Sundsvall [tel: +46706398576; e-mail: evelina.landstedt@miun.se]), **Adolescent Mental Health and Gendered Living Conditions,** *International Sociological Association, Gothenburg, Sweden,*

¶ BACKGROUND AND AIM: Despite a well documented gender pattern in adolescent mental health, research investigating possible explanatory factors from a sociological gender-theoretical approach is scarce. This study aimed to explore which factors and circumstances that influence adolescent mental health & to apply a gender analysis to the findings. METHODS: The study population was 16-19-year-old Swedish students. Data was collected by means of focus groups & questionnaires in schools. Mental health problems in focus were stress, psychological distress & deliberate self-harm. RESULTS: Adolescent mental health is influenced by, for example, social relationships, school demands, gendered role expectations, exposure to violence, responsibility taking and financial strain. Experiences of these factors are gendered and, thus, potentially contributing to gender patterns in mental health problems. Cultural norms of femininity & experiences of gendered power relations are placing girls at greater risk of mental health problems. Boys' beneficial gendered positions might contribute to less mental health problems, although ideals of masculinity also can constitute risk factors. CONCLUSION: Gender patterns in adolescent mental health are related to the ways discursive and material aspects of an unequal gender order influence young peoples' everyday life.

Lang, Graeme & Miao, Bo (City University of Hong Kong, Tat Chee Ave., Kowloon, Hong Kong S.A.R. [tel: 852-3442-6987; e-mail: graeme.lang@cityu.edu.hk]), **Urban Food Supply and Sustainability in China,** *International Sociological Association, Gothenburg, Sweden,*

¶ Urban food supply will be a key issue for cities in the coming decades. The globalized & mechanized food-production-and-distribution system is not sustainable beyond the end of cheap energy from fossil fuels, & cities which depend on this system of production & distribution for their food supply will increasingly have to turn to their own hinterlands for most types of food. Many of China's cities are actually better placed to deal with such conditions in the near future than comparably-sized cities in developed countries, because their immediate hinterlands provided most of their food supply until the late 20th century, as a result of late industrialization & political factors. But China's cities vary greatly in their ability to rely on locally sustainable food production. We illustrate using studies of local food supplies in five cities in China, & draw some conclusions about both national & municipal policy in China.

Langa, Patrício, The Possibilities and Limitations of Doing Sociology in Portuguese: A Mozambican Perspective, *International Sociological Association, Gothenburg, Sweden,*

¶ The central argument of this paper is that doing sociology in Portuguese Language in Mozambique faces a double constraint. On the one hand, sociology in the country is taught through the medium of the Portuguese language given the fact that it is the official medium of instruction. Since, however, the Portuguese language does not seem to have a significant impact on the overall sociological output and, moreover, it is not acknowledged as a medium of communication in most global forums of sociological debate, such as the International Sociological Association and reputable scientific journals unlike English and French learning sociology in Portuguese can become a less attractive option. This is particularly the case for those who may aim at pursuing an international and professional career with a possibility of a global impact. On the other hand, Portuguese as the main language of sociological instruction also represents a challenge in a country where the majority of the population does not speak the language. Assuming that the construction of the social object is achieved through the language, as it refers to a specific historic-geographic context, doing sociology should imply preserving several languages in the process. The paper concludes by discussing the possibilities and limitations of doing sociology in Portuguese in Mozambique. Keywords: Language. Mozambique. Sociology. Portuguese.

Lange, Hellmuth (University of Bremen; Centre for Sustainability Studies, Enrique Schmidt Strasse [tel: +49 421 218 61835; e-mail: lange@uni-bremen.de]), **Encounters of "First World Environmentalism" and "Third World Environmentalism",** *International Sociological Association, Gothenburg, Sweden,*

¶ In environmental sociology it has become a well established perspective to oppose "First World Environmentalism" to "Third World Environmentalism" (Gagdil/Guha 2001), & there are good reasons for doing so. "Ecology of affluence" and "Environmentalism of the poor" (Martinez-Alier 2002) can be seen as illustrating terms pointing at fundamentally different actors, problems & agendas of either concept. In the past, it made sense to also attribute these concepts to different types of societies and different regions of the world. Today, the rise of the new middle classes as one of the core features of emerging economies is undermining the plausibility of this perspective. Elements of either concept can be observed in countries such as India, Indonesia, China et al. Environmental sociology, however, is still at an very early stage of taking notice of the problems and questions which are associated with this kind of change in theoretical & practical respect. The talk will consider the state of the debate with respect to three questions:–Which issues are seen as core features of the two concepts? - Which issues are seen as the main fields of conflict between the two concepts? - Are there political options that are seen as conducive to mediating such conflicts? Particular attention will be given to (i) findings from empirical projects on the new middle classes & (ii) policies on both the national & local level.

Langeard, Chloe & Minguet, Guy (Université Bordeaux 3, Laboratoire d'analyse des problèmes sociaux et de l'action collective (LAPSAC), Université Bordeaux 2 [e-mail: chloelangeard@yahoo.fr]), **New Ethical Stakes Raised Since the Initiation of the French Nationwide Cystic Fibrosis Newborn Screening Programme,** *International Sociological Association, Gothenburg, Sweden,*

¶ Cystic Fibrosis (CF) newborn screening (NBS) has been controversial for many years in France; the long term benefit on pulmonary function test is not yet demonstrated but its median term benefits on nutritional parameters are established as soon as the CF screened infant follow-up is done in a specialized centre. In 2003, the French association "Vaincre La Mucoviscidose" published recommendations addressed at CRCM concerning post-neonatal screening cystic fibrosis diagnosis announcement. Focus: Taking the French CF neonatal screening program as a case study-we conducted both a quantitative data survey & a focus groups protocol to gain information on the attitudes, beliefs, & concerns of professionals about newborn screening (NBS) & clinical guidelines, this paper points new bioethical issues from the concrete application of this technology. Method: collective (team) and individual (professionals concerned) interviews in 15 typical centres (historic centres, low practice centres with limited resources, high practice centres with considerable resources). Results: (1) The most important ethical dilemma is the trouble issued of the cystic fibrosis sickness singularity because: 1) all the children that carry the mutations are not affected with a severe disease; 2) there is no curative treatment; 3) parents given information are made anxious, sometimes wrongly if the disease is mild or asymptomatic. (2) The second ethical issue is located in the distinction between two statuses: on one hand one can observe homozygotes (two mutations), confirmed CF; on the second hand, one can consider heterozygotes (one mutation) healthy carriers. For parents of these healthy infants, the period between learning of the screening result & the sweat test can provoke anxiety, and the long-term impact has not yet been clearly defined. Parents should receive genetic counselling for future family planning, to ensure that they understand the concepts of genetic transmission of CF. (3) However, diagnosis is not always straightforward and difficulties arise when exhaustive study of the gene, following a borderline sweat test (ST), detects a mild mutation or a previously unreported mutation of unknown effect.

Langer, Phil C. (Bundeswehr Institute of Social Sciences, Proetzeler Chaussee 20, 15344 Strausberg [tel: + 49 176 23621104; e-mail: pcl@hilclanger.de]), **Beneath the Surface: Psychosocial Backgrounds of Sexual Risk Behaviour Among Gay and Bisexual Men in Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ Context: In most developed countries HIV incidence has considerably been risen within the last decade, exceptionally affecting men having sex with men (MSM). The paper aims at identifying the psychosocial dynam-

ics of HIV risk behaviour among these men in Germany. Method: Within a participatory research design 58 semi-structured qualitative interviews with recently HIV-diagnosed MSM & untested MSM reporting sexual risk behaviour were carried out. Following computer-based categorial coding, narration and discourse analyses were used to interpret the data in the context of current social psychological theories. Results: As dominant narrative pattern the use of sexual risk reduction strategies was interconnected with biografical experiences of stigmatization, discrimination, & physical violence. Critical coming-out processes, a sense of rejected social acceptance, & self-worth deficits were correlated with high levels of depression, anxiety, suicide susceptibility, & substance use in the interviews. Discussion: Heteronormative discourses & practices deeply influence the identiy formation of gay & bisexual men in most developed countries. By spoiling a coherent identity they contribute to vulnerability dynamics in which mental health burdens, drug use, & HIV risk behaviour fuel each other syndemically. For sexuality constitutes a decisive element of gay and bisexual men's identities, identity conflicts tend to be acted out through sexual risk behaviour.

2010S01455

Langhof, Antonia (Faculty of Sociology, University of Bielefeld [fax:; e-mail: antonia.langhof@uni-bielefeld.de]), **Ngos in the Relief and Development Sector as Hybrid Organisations?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Over the last three decades NGOs in the relief & development sector have changed significantly. Many of them developed into worldwide acting agencies with multi-million turnovers. They turned from small voluntarist groups to bureaucratic organisations with clearly defined hierarchies, roles & responsibilities. During this process NGOs apparently borrowed heavily from procedures developed in the business sector to change their organisational structures and processes. Partly this can be traced back to the fact that numerous organisations are no longer only processing private donations but also money given by institutional donors. In the 1990s NGOs became part of the "privatisation" of aid agenda in keeping with the dominant politics of the time, & donors exerted pressure on them to become more professional. Nevertheless there are still a lot of NGOs that only process private donations. Even though many of them adopted practices deriving from the business sector which on first glance often seem to contradict NGO's stated values, mission, & vision. The paper will analyse how NGOs make sense of conflicting or even contradicting demands & how they succeed in integrating elements from the business sector in their self-description & their structures. Neo-Institutionalists would assume that in such cases organisations incorporate business-like instruments & proceedings in their self-description without having any effects on an organisation's core activities. Therefore the thesis of the hybridization of NGOs in the relief and development sector doesn't seem very plausible, because there won't be any changes in their mode of organizing. But drawing on a detailed qualitative case study (including the analysis of interviews, a group discussion & several documents) of a German NGO the paper will illustrate that organisational structures and procedures don't remain unaffected by the adoption of structural patterns deriving from the business sector. The empirical findings substantiate system-theoretical assumptions that self-description and social structure have decisive effects on each other. From this theoretical perspective one could argue that NGOs in the relief and development sector are a form of hybrid organisations.

Langman, Lauren (Loyola University of Chicago, Sociology, Chicago Illinois, USA 60626 [tel: 1 -- 312-944-1681; fax: 1 -- 773-508-3463; e-mail: llang944@aol.com]), **Socialism or Barbarism Revisited: Mobilization after the Meltdown,** *International Sociological Association, Gothenburg, Sweden,*

¶ Global capitalism now faces a number of legitimacy crisis beginning with the economic stagnation of the West, the rise of the BRICs along with the vast amounts of pollution generated, the waning of democracy, the growth of religious extremism etc. These various stresses & strains, crises of legitimacy, have prompted a variety of social mobilizations. Aided by the Internet we have seen the proliferation of reactionary movements that would support authoritarian means of returning society to an earlier day as well as progressive mobilizations that would seek global justice. The various reactionary movements & agendas are incapable of providing amelioration of the consequences of global capital -- indeed they would make things much worse. At the same time we see the vast proliferation of global justice movements, especially in the developing world, that would challenge neoliberal capitalism as well as various authoritarian mobilizations. The outcome of these competing mobilizations might be "Mad Max World" or global social justice. This is the 21st-century version of socialism versus barbarism.

Laniado, Ruthy Nadia (Federal University Of Bahia, Rua Maranhao, 420 - Apto.1101 - Pituba / 41830-260 Salvador/Bahia - Brazil [tel: 00 55 71 3247-5477; e-mail: Ruthy. Laniado\Bfm2x41|Endgmail.Com]), **Regional Convergence in a Context of Democratic Regimes and Social Participation: Possibilities and Limits of Changes in Latin America in a Globalized World,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper will discuss the efforts of the past two decades in the Latin American continent to organize & structure regional entities that could represent affinities & communalities among countries such as Argentina, Brazil, Paraguay & Uruguay. How far affinities that could promote organized action regionally can confront interests & pragmatic strategies that are decided upon by contingent or ad hoc policies of national interest imposed by the market in a globalized world? On the one hand, the recent democratic governments require constant political action for legitimizing democracy itself (international integration, social policies, political competition); on the other hand, non-government actors are the voice of demands for changes in terms of social justice & redistribution (human rights, social rights, participation, political contestation). Both are axial to the process of constructing politics at the regional level & to promote regional identity values (a common historical trajectory) that can facilitate interaction, a stable democratic political culture (and related institutions) & cultural values based on diversity, recognition & human rights. The analysis of the scale and diversity of efforts concerning the construction of a regional perception for facing globalization & for consolidating democracy regionally will contribute to the understanding of the possibilities of changes in the medium & long terms in these countries.

Lapa da Silva, Tiago (Tiago Lapa da Silva; CIES-ISCTE, Lisbon University Institute, CIES, Edifício ISCTE, Av. das Forças Armadas, 1649-026 Lisboa, Portugal [tel: +351 217 903 077; fax: +351 217 940 074; e-mail: tiagolapasilva@gmail.com]), **Gendered Dual Standards in the Transition to Adulthood: A Crossnational Comparison between Seven European Countries,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the context of "late" modernity, the process of individualization might be altering the social representations of what characterizes the adult person. This thesis examines social norms regarding the timing & sequencing of the transition to adulthood & attitudes towards the events that are regarded as important in the definition of the adult. Secondary, cross-sectional data from the third round of the European Social Survey was used in order to compare the attitudes & norms regarding adult life between seven European countries. It is shown that Europeans share common expectations regarding the sequencing of life course. However, the normative timetables associated with the transition to adulthood vary across countries, reflecting different demographic patterns within Europe. It is also demonstrated that there are gender double standards in social norms & attitudes: women are expected to enter adulthood earlier than men; & Europeans consider that being autonomous from others is more important for male adult life than for female adulthood.

Lapointe, Paul-André (Département des relations industrielles, Université Laval, Pavillon J.A.DeSève, [tel: Québec, Québec, Canada G1K 7P$; fax: +14186567688; e-mail: paul-andre. lapointe@rlt.ulaval.ca]), **Workplace Participation in Financial Capitalism,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the literature on the diffusion of participation & social innovation in the workplace, there is generally a paradox: despite the economic performance & higher social benefits these innovations generate, they are poorly disseminated. Using institutionalist & varieties of capitalism approaches, we would like to better understand this paradox in Anglo-Saxon model, characterized by the dominance of financial markets & whose quality of work & employment is subject to financial returns required by shareholders. In this regard, we make the following hypotheses: H1: Among companies that emphasize short-term financial performance, there is a decline in participation; H2: Companies that have introduced participation schemes & those that have discontinued previously adopted participation schemes provide less training to their employees & use more precarious forms of employment; H3: In companies that use more participation, social dia-

logue is more developed; H4: The quality of work & employment is higher in companies that rely more on participation. To test these hypotheses, we use data from a longitudinal survey conducted by Statistics Canada on Canadian workplaces between 1999 & 2006.

Los deudores de crédito hipotecario futuro de los movimientos sociales?** (From Actors to Actors. Credit Debtors Mortgage the Future of Social Movements?), *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ De actores a actores sociales. Los deudores de crédito hipotecario futuro de los movimientos sociales? Dr. Juan José Lara Ovando. Los actores sociales son los que constituyen movimientos sociales, pero muchos de esos actores son emergentes con las crisis y generan movimientos de resistencia muy fuertes, es el caso concreto de los deudores de crédito hipotecario, que en todo el mundo están saltando a defender su patrimonio: su vivienda. En México, estos han generado manifestaciones muy fuertes, pusieron a temblar a bancos y al gobierno federal, porque se ligaron a grupos de cartera vencida agropecuaria. Fue un movimiento tan amplio que generó vinculaciones estrechas con la opinión pública, liderazgos ciudadanos y manifestaciones culturales propias. Aún así, considero que no se convirtieron en actores sociales, ni generaron un proyecto como movimiento social, puesto que en lugar de identidad fue prioritaro el interés. En este trabajo se describe al movimiento deudor, se especifican sus diversas manifestaciones, se discute la importancia del actor social y sobretodo se confronta identidad con manifestaciones culturales como elementos de definición sobre el futuro de los movimientos sociales. Se propone que este trabajo vaya a la sesión RC07/RC48 Social Movements & the Future.

Larchet, Nicolas (Ecole des Hautes Etudes en Sciences Sociales (EHESS), Paris [tel: +33673537094; e-mail: nicolaslarchet@yahoo.fr]), **The Political Uses of Disaster: Reforming the Food System in Post-Katrina New Orleans,** *International Sociological Association, Gothenburg, Sweden,*

¶ Disasters, as historical events marking a break with the past, are particularly prone to political uses: the need to rebuild the disaster-stricken region can be turned into an opportunity to change society, prompting calls to "rebuild better than before." In this perspective, we will look at a project of social transformation in post-Katrina New Orleans. A food policy council has been established one year after the storm, bringing together various actors aiming to improve access to fresh fruits and vegetables in low-income neighborhoods to prevent obesity, among other objectives. Whereas this local food reform movement is similar to other efforts taking root across North America, the peculiar context of Hurricane Katrina makes it distinctive: reformers establish a direct link between the disaster & food access (many supermarkets remain closed in impoverished, flooded neighborhoods), then philanthropic organizations have made funding more easily available to this movement in the aftermath of Katrina. The disaster is thus used as a pretext to promote a reform of the people's eating habits, at the expense of other narratives: if access to fresh fruits & vegetables is more problematic after the storm, so are issues of hunger & poverty - themselves closely related to obesity - while being overlooked by the authorities.

Larionescu, Andra (Department of Sociology, Bucharest University, Bucharest, Romania [e-mail: andraULleti@yahoo.com]), **New Trends in Migrants' Housing. A Case Study of the Impact of Migration on a Rural Community from Marginea Village, Romania,** *International Sociological Association, Gothenburg, Sweden,*

¶ In my paper I will analyze how migration has induced shifts in the traditional values & lifestyle of the returning migrants, focusing mainly on their houses in the homeland. The paper relies on data collected in an exploratory study–actually a part of an ongoing research– conducted between July & October 2009 in Marginea village, based on interviews, field observation and questionnaries. This rural community, of ca 10.700 people, is characterized by strong international migration; more than half of the population has migrated outside the country since the fall of the communist regime. With an estimated number of more than 1000 migrants only in Torino & its environs, Marginea is one of the champion villages of Romania concerning the migrant movement. Migration is strongly related to investment in houses and innovation in housing practices–by access to financial resources & new information & models. Actually, the village comprises about 3500 dwellings, more than 2000 houses being newly constructed or restructured between 1990-2009. In the context of globalization, where social & technological innovations penetrate any frontier, the symbolic & material dimension of the Romanian rural household embodies new ways of expression. The study explores the ways in which the personalized housing configurations relate to families' lives & experiences.

2010S01463

Lars, Bo Kaspersen (Copenhagen Business School [e-mail: lbk.cbp@cbs.dk]), **Survival Units, Violence, and Warfare in Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ The importance of the concept of survival units is overlooked by most Elias scholars. Elias assumes that human societies from very early on have been divided into survival units. These survival units, again, have always competed & co-existed in larger figurations. A crucial dimension of these survival units is the ability to defend themselves against external enemies but also the ability to pacify the population of the survival units in order to avoid internal riots, rebellions & civil wars. Elias is one of the few classical sociologists who understand the relationship between human development & violence/warfare without falling into the social-Darwinist trap. Thus warfare as an ultimo ratio as a "solution" in a conflictual relationship between two survival units was seen as a dynamic force by Elias. Elias never conducted a systematic analysis of the European civilizing process in relation to the many competing survival units & different figurations. Now and again it pops up in his work that we can find different survival units at different times during the European history. He mentions tribes, city-states, empires, & the nation-state as different forms. This paper examines systematically how different forms of survival units have coexisted in the European figurations of survival units since the demise of the Carolingian Empire. The paper will map out the different forms of survival units embedded in different larger figurations (international systems) from the early Middle Ages to the beginning of the 21th century. The examination contains an analysis of the shifting character of warfare & violence between & within the survival units over time. Moreover, the analysis pinpoints the relationship between the character of the violence, the civilizing project at a given time and the particular form of survival unit. Thus the paper will propose a characteristic of the current global figuration, the particular survival units (stressing the survival units in the western world), & the character of the civilizing process.

2010S01464

Larsen, Håkon ([e-mail: hakon.larsen@sosgeo.uio.no]), **The Cultural Sociology of Public Debate: A Comparative Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper puts forward a theoretical framework suited for national comparative analysis of public debates within a cultural sociological approach–as stated by Silber–"(BB) that form of sociology that concerns itself with the shaping or constitutive impact of cultural formations & discursive practices upon other aspects of social life." The focus is both on how language is used by actors involved in deliberation over publicly disputed issues and how language is influencing possible ways of relating to the issues. The framework is illustrated with examples from an ongoing debate in Norway & Sweden, namely the debate on the future of public service broadcasting (PSB). The framework is suited for analysis of debates not only in traditional & new media, but also group discussions (both public, e.g. seminars, & non-public, e.g. contexts constructed by the researcher) as well as interviews with actors engaged in the issues at hand. This is due to the focus on language instead of the media (although language of course is a medium in itself). The interest lies in how the language that is used can be related to similarities & differences between the nations included in the study. The connection between language and various social & cultural elements is thus crucial. The comparative cultural sociological approach of Lamont and Thévenot is addressed, as is Fairclough's critical discourse analysis (CDA). The reason for combining these different analytical traditions is to emphasize their individual strengths & try to overcome their weaknesses. CDA's weakness is its heavy linguistic focus & the lack of specification needed to fully grasp the influence of social structure on the production of discourses. Repertoire theory, on the other hand, is too voluntaristic and naïve when it comes to the influence of social structure on action, in its tool-kit version. I am advocating a middle position between the critical/ideological/hegemonic & the repertoire/tool-kit approach. This middle position's application in empirical research will be

illustrated with examples from the analysis of the debate on the future of PSB in Norway & Sweden.

Larsson, Bengt & Engdahl, Oskar (Dept. of Sociology, University of Gothenburg, Göteborg, Sweden [tel: +46317865775; e-mail: beng.la@hotmail.com]), **Decentring the Regulatory State–The Production of Trust in Deregulated Markets,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper gives a theoretically based analysis of five cases of re-regulation of financial markets, corporate governance & the control of economic deviance in Sweden: 1) The de- and re-regulation of financial markets 1980-2000. 2) The enactment of a duty of Swedish auditors to report crime to the public prosecutor from 1999. 3) The creation of a brokers "driving licence" in 2001. 4) The leniency-program giving corporations who self report cartel activities a reduction of fines, from 2002. 5) The creation of a code of corporate governance, based on the principle of "comply or explain," from 2005. From these cases we will outline some general tendencies in the process of reregulation following the 1980-90:s deregulations. As pointed out by others, "deregulation" was misleading concept, since intervening regulations were often substituted by new market constituting regulations. This displacement is close to the concepts "the new regulatory state" and "regulatory capitalism." The outcome is a pluralistic system combining a varied set of organizations & regulations in order to produce trust in the "deregulated" markets a state control as well as pure self-regulatory processes & private systems of control. Of particular importance are the extended role of professions & expertise from the areas concerned.

2010S01466

Larsson, Nils O (University of Skövde, Sweden [tel: +4631149826; fax:; e-mail: skolnils@tele2.se]), **Important Decisions and their Settings Needed for Attaining a Sustainable World–A Methodology Proposal,** *International Sociological Association, Gothenburg, Sweden,*

¶ The main objective of the methodology to be presented is to find the most important decisions within the area of discussion. Focussing on the important decisions and in which environment they are taken gives an increased possibility of solving the problems in question. The analysis should cover decisions on all levels i.e. individual, informal and formal groupings of people, nations, group of nations as well as decisions on the global level. In this paper I will present some examples that could serve as an elucidation of the method. In this paper the method is used to outline a system for a sustainable control of some important factors such as global renewable as well as non-renewable resources & also human population growth, and introduction of new technique & its influence on sustainability Decisions having an important influence on the above factors are presented & the most crucial information needed for making relevant decisions. The next step in the analysis is to discuss the need for a decision hierarchy & what organizations should be responsible for taking these decisions.

2010S01467

Larsson, Susanna (Department of Sociology, Örebro University, 70182 Örebro [tel: +4619303088; e-mail: susanna.larsson@oru.se]), **I Bang my Head, Therefore I am a Constructing Individual and Social Authenticity in the Heavy Metal Community,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper seeks to understand the ways by which heavy metal fans construct their self & collective in relation to the music and the culture by concentrating on subjective & inter-subjective arguments on what it means to be an authentic heavy metal fan. The empirical material consists of focus group interviews & single interviews with young heavy metal fans of ages 18-26. By way of conclusion, individual understanding of authenticity, "constitutive authenticity", is the result of arguments on long term dedication, highlighting symbolic events & attributes, and the feeling of making the right choices based on an inner voice. Social understanding of authenticity, "reproducing authenticity" is the result of an abstract moral to which the heavy metal fans align. Construction of authentic selves & collectives takes place in a close social in-group context, where the understanding and knowledge of individual & collective dedication is known, as well as in a thematical in-group, where only symbols & attributes are known.

2010S01468

Latukhina, Maria (Department of Sociology, University of Saskatchewan, 1019 - 9 Campus Drive Saskatoon, SK S7N 5A5 [tel: 1(306)664-9665; e-mail: mdl589@mail.usask.ca]), **Global Civil Society: Characteristics, Perspectives, and Critique,** *International Sociological Association, Gothenburg, Sweden,*

¶ In spite of the fact that the phenomenon of global civil society is not new, it is still highly contentious to the point that even its existence is sometimes questioned. In my work, I seek to answer what is global civil society, explain the relationships between civil society & global civil society, & discuss the meaning of global civil society drawing on Habermas' idea of public sphere, ideals of postmodernism & the notion of participatory and deliberative democracy. I also address some of the criticisms of global civil society that I find unjustifiable. I argue that although global civil society is not a flawless structure & some of its members pursue their own interests, it should be given more opportunity to participate in world politics & influence decision-making.

Lauster, Nathanael, T. & Easterbrook, Adam (University of British Columbia, Department of Sociology, 6303 NW Marine Drive, University of British Columbia , Vancouver BC V6T 1Z1 [tel: 604-827-3083; e-mail: nlauster@interchange.ubc.ca]), **No Room for New Families? Documentation and Implications of Discrimination in a Metropolitan Rental Market,** *International Sociological Association, Gothenburg, Sweden,*

¶ As sociologists & demographers have documented, new family forms are becoming increasingly common around the world. Yet little attention has been directed at how new families find & construct homes in urban spaces. Here we argue that new families, especially single parents & same-sex couples, are likely to face discrimination in their interactions with urban rental markets. These patterns of discrimination, in conjunction with other forces, are likely to limit the overall opportunities for new families to construct homes in the city. But the geography of discrimination also contributes to the formation of distinct neighborhoods where new families find more support. We investigate these issues in Vancouver, Canada, through analysis of 1,622 inquiries made about one & two bedroom apartments listed for rent on a popular on-line market website. Using a modified audit study design, we analyze landlord responses to five different scenarios, including one heterosexual couple, two same-sex couples, & two single parents. We argue that the differences in response to these inquiries provide evidence documenting discrimination in the rental market. We also explore the differences in response by region within the metropolitan area of Vancouver to better document & discuss the geography of discrimination against new families.

Lavarini, Roberto (Università IULM, via Carlo Bo 1, 20143 Milano [tel: +39.02.891412644; fax: +39.02.891412641; e-mail: lavarini108@gmail.com]), **"The Evolution of Sustainability's Concept in Contemporary Tourism",** *International Sociological Association, Gothenburg, Sweden,*

¶ The purpose of my presentation is to understand how deeply rooted the concept of sustainability, not only in everyday action, but also in tourism both for travelers & for operators. The presentation is structured in three parts. The first part introduces the concept of sustainability from multiple perspectives: resident in a tourism destination, travelers and operators. To this aim, in the second & third part I present the results of three research projects, two already carried out in 2006 and 2009 & a final, identical, that will be repeated in February 2010. All made at the BIT Milan, among the stands of the exhibition. The object of the interviews is the sustainability and many tour operators in addition to visitors & exhibitors have been interviewed. In the second part of my paper, I will present the results about tour operators, while in the third part I will present the results about visitors & exhibitors. Comparison between the results allow us to see if the environmentalist attitude is growing, if it is finding application in everyday behaviour, by travelers & operators.

Lavitry, Lynda (Doctorante en sociologie, bourse CIFRE-ANPE, Laboratoire d'Economie et de Sociologie du Travail (LEST), UMR CNRS 6123, 35, avenue Jules Ferry, 13626 Aix-en-Provence Cedex [tel: 04.42.37.85.13; fax: 04 42 26 79 37; e-mail: lynda.lavitry@univmed.fr]), **French Activation Policies: The Dilemmas of the Employment Counselors and Their Clients When Coping With the Unemployment Trap,** *International Sociological Association, Gothenburg, Sweden,*

¶ This research work deals with the evolution of active labour market policy measures in France, from the implementation of the Social Cohesion Law in 2005 to the most recent developments of work-first in 2009. The presented results are based on an ethnographic study conducted in France

from November 2008 to June 2009 as part of a thesis in partnership with public operator, which focused on 65 interviews with employment counselors, and the observation of 250 interviews conducted by 60 counselors in seven agencies. Since the late 1990s, the French National Employment Agency (Agence Nationale Pour lEmploi, ANPE), the first operator of employment policy, gradually promoted a new social contract. It relies on individual responsibility and flexibility to fit into the labour market. The paper will first focus on the national context: in France, activation policies and programs influenced by the European Employment Strategy (Barbier, 2006) appeared in the late 1990s, with the aim of reducing the out-of-work benefits ("to insure that works pays", according to Lisbon European Council). Individualization has been one of the cornerstone of the reforms, concerning more and more unemployed categories, including most of jobseekers. Since 2006, the implementation of the Personalized Monthly Follow-up (SMP) is an important step in this evolution from a status logic to a contract logic (Freyssinet, 2000), with a greater emphasis on the active role of the recipient whose obligations to participate in activation measures have systematically increased. This activation process is a part of a public service reform for a better effectiveness, introducing service relation with an user who has become client. Individualization brings out various types of consequences: changes in public employment service organization, with a rationalization of the activity of the counsellors, through the acceleration of the processes (decrease of length of interviews, increase of the subcontracting), the intensification of the workload, the greater valuation of the statistical indicators. Secondly, we will turn to the meaning of these evolutions for consellors and their clients. The evolution of the legal framework relies on a hardening of the control of the job seek - Law upon Acceptable Job Offer (ORE, 2009)-. The results of our survey show a general reluctance of the counselors to use all activations tools, they prefer to use coping strategies, especially with jobseekers who have a weak employability. The reasons of these coping strategies we have analyzed are various: they are related to bureaucracy specificities and deficiencies, to the modalities of control of key activities by a professional group. Moreover, they are linked with the context of economic crisis, but also with the special position of French employment counselors, for whom social justice and rights are structuring elements of their professional identity. Control effects seem to depend on consellors professional culture (that is the meaning they give to their mission), and on the labour market situation: economic crisis weakens the definition of a suitable job, and also implies a will of detecting "false" unemployed jobseekers, which contributes to reduce compensation expenses.

2010S01472

Laznjak, Jasminka & Svarc, Jadranka (Dept. of Sociology/ University of Zagreb, Zagreb, Croatia, HR-10000 [tel: +385 1 6120184; fax: +385 1 6120007; e-mail: jlaznjak@ffzg.hr]), **The Role of National Innovation Culture in the Globalized World,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper deals with the problem of innovation culture on the national level in the age of globalized science, technology & innovation trying to answer the question why some societies are more innovative than others & do existing cultural conditions determine when, how & in what form innovation will be adopted? Higher innovation capacity is associated with societies characterized by higher individualism, willingness to take risks, readiness to accept change, long-term orientation, low power distance, weak uncertainty avoidance, openness to new information, value of education to society, positive attitudes toward science. In the paper are presented preliminary results of the survey on the representative sample of Croatian population. Croatian national innovation culture of Croatia is operationalized as set of value orientations & norms like attitudes toward innovation, egalitarianism, statism, uncertainty avoidance, individualism, masculinity - femininity, long-term or short-term orientation, and power distance. Drawing on Hofstede's (2001, 2004) dimensions of national cultures & their application on innovation culture, Croatian survey uses different indicators but referring to the same concept of innovation culture (Didero et al. 2008; Juceviğius 2007). Relatively low innovative capacity in Croatian society is associated with the significant presence of traditional set of values & low trust in institutions.

2010S01473

Le Bihan, Blanche (EHESP, Avenue du professeur Léon Bernard [tel: 35043 Rennes cedex; e-mail: Blanche.LeBihan@ehesp.fr]), **Caring For an Elderly Parent in France and Italy: Familialisatio or Defamilialisation of Care?,** *International Sociological Association, Gothenburg, Sweden,*

¶ All European countries share major challenges in addressing the social risk of dependency. In response to increasing needs & decreasing abilities to provide large amounts of family care, calls for the development of comprehensive long-term care public systems have been intensified. This paper focuses on the articulation between family care & public support in the field of elderly care and questions the impact of the Long Term Care policies implemented in two European countries, Italy & France, where family traditionally plays a major role. It presents some results of a comparative research carried out in six European countries on the thematic of "Workers under pressure & Social care" (WOUPS project), based on policy analyses & on in depth qualitative interviews of daughters & sons who work & have to care for their old parents. The analysis first proposes a comparison of LTC policies in Italy & France. It shows that the introduction of cash in LTC systems constitutes a common trend of the reform processes since the 1990s, with the development of a logic of "free choice" for the family. But the countries have different histories of LTC policies & of applying the cash approach. Thus, if the introduction of such schemes corresponds to a process of externalisation of the caring tasks, it has very different dimensions in Italy & in France. Finally, in the two countries, externalisation of care does not mean de-familialisation of care. On the contrary, the cases studied in the two countries show that the involvement of the family remains a central source of support, with an evolution of the role of family carers, who are less implied in continuous activity of caring, but become "care managers": they receive the cash support, take decisions to organise the care arrangement & coordinate the different formal & informal resources.

2010S01474

Le Gall, Josiane (UQAM, CSSS de la Montagne, 1801, boul. de Maisonneuve Ouest, 6e étage, Montréal, Québec (Canada) H3H 1J9 [tel: +01 514 934-0505 poste 7605 ; fax: 514-934-3776; e-mail: j.legall@ssss.gouv.qc.ca]), **Religious Transmission and Migration: The Case of Young Muslims in Quebec,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper focuses on the religious socialization of young Muslims in Quebec & examines the different sources of information from which these young people gain Islamic knowledge. How are young people introduced to religious education? What are their main sources of religious influence? What kind of religious heritage was taught to them & how was it received & reinterpreted? It reveals that their extensive exposure to the sometimes contradictory norms of the wider society forces them to examine their personal views on faith, God & religion. This concern for rationality encourages them to explore religion not just through the rituals they have learned through their cultural heritage, as parents still take on the role of inculcating Islamic values & of transmitting the sentiment of a distinct identity to their children, but also through the Internet, the Qu'ran & other Islamic texts, religious study groups, conferences or discussions with friends, relatives or Imams. As a result of this personal quest, the process of transmission is being transformed. This paper is based on an ongoing study that explores the religious practices & beliefs of 100 young Muslims in Quebec of different ethnic & national backgrounds.

2010S01475

Le Gall, Josiane & Gherghel, Ana (UQAM, CSSS de la Montagne, 1801, boul. de Maisonneuve Ouest, 6e étage, Montréal, Québec (Canada) H3H 1J9 [tel: +01 514 934-0505 poste 7605 ; fax: +01 514 934-3776; e-mail: j.legall@ssss.gouv.qc.ca]), **Intergenerational Solidarity over the Life Course in Transnational Families (Azores to Canada),** *International Sociological Association, Gothenburg, Sweden,*

¶ How do the stages of the life course & experiencing particular family transitions shape the transnational caregiving & other exchanges taking place in transnational families? How do they interplay with other factors, such as gender or generation? These are the questions we try to answer in our paper, analyzing the configuration of transnational family solidarity & the changes at different life course stages, especially during family transitions and migration transition. Our presentation is based on an ongoing research project started in June 2009 & dedicated to a particular migration phenomenon: the Portuguese migration from the Azores to Canada (Quebec). This case study allows observing the evolution of family exchanges over a long period of time, more than four decades, during which strong ties with the communities left behind were preserved. Nowadays, this phenomenon involves three generations of immigrants, as demographic data show. The family transitions investigated are normative (marriage, birth of a child) and non normative (illness, separation). Using a socio-anthropologic multi-sited approach, the research is conducted simultaneously both in the origin & destination countries. A qualitative methodology is employed: participant's observations and biographic interviews with members of three generations of families living in Azores & in Que-

bec. The presentation of results is structured in two parts: various types of exchanges & support (hospitality, material exchanges, caring practices, information) and the influence of family transitions & life stage on transnational caring. As it is a work in progress, new results will be added gradually. To date, this research shows how the life stage and family transitions represent key elements in understanding the transnational ties & the transnational caring. Particular family events, such as the birth of a child or the illness of a member of the family, activate or suppress specific types of exchanges and support.

le Grand, Elias (Department of Sociology, Stockholm University, Stockholm, Sweden, 10691 [tel: +46 8 163183; fax: +46 8 6125580; e-mail: elias.legrand@sociology.su.se]), **Creating a Folk Devil: The Moral Panic over 'Chavs',** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper analyzes the recent emergence of a moral panic in the British public realm about 'chavs'; white working-class youths dressed in streetwear clothing & jewellery, associated with loutish & anti-social behaviour, teenage pregnancy & welfare dependency. Through an analysis of news media & websites it is argued that chavs are constructed around moral & aesthetic boundaries as a 'rough' fraction of the white British working-class–a 'folk devil' against whom middle-class and 'respectable' working-class people distinguish & define themselves. Contrary to earlier claims the paper shows that the public debates about chavs have been explicitly expressed in terms of social class, & to some extent race. It also shows that the chav phenomenon incorporates two historically familiar folk devils, distinguished along gender lines: young violent working-class males and single, welfare dependent young working-class mothers. Lastly, the paper explores three consequences of the moral panic: how chavs have been subject to different forms of policing, how their alleged consumption of high end brand Burberry has negatively affected the brand, & how they have been used as entertainment to market and sell commodities. In conclusion, the paper contributes to research on class identity formation & how it intersects with age, gender and race.

2010S01477

Le Roux, Tessa, Presentation of Self in Everyday Life of Stroke Survivors and Their Caregiver Spouses, *International Sociological Association, Gothenburg, Sweden,*

¶ Stroke is commonly regarded as one of the leading causes of serious, long-term adult disability–in the US approximately 800,000 people suffer a stroke every year. Apart from physical disabilities, stroke survivors frequently have aphasia, a neurological disorder which brings about difficulty in expressing oneself when speaking, trouble understanding speech, & difficulty with reading & writing. In "Presentation of Self in Everyday Life," according to Goffman people perform for their social audiences in order to maintain a stable self-image. In their front-stage performances people present idealized pictures of themselves. In the case of a language disorder, the normal mechanisms at play in the front stage are changed. Impression management is more difficult as stroke survivors become dependent on their spouses for communication. Teams such as support groups reinforce the pressure to maintain a sense of normality & add a layer to the back stage which puts additional pressure on caregiver spouses to maintain their own personal front. Goffman's work provides a conceptual framework to understand the relationship between caregivers & their aphasic spouses, & the way they interact as dyad with their social environment.

Lebel, Udi (Ariel Univercity Center, Sapir College, Ariel, Israel [tel: 972544300406; fax: 972777867887; e-mail: ulebel@gmail.com]), **Blackmailing the Military,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the influence of civil society bodies on security policy & its implementation within the military arena. As is customary in military studies, the armed forces are perceived as a-political & all their components are presented as operating in accord with the principle of unity of command. Under this conventional perception, military leadership is endorsed as the ultimate [epistemic] authoritative source of sanction and obedience. This situation stands in opposition to an abandonment of politico-epistemic authorities which are outside the military framework, namely a recourse to "significant others" in civil society. This is in opposition to the growing knowledge in all matters connected to the management of civil & business organizations where the "dependency theory" (Fiedler, 1971) is becoming more & more popular. This theory teaches us about the dependency of the heads of an organisation on the religious, political & national profile of the employees in the organization. This theory also led to the organizational need to implement "cultural diversity" in the firm as well as on-going communication with opinion leaders & heads of informal groups in the organisation who grant their fellows legitimacy to respond to claims of the heads of the organization. Since the 1980s, the Israeli Left has lost its hegemony in the political arena to the political Right. At the same time, the Israeli military for the most part relies on those identified with the leftist Israeli camp (the middle class, secular, Ashkenazi, socialist, living mainly in the large towns & cities & in agricultural settlements–the kibbutz & the moshav). During the first decades of the existence of the Israeli state, this camp was solely in the formative grip of Israeli security policy. However, following this period, (because of changing political power relationships in the reins of government) it was suddenly forced to implement a security policy within the military framework which did not accord with its ideological outlook; moreover, it lacked any political effectiveness to annul this policy in the parliamentary arena. Since the beginning of the 1980s, a new strategy of influence by the groups on the Left on military policy has come to the fore and become widespread. This strategy took the form of selective refusal to answer military call-up in the reserves. More & more civil society bodies which receive economic, ideological & moral backing by leaders of the Left from the political & academic arena, as well as retired senior personnel in the security arena, started supporting organized groups within the military, including senior & lower rank officers, in advocating selective refusal of military service: that is, conditioning the acceptance of the authority of army chiefs & the political echelon on receiving legitimacy from those that served as epistemic authority for them during their army service, namely, figures from civil society. This strategy gained ground & became part of the military-political culture in Israel. (Abstract shortened by ProQuest)

2010S01479

Lebreton, Florian, Routier, Guillaume & Pardo, Rodrigo (Université Européenne de Bretagne, Rennes 2, Rennes, France [tel: +33 0683280115; e-mail: florian-lebreton@hotmail.fr]), **Sport and Alcohol Consumption Among French Students: When the Game is at Health Stake!,** *International Sociological Association, Gothenburg, Sweden,*

¶ As part of the university studies & festive context they offer, some vulnerabilities may appear in the image of excessive consumption of alcohol. Beyond its health aspect, the treatment of alcoholic drinks leading to a new level of social vulnerability. The relationship between involvement in sports & alcohol consumption appear to be complex in the alcohol literature. We note that risky behavior related to alcohol consumption are found, more importantly among young athletes (Hildebrand, Johnson et Bogle 2001). Indeed, studies (Nelson et Wechsler 2001) have reported differences between student athletes & non athletes regarding the behavior of Alcohol. Furthermore, another study (Lorente & al., 2004) highlights the impact of predictive factors for consumption (male, studies in the technical sector) & non-alcohol consumption (female, sportsmen). Consequently, we examine this link among French students to examine if alcohol can be interpreted as a gender symbol (Eriksen, 1999), specifically within sports socialization? We also examined variations in alcohol use among different university studies: sport sciences, law & medicine students. We have chosen these three populations of inquiry to examine the impact of their professional ethos of the respective uses corporal linked to the consumption of alcohol. The interest of this study is to compare different "drink" under their respective professional training (professional ethos). Thus, we have generated a random of sample of 1412 students from the first year to the fifth year of French university population: sports sciences, law & medicine students. Again, we used a self-questionnaire survey to collect data followed by specific interviews conducted with male & female students from different studies. Our communication will then respond to the following problem: is there a link between performance body made during the sequence of alcohol & one that raises the physical practice & sports? Otherwise, is there a link between excess, sports & alcohol?

2010S01480

Lecoutre, Marc & Lièvre, Pascal (LISE, ESC Clermont Graduate School of Business, 4, boulevard Trudaine - Clermont-Ferrand - 63100 - FRANCE [tel: +33 473 982 430; fax:; e-mail: marc.lecoutre@esc-clermont.fr]), **Questioning the Distinction Between Strong Ties and Weak Ties: The Notion of Potentially Cooperative Weak Tie,** *International Sociological Association, Gothenburg, Sweden,*

¶ Research based on the distinction between strong ties & weak ties implemented by Granovetter (1973, 1982, 1995) is today very common and for a wide range of uses. Weak ties provide advantages for accessing fresh previously unrecognized resources, enhancing social mobility,

exploring far from your usual social circle, stimulating the potential of innovation, or equipping technology spanning on competitive markets, etc. Strong ties support long term alliances, allow sophisticated technology transfers, provide the first allies when creating a firm, etc. A very few number of investigations we review here have been interested in questioning this strong ties/weak ties distinction. We intend to seriously discuss this question here. Certainly weak ties allow us to appeal to contacts far from our usual or everyday context, develop new cooperative arrangements, access resources that had not been previously fully identified; but the implicit condition is that these contacts will yield. How do these new links appear & develop in the course of action, what determines their acceptance to collaborate, how do cooperations start when we are far from our usual sphere of exchange partners? Detailing Granovetter's methodology (1973, 1974, 1995), we establish that in fact the strength of a tie is based on three criteria: (1) the amount of time spent together, (2) the level to which people feel close (identity closeness), & (3) the actual possibility to exchange a service or an information. We further assert that among them, the last two criteria are the most important. We then use a recent research about cooperation, relying on a long term classical tradition in sociology (Dameron 2004), that distinguishes two mechanisms, complementarian based cooperation versus communitarian based cooperation. This allows us to define the link that works, we name it the potentially cooperative weak tie: it is the only link able to generate cooperation, that is to say a link in which at least one of its two dimensions (i.e. identity closeness or level of exchange service), is strong enough to allow a cooperation. We give examples for these forms of cooperative weak ties, stemming from our empirical researches in extreme situations. Finally, going further than Granovetter's proposal, we assume that there should be three kinds of ties instead of two: the non potentially cooperative weak tie, the one that do not yield; the potentially cooperative weak tie, the one that can yield; & the strong tie, the one that yield in every case, because he feels that he as to.

Lee, Donghak (Dept. sociology, Korea University, Seoul, South Korea, 136-701 [tel: 02 3290 2070; e-mail: afewgman@gmail.com]), **Sustainable Production and Use of Biofuels in South Korea- The Case Study on Rapeseed for Biodiesel in Buan,** *International Sociological Association, Gothenburg, Sweden,*

¶ In 2008, we experienced severe food crisis. In addition to long-term factors, biofuel boost & financial specialization has great impact on world food supply & prices for decades. Some people praised biofuel as alternative & green technology in the face of climate change & peak oil. However, the others criticized biofuel because it bring severe food shortage, poverty & another environmental problems. On the basis of hot debate on biofuel, this paper aim to understanding specificity of biofuel system in South Korea. This paper consists of two parts: one is about government policy, & the other is the case study about locally-based biodiesel production & distribution. The latter was started without any support from government, & their way to produce and distribution was more sustainable & eco-friendly biodiesel than government policy. They use traditional seeds, & do organic farming. They tried to construct local recycling system by providing rapeseed oil to school, & then gathering "used cooking oil" for biodiesel. I aim to produce eco-friend, distribute in local place, & recycle everything. However, government's pilot project & the revision of Oil Act in 2007 prohibit those practices. Rather, government's policy allow capital & company to appropriate the whole process of rapeseed biodiesel & accumulate capital more easily. Comparing government policy & Buan's local case, I hope to seek more sustainable & desirable biofuel system

Lee, James Feng-chien (Center for Teacher Education, Soochow University, 70 Linhsi Road, Shihlin, Taipei ,Taiwan 111, R.O.C. [tel: 886911132242; e-mail: jam@ms38.url.com.tw]), **The Research on Adolescent Change of Student Identity Standard in Taiwan,** *International Sociological Association, Gothenburg, Sweden,*

¶ According to Burke's Identity Control Theory, identity standard controls action. Even standard may change over time, so as the action dose & back to be congruent again. To explore adolescent change of the identity standard, I followed a class of junior high school students in Taiwan for three years from seventh to ninth grade, 13-15 years old, till they entered senior high school. Student is an important role of adolescence. This research focused on student identity, which is also from the concept of role identity in Identity Control Theory. Subjects were 16 students, 8 boys & 8 girls, from the class & their advisor teacher. The teacher had taught for over 25 years. Research methods were Individual in-depth Interview, non-participative observation and document analysis. Interview & observation conducted at seventh and ninth grade, document gathered throughout three years. The result found that students' expression & their actual action about a student is closing as time goes by. That is, they can describe more accurately their identity standard at ninth grade. Identity standard guides action, but the standard hides behind their reply to the interview unconsciously for students at seventh grade. Their thought & action were usually not the same. Most students' actions changed at ninth grade. The change was the reflection of their habit since their childhood countering the interaction of growing up & the coming Basic Compete Test for entering senior high school. The conscious thinking for resolution was the reason of this result. The closing phenomenon which can be further divided into various conditions will be discussed in this paper.

Lee, Jung Woo (School of Sport Science, Sungkyunkwan University, 300 Chunchun, Jangan, Suwon, Kyunggi, South Korea [tel: 82 (0)31 299 6925; e-mail: ljw0202@gmail.com]), **Interacting With the Online Media Coverage of the World Baseball Classic 2009: Preliminary Observation,** *International Sociological Association, Gothenburg, Sweden,*

¶ One of the key features of the new media is interactivity between contents & audiences, & this allows media consumers to actively engage in the communication process. In this regard, this paper looks at the way in which South Korean citizens interact with the online media coverage of the World Baseball Classic 2009. Particular attention was paid to the practice of an image alteration, & to the meaning that the altered images conveyed. People's reactions to those images were also considered. To do so, this study utilised two research methods: textual analysis and contextual analysis. The result showed that the digitally reconstructed contents contained humorous depictions of the games and the players with nationalistic undertones, & such portrayals were especially visible when the Japanese & Korean teams, a long time Asian baseball rivalry, encountered. More specifically, a number of ridiculous elements were added to the images of the Japanese players in order to lampoon them. In addition, parody images of historic individuals such as Korean royal families and independent fighters were used to portray the South Korean athletes. These phenomena seemed symbolic revenge on Japanese imperialists' past crime, & offered cathartic experience to both producers & readers of such value-added contents that deemed unsuitable to be published in the mainstream media. Thus, this paper concludes that post-colonial nationalism against Japan still has significant implication for Korean cyberculture.

2010S01484

Lee, Na-Young & Jung, Min-Woo (Sociology Department of Chung-Ang University, Seoul, South Korea, 156-756 [tel: 82 2 820 5826; fax: 82 2 825 9668; e-mail: nylee@cau.ac.kr]), **The Construction of 'Strangers' in/between Boundaries: Post/Colonial Space of Hierarchy, Itaewon in Korea,** *International Sociological Association, Gothenburg, Sweden,*

¶ The purpose of this paper is to analyze the historical construction and transformation of Itaewon in Seoul City in South Korea, in relation to the multi-layered interactions between/among various subjects & national politics. In particular, it attempts to examine how the post/colonial space of Itaewon has been reconstituted as a symbol of multicultural, transnational, and global city intersected with the state polices, & what kind of ideologies have intervened in the process of transformation of the space & reconstruction of the social identities of subjects in it. Itaewon, a center of Yongsan in Seoul, which had been used by the Qing Dynasty of China, served as the Japanese Imperial Army Headquarters during the Japanese occupation. And it has continued to house the headquarters for the U.S. military since 1945 when Korea regained its independence. For this reason, Itaewon has been signified as a military camptown, an amusement quarter for military personnel, a commodified zone of hybrid culture between Korea and the U.S., and/or a notorious red-light district till 1980s. However, from the late-1980s when Korea's yarning for globalization began to be explicit in terms of national policy & politics, Itaewon has been reorganized & represented as a "multicultural" space where encountering between global agents & national subjects "freely" happen. But in effect, Itaewon functions as a symbolic as well as practical boundary to include or to exclude national, gendered, & sexual "others," who are identified as "strangers" with ontological nature. According to Sara Ahmed (2000), "the stranger" has been expelled as "the origin of danger" in neighborhood watch, & celebrated or welcomed as "the origin of difference" in multiculturalism & postmodernism. Therefore, this paper explores how prostitutes, gays, Muslims, and other "poor" & "exotic" migrants in the seemingly postmodern global space are (re)constituted as "strangers" to Korean national culture

& society, & how they become spatially rearranged by the gendered, racialized, & sexualized symbolic orders. Ultimately, it will show the ways in which unmarked body of "Korean nationals" is reproduced through the production and instrumentalization of "strangeness."

2010S01485

Lee, Richard Philip (Dept of Geography, University of Sheffield, ICoSS, Sheffield, UK, S1 4DP [tel: +44 (0) 114 222 6293; e-mail: r.p.lee@sheffield.ac.uk]), **Mobilising Knowledge Claims in the Production of National and International Food Standards,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines two modes of agri-food governance: the setting of international food standards in the Codex Alimentarius Commission (the Codex) & the co-ordination of national voluntary guidelines for food product reformulation by the UK Food Standards Agency (FSA). Sociological accounts of technical regulatory processes such as standard setting & implementation can help to illuminate the role of expertise in the governance of the agri-food sector. The paper focuses upon the mobilisation of knowledge claims by experts in these two modes of governance in order to analyse how expertise operates to produce socio-technical change. In particular, the paper considers how the materiality of food should be considered as an active element of governance which is specific to the associations between all actors relevant to a particular problematic.

Lee, Seejae (The Catholic University of Korea, Bucheon, Kyunggi-do, South Korea, 420-743 [tel: 82-22164-4264; e-mail: seejaelee@catholic.ac.kr]), **People's Living at Ecological Limits: Empirical Investigations on Ecologically Bounded Rationality,** *International Sociological Association, Gothenburg, Sweden,*

¶ Oil spill incident that occurred in December 7, 2007 at Tae'an, Korea demonstrated to what extent sudden destruction of the marine ecology gave impacts on people's living of the affected area. Fishing people depending on the marine ecology were faced with sudden loss of jobs, decrease of income, health problems. Moreover their communities were divided, & run into conflicts among each other which showed a typical corrosive effect on community lives. Sudden & acute impacts of ecological degradation have been serious social problems in China, where the rapid industrialization deteriorated ecological balance even in the remote regions of China. The Chinese government policy of reforestation & water management policy resulted in massive ecological refugees. There are abundant case studies of Chinese ecological deterioration and refugees. What is questioned in this paper are three points. First, people living at the ecological limits demonstrated that ecology and economy are an organically integrated entity, namely that without ecological recovery their living cannot be maintained. Secondly, system vs life-world dyad model presented by J. Habermas should be extended to system-life-world-ecosystem, a triple model thus to include the ecosystem within perspectives of social contradictions. Thirdly ecological rationality can be sought from the perspectives of ecological limits. The concept of rationality in modern social sciences is bounded within human exemptionalism paradigm. This research will introduce a new perspective of ecological rationality that can put into question the rationality problems of modern social sciences.

Lee, Shu-Ching ([e-mail: shuching928@googlemail.com]), **'Gender Education' is like 'Nan-Nu Yu-Pieh'? Deconstructing Harmony and Respect in a Confucian Society,** *International Sociological Association, Gothenburg, Sweden,*

¶ The longstanding Confucian idea of "Nan-Nu Yu-Pieh," literally spelling out that men & women are naturally different & thus should be treated differently, impinges on Taiwanese society despite its "modernisation." The vocabulary of harmony with its emergent idea of respect has long been a core conception of Chinese political philosophy & a common object of consensus in pan-Chinese society. In this sense, both turn up in a number of policy documents in relation to gender & education. School voices in response to reforms, however, seem to be rarely investigated and heard. Located in the sociology of education policy, this article, then, first explicates how school practitioners have interpreted gender equity as well as gender education; second, seeks to capture the discrepancies between the conventional notions of "respect," "harmony" & gender equity through which examining possible discontinuities between teachers' words & discursive struggles in terms of the delivery of policy in a Confucian society of Taiwan.

Lee, Yu Ying (Graduate Institute of History and Historical Relics, 100 Wenhwa Road, Taichung 40724, Taiwan [tel: 886-0931582912; e-mail: leeULyuying@hotmail.com]), **Collecting and Knowledge: A Case Study on Jade Collection in Taiwan,** *International Sociological Association, Gothenburg, Sweden,*

¶ Focusing on jade collecting & consumption, the main concern of this paper is to discuss the inter-relationship among collecting, knowledge & power. From perspectives of the production of knowledge, this paper tries to depict how collectors accumulate knowledge on archaic jade to gain reputation & to become connoisseurs in different levels. There are two topics of this paper, firstly, the formation of archaic jade collecting knowledge regarding on tell genuine jade from the fakes. Relative issues includes how these knowledge are socially produced, & how these knowledges have been circulated & how these knowledges have become powerful discourses to influence market & the taste of jade collectors. Secondly, collecting is an economical exchange activity accordingly to demand & supply. The jade consumption results in the process of social construction. There are many social forces to construct archaic jade market that includes connoisseurs, collectors/consumers, antique dealers, fleet markets, auctions and media. The power struggle among those different social forces is needed to study.

2010S01489

Lefevre, Brice (INSEP, 11 av. Tremblay 75012 Paris FRANCE [tel: 01 41 74 42 95; e-mail: brice.lefevre@insep.fr]), **Limits of Social Determinism through Social Uses of Sport: The Example of a National Sport Participation Survey,** *International Sociological Association, Gothenburg, Sweden,*

¶ The social determinism can be discussed in relation to the question of the social uses of culture (Bourdieu). Its links with social groups continues to be a topic of discussion today. This presentation is a contribution to this debate by examining coherence in the choice of physical activities & sports. The study focuses on the upper social groups, asking questions, from a macro-sociological standpoint, about their possible omnivority (Peterson) & their dissonance of choice with regard to these activities (Lahire). The methodology is based on a secondary data analysis of a national sport participation survey (MJS/INSEP 2000) with a random sample of 6,526 telephone interviews. The study shows that omnivority and massification of activities are major phenomena. However, the upper social groups in France remain distinguishable both in terms of their "high level of omnivority" & their choice of distinctive activities. Dissonance is another of their characteristics but to a lesser extent. In this case, we can conclude that theories of Bourdieu, Peterson & Lahire are complementary theories. However, to discuss these theories, our quantitative approach has limits.

Lefranc, Arnaud, The Intergenerational Transmission of Income and Education: A Comparison of Japan and France, *International Sociological Association, Gothenburg, Sweden,*

¶ This paper compares the extent of intergenerational mobility in earnings & education, in Japan & France. It uses very similar repeated surveys that provide information on educational attainment and family background, conducted in Japan & France. To insure comparability, similar sample restrictions & specifications are imposed. For Japan, we use waves 1965, 1975, 1985, 1995 and 2005 (?). For France, we use waves 1965, 1970, 1977, 1985, 1993 and 2003. Intergenerational elasticity in years of education can be readily estimated using available information. On the other hand, intergenerational earnings elasticity cannot be directly measured given the lack of information on parental income in both surveys. This leads us to apply Bjorklund & Jantti (1999) two sample instrumental variables estimation strategy. Lastly, we discuss to what extent differences in earnings mobility is related to differences in educational mobility & to differences in returns to education between the two countries.

Legrand, Emilie, EL & Carricaburu, Danièle, DC (GRIS, Université de Rouen, Rouen, France, 76 [tel: 0677139985; e-mail: legrand.emilie@voila.fr]), **The Occupational Cancer Prevention Politics in an Hospital Center: Considering a Public Health Issue,** *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ During the 2000's, in France, the cancer problematics has becoming a priority of the public authority policy. At the same time, the occupational origins of some cancers have been bringing to light, particularly thanks to the asbestos victim's mobilization. Since then, public authority have

shown an unprecedented commitment in favor of the occupational cancer's prevention; which has largely found expression on the legislative scene under the influence of the European guidelines (Decree CMR 2001) but also on the institutional scene by the proliferation of the occupational risks' preventive actions (Health/Environment action 2004-2008; Health/Work action 2005-2009; the AFSSET creation…). Even so, above the political, legal or institutional reality, the matter of the occupational risks prevention is questioned in other areas: local one & company one. Using a university hospital center's monograph, we'd like ton have a close look at the way the carcinogenic risk is handled. We'll mostly take an interest in the way rules do structure a or don't a the initiatives taken for the carcinogenic risk prevention. Are those initiatives the result of a dynamics engendered by an establishment policy ? Or, are they due to some isolated initiatives without any consistency or homogeneity. This work is based on a field work (interviews with health mangers, social partners (Health & Security committee members, doctors & healthy bodies) realized in France, in Haute-Normandie area within the context of a collective research on occupational risk & social relationship in company, financed by the AFSSET (French Agency for Health & sanitary security for Environment).

Lehdonvirta, Vili (Interfaculty Initiative in Information Studies, University of Tokyo, Hongo 7-3-1, Bunkyo-ku, Tokyo, 160-0023 [e-mail: vili.lehdonvirta@hiit.fi]), **Digital Free Time: Social Leisure and Leisurely Shopping in Online Peer Groups,** *International Sociological Association, Gothenburg, Sweden,*

¶ Besides their individual & psychological functions, leisure time activities such as sports & shopping contribute to the formation of peer groups & to the maintaining & strengthening of social ties among families & local communities in modern societies. This social aspect of leisure is today arguably under pressure: processes of urbanisation, labor mobility & economic change increasingly undermine local community formation, while economic and environmental crises challenge leisurely shopping and consumption as a form of social activity. Is the future of leisure in the global economy a lonely & austere moment between work and sleep? In this paper, I focus on how the pervasive adoption of information & communication technologies in everyday life shapes the answer to this question. On one hand, digital gadgets can be blamed for diverting leisure away from human intercourse, enabling the transcendency of work over local communities, & being part of the increasing problem of competitive hyperconsumption. On the other hand, computer-mediated peer groups have emerged as significant sources of social leisure activity, identification and emotional support for the uprooted individual. Computer-mediated "virtual consumption" of digital objects may moreover represent an avenue where money & competitive pressures to consume may be diverted with less consequence to natural resources. To substantiate these perspectives, I use data from a survey of 4395 Japanese, British & Spanish online hangout users to examine how they identify with computer-mediated & traditional peer groups, and how motives for spending real money on virtual items compare to material consumption motives.

2010S01493

Leibetseder, bettina (Department of Social Policy, Johannes Kepler University, Linz, Austria [tel: 4373224687167; e-mail: bettina.leibetseder@jku.at]), **Transformation of Austrian Social Policy. Towards a Multi-layered Gendered System of Activation,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Austrian social security system adapts towards a distinct system of activation for women reforming the social assistance scheme and childcare benefit & increasing the stratification between different categories of women. The proposed paper is intended to scrutinize current social rights & political discussion in the Austrian national context, whereas activation is extensively defined as any changes in the social or tax policy system intending to increase labour market participation (see Barbier/Ludwig-Mayerhofer 2004). On the one hand, the distinct form of activation provides employees (low-income women) for precarious low paid jobs in the service sector targeting. On the other hand, it allows for well-educated women to stay attached to the labour market, as they can rely on affordable services. Both groups still obtain benefits providing for a comfortable middle class income for the latter & for an income at the risk of poverty for the former. Thus, one has to take into account more than one axis of difference in any research of gendered outcome of social policy. The stratification runs along income, education & status as a parent and marital status within the group of women. Consequently, I argue that an indept analysis of activation policy's gendered outcome has to use intersectionality as methodological tool.

2010S01494

Lember, Uku (Uku Lember; History Department, Central European University, Budapest [e-mail: lember.uku@gmail.com]), **"Entanglement of Life-Worlds": Estonian-Russian Intermarriages in the Soviet and Contemporary Estonia,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Interwar Estonian nation state was moderately multicultural; however, the establishment of the Soviet power in 1944 created an absolutely new situation in the demographic processes. The enforced industrialization & official support for the all-union "mixing of peoples" increased the number of Russian speaking inhabitants in Estonia from ~3-4% in 1945 to ~35% in 1980. These Soviet policies have resulted in several tensions in the contemporary Estonian "nationalizing" multiethnic state. Around 2-3% of the present marriages in Estonia are between the "local" Estonian-speakers and the "newcomer" Russian-speakers. I conducted ~50 life-story interviews among such marriages of different generations and varying socio-economic backgrounds looking at them as intimate meeting points of two rather distinct life-worlds (A. Schütz)–two constellations of values, habits, traditions, and socio-cultural capital that constitute individuals' immediate mental & physical surroundings in life. In the (Soviet) Estonian case, these two life-worlds would generally be marked by spoken language & by a discourse of historical experience. (Simplistically & conditionally characterised as (small) Estonian "nationalistic" & (great) Russian "imperialistic") In my presentation, I will draw the general socio-historic borderlines of the "local" Estonian & "newcomer" Russian life-worlds, in Estonia during & after socialism. Then, I will proceed to discuss the meetings of individual & family life-courses in the inter-ethnic families; I will ask: What are the sources of open or hidden conflict for the members of the family? What are the sources of understanding & reconciliation? Under what conditions do the "social" conflicts enter a family? In short: I will draw some general patterns of enduring & stopping, reflecting on & hiding the larger social conflict in multi-ethnic families in Estonia by looking at how their members "work" with the generic social discourses in telling their own lives. Throughout the presentation, I will make a distinction between the biographical works of spouses (who are monoethnic) & of their children (who are multiethnic); of the Socialist conditions & of the contemporary conditions.

2010S01495

Lendaro, Annalisa & Imdorf, Christian (LEST/CNRS - University of Provence, Aix en Provence, France, 13626 [tel: 06 84 80 67 79; fax: +33(0)442267937; e-mail: annalisa.lendaro@univmed.fr]), **Organisational Context and the Use of Ethnicity in Job Placement: A Case Study of French Placement Agencies in the Domestic Labour Sector,** *International Sociological Association, Gothenburg, Sweden,*

¶ Despite the dominant republican norm of equal opportunity, ethnic distinctions arise from recruitment practices in the French labour market. This especially holds true for domestic labour, which concerns the occupational integration of immigrant women. In France, domestic workers are often placed by employment services. Referring to the Economy of Conventions, we ask how the different (industrial, domestic, market-based etc) conventions of work coordination & job placement impact on the use of ethnic categories to match job offers & applicants. Based on six case studies of employment services in Marseille & on semi-structured expert interviews, we coded the dominant conventions that structure job placements with regard to three types of institutional gatekeepers: (a) Public agents, (b) domestic service providers, and (c) professional integration agents. The reconstructed conventions were further related to the mention of ethnic categories. We conclude that ethnic categories carry sense as an indicator for group based competence especially in the "market world" & the "domestic world" of workplace coordination. In contrast, if job placement coordination is strongly based on conventions stemming from the "industrial world" & the "civic world" (as in the case of the national job agency), bureaucratic rather than ethnic principles of selection are applied.

Lengkeek, Jaap (NHTV University of Applied Science, Molenstraat 4, 4011EL, Zoelen, The Netherlands [tel: 0031344682053; e-mail: jaap.lengkeek@wur.nl]), **From Homo Ludens to Homo Turisticus: Regression or Step in Human Evolution,** *International Sociological Association, Gothenburg, Sweden,*

¶ Darwin's perspective on the origin of the human species has deeply influenced our interpretation of human behaviour. The question in the paper is whether there might be an evolutionary aspect in tourism. The assumption is that the need to travel & to leave the familiar living environment for a while has much to do with the development of human capacities

to create safe conditions for survival & at the same time to allow the curiosity to transgress the boundaries of the socially constructed everyday reality. First, the argumentation explores the evolutionary basis of play . There is considerable evidence for understanding play as a side effect of the evolution of the brain. Second, there is the assumption that tourism is a particular expression of play. The next step is based on the question whether or not tourism-out-of-normal-context represents a kind of regressive behaviour. Play & regression go together with higher levels of (brain) evolution of mammals. Although regression & infantilism contribute to the negative connotations of the tourism phenomenon, & may be interpreted as a relapse, there is an evolutionary logic & advantage to it.

Lennartsson, Carin & Silverstein, Merril and Fritzell, Johan (Aging Research Center, Karolinska Institutet/Stockholm University, Stockholm, Sweden, SE-11330 [tel: +4686905853; e-mail: Carin.Lennartsson@ki.se]), **Money-for-Time. Intra-Family Exchange between Generations,** *International Sociological Association, Gothenburg, Sweden,*

¶ Access to social & material resources & welfare services are important conditions for family transfers of economic & social support. This paper presents findings about intergenerational transfers in Sweden. The Swedish case is interesting because private transfers within the family relate both to welfare state provisions & the family as an evolving social institution. In Sweden most inter-generational transfers are downward, from older to younger generations. In higher social class families, parents who earlier had more frequent contact with their children were more likely than those having less contact to later provide financial transfers, demonstrating that children who invested time in their elderly parents were more likely to be financially rewarded by them. In this paper we imply that older adults provide money transfers to their children in exchange for time transfers that include services & social interaction. Further, this dynamic form of "reciprocity" is examined within divorced & intact families, and across families with different social class positions. Using data from two nationally representative panel surveys, the preliminary results show that children who earlier received financial transfers from parents were no more likely than those who did not receive such transfers to later have frequent contact with their parents. We will discuss the final results from a class and gender perspective in the context of the Swedish welfare state.

2010S01498

Lenon, Suzanne (University of Lethbridge, 4401 University Drive, Lethbridge, Alberta, Canada, T1K 3M4 [tel: 403-380-1876; e-mail: suzanne.lenon@uleth.ca]), **Governing Race through Sexuality: Forced Marriages and Gay Rights in the UK,** *International Sociological Association, Gothenburg, Sweden,*

¶ Over the course of the last five years, law & policy makers in Britain have grappled with two seemingly unrelated human rights issues: on the one hand, extending Civil Partnership to same-sex couples followed by a rejection of the legalization of same-sex marriage; & on the other, designing a number of policy initiatives & legal reforms to tackle the issue of forced marriage, with a particular focus on the "overseas" dimension and augmenting racialized immigration restrictions. Through an examination of Parliamentary debates over civil partnership and forced marriage, I situate these contemporaneous moments as relational racializing processes. I investigate ways in which the figures of the "good gay" & the "imperiled woman" emerge through & against each other within terms of neoliberal personhood, & thus function as a mode of racial governance. In so doing, the paper pays specific attention to how the articulation of partnership/marriage rights for lesbians & gay men becomes complicit with racist state regulations concerning forced marriage. The paper concludes with considerations of anti-racist ethics for the terrain of "gay rights."

2010S01499

Lenz, Thomas (LCMI, University of Luxembourg, Luxembourg, Luxembourg [tel: +352 466644 9688; e-mail: thomas.lenz@uni.lu]), **Sociology of Consumption and the "New Women" of the "Kaiserreich.",** *International Sociological Association, Gothenburg, Sweden,*

¶ The emergence of the consumer society in the German "Kaiserreich" is closely linked with a moral discussion dealing with one of the most important manifestations of this new era of consumption: the department store. At the turn of the century department stores rapidly spread in most of the bigger German cities. The German discourse on this diffusion of department stores was quite pessimistic & loaded with misogynic stereotypes, especially compared to the more moderate French discussion on this topic. In my paper I intend to show how this discussion was not only a debate on the social implications of a emerging new consumer society but also an attempt to fight against the "feminization" of the "Kaiserreich." Pamphlets, medical & juridical journals, newspapers, a vast amount of dime novels released between 1850 and 1914 & sociological texts by Weber, Veblen, Simmel & Sombart dealing with the consumer society in Germany were analysed & the discourse about the department store & women was reconstructed by me. The sociologists helped constructing the "new women" of the "Kaiserreich," defining the boundaries of a social discourse that evolved within the general public. While novels, articles or even pamphlets cannot be treated as a mirror of the society they attempt to portray, they can be seen as a repository of social discourse. These textual documents show Germans wrestling with the new experiences of consumption, nationhood & modernity. Three main topics can be identified that were discussed within the discourse on department stores & consumption: (a) the "threats" of the department stores for the women of the "Kaiserreich" (e.g. stealing, prostitution & agoraphobia) (b) the role of Jewish entrepreneurs who were thought to destroy the German "Mittelstand" (middle classes) & to endanger their female workforce a financially & sexually & (c) some enthusiasm for the architecture & the techniques of the modern department stores that was linked with a cultural-pessimistic & misogynic view on the social consequences of modernity as a whole.

Lenzner, Timo (GESIS–Leibniz Institute for the Social Sciences, Mannheim, Germany [e-mail: timo.lenzner@gesis.org]), **A Psycholinguistic Look at Survey Question Design and Data Quality,** *International Sociological Association, Gothenburg, Sweden,*

¶ Ample evidence from psycholinguistics suggests that survey question clarity is impeded by several problematic text features: low-frequency words, vague or imprecise relative terms, vague or ambiguous noun-phrases, & complex syntax, complex logical structures, low syntactic redundancy, & bridging inferences. Surprisingly, this psycholinguistic perspective has not received much attention in the literature on questionnaire design to date. Recently, two studies by Lenzner, Kaczmirek, & Lenzner (2009) and Lenzner, Kaczmirek, & Galesic (forthcoming) found that survey questions containing these text features indeed produced comprehension difficulties & slowed down responses. Moreover, the text features were found to reduce the quality of responses by producing more non-substantial (i.e., neutral) answers. To examine the effect of these text features on data quality in more detail, Lenzner (forthcoming) conducted an experiment in which respondents answered two versions of similar questions (text feature questions vs. controls) in a Web survey. The results revealed that questions containing these text features induce survey satisfying behavior and reduce the reliability of responses, particularly among respondents low in verbal intelligence. Given the detrimental effect these text features have on question clarity & data quality, survey designers are advised to avoid them when writing questions.

2010S01501

Leonard, Pauline (Sociology and Social Policy, University of Southampton, Southampton, UK SO17 1BJ [tel: 02380 594745; e-mail: pleonard@soton.ac.uk]), **'Expats' at Work: Making Race through Postcolonial Organisations,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores the making of race by white British expatriates working in Hong Kong & South Africa. The making of whiteness is often difficult for white people to acknowledge and/or articulate, but processes of migration can often sharpen awareness of race, and the ways in which this intersects with nationality, gender and class, in the negotiation & construction of new migrant subjectivities & lives. The contexts & performance of work can be implicated in these processes of race making. Given the hegemony of Western social characteristics in many multinational and transnational corporations, to what extent & in what ways are the social resources of race, gender, class & nationality still drawn upon as important & real resources by expatriates? The paper draws on on-going ethnographic & biographical research of white men & women working in two rapidly changing postcolonial contexts to reveal the ongoing salience of race, albeit in diverse and uneven ways, to identity & privilege making.

2010S01502

Leonard, Pauline (Sociology and Social Policy, University of Southampton, Southamton,UK SO17 1BJ [tel: 02380 594745; e-mail: pleonard@soton.ac.uk]), **Managing the Spaces of Whiteness–Race and Identity Making by British Expatriates,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper I will explore questions of identity, whiteness, nationality & gender, & the ways in which these play themselves out in space & place.

I draw on ongoing empirical ethnographic research conducted with British expatriates in Hong Kong & South Africa to explore the ways in which the diverse spaces of expatriate life are critically important in the construction of their lives, identities & relations. These include the spaces and places of work- from the large corporation to the small private business, from the police force to the international school, as well as the more public spaces of transport, housing & leisure. The paper argues that space, & use of space, is critical to the diverse ways in which whiteness is performed as well as the contestations which can emerge; resulting in important differences in the constructions & meanings of whiteness. The lens of space offers a window by which we can access the ways in which white people construct & frame their identities in the new contexts of migration as well as the ways in which the privileges which accrue to whiteness may be being challenged & changed.

2010S01503

Leontini, Rose (Behavioural and Social Sciences in Health, Health Sciences, The University of Sydney, Cumberland Campus, Lidcombe 1825, Sydney, NSW Australia [tel: 61 - 02 - 9351 9660; fax: 61 - 02 - 9351 9540; e-mail: rose.leontini@sydney.edu.au]), **Hereditary Risk and Narrative Analysis: Reflections on Method,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper reflects on the use of narrative analysis as method for investigating understandings & experiences of genetic risk. It draws on a qualitative investigation into people's decisions to undergo genetic testing for Huntington's Disease. The study was conducted using semi-structured interviews, & narrative and discourse analysis. The methodological objective was to examine how informants at risk interpret, interrogate & describe through narratives their lived experience of & their exposure to dominant discourses on genetic risk. The paper re-conceptualises Riessman's notion of habitual & hypothetical narratives that, respectively, highlight the everyday lived experience of genetic risk, and feature possible or imagined outcomes in light of the informants' uncertain health & genetic status. A significant number of findings reflect the value of using narrative analysis to examine lay conceptualisations of genetic risk. These include: people with a family history of Huntington's disease co-produce with significant others the uncertainty & liminal state of being at risk; they construct an identity that is not just "at risk" but ethical & responsible; they produce narratives that have both ethical & political import; & they critically assess their practices & decisions against the backdrop of dominant discourses on genetic risk & disease prevention.

2010S01504

Lepine, Valerie, Managerial and Communication Skills of Health Services Managers in French Hospital–La Trajectoire De (Trans)Formation Des CompéTences Comme Condition D'accèS A Une Nouvelle Professionnalité: Le Cas Des Cadres De Santé Du, Secteur Hospitalier En France, *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ This research focuses on health services managers in the French public hospital system. It questioned how the skills & knowledge contribute to the professional trajectory of health care workers and nurses who become managers & form a new group of professionals. The qualitative methodology is based on the analysis of 25 in-depth interviews with members from the staff of different levels (operational managers, supervisors, senior management level). They all have missions that require administrative skills but they primarily have a task of human resource management, i.e encourage & support team work. Our theoretical grounding in information & communication science led us to address this issue with special attention to communication skills, critical because of the constant interaction with patients, families, doctors, health workers. This research highlights the process of reinvestment or translation skills developed in the previous experience of care in the new position of management. These competencies are associated with interpersonal skills, empathy, supportive attitude, coming from the culture of care. Our hypothesis is that these abilities or qualifications naturalized around the nurse's female figure are as much of a difficulty as a support point for access to a position of manager.

2010S01505

Lessard-Phillips, Laurence (Netherlands Interdisciplinary Demographic Institute (NIDI) [e-mail: lessard-phillips@nidi.nl]), **Unrealistic Aspirations? The Differing Impact of Aspirations and Expectations on the School Performance of the Second Generation in Britain.,** *International Sociological Association, Gothenburg, Sweden,*

¶ Parental aspirations have been examined in order to explain the educational outcomes of second generation pupils. Yet, there still remains an unexplained gap in second generation performance once such controls have been added. It has been argued that it might be the case that the difference between parental aspirations and expectations might give more insight into the issue. This paper examines the impact of parental aspirations & expectations on second generation school performance in Britain. It is expected that the distance between aspirations & expectations will reduce the performance gap between the second generation & the comparison group at both ends of the school performance spectrum. The data used in this paper is from the Longitudinal Study of Young People in England (LSYPE). A series of OLS regressions will help determine whether the performance of the second generation can be attributed to, above & beyond typical characteristics such as social background, the distance between parental aspirations and expectations. The analyses in this paper will not only give an overview of the second generation performance gaps, but it will also outline an important dimension where more insight is needed. This distance most likely plays an important role in the integration process.

Leticia, Anabel Paulos (Sociology and anthropology, University of Ottawa, Ottawa, Ontario, KlN 6N5 [tel: +1 (613) 562-5800 ext. 1229; e-mail: lpaul042@uottawa.ca]), **Women's Activism and Feminism: The Argentinian Movimiento de Mujeres Agropecuarias en Lucha,** *International Sociological Association, Gothenburg, Sweden,*

¶ The main objective of this paper is to investigate the complex relationship between women's activism & feminism. I do so by examining the actions, strategies, & discourses of an innovative rural women's movement that emerged in Argentina in the mid nineties: the Movimiento de Mujeres Agropecuarias en Lucha (MML). This paper looks at the changes & transformations that participation in the MML provoked in MML women's lives. First, I seek to understand how participation in the movement politicized MML women's everyday lives. Secondly, I examine the effects of women's participation in the MML on the socially constructed relations of gender & representations of "feminine roles" in rural Argentina. Lastly, I focus on how to position the MML vis-à-vis feminism. By analyzing secondary data & ten in-depth interviews with MML leaders, I conclude that participation in the MML has politicized MML women's everyday lives & it has challenged their socially constructed representations of feminine roles & social relations of gender. In light of these findings, I suggest that to capture the ambiguities of the relationship between women's movements & feminism, it would be necessary to adopt an approach that recognizes the "dynamic" nature of such relationship.

2010S01507

Lev, Ari Lilach (Oranim, Academic College of Education, Sociology, Tivon Israel, 36006 [tel: 972-49838731; e-mail: llevari@oranim.ac.il]), **Return Migration and Gender: A Comparison between Israeli Emigrants in the US and Former Israeli Migrants in Their Homeland,** *International Sociological Association, Gothenburg, Sweden,*

¶ According to transnational theory, migration is a dynamic process that can be analyzed according to interactions between macro & micro social constructions & motives. This understanding leads us to conclude that emigration is no longer a constant process for some migrants. Thus, remigration to another country or countries is possible. This article examines some possible explanations regarding predisposition to remigration among Israeli migrants–either Israelis who immigrated to the US (N=500) or Israeli citizens who returned to Israel, after spending at least two years abroad (N=501)–compared by gender. Israeli immigrants in the USA are less predisposed to remigration compared with those who returned to Israel. As such, Israel is perceived as less attractive than the USA regarding future plans to settle there permanently. Israeli women, in both groups of emigrants, are less predisposed to remigration, compared with men. Ambitious Israeli women migrants, once they achieve social mobility, will not leave the country that enables them the best opportunity structure, either a foreign country or their homeland. Israeli men, like other migrants, perceive the structure of opportunities as more equal, particularly when they have already achieved their aspirations through emigration & can transfer these advantages from one country to the other.

Leviste, Enrique Nino, P. (Department of Sociology, National University of Singapore, Singapore, 117570 [tel: +65 93902257; e-mail: enpleviste@yahoo.com]), **Contending Hegemonies, Reproductive Health and Family Planning Politics in the Phil-**

ippines, *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the dynamics of politics surrounding the population policy process in the Philippines. It focuses on how the Catholic Church-led bloc has succeeded in impeding the enactment of a national reproductive health & family planning policy. It likewise examines how RH & FP advocates contest the former's ideological & political ascendancy by espousing an alternative framework of action. Using Gramsci's concept of hegemony, I argue, for one, that Philippine politics is an arena of contending hegemonies. By this I refer to the ongoing ideological and political clash between the historically dominant Church-backed alliance, & the coalition of state & non-state actors constituting a burgeoning counter-hegemonic movement. Secondly, I demonstrate how the Philippine Catholic Church's historic entrenchment & emboldened involvement in state affairs have occasioned an incoherent & weak government position on RH & FP notwithstanding incessant calls from segments of a politically vibrant civil society to remedy the dismal state of maternal health care; promote reproductive rights; & abate untrammeled population growth. Specifically, this paper delves into Philippine population policy history spanning the administrations from Ferdinand E. Marcos to Gloria Macapagal Arroyo. It derives its data from key informant interviews & secondary sources.

Levy, Gal (The Open University Israel [e-mail: galle@openu.ac.il]), **State, Religion and Israeli Citizenship: Whose Hindering Who?,** *International Sociological Association, Gothenburg, Sweden,*

¶ While six decades ago the young Israeli state might had been considered exceptional, today no one hardly expects religion to simply wither away. Judaism was a major foundation of the new nation-state, & a cornerstone of its ideology. Still, from as early as the 1960s, civic rights became a part of the multiple Israeli citizenship (Shafir & Peled 2002). In my work, I re-examine the state-religion status-quo, which is the institutional as well as symbolic framework within which state-society relationship are being organised & understood. Seeking to unpack the concept of a 'Jewish & democratic' state, I focus on the relationship between state, religion & citizenship, through the lens of the status quo, & demonstrate how state-religion relationship in Israel is entangled in society's development as an ethnicised society. Arguably, the ethnicisation of Israeli society, that is, the relegation of all matters of conflict to the realm of ethnicity and ethnic relations, has never been divorced from the central role of religion in determining the contours & content of citizenship, and hence the scope & limits of democracy. In the proposed paper I seek to account for this historical process & consider contemporary implications for the prospects of citizenship.

Lew, Ilan (CADIS–EHESS, Paris, Paris 75006 [tel: +33672187917; fax:; e-mail: ilanlew@gmail.com]), **'Barbarity' and 'Civilization' According to Public Order Agents Who Commited Violation of the Human Rights in Argentina in the 1970s,** *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ In this paper, I would like to suggest permanencies in the frames of thought in terms of 'barbarity' & 'civilization' in the speeches of perpetrators of serious State violence in Argentina. To do so, two key connotations of the 'barbarity'/'civilization' dichotomy are located at their time of entry in the political language during the first part of the 19th century, in order to show under which form discourses produced 150 years later in the Argentinian context, are still impregnated from them. Then, I explore the specific persistency of such a notional couple, from its moral to its identity-based dimension, when it is assimilated into the worldview of people who regularly transgressed the proscription of murder & torture. This communication is based on extensive testimonies such as autobiographical accounts ("memoirs") & non-judiciary interviews, from soldiers and policemen active during Argentina's military dictatorship (1976-1983) who spoke a posteriori about this past.

Lewicki, Aleksandra E. (Department of Sociology, University of Bristol, 12 Woodland Road, Bristol, BS8 1UQ, United Kingdom [tel: 0044 117 9545589; fax:; e-mail: Aleksandra.Lewicki@bristol.ac.uk]), **Religious Equality in Europe: The Pluralization of Secularity?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Combining a sociological with a political science perspective, I aim to explore aspects of the contemporary role of religion in two European countries, Germany & the United Kingdom, both of which historically acknowledged a degree of public presence of organized religion. The paper is based on the assumption that religion occupies a fluid & constantly shifting role in public realms. Gradual shifts emerge, when academic attention turns to analyze contemporary legal & institutional reform affecting the relationship between politics & religion. My paper investigates the introduction of novel political consultation mechanisms with faith groups, particularly focusing on Muslim communities. Analyzing the political intentions underlying the emergence & the negotiations within the German Islam Conference & the British Faith Communities Consultative Council, the study is aimed at bringing out different aspects of the two bodies' rationale locating them within wider conceptions of public policy. Rather than conceiving of secular citizenship as a static concept, my account identifies institutional & discursive structural factors as well as individual agency to be crucial factors shaping the relationship between religion & politics. The study is based on a thematic evaluation of policy documents & qualitative semi-structured primary interviews with key actors who were involved in the creation of & the negotiations of the two consultative bodies in question.

Lewinter, Myra (Depart of Sociology, University of Copenhagen, Copenhagen, Denmark [tel: +45 22 77 39 74; e-mail: mle@soc.ku.dk]), **Consequences of Being Invisible: Informal Carers in Denmark,** *International Sociological Association, Gothenburg, Sweden,*

¶ Denmark has an extensive pallet of care options for frail elderly people that are needs assessed & not means tested. There has been some research about these services, but little on the role of informal carers. They have been invisible from the social political arena. This paper examines the consequences of this lack of visibility. It is based on two research projects on informal care. This paper will first discuss the role of informal carers & show how these people are active in the care & well being of their frail relatives & friends. Informal carers are as a rule employed, working full time & juggle caring & work plus own families, but invisible. There are two consequences of this. One is that ministers & other politicians argue that family members aren't active in caring & should be. The other is that the needs of carers are not recognized. The paper will conclude with some reflections on the situation of these carers in a period marked by a tendency to limit these welfare services & with suggestions about making their interests visible.

Lewis, J. Scott & Houser, Jeffrey (Penn State Harrisburg, Middletown, PA 17057 [tel: 717 948 6533; e-mail: jscottlewis@yahoo.com]), **The Biology of Status Characteristics,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper expands upon Ridgeway's Status Construction Theory by linking status construction in human groups to animal dominance hierarchies. Specifically, we argue that diffuse status characteristics emerge from non-arbitrary associations with more evolutionary primitive dominance hierarchies that maximize reproductive fitness in individuals & groups. To account for the associational differences between the six elements of dominance hierarchies & the six diffuse status characteristics, we propose a mechanism similar to Baldwinian selection as a means by which cultural structures may have come to evolve the more primitive dominance

framework. Through examples in each of the six associational areas, we show first how each characteristic is associated with reproductive fitness. Next, we demonstrate how Baldwinian mechanisms evolved dominance characteristics into diffuse status characteristics to create contemporary diffuse status characteristics.

Li, Xiang, Ning, Zequn, Larsen, Svein & Oggard, Torvald (Leisure Studies and Tourism Management Department Institute of Tourism of Beijing Union University, Beisihuan Donglu 99, Chaoyang District Beijing 100101 P.R.China [tel: 86 10 64909338; e-mail: lytongji05@163.com]), **Research on How Chinese Tourists Raise Security Awareness,** *International Sociological Association, Gothenburg, Sweden,*

¶ At present, there are more than 1.9 billion person/time travelling abroad a year. Compared to their increasing enthusiasm to travelling, tourist number & consumption, the security awareness of the Chinese people lags behind & badly need raising. Overall, Chinese tourists' reaction to emergencies such as terrorist attacks, natural disasters, traffic accidents, criminal offence, and food safety & hygiene events give an impression of immaturity. Related research on the basis of Norway academic, we used a questionnaire of travel risk perception in tourists designed by the Norwegian professor. Chinese & Norway academic joined their hands to conduct a survey in 2008 (before the Olympics) and 2009, receiving 1212 valid questionnaires. The scholars carried out a factor analysis research. According to the research, with some major events taking place in China like Beijing hosting 29th Olympics, Chinese tourists have considerably improved their safety awareness. This serves as a good reminder to relevant governmental departments & companies that Chinese tourists' security awareness need fast improvement in the current situation where Chinese tourist destinations are expanding & where regional conflicts and terrorist attacks happen from time to time, through further enhancing & improving the education on tourism security.

Li, Yao-Tai (NTU, Sociology [e-mail: r95322008@ntu.edu.tw]), **Skill, Market, and Labor Organizations: The Different Characteristics of Craft Union in Taiwan,** *International Sociological Association, Gothenburg, Sweden,*

¶ A labor union is an organization formed for the protection of labor rights. In Taiwan, most researches related to the subject of labor unions concentrate on the industrial union rather than the craft union. These works consider a craft union's functions to be limited to ensuring workers' labor & health insurance. This dissertation deems that craft unions founded after democratization would display some interesting dynamics; accordingly, it aims to examine these dynamics by undertaking a case study. Two craft unions founded after democratization were chosen for the analysis, the Craft Union of Community Servicewomen & the Documentary Media Worker Union. This dissertation focused on the market behavior of the craft unions & their relations with the state, simultaneously connecting the differences between the craft unions formed before and after democratization. The purpose is to examine whether all the characteristics of the craft unions reflected the changed context or if they carried out any other functions beyond those designated by the state. The study found that these "emerging" craft unions functioned as a new type of social movement of skilled workers, attempting to influence market relations that concerned their interests & enhanced their occupational influence through market behavior. Through these activities, they could protect their own rights & interests & could even anticipate that the effects of their attempts percolate backward to the state level & thereby influence the state policy. These activities also lent new connotations to occupational labor, especially in context of public participation & the image of the craft union.

Lian, Hongping ([e-mail: h.p.lian@abdn.ac.uk]), **Resistance and Disharmony: The Land-expropriated Farmers Movement in China,** *International Sociological Association, Gothenburg, Sweden,*

¶ The process of urbanization is spreading rapidly in China. The actions of various levels of regional government have been mainly influenced by economic benefits in this era. Some land-expropriated farmers' benefits are jeopardized. Thus, they resist. As the local arm of the state, regional governments are at the forefront of land-expropriated farmers' resistance, however, they failed to cope with diverse social problems engendered by the fact that so many farmers lose their land. This study examines the unbalanced political power between regional governments & land-lost farmers focusing on the latter's perspective, as well as the disharmony within the land-lost farmers' resistance movement. Based on the qualitative research of land-expropriated farmers in Changsha city of China, this paper contains three sections: the background of urbanization in contemporary China & its impact on land-expropriated farmer issue; the unbalanced political power between regional authorities & land-expropriated farmers, which is demonstrated by the breach of agreement & inequality of compensation; the disharmony within the land-expropriated farmers' resistance movement in terms of claims & tactics. Different land-expropriated farmers have "multiple" or "split" consciousnesses & take inconsistent actions. There are five distinct groups: the elites of resistance, the following-and-echoing, the saying-without-doing, the overcautious, and the justifiers.

Liao, Pei-shan (RCHSS, Academia Sinica [e-mail: psliao@gate.sinica.edu.tw]), **Effects of Category Number and Labels in Attitudinal Scales: An Example of Chinese Questionnaires,** *International Sociological Association, Gothenburg, Sweden,*

¶ Previous research has revealed the influence of response categories in terms of its number & labels on question answers. Their suggestion & implication are, however, based on findings from mostly college students & languages in Western societies. It is not clear how many response categories, along with corresponding labels, is more appropriate to be used in Chinese questionnaire. This study aims to compare different designs of labels of response scales & their effects. The corresponding labels need to distinguish both the intense & direction. It is essential to consider the midpoint response as well. A so-call split-ballot experimental design is employed to conduct this study on Taiwanese adults, with the help of computer-assisted telephone interviewing on data collection to control possible sampling & interviewer effects. Data collected are used to examine the following influence on response pattern: (1) number of response categories; (2) response labels on response patterns; & (3) the inclusion of mid-point. The findings are reported along with discussion and implication for survey research.

Liberman, Alejandro Marcelo, **Participation of Civil Society via Communal Committee Elections,** *International Sociological Association, Gothenburg, Sweden,*

¶ A new experience in processes of participation is underway in the autonomous city of Buenos Aires. From the local constitution of 1996, a space was opened up for the creation of communal committees, which are units of political & administrative governance with territorial competence bringing together groupings of neighbourhoods in the city. This new paradigm of decentralization creates microspaces of authority in which participation is centred in much smaller territorial spaces, with a system to elect a Communal Committee that by consensus will carry forward communal public policy, as has never before been done in Buenos Aires. This situation is of great significance as these changes will produce a landslide movement away from centralization of power, decision-making & governance & toward mechanisms closer to the community. Consequently, community problems will be solved more efficiently & citizens will be invited to participate voluntarily in the projects & developments in their neighbourhoods. The aim of this paper is to show how policy that brings governance closer to the residents of microspaces within a large city, as in Buenos Aires, helps a) in the resolution of problems, by way of proximity; & b) to promote participation and issue ownership in the resident citizenry of the city.

Lichtenstein, Bronwen (The University of Alabama, Tuscaloosa, AL 35487-0320 [tel: (205) 348 7782; fax: (205) 348 7178; e-mail: blichten@bama.ua.edu]), **Psychosocial Stressors of HIV-Affected Families,** *International Sociological Association, Gothenburg, Sweden,*

¶ Background: HIV/AIDS is termed the "family disease" because of its profound effects on the wellbeing of entire families. Overall, children in HIV-affected families do not perform as well as their peers at school, are likely to have behavioral problems, & are also likely to be fostered or adopted out when an HIV-infected caregiver becomes ill. This paper presents the results of a study of the mental health & functioning of children in HIV-affected families. Methods: Personal interviews were conducted with 12 social workers at AIDS Service Organizations. Charts for 141 clients and family members were reviewed at a family HIV clinic. Results: The combined results indicated that families were likely to experience housing instability, poverty, mental illness, behavioral problems, and social stigma. Younger children typically lived with their mothers, while older children were more likely to live with relatives or to be in foster care. Mental health conditions such as depression & anxiety were common among caregivers. HIV-infected children functioned better than their uninfected siblings who did not have access to comprehensive medical & social support services at the clinic. The ratio of uninfected to infected children in these families was 3 to 1, indicating that a large numbers of children have "fallen through the cracks" in relation to U.S. funding priorities for family-centered HIV care. Conclusion: Provision should be made for a model of care that provides comprehensive services to HIV-affected families.

2010S01522

Licoppe, Christian (Departmentof Social Science, Telecom Paristech, 46 Rue Barrault 75013, Paris, France [tel: 33(0)607100124; e-mail: christian.licoppe@telecom-paristech.fr]), **Telesales as a Conversational Accomplishment "Bouncing Back" On Help-Requesting Phone Calls to Place Commercial Products,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the context of an increasing pressure to sell in the help-oriented call centers of the service industry, tele-operators are asked to use incoming calls (initiated by callers oriented towards obtaining assistance to solve technical or commercial questions) to "bounce back" ("rebondir") towards commercial proposals of products & services, once the initial reason for the call has been properly answered. The construction of a selling environment has to be done in & through talk-in-interaction. We analyze here such conversations to identify conversational means through which the conversations are reframed into sales-oriented interactions, and the organization of the sequences which accomplish this. It is based on information-oriented pre-sequences, in which the the tele-operator tries to "attach" the caller to a kind of product. By comparing cases in which tele-operators try to sell two different kinds of product, I show how the design of these sequences is extremely sensitive to the kind of information the tele-operators have about the communication practices of the callers as given by the information system. Beyond a common organization, the design of these sequences is seen to rely on the socio-technical networks of agency which characterize the work environment, & which enacts relevant affordances for "bouncing back" & shapes their performative capacity to install gradually a sales-oriented, joint frame of interaction. Beyond the details of the case study, our empirical approach may prove fruitful to develop researches at the intersection of Conversation Analysis, Economic Sociology, & Science & Technology Studies.

Lidia, Daza Pérez (University of Barcelona, Barcelona, Spain, 08034 [tel: 00 34 93 4024478; fax: 00 34 93 4021542; e-mail: ldaza@ub.edu]), **Social Dimension of Learning in Higher Education,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ With this paper I try to review literature in higher education about educational outcomes & learning from a sociological approach. I expect to describe the role played by students' social and academic experiences along higher education, & how they influence on student learning & personal development. Nowadays, the Spanish university system is the subject of an adaptation process to European Higher Educational Area. It has led us to rethink the educational paradigm, improving especially strategies for teaching. However, we go on unknowing how student learns, & what educational environments strengthen academic attainments, considering their concerns & aims. As numerous researchers have pointed out (e.g., Tinto, 1993; Pascarella & Terenzini, 1976, 1979; Kuh & Hu, 2001), the university is not only a formal educational setting where the student passes or fails depending on their capabilities or teaching style. University is a social environment where a person experiences relationships with peers, faculty & other staff of the organization, which affect student learning. For this reason, before the current transformation of the Spanish University System, new policies have to consider learning in these terms, & develop programs that contribute to increase the academic & social involvement of student to the institution.

2010S01524

Lidia, Puigvert (University of Barcelona, Department of Sociological Theory, Diagonal 690, 08035 Barcelona, Spain [tel: +34 93 403 5099; e-mail: lidia.puigvert@ub.edu]), **In Dialogue with the Other Women, Overcoming Inequalities,** *International Sociological Association, Gothenburg, Sweden,*

¶ The "other women," or women with no academic background, have been historically silenced in many spaces, even from the feminist forums dedicated to overcoming discrimination against women. The other women's contributions to social transformation have thus been ignored, dismissed or disregarded. Their everyday struggles have often turned into feminist achievements through paths of solidarity, support, & complicity being mothers, grandmothers, aunts, neighbors & friends. It has been through engaging in dialogue with these other women that Dialogic Feminism has recovered the original sense of Feminism: the emancipation of all women. The inclusion of the other women has moved beyond the symbolic, but it has represented an advance in the overcoming of gender based inequalities. Through dialogue, these women show many of the stereotypes posed to them wrong. This paper argues that the other women are also contributing to expand feminist theory towards an equality of differences' perspective.

2010S01525

Lidija, Putillo (Moscow Institute of Economy, Management and Law, Department of History and Philosophy, Moscow, Russia, 115432 [tel: +79055869718; fax:; e-mail: 34lip@mail.ru]), **The Moral Dilemma of Higher Education or Choice between Social Responsibility and Economical efficiency,** *International Sociological Association, Gothenburg, Sweden,*

¶ It is discussed the Problem of Moral Choice between social responsibility & economical efficiency in the modern higher education. This Problem is considered as a dilemma when the legitimation of social institution is in the crisis conditions and institutional orders are not so perfect. Attempts to solve this Problem at the conceptual level are generally based on The Theory of Interests ("stakeholder theory"). The most consistent form of this approach appears in the conception of the Corporate Social Responsibility. The analysis of this conception & critical arguments of opponents led us to conclude that to solve this dilemma it is not sufficient to take on additional responsibility (as a type of Corporate Social Responsibility). When taking into account institutional reasons of the efficiency-responsibility dilemma it is impossible to solve it at the level of the individual corporation. It is shown that more deep analysis of the Moral Dilemma can be achieved using the Theory of Order. This theory provides special Institutional Framework of education and Politic-Ordered Responsibility conditioned by this Framework. Thus, it lets us to consider the efficiency-responsibility task from a new perspective. In Institutional-Ordered perspective it is also emphasized that there are three relatively independents vectors: ethic, politic & social-economic. The most important sociological aspects of these vectors are discussed.

2010S01526

Liebe, Ulf (Georg-August-Universität Göttingen and Universität Kassel [e-mail: uliebe@uni-goettingen.de]), **Trends and Determinants of Ethical Consumption in Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper gives an overview of the development of ethical consumption in Germany (e.g., the purchase of fair-trade products & organic food) & discusses theories as well as previous findings on this topic. Multivariate analyses are based on the nationwide survey "Environmental Awareness in Germany 2006." Dependent variables are the willingness to purchase fair-trade products in order to support small farmers in developing countries, the non-willingness to buy genetically modified food (GMF), the frequency of organic-food consumption, & the frequency of boycott behavior regarding environmental harmful products. Our results suggest that people with high environmental concern, environmental-group members, people who perceive a strong personal influence on environmental protection & people with a high risk perception constitute the strongest social basis of ethical consumption. Furthermore, (subjective) social norms have a posi-

tive impact on the consumption of fair-trade products & organic food. Women are more likely to refuse GMF & buy organic food more often. Religiousness has only weak effects on reported consumption behavior. Somewhat surprisingly, the more people feel informed about health and environmental impacts of food products the less likely they refuse GMF. The results demonstrate that it is important to consider competing theoretical determinants to explain ethical consumption and that the effects of determinants might be context specific (i.e. depend on the good in question).

2010S01527

Liebenberg, Ian (Stellenbosch University, Military Academy, Private Bag X2, 7395 [tel: 27 22 7023095; fax: 27 22 7023060; e-mail: jcrl@ma2.sun.ac.za]), **Truth and Reconciliation Commissions and Its Impact on Civilian Control over the Military: Notes on Auto-Ethnography as Method in the Case of South Africa,** *International Sociological Association, Gothenburg, Sweden,*

¶ Transition from authoritarian rule to democracy coincided with a number of countries instituting truth & reconciliation commissions (TRCs) during the 1980s & 1990s. TRCs follow in the wake of internal oppression marked by gross human rights violations frequently in cohort–if not under direction of–the military. A truth & reconciliation process can be defined as "opening up past human injustices" caused by previous oppressive (national) governments. TRCs attempt to achieve reconciliation and justice hand in hand with acknowledging past transgressions of human rights; and, arguably the underlying rationale is the achievement of peace & social justice in the long term. TRCs also suggest measures of restitution other than direct discriminatory (illegal) action towards the previous oppressors & propose mechanisms ensuring that similar events will not reoccur. Prominent TRCs were instituted in Argentina, Chile & South Africa, countries which all experienced authoritarian rule. Later on various mixed models were applied such as a TRC corollary to International Criminal Tribunals (ICTs) or indigenous judicial processes, i.e. Rwanda. Compared to other processes, the TRC approach was first introduced around the 1980s. In 1995 the South African government opted for a TRC approach that was strongly modeled on the earlier Chilean approach. A five-volume report on the TRC was issued in 1998, addressing a variety of issues, such as perpetrators' accounts, issues of amnesty & socio- and individual psychological concerns. Seemingly lacking in the wide-ranging literature on TRCs is what it means, or could (or should for that matter have meant), for civil control over the military. The final report of the South African TRC (SATRC) suffers from the same shortcomings. Charles Moscos once remarked that he puts "more trust on the graffiti in port-a-potties than in slippery statistics"–a statement that holds some value. In this paper I reflect on the value of auto-ethnographic approaches as one angle within qualitative research related to civilian control over the military during & in the aftermath of a TRC process. While auto-ethnography is questioned by some, others argue that it adds value to our insights to socio-political dynamics while liberating research findings from imposed objectivities ("the omnipotent 'universal truth"). The paper uses auto-ethnographic moments as a contribution to military sociology on transition to democracy and the experience of achieving civil control on militaries against the background of a critical scrutiny of the intentions & outcomes of TRC following completion of their mandates. The paper argues that TRCs have some benefits but that TRCs (as ICTs) cannot guarantee subsequent civil control over the military–unless their mandates are pre-emptively broadened. The challenge where a mandate was limited (or interpreted minimally) remains the obligation of the subsequent constitutional state/new democracy & depends on the vigilance & quality of civil society/the civil community in the new democracy.

Liebeskind, Uta (Siegen, Germany, 57068 [tel: +492717402832; e-mail: liebeskind@soziologie.uni-siegen.de]), **University Teaching in France and Germany a 'Professionalization' vs. Disciplinary Education?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Debates on university development often see the university at the crossroads: is it possible to maintain a broad, general, discipline based education at universities, or should universities mainly provide formation of professionals in the knowledge society? From the institution's perspective this question is asked in a changed tune: Is professionalization, meaning teaching for labour market needs, a genuine part of the university's mission, or does the societal demand for professionalization have to be refused? My proposal rejects the notion of a hiatus between university education & labour market needs. Such a notion does not coincide with actual teaching at universities. Discipline based education does not per se exclude professionalization of university education, nor does professionalization imply the submission of academic disciplines to labour market needs. Evidence for this thesis will be provided by empirical data collected in a project comparing French & German university teaching. The data results from interviews with university professors about their teaching. In order to cover a considerable variety of academic disciplines I chose representatives from so called "soft pure" sciences on the one hand & members of "hard pure" sciences on the other (literature vs. chemistry). Theoretically the study leans on sociology of knowledge, basically arguing that social action is preceded by socially shaped interpretations of reality. The hermeneutic analysis did not aim at understanding university practice, but rather at disclosing socially shared knowledge and legitimation which underlies practices of teaching. The French German comparison reveals that disciplinary university studies are interpreted by both German & French professors either as well connected to labour market needs–& so compatible with the labour market–, or (to a smaller & only French part) deliberately independent of the university's societal environment, herein labour market needs. However, in detail the link between university studies & the labour market is differently reasoned according to country.

2010S01529

Liebman, Parrinello Giuli (Università Roma 3–Dipartimento Letterature Comparate, Via del Valco di San Paolo 19 00146 Roma [tel: 0039 06 8610460; fax:; e-mail: Liebman@uniroma3.it]), **Tourism, the Tourist, Neuroscience and Philosophy of Mind,** *International Sociological Association, Gothenburg, Sweden,*

¶ There is general agreement that the field of tourism studies is multi- and interdisciplinary. The Swiss founding fathers Hunziker & Kraft (1942) had already proposed a kind of crystal prism through which tourism should be examined. Later on the sphere of tourism disciplines expanded & consolidated, although some disciplines have been neglected up to now. If we focus chiefly on the social and human disciplines of tourism, psychology is traditionally set at the core, & especially in European research, is strictly linked with sociology (Hahn & Kahnemann 1993). An autonomous involvement of philosophy is more unusual even though philosophical issues have recently emerged (Tribe 2001, 2009). In particular, interest in the "tourist experience" has evidenced the need not only for a psychological but for a philosophical approach, with a more or less explicit appeal for a proper philosophical discourse. Neuroscience is surprisingly absent from the disciplines of tourism, in spite of the fact that, in the last few decades, it has radically changed the framework of our questions about human nature, which is also the tourist's nature! Although many suggestions can arise from neuroscience & (the) philosophy of mind, apparently they have left no trace in tourism research. Neuroscience related to the tourist's technological body was first introduced to the RC50 audience in Montreal (Liebman 1998) & the unity of the tourist's mind & body linked with the tourist experience was proposed in Mitilini (Liebman 2005). It is argued that new approaches could be applied to the research level of the tourist experience: especially the model of the extended mind (Clark 1998), is a relevant cue. Moreover some very recent issues of neuroscience, like neuroethics & the strand of neuroenhancement, could be explored for a possible application to tourism & could give a further contribution to the explanation of this multifaceted phenomenon.

Likic Brboric, Branka (ISV/REMESO, Linköping University, 601 74 Norrköping [tel: 46 7070 575717; e-mail: branka.likic@statsvet.uu.se]), **Global Financial Crisis and TINA Revisited: Contingencies for a Social Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ The 2008 financial crisis has undoubtedly undermined the legitimacy of the unregulated global financial system, bringing about at least a temporary momentum towards 'regulatory renewal'. The social unrest, actual & feared, accompanying the crisis, has provoked a return of a European Social Model onto the EU's agenda. However, while the political & public discourses reveal prominence of the issues of social solidarities, the political practices have so far been limited to bailing out of the banks & tentative steps towards re-regulation of the global financial system. The paper explores the regionally differentiated policy responses to the crisis, and their impact on the on-going re-configuration of the European social space & welfare regimes. It shows that although these responses reflect the division of the enlarged Europe between the old & the new member states, they also reinforce the common neoliberal configuration of larger European 'landscapes of financial capital', the downward pressure on welfare models and re-commodification of labour in the old member states. The paper concludes that EU policy responses to financial crisis have so far

only reinforced the perverse logic of financial capital & market freedom fundamentalism at the expense of a European social vision and fundamental social rights, bringing forth the most disquieting political trends of exclusion, nationalism & populism.

Lim, Sang Hun (Department of Social Policy and Social Work, University of Oxford, Oxford, UK, OX1 2ER [tel: 447988468332; e-mail: hunny337@gmail.com]), **Democratisation and Policy Instruments: Pharmaceutical Regulation in the South Korean National Health Insurance 1981-2000,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper explores the impact of regime change from authoritarianism to democracy on choices of policy instruments with regard to the National Health Insurance (NHI) scheme of South Korea. This paper analyses two government regulations of providers of health care, including medical & pharmaceutical experts & pharmaceutical manufacturers in two periods: (1) the separation of prescribing and dispensing (SPD) policy & (2) the pharmaceutical reimbursement pricing policy, in (1) the 1980s & (2) the 1990s & 2000. The authoritarian government in the 1980s used a less coercive policy instrument for the SPD, & gave more discretion for price-fixing to societal groups, while the democratic government in the 1990s used a more coercive policy instrument for the SPD, & regulated pharmaceutical prices more tightly. The paper explores how democratisation increased the tightness of regulation of healthcare providers in the pharmaceutical market, focusing on the links between government-society relationships & choices of policy instruments.

ZIP 91320310 [tel: 55 51 33816502; e-mail: gilima@gmail.com]), **Data Mining Network as Support to Knowledge Discovery for Public Policy,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this article we contradict a common approach that presents the networks formed by random aggregation, ie, individual agents, residing in a low scale, start producing behaviors on a scale above them, as complex decentralized networks mobilized by highly random & unique aggregration processes. We think differently: the networks have a center, a center of information & sociological activities & might become the bit of difference that makes all the difference. We want to demonstrate this thesis through quantitative Data Mining, involving different computational methods with the data of homicides (years 2007 to 2008) of one of the most violent cities in the State of Rio Grande do Sul a Brazil. We will demonstrate that data about homicide (fitted with 16 descriptors such as: 1. Age of victims; 2. Homicides by days of the week; 3. Time in which the homicide occurred; 3. Type of weapon; 4. Skin color of the victim; 5. Gender of the victim; 6. Marital status of the victim; 7. Neighborhoods where the killings occurred; 8. Neighborhood of the victim; 9. Approximate distance between residence & crime scene; 10. Educational level of the victims, etc.) form a complex network capable of easily absorb flaws & random blockades, but this is a system doomed to disaster if it faces a directed attack at its center of activity. We propose that the murders are negative social events aggregated into building networks, establishing centers of activities (key reasons) & that these centers can be discovered with modern techniques of data mining. KEYWORDS: Public policies; Network theory, Informational methodologies.

Lima, Gilson (Academical Center IPA, Rua Seival, 380. Brazil. Rio Grande do Sul. City: Porto Alegre. Número 3870. ZIP 91320310 [tel: 55 51 33816502; e-mail: gilima@gmail.com]), **A Broad Interdisciplinary Convergence of Knowledge for Rehabilitation and Inclusive Education: A Case Study,** *International Sociological Association, Gothenburg, Sweden,*

¶ We present the partial results obtained by a unique research project in clinical sociology of science, especially in dialogue with the sciences of mind & computer information. This is a case study of rehabilitation from a brain injury in a five years old child. The CT scans showed that the boy in question can carry a potential for well-structured language, but is prevented from speaking (verbalization) by a unique congenital malformation in both cerebral hemispheres. The choice of the x child is first related to the uniqueness of the clinical lesion, with high interdisciplinary implications, as it is, as we shall see in more detail below, a case of bilateral brain injury inserted into the model of split brain & a five years & six months child in the very moment of school inclusion. This clinical & social singularity makes the case potentially universalizing. The x boy is able to learn all the cognitive & motor processes necessary for verbal communication, but because of his brain injury he is organically incapable of exercising the verbalization, by having a severe congenital verbal apraxia & dysarthria. Therefore an integration solution in clinical & educational activities of rehabilitation is also an engineering solution of software and hardware a both involving school inclusion programs & an artificial voice synthesizer. KEYWORDS: Convergence, Complexity, Clinical Sociology, Verbal apraxia, Dysarthria, Informational methodologies, Assistive Technology.

Lin, Fen Jennifer & Lee, Chin-Chuan (Dept of Media and Communication, City University of Hong Kong, 83 Tat Chee Ave, Kowloon Tong, Hong Kong [tel: 852-3442-8691; e-mail: fenlin@cityu.edu.hk]), **Hierarchical Attitude and Communication Mechanisms -- the Micro-translation of Globalization in China,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study aims to explore how individuals' attitudes on globalization are affected by the tension between the global forces & local practices. We also investigate how individuals' attitudes are shaped by three sets of communication mechanisms -- through mass media, interpersonal influence & latent environment. By applying a hierarchical model to analyze a representative survey data on urban Chinese, we argue that 1) urban Chinese present bundled but hierarchical attitudes on globalization. In general they think about globalization most positively at the national level & the least positively at the personal level. 2) Such patterns of attitude are associated with mingled communication mechanisms which help individuals translate the grand social transition into micro events they can make sense of. National media promotes positive views on globalization while interpersonal influence dominates the impacts at the personal levels. Empirical data also shows the complex interactions not only among communication mechanisms, but also between communication mechanisms & latent attributes of attitudes. 3) The above patterns are further mediated by individuals' internal values. Urban Chinese who prioritize society-oriented value tend to have positive attitudes on globalization, while those who pay more attention on self-oriented values usually possess negative attitudes.

Lin, Ju-Ping & Yi, Chin-Chun (Dept. of Human Development & Family Studies, National Taiwan Normal University,Taiwan, No. 162,HoPing E. Road, Sec 1, Taipei 10610,Taiwan [tel: 886-2-77341446; fax: 886-2-23639635; e-mail: t10016@ntnu.edu.tw]), **A Comparative Perspective on Intergenerational Relations,** *International Sociological Association, Gothenburg, Sweden,*

¶ East Asian societies have experienced rapid aging processes in recent years. Although co-residence with elderly parents remains to be a viable family structure due to the dominant value of filial piety, the actual co-residence has declined substantially in recent years. The interplay between traditional norms & modernization impact in the familial context is thus a significant subject to examine. This study explores the intergenerational relations among adult children and elderly parents in East Asian societies. Based on hypotheses generated from the intergenerational solidarity model as well as the support concept from Confucianism, support provided to elderly parents are distinguished into financial support & household chore support. Mechanisms accounted for the different patterns are categorized into cultural norms, children's resources & parental needs. Results point out that non-coresiding daughters have more contact with elderly parents than sons. But in terms of generational exchanges in money & labor, adult children receive more from parents than vice versa. In addition, sons mainly provide financial support while daughters provide more household chores which clearly in accordance with the paternal societal expectation. Adult children, in general, reveal a strong perception of normative responsibility in supporting elderly parents. Over all, comparing China, Japan, Korea & Taiwan, Japan has the lowest intergenerational norms, interactions & exchanges & Taiwan reports the highest. Possible explanations to the diversity found are discussed.

Lin, Liza & Lin, Mei-Ling (National Open University, Taiwan, 60, Yung-Nien Street, Sam Ming District, Kaohsiung 807, Taiwan [tel: (O)886-7-3373128 (H)886-7-3806905; fax: (O)886-7-3315830; e-mail: paulina@kcg.gov.tw]), **Choice and Employability: Contemporary Flexibility Discourses and Regulation of Non-Standard Work,** *International Sociological Association, Gothenburg, Sweden,*

¶ New jobs & types of employment have emerged that do not take the form of standard employment. The paper aims to analyze the various socio-economic, political & cultural processes as reflected in de-standardization processes of the employment relations & social structures. The author considers the opportunities & challenges for employment & social policy structures associated with the foreseeable enlargements, & looks at their impacts on segmentation & conditionality–poly-temporal social policy, new labour market risks & the revision of unemployment protection systems. The author addresses the following objectives: First, to enhance the theoretical & methodological state-of-the-art in conceptualizing non-standard employment & labour market flexibility; Second, to analyze the segmentation and conditionality--poly-temporal social policy, Third, to quantitatively evaluate situations of non-standard work in the local territories, Taiwan; Fourth, to draw conclusions for choice and employability, & welfare policies. This paper combines empirical (N=1,350) & theoretical issues of choice, employability and the regulation of non-standard work, especially when they are related to issues concerning welfare states, solidarity & social politics. The author combines quantitative analysis of a survey data set with qualitative analysis. The variants seek to restore competitiveness by mobilizing labour as human capital.

2010S01537

Lin, Mei-Ling & Lin, Liza (National Open University, Taiwan, 60, Yung-Nien Street, Sam Ming District, Kaohsiung 807, Taiwan [tel: (O)886-7-3373128 (H)886-7-3806905; fax: (O)886-7-3315830; e-mail: paulina@kcg.gov.tw]), **Economic Life Initiative and Managing Multiple Life Courses–Restructuring of Employment and Formation of Labour Market,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is an investigation into the causes of the deterioration in the economic fortunes of workers, & applies to the nation state and social welfare systems, placing issues of equality and diversity in the context of transformations in work-life after a financial & economic crisis. Firstly, the nation state with respect to processes of globalization & the transformations in work-life & working time issues. Secondly, what work means to people & how they form their identity around work & employment. Thirdly, the questions of unemployment among young people, the preparation of young people for work & the smooth transition from education to working life. Fourthly, the impact of unemployment on a person's social belonging, & whether the unemployed hold a qualitatively different work attitude to people with jobs. Fifthly, the organization of social insurance & social assistance provisions, & how transfer payments affect the living standards of low-income groups. The empirical section presents findings from a new quantitative study(N=1,400) of household panel experiences, using the Survey Questionnaire "Transformations in Work-Life after a Financial & Economic Crisis & Challenges of Diversity--Employment Options Survey" data. The methods of the study include literature review & survey research.

Lin, Qianhan (University of Oxford - Department of Sociology, Manor Road Building, Manor Road, Oxford OX1 3UQ, United Kingdom [tel: +44 1865 281 740; fax: +44 1865 286 171; e-mail: qianhanl@gmail.com]), **An Analysis of Career Sequences of China's Cultural Revolution Cohort,** *International Sociological Association, Gothenburg, Sweden,*

¶ Using the holistic work-life histories of urban residents who spent formative years during the Cultural Revolution, a sub-sample of the 2003 China's General Social Survey, as well as the optimal matching techniques, this paper intends to make two contributions: First, by employing the optimal matching & cluster analysis, a typology of employment sequences is generated which can lead to the assessment of the contention on whether the state policies implemented during the Cultural Revolution produce negative or positive consequences. Second, by enlisting members of the Cultural Revolution cohort as the study of analysis--arguably the generation who bears witness to most of the turbulence of contemporary China--the study attempts to demonstrate how state policies interplay with the social stratification structure over time. An intriguing result reveals two polarised trajectories: One was led by those who were rusticated during the Cultural Revolution & whose market position became highly vulnerable after 20 years in the urban labour market. The other was dominated by those who were selected to join the People's Liberation Army during the turbulent period, escaping the fate of being rusticated, & who would later enjoy a relatively upward spiral of career advancement after the service.

Linde, Jessica & Lindgren, Simon (School of Social Sciences, Linnaeus University, SE-351 95 Växjö, Sweden [e-mail: jessica.linde@lnu.se]), **The Subpolitics of File Sharing: A Swedish Case Study,** *International Sociological Association, Gothenburg, Sweden,*

¶ Words like pirates & anti-pirates have become common in the cultural political debate, & the file sharing phenomenon is a delicate and disputed subject. The fact that people are organizing in networks to swap datafiles with each other has led film & music companies from all over the world to initiate a number of anti-piracy organizations, assigned to protect the right to culture and information. In Sweden the industrial organization the Bureau of Anti-piracy & the network the Bureau of Piracy play important parts in the prevailing conflict. The purpose of this paper is to apply a sociological perspective on the collective act of file sharing. By focusing on the distinctly organized part of the file sharing movement as well as the everyday practice, the goal is to describe how the collective action & the production of knowledge, taking place within the movement, can be understood & which the fundamental ideas are.

Lindgren, Lena (Sociology Lund University, 22100 Lund Sweden [tel: +46 46 12 90 85; fax: +46 46 222 44 34; e-mail: lena.lindgren@soclaw.lu.se]), **"Put Philosophy to Work": On the Relation Between Philosophy and Social Theory,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper discusses the relationship between sociological theory & different philosophical traditions. The contemporary "sociology of philosophy," which considers philosophical thinking either as part of a "sociological critique" (Bourdieu) or in terms of a more disinterested analysis (Collins), does not seem to alter the relationship; mainstream sociological theory leaves analytical philosophy largely aside. The second part of the paper regards the relationship between sociology and philosophy through the lens of "legitimacy." The idea of legitimacy is one of the oldest in political & legal philosophy and has been a part of sociological theory from the very beginning. A brief historical account of shifting attitudes towards the normative concept of political legitimacy is presented, extending from the Comtian disdain of its metaphysical heritage to today's use of it as an uncontested part of common sociological knowledge and vocabulary. Jürgen Habermas's widely accepted normative theory of legitimacy & legitimation is discussed. Could the lack of competing non-normative sociological views be explained by difficulties in formulating viable alternatives to philosophical scholarship? In the concluding section it is argued that the customary borders between philosophy & social & political science should be crossed. The analysis of the concept of legitimacy is seen as exemplifying the advantages of a non-normative interdisciplinary approach.

2010S01541

Lindhult, Erik & Bacal, Azril (Mälardalen University, P.O Box 325; SE-631 05 Eskilstuna; Sweden [tel: +46 16 153600; fax: +46 16 153610; e-mail: erik.lindhult@mdh.se]), **Global Transformative Entrepreneurship?–Entrepreneurship in and Through the World Social Forum Process,** *International Sociological Association, Gothenburg, Sweden,*

¶ A central dimension in the recent approaches to the notion of entrepreneurship, in its broader sense, is to regard it as a creative social source & agency, able to bear & promote alternative social perspectives & opportunities for community and societal change & development, thereby claiming its potential as a transformative force in society. Since 2001, when the World Social Forum was launched in Porto Alegre, RGS, Brazil, as an alternative response & project to the Davos World Economic Forum, it has envisioned & mobilized to construct "Other Possible Worlds," in other words, creating & advocating a planetarian alternative to neoliberal globalization. The global social forum movement is made by a hugh variety of alternative & grass roots movements, associations & people coming together, as a basis for finding alternative ways about the financial global crisis and, nowadays, alternative lifestyles & systemic changes to get us out of the global climate crisis. Therefore, it can be linked to a recent development in entrepreneurship research & practice, which opens up its conventional scope, seeking to enlarge & broaden the conventional views on entrepreneurship. By so doing it reclaims entrepreneurship as a vital societal phenomena & as a social force for change to reckon with in our times (Steyaert & Katz, 2004, Spinosa, Flores & Dreyfus, 1997, Johansson, 2009). From another perspective, one is able to observe social practices which one could interpret as "socially-oriented entrepreneurship" which is performed in that vein & yet is not recognized as such. We contend that the social forum movement exemplifies such socially-oriented

innovative practices, where its entrepreneurial character requires & demands fuller recognition and clarification. Our critical-constructive task is one seeking to articulate & pay recognition to the efforts made by the persons and associations that assuming entrepreneurial activities of a societal kind. Our aim with this paper, based on experiences from participation in world social forum activities, is to identify some entrepreneurial dimensions & features of World Social Forum activities. One way to achieve this research objective is to focus on the types & levels of interaction & networking taking place within the world & European social forum processes, which involve and engage a huge number & diversity of persons, movements and civil society organizations. The World Social Forum could be approached as an organization exhibiting a very extensive and activist-oriented kind of entrepreneurship (Gawell, 2004), which also entails a number of different balancing acts. Processes may strive to operate as an open & democratic process at the grassroots level, while being also criticized for being partially or overly centralized & restrictive in various ways. In general entrepreneurship theory & praxis, one finds a delicate balance between more concerted attempts to construct entrepreneurship, in order to achieve greater impact, while also trying to act as a venue for a variety of open interactions, discussions, initiatives and entrepreneurial activity.

Lindström, Kauri (Department of Social Research, University of Tampere, Tampere, Finland 33014 [tel: +358503262816; e-mail: kauri.lindstrom@uta.fi]), **Community-level Coping After Jokela School Shooting. Changes in the Level of Trust and Concern over Violence,** *International Sociological Association, Gothenburg, Sweden,*

¶ In November 2007 the community of Jokela, Finland was hit by rampage shooting at the local high school. Nine people, including students and staff, lost their lives. Instantly, the small community found itself under massive attention & pressure from multiple directions. Everyday life & Insecurity project analyses the coping of local residents after the disaster. We have collected comparable survey data from Jokela at two points of time. First data was collected six months after the disaster & the second data year later. Both of the data represent local populations aged 18-74. In the paper, I analyze changes in the level of trust and concern over violence. Concern over a new mass violence disaster increased in Jokela between the two points of time. Reason for this is that in October 2008 another rampage school shooting shocked Finland. This time it took place in the community of Kauhajoki. Interesting is, however, that trust, especially towards neighbors increased in Jokela at the same time. It appears that community-level recovery in Jokela has taken place, despite of the new violence tragedy in Finland. However, there was socio-economic variation in the responses.

Linn, J. Gary, Quive, Maria, Fako, Thabo & Poku, Kwabena (Meharry Medical College, Nashville, TN USA [tel: 615-415-6943; fax: 615-646-9486; e-mail: jlinn87844@aol.com]), **The President's Emergency Plan for AIDS Relief (PEPFAR); Second Generation Indicators of Mental Health Related to Prevention, Treatment and Care,** *International Sociological Association, Gothenburg, Sweden,*

¶ In 2008, the second generation of The President's Emergency Plan for AIDS Relief (PEPFAR), which principally provides anti-retroviral (ART) therapy to 15 focus countries in Africa, the Caribbean, and Asia was launched. By 2013, it seeks to treat at least 3 million people, prevent 12 million new HIV infections, care for 12 million people including 5 million orphans & vulnerable children (OVCs), provide at least 80% of the target population with PMTCT services, and train at least 140,000 new health care workers (CDC, 2009). The second PEPFAR follows a partnership framework model; a new approach that emphasizes strengthening country capacity, ownership, and leadership. Further, there is a focus on the development of comprehensive HIV programs with three overlapping areas: Prevention, including behavior change, management of STIs, use of condoms, & safety of blood products; Care, including ART, medical care, VCT, PMTCT, HBC, palliative care, nutrition & OI treatment; and Impact Mitigation, including OVCs, policy, & stigma reduction. High quality surveillance/monitoring systems capable of providing strategic information are integral to the success of the new generation of PEPFAR (VGH, 2009). These systems are built upon the PEPFAR "Next Generation Indicators," which promote better in-country & global harmonization of indicators. There is more attention to measures of coverage (i.e., program & population coverage) & quality (i.e., the Institute of Medicine key dimensions of structure, process, & outcome). This paper focuses on mental health indicators related to prevention, treatment, and care (e.g., number of people living with HIV/AIDS reached with a minimum package of prevention; number of eligible adults and children provided with psychological, social, & spiritual support; & number of individuals who received Testing and Counseling [T&C] services for HIV & received their test results). We discuss the utility of these indicators for host country governments to plan, monitor, & manage a coordinated national response to the HIV/AIDS epidemic & to demonstrate the progress of PEPFAR to the U.S. Congress & the International donor community.

Linnenschmidt, Katja & Steinbach, Dirk (Fachhochschule Salzburg, Salzburg, Austria [tel: +43-(0)50-2211-1154; e-mail: katja.linnenschmidt@fh-salzburg.ac.at]), **Scenario Development as a Strategy to Counteract Ageism in the Working World,** *International Sociological Association, Gothenburg, Sweden,*

¶ Evidence for ageism in the working world can be found in long-lasting unemployment, low employment rates & little participation in in-house training of people older than 55 years. To facilitate social integration & financial independence, participation in working life must be ensured for all age groups. To analyze existing conditions & constrains of older employees' integration desktop research, qualitative semi-structured interviews and structural analyses were undertaken. It turned out that age stereotypes were attributed to be a powerful & restrictive factor on all levels. Deficit oriented images of ageing still persist from times when work was mostly physical & considerably more straining than nowadays. Furthermore the widespread early retirement policies in Europe in the 1980s & -90s led to a decreasing valuation of the job performance of older employees. To sensitize social institutions, companies & individuals for the competences of older employees & the need to conserve a person's working capacity three explorative scenarios were developed. These scenarios are designed to reduce complexity in a diversified sphere of activity. By this means a better understanding of future regional, social & economic development options evolves to counteract ageism in the working world.

2010S01545

Lipman, Pauline & Pedroni, Thomas (University of Illinois-Chicago, Chicago, IL USA 60611 [tel: 312-413-4413; e-mail: plipman@uic.edu]), **Divergent Production of Social Inequality in Two US Cities: Education Policy and Neoliberal Urbanism in Chicago and Detroit,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper foregrounds the intersection of education policy and contested neoliberal urban development in Detroit & Chicago, two U.S. post-industrial metropolises. Our analysis speaks to the heterogeneity of urban inequalities within neoliberal economic restructuring. Whereas developers in Chicago jockey to position the city as a center of global finance, Detroit, with economic development centered on the auto industry, continues to shed jobs and population with little prospect for new capital investment. The result is an interesting contrast in forms of inequality production. Chicago's gentrification, service economy, and racially-inflected struggle over the right to the city differ markedly from Detroit's desolation & racial homogeneity, its urban agriculture & prairies rising against a backdrop of abandoned factories & skyscrapers. Drawing on critical studies in geography, urban sociology, education policy, & race analyses, the paper traces divergent patterns of racial exclusion and containment produced within the nexus of neoliberal urban education and economic development policy. Based on analysis of policy documents & ethnographic work, we argue that the differing nodes the two cities occupy in the restructuring of the global/urban dialectic provide significant insight into different shapes and paths the intersection of neoliberal urbanism & educational policy, & resistance to it, can take.

Lisdero, Pedro M. (CEA-UE-CONICET-UNC, Córdoba Capital, Córdoba, 5001 [tel: +54 351 155167051; e-mail: pedrolisdero@hotmail.com]), **Call Centers: Identity and Conflict. An Interpretative Propose of Collective Actions in the New Workspaces,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ This paper aims to analyze the collective actions arising in the Call Center industry in the city of Cordoba, Argentina, as metonymic experiences that allow us to report of the complex transformations that take place in the world of work. To do so, the collective action is established as the gateway to the processes through which society re-build proximities & distances in its social relations. This conflictual characterization allows us to observe in the work process a central area where are historically formed the assessments of the entity body-energy. In this sense, our analysis is

complemented in its development with the identification of relationships between the mechanisms that contribute to become-body the processes of expropriation of body energies, as a fundamental feature in the neo-colonial capitalist relations, & devices through which the conflict is occluded, the action is coagulated and is obstructed the emergence of collective identity. To do this, there is a corpus which includes interviews & group interviews of call center workers belonging to different organizations carried out from 2006 to the present, as well as audio-visual material obtained from news sources & participant observation in the same period.

2010S01547

Liston, Katie (University of Ulster [e-mail: K.Liston@ulster.ac.uk]), **Process and Progress Sociology: The Curious Case of Goody, Elias and Naturvolk in Africa,** *International Sociological Association, Gothenburg, Sweden,*

¶ In recent years Sir Jack Goody, doyen of British social anthropologists, has published a series of essays (2002; 2003; 2004; 2006: 154a79) criticizing Norbert Elias's theory of "civilising processes." In all of them, Goody–himself a West African specialist–makes clear that his disagreement with Elias dates back to their acquaintance in Ghana during the two years (1962-4) when Elias, after his formal retirement from the University of Leicester, served as Professor of Sociology at the University of Ghana, Legon. In this paper it is argued that, despite appearances to the contrary, Elias & Goody in fact have much in common intellectually. Goody is, for instance, one of the most historically orientated of anthropologists, & many points of contact with Elias are evident–to those willing to see them–in for instance his work on literacy (1968; 1987), food (1982), or The Domestication of the Savage Mind (1977), to mention only a few of his books. This having been said, it would be idle to pretend that Goody & Elias could ever have seen perfectly eye to eye with each other & some significant differences emerge in their treatment of the -emic & -etic, Goody's reliance on analytical grids as research tools & his criticisms of Elias's supposed portrayal of Africans as Naturvolk. Both swam against the ahistorical current of their respective disciplines & the dismay that Elias expressed at "the retreat of sociologists into the present" (2009d [1986]) was the same dismay that led Goody to reject the exclusive emphasis on fieldwork that Malinowski and Evans-Pritchard brought to anthropology. Both Goody & Elias reject the old notion of "progress." Elias's fault is that occasionally his formulations may appear to give the opposite impression. Goody's fault, perhaps, is that –in spite of his own historical perspective–under any model of a structured process he suspects there lurks a vision of progress & of European superiority.

2010S01548

Liu, Hwa-Jen (Sociology, National Taiwan University, Taipei, Taiwan, 106 [e-mail: hjliu@ntu.edu.tw]), **Mirrored Trajectories of Labor and Environmental Movements: The Cases of Taiwan and South Korea,** *International Sociological Association, Gothenburg, Sweden,*

¶ The struggles of labor movements in Taiwan & South Korea to increase their power & realize the interests of their constituents have followed a similar path over the course of the last 35 years. Environmental movements in the two countries have also followed a similar path, but one very different from that of labor movements. In order to explain why these two different national settings should produce consistent differences between the trajectories and strategies of labor & environmental movements, this article contends that different trajectories result from labor's & the environmental movement's pursuit of different types of movement power. Looking at the historical sequences of movement strategies in the two countries, I find that labor initially seeks to maximize its economic leverage & the environmental movements focus first on ideological power. After initial successes, both labor and environmental movements are confronted with new obstacles that undermine the power they have gained. The state & capital succeed in defaming & organizationally undermining the support bases of the labor movements. At the same time, they learn to compete with the environmental movements for discursive control over ecological values. Labor responds in turn by striving to increase its ideological by shedding the bad name of "sectional interest" and winning the support of less-privileged workers & the general public. The environmental movements struggle to increase their leverage by building a united front with disprivileged victims of corporate environmental practices. Thus, in each case, the sequence of strategies converges around efforts to combine leverage and ideological power. The trajectories shared by the Taiwanese and Korean cases are not so unfamiliar if we look at labor and environmental movements elsewhere in the world. The recent struggles of US labor to counter ideological offensives & to win public support are well documented. These efforts to transform the image & content of the US labor movement took place at a moment of crisis in which the economic leverage previously exercised by major unions was eroded. Japan's environmental activism, after its anti-pollution peak in the 1970s, dwindled throughout the 1980s and the early 1990s, suffering from declining public interest in environmental issues because of the ruling party's effective legislative & administrative responses to the pollution crisis. This is another indication that the environmental movement created new institutional competitors & gradually lost the capacity to sway public opinion. All of these provide fruitful parallels to the Taiwanese & Korean experiences.

Livacic Rojas, Carlos (Universidad Central de Chile, Lord Cochrane, 418, Primer Piso [tel: 56-2-5826324; fax: 56-2-5826297; e-mail: clivacicr@ucentral.cl]), **Transparency as a Form of Operation and Action in Public and Private Organizations in Chile,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ Desde la vuelta a la democracia en Chile, podemos señalar que los cambios que se han venido sucediendo en materias económicas, sociales y políticas no son menores, por el contrario, cada uno en su justa medida, representan una nueva manera de entender y de ver el país, tanto para los ciudadanos comunes, como en la manera de relacionarse con el sector público y privado. Considerando la mayoría de las mediciones internacional, que hay sobre Chile, dan cuenta de un marcado desarrollo en cada uno de estos temas, pero estas cifras, no logran dar cuenta de progresos y leves retrocesos que experimenta el país en materia de transparencia. En la mayoría de los casos, la realidad de Chile, se manifiesta como un país destacado, como una nación modelo, digna de todo elogio, dentro del propio continente donde está inserta, y en comparación con las naciones desarrolladas de otras latitudes. Esta comparación, que suele estar determinada y cuestionada por diversos grupos de nuestra propia sociedad, en lo relativo a desarrollo humano y transparencia, no merece mayores reparos por parte de las autoridades y los grandes grupos económicos que concentran el poder en las áreas estratégicas de recursos renovables. Si bien los cambios están a la vista, la nación registra avances (cambios) si se la compara con tiempos pasados a su propia realidad, pero al mismo tiempo, dicho desarrollo, representa todas las áreas de relaciones que hay al interior de nuestra sociedad. Por ejemplo, en materias de transparencia y Desarrollo de Políticas Sociales Participativas, podríamos plantear lo siguiente es Chile un país abierto y participativo en políticas públicas? Tienen todos los agentes sociales los mismos derechos y el mismo tratamiento en términos de justicia y acceso a los bienes que otorga el Estado?

Lizardi-Gomez, Alejandra (University of Guadalajara. North Campus, Carretera Federal no. 23 km 191 Colotlán Jalisco 46200 [tel: +52 499 9921333; fax: +52 499 9921333; e-mail: alejalizard@gmail.com]), **A Research Design to Analyze a Transnational Social Space of Care,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ Care practices in a transnational migration context involve individuals, resources & beliefs shifting from flexible imagined and geographical borders, changing identities, & provisional responsibilities. This ongoing research aim is to analyze from the individuals' perspective, how social support networks build by chronically ill migrants from Mexico to the United States, create a transnational social space of care by combining multiples factors: health services utilization, material & symbolic resources flow, patient & family decisions making both at origin & destination. Research design allows naming it a Grounded Theory Ethnography with a Constructivistic approach. From January 2007 to August 2009, deep interviews, observation & constant comparative qualitative analysis has been carried out at the community of origin in Jalisco México, & six cities of California, USA with five families with chronically ill members. Chronic conditions are: diabetes, hypertension, arthritis, asthma, hypothyroidism & Parkinson's disease. The main challenge to date has been to do transnational fieldwork. Web pages built by transnational migrants & meetings with support groups based at health services have been of great help for triangulation. Keywords: Transnational care, chronic illness experience, research design.

Llobet, Valeria & Minujin, Alberto (CONICET / UNSAM, Buenos Aires, Argentina [tel: 54 114305 4726; e-mail: valeria.s.llobet@gmail.com]), **Adolescents and Social Policy: How Transfers and Conditionalities Help, or Help Not, to Build Citizenship,** *International Sociological Association, Gothenburg, Sweden,*

¶ Conditional Cash Transfer (CCT) is one of the policy strategies that have been adopted in most of the countries in Latin America to reduce poverty. Since adolescence is viewed largely as problematic, some specific responses to the public's concerns are emerging. First Brazil & then Argentina fashioned & are implementing CCTs for adolescents with no intermediation by their families. New York City, following the experience of Mexico's Progresa is testing a CCT program that, while targeting families, delivers some of the monetary incentives directly to adolescents. Primary data was produced through interviews with agents & clients, and ethnographic fieldwork in the Argentinean case. Secondary data was obtained from official documentation, program's evaluation and program's design & background papers. Mainstream CCTs are being framed as an alternative for expanding social protection to vulnerable groups. Therefore, the main question in this paper is: Are CCTs focusing on adolescents "transformatives?" ie. promoting and ensuring their rights &/or fully promoting their inclusion? Are CCTs useful tools for promoting social citizenship among adolescents? Can CCTs help adolescents to overcome the difficult situations that they are facing in Latin America? The theoretical agenda will draw on specific axes of citizenship, as participation, transparency, & accountability, & will analyze different programs' dimensions from these theoretical perspectives, in order to answer the paper's questions.

Lloyd, Katrina L (ARK, School of Sociology Social Policy and Social Work, Queen's University Belfast, University Road, Belfast, BT7 1NN [tel: +44 2890 973585; e-mail: k.lloyd@qub.ac.uk]), **Kids' Life and Times: Using an Internet Survey to Measure Children's Quality of Life,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this paper is to examine whether there are mode effects associated with using a children's quality of life measure embedded within an internet survey when compared with its more traditional use as a paper questionnaire. Participants were 3,440 10 & 11 year old children in Northern Ireland who completed the KIDSCREEN-27 online as part of a general attitudinal survey. The questionnaire was animated using cartoon characters that are familiar to this age group & the questions appeared on screen and were read aloud by actors. Exploratory principal component analysis of the online version of the questionnaire supported the existence of five components in line with the paper version. The items loaded on the components that would be expected based on previous findings with five domains a physical wellbeing, psychological wellbeing, autonomy & parents, social support & peers & school environment. Internal consistency reliability of the five domains was measured using Cronbach's alpha & the results suggested that the scale scores were reliable. The domain scores were similar to those reported in the literature for the paper version. These results suggest that there are no mode effects associated with using the KIDSCREEN-27 embedded within an online survey of children.

Lo Verde, Fabio Massimo (Dipartimento di Studi su Politica, Diritto e Società (DPDS), University of Palermo, Palermo, Piazza Bologni, 8, 90134 [tel: ; e-mail: floverde@unipa.it]), **Leisure, Social Capital and Life Turns in Deviant Youth,** *International Sociological Association, Gothenburg, Sweden,*

¶ The production of social capital in a specific area of everyday life such as leisure & the different socio-cultural contexts it is experienced in, is a very interesting research issue, especially in the light of certain specific meanings of the notion of social capital, like Bourdieu's or, more recently, Putnam's. Nonetheless, this research issue is scarcely taken into consideration in Italy. Building briefly on the literature about the production of social capital in youth's leisure contexts, this paper is going to present a research on the biographies of young people living in deviant contexts who decide to take a "turn" in their daily lives. In order to observe how the social capital produced during their leisure practices is related to the ways in which leisure creates coping resources in the decision to either begin or interrupt a deviant career, the study focuses on a group of young adults aged from 18 to 29 living in two neighborhoods of Palermo (Italy) who have decided to take a life career different from the expectations of the social context they live in.

Lobo, Francis (Edith Cowan University, Perth, Western Australia, Australia 6027 [tel: 61 8 94574420; e-mail: F.Lobo@ecu.edu.au]), **Australian Leisure: From Antiquity to Modernity,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper traces the development of leisure in Australia from antiquity to modernity. It depicts Aboriginal life 40.000 years ago. In this prehistoric society, play was an important part of life after food-gathering activities were concluded. Homo Faber (man the worker) was superordinate to Homo Ludens (man the player). Play in the form of art, craft & dance was a central part of religious activities. It occurred at an event known as a Corroboree. Australia was colonised in 1788. At the time, Australia was regarded as uninhabited. Therefore the English legal system was implanted. Through hard labour & at times with convict help, the landscape was transformed into pastoral & agricultural areas. Leisure was class-related from early colonial times to the end of the Second World War. Generations with pronounced configurations emerged prior to & after the War to the present day. Salt (2006) described them as frugal, boomer, generation X & generation Y. As we move into contemporary times, the paper shows how each generation expresses itself in leisure moving Australia into a fluid & transient society. Salt, B. (2006). The Big Picture. Loeb, Mitchell E. (National Center for Health Statistics, 3311 Toledo Rd, Hyattville, Maryland, 20782, USA [tel: 301 458 4248; fax: 301 458 4038; e-mail: mloeb@cdc.gov]), **Development of an Internationally Comparable Disability Measure: Results from the U.N.'s Washington Group on Disability Statistics,** *International Sociological Association, Gothenburg, Sweden,*

¶ Disability is currently conceptualized as arising from the interaction of a person's functional status with their physical, cultural, and policy environments. If the environment in which one lives is designed for the full range of human functioning, & incorporates appropriate accommodations & support mechanisms, then people with functional limitations would not be "disabled" in the sense that they would be able to fully participate in society. Interventions designed to improve participation are not only targeted at the individual level (medical rehabilitation aimed at a specific impairment), but also at the societal level (the introduction of universal design to make infrastructure more accessible, inclusive education systems, & community awareness programs that are planned to combat stigma). Using data collected in Zambia, this paper explicates the ways that traditional approaches to disability measurement are not helpful in enhancing our understanding of the lived experiences of people with disabilities. A short set of six questions, developed by the U.N.'s Washington Group on Disability Statistics for use on censuses are presented as an alternative approach to the measurement of disability, & broader policy implications are explored.

Löfqvist, Louise (School of Social Sciences, Linnaeus University, SE-351 95 Växjö, Sweden [e-mail: louise.lofqvist@lnu.se]), **"Female Policemen" - Claims for Democratization and Femininity as Aptitude,** *International Sociological Association, Gothenburg, Sweden,*

¶ For some years there has been ongoing work carried out to change the demographic structure of the Swedish police force with the aim to become more in sync with the national population composition, ie. - to increase the number of women & also to include a larger ethnic diversity. The current situation is (rhetorically) considered a legitimacy issue, & the change is put forward as a move of democratization. In the study, the Police as an profession & idea have come to be considered as highly gendered, & to a large extent historically codified along lines of white masculinity. It is this organizational space; or rather a specific set of discursive constructions of it that is the current centre of attention. In this paper I discuss events & policy-discussions of the last five-year period, with the aim to describe & critically examine the attempts to widen the police force. The material used is official state reports & ministry publications as well as different texts created within the police & the police education. Complementary material has been found in labour union magazines. Different stands can be singled out, women & "immigrants" are often assumed to bring something important & different to the profession, but one can also find disagreement & conflict. To summarize, this is a case of an arena where women traditionally have been absent, & where femininity & "otherness" now is claimed as competence in order to implement change. The paper examines the "pro" & "con" arguments, in an attempt to bring into light the importance of questioning constructions of femininity & "otherness" in understanding work, professional identities & gender formations.

Lombard, Nancy (Edinburgh Napier University, Craighouse Campus, Edinburgh, EH10 5LP [tel: 00441314556224; e-mail: n.lombard@napier.ac.uk]), **Younger People's Understandings of**

Men's Violence against Women, *International Sociological Association, Gothenburg, Sweden,*

¶ This paper will draw upon my research findings which aimed to find out how younger people (aged 11 & 12) construct & understand men's violence against women. Younger people are absent from much of the theoretical literature & empirical research on men's violence unless they are identified as direct victims of it (see Mullender, 2002). The inclusion of the perspectives of eleven & twelve year olds offers an original contribution to the age-old problem of men's violence against women. In this paper I argue that their own position within childhood directs impacts upon how they conceive of, construct & understand violence. I assert that young people's understandings of male violence need to be theorised within a framework that illuminates the temporal & spatial elements of their accounts. To do this I intersect Adam's (2002) theory of temporality with existing accounts of the concept of time "in" and "of" childhood (see Prout & James, 1998) to illustrate the significance of the lens of childhood to young people's constructions. I argue that through the process of intersection (McCall, 2005) the multiple dimensions of gender, temporality and spatiality enable the analysis of the various & competing means by which young people construct male violence against women. In doing this I create what I term a matrix which I argue enables a fuller analysis of young people's constructions of male violence as multi dimensional & as fractured through the lens of childhood incorporating the time, space & gender.

Loneux, Catherine (Rennes 2 University, Place Recteur le Moal 35043 Rennes cedex France [tel: 00 33 (0)6 14 81 22 97; e-mail: catherine.loneux@uhb.fr]), **Enjeux socio-communicationnels des récits éthiques de l'entreprise** (Socio-communicative Narratives of Ethical Business), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Les références managériales se sont multipliées, depuis une vingtaine d'années, donnant lieu à une profusion de récits dans les entreprises qui prennent la forme de chartes, de documents, d'ouvrages, d'articles, de proclamations, travaillant ainsi au service d'une médiatisation de l'entreprise "durable" ou "responsable". Cela a pu laisser penser qu'il s'agissait d'un de ces "pseudo événements" caractéristiques de la spectacularisation des entreprises, et de leur entrée volontariste dans la sphère publique. Mais il s'agissait de plus que cela. Ces phénomènes ne sont plus seulement considérés par les sciences sociales, comme associés à une banale stratégie de désinformation, mais ils deviennent dignes d'être pris au sérieux pour alimenter un renouvellement des problématiques et des objets de recherche. Les sciences sociales, en mouvement comme le suggère le titre du congrès, se sont en effet préoccupées de questions qui traditionnellement semblaient le domaine réservé de la philosophie morale ou de la psychologie : Les questions de l'éthique, des normes morales, de l'amour et de la justice aqui nous concernent ici- deviennent objets de la sociologie. Ces déplacements de perspectives ont accompagné une réflexion située à un double niveau : - Au niveau "entrepreneurial", qui interroge le rapport entreprises / société (quelles relations entre les entreprises et leurs environnements sociétaux ?) - au niveau "managérial", qui interroge lui le rapport entre les politiques managériales et le rapport au travail des salariés (quelle identité ? quel "sens" ?). Ces éléments d'analyse éclairent pour partie selon nous, au plan socio-économique et socio-politique, la modernité dans laquelle nous nous inscrivons.

Longuenesse, Elisabeth (Institut Français du Proche-Orient, rue de Damas, P.O.Box 11-1424, Beirut, Lebanon [tel: +961(0)3469911; e-mail: elonguenesse@yahoo.fr]), **Globalization and the Accounting Profession in the Middle East, Restructuring the Profession and the Role of International Organisations,** *International Sociological Association, Gothenburg, Sweden,*

¶ During the last twenty years, in the Arab countries as elsewhere in the world a though probably even more in emergent economies - the accounting profession has undergone significant changes. Liberalization policies, privatization of state corporate companies, increasing foreign investment & stock market activity, new tax regulations have stimulated the demand for accountancy, audit, & financial services. Laws on accounting standards systems are progressively transformed or replaced by the adoption of international accountancy & audit standards. The activities of international audit firms have developed with the expansion of transnational corporation, the multiplication of joint ventures, and franchised companies. Management methods witnessed the emergence of new professional specializations, functions and missions, in management, finance, internal audit. The profession itself is being reorganised & redefined, to fit into an international model promoted by international bodies and organisations, including the World Bank & the UNDP. The paper will present & discuss these recent developments of the professional field of accountancy, illustrating them by national cases as Syria & Egypt.

2010S01561

Longuenesse, Elisabeth (Institut Français du Proche-Orient, rue de Damas, P.O Box 11-1424, Beirut, Lebanon [tel: +961(0)3469911; e-mail: elonguenesse@yahoo.fr]), **Plurilinguism and Code Switching in Professional Practice: The Case of Accountancy in Lebanon,** *International Sociological Association, Gothenburg, Sweden,*

¶ In Arabic-speaking countries, the vocabulary of the accounting profession hesitates between French & English, whereas it introduces new meanings in Arabic. Switching from & to English, French, Arabic, may reveal unveiled connotations: the simple name of the professional association in Lebanon, Lebanese Association of Certified Public Accountants in English, Ordre des Experts-Comptables Agréés du Liban, Niqâbat khubarâ' al-Muhâsaba in Arabic, does not literally "mean" the same thing & may be "translated" differently when using one language or the other a which often happens with professionals fluent in the three languages. Not only must the social scientist pay attention to the words used in the national language & to the way the profession is locally defined– which may be different from international or other national models; but he should also be able to analyze what is going on in the process of translation/transfer/ circulation of words & representations. The paper will elaborate on some problems encountered in a research on the accounting profession in Lebanon, & show how the circulation between two or three languages may reveal important professional stakes.

Loodin, Henrik (Department of sociology, Lund university, Lund, Sweden [tel: +46730274533; e-mail: henrik.loodin@soc.lu.se]), **Biographies from the Borderland: Biographical Reconciliation On the Field of Psychiatry,** *International Sociological Association, Gothenburg, Sweden,*

¶ Along with the recent transformation of psychiatry the function of its professionals also changed. These professionals are nowadays key agents in helping people with a mental disorder adapt to everyday social life. Psychiatry thus turns into a habitual institution of late modern society facilitating the formulation of an integrated social role. This paper unfolds the social organisation of a person's life when he or she receives a psychiatric diagnosis. Based on life-story interviews with people having a mental disorder I combine a narrative analysis with sociological role theory. The approach reveals the complex negotiations that occur when the storyteller make sense of her or himself as mentally ill. These negotiations between biographical knowledge that the diagnosed receives from others are coordinated with autobiographical knowledge from oneself. When the life-story is organised as a narrated account & one's life is made sense of the autobiography reconciles with an ascribed biography. The paper suggests that this concept of reconciliation is a significant part of the construction of a sick-role on the field of psychiatry.

Lopes, Noémia, Pegado, Elsa & Rodrigues, Carla (CIES, ISCTE-IUL, Lisbon - Portugal [e-mail: nlopes@egasmoniz.

edu.pt]), **Therapeutic Consumptions Patterns: Rural-Urban Differences Revisited,** *International Sociological Association, Gothenburg, Sweden,*

¶ One of the characteristics of present-day modernity, in relation to therapeutic consumption, is the increasing use of resources that traditionally fall within distinct systems of reference: pharmaceuticals, natural medicines & therapeutic foods. The trend towards the dominance of a rationalities of "therapeutic pluralism" is becoming increasingly widespread. One of the analytical challenges to which this new social & therapeutic situation gives rise is, precisely, to achieve an understanding of the complexity and diversity that converge within the apparent hegemony of this consumption pattern. In a sociological investigation carried out in Portugal on therapeutic consumption, with the use of intensive and extensive data collection techniques, it was possible to identify different lay attitudes in the relationship with different types of therapeutic resources. The prevention-treatment binomial, it is found, models dissimilar ways of assessing therapeutic resources. At the same time, socio-demographic variables such as gender, age group & education show themselves as equally explicative of dissimilar patterns of therapeutic consumption. Along with these variables, this paper aims to stress the contrasts between the rural & the urban displayed in the interviewees' therapeutic discourse & practices. It is not a question of simply reviving a classical variable, rather forgotten a particularly in Europe a with the effect of the transformations in modernity & the blurring of traditional rural-urban differences. More than this, it is a question of problematising the different ways of cultural assimilation and/or resistance that these different contexts present in the social dissemination of new ways of medicalisation of daily life. The empirical support for this discussion is centred on the results of two patterns of therapeutic consumption: pharmacologism & therapeutic pluralism. It is on the basis of these that rural-urban contrasts & continuities are revisited.

López Villanueva, Cristina & Pujadas Rúbies, Isabel (Department of Sociological Theory, Philosophy of Law and Methodology of the Social Sciences. University of Barcelona, Diagonal, 690, 08034 BARCELONA [tel: + 34 93 402 18 03; fax: + 34 93 402 18 94; e-mail: clopez@ub.edu]), **Living Alone in Spain. From Old Bachelor to Single transformations and Territorial Patterns.,** *International Sociological Association, Gothenburg, Sweden,*

¶ The fact of living alone- which in Spain was traditionally regarded as a marginal way to live & was impregnated by negative connotations related to loneliness, isolation, staying single & old age- is today presented as another residential option. Today, one-person households increase dramatically, they are no longer exclusive to rural areas, become typologies of great weight in big cities and diversify their composition. The fall in nuptiality, the increase in relationship breakups, the growth of unmarried people & the increase in life expectancy at advanced ages are explanatory factors for the rise & diversification of single-person households in Spain. This paper proposes: a) To analyze the increase of unipersonal households in Spain & study their growth in relation to the sociodemographical changes typical of the Second Demographic Transition. b) To explain the diversified sociodemographic profile of unipersonal households - rejuvenation, growth of single & divorced persons & higher education and professionalization- from the analysis of the latest census microdata. c) To study the spatial differentiation between cities and their suburban crowns, & between the largest-sized municipalities & the most rural ones. Sources used in the analysis of one-person households have been the Spanish Population Censuses. To analyze the evolution of one-person households, annual growth rates have been calculated (r%) & the direct standardization method has been applied to one-person household rates in order to eliminate the weight of aging on provinces and municipalities by population size.

Lorant, Vincent & Bhopal, Raj (Institute Health and Society, UCLouvain, clos chappelle aux champs 30.05 1200 Bruxelles Belgium [tel: +3227643263; e-mail: vincent.lorant@uclouvain.be]), **Ethnicity, Socio-Economic Status, and Health: Insights From and Implications of Charles Tilly's Theory of Durable Inequality,** *International Sociological Association, Gothenburg, Sweden,*

¶ Ethnic inequalities in health status & health care remain substantial in Europe & addressing them is becoming a priority for European policies. However, the best way to respond to such a challenge is, as yet, unclear. The research community is grappling with the contribution of socio-economic discrimination to ethnic inequalities. We present a new theoretical analysis, based on the landmark work of Charles Tilly on "Durable Inequality" & we apply it to the public health goal of reducing ethnic health inequalities. Tilly claims that, for organisational reasons, ethnic categories & socio-economic categories are tied together. The theory of Durable Inequality claims that the matching of ethnic categories with socio-economic categories helps to enforce exploitation, leading to inequalities. We present the theory, and focus on its main components (categories, exploitation, opportunity hoarding, emulation, adaptation) & discuss the implications for health inequalities by ethnic group. In essence, the theory provides four main implications. Research should compare different organisational & institutional settings, & study how ethnic categories aid organisational aims; it should put the emphasis on altering networks & social routines & not so much on beliefs and attitudes, including racism; the theory call for examining how ethnic minorities themselves utilise opportunity hoarding to create niche economic opportunities; finally, the measurement of ethnicity should be made with paired categories defining the access to valuable resources. Our paper opens a debate to refine these ideas prior to empirical testing.

2010S01568

Lorea Leite, Maria Cecilia (Programa de Pós-Graduação em Educação - Universidade Federal de Pelotas, Rua Alberto Rosa, 154 a Campus de Ciências Sociais 96101-770 a Várzea do Porto [tel: +55 53 32275733; fax: +55 53 32275733; e-mail: mclleite@gmail.com]), **Legal Education Reform, Pedagogy and Justice Access,** *International Sociological Association, Gothenburg, Sweden,* (POR)

¶ Brazil has had a remarkable scientific output on justice access in the last few decades. The studies concerning this subject have showed the need of further development from the democratization of justice viewpoint, as well as from its links to democracy & citizenship. This paper discusses part of the results of a study case with a qualitative approach done at a Law Undergraduate Course whose focus is its curriculum reform & the connection between curriculum, knowledge & power relations. The course implemented changes to its curriculum in 1998, which were incorporated into new curriculum guidelines in 2004, enhancing the role of social & legal phenomena, together with the development of essential learning activities, among others, on the provision of justice & the development of citizenship. This work focuses on pedagogical practices developed in the university classroom of the course above mentioned as well as on the outskirts of town, aiming to reflect on Law boundaries & contribute to the debate on justice access. The analysis, based mainly on Basil Bernstein, Stephen

Ball & Boaventura Santos, provides subsidies to rethinking inequalities in justice access through innovative pedagogical practices. Keywords: Legal Education Reform; Pedagogy; Justice Access.

Lorenc Valcarce, Federico (CONICET/IIGG - University of Buenos Aires [tel: 5411 49816831; e-mail: florencvalcarce@yahoo.fr]), **Becoming a Private Security Entrepreneur. State Careers, Professional Knowledge and Company Management - The Case of Argentina,** *International Sociological Association, Gothenburg, Sweden,*

¶ Argentine private security companies are still largely managed by ex military & ex police officers. Since de 1950s, these companies have been created as a complementary professional activity, usually after retirement. In this process, former officers organized security companies & transferred their expert knowledge (human resource management, operational competence, logistics, and intelligence) to the private sector. They also obtained recognition from society, mainly their clients, & the authorities in charge of regulating the private security industry: this activity was then seen as an "appendix" of the public security system. But police and military know-how should then be "recycled" in order to suit specific demands addressed by consumers, & adapt to the sort of service to be produced. In these new conditions, interaction between experts & the public gave birth to a new approach to the production of safety: private security services are primarily concerned by order maintenance, loss prevention & service provision, rather than crime control. The professional knowledge used by private security managers, its application to produce services, & the way in which they legitimate its supremacy is explored by directive interviews with managers & their clients and by the scrutiny of data from security companies & specialized press.

2010S01570

Lorenz, Stephan ([e-mail: Stephan.Lorenz@uni-jena.de]), **Charity on the Move,** *International Sociological Association, Gothenburg, Sweden,*

¶ Starting about thirty years ago in the USA & Canada there is a movement that has been expanding throughout most "affluent societies". This movement supports poor & excluded people mainly by distributing collected excess food from trade, industry, and consumption. So it is based on the commitment of voluntary civil society, & on resources provided by business charity. Usually the movement is organized as food banks/ pantries. In Germany "Tafel" initiatives are most common. I would like to present results of my (qualitative) research about the "Tafel". The concept of collecting/ distributing is very successful in terms of quantitative growth. Furthermore, the initiatives vary their support by offering also, e.g., clothes, advisory services or gardening projects. The movement is borne by people who intend on being helpful to "the needy". Still it seems to silently change society in excluding people from social wealth & participation, because of a shift from state-based social rights to well-meaning charity. Consequently, we could expect a new dividing line. On the one hand there are people producing & consuming affluence (often in a stressful manner). On the other we find the recipients who are supported by a moral disposal of the excess.

Lott, Yvonne & Uglanova, Ekaterina (BIGSSS Bremen University, Bremen, Germany, 28334 [tel: +49 (0) 421 218 66355; e-mail: ylott@bigsss-bremen.de]), **Equity and Life-Satisfaction within Couples a What Influence Does Objective Equity Have?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Equity within intimate relationships is a central aspect of gender arrangements & an important dimension of social inequality. A relation is equitable or fair, when partners' profit equals its investment. When a relation is inequitable, individuals become dissatisfied. This study will analyze the impact of equity on satisfaction within heterosexual couples. While most studies use individuals' perception of equity as measurement, our paper proposes an objective measurement of equity. Social exchange theorists assume that equity is a natural sentiment or social norm. Thus, objective equity should be directly related to partners' satisfaction. Based on this assumption, we formulate the following research question: Is the individuals' subjective well-being associated with objective (in)equity within couples? Our indicator for objective equity is the individual's ratio of investment and profit, with individual income defined as investment and decision-making defined as profit. The analysis is based on the GSOEP in 2005 & 2008. Fixed-effects models indicate that men are less satisfied with inequitable arrangements. For women, however, objective equity has no impact on satisfaction.

Loukili, Youness (Department of Sociology, Mohamed V University Agdal Rabat [tel: +212 0668 847216; fax: +212 0523 315433; e-mail: loukili.loukili@gmail.com]), **Illness Experience of Elderly People Affected by Sciatica in Morocco a Gender Approach,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper aims at the understanding of elderly experience of Sciatica, from both sexes, considered amongst the most widespread physical illnesses in Morocco. We will discover the determinants governing it, & the hypothesis examined will prove us that the illness is influenced more by economic factors than cultural- religious ones. This study adopted a gender view as to observe the differences between both sexes. Methodically speaking, I relied on the semi-directed individual interview with patients that consult a renowned traditional therapist in the region of Casablanca, Morocco. To have this experience within a framework, we emphasized: the patient a illness relationship, presented through a definition of the illness, its causes, & daily living with illness, then the patient-therapy relationship seen through his representation of the therapist, modern or traditional, & the therapeutic itinerary followed. This study has come, to the fact that male & female patients do not have a clear idea of their illness's nature. This urges them to use different appellations. They confirm that the illness has objective reasons: nature of work, elderness. . .etc. The study comes to conclusions. Patients believe in the piety & blessing of a therapist, as well as the good intention essential to the therapy. . .etc.

Lovekamp, William E. (Eastern Illinois University, Charleston, IL, USA, 61920 [tel: 217-581-6217; fax: 217-581-7067; e-mail: welovekamp@eiu.edu]), **Dissertation Trends in Disaster Research,** *International Sociological Association, Gothenburg, Sweden,*

¶ This research examines the development & growth of disaster research by analyzing all doctoral disaster-related dissertations in the social & behavioral sciences completed at Ph.D. granting institutions in North America & Europe since the first dissertation was completed by Samuel Henry Prince in 1920. Using the Dissertation Abstracts International database, I conducted an analysis of all available dissertations with specific focus on 1) growth of the field by the number of dissertations written, 2) the impact natural & technological disasters have on the number and type of dissertations, 3) the impact of major universities and research centers, & 4) disciplinary influences. This research sheds much light on the growth of the disaster research field within the social & behavioral sciences, to the extent that dissertations are a justified measure of growth. The evidence collected shows that while Sociology has historically produced the most dissertations, other disciplines are outpacing Sociology in recent years. Also, key academic institutions & hazards and disaster research centers have also clearly influenced growth. Finally, this research shows that large disasters such as Hurricane Katrina & 9/11 have provided researchers with prime opportunities to study within their respective fields.

Lövgen, Karin (ALC, Umeå university, Umeå university, 901 87 Umeå, Sweden [tel: +46 90 786 5508; e-mail: karin.lovgren@ddb.umu.se]), **Has Beauty No Age Limit? The Case of Dove's Advertising Aimed at the Older Consumer,** *International Sociological Association, Gothenburg, Sweden,*

¶ Advertisements for skin care products imply that it is important to look as young as possible. In this paper the case of Dove's campaign for real beauty & its claim that beauty has no age limit, is analysed. A narrative & visual analysis of the advertising campaign was conducted, using methods from semiotics and rhetoric's. The purpose was to understand how age, ageing and gender intersected & was appealed to in the campaign, & to explore possible ideological consequences of these advertisements. In the Dove campaign models that are in their fifties, the same age as the target group, were used. This is a change in the age categories otherwise represented within this advertising genre. Thereby one of the cornerstones in advertising is challenged: that women see themselves as younger than their chronological age. The copy for the products talks of beauty having no age limit, but also of how ageing diminishes beauty a thus the same message about the importance of looking young even though packaged differently. The interest in new, older than previously, consumer groups, emanates from estimates of their spending power. Addressing the older consumer entails changes in representation practices. The paradox of youth as a cultural ideal & targeting older consumers becomes evident.

Lowe, Joshua (Sociology, University of Warwick, Coventry, England. CV4 7AL [e-mail: j.s.lowe@warwick.ac.uk]), **The Idea of Progress: A Defense,** *International Sociological Association, Gothenburg, Sweden,*

¶ The mode of future-orientation contained in the modern concept of progress has come under attack. Echoing the earlier work of Karl Löwith & Eric Voegelin, but now in the face of the dangers posed by climate change, John Gray has argued that belief in progress is merely a modern chapter in the history of theology, & is not appropriate for the reality in which we live. I will examine the claim that the idea of progress is secularised theology, & the implications it has for the status of modern historical consciousness. I will argue that in its totalistic form the claim lacks plausibility, & that its significance for the present is greatly reduced by its genetic form, since it has little to say about a non-teleological and non-utopian concept of progress. The question of the appropriate temporal orientation for the historical & social sciences cannot be decided on the basis of a supposed derivation from Christian theology. Rather, I will suggest that the nature of our historical situation, & our capacity to recognise & address this situation, requires a progressive future-orientation.

Lowton, Karen & Higgs, Paul (King's College London, Institute of Gerontology, Strand, London, WC2R 2LS [tel: +44 (0)20 7848 2566; fax: +44 (0)20 7848 1800; e-mail: karen.lowton@kcl.ac.uk]), **'New' Ageing Populations, the Lifecourse and the Destabilisation of Modernist Healthcare,** *International Sociological Association, Gothenburg, Sweden,*

¶ By having influenced the nature of available treatments & the delivery of healthcare, developments in biomedicine & social attitudes have engendered a longer-term change regarding the significance of ageing in the configuration of healthcare professionals' work. Not only is the population ageing; the context of ageing is changing rapidly, as healthier cohorts experience an extended post-working life that echoes middle age rather than the infirmity & dependency of the past. Accompanying this "new" old age are the "new" ageing populations, made up of individuals with more complex health needs such as cystic fibrosis or Down's syndrome, who are living longer lives. As the lifecourse itself & its associated health needs become more complex, diverse new challenges & opportunities for different professional healthcare groups are brought about in its wake. For example, opportunities such as organ transplantation are afforded both to older people & those with increasingly complex conditions at levels unanticipated by modernist regimes of healthcare, & in so doing "destabilise" normative assumptions. Alongside this, later life becomes demarcated by the axes of the third & fourth ages, with chronological age ceasing to be the main criterion of healthcare responsibility or action. Health professionals are forced to abandon assumptions based on age norms & relate instead to a much more diverse set of patients. Herein lies a paradox as healthcare continues to be delineated along classical modernist lines, which assume that people follow a predictable lifecourse and where the organisation of biomedicine follows in tandem with its appropriate lifestage (e.g. maternity, paediatric & geriatric services). This transformation is rarely acknowledged in the study of health professions, where unreconstructed age ordering of healthcare needs is still assumed. This paper seeks to address this absence by relating this argument to two specific professional areas; cystic fibrosis & geriatric medicine.

Loyal, Steve ([e-mail: stevenloyal2002@yahoo.com]), **A Land of a Hundred Thousand Welcomes?,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper will examine processes involving ethnoracial domination in Ireland. Drawing on Elias's established outsider model and Bourdieu's theory of various capitals, it will look at the role that power, social cohesion, & interdependence play in shaping the relations between Irish nationals & immigrant outsiders. It will argue that although the division between both these binary categories is central, they are internally differentiated & that this differentiation inflects the modality or type of ethnoracial discrimination that immigrants in Ireland face.

2010S01578

Lu, Yu-Hsia (Institute of Sociology, Academia Sinica, Taipei,Taiwan,11529 [tel: 886-2-26525111; fax: 886-2-26525050; e-mail: luyh@gate.sinica.edu.tw]), **Family Survival Strategies and Boss's Wife's Status in Taiwanese Small Family Businesses,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the family's survival strategy and its impact on the gender relations in Taiwans small family businesses. Based on a survey of 302 small family businesses in various industries around the island of Taiwan, the results of the multivariate analysis suggest that bosses' wives' status is tied to family's economic strategies. That is, in response to institutional and structural barriers, as well as market competition, small Taiwanese family businesses have developed family-survival strategies rather than family-mobility strategies to maximize income. Through the use of the survival strategies, power relations and bosses' wives' decision- making power are determined by the demands of a family production system rather than reproduction system. The findings indicate that under the survival strategies, the bosses' wives in the less-institutionalized or female-skill concentrated enterprises tend to have greater say due to their indispensable role of "inside person" or their control of the key resources. The wives' personal resources such as educational attainment and capital contribution, however, are not being able to raise their decision-making power commensurably. The findings indicate further that the power relation in the domain of production unit tend to transfer to the domain of reproduction unit. Thus the survival economy of Taiwanese small businesses may provide a context in which wives become the indispensable "inside person" and further raise their status in the family organization as a whole. Therefore, through the operation of the survival strategies, the wives are possible to establish bargaining power and to go against patriarchal norms.

Lucas, Samuel R. & Szatrowksi, Alisa (Sociology Department, University of California-Berkeley, Berkeley, CA, 94720-1980, USA [e-mail: Lucas@demog.berkeley.edu]), **Assessing the Utility of Qualitative Case Analysis for Social Stratification Research: A Comparative Evaluation,** *International Sociological Association, Gothenburg, Sweden,*

¶ Comparative historical researchers have recently systematized Mill's methods in techniques called Qualitative Case Analysis (QCA) and Fuzzy-Set Qualitative Case Analysis (fsQCA). Social stratification analysts have estimated parameters to capture stratification processes, and, using those estimates, have investigated cross-national comparative questions. Thus, it would seem using both methods together could produce great gains to understanding, offering a theoretically coherent way to study macro- and micro-level questions Before we invest in this joint approach, however, it is worth exploring whether this line of work will deliver on this promise for stratification research. Stratification analysts have produced a great deal of knowledge concerning the operation of stratification systems. Will the use of QCA and/or fsQCA add to the store of knowledge? That is our question. To answer it we conduct multiple analyses that reveal what we may learn with & without the use of QCA & fsQCA. Collectively, these analyses reveal a great deal about the potential utility of QCA & fsQCA for cross-national research.

Luchtenberg, Sigrid & Flaschel, Peter (Department of Education, University of Duisburg - Essen, Essen, Germany, 45127, [tel: 49 521 123077; e-mail: sigrid.luchtenberg@uni-due.de]), **Labor Market Reforms, Education and the Role of Elites in Sustainable Flexicurity Societies,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper is based on a model of a flexicurity economy & considers labor markets with skilled, high-skilled labor & professional and political elites. The focus here is on an adequate educational system & the role of elites in such a society. We base the investigation of social sustainability on an educational sector by distinguishing between the general schooling system & tertiary education. We then discuss how adequate skill formation is made compatible with equal opportunities on primary / secondary schools and with the encouragement of talented students to develop their special talents for high-skilled employment or a if particularly successful -- towards responsibly behaving industrial & political elites in a competition-based democratic society. We show that the resulting new social structure of accumulation represents a variety of capitalism that is economically viable & also sustainable from a socio-economic point of view, in particular when based on the discussed educational structure & its implications for social cohesion.

Lucka, Daria (Institute of Sociology, Jagiellonian University, Krakow, Poland, 31-044 Grodzka 52 [tel: +48 606 789 767; e-mail: daria.lucka@uj.edu.pl]), **Revival of the Local Community: Utopia or the Vision for the Future?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Communitarianism is an intellectual approach & a social movement, which has been developing mostly in the United States since the 1980s. Locating itself between the traditional liberal and conservative approaches, communitarianism looks for a balance between what is individual, & what is communal; between individual freedom & social order. One of the basic concepts within communitarianism is a concept of community. Communitarians postulate its revival on different levels: family, local community, nation, etc. In my paper, I would like to focus on a local community, & analyze how its development & empowerment should be seen as a response to abstract forces of globalization. I will describe the social role of community for an individual identity and for the reconstruction of communal ties, as well as the urbanist aspect of community creation: how to build towns and villages, so they strengthen the community. Based on communitarian approach, I will also show that it is possible to "modernize" the understanding of community, & that a local community should play a significant role in the development of modern, industrial/post-industrial societies. Communitarians do not advocate for the re-creation of a traditional, closed, homogenous communities, imposing their views on their members. Their vision of a community assumes a combination of individualism & communal influences; in other words, the "revised" version of community fits into the requirements of modernity. The reflection on the feasibility of such a communitarian project will finish my paper.

2010S01582

Lue, Jen-Der (Department of Social welfare, National Chung Cheng University, 168 University Rd., Ming-Hsiung, Chia-Yi, Taiwan 621, R.O.C. [tel: +886-5-2720411#32111; fax: +886-5-2720810; e-mail: jlue@sw.ccu.edu.tw]), **The Future of Chinese Capitalism after the Financial Crisis: Institutional Continuity and Discontinuity,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the recent discussion about the impact of economic globalization upon the welfare regime among comparative political economy scientists, the "Varieties of Capitalism" (VOC) approach has aroused much attention & provoked many debates. Contrary to the viewpoints of globalization enthusiasts, this approach argues that the state still enjoys some policy autonomy to initiate necessary reforms to confront the challenge of economic globalization and international competition. This autonomy explains why there results in different policy output & outcome in different countries given they are located in the similar position of the world market. VOC approach argues that this policy autonomy is structured & has been made possible through the different institutional embeddeness (financial institution, industrial relation & social protection systems). This approach analyzed the institutional complementarities from the perspective of production regimes. Certain production regimes enable some actors to be facilitated with better policy learning capacity & incentive to cooperate and initiate some reform programs together, whereas some induce the actors to take confrontation strategies & block the necessary restructuring reform to copy with the economic globalization. This paper aims to compare labor & social policy reform of a rising giant economy: China. This study makes it possible to test to what extend the thesis of "Varieties of Capitalism" approach could be applied to Chinese cases. Finally, this approach allows us to depict the blueprint of East-Asian welfare capitalism & to explore the possible linkages between social protection system and other economic institutions. Particularly, this paper aims to approach the social protection dimension of China's state-owned enterprises (SOEs) reform. Facing the fierce challenges of entering the WTO & the rise of domestic private enterprises sector, the traditional monopoly status of the SOEs in the closed economy has been eroded since 1978 & demands a profound structural reform. The PRC initiates some reform options for the SOEs including: bankruptcy, merger, auditing & sales, "corporatization." This research concentrates on the linkage of social protection reform and the SOEs reform. This topic is deeply related with the establishment of a liberal mobilized labor market, which functions as a successful prerequisite of China's transition to liberal market economy. In additional to this economic consideration, the political costs result from the reconstruction of SOEs should also be analyzed. The social protection systems have been set out to tackle the mass unemployment & inequality problems arising from reconstructing the SOEs. This case study aims to evaluate the policy effects of the established social protection systems to the structural reform of SOEs. The implementation problems will also be analyzed. Key words: Financial Crisis, China, Reform of State-owned Enterprise, Danwei welfare, Social Protection, Labor Market

Lukasiewicz, Karolina (Institute of Sociology, Jagiellonian University, ul.Grodzka 52, 31-044, Kraków [tel: +48 12 422 21 29; fax: +48 12 430 20 99; e-mail: karolina.lukasiewicz@uj.edu.pl]), **'Protected' Refugees a Chechens Integrated? On Adaptation Process of Chechen Refugees to Polish Society,** *International Sociological Association, Gothenburg, Sweden,*

¶ "I have lived in Lomza for 6 years, but I feel Lomzynianka. I wear veil, I speak different language, but my home is here"–explained in a local TV Malika, a Checehn refugee who lives in a small Polish town called Lomza. Malika as a leader of Chechen community in Lomza took part in a TV programme on Chechens in Lomza. Before the programme was shot two Chechen women were beaten up by some young Pole. The accident proceeded an announcement of an MP for the Lomza district, that there were too many Chechens in Lomza & they should move out. It has been ten years since Chechen refugees, particularly victims of II Chechen war, started their forced migration to Poland on a large scale. Chechens constitute more than 90% of refugees in Poland. Still, every year roughly 6,000 Chechens apply to be granted a refugee status. Less than 10% are granted that status while the rest is being granted "tolerated stay" permits & subsidiary protection. It often happens that during the procedure many of the applicants migrate illegally to Western Europe because of better protection offered by the countries. They are often returned to Poland, according to Dublin II regulations. In Poland a situation of protected refugees who live in refugee centers is very difficult. Just recently a group of 200 Chechens have tried to get illegally to Strasburg in order to protest against bad living conditions in refugee centers as well as delays in asylum procedures. Usually after one or two years the asylum procedure is finished & after one additional year of integration programs refugees are supposed to integrate & live on their own. At this point the system obviously fails. People are left alone unadaptated with Polish society & their situation is not monitored by any institution. The goal of my presentation is to show my research result on adaptation process of Chechen refugees in Poland. I look at the adaptation process from a broader perspective, not only when refugees are being "protected" by the state, but also after the "protection" ends. The theoretical basis for my study was founded on Grounded Theory. Qualitative data was collected through forty in-depth interviews with Chechen migrants. The data was next computer assisted analyzed. Analysis focused on the adaptation process. In the process of analysis the transnational theory appeared to be useful description. I looked at three dimensions of adaptation process, i.e. "enhanced bifocality" of outlooks underpinning migrants lives lived here and there; heightened challenges to "identities-borders-orders" stemming from immigrants political affiliation in more than one nation-state; & impacts on economic developments by way of the sheer scale & evolving means of remittance sending (Vertovec, 2004:1). All the three dimensions reflected a significant change in Chechen refugees' live while adapting to host societies.

Luna, Matilde & Velasco, José Luis (Instituto de Investigaciones Sociales, Universidad Nacional Autónoma de México, Circuito Mario de la Cueva, Ciudad Universitaria, Delegación Coyoacán, 04510 D.F. MEXICO [tel: +52-55-56227400 Ext. 251; e-mail: mluna@unam.mx]), **Business and Civil Society: Representation, Legitimacy, and Efficacy in Complex Associative Systems,** *International Sociological Association, Gothenburg, Sweden,*

¶ Complex associative systems (CAS) such as governance structures or hybrids, often involve interactions between business & civil society organizations. Relevant cases include some coordinating structures in the field of development, some policy & issue networks, & problem-solving structures dealing with major political or economic crises. In this paper we analyze the problems of legitimacy & efficacy of these complex entities. We focus on the problem of representation. We follow a methodological strategy of "parallel demonstration of theory" & a maximum variation criterion for selecting our cases. These include three types of coordinating bodies where business & civil society organizations meet as major participants. We analyze the composition and integration of such bodies, trying to answer two main questions: What is the meaning of representation & representing within these complex systems? What standards should their coordinating bodies reach in order to be legitimate & efficacious? Our main claims are that two meanings of representation are particularly relevant for complex systems: descriptive or sociological representation and representation as advocacy; & that the good performance of CAS requires that the integration of their coordinating bodies comply with several standards: the similarity, the adversary, the pertinence, the proportionality, & the neutrality principles.

Lund, Anna (School of Social Sciences, Linnaeus University, SE-351 95 Vaxjo, Sweden [tel: +46 470 708000; e-mail: anna.

lund@lnu.se]), **Professionalization by Questioning Historically Dominating Ideals,** *International Sociological Association, Gothenburg, Sweden,*

¶ In recent years, gender awareness has become an important question for the dramatic arts in Sweden. This process has occurred in part through political intervention by the state, but feminist social movements, cultural journalists & drama students have also played important roles. This paper looks into the dynamics of the ways that notions of professionalism can be renegotiated when issues of gender awareness are brought to life in the artistic sphere. When artists reject ideas of originality & subjectivity, & instead understand their own work & the work of others as gender-constructed, what effects does it have on artists' professional lives & on professional authority? Through ethnographic observations & interviews with instructors and students at the Academies of Dramatic Arts from 2007 through 2009 I collected materials focusing on a specific pedagogical & artistic project, Staging gender. The theoretical perspective of the paper addresses the intersection of cultural sociology & the sociology of professions in order to explain how changes to social boundaries affect professional authority. My findings show that when gender awareness becomes an integrated part of the meaning structures carried by instructors & drama students, academics in the drama schools are strengthened & professional authority is renegotiated. The paper contributes to the discussion on how changes of authority of professional expertise occur, as well as the effects of this renegotiation on a specific professional group.

Lundquist, Helena Maria (Department of Sociology Uppsala Universitet [fax:; e-mail: helena.lundquist@soc.uu.se]), **Reclaim Participation: Alcohol, Drugs and Emotional Alienation– The Play and Interplay in Socialization and Social Interaction,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this study is, applying a social psychology framework, to understand the underlying mechanisms of alcohol and drug dependence. A further aim is to thoroughly examine the resocialization process necessary for long lasting sobriety. In an effort to identify further insights into the problem, the study has been isolated from traditional (external) explanatory variables such as an upbringing in a socially distorted context as well as (internal) variables like genetics. All the informants report a transition from primary to secondary socialization characterized by severe emotional crises. These crises are never satisfactory resolved, resulting in deficiencies in the interaction with others and, subsequently, a flawed socialization process. The individual, painfully experiencing her inability to interact frictionless, starts perceiving herself as an outsider. In an attempt to cope with the feeling of non-participation, she assumes an identity of self-chosen alienation. Furthermore, the interaction process, perceived by the individual as an ever present threat, is greatly facilitated by the use of alcohol & drugs. In this sense, alcohol and drugs become essential catalysts for further social interaction. Following sobriety, there is a substantial imbalance between the individuals' age, her self-perception & the status of the socialization process. Hence, a compressed resocialization process is a prerequisite for a sustainable sobriety.

2010S01587

Lundström, Catrin (Umeå Centre for Gender Studies, Umeå University, Umeå, Sweden, 901 87 [tel: +46(0)907866916; fax: +46(0)907869710; e-mail: catrin.lundstrom@ucgs.umu.se]), **"I Didn't Come Here to Clean My House": Racialized Division of Domestic Work in Swedish Transnational Migration to Singapore,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines Swedish migrant women, travelling from Sweden to Singapore as "expatriate wives" in the wake of their Swedish husbands. By highlighting Swedes as migrants, the paper analyzes dimensions of privilege in migration & the multiple ways in which processes of globalization & transnationalism creates cross-cutting structures among migrant women. The study is based on 13 in-depth interviews with Swedish expat women & one month field work in the Swedish community in Singapore, discussing the womens' understandings of (domestic) work & particularly the use of domestic workers in the Singaporean context, a practice still scarce in Sweden. In these circumstances, the paper asks how Swedish women navigate gendered & racialized divisions of domestic work & further negotiate their altered identities as both housewives & employers. How do Swedish women rationalize the (new) division of labour in relation to (old) Swedish national ideologies of work & ideals of gender & class equality, from their positions as expatriate wives? These inquiries highlight practices & relations in white transnational migration, created through intersecting discourses of difference, & raises questions around who is expected to do what, & how identities are re-constructed around the privilege of not having to do.

2010S01588

Luomanen, Jari (Department of Social Studies, University of Tampere, 33014 Tampere [tel: +358 50 330 7023; e-mail: jari.luomanen@uta.fi]), **The Moralities, Justifications and Discursive Work Related to Purchasing a Digital SLR Camera,** *International Sociological Association, Gothenburg, Sweden,*

¶ Digital cameras have become commonplace during the last ten years. Digital single lens reflex (SLR) cameras offer the possibility of using interchangeable lenses & promise better image quality than compact cameras. This study explores the digital SLR purchase as an example of upgrading to & investing in premium technology. The moralities, justifications & the overall body of discoursive work related to the purchasing decision will be studied. The SLR camera is an interesting case as it is (for most buyers) related to leisure experience & the purchase decision stimulates verbal displays that concern aesthetics, art, user skills, technical quality, leisure experience & other issues concerning "needs" and "wants" that are debated & justified. Theoretically this study is related to the sociological studies of technology and domestication of technology as well as studies of leisure. The data will be obtained by means of Internet Ethnography & interviews. Online discussions related to the topic will be analysed and interviews will be carried out as well. Social constructionist approach to understanding the data will be adopted & discourse analysis used as the method. The results will contribute to our understanding of leisure & the domestication of new & emerging technology.

2010S01589

Lusinska, Izabela Grabowska & Engbersen, Godfried (Warsaw School of Social Sciences and Humanities, Warsaw, Chodakowska 19/31, Poland, 03-287 [tel: +48 22 5179904; fax: +48 22 5179926; e-mail: igrabowskaULlusinska@wp.pl]), **Long-Lasting Temporariness of Foreign Workers in European Societies,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper is going to argue that after EU enlargements temporary migration has been extended into "long-lasting temporariness" which has been started to be called "liquid migration" (Bauman 2005; Engbersen et al. forthcoming). It is a "post-accession phenomenon" that is made possible by open borders. Liquidity of post-accession migration has been initially recognized as a specific pattern generated mostly by free movement of labor, but also by changing demographic patterns especially those connected to the life cycle & people's life attitudes translated to more single & individualistic life approaches, loosened connections to family & family tradition & to a household. Herewith, the paper will operationalise this "liquid pattern" as a new pattern of temporary, circular migration. Among variables to be discussed are: type of settlement, type of migration, migration status, destination countries, family responsibilities & migration habitus but also in a version orientated to the labor market: destination, job status, job profile & job content (and occupational mobility) & duration of stay or rather continuity of stay. We will make use of contemporary research on East-West migration in Poland, the UK & the Netherlands to offer an empirical foundation to the notion of liquid migration.

2010S01590

Lynch, Paul, A & Blaxter, Elaine (Department of Management,, University of Strathclyde, Glasgow, Scotland [e-mail: paul.lynch@strath.ac.uk]), **Journal Quality Grading: A Bourdieuian Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ A critical examination is undertaken of United Kingdom journal ranking lists in business & management in relation to "peripheral" industry-facing subjects using hospitality & tourism as an exemplar, with particular focus upon methodological & social construction processes. The paper adds to limited critical literature by contributing to recognising the power structures and contested nature of power underlying list creation. Lists contribute to discourse construction in the workplace & the wider academic community bringing many organisational & managerial benefits. However, in terms of Bourdieu, analysis suggests they also reflect symbolic violence & bad faith, & raise questions of transparency & integrity, as well as generating criticisms in respect of their reliability & validity. Theoretical issues are debated & practical recommendations are made in order to raise the standards of list construction.

Lytkina, Ekaterina (MGIMO-University, Moscow, Russia, 119454 [tel: +7 903 104 14 63; e-mail: lidakatya@gmail.com]),

'Anomia'–A Possible Catalyst for Societal Chaos?, *International Sociological Association, Gothenburg, Sweden,*

¶ The proposed paper attempts to rework the classical sociological concept of "anomie" in the light of recent developments in theories of social systems. It is argued that the concept, formulated by Emile Durkheim at the dawn of sociological theory, can be fruitfully applied to studying societal responses to current worldwide crisis. Robert Merton, drawing on the notion introduced by Leo Srole, distinguished between "anomia", an individual psychological, or mental, condition,and "anomie", a structural condition of weakening values, norms & sanctions. In Merton's treatment, "anomia" was a consequence of societal condition, thus causally following "anomie". However, a reverse sequence is also conceivable whereby "anomia" is followed by wider societal "anomie". This sequence may be recast in terms of non-linear systems analysis. If society is seen as a constellation (or, after Gilles Deleuze & Manuel DeLanda, assemblage) of "complex adaptive systems" existing in local equilibria states in a world of chaos, then a small fluctuation at a bifurcation point can throw the constellation in a state of widespread chaos & imbalance. Accumulated "anomia" in this scheme can be precisely this kind of catalyst setting off transformation & emergence of "anomic" state of society. Using insights from classical sociological treatments of "anomie" allows accounting for variations in functioning of adaptive mechanisms. Particularly, it is argued that the chaotic state of society is a consequence of "rebellion" whereby a multitude (though not necessarily a collectivity) of people manifest negation of the existing society & societal ordering. This framework is applied in comparative analysis of media discourses of crisis in Russian & German mass media as the rhetoric of "economic crisis" works as a context in which "anomia", normally shadowed by rhetoric of "prosperity", "growth" & "stability", suddenly obtains a channel for surfacing. Mass media channelling of "anomie" & "crisis" discourses forms the possible catalytic factor facilitating wider societal chaos. This process functions differentially in an established European society (Germany) & in a transformational postsocialist society with a recent history of crises and "totalizing crisis rhetoric" (Russia).

Maass, Margarita (UNAM -CEIICH Labcomplex, Torre II de Humanidades 6o piso Delegación Coyoacán, 04510, México D.F. [tel: 525556230449; fax: 525556162988; e-mail: maass@labcomplex.net]), **Codex-Books of the XVIth Century Analysed as a Complex System,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is part of a big project named "The book as a cultural object". It is related with the processes of knowledge construction: equilibration, des-equilibration & re-equilibration processes, & cognitive restructuring mind. The paper will try to show, an important part of the theoretical work of Jean Piaget and Rolando Garcia, with a particular & empirical example. I will talk about prehispanic codex as a study object, & understand them as a "cognitive complex" because this is a complex system. I begin with some main ideas: 1) One of the most important moments in Mexican history was in 1519, when two social groups were found in between: on one hand, Central highland Indians of Mexico Tenochtitlan, & on the other hand, the Spanish, who came with Herman Cortés from the "ancient continent". 2) I will present the topic of Production & Distribution of Books and sixteenth-century manuscript, considered as a cultural object and as a condenser of culture, whose historical evolution converging social, economic, political & technologically. 3) We know that reading & writing are & always have been cultural practices, cognitive processes & structural elements of the symbolic dimension in all cultures. 4) I assume that these books not only represent the group culture, but also provide a creative interaction with it. If we analyze the basic elements we can find and to show evidences of cognitive change in indigenous & Spanish mind during the first years of their meeting in America. Then, in this paper I will propose study this social fact as a complex system & as a cognitive complex. I will analyze it thru "Mendocino" prehispanic codex in order to understand the complexity of this moment.

Macdonald, Gillian (School for Policy Studies, University of Bristol, Bristol, BS8 1TZ [e-mail: gillian.macdonald@bristol.ac.uk]), **Domestic Violence, Children's Voices and Child Contact: Exploring Cafcass Section 7 Reports in England.,** *International Sociological Association, Gothenburg, Sweden,*

¶ The issue of domestic violence has increasingly come under scrutiny in Private Family Court Proceedings in the UK. Research & government inspections have repeatedly highlighted concerns regarding how domestic violence is taken into consideration in family court processes. Furthermore, the issue of children's involvement in decision-making that affects them is a key development in many areas in the UK, largely resultant from a paradigmatic shift in sociological thinking regarding "children" & "childhood", and the development of a children's rights discourse over the last two decades. However, there is virtually no empirical research regarding children's inclusion in private family court processes in domestic violence cases. This presentation is based on doctoral research which explored how & to what extent issues of domestic violence (DV) & the representation of children's voices (CV) were included in a sample of Cafcass Section 7 welfare reports featuring DV allegations. In particular, the thesis explored how "domestic violence" & "children's voices" discourses interacted & were affected by other apparent discourses relating to Cafcass professional roles & to dominant beliefs about child welfare and contact. How & to what extent different discourses impacted on report recommendations was analysed using principles of Critical Discourse Analysis. The key findings of this analysis will be explored in the presentation.

Machado, Jorge (School of Arts, Sciences and Humanities, University of São Paulo, São Paulo, Brazil [tel: 11 65017290; e-mail: machado@usp.br]), **"Open" or "Half-Open" Access?: Re-Thinking Open Access Initiative (OAI) Policies,** *International Sociological Association, Gothenburg, Sweden,*

¶ The debate on the issue of open access to scientific publications has a milestone the 2002 Budapest Open Access Initiative, (BOAI), a document which laid the groundwork for the Open Access Initiative (OAI). The first aim of this paper is to discuss & analyze critically the limitations of the concepts of "open access" of the OAI movement & consequently their policies. Presenting empirical data & evidence, this paper shows how inadequate and insufficient are these concepts in order to overcome the barriers to a broader view on the promotion of access to knowledge. The second aim of this paper is to propose new approaches to promote the public interest considering a) the intense public funding for scientific research, b) the different forms of output of academic research, c) & the relation of open access with other types of content, also affected by the Information & Communication Technologies (ICTs).

Machado, Nora (CIES/ISCTE, Lisbon, Portugal, 1649-026 [tel: +46 708247050; fax: +351 217 940 074; e-mail: noramachado@gmail.com]), **Death Governance: Continuities in Studies of Discretionary Death,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper analyzes the emergence of new forms of governance and regulation of end-of-life procedures, these characterized as discretionary regarding the place, manner & timing of death. These new forms of governance entail a significant departure from traditional patient/physician relation, & one where several individual & collective actors become relevant: not only the patient herself entitled with increased agency, but also the next-of-kin, several health care & legal experts. Governance forms concerning end-of-life decisions thus vary within different organizational locations, depending on how dying is expected, perceived & managed, with significant differences between a pediatric intensive care unit & a nursing home for elderly ill patients for example. Thus, this shift entails new decision-making constellations, with new actors involved in critical decisions, decisions that until a few years were to a large extent in the hands of the medical profession (and religious authorities before that). Discretionary forms of governance are also linked to the realignment of much individual & collective responsibility, the emergence of new professional & lay ethical discourses, and collective forms of decision-making concerning acceptable forms (for all involved) of dying. In this way, the increasingly discretionary character of end-of-life situations & the shift of agency towards extra-medical actors such as patient and next-of-kin, implies a refocusing of the value of "life" and personhood.

Machat, Laura (National Institute for the Study of Ageing and Later Life, Linköping University, 60174 Norrköping, Sweden [tel: +4611363323; e-mail: laura.machat@liu.se]), **Ageless Ethnic Identifications? Exploring the Potentials of Combining Identity Research in Ethnic Studies with Gerontology,** *International Sociological Association, Gothenburg, Sweden,*

¶ Research on identity & ethnicity in the context of migration commonly addresses questions of belonging, being-in-between-cultures, hybridism, diasporic identity, adaptation & integration. These focuses could inadvertently render our understanding of migrants ageless. The demographic trend towards ageing societies & the fact that many are growing old in

countries other than the one where they were born suggests that old age may be a fruitful point of departure for the study of identity and ethnicity. This paper will explore the potential fruitfulness embedded in identity research in ageing & later life for the study of identification from the standpoint of ethnicity. Three areas of gerontological research, namely the life course (with transitions), age norms & the body, will be at the focus of this exploration. These perspectives on identities in ageing & later life may prove fruitful for our understanding of identity and identification in relation to ethnicity & migration. It will be proposed that employing an old age lens in ethnicity & identity research thus could prove theoretically profuse. Bringing together these two fields of identity research is thereby suggested to have potential for advancing our understanding of processes of identification & for enabling us to begin to understand the theoretical connections between ethnicity & age.

Machimura, Takashi (Graduate School of Social Sciences, Hitotsubashi University, Kunitachi, Tokyo, Japan, 186-8601 [tel: 81 42 580 8642; e-mail: cs00035@srv.cc.hit-u.ac.jp]), **Neoliberal Developmentalism and/or its Beyond? Political Regime Shift and its Urban Meaning in Post-growth Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recent financial crisis, directly and/or indirectly, caused not only economic but also political changes in many countries & regions, which may include the result of U.S. Presidential election. Japan also experienced political regime shift after the LDP (Liberal Democratic Party), a ruling conservative party since 1955, lost in the 2009 election against the DPJ (Democratic Party of Japan). This transition was accelerated, certainly, by recent growing dualism in labor market under the crisis, particularly within manufacturing sectors & among the youth. Yet, at the same time, the author believe that this change would be reluctant but unavoidable responses to the limit of state-guided developmentalism, the coming of ageing & population-decreasing society, & more competitive situations in globalizing East Asia. This paper investigate how the new government tries to bring the actively- regulating state again into neoliberal & global context, particularly focusing on its urban roots, manifestations, & consequences. Currently the dividing lines are redrawn among the state, market, & the third sector, mostly based on the idea of neoliberal developmentalism, in the field of urban service provisions & urban regeneration.

Machin, Rosana (Federal University of São Paulo/Brazil, Santos/São Paulo-Brazil/11060-001 [tel: +551332218058; fax: +551332326348; e-mail: rosana.machin@gmail.com]), **Neither Disease, nor Vulnerability: Stigma's Construction in Cases of Self-Inflected Acts in Emergencies,** *International Sociological Association, Gothenburg, Sweden,*

¶ This presentation focuses on concepts & practices of health professionals relative to service provision in cases classified as self-inflicted acts (attempts of suicide, abortion, alcohol, drugs or medication abuse) in emergency rooms, challenging the hiatus between their professional education, which is based on the biomedical model, & their work practices in which one can see stances that are not taken into account in biomedicine. The empirical reference of the research is a public emergency hospital in the city of Sao Paulo/Brazil. Qualitative in nature, the study was carried out by means observing services, medical records analyses & interviews with health professionals. An act identified & classified by health professionals as being self-inflicted bears implications on the service provided, since it is perceived as an option, a choice made by the subject for morally reproachable attitudes a pattern of deviant behavior or "poor willpower". These actions also place some notions of life management that are inherent to the education of professionals a such as saving lives - into a different perspective. Thus, the care given in the case of self-inflicted harmful actions is challenged; the subject is stigmatized, since it is not the case of dealing with a victim or someone who is sick. In this context, the ailment is perceived as a fatality, & accident (even if it is a genetic one), despite the fact that the subject's attitudes & practices are increasingly referred to as responsible for their health condition. The intentionality that is manifested by these actions shakes the notion of care that is to be provided to a vulnerable, fragile being. In these contexts, care is often replaced by care denial or by actions that aim at inflicting suffering & pain, or even at punishing the end-users.

Maciel, Carolina Toschi (Social Science, Wageningen University, Wageningen, The Netherlands, 6706 KN [tel: + 31 317 485849; e-mail: carolinatoschi@yahoo.com.br]), **Retailer's standards on farm animal welfare: a preliminary analysis,** *International Sociological Association, Gothenburg, Sweden,*

¶ The applicability of European animal welfare standards to non-European countries is constrained by other countries sovereignty & by international trade law. This reality led to alternative market-driven initiatives. In contrast to public standards that are legally restricted to the European territory, private standards have been applied in the territories of third countries that supply the European market. However, these commercial standards, established by private companies without direct involvement of governments are of great concern for a majority of members of the World Trade Organization & the World Organization for Animal Health (OIE). The argument is that private standards lack legitimacy, transparency & scientific justification. The aim of this paper is to deepen study on private standards addressing animal welfare in the context of international trade. The objective is to offer a critical assessment of some controversies regarding European retailer's requirements for imported products of animal origin. The paper will pursue its objectives by analyzing international legal documents & reviewing literature about private standards & transnational governance.

Maciel, Diana (CIES/ISCTE, Edifício ISCTE, Av. das Forças Armadas, 1649-026 Lisboa [tel: +351 217 903 077 or +351 217 941 404; fax: +351 217 940 074; e-mail: maciel.diana@gmail.com]), **'Living in Couple in Portuguese Families and the (Re)Construction of Individuals' Identity,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is about living in couple in Portuguese families, & seeks to analyse the importance of conjugal relationships to individuals, how they perceive conjugality in its best & worst moments & its influence in their identity construction. Since modernity, profound transformations occurred in contemporary society, like individualization, reflexivity & importance of love and meaningful relationships for the individual. Those cultural transformations contributed to social transformations, like reduced number of marriages, increased number of cohabitation, higher rate of divorces & lower number of children per marriage. These cultural & social transformations changed conjugalities. To have a relationship is no longer being married during a lifetime, perceived as a status & a sacrifice of individuals' personal identity for the sake of family well-being. Nowadays, having a conjugal relationship is being linked by love & passion to a person, with whom the individual wants to share his life, while preserving his self identity, in spite of influences in the construction & reconstruction of himself. It's in this relation between living the love & preserving the individual personal identity that lays conjugality, its problems & ambiguities. The results presented are based on in-depth interviews (83 heterosexual couples, interviewed separately, with at least one child, in total of 166 individuals) done in Lisbon (72), Porto (54) & Leiria (40), to individuals living in couple, at different moments of their life cycle & with different social backgrounds. We will try to answer some central questions: How individuals see their conjugal relationship, since the moment they decided to live together & what were the best & worst moments? What changes the conjugality brought to the individual? How conflicts are managed within relationship? And what are the changes they wish to occur in their relationship in the future? Answering these questions we have identified a double trend or two different ways of perceiving and feeling the conjugal relationship. First, the feeling of living in loved & feeling the love, in which each individual share ideas and concerns, & life in itself, leading to a fulfilment of the self. The second, the perception of the relationship as a struggle or a conflict, an overburden of work & responsibilities, this leads to an identity reconstruction in the sense of a more nervous and depressed individual.

Maciel, Tania & Alves, Monalisa (Universidade Federal do Rio de Janeiro, Av. Pasteur 250, Urca, Rio de janeiro [tel: 00552122559722; e-mail: taniabm@gmail.com]), **Sustainability and Leisure,** *International Sociological Association, Gothenburg, Sweden,*

¶ The axis of research on Community, Environment, Development & Social Inclusion at the EICOS Program a Interdisciplinary Program of Communities & Social Ecology at the Federal University of Rio de Janeiro is designed for deepening the concept of Social Ecology in the sense of a human sustainability. To reach a sustainable human development, quality of life must be supported by a network of social links and relationships in which leisure exerts a fundamental role. The search for development should consider social & cultural aspects, motivate the construction of solidarity connections, thus contributing to promote life quality & endogenous development. Human beings must be at the center of the process, thus

contributing to the establishment of the ethical dimension. The Project of Social Mobilization - Community Participation, inserted in the Program for the Cleaning of Guanabara Bay - Rio de Janeiro, sought to improve local communities' cultural & ecological development through the preservation & conservation of environmental resources. This project, although not reaching everybody evenly, enhanced participation, making actors responsible for community projects. New public policies indicate the retaking of this project, & it must be associated to an interdisciplinary glance, where governance can be represented in local actors' participation.

2010S01602

Maciel, Tania & Machado, Carmen (Universidade Federtal do Rio de Janeiro, Av. Atlantica 2038 [tel: +55 21 22557722; e-mail: taniabm@gmail.com]), **Sustainability: A Case of Study,** *International Sociological Association, Gothenburg, Sweden,*

¶ The economic alternatives & the proposed technological solutions to solve environmental problems do not always apply, making it difficult the simple application of preconceived methodologies. The investment proposal for humanizing cities calls for individuals to optimize transportation methods, recycle waste, keep rivers clean, and other practices compatible with current environmental demands. These attempts have required efforts demanding investments in education & environmental conservation. As a consequence, a plan called Project for Social Mobilization- Community Participation was developed as part of the Guanabara Bay Decontamination Program, involving the state's surrounding communities. The project is designed to encourage communities to develop responsible attitudes in the face of environmental demands, aiming the preservation and conservation of environmental resources & the development of cultural & ecological communities. The results have not reached everyone equally, however, the community became a responsible participant in neighborhood development projects due to the consolidation of social ties between associations & local leaders. The development of public policies focused on environmental issues brings about an intention to restart the project with a new look, where governance can actually be represented by the participation of local actors so as to assure the local stakeholders their role as decision makers.

Mackie, Peter, K (School of City and Regional Planning, Cardiff University [tel: +44 2920 876223; e-mail: MackieP@cardiff.ac.uk]), **Spaces of sustainable trade? Street food in Latin America,** *International Sociological Association, Gothenburg, Sweden,*

¶ For decades researchers have sought to describe the spatio-temporal patterns of informal food trading in developing areas, whilst also examining the tensions that exist with urban planning processes. More recently, it has been argued that these tensions have led to a gentrification of trading activity & the traders themselves in urban areas. However, informal food traders continue to challenge the urban planning process in an attempt to sustain their livelihoods & their identities. In this changing & contested retail environment, the author explores the sustainability of informal food trading in the city of Cusco, Peru. By focussing on the informal trader & their resilience to planning interventions, the paper provides a rare sociological perspective on sustainable food trade.

MacNeill, Margaret, Hayhurst, Lyndsay & Frisby, Wendy (Faculty of PE and Health, University of Toronto, Toronto, ON, Canada, M5S 2W6 [tel: 416-978-0598; e-mail: margaret.macneill@utoronto.ca]), **Postcolonialism, Sport and the 'Girl Effect',** *International Sociological Association, Gothenburg, Sweden,*

¶ International development scholars contend girls are increasingly viewed "as active agents of change; the dynamic promoters of social transformation that can alter the lives of both women & men" (Sen 2000: 189). The "Girl Effect", the promise of girls to lessen the dire consequences of poverty & be agents of sustainable development, has led to interest in sport for development interventions that target girls in the Two-Thirds World by the private sector, governments & non-governmental organizations. We argue that sport does have a potential role to play in promoting health & other benefits while lessening power imbalances, but only if the problems associated with it are not imported from the One-Third World in a colonizing manner. In this paper, we illustrate the value of postcolonial feminism through a case study of the Go Sisters initiative in Zambia. Postcolonial feminism is concerned with both the recent impacts of global capitalism, the historical effects of different forms of patriarchy and colonization, & how all of this affects lived experiences (McEwan 2009; Mohanty 2003). We offer suggestions for envisioning decolonizing approaches to sport research, knowledge production, and international development policy making & practice.

2010S01605

Macnicol, John S. (Department of Social Policy, London School of Economics, Houghton Street, London WC2A 2AE [e-mail: J.Macnicol@lse.ac.uk]), **Anti-Ageism and the Neoliberalisation of Old Age,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since the early 1970s, there has been an increasing emphasis in western societies on the enhancement of individual rights via legislative action against discrimination in social relations & attitudes as well as in access to employment. In the UK, this has recently intensified via New Labour's 'equality agenda'. Part of this process has involved a rediscovery of ageism in social relations & attitudes & of age discrimination in employment. (both of which actually have a long history). This increasing emphasis on human rights has occurred alongside the rise of a neoliberal political & economic culture, characterised by policies to expand labour supply, competitive individualism, widening income inequality, the growth of low-paid insecure employment & attacks on welfare rights in general & on those of older people in particular (most notably, via the raising of state pension ages). What we may be witnessing, therefore, is a reincarnation of nineteenth century ideas that welfare categories should be abolished & all citizens should seek support through paid employment & private welfare via individual savings–a strategy that has been increasingly argued by neoliberals since the transformation of western economies that began in the 1970s. A proper understanding of the meanings of ageism, therefore, must recognise that its recent rediscovery is built upon foundations that are dualistic & contradictory. This paper will explore these contradictions inherent in the modern meanings of ageism.

2010S01606

Maddison, Sarah (Indigenous Policy and Dialogue Research Unit, University of New South Wales, Social Policy Research Centre, G2, UNSW, 2052, Australia [tel: + 61 2 93852380; e-mail: sarah.maddison@unsw.edu.au]), **Beyond White Guilt: Rethinking Black-White Relations in Australia,** *International Sociological Association, Gothenburg, Sweden,*

¶ The deep injustices inherent to Australia's racialised colonial history provide many non-Indigenous Australians with a source of guilt. Some turn this guilt inwards, leaving them paralysed and helpless to address the contemporary manifestations of our history. Others turn this guilt outwards, expressing anger at this country's original inhabitants for their failure to grasp the opportunities that colonisation has brought. Since colonisation, the dominant response to Australia's original inhabitants has ranged from hostility to fear, & from curiosity to ambivalence, tempered at times by compassion, & eventually governed by frustration. Governments have reflected these changes in public sentiment through policy that has in turn sought to obliterate or assimilate Australia's Indigenous peoples. Perhaps unsurprisingly, none of these responses has been effective in bridging the gulf between those who were here first & those who have come later. Repeated failures in this regard, accompanied by a pattern of heavy-handed interventions in Indigenous lives, demonstrate our fundamental failure to adapt. This paper explores the ways in which Australian guilt about the past leaves the relationship between non-Indigenous and Indigenous Australia profoundly "stuck". Resolving this tension remains a matter of pressing national significance, but to do so will necessitate a radical rethinking of Black-White relations & a resolution of white guilt.

2010S01607

Madeira, Cláudia (ICS -UL, Av. Professor Aníbal de Bettencourt, 9, 1600-189 LISBOA, PORTUGAL [tel: 00351-217 804 700 ; fax: 00351-217 940 274; e-mail: claudia.madeira@ics.ul.pt]), **Transdisciplinary Art. Un+programmed Art?,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the early years of the 21st century, the Portuguese system of performative arts has been characterised by the enlargement of two areas: the cultural programming, & the transdisciplinary or hybrid arts. Nowadays, the correlation between these two areas is particularly blatant in the "laboratorial" cultural programming, where two organisational movements, apparently contradictory emerge: 1) an organisational movement of rationalisation, of programming that allows: to organise artistic projects by themes, by types of creation processes, etc., as well as the internationalisation of programming & artistic meetings, making possible the artistic dissemination in international circuits through affinity networks; 2) a programmatic & artistic movement that is disruptive with regard to an excessive rationalisation, transmitted by the own laboratorial specificity

of this programming, which sometimes aims for an artistic "un+programming", in a wider sense. Some of these "un+programming" cases include as a centre point the discussion of the very systems of cultural organisation of societies, so they can be read, in this sense, as processes of (searching for) social intervention through art. In order to discuss this double movement of "un+programming" we will analyse three different cases from the Portuguese situation.

2010S01608

Madeira, Lígia (UFRGS, Porto Alegre - Rs - Brazil [tel: 55 51 33310341; fax:; e-mail: ligia.madeira@ibest.com.br]), **Inconclusive Citizenship in Brazil: The Formal Attainment of Rights and the Operation of Brazilian Penal System,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is about the operation of the Brazilian system of criminal justice, the criminal politics & the distance between the legal precepts & the actual actions of operators, specially focusing the problem of the Brazilian penitentiary system & its constant human rights violations, with the analysis on the building of civil rights & liberties as a background scene, tackling its relation with the attainment of an inconclusive citizenship, legally including civil, political & social rights not yet consolidated effectively. This work intends to briefly gather historical information on the construction of rights in Brazil, discussing Marshall's theory on the succession of English rights & the analysis of Carvalho on the inverted succession in Brazil, which turned out in a first attainment of social rights, in a period of suppression of political & individual guarantees in times of authoritarianism, switching to democratic times, in which the worsening of social problems, specially violence, makes us ponder on the attainment of a Brazilian citizenship, in a society whose social rights aren't effective for the whole population & the penal system barely manages to fill the blank gaps, socially controlling individuals who are out of these rights' reach. The citizenship issue with the police & judicial institutional practices in Brazil is then contrasted, presenting a panorama on the penal system & its punitive practices, as well as on the common sense about violence & criminality.

2010S01609

Madeira, Lígia (UFRGS, Porto Alegre - Brazil [tel: 55 51 33310341; fax:; e-mail: ligia.madeira@ibest.com.br]), **The Way of Infamous Men: Penal Public Politics and the Support Programs to Those Exiting the Penitentiary System In Brazil,** *International Sociological Association, Gothenburg, Sweden,*

¶ The present paper aims at studying the support granted to ex-convicts of the Brazilian penitentiary system based on legislative productions, public policies & programs from the 90's onwards. It focuses mainly on the performance & role of support programs in relation to the life trajectory of ex-convicts. In order to accomplish such goal, national initiatives, public (Agentes da Liberdade, Rio de Janeiro, RJ & Programa de Acompanhamento Social, Porto Alegre, RS) & civil society programs (FAESP, Porto Alegre, RS, & Pro-Egresso, Maringá, Paraná) were deeply researched. Also, the life trajectory & the impact of support programs were analyzed from the viewpoint of ex-convicts. The research methodology comprised legislative & public policy analysis, & visits to programs so as to research documents and conduct interviews. The theoretical referential was based on public, social & criminal policies - Delmas-Marty (2004), Adorno (1991), Souza (2007); trajectories of life, social capital, hopes and opportunities - Bourdieu (1980, 1997, 1999, 2001, 2002, 2004, 2005); imprisonment impacts: discipline, prisionization & stigma - Foucault (1996, 1999, 2002a, 2002b, 2003), Baratta (1999), Goffman (1988); & inclusion/ exclusion asocial networks, religion & work - Xiberras (1996), Barnes(1987), Quiroga (2005), Castel (1999). This study also highlights the insertion of the Penal Welfarism model in Brazil, which was the criminal policy adopted by the central countries at the time of the Welfare State and the Penal Sate - such criminal policy rose during the crisis of the Welfare State model. In the light of public & social theories, the support programs examined showed mediation spaces to the rising of small victories: access to formal citizenship, food, means of transportation, clothing & health. Although in a smaller scale, the initiatives also granted educational & work insertion. Notwithstanding, the life trajectories of ex-convicts reveal the existence of low economic & cultural capital levels which, in the struggle for survival, may lead to crime. Once entering the prison system & experiencing its consequences such as prisioning and stigma, the ex-convicts rely on the support programs to help rebuild their sociability & visibility. Moreover, there are other elements responsible for broadening the hope & opportunities of such people, for instance, the formation of social networks, religious conversion & work access. On the other hand, attending a support program involves victories & frustrations. Furthermore, the stigma of being an ex-convict & the temporality of initiatives might not bring full social inclusion, but they certainly help keep these people from committing crimes & help lessen the stigma of infamous men.

2010S01610

Madonia, Thomas (Department of Political Science and Sociology - University of Florence, Via delle Pandette, 21 - 50127 Firenze (Italy) [tel: 0039 - 328 6233581; e-mail: thmsmad@hotmail.com]), **Interpreting "End-of-Life" as an "Épreuve" in Turkish Modernity,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper I will apply the concept of "épreuve", as proposed by Danilo Martuccelli's theoretical approach (2006), to the issue of "end-of-life". After describing "épreuves" as different challenges, historically situated, socially produced & unequally distributed throughout the social pyramid, I will attempt to show how "end-of-life" can be considered as an "épreuve" that individuals are constrained to deal with in contemporary societies. "End-of-life" is an interesting & extreme case in the individuation process (intended in a strictly sociological one rather than in a Jungian one) because individuals affirm themselves in the world in the process of dying. The second half of the paper shows how this sociological theory can be applied to the case-study of Turkey. The analysis here is based on the results of several empirical studies, conducted in Turkish hospitals & medical centres, in order to survey health personnel's attitudes on euthanasia & palliative care, among others. Furthermore, secularized Turkey provides an illuminating case on religious influence on the views, the attitudes, & the practices of physicians & nurses on such ethical questions. The paper indicates the emergence of different paths of modernity, understood as tension-ridden human condition.

2010S01611

Maerker, Markus (Institute of Social Policy and the Organisation of Social Services, Department of Social Work and Social Welfare, University of Kassel, Arnold-Bode-Str. 10, 34109 Kassel, Germany [e-mail: maerker@uni-kassel.de]), **Responses to Paradoxical Governance. New Public Policies and Organisational Coping Behaviour in the German Hospital Sector,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper discusses changes in the German hospital sector which, under the influence of lump-sum (DRGs) public funding, wide-reaching privatisation & growing competition for patients & contracts, sees a creeping shift from public to market-oriented governance, prone to revolutionise the internal life of hospitals as well as their behaviour towards stakeholder environments. The focus is on those "real-life" options which hospitals can use to respond to both the new micro-economic pressures & to the persisting expectation of all needs being met. Furthermore, consequences of this paradoxical governance model are discussed, including in the light of experience from other health care systems exposed to similar evolutions. While recent state-commissioned research on the implementation of the German DRG-funding scheme seems to downplay problems with market-oriented governance, there is evidence for the emergence of unintended consequences regarding the new model. One major indicator is the substantial reduction of staff as a major way to cope with the new pressures; it seems that high quality health care can only be ensured through an intensification of work and extreme personal commitment of the remaining staff. The paper draws on an extensive literature review & first results of expert interviews in the German hospital sector.

Magalhães Brito, Simone & Ventura de Morais, Jorge ([e-mail: simonebritto@hotmail.com]), **Sociology of Morality: Towards an Understanding of Violence in an Era of Recognition,** *International Sociological Association, Gothenburg, Sweden,*

¶ From a moral theory point of view, one could consider that our global society reached its highest point. Recent ethical discourse created a strong normative basis capable of including & justifying difference, the need of openness requested by the recognition debate set the boundaries of ethics well beyond the human. It is possible to believe now that, normatively, we have created a moral horizon that radically opposes prejudice & violence. However, despite this normative perspective, episodes of massacres and ethnical cleansing around the world confront any belief on a sustained moral development. The relation between morality and violence is almost obvious from the moral philosophy point of view: the second must be avoided. Here interests to discuss how sociology can contribute to understanding this relation & what can be said beyond this normative basis. Is it violence a normal aspect of human actions? How can this crude sociological assertive live with the critical grounds of the sociological enterprise? More specifically, how could one understand the outbursts of vio-

lence parallel to the development of "identification" with other human beings characteristic of civilizing process? This work proposes a debate on the relation between morality & violence based on Figurational Sociology (Elias) & Critical Theory (Adorno and Honneth). It is a theoretical research where we try, first, to stress the authors' normative ground & their different ways of dealing with the legacy of Hegelian social theory of conflict, and particularly the master & slave dialectics. We claim that this theoretical core is misunderstood as a general theory of moral behavior & it should actually be understood as a model for certain specific kind of conflicts or a model for understanding the sociology of the "borders". Based on a particular reading of Elias, we affirm that sociology of morality is a discipline divided on two different organizations of normativity: an "established" and an "outsider" model.

Maggino, Filomena & Ruviglioni, Elena (Università degli Studi di Firenze, Via Laura 48, Firenze, Italy, I-50121 [tel: +39-055-2756079; fax: +39-055-2756091; e-mail: filomena.maggino@unifi.it]), **Preaching to the Choir: Are the Commission's Recommendations Already Applied?,** *International Sociological Association, Gothenburg, Sweden,*

¶ In 2008, the French President appointed Stiglitz, Sen & Fitoussi to create a Commission on the Measurement of Economic Performance and Social Progress (CMEPSP). The commission's final report (2009) outlined a comprehensive framework by defining some guidelines by: ac identifying the limits of GDP as an indicator of economic performance & social progress, including measurement problems; ac considering what additional information might be required for the production of more relevant social progress indicators; ac assessing the feasibility of alternative measurement and presentation tools. The report argues that GDP should not be completely eliminated by the options for measuring progress, but must be integrated with other information. In particular, the Committee defines three major areas in which indicators should be developed: economic conditions, quality of life & sustainability. In the European scene, but not only, there are many initiatives that aim at measuring the progress of countries & well-being through different conceptual frameworks & by using several indicators. This paper intends to analyze some of those relevant initiatives by comparing & confronting them to the Commission's recommendations, in order to check what already fits the commission recommendations & what still needs to be defined in that perspective.

Mahne, Katharina & Huxhold, Oliver (German Centre of Gerontology, Berlin, Germany, 12101 [tel: +4930-26074018; e-mail: katharina.mahne@dza.de]), **Multiple Grandparent-Grandchild Relations: Taking a Three Generation Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ Grandparenthood is a highly valued role in later life & is experienced by large shares of older people over an extended period of lifetime. Due to several social trends, the structures of grandparenthood as well as the relations to grandchildren have become more complex & varied. This study adopts a three generation perspective of grandparents, children & grandchildren. By doing so, characteristics & living situations of all generations involved can be analysed as an impact on the grandparent-grandchild relation. In addition, this study attends to multiple grandparent-grandchild relations, & hereby accounts for variation between & within families. Analyses are based on the current third wave (2008) of the German Ageing Survey, a nationally representative multi-purpose study of the population aged 40 and older, that is now a unique source for data on grandparenthood. Our subsample consists of more than 7,000 triads of grandparents, children & grandchildren. We apply a multilevel modelling approach that accounts for the nested nature of the data. Whereas grandparents in general report close relations & high contact frequency with their grandchildren, we do find characteristics of all three generations (e.g. age, gender, marital & employment status) that influence the grandparent-grandchild relation. Moreover, there is significant within family variation, indicating that grandparents experience different relationship qualities with different grandchildren.

Maia, João Marcelo E. (Fundação Getúlio Vargas/ CPDOC [fax:; e-mail: joao.maia@fgv.br]), **Peripheral geopolitics: Ideas and State-Building in Central Brazil,** *International Sociological Association, Gothenburg, Sweden,*

¶ European geopolitical ideas have been frequently employed by intellectuals in the global periphery. Nation-building theories in Brazil, for instance, have been largely shaped by these ideas. How did intellectuals historically draw on these notions? This paper takes Brazilian social thought in the 1920s & 30s as a case-study to analyze these issues. The paper focuses on major & minor works in Brazilian geography during this period & explains how these texts provided a cognitive framework that shaped state action in the 1940s. I center my attention on the case of Fundação Brasil Central (FBC), a state bureau created in 1943 by Estado Novo dictatorship in order to promote colonization & economical development in Brazilian hinterland. Thus this paper also explores the relation between social sciences & public policy in Brazil.

Hopmansstraat 1 4817 Breda, the Netherlands [tel: 0031765332750; e-mail: mainil.t@nhtv.nl]), **Narratives of Local Indian Voices on the Phenomenon of Medical Tourism. A Focus-Group Research with Indian University Students in Bangalore, India,** *International Sociological Association, Gothenburg, Sweden,*

¶ Medical tourism of global health care is mostly approached in the literature from out a supply-driven impetus in the perspective of an international sector with multi-stakeholders. Most of the time, the local perspective of citizens residing in the new economies is forgotten. This study reports on Indian students from several educational & socio-economic backgrounds who study at Christ University, Bangalore, a medical hub in South India. The objectives are 1. to uncover a local Indian perspective onto the emerging giant of medical tourism in India 2. to assess the relation with the public health care situation in India 2. 4 focus-groups were held with studying Indian master & under-graduate-students at Christ University, Bangalore from different courses including Master of tourism management, Media studies & Sociology. 3. Indian students have a lay knowledge towards their own health, health care use of their community members, which differs from the general international medical tourism perspective. These students also have specific thoughts & ideas about the relation between Indian public health & the rise of international hospitals. Assessment of lay knowledge proves useful in order to uncover local perceptions on the phenomenon of international provision of health care services: a globalized market

Makita, Meiko (University of Glasgow, Glasgow, UK, G12 8RT [tel: 44 141 330 3931; fax: 44 141 330 3919; e-mail: meiko-makita@gmail.com]), **Ambiguous Narratives of Care: Grandparenting Roles of Older Women in Mexican Society,** *International Sociological Association, Gothenburg, Sweden,*

¶ Previous research in Mexico has focused on older people as a social burden rather than looking at private lived-experiences. Thus, by following a critical feminist approach, this paper aims at eliciting older women's narratives on how they make sense of identity & their caring roles as grandmothers. On-going analysis of multiple in-depth semi-structured interviews of 32 women aged 60+ has revealed that these women are in a constant struggle against enfeeblement & under a continuous negotiation of their notions of independence, obligations, reciprocity, expectations and burden in later life. Moreover, their resistance strategy for such constraints is originated in caregiving & might be also explained by the contrasting intersection of family responsibilities and intergenerational change. The caring relationships of these women are constituted by feelings of concern & affection, & practical work especially toward their children & grandchildren. The majority needs to have the caring experience, as it brings self-recognition & meaning to their lives. Yet, there are few of them that do not want to be identified only by their roles as mothers, grandmothers, or caregivers, & thus, their attitudes and activities do challenge the status quo of the traditional and typical caring older Mexican woman.

Makoto, Nishikido & Yamamoto, Hidehiro (Hosei University, Tokyo, Japan [tel: +81-3-3264-9793; fax: +81-3-3264-9663; e-mail: nishikido@hosei.ac.jp]), **Media Framing and Civic Action in Anti-G8 Movements in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this report, I analyze what kind of reaction the local resident did to anti-G8 movement performed involving the G8 Hokkaido Toyako Summit, & consider whether anti-G8 movement is accepted in Japanese society. I use the data of the survey investigation to the citizen of Sapporo which the large-scale demonstration generated, and the residents of the surrounding area where summit was held. The result of data analysis is as follows. People aged 50 & over with a high participating experience rate of the past social movement, had caught anti-G8 movement in the affirma-

tive compared with aged 40 & below. However, it turned out that people aged 50 and over who experienced movement have also caught this anti-G8 movement in the negative, as compared with the social movement made in Japan until now. But, it was found out that the residents near the Lake Toya, who looked at the demonstration performed in defense with more number than the participant in a demonstration, have given high evaluation relatively to the opinion of anti-G8 movement. Generally, it can be said that the penetration into the citizen of anti-G8 movement in the Lake Toya summit was unsatisfactory.

Malaina Martín, Alvaro (Sociology Department, University Complutense of Madrid/Centre Edgar Morin, EHESS Paris, 28223 Pozuelo de Alarcón, Madrid, Spain/22 rue d'Athènes 75009 Paris, France [e-mail: alvaromm@pdi.ucm.es]), **Towards a New Epistemology of Socio-Economic Complex Systems: Between "Social Constructivism" and "Spontaneous Social Order",** *International Sociological Association, Gothenburg, Sweden,*

¶ We propose in our paper, in order to conceive the specific nature of socio-economic systems in the framework of the epistemological implications of the theories of complexity, a complex theoretical middle way between "spontaneous social order" & "social constructivism", the classical distinction made by F. von Hayek. Firstly, we will refute the identification between social complexity & spontaneous social order, showing how to catch in its fullness the purely anthropo-social complexity we can not exclude its main parameter: the human self-reflexive consciousness constructing meaning & reality. Then, we will also refute the belief in the main conscious & intentional human control of social dynamics, showing how social complexity implies uncertainty and unpredictability in the results of the human action. We conclude that the axiological SETC model for job creation in Spain, coordinated by F. Parra Luna, is an example for this middle range way, between the neoliberal belief in the "spontaneous" effects of self-organization in socio-economic systems & the neokeynesian belief in the full capacity of the State for socio-economic conscious & intentional "construction".

¶ The historic identitary confrontation between mapuche people & white ethnic majority in Chile has its base on the construction of Chilean Nation-State. Mapuche ethnic/ethnonational identity has been denied & it has been tried to dilute it in a Chilean national identity, where all the "ethnically homogenous" Chilean citizens would fit. Nowadays, it is necessary to add the fact that Chile is the Latin American State where more rigidly has been imposed neoliberalism. This prepares the ground to the existence of a violent racism arisen from the constitution of this State, which it is related with authoritarianism that permeates the Chilean institutions. Also, this racism it is reflected on historical despoliation of the Mapuche territories, that actually is carry out by transnational companies in collusion with Chilean State. Repression to Mapuche people counts with a constitutional endorsement, since the terrorism crime is typified & it is imputed to Mapuche; this complements the social construction of the "others mapuche" as lazy, savage, inept. Furthermore, Chile has been the last Latin American State to ratify the International Labour Organization - Convention 169, with significant limitations. In synthesis, it is a case of racism where identitary distinction and the neoliberal context are strongly overlapped.

Maleki, Khosro (ERASE/2L2S Department of sociology/ University of Metz, Ile du Sulcy, 57006 Metz, France [tel: 33(0)387315652; e-mail: kmaleki8@yahoo.fr]), **Scientific progress and Subjective Well-being,** *International Sociological Association, Gothenburg, Sweden,*

¶ The conception of the scientific culture is profoundly changed. The notion of the culture integrates the scientific knowledge to a wide public. The question which is going to arise is: what expects the public from the sciences? To measure the scientific culture is trying to get to know the information about the perception and understanding of the public from the scientific progress as a indicator of well-being in the near future. The scientific culture can be estimated from four indicators: the interest, the attention on the scientific subjects, the scientific knowledge & the attitude to the science. Our survey realized by questionnaire during the edition 2008 of the "Festival of the Science" in Lorraine (France), allows us to classify the public face the consequences of the scientific progress on the well-being in three categories: "optimist public" (The individuals who agree that thanks to the scientific progress, we shall live better in 20 years than today), "pessimist public" (The individuals who do not agree), & "mitigated public" (the individuals who are neither agree nor disagree). The general hypothesis consists in saying that the percentage of the "optimist public" is widely higher than that of the "pessimist public".

Malesevic, Sinisa (School of Sociology and Politics, National University of Ireland, Galway, Galway City, Ireland [tel: 353 91 589 622; e-mail: sinisa.malesevic@nuigalway.ie]), **To Die and Kill for the Nation: War, Nationalism and Group Homogeneity,** *International Sociological Association, Gothenburg, Sweden,*

¶ The commonly shared view is that warfare invariably & radically transforms established patterns of group solidarity. It is generally assumed that the outbreak of war sharpens group boundaries across the lines of conflict, thus enhancing in-group homogeneity vis-à-vis the threatening out-groups. More specifically, protracted violent conflicts are regularly seen as a hotbed of intensive national attachments. Although there is disagreement on whether war & violence precede, & thus produce, strong national bonds, or whether warfare itself is a direct outcome of intensifying nationalist feelings, there is virtually no disagreement that the eruption of war almost instinctively increases in-group solidarity & national homogeneity. The main aim of this paper is to challenge this perceived link between warfare & group homogeneity. In contrast to this, I argue that national homogenisation & the alleged large scale group solidarity, witnessed at times of war & in the context of violent conflicts, are neither automatic & inevitable nor directly tied to warfare itself. Rather than being a cause or a direct product of war, the ostensible macro solidarity & group homogeneity exhibited in times of violent conflicts originate outside of these conflicts. In other words, instead of being an automatic social response, homogenisation is a complex process that requires a great deal of long term institutional work. In-group solidarity is not something that "just happens" & naturally occurs in times of war. It is a contested & messy process. The first part of the paper provides a critical analysis of two dominant types of explanations linking warfare & group homogeneity, while the second part elaborates an alternative interpretation.

Maliepaard, Maria & Phalet, Karen (Utrecht University, Interdisciplinary Social Science, Heidelberglaan 2, 3584 CS Utrecht [tel: +31 30 2535442; e-mail: M.I.Maliepaard@uu.nl]), **Religious Identity Expression among Dutch Muslims: Effects of Social Integration,** *International Sociological Association, Gothenburg, Sweden,*

¶ There are many different ways of expressing one's religious identity. In this study we attempt to explain how differences in both degrees and forms of religious identity expression are related to the social integration of Muslim immigrants within (a) the (almost fully Muslim) ethnic minority community & (b) the wider (majority non-Muslim) Dutch society. Using the records of Turkish- and Moroccan-Dutch Muslims from the most recent Dutch ethnic minorities survey (SIM 2006; N=2,163), we assessed social integration in terms of friendships & neighbourhood contacts. Religious expression was assessed with regard to religious practices in the family or community context (i.e., visiting a Mosque, praying, eating halal food) & religious assertion (i.e., claims on religious recognition & accommodation in the public sphere). Our findings suggest that social integration a taking into account socio-economic integration - shapes the expression of religious belonging in two ways: in addition to a mediated pathway through varying levels of commitment to one's religious identity, an additional pathway represents a less well-documented direct social influence of immigrant networks on the expression or suppression of religious practice & assertion. Furthermore, the impact of social integration is moderated by the domain of religious expression. Whereas integration in the minority community supports private practice as well as public claimsmaking, integration in the wider society mainly suppresses public claimsmaking. This selective impact of intergroup contact is explained in terms of conflicting group norms & expectations within minority communities & in Dutch society with regard to the public role of religion.

Mallén, Agneta (Department of Sociology, Lund University, Box 114, 22100 Lund, Sweden [tel: +46-70-2180353; e-mail: agneta.mallen@soc.lu.se]), **"We Are Too Close" How to Report Abuse and Neglect of Disabled Children to the Social Services.,** *International Sociological Association, Gothenburg, Sweden,*

¶ Under Swedish law, it is incumbent upon Child & Youth Habilitation Services to report abuse & neglect of disabled children to the Social Services. However, according to the Swedish National Board of Health & Welfare, only a small proportion of suspected cases of abuse or neglect are reported to Social Services. The aim of the present study is to examine why Child & Youth Habilitation Services consider some cases of abuse & neglect of disabled children difficult to report. Qualitative data were collected in individual & natural group interviews with fourteen members of staff. The study shows that reporting was regarded as a "last resort", used only when all other remedies had been exhausted. The main obstacles to reporting were found to be in the experienced closeness between staff members & the disabled children's families. Other hindrances to reporting were habilitation ideals, ideas about the happy family, insufficient evidence of abuse and neglect, & uncertainty about the future of the child after reporting. Factors that facilitated reporting were visible proof of abuse or neglect, & the disabled child's ability to communicate. In addition, certain criminal acts against the children were regarded as more condemnable than others & thus easier to report.

Mallick, Sambit & Das, Liza (Department of Humanities and Social Sciences, Indian Institute of Technology Guwahati, Guwahati 781039, Assam, India [tel: +91 361 2582566; fax: +91 361 2582599; e-mail: sambit@iitg.ernet.in]), **Research in Science and Technology in the Era of Liberalization in India: Institutional and Policy Issues,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the process of liberalization in India focusing on the implications of research in a frontier area in science and technology, namely, agricultural biotechnology. Research in agricultural biotechnology seems to be increasingly influenced by considerations of the potential of research for attaining patents. The World Trade Organization-regulated policies of liberalization, privatization & globalization have brought about new vistas as well as challenges for knowledge production. The Intellectual Property Rights (IPRs) regime has brought about a new set of norms, interests, meanings, values, etc. that have a potential to influence the practices of the scientific community in India. In this context, the objective of this paper is to examine the actual and potential impacts of the WTO-regulated liberalization policies on developing countries such as India, of the global trend towards a stronger protection of intellectual property rights, & to capture the changing scientific practices, cognitive & political, in the wake of this new institutional regime. In the light of this, we attempt to capture the emerging institutional framework of scientific research that is contingent upon the protocols of the IPRs & changing scientific practices. Particular attention is paid to the views of scientists in India engaged in research in agricultural biotechnology -- on genetic engineering, agro-climatic specificities as well as transgenics -- & the changing relationship between scientists & boundary organizations. This new regime is marked by the advent of a customer–funder–policymaker nexus as a prominent element in science forcing the scientists to (re)negotiate scientific boundaries. The commodification of scientific research alters the idealized identities of science & scientific community. The scientific community in India is confronted with the dialectic of resistance & accommodation under the stringent norms of the IPR regime. However, this regime calls for interdisciplinary and inter-institutional collaborative networking in these frontier areas in science & technology. The paper concludes that disciplines that can contribute to map different dimensions of the problem should collaborate to identify a shared perspective and suggest workable or deliverable solutions.

Malmgren, Britta (School of Health Sciences and Social Work, Växjö University, S-351 95 VÄXJÖ, Sweden [tel: +46 772 287498; fax:; e-mail: britta.malmgren@vxu.se]), **Activation Adapted to an Individualistic Era?,** *International Sociological Association, Gothenburg, Sweden,*

¶ After the second world war Sweden became well known as a welfare state, one of the characteristics being an active labour market policy. Looking closer at Swedish labour market policies we can observe the use of standardized measures aimed at holding unemployment rates low. In the last decade or two, however considerable changes have come about. Inspired by Bourdieu's concepts habitus, capital & field my research deals with the ideology & activities of a voluntary youth organization which became responsible for running a project for young unemployed in the city of Växjö in south-eastern Sweden, & how this project was received & used by participants from different social backgrounds. The project leaders launched an entrepreneurial attitude to unemployment, promising success in helping the majority of the participants to get a job or start an education. The project was supported by the European Social Fund, and various regional authorities. My research is based primarily on 26 qualitative interviews representing young participants, project leaders & copartners. My findings are discussed in relation to tendencies found in Europe (Pascual 2000, 2004), one of them being a personalization of the measures taken, especially when dealing with young unemployed.

Maman, Daniel & Rosenhek, Zeev (Department of Sociology and Anthropology, Ben-Gurion University of the Negev, Beer-Sheva, Israel, 84105 [e-mail: dmaman@bgu.ac.il]), **Intra-State Politics in the Neoliberal Era: The Struggle over the Legal Independence of the Israeli Central Bank,** *International Sociological Association, Gothenburg, Sweden,*

¶ Central bank independence is considered as a critical component of the neoliberal policy paradigm. This is manifested in the worldwide wave of changes in the legal status of central banks taking place since the early 1990s, which is often explained as resulting from processes of institutional & economic globalization. In this paper we focus rather on the dynamics of the local political-economic field, & demonstrate that the position of central banks within the state institutional configuration is largely determined by the power balance & interactions between state agencies, particularly between the central bank & the Ministry of Finance. Based on a detailed process-tracing analysis of the intensive struggle over the legal status of the Israeli central bank that took place between the mid-1990s & the mid-2000s, we examine the power relations between these two state agencies, & the strategies that they deployed for advancing their interests. While the Ministry of Finance attempted to restrict the power that the Bank of Israel accumulated since 1985, the latter pursued to consolidate its position within the field through a comprehensive legal reform. Both actors mobilized the rhetoric of institutional globalization & appealed to models existing in other countries as source of legitimation. A second strategy, which was used by the central bank, was to mobilize the support of external organizations, such as the International Monetary Fund and the European Central Bank. Finally, the Bank of Israel mobilized knowledge provided by orthodox monetary economics to reinforce its status as a-political agency which carries the voice of objective expertise.

Manap Kirmizigul, Cigdem (Middle East Technical University Sociology Department, Ankara Turkey 06531 [tel: +903122103136; fax: +903122107972; e-mail: manap@metu.edu.tr]), **Experiences of Asylum Seekers in Turkey,** *International Sociological Association, Gothenburg, Sweden,*

¶ The purpose of this paper is to describe the status of refugees and asylum seekers which reside in Turkey temporarily, from their own standpoint & from the prospect of workers & representatives in the agencies & institutes involved in the field. This work focuses on the inconveniences experienced by asylum seekers and refugees during their stay in Turkey & the reasons of these inconveniences, in the context of social exclusion. Due to political, social or other reasons, every year hundred thousands of people are obliged to leave their country & look for a new future in a foreign country for a more secure & humane life. People are sometimes obliged to leave their country for economical reasons, natural disasters & violation of human rights. Military coups, bloodbaths, wars & similar causes result in people leaving their country & living under severe conditions with an identity of refugee. At the end of year 2007 number of refugees under the responsibility of UNHCR was announced as 11.4 million. The picture we get with the officially announced numbers & unrecorded refugees deserves to be analyzed as a sociological fact. Besides statistical data, the severe conditions which refugees experience in their home country, during their migration & in destination country make the subject more of a research topic. People leave their homes for many reasons–because they cannot support themselves or their families at home, because the crops have failed, because the environment will no longer sustain them, because of war or persecution, because they want a better life for their children. On every continent, individuals, families and communities are forced to abandon their homes & villages (Ferris, 1993: xii). People do not willingly undertake long & dangerous journeys to unknown or uncertain destinations, abandoning their material, social, cultural & other resources, unless they are under extreme pressure (Marfleet, 2006:14). After every social or political upheaval, people have been forced to leave their country and to become refugee (Rubinstein, 1936:716). (Abstract shortened by ProQuest.)

Mandelert, Diana (Education department, PUC-Rio, Rio de Janeiro, Brazil, [tel: 552196482161; e-mail: mandelert@oi.com.br]), **The Price Of Success: Retention in Prestigious Schools,** *International Sociological Association, Gothenburg, Sweden,*

¶ The great value placed upon schooling by middle & upper classes may be ascertained by the high internal selectivity of prestigious schools in Rio de Janeiro. For every 10 students admitted, only 3 graduate in the same school. From the moment schooling starts up to the end of high school, retentions & transfers contribute towards the good results these schools obtain in national evaluation surveys. In order to investigate this phenomenon we based our research on two schools ranked among the best in the national assessment, where we gathered comprehensive data regarding four entire cohorts. We verified that the admittance & departure of students obey patterns. Retentions are uncommon in the first years of schooling, & selectivity operates by transfers: most students change schools. In the 5th grade there is another input of new students, & in the years leading up to high school over 6% are retained, & even more are transferred. In the first year of high school there is another vast enrollment of new students, but within two years almost 30% of these are transferred or retained. Most retained students request transfers, & many of them do so midterm, before being retained. This data raises new issues about the "school effect" in prestigious institutions.

Maney, Gregory, M. (Hofstra University, Hempstead, NY 11549 USA [tel: 516 463-6182; fax: 516 463-6250; e-mail: socgmm@hofstra.edu]), **Measuring and Explaining Terror: Statistical Analyses of Indiscriminate Political Violence in Northern Ireland, 1969-2008,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper critically evaluates widely used definitions, measures, and explanations of terror. Using a multi-source database of political deaths taking place in Northern Ireland between 1969 & 2008, the author examines: (1) the extent to which lethal political violence against civilians in Northern Ireland occurred for reasons beyond the ethno-nationalist affiliations of the victims; (2) the relative use of terror by state actors & by insurgents as well as possible linkages between their uses; (3) other factors (both frequently asserted & often overlooked) that may significantly effect levels of terror; & (4) changes over time in the levels, dynamics, and causes of terror. The paper concludes with a discussion of the methodological, theoretical, & practical implications of the study.

Manjrekar, Nandini (Tata Institute of Social Sciences, CSSE, Tata Inst of Social Sciences, V N Purav Marg, Deonar, Mumbai INDIA 400088 [tel: 91 9324764425; fax: 91 022 25525050; e-mail: nandini.manjrekar@gmail.com]), **Gender, Conflict and Education: Reflections from Post-2002 Gujarat,** *International Sociological Association, Gothenburg, Sweden,*

¶ A significant feature of the 2002 carnage against the Muslim community in the western Indian state of Gujarat by Hindu fundamentalist organizations was the targeting of women & young children, against whom the most brutal acts of violence, including sexual violence, were ruthlessly perpetrated. Educational marginalization of the community, a focus of the violence in 2002, continues to cast a shadow on the lives & aspirations of young Muslim women in the state. This paper will explore the gendered effects of conflict on Muslim girls' education in Gujarat, eight years after the violence of 2002. Based on narratives of Muslim girls from both rural & urban areas, those directly affected by the violence and others, this paper will discuss the ecology of fear & insecurity that continues to affect accessibility & participation in education. It will also look at girls' perceptions of entitlement and citizenship as related to formal education, & examine how these frame girls' experiences & imagined roles in relation to community & nation.

Manmohanjit, Singh Hundal (GNDU, Department of Sociology, Amritsar, India [tel: 00911602645210; e-mail: hundalULms@yahoo.co.in]), **Waning Morality among the Youth: A Corollary of Unprofessional Practices among School Teachers,** *International Sociological Association, Gothenburg, Sweden,*

¶ Crime among youth has assumed alarming dimensions in Indian society. Aimless life & desire to make easy & quick money, for leading a high life, have forced the youth to adopt unfair means for earning money. Education the social institution is considered to have the requisite potential in the formation of social personality and earning a livelihood by fair means. School is the place & school teacher is the agent of the society that enables the individual; learn to internalize the ideologies, attitudes, values, norms and behavior patterns to behave as responsible citizens in the society. For that they ought to be in the possession & requisite commitment for the transmission of desired values to the students. When the education is fully functional then it contributes to social stability in the whole society. Numerous studies have highlighted the prevalence of various types of unprofessional values among the school teachers. In this paper an attempt is made to highlight the prevalence of various unprofessional practices among the school teachers & findings are based on the data collected from 385 school teachers in Roopnagar district in the Punjab state of India. A comparative prevalence of various unprofessional practices is highlighted among male & female teachers besides the reasons for their prevalence.

Mansooreh, Saniei (Centre for Biomedicine and Society, King's College London, london, United Kingdom, SW2R 2LS [tel: +447501318443; e-mail: mansooreh.saniei@kcl.ac.uk]), **Iran and Development of Human Embryonic Stem Cell Science,** *International Sociological Association, Gothenburg, Sweden,*

¶ Research on human embryonic stem cells(hESCs)requires careful scientific method, ethical debate & supportive regulatory frameworks to achieve its potential. Due to varying socio-cultural, religious & political backgrounds, individual countries have different regulatory approaches which play an important role in international hESC research collaborations. Studying the complexity of regulatory frameworks in different parts

of the world highlights differences & similarities between nations, the variety of views on specific issues, & the range of regulatory uncertainties. Iran has been actively involved in hESC research for several years, assuming a leadership role in this area, particularly in the Middle East. Iran now endorses one of the most permissive approaches to hESC research among Islamic countries, although all embryo research policies are influenced by religious beliefs, as in many other parts of the world. Whilst Iran, with respect to Islamic law, allows scientists to use spare in IVF/PGD embryos for hESC research, many other Muslim nations advocate a ban on all forms of hESC work. HESC research has not been met with such serious ethical reservations & parliamentary regulation in Iran. In order to understand the interactions between ethics, policy & regulation in this field of research, it is crucial to map the development and practices of science & its regulatory systems & to explore the key factors which influence the governing of hESC science in individual countries. This proposed ethnographic study will be the first to comprehensively explore such issues in Iran, & will be in the vanguard of empirical studies of the sociology & ethics of stem cell research in the Muslim world.

Mansurov, Valery & Yurchenko, Olesya (Department of Sociology and Sociology of Professions, Institute of Sociology of the Russian Academy of Sciences, Moscow, Russian Federation [tel: +7-495-719-09-71; fax: +7-495-719-07-40; e-mail: mansurov@isras.ru]), **Professional Ideology of Altruism of Russian Medical Practitioners,** *International Sociological Association, Gothenburg, Sweden,*

¶ Professional altruism, taken as a social good at which the professional expertise is directed, was seen as an important characteristic of professionals by social researchers writing from various theoretical perspectives. Functionalist & trait writers saw professions as ethically positive embodiments of the 'central values' of the society. Critics felt that this approach reflected too closely the ideological image which professionals tried to convey of their own work. In our research, in accordance with neo-Weberian critiques, we have not denied the importance of the professional ideology of altruism, arguing that some of medical practitioners" actions may be self-enhancement, but the reverse side of the coin is still a service for their patients or clients. In the recent desk & qualitative research of Russian orthodox practitioners, the professional ideology was interpreted as a significant professional characteristic. The research picked up the discrepancy between the sense of reduced circumstances of medical practitioners & their rather positive estimations of the professional side of things. Medical practitioners proclaimed a greater commitment to "doing good work" than to economic gain, and to quality rather than efficiency. Although a proclaimed ideology should not be mistaken for reality, it is worth noting that Russian doctors wish to be seen as supporting a professional ideology of altruism. The status of medicine as a career choice was also still significant to the respondents. Members of the profession were not willing to leave an occupation, & were likely to assert that they would choose the same work if they were to begin again.

Maratou-Alipranti, Laura & Koronaiou, Alexandra (National Centre for Social Research, EKKE, Athens, Greece 11527 [tel: 00302106202729; fax: 00302106202729; e-mail: lalipranti@ekke.gr]), **New Family Values and Leisure Lifestyles of Women in Greece,** *International Sociological Association, Gothenburg, Sweden,*

¶ Women's status & social image in Greece have changed significantly during the last years. Important improvements in educational attainment of women are noted since the seventies & girls participate in the educational system at a more accented pace. This trend has resulted to the easing off of differences between the sexes in all levels (especially in the tertiary education) & have opened up employment possibilities for women in middle & higher professional categories. This has also contributed to the increase in women's share in the labour force & to the improvement of their position in general. However, despite the implementation of various measures at the legal & institutional levels & the changes in social values & mentalities, gender stereotypes are still persisting in the labour market & in mass media; women continue to be responsible for domestic work & taking care of small children. This paper investigates the extent to which new values & lifestyles have influenced women's family life, work and leisure time. This is analyzed consolidating national statistics, survey data & qualitative research involving semi-structured interviews with 40 women living in Athens. The results of this study show evidence of the growing importance that Greek women place on work & leisure time as an opportunity for more autonomy and independence in the midst of various social, economic and familial constraints. It is evident that women's participation in the labour market & leisure activities outside their home have contributed to their general emancipation. The emergence of new lifestyles & family models represent a base from which Greek women fight against traditional stereotypes & roles & confront a male-dominated society not only in working & leisure time but also in economic, financial, political, information & scientific spheres.

Marcuello, Chaime (Depto. Sociología. Universidad de Zaragoza, Eues. Violante de Hungría,23. 50009-ZARAGOZA, ESPAÑA. [tel: 34-976-762937; fax: 34-976-76-1029; e-mail: chaime@unizar.es]), **Digital Generations, Soft Societies?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Internet is, firstly, a technological sphere. It is a complex system where phone networks & computers are connected using a standard of information exchange. This basic structure facilitates hardware where different machines & devices operate. Secondly, it creates a network of networks where different software and applications build a new level of human & social interactions. This paper focuses on the social appropriation of "internet technologies" & its social consequences on the level of personal and organizational interactions. A framework is proposed to consider whether or not these transformations modify the political arena. Nevertheless, it is not an accurate & precise cause-effect mechanism. These "never-ending" emergent technologies are creating an on-line world, an on-line social system. This overlaps the analogical dimension of our societies & it has crucial implications on personal & collective life. This paper is divided in five sections, including an introduction & conclusions. Firstly, it reviews some milestones in Internet "hardware" and technology construction & their relationship with its social uses. Secondly, it proposes an incipient analysis of the emerging social effects of the aforementioned innovations in contemporary societies on three different levels. Thirdly, it advances a conjecture: would it be possible to speak of "digital generations", the possibility of society moving towards "soft(ware)" mediated imaginaries & a soft society where old utopian horizons are moved.

2010S01639

Marder, Nancy S. (Chicago-Kent College of Law, 565 West Adams Street, Chicago, IL 60661 U.S.A. [tel: 312-906-5136; fax: 312-867-2878; e-mail: nmarder@kentlaw.edu]), **Judging the Television Judges,** *International Sociological Association, Gothenburg, Sweden,*

¶ "Judge Judy," an extraordinarily successful American television show, has inspired a television phenomenon in the U.S. in which viewers can watch television shows from morning until evening seven days a week. These judge shows adhere to a format made famous by "Judge Judy." What do these shows teach television viewers about the judicial system, & what do they teach them about justice? In addition, what lessons do they teach about race & gender & the role of the judge? I intend to provide a taxonomy of American television shows, examining the lessons they teach about judges, courts & justice, & how they contribute to or detract from the national conversation about race & gender & its effects on the proper role of the judge.

Marekovic, Anna-Maria, Sarstrand (School of Social Sciences Linneaus University, 35195 Växjö [tel: +46 470 708662; e-mail: anna-maria.sarstrand@lnu.se]), **Cultural Decoration or Partners for Integration? The Changing Relation of Local Governments and Migrant Associations.,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this paper is to present & analyze empirical data that highlights the different roles migrant associations have played in relation to the integration/incorporation work of local authorities in Sweden between 1965-2005. I focus on the changes and continuities that have surrounded the work & raise questions like: under what conditions have the migrant organizations operated? Which roles have been attributed to them? In what ways have the migrant associations been an active partner of integration/incorporation? The material consists of interviews with local government officials & historical documents from five Swedish municipalities. It reveals that the role have shifted over time but also between different municipal settings. The migrant associations have been a source to gain information about the different migrant groups, a channel to spread information to the migrants but also an important actor for the authorities to extend information to the general public about immigration in general as well as knowledge of particular cultures. To a lesser extent the migrant associations have acted as real partners for integration. My paper will map

& analyze the development & differences that the relation between local integration authorities & migrant associations conveys.

Marjaei, Seyed Hadi, Tabatabaei, S. Mahmood. Ghazi, Yazdi, Fahimeh Ahmadian & Marjaie, Seyed Ali (Department of Sociology/University of Tehran & IRPHE, Tehran, Tehran, IRAN, 19395 [tel: 00919730910968; fax: 00982166404272; e-mail: hdULmarjaie@yahoo.com]), **Effects of Information Technology on Social Capital, Academic and Cultural Development of University Students in Iran,** *International Sociological Association, Gothenburg, Sweden,*

¶ This article is based on survey of 1,155 students of Tehran, AmirKabir, and Alzahra universities located in Tehran Iran. The results show that such extensive use, & access to IT among university students in Iran increasingly affect their cognitive & operational schemas, & breads a new social, cultural & academic everyday communication & life style. Significant relationship was found between access to & use of information technology variables and the variables related to self referent thoughts, social and cultural capital. The self referent thought variables included the student's academic self efficacy, technical & scientific abilities, future income & occupational expectations. The various dimensions of social & cultural capitals, included, the student's level of social & political participation, use of cultural products, membership in civic institutions, social trust, interaction with other fellow students, the professors, & the campus authorities. The results also show that, certain categories and groups of students, namely the graduate students, especially those in engineering & natural sciences, males, those who have jobs in their related field of study, & those who live in campus have more access to & use information technology & internet more often than the others.

Markkanen, Sanna & Horvath, Kenneth (Department of Land Economy, University of Cambridge, Cambridge, United Kingdom, CB3 9EP [tel: +441223764549; e-mail: sm725@cam.ac.uk]), **National Methodologies, Shared Challenges: Some Implications of Established Quantitative Frameworks for Research into Migration and Ethnicity in Contemporary Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper starts from the observation of an increasingly problematic gap between current theoretical & conceptual debates on ethnicity and migration, on the one hand, & quantitative methodology of official statistics & academic research on the other. Drawing on recent as well as less recent theoretical & conceptual contributions, the paper attempts to highlight this gap & some of its implications by engaging in a theoretical reflection on, and critique of, what we refer to as 'established methodological frameworks" of Western European (quantitative) research into migration & ethnicity. Important distinctions between different national frameworks notwithstanding, some shared problems are identified & illustrated. These include (i) the atheoretical conflation of "ethnicity" & "migration'; (ii) an (implicitly) essentialist & identitarian approach to ethnicity & (iii) a prevailing methodological nationalism. Above points will be discussed using examples of surveys, census data & population register data from different Western European countries. Theoretically informed analyses, we argue, are impeded as the complexity of current developments & the changing interplay of migration & minority formation processes cannot be adequately captured. This, in turn, has serious implications for the use of quantitative data.

2010S01643

Marma, Angkyaching & Mog, Mongsajai (Buddhist and Pali University of Sri Lanka, Buddhist studies, North Pitipana, Homagama [tel: +940719003314; fax: +940362253921; e-mail: akmarma@yahoo.com]), **Social Policy and Economic Analysis,** *International Sociological Association, Gothenburg, Sweden,*

¶ The growth of the academic tradition & subject which we now call social policy & administration involved an equivocal relationship with economists & economic analysis; at time the economic perspective was almost rejected out of hand. Yet social policy cannot be hermetically sealed from economic policy and economic analysis. Indeed, the immediate post-war tendency to leave "welfare" issues entirely to student of social policy has had a number of negative consequences. It left economists to concentrate on the "really important" dimensions of material welfare the production & distribution of priced goods while absolving them from the task of studying a large & growing body of social service goods which were distributed through the political administrative system. It also reinforced the status of social welfare as a residual feature of the economy & much academic and political debate. Meanwhile, the social policy people who have inherited the intellectual concern for social welfare often lost sight of scarcity, opportunity costs, consumer preferences and other basic facets of the economic perspective. This dichotomy between economic & social policy has been outlined in stylized and exaggerated terms. Quite a number of social policy experts were initially trained as economists & some "mainstream" economists have always had an interest in social policy. Moreover, the dichotomy has been substantially reduced in recent years. But the caricature has sufficient validity to be instructive. The problem of rationing in the social services was virtually not discussed in this term for some decades, for example, & the concept of need has prompted shivers of apprehension, or peremptory dismissal, on the part of some economists. One of the legacies of this partial intellectual apartheid is that the public social services have been vulnerable to criticism & analysis of an economic nature even of the most vulgar kind. For too long the extent & range of economic analysis of social policy was insufficient to force the protagonists of collective provision to adopt sophisticated arguments. Analysis of outputs, of comparative costs & cost effectiveness have been few & far between; the preoccupation with charting need & arguing for greater public expenditure inputs has been to the fore. These latter concerns are not wrong or misplaced. They have been emphasized in an attempt to counterbalance the residence to, or lack of interest in such arguments outside social policy. But the imbalanced intellectual approach within social policy has been an Achilles heel. It has allowed even crude accusations of waste & inefficiency in public services to go unchallenged in economic terms. Here then, is one primary reason for exploring the strengths & weaknesses of microeconomic analysis as means of viewing social policy issues. The discussion of social policy simply cannot be insulated from the economic perspective which has gained such intellectual & political dominance in our society. The student of social policy therefore needs, at least to acquire a critical awareness of what the economic perspective may actually amount to & imply; microeconomic analysis is only one element of the larger and diverse whole, of course, but it is a powerful & important element.

2010S01644

Marom, Nathan (Center for Urban and Regional Research, Technion - Israel Institute of Technology, Haifa, Israel [e-mail: natmarom@gmail.com]), **The Crisis of Affordability in Tel Aviv's Globalized Housing Field,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper puts forward an analysis of the social & political construction of affordability that goes beyond the market to examine the field of housing (following Bourdieu 2005). The housing field in Tel Aviv has seen profound changes in recent years. A boom in the higher echelons of the market, with numerous high-rise "luxurious" residential towers built in the last few years, has lead to a rise in housing prices throughout the city. The result has been that middle class families, young professionals and students are increasingly finding housing in the city center unaffordable, while specific areas are prone to rapid housing gentrification. An emergent political discourse of affordability has shaped the municipal elections held in late 2008, challenging the ruling coalition & prompting a process of policy debate. The perceived crisis of affordability has been further complicated by the fact that the global financial crisis has effected many of the housing producers & real estate corporations based in Tel Aviv and operating globally. This will likely have profound implications on further reshaping the housing field in Tel Aviv a not least in shaping the structure of possibilities & the very perceptions of actors in the field as to what is "affordable".

2010S01645

Marontate, Jan (Simon Fraser University, School of Communication, K9671, 8888 University Dr., Burnaby, BC, V5A 1S6, Canada [tel: 17787825449; fax: 17787824024; e-mail: jmaronta@sfu.ca]), **From Noise to New Music: Soundscapes as Trading Zones,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the collaboration of musicians, engineers, scientists, musicologists & ethnographers concerned with documenting noise & sound in public places & the emergence of an interdisciplinary network of soundscape recordists associated with the World Forum of Acoustic Ecology (WFAE). The study draws on an analysis of a collection of soundscape recordings & interviews with participants in a forerunner of WFAE, the World Soundscape Project (WSP) begun forty years ago. The WSP grew out of communication researchers' concerns about noise pollution but rapidly evolved into a documentary project about disappearing sonic memories of the world & a resource for composers. The archives include a collection of audio field recordings of public spaces in urban locations,

& the sounds of specific types of places outside of urban areas (such as sounds of a working mining town), photographic documentation of the sites where the field recordings were made, & textual descriptions of sounds of the past in literature. The paper will discuss the transformation of researchers' definitions of "noise", ways of characterizing "sonic environments" & the uses made of recorded soundscapes in sonic design, soundwalks & electro-acoustic music composition.

2010S01646

Marotta, Vince P. (Deakin University, Burwood, Australia 3125 [fax:; e-mail: vince.marotta@deakin.edu.au]), **Stuart Hall, Cyberspace and the Rise of New Ethnicities,** *International Sociological Association, Gothenburg, Sweden,*

¶ In 1989 Stuart Hall contemplated the emergence of a new conception of ethnicity which engages rather than suppresses difference. This new category entails a notion of difference which is positional, conditional & contested. It is an ethnicity of the margins & of the periphery & it entails the realisation that "we all speak from a particular place, out of a particular history, out of a particular experience, a particular culture, without being contained by that position". The new ethnicity means the end of the essential ethnic subject. The paper ponders several questions: Does a new ethnic subject exists in the contemporary world of cyber space & virtual communities? Are these emerging new ethnicities in cyberspace less coercive & more diverse? Do they empower or do they reinforce existing class & gender inequalities? Are these new virtual ethnic selves the subjects rather than the objects of the practices of representation?

2010S01647

Marques, Eduardo (Department of Political Science/USP, São Paulo, Brazil, 05447000 [tel: 551155740399; e-mail: ecmarq@uol.com.br]), **Social Networks, Poverty and Neighborhoods in Two Brazilian Cities,** *International Sociological Association, Gothenburg, Sweden,*

¶ Social networks have been increasingly considered as important elements in the construction of broad variety of processes since access This article discusses the characteristics of personal networks of individuals in poverty in twelve neighborhoods in the cities of São Paulo & Salvador de Bahia. Previous results of this same research project have studied the role of social networks in the reproduction of poverty, considering the access of poor individuals to markets & to goods & services obtained through social support & exchange. The previous research studied the personal networks of 209 individuals in poverty & 30 middle-class individuals in seven locations in São Paulo. This paper includes the results of 150 personal networks of individuals in poverty who live in five different locations in the city of Salvador de Bahia. The article discusses comparatively the characteristics of personal networks of the individuals in São Paulo & Salvador. In general, the results confirm previous findings regarding the diversity & the importance of networks in living conditions, but also explore the differences between the cities to discuss dimensions of migration, race, housing conditions and tenure situations that could not be stressed in the previous research.

2010S01648

Marques, Joana & Amaro, Rogério (ISCTE-IUL, Av. Forcas Armadas | 1649-026 Lisboa | Portugal [tel: +351 917731384; e-mail: joana.marques@iscte.pt]), **Solidarity Economy in Macaronesia: An Innovative Concept,** *International Sociological Association, Gothenburg, Sweden,*

¶ The concept of solidarity economy refers to a variety of contexts and terms, ranging from the popular organisations in the South to the prosperous cooperatives in the West. The authors will bring to the discussion the experiences developed in the region of Macaronesia, which groups a set of islands characterized by the reference to the Atlantic Ocean & Sub-Saharan Africa, where it has been identified a set of unique experiences, allowing anticipating a new concept of solidarity economy. Based on Macaronesia's experiences, an hepta-dimensional vision of solidarity economy is proposed, consisting of seven pillars: an economic project, involving the production & sale of goods & services; a social project, promoting social inclusion & cohesion; an environmental project, valuing & protecting the environment; a cultural project, respecting & promoting cultural diversity; a governance project, based on democratic principles & shared governance & efficient management criteria; a territorial project, mobilising endogenous resources & capabilities & promoting local development; a knowledge project, constantly monitoring, evaluating & updating itself. As a multidimensional & holistic approach, such model aims at integrating the economy with all aspects of life, acting as a factor of social development.

2010S01649

Marques, Paula Ana & Moreira, Rita Helena (Departamento de Sociologia - Universidade do Minho, Braga, Portugal [tel: +351 253 604 212; fax: +351 253 678 850; e-mail: amarques@ics.uminho.pt]), **Entrepreneurship in Social Sciences. The Entrepreneurial Potential and the New Labour Market Insertion Strategies of Young Graduates.,** *International Sociological Association, Gothenburg, Sweden,*

¶ In recent years, entrepreneurship has been recognized as one of the possible way to access to the labour market & may even constitute an alternative form of professional insertion particularly important for young people with higher qualifications. In this sense, means that entrepreneurship poses significant & new challenges to the University that are related to their ability, together with other actors (economic, social, political) to develop entrepreneur spirit & an entrepreneurial & innovation culture. To illustrate this importance, this paper aims to explore the results of a research performed at the young graduates in social sciences from the University of Minho, in particular focused on their entrepreneurial potential. From the analysis of their academic & professional trajectories, & the modalities of professional insertion, this paper aims to contribute both to the discussion about the importance of higher education to develop the entrepreneurial potential on students & to understand their implications for the "construction" of alternative career paths. And also see how the non-formal activities or extracurricular experiences in academic context, can increase transversal skills and enhance the potential employability of young graduates, preparing them for their own career choices, whether they pass to work for others or by creating their self-employment.

2010S01650

Marron, Ann, Carragher, L. & O'Connor, L (Netwell Centre, Dundalk Institute of Technology [tel: Tel: ++ 353 (0)42 9370347 ; e-mail: ann.marron@dkit.ie]), **Home Care Workers, Who Cares? The Role of Job Satisfaction and Job Stress on Home Care Workers' Intentions to Leave Their Job,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction: Paid home care workers are crucial to the success of care in the community policies, providing much needed support to older people & informal carers. Yet constraints on the system have resulted in a decrease in caring hours, with potentially serious implications for workers & community care policy. The aim of this study is to explore the relationship between levels of job satisfaction of home care workers & turnover intention. Methods: A county-wider survey of home care workers involving both public and independent sectors care workers (n=520). Measures include the Intention to Turnover subscale of the MOAQ (Cammann et al. 1983), the Benjamin Rose Relationship with Supervisor Scale, & the Perception of Empowerment Instrument. Psychosocial well-being is measured using the General Health Questionnaire (GHQ-12) and Satisfaction with Life Scale (SWLS). Results: Preliminary analysis suggests significant associations between negative job satisfaction, health problems, & higher levels of psychological ill-health when job security is low & the workload is heavy. Evidence also suggests job dissatisfaction & intentions to leave current position are higher in younger workers. Conclusion: Job satisfaction, particularly low job satisfaction has the potential to damage mental & physical health, & adversely affect turnover intentions. Given current demographic & economic trends, the future availability of sufficient numbers of home care workers remains uncertain. The findings from this study will provide important lessons for policymakers & service providers in terms of the identification & implementation of successful interventions for developing & sustaining this workforce at both policy & practice levels.

2010S01651

Marschall, Jörg (Department of Sociology, Berlin, Germany, 10587 [fax:; e-mail: joerg.marschall@tu-berlin.de]), **Constitution of Communities through Practices. The Case of VW (Classic Cars) Brand Communities,** *International Sociological Association, Gothenburg, Sweden,*

¶ The case of VW (classic cars) brand communities. Brand communities (Muniz/O'Guinn 2001), subcultures of consumption (Schouten/McAlexander 1995), consumer tribes (Cova/Kozinets/Shankar 2007), or commercial communities (Hellmann 2008), are collectives of consumers centered around a specific product, service or brand (I will use the term brand community in the following proposal). Such brand communities are said to be specialized, non-geographically bound communities, based on a structured set of social relations among admirers of a brand (Muniz/O'Guinn 2001). They are said to exhibit features which contradict the traditional notion of community (Gemeinschaft) outlined by Ferdinand Tön-

nies (1887) & are therefore considered to be a type of post-traditional community (Hitzler 1998). Though some particular studies reveal the sets of values underlying brand centered communities in detail (most notably Schouten/McAlexander 1995), there is no sociologically informed definition, typology & theory on brand communities which would account systematically for values exceeding brand or product attribution. Ethnographic research on two cases of VW classic cars brand communities in Germany suggests that each of these communities has a distinct set of values which are only at first sight primarily brand or product related. Closer inspection reveals that in the seemingly commercialized context of such communities sets of values emerge mainly from the practices of repairing & restoring classic cars & include environmental, anti-consumerism, & value-preservation concerns. In my paper, I will present a model which starts from Theodore Schatzkis idea of the organization of a practice (Schatzki 1996) to outline the interaction of (1st) practices, (2nd) values, practical knowledge and beliefs & (3rd) the material artefact which constitutes specialized communities. This model attempts to contribute to a sociological approach to brand communities which can also be generalized to other specialized communities & should be able to account in a systematic way for the sets of values which come within sets of practices in a community.

2010S01652

Martin Perez, Alberto (Spanish National Research Council CSIC, Madrid, Spain, 28037 [tel: +34916022615; fax: +34916022971; e-mail: alberto.martin@cchs.csic.es]), **Immigrants' Entitlements in Welfare Services: Different Treatment in Search of Equality?,** *International Sociological Association, Gothenburg, Sweden,*

¶ In most European countries, 'legal' immigrants are usually entitled at least to social & economic citizenship. They are so granted access to welfare services in the same terms as native citizens. However, when observing the daily practice of welfare services, the immigrants' access to limited citizenship is often translated into a different treatment, compared to full citizens, in their interactions & social relations with welfare officials. These latter seem to introduce more discretion in these specific interactions (for instance, by insisting in looking for loopholes in order to avoid access to a particular provision), which could be interpreted as discriminatory practices against immigrants. But social relations are more complex. I am currently carrying out a research project on the daily practices of three welfare services in Spain (the Social Security, the Unemployment Services & the Social Services). I am observing the interactions between civil servants & heterogeneous clients in these particular public spaces, & focusing on the way categories & identities are continuously negotiated within these interactions. I am especially focusing on the differences between full citizens & immigrants in order to understand the reasons & the consequences of these differences in terms of treatment. This paper will show that different treatment does not always lead to discrimination, but could become a successful strategy of social integration. When observing officials serving heterogeneous categories of clients and treating them differently, by taking into account the profile of each client & his or her specific needs, the interactions can be analysed as a way of seeking equal access to welfare. Therefore, I argue that civil servants are 'teaching welfare entitlements' in order to reinforce equality, by treating citizens & immigrants differently in the public spaces of welfare services.

Martin, Alberto (Universidad De Colima, Colima, Mexico, 28040 [tel: 0052 312 316 11 27; e-mail: matinal@ucol.mx]), **Processes of Change in Non-State Armed Groups: Learning from the Salvadorean Experience,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper intends to contribute to the understanding of the ideological & strategic evolution of the organizations which comprised El Salvador's Frente Farabundo Martí para la Liberación Nacional (FMLN, Farabundo Martí National Liberation Front,) from its inception in the 1970s to its becoming a political party in 1992. The main question posed by the Salvadoran case is why a powerful coalition of armed forces a one of the strongest guerrillas in the history of Latin America a agreed to negotiating their disarmament & coalescence to the political system without having undergone military defeat and without having reached their fundamental goals, namely, revolution and socialism. The conventional answer to this question emphasizes the fact that both conflicting parties had reached military equality as well as a lack of external support following the fall of the Eastern Bloc, yet it oversimplifies a longstanding & quite complex process. Said process is one of the main issues this paper will discuss.

Martin, Claude (CNRS - EHESP, EHESP, av. professeur léon bernard 35043 Rennes cedex, France [tel: 0033 299022838; e-mail: claude.martin@ehesp.fr]), **The future and limits of intergenerational solidarities,** *International Sociological Association, Gothenburg, Sweden,*

¶ Intergenerational solidarity is a permanent & strong element of social cohesion. Nevertheless, the conditions in which they operate are changing. In this presentation, we propose to develop two main issues. First, what are the consequences of individualization on mutual care practices? How do we care for each other in an individualized society? Second, intergenerational solidarities (ascendant & descendant) could be affected by strong social trends: on one side, with increasing life expectancy, people are living longer & longer in couple, but are also confronted to important care needs due to their frailty or vulnerability; on the other side, adult children, as senior workers, have more & more difficulties to balance work & family responsibilities, due to precariousness, work flexibility & non-standard hours of working. Confronted to these trends, we could consider that intergenerational solidarities are under pressure

Martín, Eloísa (Dept. of Sociology, University of Brasília, Brasília, DF, Brazil [e-mail: eloisamartin@unb.br]), **Imagination and Epistemological Constraints Towards a Definition of "Sociology Of Religion" as an Academic Field in Latin America,** *International Sociological Association, Gothenburg, Sweden,*

¶ Sociology of Religion has a well established academic place in Latin America. This is a field of knowledge & forces, with its own references to specific authors, literature & topics a and widely present in many undergraduate & graduate courses. Research and academic production on Sociology of Religion has grown significantly in the region during the last decade a in Brazil, for instance, it is the area which has grown the most in Social Sciences. However, Sociology of Religion in Latin America has been structured throughout Eurocentric & Modern-centric perspectives. It has happened mostly, I argue, following a need for legitimating their "native" arguments using theoretical statements and methodological standards coined in hegemonic academic centers. By means of the examination of syllabi on Sociology of Religion, collected in 45 Latin American Universities, I propose the analysis of how Sociology of Religion has lately been imagined & taught. Overall this paper intends to discuss the Latin American epistemological contributions towards the understanding of religious phenomena in peripheral contexts.

Martin, Philip (Media and Communications Program, School of Design and Social Context, RMIT University, Melbourne, Vic, 3000 AUSTRALIA [tel: +61 3 9925 1911; e-mail: philip.martin@rmit.edu.au]), **'I Want My Father to Return to the Position Where He Should Be': Young Urban Vietnamese Men and the Rise of Women's Economic Dynamism,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper proposes that young urban Vietnamese men's memories of gender relations in their homes during the early 1990s Doi Moi reforms are at odds both with dominant scholarly understandings of gender in the household in Vietnam, & their own narratives on masculinity. Most research on changes in household relations during Doi Moi suggests that despite an increased economic role in both home life & the national economy, women remained curtailed by traditional patriarchal structures at the household level. Drawing from the life-narratives of five men aged in their 20s collected over 13 months of fieldwork in Hanoi (2005-6), I argue that young men's memories of their parents' work experiences during the early 1990s reveal a profound awareness & appreciation of their mothers' then heightened vulnerability to labor market reconfigurations & overall work intensification. Young men remember their mothers in this period as economically dynamic relative to their fathers. This has led to young men facing changing socioeconomic conditions today citing their mothers' histories of economic risk-taking & chance as exemplar of economic capableness. Young men's memories of their fathers during the early 1990s generally do not include economic dynamism. Their perception of their fathers' relative constancy amid change in the labor-market has however lead to a (re)vivification of discourses condoning roles of "contemplative" & "unruffled men" within the household. This paper reveals how young men's memories of the changing roles of women within & beyond the family during Doi Moi exist side-by-side with extant conceptions of the patriarchal household. In so doing, it points to how academic & popular discourses around unchanging "traditional" patriarchal structures at the

household level in Vietnam have hidden significant change in young men's attitudes toward caregiving & labour therein.

Martin, Sonia Lea (School of Social and Political Sciences, University of Melbourne, Parkville, Victoria Australia 3000 [tel: +61 3 9483 2497; fax:; e-mail: sonia.martin@unimelb.edu.au]), **Reconceptualising Young People's Engagement with Work and Welfare: Considering 'Choice',** *International Sociological Association, Gothenburg, Sweden,*

¶ Active labour market policies in Europe, the United States and Australia aim to improve economic self-reliance by moving people into paid work & off state-funded welfare. Policy measures range from curtailing benefits & tightening eligibility to making welfare conditional upon fulfilling certain job search activities and punishing recipients for non-compliance. Underpinning the approach is a set of contestable assumptions about the behaviour and morality of welfare recipients who are perceived to be guided by self-interest & to be at "moral hazard" from a temptation to abuse the welfare system. Guided by critical social inquiry, the paper draws on Bourdieu's notion of habitus to suggest a useful approach to conceptualising action & choice. In-depth interviews with a small sample of Australian young people with varied labour market attachment provide insight into the ways in which the young people's choices were shaped. The notion of habitus enables an understanding of choice that recognises individuals as capable actors & in so doing provides a substantive base from which to counter the mischievous claims about young people evident in current social policy.

Martin, Unai & Bacigalupe, Amaia (University of Basque Country, Basque Country. Spain [tel: 0034650847854; e-mail: unai.martin@ehu.es]), **The Relevance of Inequality in Housework Division to Understand Gender Inequalities in Health: The Case of the Basque Country,** *International Sociological Association, Gothenburg, Sweden,*

¶ As well as in most societies, in the Basque Country women live longer but in poorer health. Recently, many studies have shown the importance of considering the wide range of women's situations to compare their health to that of men. Specifically, it has been underlined the relevance that paid work & housework can have on the observed gender differences. The objective of this paper is to analyse the unequal impact that paid work has on Basque women and men, taking into account the influence that gender differences in housework division have in that relation. Methods Observational and cross-sectional study based on the Health Survey of the Basque Country. The independent variables were the degree of inequality in housework division at home (based on the declared frequency of housework activity by both members of the couple) & the paid work. The independent variables were self-perceived heath and health related quality of life (SF-36). Prevalence ratios (PR) were calculated by log-binomial regression analyses & means by covariance analysis. All the calculations were adjusted by age, social class, & the lack of social support. Analyses were also stratified by social class & sex. Results The protective effect of the paid work was clear in men but not in women. In women this effect was only observed when housework was equally divided with their partners. Moreover, women's probability of Ill-health and poor quality of life was greater among workers with an unequal division of housework & among housewives. These results remained after adjusting by the other variables. Conclusions The beneficial effect that many studies describe for paid work is not so clear for women because it is necessary to consider the influence of housework division in the couple. The current unequal distribution in housework could partly explain gender inequalities in health.

Martin, Wendy & Williams, Veronika (School of Health Sciences and Social Care, Brunel University, Mary Seacole Building, Brunel University, Uxbridge, Middlesex. UB8 3PH [tel: +44(0)1895 268747; e-mail: wendy.martin@brunel.ac.uk]), **Photographing Everyday Life: Ageing, Bodies, Space and Time,** *International Sociological Association, Gothenburg, Sweden,*

¶ As people grow older, daily norms & practices can become increasingly problematic as everyday routines become more frequently and, at times, unpredictably, disrupted. The integrity and logic of the ageing body & everyday practices may become questioned, the taken for granted nature of embodiment challenged, and people in mid to later life may increasingly be required to make sense of biographical & bodily changes in order to maintain and/or re-negotiate a sense of "ontological security". Methods: This paper draws on data from the pilot phase of an empirical study funded by the ESRC First Grants Scheme entitled 'Photographing Everyday Life: Ageing, Lived Experiences, Time & Space'. The project will involve a diverse sample of men & women aged between 50 & 70 years with different daily routines (work, non-work and voluntary). Data collection methods include participants taking photographs of aspects of their daily lives followed by in-depth interviews. The photographs become a form of "visual diary" as a means to explore the photographs & meanings about daily lives. Findings & conclusions: An exploration of everyday life makes visible the rhythms, patterns & tempo-spatial textures that underlie our habitual & routinised daily lives. We will discuss themes underpinning these issues including gender; space & time; identities & everyday life; mess & dirt; social networks; and the body in everyday life. We conclude by highlighting interconnections between the corporeality of ageing bodies & the socio-cultural context in which we live.

Martín-García, Teresa & Castro-Martín, Teresa (Center for Human and Social Sciences, Council for Scientific Research (CSIC), C/ Albasanz 26-28 Madrid 28037 [tel: 00 34 91 6022312; e-mail: teresa.martin@cchs.csic.es]), **Public Employment and Reproductive Decisions in Spain,** *International Sociological Association, Gothenburg, Sweden,*

¶ An increasing number of studies cast doubt on the assumption that a woman's accumulation of human capital & labor participation per se must result in lower fertility. The (un)feasibility of family-work reconciliation issue is crucial in the decision. This paper investigates to what extent public employment affects women's reproductive behaviour in Spain. It specifically explores whether and how public sector positions improve women's chances of combining a career with childbearing, implying a higher final fertility as reported in other contexts. Event-history analyses are applied to retrospective reproductive & work biographies from the Spanish Fertility Survey (CIS 2006). Preliminary results show that there are differences in women's fertility according to their occupational position & confirm that women employed in the public sector show a specific advantage in harmonizing work & motherhood in Spain. This finding is consistent with the idea that to study the impact of women's labour force participation on fertility, one must take into account not only a woman's human capital, but also her employment conditions at the workplace. This effect is particularly strong in Spain, characterized by a weak welfare state, a social organization that relies heavily on strong family ties, & a low investment in public policies.

Martin-Juchat, Fabienne (Université de Grenoble 3 - Gresec, 11 avenue du 8 mai 1945 BP 337, 38434 ECHIROLLES Cedex [tel: 04 56 52 87 13; fax: 04 56 52 87 10; e-mail: fabienne.martin-juchat@u-grenoble3.fr]), **Embodied Interactions: ICTs and Social Spaces,** *International Sociological Association, Gothenburg, Sweden,*

¶ The individual doesn't have a body, the individual is its own body. Communication is a meeting point between movements that build the social, physical movements, moreover emotional movements, expressed vocally or not. The body is not only an aggregate of muscles and corporal activity is not limited to visible movements. The body is first of all a medium that allows the rise of senses. Feeling through flesh & bone is the standing point on which symbolical thoughts & common sense are built. Thought rises from a body in action. What happens in the relation with a symbolical space is very specific as it characterizes the human being. Narrations, especially if they rest on bodies in movement, give birth to emotions through identification. The process isn't new, but it has however been generalised (see storytelling) in order to answer to the culture of emotion in which capitalism consists of. Communication techniques have progressively become more complex with digitalisation, thus facilitating the potential identification allowed by representation. As a follow-up to this epistemology, the purpose of this article is: -firstly, to underline with examples the fact that the body is increasingly approached by the media and social areas, in a societal context dominated by trade logics; -secondly, to defend the theoretical importance of taking the body into consideration when analysing interactions between individuals, symbolical spaces & social areas.

2010S01662

Martinez Andrade, Luis (Ecole des Hautes Etudes en Sciences Sociales, FRANCE, 75006 [tel: 0033642485407; e-mail: luismaU-Landrade@hotmail.com]), **Social Theory and Social Movements in Latin America: Towards the Decolonization of**

Knowledge(s), *International Sociological Association, Gothenburg, Sweden,*

¶ The social movements at the turn of the century in Latin America have questioned the universal practices & theoretical foundation of the left. The socio-political shaping of anti-systemic movements has come from subjects outside the hegemonic discourse (indigenous, peasants, unemployed & afro-latinos). These movements rejected the ideological framework of right & left & effectively replaced it. In this paper I would echo them criticizing the main weaknesses of liberalism & Marxism. Building on the contributions of Tricontinental authors I would also argue against current postmodern relativism & intolerant Marxism. Decolonizing power ought to be linked with decolonizing knowledge. Social sciences ought to respond to this double critique or face the consequence to remain as subordinate discursive sites.

Martínez Ariño, Julia (Universitat Autònoma Barcelona, Edifici B, Campus de Bellaterra, 08193 Cerdanyola del Vallès (Barcelona) [tel: 0034935812447; e-mail: julia.martinez.arino@uab.cat]), **The Identity Socialization of Children and Youth in the Jewish Communities of Barcelona,** *International Sociological Association, Gothenburg, Sweden,*

¶ The main aim of this communication is to present some of the principal elements of the educational field of the Jewish communities of Barcelona. More specifically, it tries to show the way in which these address the socialization of their new generations, in a secular environment that does not reinforce the Jewish belonging, but offers a wide variety of options to legitimate the reality. In this sense, the presentation takes into account not only the role that formal education, more specifically the community Jewish school, plays in these processes of construction & transmission of Jewish identity, but also the non formal education, particularly the one that takes place in leisure centers & youth associations, on the one hand, & the informal education that children & youth receive, mostly in their family & home, on the other hand. In this last one takes place the first stage of the socialization process, & therefore the first contact to Judaism, not only as a religion, but also as a cultural tradition & an "ethnic" belonging. The principal conclusions of this research are based on in-depth interviews to teachers, families & leisure monitors, as well as observations & documental analysis.

Martinez Mullen, Claudia (Sociology Department University of KwaZulu-Natal, Durban, KwaZulu-Natal, South Africa (4001) [tel: + 27 31 260 2510; e-mail: martinezmullen@ukzn.ac.za]), **Are Leisure Relations Free? A Marxist Approach,** *International Sociological Association, Gothenburg, Sweden,*

¶ The rapid circulation of capital & new commodities within the world system during the nineteenth & twentieth centuries was possible due to large-scale European industrialisation & the expansion of global markets incorporating the underdeveloped world. Europeans not only brought with them new economic forms, but also new cultural practices which transformed the everyday life of people in the third world in radical ways. These transformative cultural practices included sport & leisure activities, originally practiced in Europe, brought over to the third world through British colonialism; sport played an important role in developing a new social order. In particular, sport played a significant role in developing new ways of understanding, experiencing & "using" time that were central to the development of a new global labour process. English cultural and social practices in particular had great influence in the development of a new category of time, "leisure time," in Argentina & South Africa. As new leisure activities & athletic pursuits were appropriated & re-appropriated by various sectors of these societies, they reinforced new ways of understanding labour relations by constructing opportunities for "using the time" when people were not working. During this "leisure time" people started to "choose" among different activities. Many of these activities spread with the advance of science, technology and communication & with the concomitant continuous creation of new needs consumed by the population. I argue that the majority population in urban areas of these two countries, South Africa and Argentina, have incorporated leisure activities & thoroughly incorporated the concept of "leisure time". This new category and the activities associated with it, are actively accepted and incorporated by the social order as a way to reproduce the capitalist system. Workers, who are an active part & producers of the labour process at work become consumers in their leisure time; far from being a contradiction, these two roles operate two sides of same coin, reproducing in this circular process of production and consumption the capitalist mode of production. Leisure activities have an essential function in our societies, creating multimillionaires & entire industries associated to the "entertainment." This paper will respond critically to the social category of leisure & "leisure time," using both Marxist and Neo-Marxist theoretical tools, such as the theory of Frankfurt school, Gramcsi & Pierre Bourdieu. It will attempt to bring some insight to contemporary leisure relations produced & reproduced in the context of capitalist relations. A key site of critique will be the idea of "free individuals" who can act as they please in these societies & who can choose "consciously" how they want to spend the leisure time "freely". Empirical information from a survey conducted in Argentina & South Africa about leisure activities, & respondents' choices & preferences will be analysed as an attempt to highlight contradictions between individual experiences of "free choice" in leisure activities and the limits to freedom inherent in the construction of "leisure time" as a social category.

Martins de Albuquerque, Paulo Henrique (PPGS-Pernambuco University - Brazil, Av. Helio Ramos, S/N, Prédio do CFCH, 12. andar, zip code: 50670-901 [tel: 55-81-21268285; fax: 55-81-21268284; e-mail: pahem@terra.com.br]), **Between Postcolonial and De-Colonial Theories: The Epistemological Shift of Latin American Sociology,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ Entre las teorías pos-coloniales y las descoloniales: el giro epistemológico de la sociología en América Latina Con esta ponencia pretendemos demostrar que el debate pos-colonial no evoluciona de manera simétrica en los países del sur, siguiendo el rumbo de los acontecimientos que marcan las diversas experiencias republicanas en los contextos de descolonización planetaria. En el caso de América Latina, proponemos que el debate pos-colonial tuvo un gran avance con teorías como el estructuralismo cepalino, la teoría de la dependencia y la teología de la liberación. Sin embargo, tales tesis no fueron suficientemente radicales para cuestionar el mito del desarrollo. Esta crítica se emancipa apenas en los últimos años, a partir de algunos factores confluyentes: por un lado, el avance de la teoría crítica, sobre todo con la introducción de metodologías desconstruccionistas y, por otro, las nuevas movilizaciones sociales y culturales que pasaron a cuestionar el ilimitado ideal del progreso económico. Pretendemos demostrar, igualmente, que el avance de las tesis desconstruccionistas dependen de la incorporación, de modo más objetivo, de las críticas antiutilitaristas desarrolladas en los países del norte. En este sentido, el debate pos-colonial no debe significar un choque sur-norte sino una nueva configuración de los intercambios entre el sur y el norte en el contexto de la decadencia del eurocentrismo.

Martins, Ana Lucia (Federal Rural University of Rio de Janeiro, Campus Nova Iguaçu [tel: 021 22948605; e-mail: allumar@uol.com.br]), **Leisure and protected area: conflicts in the search for 'agreeable emotions',** *International Sociological Association, Gothenburg, Sweden,*

¶ The increase of creation of protected areas in the world in the last 20 years & the complexities which surround them have resulted in a new field of studies under human & social sciences. This paper approaches the issue of leisure & protected areas with an empirical focus on a biological conservation unit & the populations who live & stay around it. The claim is that the categorization of the protected area disputes, by a group of actors, values & practices on conservation. In such dispute, leisure is a tense & (im)possible mediation for the relations between society & nature. On the whole, the paper aims at exploring the singularities of the process of categorization of the protected area, seated in a metropolitan context with strong social difference, where leisure is problematized under a very little discussed relation by sociological studies. From observations, interviews, photographs & questionnaires with non-governmental organizations, local residents, representatives of tourism enterprises & public powers, we intend to discuss the dynamics of the social relations constituted in the context of the social processes of nature preservation & the particularity of leisure as a practice & a value in the interactions among different social actors & also the issue of the preservation of protected area.

2010S01672

Martins, Carlos Benedito (University of Brasilia (UnB), Brasília, DF, Brazil, 70910900 [tel: 06133071475; e-mail: carlosb@unb.br]), **Reshaping Brazil's Higher Education System in the Age of Globalization,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper will discuss the transformations that occurred in Brazilian higher education from the 1990's up to today's date. First of all, it will analyze certain proposals suggested by transnational organizations (World Bank, UNESCO, etc) that aim to organize higher education in Brazil. This paper will also highlight the financial modalities that were recommended for public education, the introduction of new academic management practices, the flexibilization in the accrediting process of academic institutions, the incentive to increase competitiveness among universities, etc. Following that, the paper will examine the constant tensions & conflicts that these proposals have produced among different actors (state, professors, scientific associations, etc) who participate in the Brazilian higher education system. The text will address the consequences of neoliberal globalization model, which was initiated in Brazil during the mid-nineties, over the national higher education system. Furthermore, it will point out how state disinvestment towards the public university has contributed to the advancement of private higher education. In fact, the private institutions which currently respond for the elevated rates of the number of institutions & undergraduate enrollments started to organize themselves as powerful companied. Lastly, the paper will discuss the policies adopted by the current government (2002-2010). It will analyze how the government has been facing the challenges brought forth by globalization process and will also highlight the measures adopted by it, aiming to increment the democratization of its access, to retrieve the public university's expansion capability & to regulate the growth of the private higher education.

2010S01673

Maruthakutti,R (Department of Sociology, Manonmaniam Sundaranar University, Tirunelveli - 627 012, Tamil Nadu, INDIA [tel:

+91 462 2333741; fax: +91 462 2322973; e-mail: maruthakutti@yahoo.com]), **Grandparenting in Rural and Urban Communities,** *International Sociological Association, Gothenburg, Sweden,*

¶ Aging in India has been viewed based on certain assumption that the elderly lack resources, particularly fluid monetary resources, and hence their exchange with grandchildren is highly limited. The present paper examines the tenability of the assumption. The data are compiled relating to the differences between rural & urban grandparents in terms of their perceived normative obligations towards grandchildren as well as their experience & perception of changes in the relationships between grandparents and grandchildren. Another key focus of the study is the modes and frequency of contacts between grandparents & grandchildren as well as the types of exchanges taking place between them. Data were collected from 77 urban grandparents residing in care homes & 96 community-resident rural grandparents in Coimbatore district of Tamil Nadu State, India. The findings reveal that those in the elderly homes expressed their unmet emotional need to socialize with their grandchildren primarily because either the grandchildren seldom visited them or due to restrictions prevalent at the institutions which prevented them visiting their families. Frequency of contact is high while grandchildren are very young, and then decreases as they grow to adult age & uncertainty prevails after marriage. Rural grandparents are bound by greater affect with grandchildren, such as jovial, playful & companionate interface but who noticed lack of respect to elderly in some cases due to geographical mobility, impact of media, changing composition of networks & socialisation practices. The findings also suggest that grandparenting role in South India is gender based & norms are strong in support of caring about daughter's children. Grandparents contribute money & material support & other care support to grandchildren at rites of passage, & in return grandparents' presence at ceremonies is highly valued & is reciprocated with material gifts & public esteem to the elderly.

Marzorati, Roberta (Universitat Autonoma de Barcelona [e-mail: roberta.marzorati@gmail.com]), **"DIGNIFICAR EL BARRIO"? Gentrification, Global Tourism and Conflicts over Space in Barcelona's Multiethnic Raval,** *International Sociological Association, Gothenburg, Sweden,*

¶ The successful model of urban restructuring called "Modelo Barcelona" was based at the beginning on the coordination of economical and political interests with the civic interest, & the promotion of social cohesion. More recently, following the larger space given to the market & the private sector to the detriment of political planning, the model has shown his side effects. Raval is a neighbourhood in the historical centre where these contradictions have become particularly evident: dramatically transformed from the 90's through rehabilitation processes following the Olympic Games euphoria, it faces problems related to the coexistence of many different populations, exacerbated by the local institutions regulatory system failures. The article focuses on the southern part of the neighborhood, which has gone through a process of gentrification in the last decade, has attracted more & more tourists, has become a leisure & consumption place for many, while keeping on being a place for immigrants & poor residents - only partially expelled. Conflicts over the control of space have become routine, & spontaneous neighbors associations with a clear anti-institutional discourse are gaining prominence. This article aims at unpacking Raval complex situation through the analysis of the evolution of urban movements in the neighbourhood, to show how urban conflict has multiple facets & how feelings of injustice and exclusion are experienced differently from different actors.

Mashkina, Olga A. (Department of Pedagogical Education Moscow State University, Moscow, Russian Federation, 119992 [tel: +7 495 9394280; fax: +7 495 9394056; e-mail: oliyam@yandex.ru]), **Identity Transformation of Chinese Students Studying Abroad,** *International Sociological Association, Gothenburg, Sweden,*

¶ Training of Chinese students at Moscow State University shows that their two greatest challenges are the language barrier and adaptation to the new reality. Chinese students due to their self-organization, high motivation & active talking practice manage to master their Russian within 2 years of regular study. They have difficulties in creating original scientific texts in Russian in accordance with the required standards of style and genre. Adaptation Chinese students to Russian mentality & culture is even more difficult task & can cause a number of conscious or subconscious reasons for resistance or even rejection. It is connected first of all with transforming one life code to another, different from habitual in China. It is well known that Chinese culture formed on indigenous civilization base. The life of contemporary Chinese, despite their active involvement in the process of globalization, is still imbued with the ancient knowledge, concepts, ideas, taking the form of symbols, not always understandable to people of other cultures. Chinese students prefer not to mix with other students & keep in separate groups. This situation has no political background; it is connected with adherence to traditional norms of life, enshrined in the collective unconscious level. Chinese students have such national distinguishing features as diligence, honesty, respect for knowledge & their holders. These characteristics are prerequisites for successful study. At the same time, the traditional Chinese basic values also include a priority of collective interests over personal, obedience & adherence to a strict hierarchy between older & younger. These characteristics prevent the formation of personal views, critical thinking abilities, & creative potential. Experience shows that acquaintance, with a system of values of the Chinese allows a teacher to make a bigger impact on the transformation of the identity & personal code (model of behavior) of Chinese students.

Mashkova, Elena (GEPECS, Universite Paris Descartes, 45, rue des Saints-Peres, 75006 Paris, France [e-mail: elenom@gmail.com]), **Quality of Working Life Analyzed Through the Prism of Employment Status. Examples from the French Construction Sector,** *International Sociological Association, Gothenburg, Sweden,*

¶ Based on the evidence from field research dedicated to temporary workers in the French construction sector, this paper argues that the analysis of quality of working life should not neglect such factor as the employment status. It appeared that temps suffer generally from a poor integration & are often excluded from basic forms of participation as a matter of their employment status. Constraints resulting from job insecurity & poor working conditions may result in higher rates of occupational injuries when compared with permanent workers. However, segmentation process could be also observed within the category of temporary workers. The importance of the temporary work in production process as well as practices of human resources management & workforce mobilization within firms determine the position of temporary agency workers in employment & at work.

2010S01677

Mashkova, Elena & Poussou-Plesse, Marielle (GEPECS, Universite Paris Descartes, 45, rue des Saints-Peres, 75006 Paris, France [e-mail: elenom@gmail.com]), **Employment of Older Workers in France: Tomorrow Better Than Today?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Breaking with societal arrangements characteristic of the previous decades, French government recently instituted new legal obligations forcing firms & professional branches to negotiate and therefore inviting social partners to adopt new measures in favor of older workers. However, the success of these measures will depend on strategies of human resources management within firms and in particular the vision of ageing in work. Recent economic crisis could be considered in part as a "moment of truth" for the employment of older workers as soon as it has put the employment under stress & especially of workers over 55. The paper intends to analyze different factors & conflicting trends that may intervene in the process & impede the governments' initial intentions. Conclusions from the selected case studies will be presented as an illustration.

Maslauskaite, Ausra (Institute for Social Research, Saltoniskiu g. 58 [tel: +3705275 86 67; fax: +3705275 48 96; e-mail: amaslauskaite@ktl.mii.lt]), **Contacts between Adult Children and Their Parents in Lithuania: The Effects of Familial, Individual and Structural Level Factors,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this paper is to examine how adult child-parent contacts are affected by parental family history & on the other hand, how these contacts are shaped by the child's life course events & child's individual & structural level factors. The study is based on the dataset of Generations & Gender Survey. The analysis is conducted using the methods of descriptive analysis and logistic regression. Research results show that divorce has negative effect on adult child-parent relations but this effect is valid only for the child-father relations. Divorce disrupts more daughter-father than son-father contacts. Within the child-father dyad earlier divorce has negative effect & post-divorce life course transitions have no effect on the intergenerational contacts. Contrary to what has been expected child's life

course events & child's structural factors define the intergenerational contacts in very limited way. Proximity stands out as a most stable factor for contacts in all child-parent dyads; gender & age are relevant only for the weekly contacts with mother & non divorced parents; SES factors have very moderate predicting power for child-mother & child-parent dyads & are not significant for the contacts with father.

Maslovskiy, Mikhail (Dept. of Sociology and Social Work, University of Nizhni Novgorod, Universitetsky per., 7-201, Nizhni Novgorod, 603000, Russia [tel: +7 831 4338349; fax: +7 831 4338349; e-mail: maslovski@mail.ru]), **Neo-Weberian Comparative-Historical Sociology and the Reversal of Democratization in Post-Soviet Russia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Inattention to contemporary theories of comparative-historical sociology was among the reasons why the reversal of democratization and a new turn to authoritarianism in Russia proved to be unexpected by most representatives of 'transitology' as a branch of political science. Pre-conditions for democratic failure in Russia can be discussed from the perspective of different versions of neo-Weberian historical sociology. Randall Collins has emphasized the impact of geo-political factors on the process of democratization. Michael Mann has discussed the role of economic, political, military & ideological power in breakdown of democratic regimes in several European states. The multiple modernities approach developed by Shmuel Eisenstadt focuses on the cultural dimension of democratization & provides a comparative perspective for the study of political processes in non-western civilizations. All these approaches can be seen as complementary rather than contradicting each other. Application of theories of neo-Weberian comparative-historical sociology can contribute to understanding the dynamics of democratization and de-democratization in Russia & other post-Soviet states.

Mason, Jennifer & Muir, Stewart (Sociology, University of Manchester, Manchester, UK, M13 9PL [tel: +44 (0) 161 275 0265; e-mail: stewart.muir@manchester.ac.uk]), **Generations Beyond Families: Inter/Generational Dynamics in Personal Life,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores relationships between older people (over 55) and others of different generations. Rather than deploying only the definition of familial generations we investigate inter/generational locations & relationships outside "the family". We will suggest that neither the familial version of "generation" nor models of historical, cultural or political generations fully describe the way generationing "works" in people's everyday lives. We shall argue that although familial relationships are unquestionably important, that inter/generational dynamics are also present in (real, imagined & virtual) encounters with a range of non-familial others a e.g. neighbours, health care professionals, friends a as well as with places, cultural forms, & technologies. The significance of these relationships & associations lies in their capacity to shape and influence experiences of generational difference and/or similarity as well as the ways in which people may be assigned to or identify with particular "generations". We will show that relationships with these kinds of non-familial "others" can be crucial in older people's experience of cultural, social & physical ageing. The paper draws insights from mixed methods data generated in our ESRC funded study "Inter/generational Dynamics"; this study brings together a range of qualitative methods with quantitative data drawn from the English Longitudinal Study of Ageing.

Masselink, Leah E. (School of Nursing, University of North Carolina at Chapel Hill, Chapel Hill, North Carolina, USA 27599 [tel: 919-641-7077; fax:; e-mail: leahULmasselink@unc.edu]), **Health Professions as a National Industry: Framing of Controversies in Nursing Education and Migration in the Philippines,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the face of a global nursing shortage, many health care organizations in developed countries recruit foreign-trained nurses to maintain staffing levels. The Philippines is a key source country of nurses & the site of a growing training-for-export industry, despite its weak domestic health system. While the international orientation of the country's nursing sector is well-documented, the logics & power dynamics that underlie it are poorly understood. This paper uses case studies of two recent controversies in nursing education & migration to examine how stakeholders ("migrant institutions") in the Philippines debate priorities & represent nurses in public discussion. Findings from frame analyses of newspaper articles & key informant interviews suggest consensus of government, health sector, nursing education and professional development stakeholders around representations of Filipino nurses as export products on the global market, which minimize concerns about their rights as migrants & the impact of nurse migration on the domestic health system & link the nursing profession to the government's economic development and nation-building projects. These findings complicate representations of health professional migration as "brain drain" & demonstrate the contested nature of policy decision-making related to nurse migration in a country where it is economically & politically important.

Mathias, Matthew, Boli, John & Gallo-Cruz, Selina (Dept of Sociology, Emory University, Atlanta, GA, 30322, USA [tel: 1-404-512-7441; fax: 1-404-727-7532; e-mail: mmathia@emory.edu]), **The Globalization of Sudoku,** *International Sociological Association, Gothenburg, Sweden,*

¶ Predecessors & variants have been widely known for centuries, but it was not until 2005 that the sudoku number puzzle suddenly globalized. It did so at a dizzying pace. Lexis-Nexis reports four scattered newspaper articles mentioning sudoku from January to early May, 2005, followed by 27 articles in the second week of May and 121 articles in the third week. Global Books in Print lists no English-language sudoku books for 2004; in 2005, 11 titles appeared from January through May, 110 from June through August, & 286 from September through November. A total of 456 titles appeared in 2005, 717 in 2006. Sudoku is now everywhere, from the supermarket to the airline travel magazine, celebrated in local and international competitions & even on television game shows. How can we solve the puzzle of sudoku's phenomenally rapid globalization? In this paper we draw on several disparate data sources to trace the patterns of sudoku's spread & evaluate hypotheses about variations in sudoku popularity. Our quantitative analyses investigate both how soon a country or region's residents jumped on the sudoku bandwagon & the intensity of their interest in sudoku. Of particular interest is our use of web search data (using eight different writing systems) from Google Trends and Google Insights, relatively new & rich resources for information on globalization that have not previously been used in sociological research. In the last part of the paper we explore general arguments about the operations of world culture, whose increasingly rationalized, scientized, & complex character favors the spread of some types of cultural elements (including sudoku) but not others.

Matos, Ana (Centre for Social Studies, University of Coimbra, Colégio São Jerónimo, apartado 3087, 3001-401 Coimbra - PORTUGAL [tel: +351239855570; e-mail: amatos@ces.uc.pt]), **Can Protest Movements Broaden the Concept of Participation? The Analysis of the Controversial Reform of the Portuguese Public Maternal Health Services,** *International Sociological Association, Gothenburg, Sweden,*

¶ In March 2006, the Portuguese Health Minister determined a reform of the maternal health system, based in an experts report asked by the Government a few months before, which ordered the closure of 23 of the 50 maternity wards functioning at the time. The taken decision caused strong popular protests in several of the places affected by the decision, which lasted for 2 years. Drawing on a qualitative analysis provided by published news in 3 national newspapers, between March 2006 & December 2007, & on interviews made to privileged informants on this process, the paper tries to analyse how protest movements, faced as the most common form of public involvement, can enlarge the theoretical conception of "participation" a which is being neglected comparing to other institutionalized forms of citizen participation a & influence decision making processes. The study puts in evidence some remarkable findings: popular protests, despite being very dynamic and organised, never acquired a national dimension & didn't influence the government decision; although citizens express the need to revert the decision, they are especially aware of their exclusion from this political decision making process, the main reason why they integrate the protests.

Matschinger, Herbert (University of Leipzig / Clinic of Psychiatry, Semmelweisstrasse 10 04103 Leipzig [tel: ++49 341 9724533; fax: ++49 341 9724539; e-mail: Herbert.Matschinger@medizin.uni-leipzig.de]), **The Effect of "Item Ordering" in Screening Depression by Means of the PHQ-9,** *International Sociological Association, Gothenburg, Sweden,*

¶ The PHQ-9 instrument is frequently employed to adequately screen patients with respect to depression. It consists of 9 ordinal, Likert type items which are exclusively worded in the same direction & assumed to map one & only one latent construct. It is widely accepted that this short set of questions can be applied as a quick & easy to use screening instrument for assessing depression in the context of both experimental & non-experimental designs. Implicitly it is assumed that these 9 items are locally independent, which means that the manifest answer is generated by the latent dimension (e.g. depression) only & therefore the sum can be used as a sufficient statistic for the location of a respondent on the dimension. This only holds on condition that no learning or warming up, or contrary no fatigue and/or time shortage have an effect on responding to a question. These assumptions obviously are violated if the order of the questions in the questionnaire exerts an effect on several characteristics, like difficulty and/or discrimination of the prescriptive forms of answering. In order to investigate such a potential effect, a model has to be adopted which allows to distinguish between differential item functioning & item impact with respect to a strict (uni)-dimensional form. To evaluate both the ordinality of the prescriptive forms of answering (catgories) & the effect of the order on this characteristic, a partial credit model has been employed. This model is formulated within the framework of a non-linear mixed model which allows to treat the threshold parameters as dependent from the individually varying position of a question. A CATI survey was conducted 2009 on 1005 respondents employing a Latin Square, so that each of the 9 items is to appear at each of the possible 9 positions. Results show that the thresholds are not ordered & the discrimination of the categories depend on the order of the items. Therefore, the sum cannot be treated as a statistic to portray depression. Particularly, the quite frequently applied algorithm to obtain a classification into minor & major depression is not independent from the order of the items.

Matsumoto, Miwao (Department of Sociology, The University of Tokyo, 7-3-1 Hongo Bunkyo-Ku Tokyo 113-0033 Japan [e-mail: ghc03207@nifty.com]), **The Complex Circular Structure of Bioethics between the Academic and Citizen Sectors: Clarification by "Sectors Model" for Democratic Decision-making,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper describes & analyses the subtle but telling discrepancy between the academic & the citizen sector in bioethics with particular reference to the circular structure of arguments detected between the two sectors. The paper focuses on arguments centring around a large-scale government-sponsored epidemiological project in Japan to link genetic information & medical histories. Based on in-depth interviews with scientists & medical doctors and focus group interviews with citizen groups, it is shown that there is the complex circular structure of argument in terms of bioethics as seen by the academic & citizen sectors. In particular, citizen sector tends to leave everything to the responsibility of the academic sector, whereas the academic sector tends to leave everything to the decisions of society as a whole including the citizen sector & wait & see until the decision is made. When seen within multiple sector relationships, this finding strongly indicates that a dichotomous model of academic & citizen sectors as assumed in usual endeavours of public understanding of science and/or risk communication deviates from the reality significantly. The insight has profound sociological implications for designing a public arena that can maintain scientific integrity and appropriately mediate the academic & citizen sectors.

Matsushige, Takuya, Tsutsui, Takako & Otaga, Masaaki (Department of Social Services, National Institute of Public Health, 2-3-6 Minami, Wako-shi, Saitama 351-0197 Japan [tel: +81 48 458 6133; fax: +81 48 458 6177; e-mail: yakutagesh@aol.com]), **The Coordination Function in Integrated Home Care in Japan: A New Form of Mutual Aid,** *International Sociological Association, Gothenburg, Sweden,*

¶ In Japan, the Long-Term Care Insurance Act was revised in 2005, which required local municipalities to set up Community Integrated Support Centre. The centres have been expected to play a role to coordinate health & social care as well as formal & informal caring bodies in order for users to receive care services in a seamless way at home. Behind this revision is an increasing awareness that disproportionate weight on public service could lead to the collapse of the care system, & mutual aid in a local community, as a complement to the system, should be developed. However, efforts to promote the mutual aid are facing serious challenges as "socialisation of care" has deprived the society of such function largely. This study examines the ways in which integrated home care is provided based on empirical research and considers future agenda. Qualitative data were obtained by semi-structured interviews & observation of care practice. The data were analysed with grounded theory approach. Our findings imply that the coordination works when the connectedness among social resources, rather than disciplinary value judgment, become the central issue of the integrated care.

Matthews, Amie, L. (School of Social Sciences, University of Western Sydney, Penrith South DC NSW, Australia 1797 [tel: +61 2 9772 6224; e-mail: a.matthews@uws.edu.au]), **World-Making or World-Breaking Tourism? Understanding Cosmopolitanism as It Is Lived and Negotiated by Young Backpackers in the Travel Space,** *International Sociological Association, Gothenburg, Sweden,*

¶ Drawing on ethnographic fieldwork, in-depth interviews with young backpackers & analysis of key travel media, this paper explores the ways in which a cosmopolitan ethos is made manifest in the travel space inhabited by young travellers. The paper examines how in the backpacking culture notions of worldliness, global awareness and responsibility, hospitality & reciprocity are mediated by key discourses of authenticity & freedom, ultimately contributing to a "world-making" cosmopolitanism. However, drawing on more recent research into traveller discourses on illicit drug use, the paper also acknowledges the need to examine some of the more negative transformative potentialities that exist within the backpacking culture, particularly as behaviours such as illicit drug consumption (which inevitably impact toured communities) may also derive from young travellers' desires to develop more "worldly" selves. To this end, the paper seeks to develop a more nuanced understanding of how cosmopolitan values are lived, understood and negotiated by young travellers & how in the travel space a sense of global humanity may in fact be tempered by an equally strong sense of individualism & a desire for experiential freedom. The end result may thus be that there is not one cosmopolitan ethos within the backpacking culture but many.

Matthews, Julie & Garlick, Steve (The University of the SUnshine Coast, Maroocydore DC [tel: 07 5459 4441; e-mail: jmatthew@usc.edu.au]), **A Capabilities Approach to Animal Ethics and Sustainability Education,** *International Sociological Association, Gothenburg, Sweden,*

¶ Our failure to successfully address questions of environmental, social, economic & cultural sustainability threatens the survival of human society, animal species & ecosystems. Education values are central to evolving a culture of sustainability responsibility. This paper examines the potential for a capabilities approach to animal ethics as a means of deepening the values orientation of sustainability education & its contribution to the changes necessary to sustain life & biodiversity on earth. Sustainability education developed out of the sustainable development debates of the 1970s, but despite a concern with social injustice, it tended to endorse capitalist models of economic growth. Contemporary movements in sustainability education undertaken in ecopedagogy and ecoliteracy are interested in values education & the paradigm shift necessary to make education socially relevant & able to secure future survival. Sen (1985) has identified a capabilities approach, which when applied to the animal circumstance (Nussbaum 2003), provides a mechanism for sustainability action that is not driven by neoliberal forms of commodity accumulation & exchange. This approach provides an alternative to anthropocentric concepts of "humaneness" & utility. This paper examines the contribution of Sen's capabilities approach to the ongoing development of contemporary sustainability education.

Mattos, Rossana Ferreira da Silva (Professor of the Master of Social Science University Center Vila Velha a UVV; Coordinator of the Integrated Public Safety - UVV / National Secretariat of Public Security - SENASP - Ministry of Justice - MJ., Vila Velha - Espírito Santo - Brazil - 29.102-770 [tel: 55 (27) 34212080; 55 (27) 99514288; fax: 55 (27) 34212027; e-mail: rossanamattos@terra.com.br;rossana@uvv.br]), **Inequality and Urban Violence (A Study of Vitoria, Espirito Santo, Brazil),** *International Sociological Association, Gothenburg, Sweden,*

¶ The present paper analyzes how the economic & social changes occurred in Brazil since 1980 changed the social-spatial setting, contributing to the increase of urban violence, for example, in the Metropolitan Region of Vitoria a MRV, in a context of productive restructuring & changes in the labor market. The main hypothesis is: the increase of social

segregation may lead to the social fragmentation, and, as consequence, could generate a social environment that stimulates urban violence. To demonstrate it this paper analyzed the dynamic of the metropolitan space organization, associated with the social-spatial transformations. To better understand this process, the methodology focused on historical conjuncture analysis plus the development & structural changes that were processing in MRV, in the late twentieth & early twenty-first century, ensuring a more rigorous analysis of phenomena in question. Moreover, coupled with the analysis method applied in research conducted by the Centre of the Metropolis, we identified & analyzed the metropolitan area and socio-occupational structure of MRV in 2000. For this, we used two complementary methods: first a factor analysis, & from this analysis, each of the 59 Areas of Expansion of Sample Data - AESD, the MRV, was included in a typology of the area. Such approach was developed to evaluate how the local dynamics, & the intensification of labor precariousness, compared with the macro-economic determinations, could interfere in the fabrication of social segregation & urban violence.

Mattu, Salvatore (Dept. of Sociological Theory, Philosophy of Law, and Social Science Methodology Facultad de Económia y Empresa, University of Barcelona, Teniente Coronel Valenzuela 1-11, Torre 2, 4Ao. piso [tel: +34 93 4021602; fax: +34 93 4021967; e-mail: salvatore.mattu@gmail.com]), **The Problem of Integration in Secularized Societies,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ The paper explores the ethical & symbolic dimension that each society renews with their civic rituals. Every society has its own sources & instruments of legitimacy & consensus, integrating the social body while acting as item of conflict between the social and political forces. The specificity of European secularism isn't enough to define the variety of the religious context in the historical & cultural realities that compose European nations. That's the aspect which pushes to explore, the broad spectrum of phenomena connected with civil religion rituals & manifestations, focusing in the local dimension of civil life. Each society shares a specific history & culture that determines its collective historical consciousness. Is through great historical events and essential cultural references that social agent shapes the common heritage of a nation. The organic whole of historical heritage and cultural reproduction systems affects the individual psychological dimension, determines the citizen's civic spirit, while reinforcing the link with public institutions, strengthen a collective identity and promote democracy. If the civil religiosity is the corollary that animates the whole, then I must ask: what are the dimension and the conceptual boundaries of the phenomenon of civil religion in the European context? In this context, the phenomena of civil religiosity referred to the politeia, has a historical & cultural legacy that defines & determines it, hence we need to reformulate the analytical approach to the phenomenon of civil religion and some of its theoretical bases. Finally I want to reopen the debate on civil religion as an instrument of integration & inclusion, also in secularized societies, focusing my attention on the third millennium polis as open nodes of the global network interconnections. Modern leading cities are nowadays the architectural & social stages where protagonists' actors play their active role in globalization process.

Matulionis, Arvydas Virgilijus (Vilnius Academy of Business Law, Vilnius, Lithuania, LT03202 [tel: +37065086007; e-mail: matulionis@ktl.mii.lt]), **Education as a Basis of Formation National Identity,** *International Sociological Association, Gothenburg, Sweden,*

¶ Problems on culture, education, citizenship, identity & cohesion are relevant to every country & every person. This essay will try to overview shortly some of the social processes & changes which have been taking place recently in Lithuania. After Lithuania restored its statehood there were cardinal structural & systemic changes in all areas of life as the market economy & civic society were forming. Part of the youth do not receive general education certificate especially if they come from Romany's families. The social exclusion of such youth is emerging. But a lot of attention is given to schools where ethnic groups are a majority. There are Jewish & Belarusian schools. If in Soviet times the Polish used to attend Russian schools because they were supposed to provide better education, Then–now Polish are more willing to attend Polish schools. Lithuania does not experience problems with Russian education. These problems are quite seen in Latvia & Estonia. In Soviet period the ethnographic folk music & dance groups were the main actors in promoting Lithuanian traditions. This movement is alive. And it is significant to rural communities. The national traditions of ethnic groups are also fostered through the activities if such ethnographic groups. The most active are Polish, Karaim, Jewish, Tartar & other communities. This all created social cohesion. The idea of lifelong learning is being implemented. This is not only about qualifications for the world of work; it has a much broader idea a intercultural education. It is almost a few decades when the third age university is implementing the aim to satisfy the need for new knowledge & communication for thousands of people. I will finish with one remark: competing with Estonians there were efforts taken to create the image of Lithuania. The experts developed the idea of brave & daring country. In my opinion creation of such image is meaningless. Lithuania is a country of creative people.

2010S01692

Mau, Steffen & Sachweh, Patrick (University Bremen, BIGSSS, Po Box 330440 [tel: 0049 (0)421-218-66420; e-mail: smau@bigsss.uni-bremen.de]), **The Middle Class and the German Welfare State: Beneficial Involvement at Stake?,** *International Sociological Association, Gothenburg, Sweden,*

¶ We investigate how recent changes of the German welfare state are viewed by the middle class. While the working class is generally seen as the driving force of welfare state development, other approaches maintain that the middle classes' beneficial involvement into social security is crucial. The German welfare state is seen to be particularly centered on the desires of the middle class, but recent changes challenge this assumption. Unemployment provision has moved from status maintenance to minimum income support, & old age pensions have been lowered, while the private component of old age provision has been strengthened. Thus, we ask how the German middle class views the principle of status maintenance (and its emerging abandonment), & investigate to what extent responsibility for social security is assigned to the state versus the individual citizen. On the basis of qualitative material from focus groups & quantitative survey data, we find that individual responsibility is generally supported, but that the state is still assigned responsibility for providing a basic level of social security. Besides, some people are seen as less capable of acting individually responsible, e.g. the poor or long-term unemployed, & therefore a state "inducement" of individually responsible behavior is demanded.

Mayer, Liliana (University of Buenos Aires, M.T. de Alvear 2231, 1111, Buenos Aires [tel: 5411-4824-3577; e-mail: lilimayer@yahoo.com]), **Education, Social Inequality and Cultural Diversity. Notes on Citizenship Building in a Fragmented Society,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ In our exposition we will argue that main school agents, that is, teachers & directors- from the educational systems tend to read social inequalities as cultural differences and, supporting their diagnosis in relativists arguments, they inhibit & fracture the pedagogical & socializing function from the education experience, contributing to the reproduction & production of inequalities and amplifying origin differences. By doing this, school system resign the ethos for which it was created. So, even though Argentinean Educational System documents stipulate that modern school should generate habits of normalization & discipline among its future citizens, in order to develop useful men for the society in the future, these goals is reserved to the ones in good socioeconomic conditions. The exposition is based on my doctoral research work, which included participant observations in for secondary schools from the City of Buenos Aires & interviews to their agents. These school can be divided into two types: a) an elite High school, b) three schools which segment their public within its shifts, by offering a different educational experience to their pupils from the morning shift–where the educational process takes place–and the comfort above mentioned to the afternoon & night shifts.

2010S01694

Mayerl, Jochen (University of Stuttgart, Institute for Social Sciences, Stuttgart, Germany, 70191 [tel: ++49 711 685 83577; fax: ++49 711 685 73577; e-mail: Jochen.Mayerl@sowi.uni-stuttgart.de]), **Methodological Problems of Ego-Centered Network Analysis in Attitude-Behavior-Research,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper discusses methodological problems & solutions for an application of ego-centered network analysis in the field of attitude-behavior research. The combination of concepts of social network analysis & attitude-behavior research is a promising way to enhance both theoretical & empirical explanatory power in behavioural research: Social network analysis lacks a general individualistic behavioral theory, & models of attitude-behavior theory ignore the social embeddedness of social actors and there-

fore have an individualistic bias. The paper presents several methodological problems a research project has to deal with when trying to combine social network analysis & attitude-behavior research: issues of sample size & sampling problems, panel design to enable causal modeling, the need & realization of follow-up-surveys of Alteri, the mode of surveys (CAPI vs. CATI), the features of an adequate network name generator, & the statistical analysis, e.g. the combination of structural equation modeling (due to the fact that attitudes are latent variables) and multilevel analysis to estimate causal "social" attitude-behavior-models.

Mazidi, Mohammad, Khoshbakht, Fariba & Alborzi, Mahbobeh (Foundations of Education, Shiraz University, Shiraz, Fars, Iran 71946 [tel: 098-0711-628-1297 Cell ph. 098-9173159641; fax: 098-7116286441; e-mail: mmazidi52@yahoo.com]), **Burnout Teacher in Iran: Psychometric Properties of the Farsi Version of Dworkin Burnout Teacher Inventory,** *International Sociological Association, Gothenburg, Sweden,*

¶ While the most commonly employed burnout measure has been the Maslach Burnout Inventory (MBI), researchers have been troubled by some of the psychometric limitations of that scale (e.g. wording of the scale items) as well as the limited conceptualization of burnout upon which it is based (Halbesleben&Demerouti,2005). As a result, Dworkin has developed an alternative measure of burnout, the Dworkin Burnout Teacher Inventory (DBTI). The main purpose of this paper is to develop evidences for the validity & reliability of the Persian-language translation of the DBTI. With the kind permission of professor Dworkin, this questionnaire was translated into Persian (Farsi), and the procedure of back translation (cf. Brisling-1986) was used to assure that the content of the scale remained the same in the English & Persian languages. This study is the first validation study of the DBTI, & the first to assess the characteristics of the DBTI in Persian-speaking sample. Therefore, this Persian translated version of DBTI, we named DBTII, that is DBTI for Iran. The sample consisted of 145 elementary school teachers in Shiraz (98 male & 76 female) selected by applying a stratified random sampling method. The subjects were asked to complete the questionnaires without presenting any identification remarks (total N = 145). Results of Factor analysis, using Principal Component Method, showed four factors. Applying these emerged factors to the content of the items in the questionnaire constituted four main categories. In accordance with Dowrkin & Maslash, we also named these categories as: Meaninglessness (items 8 & 9); Powerlessness (items1,3,4 & 5); Isolation (items 10,11 & 12); & Normlessness (items 2 & 6). Results of analysis showed that %53.78 of teacher's Burnout variance was perceived by the four categories in total. Internal consistency of the scale was sufinciently high (I-= .61). These results, in general, suggest the reliability (internal consistency & stability) & factorial invariance of the DBTI in Iranian teachers elementary schools samples. Keywords: Dworkin Burnout Teacher Inventory (DBTI), Validity, Reliability, DBTII

Mazidi, Mohammad, Khoshbakht,Faiba & Alborzi, Mahbobeh (Foundations of Education, Shiraz,Fars, Iran, 71946 [tel: 098-09173159641; fax: 098-07116286441; e-mail: mmazidi52@gmail.com]), **A Study of the Relationship between Demographic Factors and Elementary School Teacher Burnout: The Iranian Case,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of the present study was to investigate the relationship between demographic factors & elementary school teacher burnout. The sample consisted of 144 elementary school teachers (98 men & 76 women), selected by applying a stratified random sampling. The instrument for Data collection consisted of two parts: (a)-Personal Information Form, developed by the researchers, & (b)- Dworkin Burnout Inventory (1981). The validity & reliability of Inventory were confirmed (Cronbach alpha was 0.61). Results of t-test for independent groups revealed a significant difference for teachers' powerlessness, one of the teacher burnout dimensions or categories, in respect to their marital status ($t=2.1$, $p< 0.05$) & gender ($t=3.3$, $p< 0.05$). Also a significant relationship was found between teachers' feeling of meaninglessness, another teachers' burnout dimension or category, & their numbers of children ($r=-0.21$, $p< 0.05$).

Mazzucchelli, Sara & Rossi, Giovanna (Athenaum Centre for Family Studies and Research, Catholic University of Milano, Milano, Italy 20123 [tel: +39 02 7234 5945; fax:; e-mail: sara.mazzucchelli@unicatt.it]), **Parental Leave in Southern European Countries: An International Comparison,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since the early 1990s the demand for maternity & parental leave has grown steadily in all European countries. This increase is closely connected to the influx of women into paid employment & has been incorporated at the EU level in several recommendations/directives by the EU to its Member States. Nevertheless, significant differences between the countries in terms of eligibility, duration, benefit levels & flexibility in taking up parental leave can be found. Taking this as a starting point, the paper will be articulated as follows: first, using comparative data (International network on Leave Policies), we will discuss the variation in leave schemes & consequences of different kinds of leave policies in some Southern EU countries; then we'll focus on challenges & differentiated impacts on careers of men & women who take parental leave in Italy trying to outline the link between the societal norms & the gendered social institutions of family and work. In doing so we'll outline the essential features of the Italian law (n.53/2000) on parental leave, in order to analyze its implementation data & to identify its cultural orientation. A fundamental objective of this law is infact the identification of concrete flexible tools that allow for a reconciling of contrasting personal & working needs. This regulatory measure is innovative: it presents a vision of parenting as a shared task of co-responsibility, as a relationship between the parents. The measure takes into consideration the ethics of caretaking & is characterized by the value of reciprocity. However, the data on the use of parental leaves by the general population (see research carried out by the Italian National Observatory on the Family) present a stark contrast to the new law: in daily life there is an almost complete disregard of the principles of equality that inspired the new regulation.

McCallum, David (Victoria University, Melbourne, Australia, 8001 [tel: 61 3 99194174; fax: 61 3 99194164; e-mail: david.mccallum@vu.edu.au]), **Governing Through Rights: Histories of Children's Rights and Governing Vulnerable Children,** *International Sociological Association, Gothenburg, Sweden,*

¶ Australia is reportedly experiencing a child welfare crisis. Despite formal acknowledgement of international children's rights conventions, all Australian governments have recorded significantly increased rates of child abuse, & many jurisdictions report higher rates of child imprisonment. This paper outlines a series of historical investigations into the relationship between assertions of children's rights & the governance of children in welfare and justice systems. What have been the outcomes for children's welfare of governmental promulgations of children's rights?

2010S01699

McClure, Stephen C & Waters, Nigel (George Mason University, Fairfax, Virginia, USA 22030 [tel: 703 993 1210; e-mail: smcclur1@gmu.edu]), **Counter Mapping the Washington Metropolitan Region: An Action Research Approach to GISci,** *International Sociological Association, Gothenburg, Sweden,*

¶ Incorporating both quantitative & qualitative methods including spatial analysis in a Geographic Information System, we examine neoliberal restructuring in the Washington Metropolitan area. Neoliberal restructuring both limits & opens new possibilities for contesting the social construction of space. We examine the role of Defense contracting; immigration, economic & class formation as they pertain to lived space of everyday life that make the Washington area unique in a system of globally connected cities and regions. Activist research as has as its objective social change; the researcher is a participant in & engaged with social movements assisting the process of building popular power from below. Research questions developed out of an ongoing engagement with Virginia New Majority (VNM) & Tenants & Workers United (TWU), community organizations contesting neoliberalization within a right to the city framework. In the context of increased polarization along race, class & gender lines, new working class organizations are contesting the social construction of space and for an expansion of the commons via new forms of organization at multiple scales & deploying multiple tactics.

McCone, David, R., Scott, Wilbur, Sayegh, Lisa & Looney, Joseph (Dept. of Behavioral Sciences and Leadership, United States Air Force Academy, 2354 Fairchild Dr. 6L-143, USAF Academy, CO 80840 USA [tel: 719 333-1310; fax: 719 333-6711; e-mail: david.mccone@usafa.edu]), **Resiliency of Army National Guard Soldiers: Unique Stressors and Sources of Support,** *International Sociological Association, Gothenburg, Sweden,*

¶ A significant issue that soldiers face is coping with the stressors associated with reintegration after returning from deployment (e.g., family matters, adjusting to garrison tempo, etc.). This adjustment process can be particularly difficult for Army National Guard (ARNG) soldiers who also must reintegrate as a civilian into their communities, return to their civilian jobs, & cope with generally less access to unit support & medical care. We are collecting quantitative & qualitative data from ARNG soldiers deployed in support of the wars in Iraq & Afghanistan. Preliminary results show that these soldiers do experience a significant amount of stress, although many cope well despite this. Common stressors include feeling that they have little control over their situation, difficulties returning to home life & their civilian job, & frustration that their contributions go unnoticed by the American public. Positive aspects of deployment include feeling as if they make a significant difference, being more appreciative of their families & of their life at home, & being better able to put minor stressful events into better perspective.

McDaniel, Anne & Buchmann, Claudia (Department of Sociology, The Ohio State University, Columbus, OH 43210 [tel: 614-247-8363; e-mail: buchmann.4@osu.edu]), **Gender Inequalities in Higher Education: Trends and Prospects from a Cross-National Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ In recent decades, a dramatic shift has occurred in higher education throughout many industrialized societies. For the first time in history, women are enrolling in & completing more education than men in many countries. During the 1970s, women lagged behind men in the number of tertiary degrees completed. Since the 1980s, women began to reach parity with men, & in many cases surpassed men in terms of their educational attainment. In this paper, we consider whether this reversal in the gender gap in tertiary degree completion is connected to other major changes in women's lives an status in European countries. We consider how changes in women's tertiary education are related to changes in family formation, fertility, & women's employment & occupational status. We then examine whether the relationships between women's share of tertiary education & other indicators exhibit different patterns in different regions of Europe. We find evidence for regional variations in the relationship between women's share of tertiary education & women's labor force participation, share of prestigious, powerful positions & fertility rates. We conclude by considering the implications of these changes for higher education, labor markets, & family formation in the future.

McDaniel, Susan A. (University of Lethbridge, Prentice Institute, Lethbridge, Alberta T1K 3M4 CANADA [tel: 403-329-5156; fax: 403-317-2823; e-mail: susan.mcdaniel@uleth.ca]), **The Welfare State in Aging Societies: Comparing the Production/Protection Nexus in Canada and Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ Population aging & economic challenges in many countries raise challenges for welfare state regimes. One argument is that a downward convergence is inevitable as global economic and demographic pressures bring greater homogeneity to policies. Another argument suggests that demographic & economic pressures can have stimulative effects on welfare regimes. This paper looks at Japan & Canada as case studies. Japan is the demographically oldest country in the world, with a mixed welfare capitalist regime premised simultaneously on a liberal company-based protection system combined with a conservative familist approach, with changing rapidly with the economic challenges, shifting gender/family relations & demographic aging. Canada is a liberal welfare regime with more policy focus on the latter stages of the life course. While not experiencing the degree of economic challenges other countries face, Canada is reconfiguring its welfare state. We compare Japan & Canada along three dimensions: pension policies, care policies, & family/gender policies. We find that welfare retrenchment, so characteristic of Anglo-Saxon welfare regimes, has not occurred in Japan. Instead, there has been an expansion of social protections by the state in the provision of care & facilitation of work/family balance. Institutional complementaries in Japan & Canada are compared focussing on evolving welfare state regimes, economic & demographic structures and the political processes of interest group mobilization.

McDonald, Ruth & Cheraghi-Sohi, Sudeh (University of Nottingham, Sir Colin Campbell Building, University of Nottingham, NG& 2TU [e-mail: ruth.mcdonald@nottingham.ac.uk]), **Changing Organisations and the Implications for Medical Professionalism: The Case of English Primary Medical Care 2004/9,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recent reforms in English primary medical care seek to make professionals accountable at the level of the organisation (as opposed to the individual professional). There is a growing body of research, describing the impact of these reforms on the profession of general medical practice. However, the issue of the impact on primary medical care organisations has received little attention. This paper draws on institutional theory to examine the ways in which general medical practice organisations are adapting their internal structures & processes to conform to the expectations of key stakeholders in the wider environment. Using data from interviews with a range of stakeholders including primary care doctors & their staff, patients & third party payers (n=239), the paper assesses the ways in which & extent to which the organisational field of general medical practice is changing over time in response to a new institutional logic. Our findings suggest that primary care organisations are moving in the same direction, and one that is consistent with reforms making professionals increasingly accountable. Furthermore, we also identified a process of convergence, with organisations increasingly resembling each other over time. A focus on compliance with standardised care processes, linked to performance targets, was reinforced by financial incentives, field level changes in software to standardise care processes & inter & intra organisational comparisons of target performance. In the context of other reforms offering the potential for "competent" organisations to bid for resources, compliance with performance targets is becoming accepted by primary care organisations as a legitimate means of judging organisations & is used by practices to judge their performance against other organisations. These organisations were becoming increasingly hierarchical with salaried doctors & nurses, playing a substantial role in the achievement of targets, whilst financial rewards accrued to medical partners. These findings of convergence and compliance have implications in the context of market reforms intended to encourage diversity in the range of providers of primary medical care services. They also have implications for the profession of primary medical care. The distinction between salaried doctors & partners is beginning to erode notions of equality amongst members of the same profession working in the same organisation. This is partly due to pay differentials but also because new organisational structures & processes make it possible & legitimate for partners & practice managers to scrutinise the work of salaried doctors. These developments have implications for the profession of medicine in primary care more generally since, "good practice" is starting to be defined in terms of achievement of performance targets. Furthermore, the desire to demonstrate organisational superiority in a context where most organisations are high performers leads to doctors accusing fellow professionals in other organisations of achieving targets by, at best, tick box medicine & at worst fraud. Allegiance to organisation & performance to demonstrate that, as opposed to loyalty to fellow professionals, appears to be becoming an increasingly accepted part of organisational life.

McFall, Elizabeth R. (Open University, Walton Hall, Milton Keynes, MK11 1EQ, UK [tel: 44-(0)1908 654409; e-mail: e.r.mcfall@open.ac.uk]), **Advertising, Agencements and Crashes: Following the Line of Least Resistance?,** *International Sociological Association, Gothenburg, Sweden,*

¶ For Walter Benjamin, advertising had an uncanny capacity to use sentiment to reawaken human mimetic facility. Confronted by the giant neon images of early twentieth-century advertisements, people were taught to feel & to imitate once more. From Adam Smith, through to Gabriel Tarde & Marcel Mauss, the capacity to imitate, prompted by prestigious or authoritarian examples, is the core condition of the social. This capacity to inspire emulation and imitation such that the line of least resistance subtly becomes buying the toothpaste, smoking the cigarette, wearing the perfume, etc. became one of the most widely held, & widely reviled, attributes of advertising. The trouble with this lies partly in the artificial isolation of advertising from its environment & partly in the neglect of advertising's many failures. Drawing upon the long history of life assurance promotion, the paper aims to reconsider advertising's impact on the mimetic facility by locating it as an element within a socio-technical market device or agency. From this perspective new forms of consumer conduct emerge through the dynamic encounters between a range of elements which combine to make purchasing desirable, habitual or unthinking. These same elements can also collide or crash & to date the interesting questions raised by such failures have received little attention.

McGregor, Ian M (School of Management, University of Tech-

nology, Sydney (UTS), Room - Building 5 D4.08, Markets Campus, POBox 123, Broadway, NSW 2007, Australia [tel: 612 (02) 9514 3240; fax: 612 (02) 9514 3602; e-mail: ian.m.mcgregor@uts.edu.au]), **Developing Effective Global Climate Change Public Policy,** *International Sociological Association, Gothenburg, Sweden,*

¶ Dangerous climate change is the greatest threat to sustainability that humanity has ever faced. In order to have a high probability of avoiding dangerous climate change we need to reduce CO2 in the atmosphere to less than 350ppm from the current levels of 390ppm. This level of emission reductions is not going to be achieved by international politics as usual. The paper outlines the major problems in negotiating & implementing ambitious & effective Global Climate Change Public Policy which is urgently needed. What kind of agreement on global public policy will ensure that global emissions stabilise soon & then rapidly reduce, even while the developing world rapidly increases its use of energy to reduce endemic poverty to enhance human development? One such approach is the Greenhouse Development Rights Framework. It seeks to measure capacity & responsibility as a way of sharing the substantial costs of responding to the climate change emergency. In order to develop effective global public policy which maximizes the likelihood of avoiding dangerous climate change, it will require a much greater willingness to cooperate agree to a far more radical, ambitious & binding agreement than that so far achieved in 20 years of international climate change negotiations.

2010S01706

McGregor, Ian, M (School of Management, University of Technology, Sydney (UTS), Room - Building 5 D4.08, Markets Campus, PO Box 123, Broadway, NSW 2007, Australia [tel: 612 (02) 9514 3240; fax: 612 (02) 9514 3602; e-mail: ian.m.mcgregor@uts.edu.au]), **Policy Coalitions in the Global Greenhouse: Contestation and Collaboration in Global Climate Change Public Policy,** *International Sociological Association, Gothenburg, Sweden,*

¶ The research uses a neo-Gramscian theoretical perspective & develops and applies an analytical framework focused on policy coalitions of state & non-state actors to investigate the role that non-state actors have played in the global climate policy process. It focuses on two opposed non-state actors, Global Climate Coalition (GCC) and Climate Action Network (CAN). GCC & CAN each played major roles within opposing policy coalitions that became particularly important in shaping the outcome of the global & national climate policy processes. The research focuses on the role of GCC & CAN and their associated policy coalitions in influencing the framing, developing, implementation & review of global climate policy. It reviews how GCC & CAN enabled more effective national and transnational advocacy & how they fostered major opposing policy coalitions on climate policy. It examines the global climate change policy process through this analytical lens of contestation between policy coalitions from the creation of the Intergovernmental Panel on Climate Change in 1988 to the Copenhagen Climate Summit in 2009. The paper assesses the analytical framework & concludes by identifying critical issues that the current global public policy processes have encountered in developing & implementing effective global climate change public policy.

2010S01707

McIntyre, Janet J (School of Social and Policy Studies, Flinders University [tel: 82012075; fax: 82012273; e-mail: janet.mcintyre@flinders.edu.au]), **Towards a Cosmopolitan Approach for Social and Environmental Justice,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper acknowledge the important contribution made by Nussbaum (2006) in reframing the social contract & arguing for the need for education & the development of our human capabilities to think differently, or in the words of Bateson(1972) , to develop an "ecological mindset". The environment is a living entity which co-determines our very existence, not as a commodity from which to extract endless profit. It a) extends the argument to address the social contract & to explore alternative forms of government and governance that can protect those who fall outside the mantle of citizenship rights as a result of their age, gender, race, species or level of ability. b) explores ethical frameworks to enhance human reasoning capability. c) develops an argument for a new form of democracy & governance that is based on a recognition of our role as caretakers. The Copenhagen Climate Change Summit illustrates that even when organisations try to include diverse stakeholders & diverse viewpoints, the challenge remains as to how to include diverse viewpoints.

2010S01708

McKeen, Wendy E. (School of Social Work, York University, Toronto, Ontario, Canada, M3J 1P3 [tel: 416 736 2100 x 81023; e-mail: wmckeen@yorku.ca]), **"Welfare Mothers" and Feminists in the "War on Poverty" Debate in Canada: Seen but Not Heard,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is concerned with unpacking the political struggle over social rights in Canada, particularly with respect to gender issues & in showing the significance of women's voice in these struggles. The particular focus of this paper is the national "war on poverty" debate of the late 1960s/early 1970s. Using archival material, published reports, committee transcripts, & secondary material, the paper explores in detail the various understandings and strategies of key actors in this debate, including, especially, those of "welfare mothers" & grass-roots feminists a constituency whose political agency in social policy struggle is rarely acknowledged. The paper reveals that a large gap in understanding existed at this time between mainstream policy actors and that of welfare mothers/ feminists. It argues that while the latter offered meaningful alternatives to mainstream notions of social rights & of a social future, their voice was largely ignored by key actors. I argue that, contrary to the accepted view that this period was simply one of "social liberalism," the actual political choices of core actors reveal a concerted effort to resist & thwart challenges to a largely liberal, male-biased "steady as she goes" approach to social policy & a social future. Key Words: Women, Politics, Social Policy, Poverty

McKeever, Matthew (Mount Holyoke College, 50 College St., South Hadley MA 01075 USA [e-mail: mmckeeve@mtholyoke.edu]), **Stratification in Societies with Weak States: The Case of Zimbabwe,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper, I explore the limits of stratification research in countries with weak central states. One of the central premises of stratification research is the effective operation of a central state authority regulating the labor market, however in some developing countries this cannot be assumed. Specifically, I conduct a case study of one country which has experienced progressively weaker state authority, Zimbabwe. While predominantly agricultural, some movement towards a more diverse labor market had begun over the first fifteen years of independence. This trajectory was interrupted by unproductive structural adjustment programs, equity issues surrounding the distribution of farmland, and increasing political authoritarianism. I analyze data from the 2005-2006 Demographic & Health Surveys in Zimbabwe, looking at potential stratification outcomes such as income, occupation, wealth, & lifestyle. The data on relational measures of wealth and living conditions provide the best way to assess inequality. I then analyze how these are related to various factors such as family structure, labor market participation, educational levels, and ethnicity.

2010S01710

McMichael, Anthony, J (National Centre for Epidemiology and Population Health, The Australian National University, Canberra, ACT 0200, Australia [tel: +61 2 6125 2378; fax: +61 2 6125 5608; e-mail: tony.mcmichael@anu.edu.au]), **Sustaining or Surviving? Applying Reason to Unfamiliar Trans-Generational Horizons,** *International Sociological Association, Gothenburg, Sweden,*

¶ Reason enables us to address past, present & future. However, as a product of routine biological evolution we humans are "hard wired" to focus preferentially on surviving the present. In nature, Darwinian culling gives no credit for ability to think about possible future environments. Yet that is where we, the species with the big complex brain, must now increasingly direct our gaze and reason. Meanwhile, the environmental consequences of that complex brain have assumed unprecedentedly large & systemic scale, inexorably extending many decades into the future. Today, the Human Enterprise substantially controls the planet's future, and is seriously eroding its life-sustaining capacity. Climate change, ozone depletion, ocean acidification, biodiversity loss, soil degradation, etc. pose fundamental threats to health and social stability. To attain environmental & social sustainability, far-sighted reason (foresighting) must become a primary resource for social change. Resistance will come from our present-fixated value systems & institutions of governance, production & learning. However, as the evidence of adverse consequences accrues, our latent capacity for long-distance reasoning can be enabled. We may yet do better than earlier, more localized, societies a where non-sustainability signals were misunderstood or ignored, in favour of intensified production, greater consumption & monumental aggrandizement. (Dubai anyone?)

2010S01711

McMichael, Philip D (Cornell University, Ithaca, NY 14853. USA [tel: +1 607-255-5495; e-mail: pdm1@cornell.edu]), **Transitioning the Food Regime,** *International Sociological Association, Gothenburg, Sweden,*

¶ As the IAASTD Report claims, agriculture is at a crossroads. This paper situates this crossroads from a food regime perspective, taking account of different temporalities regarding energy source, political-economic conjuncture & social & ecological feedbacks. The paper will consider what kind of turning point the world is at and what kinds of paradigmatic & practical shifts might be necessary to sustain planetary life as we know it.

2010S01712

McNamara, Dennis, L. (Sociology Department, Georgetown University, 3700 O Sts NW, Washington DC 20057 USA [tel: 1-202-687-3603; fax: 1-202-687-7326; e-mail: mcnamard@georgetown.edu]), **Knowledge at the Wheel - Innovation and Regional Integration in East Asia,** *International Sociological Association, Gothenburg, Sweden,*

¶ The financial crisis has intensified the competition in global markets for higher added-value production, eroding cost advantages of labor-intensive manufacturing. How can regions anchor more knowledge-intensive manufacturing in a volatile era of highly mobile international capital? It is argued that regional production-sharing in East Asia contributed to market liberalization efforts evident in preferential trade agreements. I move the argument to the next step to suggest that foreign market access (i.e., "gateway trade") through the host country has in turn promoted more knowledge-intensive investment. I join trade and investment data to case studies of leading Japanese firms in regional auto (Toyota) & electronics (Panasonic) sectors to test the hypothesis. The transition economy of Thailand provides a focus, with comparisons to China & South Korea. Literatures on global value chains (i.e., knowledge nodes), comparative capitalisms (i.e., complementarity), & innovation (i.e., knowledge networks) help shape the argument. I cite data to suggest agreements promoted trade gateways such as Bangkok within the region & beyond which anchor product development efforts in host nations, & indirectly promote complementarities in innovation systems. A shift from production to knowledge networks in East Asia may well permit a regional integration quite distinct from most other regional groupings. I conclude with national investment and innovation policies that encourage more knowledge-intensive inward Foreign Direct Investment.

2010S01713

Meardi, Guglielmo (University of Warwick, Coventry, UK, CV4 7AL [tel: 44-2476522645; e-mail: irobgme@wbs.ac.uk]), **Worker(S) Movement and Crisis: Unions, Migrants and Posted Workers in the Construction Sectors' Turmoil in UK And Spain, 2008-10,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper draws on a European project on labour market uncertainty in Europe, & present findings on labour migration (and especially short-term migration) as a social process redistributing the uncertainty burden in ever-more flexible & insecure labour markets. The empirical focus will be on the two large European countries with the most flexible (although differently regulated) labour markets & the largest recent migration inflows, UK and Spain; & on an economic sector, construction, which is particularly volatile & affected by the recent crisis, & where the workforce is particularly mobile & often transnational. The research combines policy analysis, labour market data, & case studies of employers' strategies & trade union reactions. The first part of the paper will discuss how far the distribution of uncertainty is unequal between national & migrant workers, and develop a theoretical argument as to the social sustainability of such division in terms of labour relations & ethnic relations. Particular attention is paid to the potentially disruptive issue of movement of services & posted workers. The second part will analyse the role of trade unions in the process. It will critically assess representations of trade unions as exclusionary "communities of fate" protecting the insiders & transferring insecurity to the outsiders. It will analyse the variety of trade unions roles: collective bargaining practices on employment security, experiences of migrants' organizing, transnational activities, & cases of conflict over foreign labour & foreign contractors, such as the "British jobs for British workers" strikes of 2009 in the UK.

2010S01714

Meder, Mehmet & Sahin, Hande (Sociology, Pamukkale University, Denizli, Turkey, 20020 [tel: +90 258 2963682; e-mail: mmeder@pau.edu.tr]), **The Socio-Economic Effects of 2008 Economic Crisis On Different Classes in Turkey,** *International Sociological Association, Gothenburg, Sweden,*

¶ Globalization, conceptually, is used to define new capitalist relations & recent trends of world capitalism. In this process, in which phenomenons like global mobility of money, globalization of economy & knowledge, increase in the activities of multinational corporations, global identities & wide currency of cultures operate simultaneously, all social, economic & politic transformations effect all areas around the world. Having moved out of national dimension, capitalism has reached a global level and all macro-crisis effect both the centre & the periphery because, especially with post-1970 crisis they were considered by central countries as both cheap labour force & market & raw material fields. In the context of this unequal relation, surrounding countries are perceived as buffer zones for other macro economic crisis. Markets & labour markets of peripheral countries have become vulnerable for all the probable negativities. Economic crisis have deep impacts on underdeveloped countries which are already indebted to IMF & World Bank. The effects of 2008 economic crisis on Turkey can be considered in this context. Turkey is a significant example as it is a micro reflection of knock-on effects of those macro effects. The main objective of the study is to discuss, in Turkey case, the effects of macro transformations taking place in the centre of the world on micro lives in the peripheral countries. For this purpose, fieldworks in different regions will be operated & transformations in the consumption patterns, in the forms of saving & spending, in the everyday life and work of the individuals with the crisis will be presented. The fieldwork will be supported with the official statistics of labour market, poverty line, per capita income.

2010S01715

Meethan, Kevin (University of Plymouth, Drake Circus, Plymouth, UK PL4 8AA [tel: 01752 585817; e-mail: kmeethan@plymouth.ac.uk]), **Tourism Policy in the EU: A Critical Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ The European Union has no direct power or remit in relation to tourism although a number of European policies do have a considerable impact, & EU programmes support a number of activities that are tourism related such as education & training, cultural heritage and social integration through a variety of funding measures. As is common in many developed economies, within the EU as a whole tourism has often been undervalued in terms of its economic contribution to the economy . This is a well known problem which in part can be explained by the predominance of SMEs within the sector, & also by the diverse number of sectors that tourism production & consumption involves. In 2006 the European Commission presented a new policy framework for the EU which aimed to increase awareness of the economic, social & environmental importance of tourism. Such an approach is designed to complement rather than replace national policies by providing "added value" at an EU level, & by adhering to three broad aims of the Lisbon Strategy to develop a competitive, dynamic, knowledge-based economy, to invest in human resources & combat social exclusion, and a recognition that economic growth must respect natural resources. At the same time, tourism policy is also intended to encourage synergies between tourism & related sectors. This paper will provide a critical perspective on these recent policy developments & some barriers to the implementation of supra-national policies at the regional & local level.

2010S01716

Mehrabi, Maryam & Ahmadnia, Shirin (Health Ministry of Iran, No:436,Psycho-Social Health Office, Ministry of Health, Gomhoori Ave.Tehran,Iran,113659383 [tel: +98 21 66760520; fax: +98 21 66700410; e-mail: MARY.MEHRABI@yahoo.com]), **Sociological Study of Professional Relationship Nurse & Physician,** *International Sociological Association, Gothenburg, Sweden,*

¶ This is a sociological study of Professional relationship between nurses & physicians. During the recent decades, experimental research on interpersonal conflicts & negative outputs of health services in hospitals reveals the importance & necessity of a professional restructuring & reforming of the communicative relationships. On the other hand, gender discrimination is being reported as one of the important reasons for the occupational conflict between nurses & medical doctors. Moreover, due to emerging new hypotheses concerning power inequality among the professions, the nurses' occupational dependence, the demands for a new form of cooperation between nurses & medical doctors, new perspectives for the theoretical & experimental studies of the professional role of nurses in the health structure have been created. In this study, we review a wide range of issues concerning the professional interrelationship of nurses & doctors, ranging from their micro level interaction & experiences, to the hospital meso-

organizational level & the macro level of policy and structure, using some theoretical ideas from theorists such as J. Scott, Lopez, C. R. Mills, A. Giddens & a few others. Therefore, using theories from medical sociology & the sociology of women's occupations, we undertook research on the nurse & doctor intreprofessional relationship including traditional models (dominant- in dominant & Dependent-independent models) as well as rational model (cooperation-participation) & the affecting causes. We implemented a survey method using a semi quota sampling method, with a sample of fifty nurses & fifty medical doctors currently working in the hospitals under medical sciences university's of Tehran & Shahid Beheshti in Tehran, the capital city of Iran. The findings revealed the Nurse & doctor professional relationship model being in the following order: Dependent-in dependent model mostly in first, the Dominant–in dominant model second & the Cooperation–participation model last. In addition, according to our findings, the most important factors affecting the quality of the interactions were found to be, the occupational socialization, gender stereotypes, the amount of professionals' legitimate authority & actors' share of power(their agency) which somewhat explain the concerning models.

Meier, Isabella & Kreimer, Margareta (Department of Economics, Universitaetsstrasse 15, A-8010 Graz [tel: +43699/11707349; e-mail: isabella.meier@uni-graz.at]), **Long Term Care in Private Households: Status Quo in Austria And Challenges for the University of Graz as an Employer,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Austrian Care System focuses on cash benefits for care receivers. The utilization of professional care services is optional and rather expensive, independent from the level of disability. As a consequence long-term care is provided to a very large extent by informal care givers within the family. Simultaneously employees are increasingly confronted with caring obligations besides paid work. In contrast to childcare, caring for elderly relatives is rather unpredictable concerning the beginning, intensity and durability of caring activities. Our paper analyses the situation of employees engaged in long-term care at the University of Graz. Methods & results: The empirical research consists of expert interviews in professional care organizations & of qualitative interviews with employees of the University of Graz who care for elderly relatives. First results show that the scientific staff is more flexible regarding working time & -place; but informal caring activities influence the career development more negatively, considering mobility & scientific output. The careers of administration staff are less affected by home caring activities but these employees are less flexible in regard of workplace and -time (e.g. office hours). In both occupational categories tolerance & informal support by line managers & colleagues are essential for the compatibility situation. Conclusions: An employer like the University of Graz can support caring employees by adopting flexible work arrangements & promoting tolerance by superiors. But such measures are unable to compensate for a care system that leaves the case management within the family and supports informal, unprofessional & unpaid homecare.

Mello e Silva, Leonardo (Dept. of Sociology USP, São Paulo, Brazil. 05045-020 [tel: +55 11 38711816; e-mail: leogmsilva@hotmail.com]), **Unions Face Corporate Social Responsibility: Some Comments on Recent Developments in Brazil,** *International Sociological Association, Gothenburg, Sweden,*

¶ The union trend towards Social Responsibility discourse is nowadays playing a significant role in the main discussions taking place within Brazilian union movement. Corporate Social Responsibility (CSR) is seen by unionists as a pathway to channel historic demands from the movement, as well as a tool for social justice. The paper identifies important critical strands in the CSR debate in Brazil: firstly, as a way to attain a good ambience in work organizations. Secondly, CSR raises the quest of institutional alliances among social forces at the global scale: NGOs & Global Unions claim for global standards stemming from multilateral institutions (ILO, NATO etc) while transnational corporations opt preferably to employ their own "code" of social responsibility. Thirdly, CSR is able to strengthen the role of the global players on the labour side. Fourthly, international actors engaged in global campaigns appear to more & more call the attention of local unions. Fifthly, the importance of the "brand" to enterprise's economic performance is taken as one more element to reinforce social relations within organization, and, as a result, CSR as a case of dispute around how and at what measure can workers & employees altogether contribute to such a performance.

Mélo, David ([e-mail: david.melo@univ-orleans.fr]), **Le temps des Luttes "Alternatives". Souffrances au Travail et Conflictualité dans les Grandes Enterprises** (Time Control "Options." Suffering at Work and Conflict in Large Enterprises), *International Sociological Association, Gothenburg, Sweden,*

¶ Comment caractériser les luttes individuelles et collectives des salariés des grandes entreprises ? Les souffrances au travail débouchent-elles sur des logiques de dissidence ? En associant deux perspectives trop souvent séparées par la pratique sociologique, la sociologie du travail et la sociologie de l'action collective respectivement, notre communication montrera que la contestation de ces salariés est bornée par une disposition à jouer le jeu imposé par le management. Les souffrances vécues s'inscrivent ainsi dans la perspective d'une loyauté paradoxale à l'égard de leur entreprise. Nous soulignerons également que les souffrances ne trouvent pas de débouchés en terme d'action collective mais davantage en terme d'actions et de luttes individuelles. Dans ce contexte, les luttes individuelles et collectives des salariés se présentent comme discontinues et ambivalentes. Ce sont, au fond, des luttes "alternatives," moins au sens politique de ce mot qu'au sens que la physique donne à ce terme.

Melo, Maria Benedita (Institute of Education - University of Lisbon - Portugal, Lisbon - Portugal [e-mail: mbmelo@ie.ul.pt]), **Studies' Choices and Professional Options–When the Media Come into Opposition with School and Family,** *International Sociological Association, Gothenburg, Sweden,*

¶ We will analyze in this presentation to what extent models conveyed by the media a incorporated by social actors as norms, values & ideals a (Lahire, 2005) are in conflict with the values transmitted by teachers, peers, school psychologists & family & limit the schooling choices and professional aspirations of the students. Our analysis results from the data obtained by the 1080 questionnaires & twenty interviews next to secondary school students. We will show that young respondents favor the information they obtain in school & family at the expense of which are conveyed by the media. While family and school play a part of actual persuasion sources, traditional mass media & the internet appear to hold mainly an information function complementary to the range of previously held knowledge regarding degrees, professional classifications and/ or job opportunities. However, in some cases, they may also contribute to the identification of some schooling choices that had not been previously considered when they convey new information that coincides with the interests previously held by students regarding certain job opportunities. The role of media in the schooling choices of the students only appears to be actually relevant a working as "surrogate" & 'non-conflictual' information sources a when the latter do not count on the support of their families, peer groups, & teachers, which is especially true for students coming from less privileged class fraction.

Melsom, Anne May & Mastekaasa, Arne (Department of sociology and human geography, University of Oslo, Postboks 1096 Blindern, 0317 Oslo [tel: +47 93691753; e-mail: a.m.melsom@sosgeo.uio.no]), **Gender Segregation and Sickness Absence,** *International Sociological Association, Gothenburg, Sweden,*

¶ In most countries, women have considerably higher sickness absenteeism rates than men. One possible explanation for this difference is that women have on average less healthy jobs than men. Women's higher rates of sickness absence could be due both to vertical gender segregation (e.g., women in lower level jobs with less authority & control) & horizontal gender segregation (e.g., women more often in service occupations requiring extensive emotion management). In this paper we address these issues using comparative data from a large number of countries from the European Labour Force Survey. With fixed effects methods, we examine if gender differences in sickness absence disappear or are reduced if we compare women & men in very detailed occupational categories (created by cross-classifying one-digit industry codes with three-digit ISCO occupation codes). We also examine to what extent women's & men's levels of sickness absence are systematically related to the gender mix of the occupation, e.g. if women are worse off, in relative terms, in occupations that are strongly male dominated. This also provides indications on whether working conditions affect men's & women's sickness absence in similar ways, or whether men & women react differently to the same conditions. Preliminary results indicate that the gender differences in sickness absence are not reduced with detailed control for occupational categories. On the contrary, in all the countries these differences either increase or remain the

same. Our results indicate that the female excess in sickness absence is not due to women being in other or less healthy occupations than men. Findings on the impact of the gender mix of the occupation will be reported in the final paper.

Melzer, Silvia (Institute for Employment Research (IAB), REgensburger Str. 104 [tel: 0049-911-179-5363; fax: 0049-911-179-5363; e-mail: Silvia-Maja.Melzer@iab.de]), **Why do Couples Leave? Considering Migration from East to West Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the past East-West migration was analysed at the basis of male household heads or "atomized" individuals. The aim of this paper is to empirically examine the migration behavior of couples & the influence of each partner's employment situation & individual human capital characteristics on the joint migration. More precisely, the paper addresses the following questions: How does the migration behavior of married & cohabitating men & women differ from that of individuals living alone? What factors influence family migration? Finally, are there gender-specific differences in the factors that motivate migration? To address these questions, I derive hypotheses from bargaining & gender role theory, & investigate migration, first, on an individual basis, & second, on a household basis. I analyze data from the Socio-Economic Panel covering the period 1992-2007 using hierarchical regressions models. Results show that the educational level of the male partner is the most important factor determining the decision to migrate; the likelihood of migration increases for highly educated male partners. The results generally support the predictions of gender role theory & suggest that couples follow a more traditional gender role orientation in their migration decisions.

Melzi, Clara (University of Study Milan-Bicocca, Via Bicocca degli Arcimboldi, 8, 20126 Milan [tel: +39.349.3215586; e-mail: c.melzi@campus.unimib.it]), **Mobility and ICTs. The use of Location-Based Services in "Informational" cities,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this paper is to analyse the topic of development of new information & communication technologies (ICTs) & their social impact on the economic, social & cultural behaviours of the people who live in contemporary cities. In the first chapter an analysis of the main sociological ideas is made about the relationship between the development of a "network society" and its infrastructures & other phenomena of territorial and localized character such as urban mobility. In particular, the first paragraph describes the main changes introduced by ICTs in many social components such as time, spaces, social behaviour, relationship & cultural developments. The development of "network society of informational era" [Castells, 2000] is also presented. In the second paragraph is reviewed the role of infrastructure in metropolitan areas ("city cyberinfrastructure"). These infrastructures have the task of managing & supporting the great mass of information that is exchanged in the information society. The last paragraph, however, focuses on mobility in urban systems. The second chapter discusses new sociological instruments of analysis: the mobile technologies and, in particular, Location-Based Services. In the first two paragraphs the characteristics & the fields of use are presented. Finally in the conclusions, the new perspectives of study are described on mobility & increasing velocity of everyday life open from the development of mobile technologies & Location-Based Services.

2010S01724

Memmi, Dominique ([e-mail: dominique.memmi@csu.cnrs.fr]), **A Revenge of the Biological: The New Administration of Human Remains,** *International Sociological Association, Gothenburg, Sweden,*

¶ As for administration of birth & death, the civilization process has shown by the sixties a noteworthy acceleration. Individual control over autonomy of the biological process has registered a clear growing up in that period. What grew drastically is the intolerance toward the idea of forsaking biological matters to their own development–that is to say, in that case, to their own natural proliferation. Couples, of course, had been controlling their procreation for two centuries in the silent spaces of their bedrooms, in spite of Church & State hostility & threats. But by the sixties, this efficient silence has changed into a shouting behaviour, officially claiming for (at least) State recognition, technical instruments, & financial contribution to achieve such secular practices. In that same period, the rate of cremation began to grow very quickly–a trend that remained constant since then–while dying persons were systematically taken from the gaze of their family & driven to hospitals wards. The movement for euthanasia gained visibility and legitimacy. To make it short, "voluntary interruption" of dying and decaying became symetrical to the "voluntary interruption" of pregnancy. Control over biological proliferation became a personal duty for individuals themselves. This was accompanied by the feelings that usually go with civilization process: disgust and shame. Shame for the wrongful procreation: shame not to have had sexual intercourse, but not to have been able to control the natural "side" effects of it. Shame for the wrongful way of dying: those that began to fight for euthanasia legitimation were keen to express their shame for the idea to leave a bad, physical too, image of themselves. Shame of not controlling one's own dead body, too: recent polls show that people are now keener to claim cremation for themselves than for their parents & relatives: they show a personal reluctance to become a physical burden–for relatives as for the earth. Disgust: to opposite of the expected & accepted foetus arises more and more the image of the wrongful life fAtus or "tumoral fAtus": that which is not in conformity with the ideal conditions of life for itself and/or its relatives. And disgust of course for the decaying body (that is the first statistical argument produced in favour of incineration) & the dying body: Elias has been personally in the situation to experience both of them. 3. During that whole period, as revealed in various cultural products, a strange "return of the repressed" took a progressive strength. By the end of the sixties–since exactly the film *Rosemary's Baby* in 1967, rose on the screens the ever-increasing theme of Alien, born in a first welcoming, than reluctant but all the way proliferating matrix, in spite of collective efforts to stop this invasion. Worms on corpses started too to invade written & visual detective stories, while the traditional figure of the detective gave place to the "doctor of the dead" & to the scientific "expert" of the decaying process. Last but not least, in the beginning of the nineties, that is to say fifteen years after the events we described, a strange change occurred in "real life" too. A new theory of mourning appeared–"new" in comparison to the Freudian psychoanalytican tradition: to mourn properly, one should look at corpses, or even have material contact with it. Everywhere in big cities' hospital wards, mothers (and fathers) are now strongly incited to look at the corpse of their dead newborn baby, & if they accept to do so, to take it & keep it in their arms. One might no longer too quickly or too easily get rid of dead bodies: a hidden fight to refrain the physical & symbolical mobility of ashes has been untertaken by policymakers & death professionals, while psychologists & other professionals (midwifes, physicians, and even social scientists), intellectual producers (film makers, writers) began to produce narratives where the remaining "presence" of the organ donator in the given organ plays a crucial part in the psychological future of the organ receiver. Every plane crash gives place to frantic researches of body pieces, and ceremonies are organized on the deserted place to be shown with insistence as a collective minimum obligation paid to the grief. In few word, after some decades of estrangement from similar popular practices, the contemplation & manipulation of concrete, material body has turned (or returned) to be considered by some as the main path to think "properly" abstract things: loss, death, and identities. Why is it so? And why then?

Menanteau, Dario (University of Minnesota, USA, Saint Paul, Minnesota, USA. 55108 [tel: 612-625-8798; e-mail: dmenante@umn.edu]), **Globalization and Distorted Development: In Search of a System Perspective for Sustainability,** *International Sociological Association, Gothenburg, Sweden,*

¶ The impact of globalization on the international community poses serious questions regarding the negative outcomes of this process. Wars, financial crisis, inequality, & lack of social development are clear signs of a self-destructive & non-sustainable world system. This paper examines three main issues: (1) The notion that globalization is a new phenomenon is highly questionable. (2) Globalization has produced conditions of "distorted development" characterized by economic growth without social development. (3)The urgent need of more sustainable linkages between globalization and social development. For this purpose, the paper reviews some sociocybernetic principles of the "Viable System" suggested by Stafford Beer.

2010S01726

Mendes, Derrick (Universidade dos Açores, Rua da Mãe de Deus, 9501-855 - Ponta Delgada (Açores) [tel: (+351)296650065; fax: (+351)296650126; e-mail: derrickmendes@uac.pt]), **Práticas e percursos conjugais dos imigrantes em contexto insular: o caso dos Açores** (Practice and marital pathways of migrants in the insular context: the case of the Azores), *International Sociological Association, Gothenburg, Sweden,* (POR)

¶ Tendo como base de trabalho os dados intercencitários (1981-2001), iremos procurar analisar os padrões conjugais entre estrangeiros e nacionais na Região Autónoma dos Açores, ainda que centremos a nossa atenção nos imigrantes cabo-verdianos, por serem os representantes da imigração africana nos Açores e por serem aqueles que têm revelado uma consolidação enquanto comunidade, e nos brasileiros e ucranianos. A escolha destas duas últimas comunidades prende-se com o facto de serem ambas os representantes das novas vagas migratórias que vieram alterar o quadro imigratório açoriano na última década. (Rocha et al., 2004; 2009; Ferreira, 2009) A presença de um mercado conjugal nos Açores onde os estrangeiros são intervenientes cada vez mais activos, tem vindo a ganhar particular relevância nos últimos anos. Esta ideia é, de resto, corroborada pelo número de casamentos mistos entre cidadãos nacionais e estrangeiros a do total de casamentos celebrados nos Açores no ano de 2008 cerca de 6% (em 2000 representava 2,2%) tinha um dos cônjuges estrangeiro (INE, 2008). O surgimento de múltiplos modelos familiares com outras lógicas e dinâmicas, tendem a ganhar particular importância no contexto das dinâmicas migratórias contemporâneas.

2010S01727

Mendes, Ferreira, Manuela, Maria (Faculdade de Arquitectura da UTL; CIES-IUL [tel: 351934285280; e-mail: mamendesster@gmail.com]), **Immigrants in the Lisbon Metropolitan Area: Cultural Practices and Sociabilities–A Changing Space,** *International Sociological Association, Gothenburg, Sweden,*

¶ We have taken for granted that the amount & diversity of the migratory waves which have marked the Lisbon Metropolitan Area (LMA), as well as the settlement patterns & localization of migrant & non-migrant minority groups, have contributed to the reinforcement of the phenomenon of peripherisation of this territory. The results presented here are based on a study of qualitative nature in which the detailed interview with the Russian and Ukrainian immigrants living in the Lisbon Metropolitan Area was given a special relevance. The residential concentration of some immigrants & ethnic groups around the urban area of Lisbon is a well notorious tendency in the LMA. Thus, as far as the geographical settlement of foreigners in our country is concerned, we come across a different distribution of immigrant populations over the various districts or even regions, the structural over-concentration of these populations in the Lisbon district being evident. Even among new foreigners from Eastern Europe, the centrality of the Faro district is visible, in parallel with the metropolisation of the residential pattern around Lisbon and Setúbal. Such settlement & residential patterns are the result of the conjugation of several forces in which the political and administrative action, in articulation with the social, economic & urban interests, have played a decisive role in the distribution & relegation of these populations into certain areas in the LMA. In these spaces we have found processes of social and spatial recomposition, which have been changing & innovating. The minority migrant groups that live mainly in the outskirts of the LMA tend to activate new cultural practices in a migratory context, besides updating the practices of their home country, incorporating elements of the host country. This analysis is centred in the practices & representations of the Russian & Ukrainian immigrants who live in the surroundings of Lisbon, focusing on the relational dynamics between these actors & the major members of society, which take place in a context of emergence of new leisure practices, new sociabilities of intercultural character, as well as new values & cultural practices. In this way, the social material, which gains forms of a renewed urbanity, becomes more complex & dense.

Mendes, Hugo, Silva, Pedro Alcântara da & Nunes, João Sedas (CESNOVA/New University of Lisbon, Av. de Berna, 26 C, Edifício I&D, Lisboa 1069-061 [tel: +351 21 790 83 00 ; fax: +351 21 790 83 08; e-mail: hugo.santos.mendes@gmail.com]), **Physicians, Teachers and the State in Portugal: Professionalization Strategies and Regulatory Responses,** *International Sociological Association, Gothenburg, Sweden,*

¶ The state has a strong position in the health & education sectors in Portugal, where it plays the role of the main provider. However, these sectors display important differences when we look at key indicators. In the health sector, although the number of physicians per capita is close to the OECD average, the average annual growth of physicians in the last 20 years is dangerously low, a trend which puts to risk the capacity of the system to perform adequately in the future, in face of growing demand. In the education sector, however, Portugal has one of the lowest pupil per teacher ratio, and the system cannot integrate the full stock of professionals who graduated in the last two decades. As a consequence of the strategies & policies of the last quarter of century, the public sector demand is high in the case of physicians, but low in the case of teachers. Complementarily, the physicians' associations reject the opening of more medicine faculties, & the teachers unions object to policies that make the access to the career a more demanding one. This paper mobilizes the analytical resources of actor-centred institutionalism to account for these different trajectories & outcomes. It looks at the role played by the professionalization strategies enacted by physicians & teachers toward the state, & the difficulties felt by regulatory powers to implement policies that guarantee efficient & equitable public services.

Mendoza, Marlen (University of Barcelona, Avenida Diagonal 690, Facultad de Economia y Empresa (Dept. TA Sociològica, Filosofia Dret i Metodo. CS) 08034 Barcelona [tel: +34 661 60 10 53; e-mail: marlenmendoza@ub.edu]), **Making Arts of the Day of the Dead: "Mexicatalan Cultures",** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the incorporation into Barcelona of one of the most important celebrations in Mexican culture; The Day of the Dead. This celebration has been recently named "human patrimony" by UNESCO & it is starting to spread its symbolic meaning to other Western cultures. As a Mexican tradition, this celebration has become an artistic, intercultural & political event bringing together Mexicans living in Barcelona with Catalan & other cultures. This kind of cultural hybridization is important because five decades previously veneration of the dead existed in Catalonia and it is through the arts that this custom has been re-appreciated. Through the perspective of Mexicans interviewed during the last year, this paper explores the role of the "Altar Route" which took placed in several Museums, houses & art spaces to celebrate & disseminate this Mexican tradition. Using visual and performance arts via storytelling, music & poetry, this route explores the deepest meanings of death in the multicultural context of Barcelona. To conclude the Day of the Dead reinforces Mexican identity into a European context & transforming a religious celebration into an artistic event.

Mennell, Stephen (University College Dublin [e-mail: Stephen.Mennell@ucd.ie]), **American Capitalism: Sociological Reasons Why the Rest of the World Follows the American Model in Nearly Everything, and Sociological Reasons Why that is a Very Bad Idea,** *International Sociological Association, Gothenburg, Sweden,*

¶ The first part of the paper will consider the interdependence a and crucially the power ratio–between the USA & the rest of the world as the largest possible established-outsider relationship. The second part will take its inspiration from Talcott Parsons's observation that no social system can take economic rationality as its supreme value, because that corrodes & corrupts all other values. It will also critically examine Norbert Elias's confidence in functional democratisation & pressures towards increasing foresight as dominant trends in the modern world. It will be argued that we are witnessing a fairly long-term dominant trend towards functional de-democratisation & diminishing foresight. The argument will be illustrated by reference to the world financial crisis of 2008-9.

2010S01732

Menold, Natalja & Zuell, Cornelia (GESIS a Leibniz Institute for the Social Sciences, Mannheim, Germany [tel: +49 (0)621-1246-286; e-mail: natalja.menold@gesis.org]), **Reasons for Refusals and their Collection: Lessons Learned from a Content Analysis**

of Interviewers' Notices in Contact Protocols, *International Sociological Association, Gothenburg, Sweden,*

¶ Refusals are an important source of non-response in surveys. During the field period some surveys collect reasons for refusals in call record data. In addition to providing interesting information for research these data can also reveal some information about non-respondents which could be used to reduce refusal rates. However, the use of the accordant data can be restricted by their possibly small reliability, validity & objectivity. Especially objectivity can be reduced through the interviewer impact. This article presents a standardized instrument to describe reasons for refusals, which was developed using a content analysis of open-ended comments by interviewers. Additionally, we analysed the impact of interviewers' characteristics on the data collection via different multilevel multinomial models. The results show that the probability to collect specific reasons for refusals was influenced by several interviewers' attributes to a certain extent. At the same time interviewer related variances were of high magnitude, showing that interviewers prefer to report specific reasons for refusal. To reduce this high interviewer impact & to improve the reliability & objectivity of collected data we suggest using standardized instruments of data collection such as the categories presented in the article.

Merchán-Hernández, Carmen (IESA/ CSIC, Córdoba, España, 14004 [tel: 0034 676828236; fax: 0034957240438; e-mail: cmerchan@iesa.csic.es]), **Boundaries and Strategies of Firms to Collaborate with Universities in a Regional Innovation System,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper focuses on exploring the strategies of firms to collaborate with universities into a regional innovation system. The research questions drawing on are: How are the different strategy to collaborate with the universities? And, why a representative group of firms in the region don't collaborate with universities? The analysis is based on a region of the South of Spain, Andalusia. This region is characterized by having a traditional & atomized industrial sector, where the production of scientific knowledge is concentrated on the scientific community (mainly on public universities). Thus motivation of university-industry collaboration seems a strategic to apply new knowledge & to generate innovation development in the region. Despite government promotion, official data highlights the weak of this type of collaboration on the regional innovation system. The data for the study resides in a face-to-face survey of 737 representative firms conducted in 2008. The analysis of the data is organized in two steps: 1. Descriptive analysis to identify the different strategies to collaborate with universities, 2. Logistic Regression analysis to detect factors that have influence on firms to collaborate. The findings in this paper suggest that the intensity collaboration with universities is specifically concentrated on a type of firms who are integrated on the regional innovation system. Structural factors of firms are significant to increase the collaboration with universities. In additions, the position of firms on the institutional framework and their localization on the regional innovation system are extremely important factors in explaining such collaboration.

2010S01734

Mesa, Aníbal, González, Yurena & Quintero, Nieves (Universidad de La Laguna, España, C/ Molinos de agua, s/n, 38207, La Laguna, Islas Canarias, España [tel: 0034922319000; fax: 0034922319000; e-mail: animelo@ull.es]), **Ciencia, Conocimiento Local y Desarrollo en la Gestión de las Reservas de la Biosfera. El Caso de la Sierra Gorda de QueréTaro, México** (Science, Local Knowledge and Development in the Management of Biosphere Reserves. The Case of the Sierra Gorda of Queretaro, Mexico), *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ Hace dos años concluimos una investigación en la Reserva de la Biosfera Sierra Gorda de Querétaro, a la que nos desplazamos para estudiar el impacto que sobre la eficiencia de la gestión del espacio tenían las diferencias culturales entre los gestores y técnicos externos y los habitantes del lugar, los serranos. Lo que observamos es que el éxito de la gestión está lastrado por el cierre que el conocimiento científico, en materia medioambiental, ejerce con respecto a cualquier alternativa de percepción del territorio. Las directrices internacionales sobre gestión de espacios naturales protegidos marcan el camino de cualquier actuación y los límites a los que ha de ceñirse cada caso particular, sin tener en cuenta las realidades nacionales, regionales y locales. Esto puede ser válido en espacios protegidos sin población en su interior, pero no cuando nos encontramos ante cerca de cien mil habitantes afectados por las políticas de la Reserva. La constatación de este desfase entre diseño y práctica nos provocó las siguientes cuestiones: es posible entender el desarrollo sin que este tenga como punto de partida los modos de conciencia centrados en los lugares? Puede generarse un modelo de desarrollo exitoso para el tercer mundo desde modelos de conocimiento articulados exclusivamente en el primero? Qué fuerza tiene el conocimiento centrado en el lugar para presentarse como alternativa a las formas dominantes? Nuestra experiencia en este trabajo nos llevó a la conclusión de que la única forma de que las políticas tengan una incidencia real en los territorios pasa por la articulación de sus específicas formas de conocimiento como punto de partida. Es decir, no hay posibilidad de desarrollo si este no se centra en los lugares y en sus particulares cosmovisiones.

Mesjasz, Czeslaw (Cracow University of Economics, 31-510 Krakow, Poland [tel: +48 12 2935619; fax: +48 12 2935 067; e-mail: mesjaszc@uek.krakow.pl]), **Complex systems and the Need of Rethinking Finance,** *International Sociological Association, Gothenburg, Sweden,*

¶ Current disturbances on financial markets have been reflected in the dilemma: mathematical elegance vs. relevance of the models. Since the causes of the crisis in finance & economics likely have deep systemic roots thus methods taken from complex systems research seem to be more relevant instruments of their analysis. The aim of the paper is to show how ideas drawn from complex systems studies, both "hard" mathematical complexity methods, & "soft", constructivist complexity, can help in better understanding phenomena which have occurred on the financial markets from 2008 onwards. The main hypothesis is that they are more relevant to reality than traditional narratives a including mainstream mathematical models, & analogies & metaphors. Selected specific concepts taken from financial markets will be discussed with the use of ideas drawn from broadly defined sociocybernetics - mathematical complexity models & constructivist concepts of complexity of social systems. The main result of the paper will be a comparison of characteristics of financial markets - risk, equilibrium, stability analyzed with the "classical" mathematical tools & analogies, & metaphors, with mathematical models and analogies, & metaphors related to those characteristics, which are based upon complex systems concepts.

Messina, Marcella (University of Bergamo, Bergamo, Italy [tel: 0393394335281; e-mail: marcella.messina@unibg.it]), **Gender and Co-Housing,** *International Sociological Association, Gothenburg, Sweden,*

¶ Co-housing relates directly to issues of sustainability, through the role played by the use of shared resources by their participants. Shared resources include forms of organisation like car & bicycle sharing, purchase of commodities & food (often in "buy local schemes"), care/nursing, crèche provision & babysitting. The specific exploratory objective of the paper is to consider how far, and in what ways, the new gender politics is contributing to raising awareness & levels of responsibility in relation to sustainability practices in cohousing projects. The paper is focused on gender dynamics & it will seek to explore the interrelationships between gender, co-housing, & sustainability through a series of key questions by using qualitative research in two specific case studies: London (Coin Street) & Milan (Bovisa). The research shows how far co-housing is able to empower women, & contribute to their independence & quality of life, as part of a broader contribution to social sustainability.

Meuleman, Roza, Bekhuis, Hidde, Lubbers, Marcel & Scheepers, Peer (Ercomer, Utrecht University, Utrecht, The Netherlands, 3584CS [tel: +31 649321753; e-mail: r.meuleman@uu.nl]), **'Own Culture First?' Nationalism and Preferences for National Cultural Consumption,** *International Sociological Association, Gothenburg, Sweden,*

¶ By consuming cultural goods from the own country, visible boundaries between in-groups & out-groups can be made in everyday life. Previous research has, however, mainly focussed on the stratification between "high brow" & "low brow" consumption and has overlooked the national dimension of cultural preferences. In this contribution we will try to fill this gap by asking the following research questions: a. To what extent do educational categories & social classes differ regarding their preferences for national cultural consumption? b. To what extent can these differences be explained by chauvinism, patriotism & localism? c. To what extent are the relationships regarding social categories, mediating variables & preferences comparable across countries? Social identity theory is used to derive our hypotheses. We used data from the ISSP 2003, which entails questions about preferences for national films & television-programmes & perceived

damage to the national culture by exposure to foreign films, music and books, for 27 countries. We performed Structural Equation Modeling and multilevel regression analyses. The negative effect of education & social class on national cultural consumption preferences is mediated by chauvinism, patriotism & localism.

Mewes, Jan (University of Bremen, Bremen, Germany, 28334 P.O. 330440 [tel: 004942121866413; e-mail: jmewes@bigsss.uni-bremen.de]), **Discrimination, Victimization and Migrants' Attitudes towards Institutions: Evidence from the Fourth Wave of the European Social Survey,** *International Sociological Association, Gothenburg, Sweden,*

¶ Trust in social & political institutions is often portrayed as a necessary precondition for a healthy democratic functioning. With regard to immigrants & people with migrational backgrounds, trust in the political institutions of the respective receiving countries might be regarded as an important step within the process of successful social integration. Yet, research on the underlying mechanisms of trust in institutions is scarce in general. More precisely, almost nothing is known about the relationship between the processes of discrimination, victimization & the formation of institutional attitudes (for example trust in the police) on behalf of the population with migrational background. My presentation addresses this research lacuna by analyzing comparative data from the fourth wave of the European Social Survey (ESS). On the basis of a comparative multivariate multilevel analysis, I show whether and to what extent xenophobic experiences & discrimination affect and shape migrants' trust in institutions. As trust in institutions should be regarded & analysed as a multi-dimensional phenomenon, trust in three different kinds of institutions at the country level is analysed, namely trust in the parliament, in the legal system & in the police. Also, I will employ the Migration Integration Policy Index (MIPEX, a multidimensional measure for countries' efforts to integrate migrants) to explain variance between countries. Special concern is given to the question whether & to what extent migrants & people with migrational background differ from the "indigenous" population when it comes to trust in institutions.

Meyer, Uli (Technische Universität Berlin, Institute of Sociology, Sekr. FR 2-5, Franklinstr. 28/29 10829 Berlin, Germany [tel: +49 314 73678; e-mail: uli.meyer@tu-berlin.de]), **Innovation path. Institutionalized Innovation Processes in the Automobile Industry,** *International Sociological Association, Gothenburg, Sweden,*

¶ Technological development within the automobile industry is heavily based on the rational myth of innovation. Especially in Europe & Japan, innovation & innovativeness are crucial criteria for the evaluation of new cars. As a consequence, companies in this industry are required to innovate on a permanent basis & innovation processes are highly institutionalized within this industry. The paper draws on concepts from institutional theory (organizational field, institutional work, institutionalization) & evolutionary economics (path dependency) to describe the resulting interplay between stability & change. The range of observable phenomena ranges from mere innovation rhetoric without any practical use, something engineers call "innovations dust" to the establishment of new organizational fields aimed at the development of new technologies. These developments are constrained, but also enforced & stabilized by powerful mechanisms within the field. The paper is based on a case study of the development of Advanced Driver Assistance System (ADAS), for which 37 qualitative interviews were conducted. The case study not only helps to understand the phenomenon of the organization & institutional innovation but also helps to elaborate concepts from the applied theoretical approaches, namely institutional theory & evolutionary concepts.

Meynert, Mariam (Unit of Education, Institute of Sociology, Lund University, S-22100, Sweden [tel: 046-129657; e-mail: meynert.mariam2@gmail.com]), **Inserting Childhood, Knowledge, Pedagogy, and Educational Research into Modernity and Post-Modernity–Theoretical Reflections,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this document is to integrate parallel & socially constructed discourses across different disciplines such as Sociology of Childhood, Sociology of Knowledge & Sociology of Education. This document aims specifically to explore & read texts within contemporary (modernist–postmodernist) discourses. It further attempts to explore texts related to the construction of childhood both historically & within modernist & post-modernist educational theory. The goal of the study is to sift out and document some of the pedagogical & research implications resulting from the emergence of the new directions within the studies of children & childhood & resultant pedagogy located at the boundaries of the modern & the postmodern. In order to reach this goal, text from secondary literature was read critically, discourses analyzed & located both within stable space of modernity & the existential phenomena called "post-modernity"

2010S01741

Meynert, Mariam John (Dept of Education, Institute of Sociology, Lund University, Sociologiska institutionen, Box 114, 221 00 Lund. Telefon: 046-222 00 00 (vx) [tel: +46 46 129657; e-mail: meynert.mariam2@gmail.com]), **Inserting Childhood, Knowledge, Pedagogy, and Educational Research into Modernity and Postmodernity–Theoretical Reflections,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper locates the concept of childhood within two paradigmatic discourses in the area of the New Sociology of Childhood viz. modernity & postmodernity. Oppositions between conflict theorists and consensual theorists have shifted to oppositions between structuralists & poststructuralists. What passes for "truth" is a claim for power that is relative to historical, cultural and social contexts. The new postmodern age is marked by a "crisis" of power, patriarchy, authority, identity & ethics. Reality grounded in meta-narratives have given way to the realities of little narratives. In fact reality appears as a text, subject to multiple interpretations, multiple readings & multiple uses. Epistemological positions have shifted from positivism to and relativism, strengthened by Wittgenstein's notion of language games & Kuhn's study of shifting paradigms. From the debris of these fragmentary discourses have arisen new directions in study of childhood, & pedagogy. This paper therefore attempts to explore the contemporary paradigmatic discourses in the area of childhood, construction of knowledge, pedagogy & research. The modernist understanding of the child as a unified, stable, reified, essential self is deconstructed & social constructionists understanding of there being no such thing as "the child" or "childhood" but many children & many childhoods is attempted to be reconstructed. Finally an attempt is made to conceptualize pedagogy & research into the postmodern. It further attempts to locate educational theory & practice & construction of knowledge within these two paradigms & finally inserts research theory & practices within modernity & post-modernity.

Meza Cuervo, Manuel (Universidad Nacional Autonoma de Mexico (UNAM), Ciudad de Mexico, (Mexico) [tel: (52-55) 24571622; e-mail: mmcuervo@gmail.com]), **From the Classroom to the Learning Community,** *International Sociological Association, Gothenburg, Sweden,*

¶ This work was constructed around the question: Is it possible and desirable to develop Cybercultur@ as a strategy to generate better results in the teaching-learning process? This research is based in the premise that classrooms are privileged places to promote social change, for it is the space where students can experiment with new forms concerning the organization & construction of reality. The paper reviews internal & external factors that enable or delay, the development of culture of communication, culture of information and culture of knowledge (the three key elements of Cybercultur@ as proposed by LabCOMplex) in a context of formal higher education. The research is based in an empirical investigation with participant observation & interviews following an heuristic methodology of successive approximations. The research was undertaken with 5 groups of high school in Leon (Mexico). The research focused in five main categories: 1. The power exercise of the teacher in the classroom 2. The physical & temporal spaces available for class development 3. Resistance of the teacher and students to change 4. The dialogue teacher-student and student-student 5. Measurable academic achievement Findings show that even partial development of the three cultures may show visible changes in the dynamics of the group & hence, a better academic performance of the class.

Mezger, Cora & Flahaux, Marie-Laurence (Institut National d'Etudes Démographiques, Paris, France, 75020 [e-mail: cora.mezger@ined.fr]), **Returning to Dakar: The Role of Migration Experience for Professional Reinsertion,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper uses mixed methods to investigate the impact of international migration experience on occupational status in the context of return migration to Sub-Saharan Africa. The objective is to study the professional situa-

tion of return migrants back in Senegal, & to contrast their labour market characteristics with non-migrants. Moreover, we explore whether differential international migration experiences & return conditions are a key factor in explaining occupational status. The quantitative data for this study comes from the MAFE survey (Migration between AFrica and Europe, 2008), which collected life-histories both at origin (Senegal) & in European destination countries (France, Spain, and Italy). The qualitative analysis is based on semi-structured interviews with return migrants in the region of Dakar. The results suggest that returnees are in general able to join the labour market after their return, & that "retirement" return migration is negligible. In lines with previous research, they are found to be overrepresented in self-employed jobs. However, self-employment is not necessarily associated with a positive migration & return experience. Rather than a choice, the self-employment status appears as a "last resort" for individuals who were not able to accumulate capital abroad or to prepare their return, & are obliged to continuously sustain their family once they are back in Dakar.

Mhlolo, Michael K (Marang Centre for Mathematics Education University of the Witwatersrand, 27 St Andrews Road Parktown 2193 Johannesburg 2050 SOUTH AFRICA [tel: +27117173404; fax: +27117173259; e-mail: Michael.Mhlolo@wits.ac.za]), **Developmental Coherence: A Stock-Take of the Enacted National Curriculum Statement for Mathematics (NCSM) at Further Education and Training (FET) Level in South Africa,** *International Sociological Association, Gothenburg, Sweden,*

¶ Mathematics reform in many developed & developing countries including South Africa were not successful in their efforts to develop students' higher-order cognitive skills. International studies such as TIMSS 1995 - 2007 & the World Bank report of 2007 provide empirical evidence that suggests why & put forth a theory that all students can reach high standards of performance if the written, the taught & the tested curriculum were all aligned. This study draws from a large scale (DfID) funded project & was premised on this view that ensuring curriculum alignment would be one promising route for leveling the playing field for the poor and minority students. This research report attempts to answer the question "How do FET mathematics teachers foster developmental coherence of processes & skills that are espoused in the NCSM?" Five Grade 11 mathematics lessons were video recorded & a "video segment" or "evaluative event" was used as a unit of analysis in each of the lessons. What emerges from the lesson analyses seems to suggest that the theory of curriculum coherence as defined by the First World assumes teachers' ability to represent mathematical objects in a manner understandable to learners. This ability appears to be weak in most of the lessons analysed suggesting that for curriculum coherence to be beneficial to the poor & minority groups in the developing countries teachers' teaching tasks need to be addressed.

Michaud, Jacinthe (Glendon College, York University, 2275 Bayview Ave, Toronto, (ON) M4N 3M6 [tel: 1-416-736-2100 / 88356; e-mail: jmichaud@yorku.ca]), **Feminist Discourses Formation and Relations with Other Social Movements: Comparing the Italian and the Québec (Canada) Feminist Movements,** *International Sociological Association, Gothenburg, Sweden,*

¶ This conference paper will revisit the feminist discourses formation of two feminist movements: the Italian & the Québec (Canada) feminist movements during their early contemporary period. The main focus of the presentation will be the various relations of exchange and of struggles for autonomy these two movements had with segments of the left & other social movements during the 70s. Both feminist movements have experienced internal tensions & divisions around the issue of participation/non participation with other social forces from the left. During the turbulent year of the 70s, these debates confronted two opposite types of feminist strategies: one feminist strategy which favoured feminist action within the public/political spheres & the second feminist strategy which refused the practice of addressing demands through discourses and practices dominated by masculine thought. This presentation will focus on some of the most emblematic feminist demands a struggle for organizational autonomy, struggle for abortion, health, against sexual violence a to highlight the dynamic of feminist discourse formation within these two specific political movements and national contexts. It will also underline the importance of using a comparative approach to study the feminist theorization of women's issues, especially in the context of the women's movement & its relations of either dialogue or confrontation with segments of the left during the 70s until the mid 80s.

Michelotti, Fernando Canto (Federal University of Rio Grande do Sul, Av. Bento Gonçalves, 9500 - Sala 103 IFCH Campus do Vale, CEP 91509-900 Porto Alegre-RS, Brazil [tel: +55 51 3308 6635; fax: +55 51 3308 6637; e-mail: fcmichelotti@yahoo.com.br]), **Brazilian Health Reform from the 90's: An Analysis of the Interrelationship between State and Health Professional Communities,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper aims to discuss the process of policy-making taking Place in the health sector after the creation of a public health system in Brazil's new Constitution as its empirical basis. Even though the controversial debate on primary health care worldwide had influence also the formation of a similar policy inside the national Unified Health System, this paper wants to reveal the particularities that come across this subsystem, which is different from the trajectories pursued by other countries. The analysis of the building up of a primary health care policy in Brazil also needs to focus on certain conditions given by the relationship established between health care professionals (mainly doctors and nurses) & the state & especially the strategies that were used in order to subvert the medical dominance in the field, which was gradually reestablished once the state started to be more responsive to the demands of this group. It proposes an analytical reconstruction of the emergence & consolidation of the "Family Health Strategy" since the beginning of the 90's. It relies on a historical background regarding conflicts & cleavages even inside these professional corporations. Because of not being in the agenda of the sanitary reformers a consensual solution of a model of health care that could give an immediate answer to the poorest regions of the country, which suffer the most the hospital-centric model of medicine & the increasing privatization during the authoritarian regime, the strategy started to be implemented by local politicians from the northeast & a community of nurses articulated with the federal government, which defended a multi-professional approach to health policy as well as a central role for nursing in the policy being created. Without the political supportive conditions for creating a career of public health professionals, this opens up, once again, the multiple entry to health policy, breaking down the reformers ideals.

Michelson, William (Department of Sociology, University of Toronto, Toronto, Ontario, Canada M5S 2J4 [tel: (416) 978-4562; e-mail: william.michelson@utoronto.ca]), **What Makes an Activity Most Enjoyable? Alternative Ways of Measuring Subjective Aspects of Time-Use,** *International Sociological Association, Gothenburg, Sweden,*

¶ Time-use analyses typically report the duration & frequency of pursuing specific types of activity. But how people evaluate what they report doing is not necessary evident without additional, complementary forms of data. There are many alternative approaches to the measurement of subjective aspects of daily time use, ranging from short term & activity-specific to long term & general. How is the extent of enjoyment operationalized, & what aspects of activity are then shown as germane? A special analytic focus in this paper is on a question pursued in the past by Statistics Canada on the most enjoyable activity reported on a respondent's time diary. Data show that the activity most frequently chosen as most enjoyable is not the same as activities less frequently pursued but of greater salience for enjoyability if done. Watching television is a nearly ubiquitous activity, hence gathering a high frequency of "votes" as most enjoyable activity. In contrast, a significantly higher percentage of those pursuing activities with active social participation or a live venue choose these as the affective highlights of their day.

2010S01749

Michetti, Miqueli (Unicamp; École des Hautes Études en Sciences Sociales [tel: 33 6 37318663; e-mail: miquelimichetti@yahoo.com.br]), **'Brazilian Fashion' and Globalization: a Turn towards Diversity?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Based upon a research carried out in fashion fairs & weeks in São Paulo & Paris, the study investigates the condition in which the fashion produced in Brazil acts in the globalization process. In the end of the XX century, when the Brazilian market liberalization & a cultural turn towards the idea of diversity come into existence, two apparently contradictory movements come into play as complementary: the attempts simultaneously to develop a "Brazilian fashion" & to internationalize it. In these terms, "Brazilian fashion" needs to be global to be legitimate; as much as it needs to be presented as national–or even local–to get its share in the international market. Therefore, we can realize a change in the international fashion market: the historically consecrated fashions (mostly from European countries and the United States) create its links with fashions of other places, like Brazil, newly symbolic enriched as reservoir of the cultural & natural diversity. Thus, uses of the idea of diversity in the contemporary global fashion imply renegotiations within local, national, & global scopes, according to reciprocal and hierarchic relations. Besides, the power to organize the diversity is concentrated on some specific agencies, as revealed by this study.

2010S01750

Midgley, Andrew C & Renwick, Alan (Scottish Agricultural College, Edinburgh, United Kingdom [tel: 00 44 (0) 131 535 4418; e-mail: andrew.midgley@sac.ac.uk]), **The Scottish Vision for Agriculture: Using Discourse to Maintain the Status Quo,** *International Sociological Association, Gothenburg, Sweden,*

¶ The debate about the degree to which agricultural policy should be reformed is highly contentious & one that continually evolves as new arguments are made & as the context of the debate changes. One of the significant events that altered the context of these debates was the food crisis of 2008 & the aim of this paper is to explore the way that this crisis, & issues of food security, have been mobilised in the evolving debates about agriculture in Scotland. Adopting a discourse analytic approach & concentrating on several key Scottish agricultural policy documents, the paper traces the changing nature of agricultural policy discourse between 2001 & 2010. It demonstrates how early post-devolution policy documents were dominated by a neoliberal discourse that sought to focus attention on the need for farmers to produce for the market, but also that a multifunctional discourse became more important as the concept of sustainability was incorporated within the agricultural policy debate. In examining the recent documents that have been produced since the food crisis of 2008, the paper identifies a resurgent neomercantilist discourse articulated by a new Scottish nationalist administration that uses the food crisis as a means of creating lines of difference between Scottish & UK governments & engendering favour with the traditional farm lobby. The food crisis is used to underpin a rhetoric of productivism and a defence of the agricultural policy status quo.

Miele, Francesco (University of Trento, Trento, Italy, Via Verdi 26, 38122 [tel: 39 3470889551; e-mail: francesco.miele@soc.unitn.it]), **New Organizational Forms and Different Criteria of Legitimacy,** *International Sociological Association, Gothenburg, Sweden,*

¶ How does the divergence between the pressures from different actors affect the institutionalization process of a new organizational form? This paper intends to focus on the institutionalization of new organizational forms, considering the specific case of academic spin-off processes, involving the creation of private business (the spin-off company) created by members of a university, with the aim of commercial exploitation of innovative knowledge developed in academic laboratories (Mustar, Wright, Clarysse, 2008). Following the approach of the action-nets (Czarniawska, 2004), I will not focus on the characteristics of formal organizations emerging from the processes of spin-off, but rather on the sets of actions emerging from the processes considered & on the ways in which they are produced & re-produced by heterogeneous actors. The case of Italian spin-offs is particular interesting, because in this processes are involved powerful actors that legitimize and support them following different criteria of legitimacy (Piccaluga, 2001): (1) the university legitimizes these processes as they have a relationship of continuity with the innovative research conducted by its members within the academic laboratories. (2) the local companies, often quite modest in size & technological content of their business, legitimize the spin-off processes because they provide relevant expertise & facilities to improve their production performance. In this contribution I will consider the first case of spin-off process in the University of *, a small town in Northern-Italy. Between April & May 2010, I carry on my empirical data gathering, employing the techniques of participant observation & in-depth interviews, with the aim to track action-nets emerging from the considered process.

Miele, Mara & Lever, John (School of City and Regional Planning, Cardiff University, Glamorgan Building King Edward VII Avenue CF10 3WA [tel: +44 (0)29 208 74022; fax: +44 (0)29 208 74845; e-mail: MieleM@Cardiff.ac.uk]), **Ambivalence and Sensibility: Civilizing Animal Farming in Europe?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The emergence of the public abattoir in 19th century Europe brought about a radical shift in animal farming, institutionalising large numbers of farm animals for industrial production. From a figurational perspective (Elias 2000) this development can be viewed as part of a long term civilizing process through which many diverse aspects of human practice slowly disappeared from view as human sensibilities changed. Things started to change during the later stages of the 20th century, as worries over food safety and food quality pushed farm animal welfare back into public discourse and political debate. Civilization was no longer judged by its ability to control nature in order to facilitate human needs, more by its ability to protect the natural environment (Sutton 2004) and non human animals. This paper examines the changes in animal farming that subsequently emerged through empirical material collected during the EU funded Welfare Quality project, which has proposed a standardised method for assessing the welfare of farm animals & harmonising welfare claims. While these developments have the potential to improve the life of farm animals, the paper concludes that there needs to be a much wider engagement with social & environmental issues if they are to be successful.

Mierina, Inta & Zobena, Aija (University of Latvia, Faculty of Social Sciences, Lomonosova 1A, Riga, Latvia, LV-1019 [tel: +37125919309; e-mail: inta.mierina@gmail.com]), **Learning Political Helplessness: The Vicious Circle of Political Socialization in Latvia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Many observers have been wondering about the lack of considerable civic response or unrest in the light of the current economic crisis in Latvia. How can we explain such civic passivity? In our view, an aspect that has been grossly overlooked so far is the socializing effect of previous government actions, policies and communication with citizens, & the psychological mechanisms underlying this kind of "top-down" political socialization. From the literature it follows that government's performance can facilitate or hinder the development of civil society a through its impact on (1) a sense of political efficacy & (2) interpersonal trust. A government that performs satisfactory should create a virtuous circle of high confidence, high efficacy and trust, & substantial civic participation. By using International Social Survey Program 2006-2007 data, we construct a Structural Equation Model, & we argue that as a result of continuously poor performance & unresponsiveness of government institutions the opposite has happened. People in Latvia have fallen in the 'vicious circle', leading to disenchantment from politics & a weakness of civil society. A politically "helpless society" seems to be created, not able or willing to defend itself by using democratic means.

2010S01754

Miethe, Ingrid Thea (University of Giessen, Department of Education, 35394 Giessen, Germany [tel: +49-641-99-24141; fax: +49-641-99-24149; e-mail: ingrid.miethe@erziehung.uni-giessen.de]), **Educational Advancement in Three Generations in Eastern and Western Germany: Biographical Reconstruction to Determine the Relation Between Habitual Disposition and Political Opportunity Structure,** *International Sociological Association, Gothenburg, Sweden,*

¶ The research project presented here is aimed at representing the relation between habitual dispositions & the prevailing political opportunity structure. In other words, the study examines whether a micro-macro link can be identified by tracing successful educational processes. In order to study very different political opportunity structures, a comparison between Eastern & Western Germany in three different decades has been undertaken. The empirical study must be carried out from a dual perspective: Level 1: Determining the Prevailing Structures of Political Opportunity. The

concept of political opportunity structure (Tarrow, Eisinger) permits a meso & macro-level characterization of the different opportunities for educational advancement. This level of the study involves tracing the development of educational policy and statistical data on the social structures in Eastern & Western Germany. Level 2: Biographical Reconstruction On this level, the study reconstructs biographies to reveal the ways in which individuals utilized the given political opportunity structure, the effects of family experiences of socialization & education, and other factors, such as positive framing, that may have been useful for a successful educational advancement. The reconstructions are based on narrative interviews with successful protagonists of educational advancement in Eastern & Western Germany. The question under study leads to the following sample: The first generation: Successful protagonists of educational advancement in East & West in the 1950s. The period is marked by a favorable political opportunity structure in East Germany & an unfavorable political opportunity structure in West Germany. The second generation: Successful protagonists of educational advancement in East & West in the 1970s. The period is marked by an unfavorable political opportunity structure in East Germany & a favorable political opportunity structure in West Germany. The third generation: Successful protagonists of educational advancement in united Germany in the 1990s. The period is marked by a rather unfavorable political opportunity structure for educational advancement, & the children of immigrant workers are a new target group. The interviews were analyzed by hermeneutic case reconstruction after Rosenthal. Because the primary objective here is to reconstruct not specific micromileus, but rather the link to the macro level, a comparative analysis of the interviews was performed early on, using the concept of political opportunity structure as a theoretical framework. Hence the analysis involved closer theoretical guidance than is usually applied in biographical studies. The presentation introduces the first two reconstructed types, representing different kinds of relations between biography and political opportunity structure.

Mika, Tatjana C. & Stegmann, Michael (German Pension Fund; Research Data Centre, Berlin, Germany, D-10709 [tel: +493086589541; e-mail: tatjana.mika@drv-bund.de]), **Increasing Retirement Age in Germany: Are the Baby Boomers Adapting to the Changing Legal Framework?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Ongoing welfare state reform in Germany gradually increases legal retirement age to 67. Only those who worked for 45 years will be allowed to retire earlier at the age of 65. However, the end of work in the life course & legal retirement age do not necessarily coincide. Institutional arrangements including early retirement schemes, unemployment with & without income replacement and sickness pay serve actually as a bridge between exit from work and retirement. Because several of the early retirement arrangements will no longer be available for the baby boom generation, not even with deductions from the pension, they will have to retire later. The question arises, how cohorts who are now approaching retirement adapt to new regulations & how many baby boomers will be able to retire after 45 years of employment in the future. The paper compares the changing pattern of transitions from work to retirement for the birth cohorts 1932 to 1960. For this goal we will carry out sequence analyses with longitudinal data from the statutory pension insurance ("Sample of the insured populations" records" (VSKT)), which allow us to compare the life courses of those age cohorts.

Miki, Hizuru (Osaka International University, Sugi 3-50-1 Hirakata, Osaka, 573-0192 JAPAN [tel: 81-72-755-7855; fax: 81-72-755-7855; e-mail: mikia0101@nifty.com]), **Integration and Isolation: Religions of Foreign Residents Who Immigrated to Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since the end of the 20th century, the number of the foreign residents in Japan has increased. Many of them are Nikkei-jin, the descendents of immigrants who left Japan to settle in Brazil or Peru. The revision of the immigration control law of Japan made it easier for the Nikkei-jin to come to their parents' or grandparents' homeland & to find jobs. Now Japanese-Brazilians have founded their own evangelical churches & pray for happiness. And Japanese-Peruvians, at several Catholic churches in Japan, plan and perform the Peruvian traditional festival (the festival for the Lord of Miracles) every year. However, at these churches & at such festivals are seen only a few Japanese. That means (1) the churches & festivals are of much importance for immigrants to make up solidarity among them & keep their identity as Brazilians or Peruvians, & (2) the churches & festivals, on the contrary, may isolate the immigrants from the host society.

Milicevic, Mladen (Loyola Marymount University, 1 LMU Dr. Los Angeles, CA 90045, USA [tel: +1-310-338-4575; fax: +1-310-258-8788; e-mail: mmilicev@lmu.edu]), **Cyberspace Alienation,** *International Sociological Association, Gothenburg, Sweden,*

¶ As cyberspace increasingly becomes an emotional escape from "real life," the phenomena of new realities created by globalized capitalism produce new forms of alienation & new paradigms of emotional socialization. The question arises: how can the Internet, that helped global unification by enabling the free exchange of ideas, alienate the participants? Why do some people get "addicted" to "on-line life?" Does this double existence skew people's sense of reality, making them feel lonely & depressed? By developing on-line relationships with people on the other side of the globe, are people sacrificing valuable time that would have otherwise been available for participation in "real life" activities, which may have fostered a sense of community in their own neighborhoods? In Western society the value of instant gratification often comes first, & what better place to achieve that with great impunity then in cyberspace. How do cyberspace experiences when transposed into "real life" alter peoples' understanding of feelings "in the body"? I will try to shed some light on these questions.

2010S01758

Millán, René (Instituto de Investigaciones Sociales-UNAM, Mexico, DF, cp 04510 [tel: 52-55-56227400; fax: 52-55-56227417; e-mail: millan@servidor.unam.mx]), **Civic Engagement and Diverse Participation Forms: Testing Putnama's Model,** *International Sociological Association, Gothenburg, Sweden,*

¶ Based on a survey (3200 cases) applied in three Mexican cities (with different socioeconomic characteristics), this paper verifies two thesis of Putnam's model. The first one is if, in fact, a significant correlation exists between the components of social capital (trust, reciprocity & voluntary associations) & the disposition to cooperate in solving common problems. According to the evidence, I conclude that this association exists but is little significant statistically. In any case, it is not greater than the one registered between the variables "disposition to cooperate" and "have cooperated" before under diverse forms of participation. In terms of the collaboration with others, the fact of "have cooperated" before would have an equal or greater effect than the sole participation in voluntary associations. The second one, I verify if different forms of participation (parties, civic associations, NGOs, neighborhood organisms, social movements, clubs) have a differentiated effect in the formation of social capital & in the formation of collaborative culture to solve common problems. I conclude that that effect varies according to the different institutional contexts & the traditional cultures of organization.

2010S01759

Millán, René (Instituto de Investigaciones Sociales-UNAM, México, DF, CP 04510 [tel: 52-55-56227400; fax: 52-55-56227417; e-mail: millan@servidor.unam.mx]), **Types of Participation, Cooperation and Sense of Citizenship,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper discusses two problems. On the one hand, I verify if the fact of being a citizen & the disposition to cooperate with others to solve common problems as well is associated in a significant way to the participation in voluntary associations. For that it is taken into account if have cooperated with others under different forms (for example, public protests) is equally associated to the sense of citizenship, independently of participating or not in voluntary associations. On the other hand, it discusses if different forms of voluntary association - politics (parties, social movements, NGO) or strictly civic (voluntary, clubs) are equally associated to the form in which citizens see themselves as such. It also analyses if the difference in this association is linked or not to the democratic culture of these associations. For the discussion of these two problems, the paper presents the results of a survey applied in three cities in Mexico (with different socioeconomic characteristics) & which has 3200 cases.

Miller, Judi H (College of Education, University of Canterbury, Christchurch, New Zealand 8041 [tel: 64 3 364 2546; e-mail: judi.miller@canterbury.ac.nz]), **Inclusion and Equality: The Challenge of Maori Knowledge for the Professionalization of New Zealand Counselling,** *International Sociological Association, Gothenburg, Sweden,*

¶ In 2009, the New Zealand Association of Counsellors applied for statutory registration under the Health Practitioners Competency Assurance Act 2003. This decision to apply has highlighted divisions within the Association. In this paper, I use the content of a decade of Association publications to illustrate how attempts to professionalise expose conflicts of interest: the need to raise membership standards for registration while resisting a process that will exclude some members because their traditional ways of working will not be accepted by the registration board. The basis for these conflicts is the founding New Zealand constitutional document the Treaty of Waitangi that demands inclusion of New Zealand's first peoples, Maori, in all policies. The focus of this paper is on how the Association is attempting to extend initiatives to enrich partnership relationships between Treaty participants and retain inclusive policies in the face of demands imposed by registration requirements. This paper will contribute to debates about post-colonialism, political challenge & professionalization projects in European settler societies.

Miller, Lee, M. (Department of Sociology/Sam Houston State University, Huntsville, Texas, 77341 [tel: +001-936-294-1517; e-mail: lmm007@shsu.edu]), **Community Responses to Toxic Hazards: Acceptance vs. Resistance of Injection Wells in Two Texas Communities,** *International Sociological Association, Gothenburg, Sweden,*

¶ The goal of this research is to understand what makes some communities able to coordinate their members & mobilize resources in response to a toxic hazard in their midst, whereas others remain relatively passive in their acceptance of potential risk to health and property. These latter communities endure the physical consequences of the toxic hazard as well as the added affronts of feeling marginalized & powerless. This project is a qualitative study of two Texas communities impacted by toxic hazards associated with waste water injection wells. One site is dealing with the effects of the new presence of a waste water injection well & the other has mobilized to resist the location of similar threats in their community. Data was gathered through in-depth interviews using a snowball approach to identify respondents. Interviews, field notes and study of related news stories & legal documents began in February of 2009 & are ongoing in May 2010. Interviews have been transcribed, coded & analyzed using qualitative analysis software. Emerging themes indicate that bridging social capital (Putnam 2000) & the degree to which the local economy is diversified are two principal factors in how actively a community resists toxic hazards.

2010S01762

Miller, Robert Lee (Queens University, Belfast, Northern Ireland, United Kingdom BT7 1NN [tel: +44 28 9097 3275; fax: +44 28 9097 3943; e-mail: r.miller@qub.ac.uk]), **Collecting Life and Family Histories in Order to Investigate the Intergenerational Transmission of Poverty in Kenya,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper reports on an exploration of linking an ongoing quantitative household panel study with the pilot collection of qualitative family histories using undirected life history interview approaches. Kenyan families identified by the longitudinal panel study as having moved out of poverty were followed up qualitatively with the intention of establishing how the moves towards relative security were realized. While a relatively short & limited pilot study, the results were substantively interesting & gave clear indications for improving the methodology of melding quantitative and qualitative approaches. The richer detail obtained from the qualitative interviews cast doubt upon the reliability of the quantitatively-based assessment of movement out of poverty, the attribution of which seemed more due to flukes of the timing of panel re-interviews for individual families. Rather than previously being in poverty, the families seemed to have suffered temporary reversals in fortune at the time of a previous survey wave. An undirected mode of in-depth qualitative life history interviewing worked very effectively, probably more effectively than in northern European cultures. However, attempts by the interviewer to remain noncommittal were seen as rude & the presence of a woman researcher was necessary when interviewing women (at least for the groups in which these interviews took place). From both the perspectives of the researchers & the researched, undirected interviews were found to be much more effective at eliciting significant information & accounts than semi-structured approaches. The give-and-take style of interview discussion that evolved means that the interviewer & interviewees need to have a common language. This implies that the most effective long-term strategy would be to train local interviewers to a high level of qualitative proficiency. A multi-generational approach is effective for gaining a holistic view of the family & for capturing changes in perspective across generations (though maintaining confidentiality can become an issue). Popular "family tree" genealogical computer programme are useful for ordering information and aiding recall. Taking a "long view" a extended interviews with multiple members of a single extended family network, including locating & following up family members located in different areas, especially those who have migrated to urban areas a generates exponentially richer findings & insights, particularly with regard to the generational changes & the transmissions & conversion of capital across generations. The overview impression from this pilot exercise is that qualitative family-based techniques are an area that will richly repay development.

2010S01763

Miller, Tina (Oxford Brookes University, Headington, Oxford, OX3 OBP [tel: +44 1865 483764; e-mail: tamiller@brookes.ac.uk]), **'It's a triangle that's difficult to square' Men's Intentions and Practices Around Caring, Work and First-Time Fatherhood,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper reports the findings from a qualitative longitudinal study of men's transitions to first-time fatherhood in the UK. Using data collected before & following the birth of a first child the paper will show how the men's intentions are shaped & possibilities around caring involvement imagined and, following the birth, how these are practised across the first two years of the child's life. Through a finely focused analysis the study reveals men's hopes and subsequent everyday experiences as they juggle new paternal identities, care-giving & paid work. The research shows the impact of more nuanced understandings of masculinities alongside the "durability" of particular gendered discourses around paid work & care-giving. The possibilities of sharing care-giving are illuminated through the intense period of paternity/holiday leave that the men take following the birth: but this is short lived. A return to work signals a "domino-effect" of caring responsibilities to gradually unfold. The findings from the study raise questions about what these shifts in men's involvement might signal a "undoing gender" (Risman, 2009), "doing gender differently" (Deutsch, 2007) or, "a new, more subtle expression of traditional 'hegemonic masculinity"'? (Plantin et al, 2003:5) - and these are considered.

2010S01764

Millere, Jolanta (Faculty of Social Sciences, Latvia University of Agriculture, Jelgava, Latvia, LV-3001 [tel: +371 6 3005616; e-mail: Jolanta.Millere@llu.lv]), **Socio-Economic Security of Families of Children with Special Needs,** *International Sociological Association, Gothenburg, Sweden,*

¶ The socio-economic security of families of children with special needs depends not only on the material support provided by the state, accessibility of necessary institutions, but also on capability to satisfy their needs by the environment, which is creating this capability. In summer 2009, the research was carried out, which focused on conceptualization of socio-economic security as an aspect of family quality of life. Extended interviews were conducted with 50 respondents a family members of children with a disability in different regions of Latvia. Four domains of socio-economic security of a family were analyzed - health care, housing, employment & the field of financial security. The result of this research shows that families face problems in the area of health care that are associated with limited capability to use the health care services due to difficulties of financial nature and distant location. The country regions have developed a tendency that material support provided to children with a disability by the state is the only source of family's financial income & as a result of this family cannot satisfy even their basic needs. Also families often face the lack of security in the area of housing and financial resources.

Millward, Christine A, Fehlberg, B & Campo, M. (Law School, University of Melbourne, Melbourne, Victoria, Australia, 3010 [tel: +61 3 8344 1106; e-mail: cmillward@netspace.net.au]), **Australian post-separation parenting 2009: roles, legal influences and outcomes,** *International Sociological Association, Gothenburg, Sweden,*

¶ Shared post-separation parenting was a key goal of recent Family Law changes in Australia. Shared parenting is often equated with equal or substantial time sharing, where children move between homes on a weekly basis or some other roster. Empirical evidence suggests only certain types of parents & situations promote successful shared time parenting. This paper presents preliminary findings from a three year empirical project which aims to identify & explore the long-term impacts of post-separation

shared parenting. The impact of State mediation & legal services & legislative changes upon outcomes for parents & children are considered. In-depth interviews were conducted with 60 divorced/separated parents in early 2009. All were volunteers living in the state of Victoria with dependent children aged 16 or younger. More than half had shared parenting arrangements. Many parents tried to avoid court proceedings due to costs & to avoid escalating conflict. Some with shared care were satisfied, typically if the relationship with their ex-partner was reasonably cooperative and/or arrangements flexible. Many parents however felt controlled by legal orders or the other parent & lacked communication with their ex-partner. Mothers in particular were concerned about the quality of child care given by their ex-partner & reported emotional trauma and concerns for children's health & safety due to an ex-partner's mental ill-health, substance abuse or violence. Therefore, present legal & social rules & norms raise questions about how best to meet children's & parents' post-separation needs. Adverse outcomes can result from changing legal & social mores, with the State displacing family decision-making.

Milne, Elisabeth-Jane (Department of Integrated Studies in Education, McGill University/ Government of Canada - DFAIT, Montreal, QC H3A 1Y2 [tel: ; e-mail: elisabethmilne@hotmail.com]), **Analysing Visual Data With(in) Communities: Deconstructing the Visual Focus Group,** *International Sociological Association, Gothenburg, Sweden,*

¶ Participant produced visual data is increasingly used by qualitative researchers as a tool for increased engagement & to address questions of power & agency within the research process. Participants involved in such research often take part in photo-elicitation exercises as an integral part of the "fieldwork"/"data collection" process. These elicitation exercises are commonly individual discussions between a single participant and the researcher, although group elicitation discussions (also known as "visual focus groups") are occasionally used. Published accounts of such exercises construct these spaces as sites where data is "gathered" & "collected". This paper argues that such accounts fail to acknowledge what is occurring in these groups, that is, both discussion & analysis of data. By deconstructing the process of the visual focus group, I seek to challenge traditional accounts that construct the participant as "discussant", & the academic researcher as "analyst". I argue that group participants are involved in complex processes of visual analysis & that value should be ascribed as much to community knowledge & ways of "knowing", as to traditional academic knowledge. This is important if visual researchers are serious about using elicitation methods as a way of challenging & re-addressing power imbalances within the research process, & if we are to be ethical researchers.

Minguet, Guy & Langeard, Chloé (Ecole des Mines de Nantes, 4, rue Alfred Kastler BP 20722 F-44307 Nantes cedex 3 France [tel: + 33 (0)2.51.85.85.40 ; fax: + 33 (0)2.51.85.8I.69; e-mail: Guy.Minguet@emn.fr]), **New Ethical Stakes Raised Since the French Nationwide Cystic Fibrosis Newborn Screening Program Was Initiated,** *International Sociological Association, Gothenburg, Sweden,*

¶ Cystic Fibrosis (CF) newborn screening (NBS) has been controversial for many years; the long term benefit on pulmonary function test is not yet demonstrated but its median term benefits on nutritional parameters are established as soon as the CF screened infant follow-up is done in a specialized centre. That is the reason why the systematic newborn screening program implemented in France in 2002, was combined with a follow-up care for CF patients in CF care centres (CRCMs) created by the health regulatory agency. France became the first country in the world to perform the CF neonatal screening all over its territory. Taking the French CF neonatal screening program as a case study- we conducted both a quantitative data survey & a focus groups protocol to gain information on the attitudes, beliefs, & concerns of professionals about newborn screening (NBS) & clinical guidelines -, this paper points new bioethical issues from the concrete application of this technology.

Mirzaie, Hossein (University Of Tehran, Social Sciences Faculty, Gisha Bridge, Tehran,Iran [tel: 00989122716430; fax: 00982144237741; e-mail: hmirzaie@ut.ac.ir]), **Iranian Modernity, Situation of Tradition and Modernity,** *International Sociological Association, Gothenburg, Sweden,*

¶ Over one century Iran have encountered with modernity & other aspects: modernism & modernization. Iranian modernity in one hand attempts to identify native & local cultures & traditions, in the other hand try to identify modern components. Iranian society has some characteristics such as religious & collectivistic. Iranian modernity endeavors to discover & extract internal cultural elements & appeal to the commensality & the interaction of traditions & modernity rather than follow the western modernity exactly. It seems modernity in Iran is a blurred phenomenon, in other word the situation of modernity & tradition in Iran is similar to this phrase: "neither this nor that" "either this or that". This process is occurring & it's aims is selecting & refining modern elements according to native qualities. A great deal of Iranian theorists & intellectuals have paid attention to Iranian modern experience & it's challenges. This article attempts to deal with the characteristics of Iranian modernity & it's challenges.

Misits, Éva (Department of English Language Teacher Education and Applied Linguistics, University of Szeged, Szeged, Csongrád, 6722 [tel: +36706113117; e-mail: eva.misits@freemail.hu]), **Discourses of Asexuality in Hungarian and English Cyberspace,** *International Sociological Association, Gothenburg, Sweden,*

¶ Research on language, gender & sexuality in the last fifty years has proven to be particularly useful in denaturalizing hegemonic masculinity & heteronormativity, especially when coupled with critical discourse analysis & queer theories to uncover hitherto unheard voices & ostracized identities falling outside the boundaries of heteronormativity. However, certain identities, such as asexual identities, remain controversial & still await scholarly scrutiny. Therefore, as a contribution to both computer-mediated communication & language & gender studies, I have chosen to explore asexuality & discourses of asexual identity & desire (or lack, thereof) in Hungarian & English cyberspace, using critical discourse analysis as well as a "queer" perspective of asexuality discourses that goes beyond the "sexuality versus disorder" debate. My research concerns, then, the negotiation & display of asexual identities on the internet; more precisely, on Hungarian & English online forums, blogs and other community pages where such identities are discussed, combined with an investigation of how asexuality proper has been (re)presented in "authoritative" literature; this is to see if disseminated notions of asexuality support or undermine the negotiation of asexual identities as 'valid'.

2010S01770

Miskolci, Richard (Dep. of Sociology/UFSCar-Brazil, Rod Washington Luiz km 235 S. Carlos-SP Brazil, 13565-905 [tel: 55-11-94596926; fax: 55-16-3351.8915; e-mail: ufscar7@gmail.com]), **Subaltern Knowledges and Human Rights: New Reflections on the Debate Universalism versus Relativism,** *International Sociological Association, Gothenburg, Sweden,* (POR)

¶ Human Rights still has an unknown history & new theoretical perspectives that can be developed under the perspective of Subaltern Knowledges (Queer Theory & Post-Colonial Studies) and the history of social movements. This article intends to articulate a provisory subaltern history of Human Rights with a discussion of its central debate on the opposition universalism versus relativism. It will do so exploring & analyzing two of the main deficits on the present discussions on the subject: A macrosociological deficit that appears on studies that present Human Rights as an Euro-American conquest that should be seen as the zenith of Western Civilization & Modernization instead of taking into account the fact that this same "civilization" and modernity were built due to colonialism, imperialist practices and the development of an Eurocentric "science"; An anthropological deficit connected to a notion of culture still marked by borderlines. This notion keeps cultures in a scheme of comprehension in which they do not modify each other, so imposing multiculturalism as the only possibility to deal with demands for recognition. The critical analysis of these powerful hegemonic views on the debate will be unified with a new perspective developed by Post-Colonial Studies & Queer Theory.

2010S01771

Missinne, Sarah, Levecque, Katia & Bracke, Piet (Department of Sociology, Ghent University, Korte Meer, 5, 9000 Ghent, Belgium [tel: +32 9 264 84 53; fax: +32 9 264 69 75; e-mail: sarah.missinne@ugent.be]), **Discrimination and Ethnic Inequalities in Depression: A Multilevel Analysis for the European Population,** *International Sociological Association, Gothenburg, Sweden,*

¶ An increasing amount of studies report evidence for ethnic inequalities in depression. These show the great impact of socio-economic factors & suggest ethnic discrimination as another risk factor. However, this research is restricted to mainly American en British studies, whereas in continental Europe very little is known on this subject. Using data from

the third wave of the European Social Survey, a multilevel analysis was performed for the adult population aged 18 to 65 (N= 33035) of 23 European countries. The results show that ethnic minorities do experience more depressive feelings in 11 countries. Moreover, their socio-economic position & the experience of ethnic discrimination are important risk factors. In addition, there are substantial country-level differences in depression. The present study is the first to investigate ethnic inequalities in depression for the European population.

2010S01772

Misumi, Kazuto (Faculty of Social and Cultural Studies, Kyushu University, Fukuoka, Japan, 819-0395 [tel: +81-92-802-5612; fax: +81-92-802-5612; e-mail: kmisumi@scs.kyushu-u.ac.jp]), **Possibility of Generalized Social Identity: From the Viewpoint of Social Capital and Network Imagination,** *International Sociological Association, Gothenburg, Sweden,*

¶ Making investment on social capital can be rational for the investor; however, what motivates the contact to provide his/her resources to the investor. Explanation donors' motivation in this case requires an extended framework beyond orthodox rational choice theory. Then, we introduce the concept of generalized social identity that is logically similar to the norm of generalized reciprocity. In general, the donor's motivation will be strengthened in a commitment relationship where people share the same social identity. However, generalized reciprocity requires the donor to expect return, not from the commitment tie at present, but from the other ties that might be established in the future. Then, people should already have a social identity that is general enough to imply connections with such imagined others. We discuss that a generalized social identity can be extendedly generated from local social identities in terms of network imagination, & this ability is conditioned by people's having multiple social identities. The internet survey data we gathered in Fukuoka city, Japan, in 2007, mostly supports this hypothesis. The results suggest that our conceptual framework of generalized social identity & network imagination is effective in explaining motivation of contacts in the process of social capital.

2010S01773

Misztal, Barbara A. (University of Leicester Department of Sociology, Leicester LE1 7RH, UK [tel: 44 -0116 25222459; e-mail: bm50@le.ac.uk]), **Trust: Acceptance of, Precaution against and Cause of Vulnerability,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper offers a conceptual analysis of the relationship between trust & vulnerability. It argues that both trust and vulnerability are relevant considerations in any attempt to describe & explain social relationships. Although vulnerability has long been connected with the development of trust, there is no much in the theoretical literature on the complexity & the dynamic nature of the links between trust & vulnerability. The paper argues that sorting out the meaning of both terms and developing further our understanding how they are connected are one of the important tasks of the social science. Trust is usually defined as confidence that partners will not exploit each others' vulnerability. While stressing that vulnerability cannot be conceived as a single continuum & the varieties of its link with trust, the paper views vulnerability as irreducibly plural and rooted in the human condition of dependence on others, in the unpredictability of action & in the irreversibility of human experiences. The paper, while bridging theories of trust based on rational choice & those based on normative routines, asserts that trust is a remedy for vulnerability, but trust itself is vulnerable to the universal condition of our humanity.

2010S01774

Mitra, Arpita (KIIT Law School, KIIT University, Bhubaneswar, Orissa, India 751024 [tel: 9108093449552; e-mail: arpitaamitra@gmail.com]), **ICTs in Community Policing: Partners in 'Appropriate' Policing or More Control? A Sociological Essay of Kolkata Police,** *International Sociological Association, Gothenburg, Sweden,*

¶ The burgeoning civil society has marked its presence felt during the recent socio-political disturbances in Kolkata, India. Peoples' cry for justice has brought to light the need for participatory democracy along with restoration of faith in governance. This acted as one of the primary catalyst towards the realization of the implications of people's cooperation & collaboration in police work. This, in turn, has led the police in India as a whole & Kolkata in particular to become serious regarding the implementation of the idea of community policing as opposed to authoritarian, repressive and violent police culture. A section of the Police also has been inclined to shed its oppressive & autocratic orientations in order to procure the cooperation of the people for effective implementation of police work. The introduction of Information and communication technologies (ICTs) by the police organization of the metropolitan city of Kolkata, West Bengal, began using ICTs to ensure better policing practices, increased access by the people and efficient maintenance of law & order. It has initiated several e-services as part of its community policing programmes to cater to the people & bring about social welfare & security. The new mission aims, at least on paper, to advance greater police transparency & accountability. In the light of this, the main objective of the present paper is to evaluate the extent to which the application of the ICTs has facilitated the successful implementation of community policing by the Kolkata Police or increasing control as partners in creating new frontiers of power relations. My findings indicate that the services that Kolkata Police has initiated to modernize have failed to achieve desired level of public involvement. What is more, by catering to the economically affluent class it is creating a new digital divide. Moreover the lower rank officers have less access & are less comfortable with these technologies. The absence of genuine efforts on the part of state & police administration, lack of adequate public involvement & technology timid officers are making the purpose of these programmes less relevant & perhaps often useless. A paradigm shift for conceptualizing "appropriate community policing" along with innovative strategies for resolution of social conflicts in a more meaningful way perhaps is the need of the hour.

2010S01775

Mitupova, Sayana Alexandrovna (Russian State Medical University; Department for Foreign Languages, Moscow, Russia 117997 [e-mail: smit78@mail.ru]), **Post-War Development of Japanese Sociology,** *International Sociological Association, Gothenburg, Sweden,*

¶ Here I'd like to reflect on complexities involved in doing a history of Japanese sociology after World War II. The burden of my argument here is to track the post-war narrowing of sociology's intellectual diversity in Japan. The first aim is to look at the impact of social events on the development of Japanese sociology–the events of World War II & examine the institutions & the funding mechanisms that influenced the development of sociology in Japan between 1945-1965. It is important also to provide an examination of how the social context of the 1960s affected the discipline of sociology. A key foundational question in considering this subject is this: what is a historian of sociology trying to accomplish? First, a good history of a concrete sociological tradition may lay out some of the intellectual influences that stimulated thinkers through the formative period Second, the history of the Japanese sociological tradition may give a lot of attention to uncovering the specific institutions of knowledge validation. A third component of the post-war history of a Japanese sociological tradition might be an account of the historical & social environment in which the tradition takes shape. Thus, social knowledge is a dynamic & expanding tool box of theories and approaches, each of which adds something to our overall understanding of society.

2010S01776

Miwa, Satoshi & Ishida, Hiroshi (Tohoku University, Sendai-shi, JAPAN, 980-8576 [tel: +81 22 7956120; e-mail: miwa@sed.tohoku.ac.jp]), **School Discipline Climate and Achievement in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study attempts to contribute to the project of cross-national study on school discipline by examining the relationship among school characteristics, individual background & achievement, and school discipline climate in Japan. The data set used in this study comes from the Japanese 2003 TIMSS which includes surveys of about 4800 students in the eighth grade in 146 Japanese schools. As for the supplementary analysis, we use the Japanese Life Course Panel Survey (JLPS) which is the national survey of youth in Japan. Japanese society stands out on a number of respects in this cross-national project. Japanese schools are characterized by the low prevalence of delinquency behavior, & school discipline in Japan is only weakly associated with students' achievement and other school-level characteristics. Japanese principals and teachers appear to be concerned with the discipline problems at schools, but their perception does not necessarily correspond to the prevalence of students' misbehavior. School-level characteristics are not strongly related to the occurrence of discipline problems. Furthermore, school disciplinary climate does not seem to affect the future life chances of the students after leaving middle school, as far as high school type, high school grade, & college attendance are concerned. However, the experiences of delinquency in middle school show lasting influence on the individuals' life chances after leaving middle school.

Miyamoto, Naomi (Ritsumeikan University, Faculty of Letters [tel: +81-75-466-3616; fax: +81-75-466-3616; e-mail: nmiya@sd5.so-net.ne.jp]), **Authenticity and Music Festivals in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the transition & tendency of music festivals in Japan from the perspective of authenticity, a notable concept in tourism research. In Japan, the most common type of music festivals are the so-called classical music festivals. At music festivals, music that was created in the past in European countries is reproduced. The concept of authenticity is effective when trying to consider the significance of classical music festivals in Japan, which were originally irrelevant & inauthentic with regard to European traditional music. Now many Japanese festivals are participated in by local volunteers & amateur musicians, & lots of unique events are planned. For example, "Kura-concert" (Japanese traditional warehouse concert), which blends European classical music & Japanese old landscape. Japanese music festivals continue by "transplanting" foreign music into their own places. In that sense the music of Japanese festivals does not become a borrowed culture. The long lasting festivals in Japan maintain object-related authenticity of western classical music by inviting world-famous foreign musicians as well as experience-oriented authenticity in the sense that they are rooted in the local community & landscape through the voluntary activities of the locals themselves.

Mjöset, Lars (Deprtment of Sociology and Human Geography, University of Oslo, Norway, P.O.Box 1096, Blindern, 0317 Oslo, Norway [tel: +4722856749; fax: +4722855253; e-mail: lars.mjoset@sosiologi.uio.no]), **Norden during - Not after - World War II,** *International Sociological Association, Gothenburg, Sweden,*

¶ Historians mostly synthesize specialized historical research by writing histories of nation states. The tradition of comparative historical sociology attempts to synthesize by using the same specialized research as field notes, taking them as points of departure for comparisons. In analyses at the macro-level, the cases selected are mostly nation states. This is a type of qualitative research, & it is thus not necessary that the selected cases are independent of each other. This essay compares the five Nordic countries during World War II. In the first part, the five countries (Denmark, Finland, Iceland, Norway & Sweden) are related to each other. That is, Norden is seen as a subsystem of states within a European state system that has triggered global war. In the second part, the five cases are compared as separate units. The essay includes methodological reflections on how historical sociology uses comparison to specify context in relation to the processes that are traced, & also intends to contribute to the discussion of the relationship between sociology & history as academic disciplines.

Mlodawska, Agata (Jagiellonian University, Grodzka 52, Poland, 31-044 [tel: ; e-mail: a.mlodawska@gmail.com]), **Deconstructing "Mother Pole"–An Overview of Intersection between Occidentalization, Colonialism, Class and Gender in the Middle of Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of paper is to discuss whether postcolonial approach might be useful in investigating new models of motherhood in Poland. The former ones were based on assumption that motherhood should be identified with femininity; which seemingly defining maternal practices as situated beyond the society. However, traditional understanding of the term "Matka Polka" (Mother Pole) involved strong relation between maternal practices, nationalism and Catholic religion; underlying uniqueness of experiences of Polish mothers. It was evident, that notion "Polish Mother" was supposed to encompass all maternal practices regardless of class, age, education etc. Nevertheless, this monolithic construct, created by Western scholars seem to reflect anti-Eastern European prejudices; for instance Polish women were described as pre-modern Catholics, who are hostile to idea of women's rights. Therefore in first part of presentation I discuss the results of analysis of definition of "Polish Mother" in texts of Western feminist scholars. In the second part I will demonstrate, the role of references to "Western" & "Modern" in constructing distinctions between mothers from different classes. Apparently, these notions are crucial for constructing cultural barriers between backward Polish catholic lower class mothers & modern liberal mothers representing occidentalized elites. Moreover, I demonstrate how the concept of "Westernization" and "Europeanness" of maternal movement is used in process of legitimization of organization that are established to struggle for mothers' rights or to regain public space for mothers. Finally, I discuss if theoretical framework of postcolonialism should be modified in order to grasp complexity of relation of power between former First & Second World.

Moberg, Marcus M (Comparative Religion, Åbo Akademi University, Fabriksgatan 2 20500, Åbo, Finland [tel: +358407243754; e-mail: marcus.moberg@abo.fi]), **Popular Music as a Resource for the Construction of Alternative Modes of Religious Expression and Embodiment: The Finnish Christian Metal Music Scene,** *International Sociological Association, Gothenburg, Sweden,*

¶ During recent decades, popular culture has developed into an increasingly important source of inspiration for the construction of alternative forms of religious expression & practice. This paper concentrates on the phenomenon of Christian metal music in a Finnish context as a rare example of a case in which Protestant Christianity & a particular form of popular music & its culture have met & merged. The paper accounts for how metal music and culture has become formative & determinative of the ways in which a particular group of young adult Christians express & practice their faith in an expressly alternative & unconventional manner. Drawing on five years of research on the Finnish Christian metal music scene, particular focus is directed at how the popular musical culture of metal provides Christian metal scene members with important resources for the construction of an alternative form of religious expression, embodied religious practice, & an alternative Christian identity.

Mocanu, Cristina, Zamfir, Ana Maria & Gheorghe, Carmen (National Labour Research Institute from Romania; Labour Market Department, Bucharest, Romania, 010643 [tel: +40-21-3124069; fax: +40-21-3117595; e-mail: mocanu@incsmps.ro]), **Being Roma Women Employee: The Experience of the Second Labour Market Segment. Case Study on the Occupation of Sanitary Mediator.,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper focuses on the emergence & development of a new occupation on the Romanian labour market, namely that of sanitary mediator. The occupation was "born" as a tool for social intervention at the level of Roma communities within the programs of the Roma NGOs. Once the program was taken over by the government & extended at a national scale the occupation knew its first steps of regulation. The occupation is in the same time a gendered & ethnical one; all sanitary mediators are Roma women. The research employed two main components: desk review of legal framework & semi-structured interviews with sanitary mediators, county coordinators and representatives of Roma NGOs. Results show that while working in a more & more regulated occupation, sanitary mediators activate at the edge of the health care system, experiencing poor working conditions & low levels of representation. Although they have started to act as a collective actor, they display poor capacity of representing & promoting their interests. Sanitary mediators experience difficulties in building a positive occupational identity as long as their activity is unvalued, perceived and treated as temporary & exceeding the core of the health care system. Thus the paper will discuss how the process of governmental regulation strongly ties the sanitary mediators to the second segment of the labour market.

Mochmann, Ingvill C. (GESIS - Leibniz Institute for the Social Sciences, Cologne, Germany [e-mail: ingvill.mochmann@gesis.org]), **Individual versus Collective Responsibility–Who Is Responsible For The Children Born Of War?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Throughout history children have been fathered by members of enemy, allied & peacekeeping forces & local women. The relationships could be consensual or abusive, for many of these "children born of war" the background of conception is not the dominant factor in their lives. Research indicates that rather their lives are marked by stigmatization & discrimination in family & society reaching from infanticide, mobbing & social exclusion to lack of citizenship. In addition, the biological origin often becomes a taboo in the family which for many of the children results in identity crises. The fathers, on the other hand, mostly return home without any obligations towards the child. This paper will discuss selected cases of children born of throughout history & analyze similarities & differences at the individual & societal level. This analysis will also include the position of the armed forces in the respective conflict of analysis. Based on the information accessible so far suggestions on how to protect this vulnerable group of war affected children will be presented.

Modi, Ishwar (India International Institute of Social Sciences, 28, Vishnu Enclave, JLN Marg, Jaipur - 302018, India [tel: +91-141-2723737/+91-94607-66077; e-mail: iiiss2005modi@yahoo.co.in]), **Leisure and Life through the Ages in India,** *International Sociological Association, Gothenburg, Sweden,*

¶ Leisure is essence of life. It is also the spirit that has sustained and rejuvenated man all through the ages. It is equally true that man has also been toiling all through to sustain himself & his family. It is not work alone but leisure that has made his life more fulfilling & worth leaving. It is not without reason that leisure has been acclaimed as one of the greatest savior of the mankind. However, leisure is not a static but a dynamic phenomena. Conditions, both social & natural, around him have differed from time to time & he has been adjusting himself accordingly. With the evolution & progress of societies, man's daily routines kept on changing & yet he kept on seeking time for himself. Working even in the most in-human conditions, as in case of the plantation slaves, man could retain his identity & culture even if he were to find leisure in the midst of the night. As such, in traditional societies, sub-sumption of leisure in culture was integral to its worldview. Leisure was culture, the basis of culture was leisure. Contrary to such notions that leisure existed in its truest sense only in ancient Greece during the time of great philosophers Plato and Aristotle, & neither before nor after (Sebastian de Grazias' view); or that leisure is essentially the product only of the civilizations born from the industrial revolution (as repeatedly insisted upon by Joffre Dumazedier), leisure exists universally and that it has a dynamic character. While it is structural in nature, it is cultural in orientation & operation. It cannot be accepted by any yardstick that the thousands of years old cultures and civilizations, like that of China & India or that of Babylon, Egypt or Mexico, were devoid of traditional leisure cultures. However, the single most factor that has influenced the nature and character of leisure all through the ages has been the social structure of a given society. Whenever, social structure for a particular society changed, the patterns of leisure also changed accordingly & commensurately. Examination of various societies whether it be Greek, Spartan, Roman or during Christianity & the Middle Ages in their historicity & in the context of their the then social structures amply prove that how their social structures influenced & determined the nature of leisure of these the then societies (Modi, 1985). Almost the same may be said about the Indian society. During the long course of history, whenever, major social structural changes took place in society, the nature of leisure also changed accordingly (Modi, 1985). However, while it may be said to be true in the context of almost all the traditional societies, whether Western or Oriental including the broader South Asian region, drastic changes are taking place in the nature and character of leisure under the impact of modernization, globalization & social transformations.

Modic, Dolores (School of Advanced Social Studies, Nova Gorica, Slovenia, 5000 [tel: 00386/31-334226; e-mail: dollymod@gmail.com]), **The Role of Legal Regulative in the National Innovation Systems,** *International Sociological Association, Gothenburg, Sweden,*

¶ The lack of empirical studies in the sociology of law is not a new issue (see: Horwitz, 1977). The following paper aims to depict the connection between a concept of the national innovation systems (NIS) & the role of the legal regulative within them. There have been several studies focusing on the flow of technology and information both on national (for Slovenia see: Stres et al, 2009; Cvelbar et al, 2008), as well as on the international level (see: Ceccagnoli et al, 2005; OECD, 1997). In all of them the role played by the legal regulative is clearly seen, however no study has been conducted that would try to comprehend the general influence of the legal regulative on NIS. This paper shall aspire to analyze the scope & the magnitude of the influence the legal regulative has on national innovation systems, whereby it will draw the information from pre-existing studies on the flow of technologies and information. However, only one line of data shall be analyzed comparably, that is, those related with the legal regulative and trough it aiming to reach an insight into the extent of the interconnection between the NIS & the legal regulative.

Mohamadi, Zahra, Sanagoo, Akram & Jouybari, Leila (Golestan University of Medical Sciences [tel: 00989122083295; e-mail: miminaUL13@yahoo.com]), **Spousal Abuse in Marital Relationships among Women Referred to a Central Clinic Affiliated to Golestan University, 2008,** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction: The incidence of wife abuse & its impact on the psychological as well as physical health of the women & in its ultimate negative effects on the health of the family have been presented in many research studies. Materials & Methods: The data gathering conducted by a "spouse abuse" questionnaire, consists of 27 items in emotional, physical, & sexual domains. The validity and reliability of the tool was confirmed (Alpha Cronbach=0.86). 300 married women, referred to the only central educational clinic in Gorgan, participated in the study. Results: Data analysis revealed that the frequency of physical & psychological wife abuse among the subjects were 54.5 & 82.5 percent respectively. There was a significant relationship between wife abuse & the age of women. Wife abuse also was significantly related with addiction and cigarette smoking of husbands (P=0.000). The Older women reported higher incidence of wife abuse. Conclusion: Our findings suggested that there are relationships among the variables of age, cigarette smoking or drug consumption & wife abuse. Legislation of a law which forbids husbands to abuse their wives & increasing the general knowledge about wife abuse by means of mass media may have significant effects on reduction of wife abuse.

Mohan, Kamlesh (Panjab University, Professor in Modern History, Panjab University , Chandigarh India [tel: 91-9872844391; e-mail: kamleshmohan14@yahoo.com]), **Disease in the Ecology of Famine,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper focuses attention on the complex relationship between famine and disease. Historically speaking, famines whether local, regional or class-based, were multi-factored especially under the colonial rule: they were caused by ecological collapse coupled with administrative inadequacy & indifference to social responsibility. In the era of globalization, they owe their spread or mitigation to the domination of market forces as well as biological & technological interventions. Discussion of causation would serve as a backdrop for locating disease in the ecology of famine. In order to unravel the multi-layered relationship between famine & disease, it is relevant to bring in the concept of energy-flow, its sustenance in times of abundance & mechanism of its breakdown leading to famine. Destruction of the energy-storage of a country, community or individuals by a flood or drought leads to reduction in resistance & immunity to bacterial diseases a water-borne, air-borne or food-related. How does famine increase human vulnerability to particular diseases? There are three aspects of this question. The first is how famine affects the immune system. The second concerns the mechanism or process of its working in epidemiological terms. The third aspect deals with the availability of data on experimental infections. The Madras famine of 1876-78, an integral part of the "Great Famine of India," provides a rich source-material for an in-depth analysis of the medical problems caused by prolonged starvation in the human body. Reports of autopsies of victims of dysentery in the Relief Camps (1889) & McCarris records of nutritional experiments on monkeys (1920) for evaluating the impact of a deficient diet on the urban poor & other sources related to famine in the colonial Punjab throw a flood of light on the relationship between famine and disease. Author Profile Dr. Kamlesh Mohan is Professor of Modern History at the Punjab University, Chandigarh. She was Fellow of St. Antony's College, University of Oxford in 1995-96 & Fellow of the University Grants Commission in 2008-09. She has several publications to her credit. To mention a few: "Militant Nationalism in Punjab," Manohar Publications (1986, reprint 2010); "Towards Gender History: Images, Identities & Roles of North-Indian Women," Aakar Publications (2006) & "Rameshwari Nehru: A Biography," National Book Trust, India (2010).

2010S01787

Mohanty, Bibhuti Bhusan (Department of Sociology, Pondicherry University, India, Puducherry 605 014, India [tel: +91 4132655386; fax: +91 4132655255; e-mail: bibhutimohanty@hotmail.com]), **Voices of the Displaced: Development Experience in Tribal India,** *International Sociological Association, Gothenburg, Sweden,*

¶ Though displacement started on a large scale in tribal areas as a consequence of planned economic development following independence, the past two decades have witnessed rising protest movements by tribals against displacement. The studies on these protest movements, by & large, subscribes to two different views. While one group argues that these movements retard the exploitative development model of the state, the other group holds that they generate distinct identity for the tribals & create an alternative to the dominant & destructive system of development. Against this background the present paper, based on some select protest movements, analyses how movements have impacted upon tribals & the devel-

opment policy of the state. The study argues that in the process of dissenting their voices against the development projects, the tribals learned to assert their rights and are trying to position themselves as the state's chief political actors through participatory process. The resultant effects have generated a kind of democratic awakening among these hitherto silent groups & made the development policy of the state more inclusive. Though these protests have hampered the implementation of government policies, they have helped to restore the people's faith in democratic values & sensitiveness of the state to their dissent voices.

Möhring, Katja, Zähle, Tanja & Krause, Peter (Research Training Group SOCLIFE, University of Cologne, Richard-Strauss-Str. 2, 50931 Cologne, Germany [tel: +49 221 470 5496; e-mail: moehring@wiso.uni-koeln.de]), **Pathways into Retirement and Income Trajectories–Germany and Great Britain Compared,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study is a comparative cross-national analysis of individual employment pathways into retirement & the resulting income positions in Germany & Great Britain. It deals with the question of how the different policy approaches & pension systems of both countries affect the individual transition process, produce typical transition patterns & determine the income situation in old age. The study focuses on the transition processes of people at the age of 58 to 65 in the years 1992 to 2006. The required longitudinal data are derived from the German Socio-economic panel & the British Household Panel. Unlike previous studies -- which usually investigate the transition into retirement by focussing on single points in time -- we operationalize the transition process as long-term period within the individual life course. Therefore, we apply the method of sequence analysis, which focuses on trajectories rather than on transitions & allows the detection of employment pathways patterns. Due to differences between both countries in the national pension system & the retirement policies as well as the reform measures during the analysis period, it is assumed that the developments of the retirement transition patterns are divergent.

Mol, Arthur P.J. & Hong, Dayong (Wageningen University, Hollandseweg 1 [e-mail: arthur.mol@wur.nl]), **Energy, Resources, and China's Rapid Industrialization: Challenges for Social Theory,** *International Sociological Association, Gothenburg, Sweden,*

¶ China's unprecedented economic growth path over the last three decades has been paralleled by a exponential growth in the consumption of natural resources & energy. Initially China mainly exploited domestic resources to fuel its rapid industrial development; but over the last one & a half decade we witness two significant changes in China's strategy to fulfill its natural resource needs. First, with the further integration of China in the world economy and polity increasingly larger shares of China natural resources and energy consumption are imported from other parts of the world. The second strategy, especially pushed since the 11th Five Year plan, consists of a strong effort by China towards renewable natural resource use, recycling of used natural resources and increased efficiencies in natural resources & energy use. This paper will reflect on these developments using theories of ecological modernization & the sociology of networks & flows. It especially focuses on the following questions: Can we indeed identify & quantify these two major changes in societyaenvironment relations in China over the last one-and-a-half decade? Should we understand these developments as a "copy" of what many OECD countries (western Europe, Japan, the US) have gone through, but then condensed or compressed (in time); or is such a homogenization idea too simple & are Chinese specificities at work? Where are the main domestic "governing institutions" of these moves towards "imports" & "renewables"?

2010S01790

Moller, Valerie (Institute of Social and Economic Research, Rhodes University, Grahamstown, South Africa, 6140 [tel: +27 46 6038903; fax: +27 46 622 3948; e-mail: v.moller@ru.ac.za]), **Fortune and Misfortune in South African Pensioner Households 2002-2009: An analysis of Intra-Household Dynamics,** *International Sociological Association, Gothenburg, Sweden,*

¶ South Africa is among the few developing countries that assists vulnerable older households through a non-contributory old-age pension on a large scale. Men & women 60 years & older are eligible for the social pension that is means-tested. South Africa's social assistance programme fulfils a symbolic as well as a cash injection purpose: while the cash transfers serve as a safety net for the poorest, they also signify redress for the economic & social inequities inflicted on the poor in the past. A 2002 survey conducted among over 1000 rural & urban pensioner households in the Eastern & Western Cape provinces found social pensions improved recipient households' chances of moving out of poverty & assisted them to better weather financial shocks caused by loss of a job, illness & disability, or the death of an income earner. Findings suggested that social pensions may have wider effects on the wellbeing of household members, their livelihoods, and their integration in society. The same households were revisited in 2009 to inquire into changes in their situation relating to household composition, health, livelihoods, & living circumstances. Householders were asked to assess their overall quality of life & personal well-being. The paper presents the profiles of households that have fared better & worse since 2002. An attempt is made to identify the main factors that distinguish households that state their situation has improved from those whose situation has reportedly got worse. A better understanding of the household dynamics underlying household gains & losses could have important public policy implications.

2010S01791

Monahan, Torin (Vanderbilt University [e-mail: torin.monahan@vanderbilt.edu]), **Mapping Concerns with Homeland Security Fusion Centers,** *International Sociological Association, Gothenburg, Sweden,*

¶ The U.S. Department of Homeland Security's data "fusion centers" have been celebrated as representing the ideal organizational configuration for the provision of national security. Fusion centers, which are proliferating across all U.S. states, coordinate data sharing among state & local police, intelligence agencies, and private companies. The primary goal of fusion centers is to engage in intelligence sharing for counterterrorism purposes; however they have been used for a variety of other purposes such as basic policing, spying on social movement organizations, or restricting legal public activities such as taking photographs. This paper identifies & discusses three primary categories of concern with fusion centers: (1) ineffectiveness, particularly given the financial expense, the statistical unlikelihood of terrorist attacks, & the pressing need for other law-enforcement support; (2) potential for mission creep, where the functions of fusion centers expand beyond their originally intended purposes to encompass things like all-hazards preparedness; & (3) violation of civil liberties, especially through racial-profiling or First Amendment violations.

Moore, Ami, R (University Of North Texas, 1155 Union Circle # 311157 Denton, TX 76203 [tel: 940.565.4267; fax: 940.369.8652; e-mail: ami.moore@unt.edu]), **The American Dream through the Eyes of Black Africans (Ethiopians, Ghanaians, Kenyans, and Nigerians) in Texas,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study uses James Truslow Adams" (1931) definition of the "American dream" to examine whether Black African immigrants in Texas are achieving the American dream which includes not only the economic aspects of their lives such as material achievement but also a holistic assessment of their lives. Although the concept "American dream" is a pervasive concept in American culture, it has been often used mainly to reflect materialism such as home ownership (Freeman & Hamilton, 2004) & upward mobility such as achieving middle class status (Clark, 2003). However, another aspect, the moralistic one, such as ideals of 'true regard for the dignity & worth of each & every individual' (Fisher, 1973: 161) have been overlooked. The study uses in-depth interviews to examine how Black African-born American citizens in Texas go through the process of achieving the "American dream", the roadblocks they face, & ways they circumvent hindrances. By focusing on Black African-born people in Texas, the study will provide insight into race, ethnic, & class dynamics.

Consequently, the study results can inform policy to combat continued race & ethnic stratification in immigration discourse.

2010S01794

Moore, Ami, R. (University of North Texas, 1155 Union Circle # 311157 [tel: 940.565.4267; fax: 940.369.7035; e-mail: ami.moore@unt.edu]), **Sexual Responses to HIV among Togolese Who Are on Antiretroviral Medications: A Report from HIV and AIDS Service Providers,** *International Sociological Association, Gothenburg, Sweden,*

¶ Objectives: Since the advent of antiretroviral (ARV) medications in Togo (West Africa), people living with HIV & AIDS (PLWHIV) are living longer & healthier lives. However, the sexual behaviors of people on ARV in Togo are not known. In this study we examined the sexual behaviors of Togolese who were on ARV from reports of their service providers as PLWHIV confide in & receive advice from them. Methods: Interviews of 30 HIV & AIDS service providers from 10 different non-governmental organizations were conducted in Lomé, Togo. Each participant provided a list of sexual behaviors of PLWHIV who were on ARV medications. From the list were created five categories of sexual responses. Findings: Factors that influenced sexual responses were mostly desire or non desire for children. (1) PLWHIV who had sex with other PLWHIV & always practiced safer sex (consistently use condoms). Most people in this category used condoms as means of fertility control as they did not want to have children. (2) PLWHIV who had sex with other PLWHIV but did not practice safe sex because they wanted to have children. (3) PLWHIV who had sex with seronegative people & always practiced safe sex because they did not want to infect others or have children. (4) PLWHIV who had sex with seronegative people & did not practice safe sex as they wanted to have children. (5) PLWHIV who were not sexually active as they were turned off by sexual intercourse a vector through which they became seropositive in the first place. Conclusions: Interventions for PLWHIV who are on ARV medication must be designed to address the complex needs of PLWHIV as those who have unprotected sexual relations are the potential transmitters of HIV.

Moore, Crystal & Loe, Meika (Skidmore College, Saratoga Springs, NY 12866 [tel: 1 518 580 5428; fax: 1 518 580 5429; e-mail: cmoore@skidmore.edu]), **From Nursing Home to Green House: Changing Context and Outcomes of Elder Care in the US,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper tracks the changing roles of elder care workers trained as certified nursing assistants, as they transition from a traditional institutional care setting (nursing home) to a "de-institutionalized" elder care setting (Green House). Previous research (Kane et al 2007) reveals positive health & quality of life outcomes for elder residents living in Green Houses. This paper continues that line of inquiry, but with a focus on those who care for elders in the Green Houses -- nursing assistants now called "shabazim." Specifically, our research examined how the transition from traditional nursing home to Green House influenced CNA's perceptions of their health & quality of life, as well as job satisfaction & performance. Data culled from interviews, focus groups, & participant observation before & after these staff members transitioned into Green Houses reveal the importance of context of care. In a nursing home environment, informants report that patient-caretaker interactions tend to be rushed, detached, & adversarial, whereas a Green House care environment, when successful, can foster interdependency & strong ties. Shabazim report diminished guilt, stress, & adversarial relationships & an enhanced sense of empowerment in their positions when providing care in Green Houses. In sum, we argue that the context of elder care matters when it comes to resident and staff well-being, & empowerment of CNA's in the Green House context could lead to increased worker retention as compared to those in the traditional nursing home setting.

Moraes, Wanderlei (Département de Sciences Politiques et Sociales / Université Catholique de Louvain, Louvain-la-Neuve, Belgium, 1348 [tel: +32488376797; e-mail: wanderlei-moraes@gmail.com]), **Ethnic Identity and Marketing Strategies of Brazilian Immigrant Entrepreneurs in Brussels,** *International Sociological Association, Gothenburg, Sweden,*

¶ This ethnographic research, based on observation & in-depth interviews, focuses on the owners of 12 Brazilian ethnic & exotic markets, which opened in the past 10 years in the region of Brussels-capital. Concentrating around the Midi train station, they form a "Brazilian triangle", adding a new cultural content to a neighborhood composed by many other ethnic groups. Taking consumption & trade as arenas in which processes of objectification & the construction of the relationship we-other take place, I intend to discuss the effects of the circulation of symbols in the construction of multicultural spaces & how a new set of cultural practices based on ethnic resources are being developed. To succeed, the entrepreneurs seek to find the place of the Brazilian identity in the local imaginary, experimenting with different marketing strategies. The evolution of these strategies has direct consequences on the configuration of these market spaces and on the way it recreates the imaginary about Brazil. In the process, these entrepreneurs develop a multicultural habitus as a form of cultural adaptation. That is, through their experiences, which are marked by the struggle to become subjects of their own identity, they create narratives which enable them to act & to appropriate their status of others.

Mordal Moen, Kjersti & Green, Ken (Norges Idrettshøgskole, Postboks 4014 Ullevål Stadion, Oslo, Norway [e-mail: kjersti.mordal.moen@nih.no]), **Physical Education Teacher Education in Norway: A (Figurational) Reflection on Dominant Theoretical Perspectives,** *International Sociological Association, Gothenburg, Sweden,*

¶ The sociology of physical education (PE) is characterised by myriad theoretical positions prominent among which, latterly, have been variants of Critical Theory. A central premise of Critical Theory as applied to PE is a belief that the role of research is to enlighten & emancipate the PE profession via the adoption of a more reflexive & critical perspective on the subject among its practitioners; thereby enabling physical educationalists, individually & collectively, to take charge of their professional lives & their subject. The last three decades have witnessed the emergence & development of a substantial body of research on the processes of becoming & being a PE teacher. Theorising of PE teacher education (PETE) in Norway has reflected the dominance of critical theory & its proponents' inclination to point up what they see as teacher educators' lack of interest in subject matters beyond physical skills & foundational sports knowledge (Kårhus, 2004) as well as their inclination to focus upon the "here-and-now" or the "hands on stuff of teaching" rather than the philosophical aspects of being a PE teacher (Møller-Hansen, 2004). In this paper we seek to explore the contribution of the pre-eminent theoretical perspectives in PETE from the perspective of figurational sociology.

Moreira, Manuel Belo (Instituto Superior de Agronomia, Technical University of Lisbon, Tapada da Ajuda, 1349-017 Lisboa, Portugal [tel: +351.213653465; fax: +351.213653286; e-mail: mbelomoreira@isa.utl.pt]), **Food Safety and Change in Agrifood: Could Agricultural Co-operatives Represent an Alternative?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Starting with a short description of the main characteristics of the global food system the paper will try to tackle the theoretical and practical developments made by the co-operative movement to adapt to this changing world. Then a reflection will be made to evaluate the weakness & strengthens of agricultural co-operatives in the food system. That is, the paper will try to assess if co-operative advantage could be a suitable alternative to address the problems highlighted by the development pathway of the global food system. To fulfil this goal means that the co-operative movement should be able to provide alternative answers to the following relevant issues: environmental sustainability of the food system; food chains transparency, particularly providing a total traceability of food raw materials & fresh products and, last but not the least, contribute to organize production with a different economic logic.

Morel, Nathalie, Palier, Bruno & Palme, Joakim (Institute for Futures Studies, Stockholm, Sweden [tel: +46 8 4021222; e-mail: nathalie.morel@framtidsstudier.se]), **Social Investment: Changing the Relationship between Labour Market and Social Policy,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since the mid-1990s a new "social investment" paradigm has emerged, which represents a new perspective on the welfare state that focuses on the importance of human capital. Investment in early childcare, in education & training, in life-long learning, and improving work-family balance or promoting gender equality are now high on the political agenda, indicating new priorities for social policy. While under both the Keynesian & the neo-liberal era social policy was subordinated to labour-market conditions, we show in this text, based on previous work (Morel, Palier, Palme (eds.), "What future for social investment?" Institute for Futures Studies report series 2009/2), how the social investment perspective has turned the rela-

tionship between the labour market & social policies upside down by putting forward the notions of investment, prevention, & preparation. Secondly, we review the various types of policies & services that form part of the social investment perspective & discuss how they interact. Thirdly, we analyse the diversity in the implementation of these policies in different welfare regimes. Finally, we review the varying success of these different social investment configurations as far as labour market results are concerned.

Morin Chassé, Alexandre (Université de Montréal [tel: 1-418-929-5775; fax:; e-mail: alexandre.morin.chasse@umontreal.ca]), **Response Order Effects in Dichotomous Voting Intention Questions,** *International Sociological Association, Gothenburg, Sweden,*

¶ My communication verifies if respondents to dichotomous voting intention questions asked during telephone interviews are influenced by the ordering of candidates. The most appealing theory, satisficing theory, predicts that respondents are not affected by candidates' ordering. My research aims at testing this "no-effect" hypothesis. I elaborate the tug-of-war framework, an analogy that distinguishes six scenarios eventually hidden behind the measured effects. Two of them correspond to the no-effect hypothesis. The research design consists in eliminating rival scenarios until only these two scenarios remain. Data on candidate rotation during the 2008 presidential campaign are extracted from the Roper Center Databank. Experiment 1 presents a meta-analysis of response order effects in 53 voting intention questions. Three rival scenarios are eliminated. Experiment 2 confirms that most of the variance in measured effects is actually due to random imbalance of supporters in split-samples, eliminating the remaining rival scenario & confirming the no-effect hypothesis.

Morita, Jiro (Department of Sociology, Kyoto University, Kyoto, Japan, 606-8501 [tel: +81 75-753-2758; fax: +81 75-753-2749; e-mail: morita-jiro@l01.mbox.media.kyoto-u.ac.jp]), **A Reassessment of Alternative Education in Contemporary Japan: The Dynamics of a "Free School" in Kyoto,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since the 1980s, "free schools" have been a hotly-debated topic concerning alternative programs to the existing modern school system in Japan. According to previous research, most of the free schools in Japan are depicted as non-governmental facilities which try to remain independent from state control, & strongly aim at realizing ideals of "freedom", "autonomy" & "individuality" in education for futōkō children (students who do not or cannot attend school). However, these arguments overlook the fact that there has emerged a new type of free school during the period of educational reforms in Japan in the 1990s. The arguments have so far focused solely on free schools which challenge to the established public school system, & they have neglected the new type of free school which collaborates with the national or local government. This study, based on participant observation and interviews conducted in a certain small-scale free school in the city of Kyoto between November of 2005 & October of 2009, examines the daily activities of this new type of free school collaborating with the local government, & reviews its creative potentiality in the contemporary Japanese education system.

Morita, Keitaro (Rikkyo University, Tokyo, Japan, 176-0021 [tel: +81-90-2469-0223; e-mail: keitaro.morita@gmail.com]), **Ecological Reflection Begets Ecological Identity Begets Ecological Reflexivity,** *International Sociological Association, Gothenburg, Sweden,*

¶ I interviewed 29 staff members of an environmental NGO in Japan. In the process, I asked them why they became interested in environmental issues. By having them think back on their experience of nature, their ecological identities (Thomashow, 1995) emerged, as demonstrated in the narrative theory. Furthermore, by analyzing the collected discourses, I found out that the staff with ecological identities had the ability of ecological reflexivity. The term ecological reflexivity is originally used by the ecofeminist Mary Mellor in her paper (2000) but not explored to the full extent. Here, reflection is to look back upon the fact after the fact while reflexivity is to monitor the fact in the moment (Nagata, 2006). Accordingly, I define ecological reflexivity as being sensitive, conscious, & mindful about how the action affects the natural environment in the moment. Hence, in conclusion, I would like to propose that: ecological reflection begets ecological identity begets ecological reflexivity.

Morris, Alan (University of New South Wales, University of New South Wales, Sydney, Australia, 2018 [tel: 61-2-93853541; fax: 61-2-93851040; e-mail: a.morris@unsw.edu.au]), **Older Public and Private Renters, the Neighbourhood, and Social Activity in Sydney, Australia,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores the social worlds of older private & public renters in Sydney, Australia. Drawing on 56 in-depth interviews, it argues that the cost of accommodation & security of tenure played a pivotal role in shaping the social connections & leisure activity of the interviewees. It illustrates that in the case of the older renters interviewed who were dependent on the private rental market their minimal disposable income & constant anxiety around their tenure, meant that many could not afford to engage in leisure activities & did not have the desire or emotional capacity to do so. Many were isolated as a result. The older public housing interviewees, in contrast, because of their strong security of tenure, longevity of residence, low rents & the social composition of their accommodation had the desire, capacity and opportunity to engage in a range of pursuits & sustain strong social ties in the neighbourhood. The knowledge that they could age in place was a great comfort. The study suggests that providing affordable & secure housing can play a pivotal role in enhancing the capacity of older people to have strong social ties & engage in activities in & outside the neighbourhood.

Mortimer, Jeylan T. & Kim, Minzee (University of Minnesota, Minneapolis, Minnesota, 55455, U.S.A. [tel: 612 624 4064; fax: 612 624 7020; e-mail: morti002@umn.edu]), **Unemployment and Self-Efficacy during the Transition to Adulthood: A Prospective Longitudinal Study,** *International Sociological Association, Gothenburg, Sweden,*

¶ Individual self-efficacy, the belief that one is capable of achieving one's objectives, is widely considered the foundation of agentic action. More efficacious individuals set higher goals, engage in more effort in the face of obstacles, and have greater success. In view of its widespread implications, scholars have given much attention to its sources. Of foremost importance are attribution processes; when individuals are successful, self-attributions enhance self-efficacy; when they fail, efficacy erodes. The period of transition from school to work may be especially formative in the development of an efficacious sense of self. Unemployment may be especially damaging at this time, particularly in an individualistic, achievement-oriented society that leads individuals to blame themselves for their plight. However, prior self-doubts might also engender employment problems & difficulties in job search. This analysis of data from the Minnesota Youth Development Study examines unemployment and self-efficacy during the decade from age 21 to 31. Using hierarchical linear modeling, we find that self-efficacy diminishes in response to both contemporaneous & cumulative unemployment (and other time-varying predictors), even under stringent controls for unobserved heterogeneity.

Morvaridi, Behrooz (University of Bradford, Development and Economic Studies, University of Bradford. Bradford, West Yorkshire, BD7 1DP, UK [tel: (0044) 1274 233961; fax: ; e-mail: b.morvaridi@bradford.ac.uk]), **Do Migration and Faith Based Remittances Reduce Poverty?,** *International Sociological Association, Gothenburg, Sweden,*

¶ A conceptual & policy debate on the migration and development nexus has been prompted by increases in the flow of remittances from developed to developing countries over recent years. This paper considers the underlying assumption that is being promoted by major development agencies, that remittances have positive impacts on economic growth & de facto contribute to poverty reduction & improvements in the well-being of local recipient communities. It builds on a growing body of literature on the relationship between migration, remittances & poverty reduction, by giving specific consideration to the impact of faith and religious-based remittances. Remittances are often played into religious obligations & institutions, such as Zakat & Sadegeh, through which Muslims commit to the notion of a transnational community, & collective responsibility for all of its members, including the poor. In examining data on remittances sent through charitable faith-based organisations with links to poverty reduction schemes, the paper considers if there is evidence that remittances contribute to the reduction of poverty & improved service delivery.

Motel-Klingebiel, Andreas, Huxhold, Oliver & Tesch-Roemer,

Clemens (German Centre of Gerontology (DZA), Berlin, D12101 [tel: +49302607400; e-mail: andreas.motel-klingebiel@dza.de]), **Later Life Dynamics in Changing Social Contexts–The Impact of Neighbourhoods, Districts and Regions on Diversity and Inequality in Later Life in a Multi-Level Perspective: Results from the German Ageing Survey (DEAS),** *International Sociological Association, Gothenburg, Sweden,*

¶ Quality of life in the second half of life & its dynamics are influenced by contexts on different societal levels. Districts, neighbourhoods & regions have a substantial, but often neglected contextual impact on quality of life in old age. Cross-sectional and longitudinal analyses of data from two waves (1996, 2002) of the German Aging Survey (DEAS) showed a threefold impact of a district's prosperity on the individual's perception of living standard: Direct effects on resources, direct effects on evaluations & a moderating effect on their interaction. We will extend our analyses to a variety of contextual factors & other dimensions of quality of life. Multilevel analyses, which include recent longitudinal data of the DEAS from 2008, explore to what extent individual changes in quality of life interact with social contexts. They also show the impact of welfare state interventions on the different societal levels on quality of life in the second half of life.

Mouat, Clare (Faculty of Architecture, Building and Planning, University of Melbourne, Melbourne, VIC 3010, Australia [tel: +61383443129; fax:; e-mail: cmouat@unimelb.edu.au]), **The Place of Social Capital and Social Learning in Planning for Sustainably Liveable Communities: A New Zealand Case,** *International Sociological Association, Gothenburg, Sweden,*

¶ Public planning concerning climate change advances mutual social learning via participatory governance & civic engagement. Capturing the public & policy imagination about the urgency for sustainable development is easy. However, civic & citizen governors must overcome increasing green fatigue & deferred action to jointly achieve ongoing behavioural change & action at the local scale. The critical task facing contemporary governance regimes like New Zealand is identifying & activating the actions and connections that normalise effective sustainable living practices in public agendas & everyday life. Conceivably, Bourdieuian (1998) notions of social & cultural capital are potent pre-cursors & conduits for exploring place-based mutual social learning & sustainably liveable community development. This research examines the publicly-orientated interpretation of globally-aware citizenship & participatory governance in Auckland's strategic planning for sustainably liveable communities (Mouat, 2009). This paper reviews how the prevailing use of social capital is evolving in New Zealand governance. It then promotes a pragmatic repositioning of social capital planning for multi-level sustainable development where planners & locals must democratically capitalise on sociocultural connections (after Alexander, 2001; Dale & Newman, 2010). Ultimately, the paper concludes that re-viewing mutual social learning through the institutional foundations of social capital is vital for normalising resilient learning communities toward stronger and equitable sustainable development.

Moulaert, Thibauld (GIRSEF - Catholic University of Louvain, Louvain La Neuve, Belgium, 1348 [tel: (++32)10 47 42 05; e-mail: thibauld.moulaert@uclouvain.be]), **From Early to Progressive Retirement: New Policies and New Conduct of the Self,** *International Sociological Association, Gothenburg, Sweden,*

¶ In our modern ageing societies, new public policies aim at supporting longer working lives & more flexible pathways to retirement. Based on a comparison between Belgium & Quebec, this paper explores two distinct approaches to introduce theses changes in order to move "from early to progressive retirement" (Merla) in the name of "active ageing". While differences may be explained by "cultures of ages" (Guillemard) or structural parameters (job market, industrial relations, pensions schemes), we propose a broader lecture of this turn based on critical gerontology (Biggs) and on the concept of "governmentality" (Foucault) summarized by Dean as the "conduct of the conduct" & the "conduct of the self". This paper suggests that public ageing policies agendas not only reconfigure the "conduct of the conduct" (from early to progressive retirement) but also, & at the same time, responsabilize the individual by acting on the "conduct of the self" (by changing the self determination of older workers from accepting to retire for the young to accepting to stay involved and active in society). If flexible retirement could be a personal choice for some, a critical perspective usefully remembers that it becomes the opposite for others.

Moulene, Frederic (University Of Strasbourg - Laboratoire Cultures et Societes en Europe, Laboratoire Cultures et Sociétés en Europe Maison Interuniversitaire des Sciences de l'Homme - Alsace (MISHA) 5, allée du Général Rouvillois CS 50008 F-67083 Strasbourg cedex [tel: 0033 3 89 49 79 40; e-mail: frederic.moulene@voila.fr]), **The Speeches of the French Presidential Campaign 2007: Beyond the Epistemological Obstacles in the Way of a Sociology of Language,** *International Sociological Association, Gothenburg, Sweden,*

¶ The relations between sociology & linguistics have never been simple. This problem has several causes & one of them is the radical difference the researchers made between language and speech. They define the linguistic signs independently of the social context & the contextualization will be achieved when people will talk with all they are & have done. This position, objectionable for sociologists, has a fatal consequence: it denied the various social forms of talk & as well our "linguistic capital", namely the language resources we get all our life long and use daily. Of course, that's a tendency in linguistics to avoid the questions about social using of speaking & to focalize on purely linguistic problems. But the sociologists make sometimes their own mistake whenever they keep language questions out from their study domain. All these questions had to move in the sixties when speech analysis appeared, taking its principles from sociology and linguistics either. This is the direction of the research we've started about the speeches during the French presidential campaign 2007. The issue is to know whether the persons think & talk with the words & arguments with which the leaders try to convince them.

2010S01810

Moura, Edila A F, Nascimento, Ana Claudeise & Souza, Dávila S. (Faculty of Social Sciences, Federal University of Pará, Belem, Brasil, 66000-000 [tel: +559132596585; e-mail: edimoura@ufpa.br]), **Social Policies and Social Strategies of Small Population Groups in the Amazon,** *International Sociological Association, Gothenburg, Sweden,*

¶ Population who live along Amazon forest-river borders, in most aspects, for most of their recent history, have not received any assistance either from national or local government. Most of what has been done in relation this population's health care and educational orientation results from the work of religious missionaries, mainly the progressive Catholic church, during the 70's, eventually extended to the many non-government organizations surged during the 90's in different areas offering alternatives to the social development of that population. Toward the end of last century, the State has made its presence more consistent in those Amazon small villages far from the urban centers. Environmental conservation policies with territorial redefinition & forms of product commercialization, income transfer policies, affirmative policies, reformulation of health & educational policies, when focused on small population groups organized under a common resource property system, with a social organization strongly structured under a close kinship & principles of group solidarity, produce several rearrangements on family strategies revealing a wealth of nuances formed as social & individual responses toward these projects. In an attempt to follow these social changes, this study presents an analysis of family strategies consisting of 88 families with 552 people living along 8 small river shore communities in the Mid-Solimões in the state of Amazonas, Brazil. This study analyzes the demographic dynamic of these population groups, their gross domestic income under income transfer programs, changes in consumption patterns, new forms of market sociability & relationship, & how individual & group relations are reconstructed & re- elaborated at different processes of re- socialization before the forms of intervention of government programs into the livelihood of these communities. The data refer to 2008, also based on comparative studies between 1995 and 2005.

2010S01811

Mourao, Maria V. (ISCSP/ UTL - CAPP, Polo Universitario da Ajuda, Rua Almerindo Lessa, 1500 lisboa, Portugal [tel: 00351 91689 2729; e-mail: vmourao@iscsp.utl.pt]), **Insiders: Pleasure and Anomie as metaphors of Drug,** *International Sociological Association, Gothenburg, Sweden,*

¶ Drug use among non-excluded populations is widely spread. From the "normalization" debate to the semiotic turn, this thesis addresses social representations & practices, among a survey sample of 6792 university students, to obtain patterns of drug use & associated images. Free association to the stimulus word "drug" was used to search for social representations. Analysis consisted in sorting, data mining, contingent tables with adjusted residuals & multi correspondence analysis. "Drug" is mostly

associated with the interpretative category anomie (71.4%) , dependence (43.2%), moral judgement (34.5%), illness (26.8%), death (26.3%), social problems (22.0%), substances/rituals (20.5%), pleasure & places of leisure (17.7%), crime (14.9%), political action (8.4%), sensation seeking(3.0%). Mimetic relations exist among the words stated in the first, second & third evocation of "drug": Among regular tobacco (28.9%), alcohol (34%) users, & prevalence of cannabis (27.3%),heroin (3.1%), cocaine (3.4%) & ecstasy(3,4%) there is a consistent model of association of "drug" to pleasure, substances and rituals, political action & sensation seeking. Among non-consumers, the main categories evoked to "drug" are anomie, dependence, moral judgement & illness. Categories death, crime and social problems are not distinctive. As the majority of non consumers see "drug" in a distinctive way, we can question the normalization debate. There is a clear conflict of judgement. Drug users are "insiders" in the social context of university; sub culturally integrated as consumers in their private lives, and spoke less private outsiders about their drug use among all "others". "Drug" as a metaphor is not a normalised issue.

2010S01812

Mousavi, S. Yagoub (Alzahra University, Social Sceince Dep. Socio-Economic Faculty, Alzahra University, Vanak Aqure, Tehran, Iran [tel: 0098-021-88047862; fax: 0098-88047862; e-mail: mousavi35@yahoo.com]), **Urban Neighborhood Regeneration' Policies,** *International Sociological Association, Gothenburg, Sweden,*

¶ Following the evolution over socio-spatial structure of great cities, there has been applied vary urban plans concentrating on reform of internal fabric of these cities & to increase their institutions capabilities. In first glance it seems that the nature of implicitly continued neglecting the small scales of urban issues, activities and institutions. For this reason many urban network particularly in marginal areas could not use the benefits of macro urban plans. A series of facts show us that developing cities, which are mostly located in third world countries, are sadly experiencing problems such as unequal socio-spatial structure, poor services distribution system. Moreover, as the result, this type of problem itself origins of many other urban problems on the level of city such as social inequality, urban crimes, delinquency, social abnormality, urban poverty & so on. In recent years the attention is shifted toward micro scale of analysis & planning process. Urban neighborhood as a unit of analysis & management became the focus of many research works. Particularly there has been appeared an attention to regeneration of poor urban neighborhood as the foundation of development of general structure of city. Urban neighborhood regeneration on framework of community development planning is a why in which planners could attempt to rebuild the internal structure of poor neighborhoods, to change the quality of people, to increase the possibilities of affording of services and provisions. After the failure of to use the macro system of analyzing it seems to be necessary to apply a new approach to analysis & to produce a sustainable policy for future of urban development which can be concentrated on neighborhood base in city rather than city system or its overall conditions. The body of discussion in this article is that the Community Development Planning can be conceptualized as a new approach & frequency means to reconstructure poor areas in developing cities. However, in this paper the main aim is to develop the sociological aspect of community development planning approach & to bring attention towards its results for the city life & urban regeneration in general. Key words: Under developed Neighborhoods, Urban Neighborhood Planning, Urban Planning, Community Development

2010S01813

Mousavi, Seyed Yaghoub (ISA, Alzahra University, Vanak, Tehran, Iran [tel: 00983460216; fax: 009888046876; e-mail: mousavi35@yahoo.com]), **The Capacities and Limitations of Social Science in Today Iran,** *International Sociological Association, Gothenburg, Sweden,*

¶ This article is going to clarify the situation of social science & its development in recent years of Iran. By using some sociological of knowledge's experience it will discover the mains obstacles which social sciences are facing to be more internally developed. In recent years, there has been emerged different analytical patterns to analysis the capacities & limitations of development of social science particularly sociology in Iran after Islamic Revolution. A significant analytical pattern is related to the social context in general. Other important style of thought in understanding of social science position is concerned to the current school of knowledge which is more interested to indicate the difficulties which these science have with themselves. In fact, the birth of new social science in Iran returns to nearly seventy years ago. Since then social sciences including sociology has experienced significant social facts such as high demanding through elites in Shah's time to have be more closed to western culture & new style of social life which was encouraged by government. New paradigm in social science shifted into establishment of Islamic social science in Iran after revolution. In these times the core attention of scholars it was changing the philosophy of social science based on Islamic type of thought. However, this attempt has been made some results in cases such as New Banking System or in the case of Formal Laws, some Islamic principles changed the previous place of general & civic life conditions. In second decade under new social conditions social science taken new role to be more applicable in order to solve the remained problems from the war with Irag in the country. The outcome was the increase of students in this field & more books & writing's productions beside the growth of its significant. Recent decade social science paradigm is found new claims in principals. Essentially there are people who believe that the social science should be concerned as an indigenous & local science more than to be a globally one. Relatively & the lake of unit methods are important reasons to them in challenging with modern social sciences. How could be understand these shifts & under which social conditions it is possible to figure the future of social science in Iran, all are the focus of discussion in this paper. Through a distinct refined of social context it seems to be possible the analysis of capacities & limitations of social sciences at present in Iran. In brief, this article aims to provide a basis for more autonomy epistemology related to these types of sciences in general or specifically. It seems that the development of social science follows general rules in science & is made on the basis of social conditions locally. Key Words: Social Sciences, Islamic Social Sciences, Capacities & Limitations of Social Sciences, Development of Social Sciences.

2010S01814

Mrozowicki, Adam & Trawinska, Marta (Institute of Sociology, University of Wroclaw, Wroclaw, Poland, Koszarowa 3, 51-149 [tel: 0048 602817721; fax: 0048 713261008; e-mail: adam.mrozowicki@wns.uni.wroc.pl]), **Women's Activism and Trade Union Renewal in a New Capitalist Economy: The Case of Poland,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper assesses the role of women in trade union revitalization in Poland in the first decade of 21st century. While women still constitute a smaller part of union members than men, the loss of male union members in manufacturing in the 1990s increased the importance of union recruitment in more feminized branches, such as public services & the private retail sector. This coincided with the new wave of grassroots women's activism both at the workplaces and beyond it. This paper examines the scope, forms and consequences of these recent developments. First, based on expert interviews with 40 national-level union leaders & internal union statistics, the dynamics of women participation in trade unions is explored. Second, biographical interviews with company-level women unionists in retail sector, public services, education & heavy industry are used to reconstruct the evolution of women's subjective commitments to trade unionism. The analysis suggests that the practical efforts of women to regain more control over their occupational life & to voice their interests as workers create a bottom-up potential to revitalize unions. However, further increase in women's participation in unions is hindered both by structural factors, including hidden power mechanisms excluding women from the higher levels of union structures, & by the insufficient institutionalization of gender-aware union politics and gender-sensitive union organizing strategies.

2010S01815

Mtevski, Zoran & Aziri, Etem (University Ss Cyril and Methodius, Skopje, R. Macedonia, 1000 [tel: ++389 71 262004; fax: ++389 3071 737; e-mail: matev@t-home.com]), **Influence of the religious education on the youth moral norms in R. Macedonia,** *International Sociological Association, Gothenburg, Sweden,*

¶ In R. Macedonia, until the fall of communism, in force was the so-called socialistic moral. After, the fall of communism, the socialistic moral with all its ideology took a plunge. Accordingly, the successor of the socialistic moral was to be the so-called civil moral that was based on civil humanistic rights & freedoms. The establishment of civil moral in a young democratic society such as Macedonia proved to be quite difficult. The principal reason for that, however, was the fact that Macedonia did not possess democratic tradition. As a consequence, a vacuum of moral values which had terrible consequences on Macedonian youth, took place. Simply put, in a situation where the socialistic moral values were abandoned & the civil moral values were still not created, the youth started to feel lost & disoriented regarding their moral norms. This represented an ideal chance for promotion of the idea of return to religious moral, which, with help of its

moral norms, based on the Holly Books, should be able to save the moral deterioration of the Macedonian society. The idea was: religious education in no way can hurt the children. With this has to prevent "moral panic" which spread among the young people in Macedonia. With that has to fill the moral vacuum that occurs in so called transitional period in R. Macedonia, thru rejection of the values characteristic for socialistic moral & slowly establishment of civic values.

2010S01816

Muchindu, Mazuba W (University of Zambia, Social Dev Studies Dept, P. O. Box 32379, Lusaka [tel: +260 978 866587; fax: +260 211 290020; e-mail: mazuba.muchindu@unza.zm]), **Housing Boom in the Face of Recession: The Case of Lusaka,** *International Sociological Association, Gothenburg, Sweden,*

¶ Lusaka the capital of Zambia has been experiencing a boom in the housing market since housing was liberalised in 1996. So vibrant has the market been that even in the face of the global financial crisis prices & rent remained high. This paper is aimed at showing this rather unique experience in Lusaka during the global financial crisis. The supply & demand model is used to explain the high demand for housing in Lusaka. This is however examined in the context of the housing financing at play in Lusaka & Zambia generally. The model is also examined in the wider context of the global financial system & events affecting it, that is, the global financial crisis in terms of what impact it has had on the financing system in Zambia, then its impact to housing finance, and thereafter, its impact to the housing market. In terms of the implication such global events have on existing urban theories and perspectives, the situation in developing countries calls for caution before adopting new approaches due to their contextual differences as shown by what has been happening in Lusaka.

Mudiappa, Michael & Kluczniok, Katharina (University of Bamberg, BiKS-Project, Bamberg, Germany, 96052 [tel: +49 (0) 951-863-2071; e-mail: michael.mudiappa@uni-bamberg.de]), **Cultural Capital in Families with Preschoolers,** *International Sociological Association, Gothenburg, Sweden,*

¶ Studies have shown that cultural capital in families determines school success & educational chances. Therewith related educational inequality is the result of different investment, allocation as well as transformation process of cultural capital. The acquirement of cultural capital starts during the infantile socialization. Encouraging cultural activities is particularly relevant in this process. On the one hand, the child will acquire cultural skills which will have a positive impact on school success. On the other hand, investments in levels of cultural encouragements are indicators of the parental aspiration of education. The presentation will answer the following research questions by using data from the German panel study BiKS-3-8 (N=554): 1. How many forms of cultural capital are there in families before school enrolment? 2. What is the interrelation between structural variables & cultural activities? 3. Which structural variables, resources of high culture, reading habits & educational aspirations influence these cultural activities in families? Results of regression analysis show that resources of high culture and educational aspirations have effects on the frequency of cultural activities. The results will be discussed against the background of social inequality.

Mueller, Georg P. (Faculty Economics & Social Sciences, U Fribourg, Blvd de Perolles 90, CH-1700 Switzerland [tel: +41-26-300-8390; e-mail: Georg.Mueller@Unifr.ch]), **Biographical Transitions as Vulnerability Tests: International Comparisons of Retirement Under Different Welfare Regimes,** *International Sociological Association, Gothenburg, Sweden,*

¶ Social *vulnerability* is usually defined as the *risk* of being affected by negative outcomes of future and often unplanned events. Human life course as a sequence of biographical transitions is strongly related to this topic: many transitions such as retirement or divorce entail losses of income, in certain cases they may even result in poverty. Biographical transitions can thus be considered as involuntary tests of social vulnerability. The results of these tests may be described by comparing the average income or the share of persons below a poverty-threshold before and after the mentioned transitions. Vulnerability in terms of income-losses is generally buffered by benefits from the welfare state, private insurances, or by support from family members. The performance of these protective institutions varies by country and target group. Under liberal welfare-regimes, which emphasize private insurance solutions, women and lower classes are e.g. more vulnerable than under socialist welfare-regimes with universal social protection. In order to explore the mentioned relations between vulnerability, welfare-regime, and personal characteristics, the author analyses interview data of different birth-cohorts of the International Social Survey Programme (ISSP). This allows one to determine for a great number of European countries income losses of major biographical transitions such as unemployment, retirement, or disability. However, for reasons of the availability of subsamples with a sufficient size N, the empirical analyses will mainly focus on *retirement*. The international scope of the ISSP-data allows one to compare different welfare-regimes with regard to the vulnerability of various groups defined by gender, marital status, social class, etc. The mentioned empirical analyses will also help to identify the most vulnerable among these groups. On the one hand, this is important for policy-changes of the welfare state. On the other hand, the identification of vulnerable groups may be used for the construction of *early warning systems*: any increase in the size of such groups will probably result in additional social problems in a more or less distant future.

Mueller, Georg P. (Faculty Economics & Social Sciences, U Fribourg, Blvd de Perolles 90, CH-1700 Switzerland [tel: +41-26-300-8390; e-mail: Georg.Mueller@Unifr.ch]), **Qualitative Comparative Analysis with Three-Valued Logic: A New Methodology and its Application to Social Conflict,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper deals with the methodological problem on how to compare social settings with regard to their consequences, described by qualitative dependent variables with binary values 0 and 1. The classical QCA-method of *Ch. Ragin* proposes to translate for this purpose the original data into Boolean expressions, which are subsequently simplified for further analyses of the causal relations between the dependent and the independent variables. As Ragin recognized himself, QCA often faces two major problems: i) For some social settings the consequences are *unknown*, because there are no real cases matching these settings. ii) For other social settings the consequences are insofar *contradictory*, as a setting may yield different binary values for the same dependent variable, depending on the case which is considered. Ragin has attempted to solve these problems by declaring some values as missing and by switching from Boolean to fuzzy logic. Both solutions are unsatisfactory: in qualitative analysis every piece of counter-evidence matters and thus must not be discarded as a missing value. Moreover, fuzzy logic *quantifies* propositions about society, which are often *qualitative* by their very nature. Consequently, this article proposes to use in QCA, instead of the binary logic of G. Boole, the *three-valued* logic of J. Lukasiewicz, which has a third *indeterminate truth-state i*. It imposes itself to attribute this third state *i* to those consequences of social settings, which are either contradictory or missing. Like in conventional QCA, the resulting three-valued data-tables can be translated into logic expressions, which are subsequently simplified with modules from Ragins *fs-QCA-software*. The procedure yields logical formulas which can be visualized in path-diagrams, where logical variables are linked by three types of causal relations from modal logic: *necessary*, *possible*, and *impossible* implications of social settings. The use of three-valued logic for qualitative comparative analysis is illustrated by datasets about the political success of conflict movements, which Ragin originally analyzed with two-valued Boolean logic. This allows to compare results generated by different methods and to assess the usefulness of three-valued logic for comparative qualitative analysis.

Mueller, Klaus & Pickel, Andreas (AGH University of Science & Technology, Cracow, Poland 30-071 [e-mail: muelacde@zedat.fu-berlin.de]), **What is Critical Cosmopolitanism?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The renewed interest in cosmopolitanism since the late 1990s has produced a growing number of scholarly publications on the topic, most of them in the "traditional" areas of moral & political philosophy. This paper seeks to contribute to this debate by asking what a critical cosmopolitanism offers to the social sciences in general. Does it formulate & substantiate a progressive problem shift in how we approach fundamental questions of social theory in the era of globalization? Critical cosmopolitanism, in our understanding, means first of all two things: First, to substantiate the abstract moral principles of classical cosmopolitanism by recent work on global (rather than just international) inequalities, global poverty & an expansive agenda of human rights politics. What kind of rights & norms of solidarity make "world society" more than an abstraction; how to translate intuitive moral concepts of a "fair", "equitable" and "inclusive globalisation" into norms of justice & claims to rights? Second, critical cosmopolitanism confronts naïve concepts of a "global civil society" designed

to define a political space beyond the power structures of states & the dominant cultural reach of nations.

Mueller-Botsch, Christine (Free University Berlin [e-mail: mueller-botsch@gmx.de]), **Biographical Case Reconstructions on Party Activists: The Case of the Nazi Party at the Local Level,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper demonstrates the suitability of a qualitative biographical approach to study party activists & the development of political parties in past & present. Conducting biographical case reconstructions provides a deep insight into contexts & processes of joining a political party, becoming an activist, assuming specific functions & passing specific party careers. Methodically the case study on the Nazi Party at local level combines a sociological approach to biographical case reconstructions with historical analysis. It is based on personal files & records of the historical Nazi Party (National Socialist German Worker's Party, NSDAP) & denazification documents, including biographical documentation & autobiographical reports of the party's low-level functionaries. Based on this material theoretical generalizations drawn from case reconstructions will be discussed. Different types of biographical meanings of party activism & their impact on party careers will be outlined. Furthermore I will point out the interdependency between the development of the lower Nazi Party units after 1933 (e.g. spheres of action) & the activists' orientations & patterns of interaction. This leeds to the broader question of applying biographical approaches to empirical studies on political parties in present, using also other forms of self presentations (e.g. narrative interviews, CVs on candidate watch), and their combination with other methodological approaches.

Muenstermann, Ingrid (Charles Sturt University, Wagga Wagga, New South Wales, Australia 2650 [tel: 61-2-69332258; fax: 61-2-69332792; e-mail: imuenstermann@csu.edu.au]), **Cross-boundary Farming - Can This Challenging Farming Method Save the Australian Family Farm?,** *International Sociological Association, Gothenburg, Sweden,*

Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (858) 571-8979. Fax: (858) 571-8694. E-mail: info@csa.com

¶ Recent environmental changes & trade liberalisation have significant implications for the way farming will be conducted in future. The number of farming families in Australia has decreased by 46% between 1971 & 2006 (Australian Bureau of Statistics, 2006), therefore re-evaluation of farming methods seems appropriate. Traditional family farming, co-operative & corporate farming, as well as cross-boundary farming methods are discussed briefly. The latter is a form of collective farming: it means individual title of the land, but collective ownership & management. This system has worked well for many years in Europe (ABC Landline, 2001). In Australia, a group of academics & landholders worked this system successfully for six years (Common Property Resources System) (Williamson, Brunckhorst & Kelly, 2003): it encouraged flexibility & shared labour, & there was economic, ecological and environmental success. However, the directorship changed and the system was subsequently abandoned. - Rural communities depend on the sustainability of the surrounding land & farms, but the persisting, seven-year long drought & degradation of the land has led to a decline in the social & economic viability of life in rural areas. Sustainability requires a re-thinking of the landscape, which, in turn, requires a re-thinking of eco-ethical values & biodiversity, as well as having a holistic approach. Cross-boundary farming is such an approach, but will it be taken up?

2010S01823

Muenstermann, Ingrid (Charles Sturt University, Wagga Wagga, New South Wales, Australia 2650 [tel: 61-2-69332258; fax: 61-2-69332792; e-mail: imuenstermann@csu.edu.au]), **Family Farming, Cross-Boundary Farming, and Ulrich Beck's Notion of Risk Society,** *International Sociological Association, Gothenburg, Sweden,*

Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (858) 571-8979. Fax: (858) 571-8694. E-mail: info@csa.com

¶ The year-long drought, environmental changes, and trade liberalization have significant implications for the way farming will be conducted in Australia in the future. The number of farming families in Australia has decreased by 46% between 1971 and 2006 (Australian Bureau of Statistics 2006, Customised Data), therefore the re-evaluation of farming methods seems appropriate. Beck (2007) claims that the dynamics of risk society are beyond status and class because global threats ultimately affect everybody, even those responsible for them. Interpreting the findings of a group of scientists at the University of Queensland (McAlpine at al., 2007, 2009a, 2009b), Australian rural sustainability is at risk as a consequence of 150 years of land clearing by farmers. Land clearing and land cover change have added significantly to the warming and drying of eastern Australia, an area where most farming takes place. A men-made risk which, this study argues, has reached catastrophic proportion if we are looking at the Australian family farm. This study considers the traditional family farm, co-operative and corporate farming systems, and argues that, in light of Beck's notion of risk society, cross-boundary farming may offer a solution to the present plight of the farming family. Cross-boundary farming is a form of collective farming: it means individual title, but collective ownership and management. In Australia, a group of academics and landholders worked this system successfully for six years (Williamson, Brunckhorst & Kelly, 2003). It encouraged flexibility and shared labour, there was economic, ecological and environmental success; however, after a change in directorship the system was abandoned. Rural communities depend upon the sustainability of the surrounding land and farms, but the persisting drought and degradation of the land has led to a decline in the social and economic viability of life in rural areas. Sustainability requires a re-thinking of the landscape, which, in turn, requires a re-thinking of eco-ethical values and biodiversity, as well as having a holistic approach. The argument here is that cross-boundary farming has positive effects on sustainability, and it could save the Australian family farm.

Muir, Lorna (Film and Visual Culture, School of Language and Literature, University of Aberdeen, King's College, University of Aberdeen, Scotland, AB24 3HB [tel: n/a; fax: n/a; e-mail: lemuir@abdn.ac.uk]), **Assemblages, Data Doubles and Deleuze's Dividual: Cinematic Representations of the 'Control' Body,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recent developments in surveillance practices & their related technologies suggest that the heretofore dominant Foucauldian paradigm of discipline may no longer be an adequate theoretical framework in surveillance studies. In 2000, Kevin D. Haggerty and Richard V. Ericson put forward the concept of assemblages, drawing from the work of Gilles Deleuze, in which the body is "broken down by being abstracted from its territorial setting", as a possible alternative model. This broken body is subsequently reassembled via data flows, which in turn produce the virtual body of the data double. The body is thus radically reconceptualised in a decorporealized rather than corporeal form. This shift is echoed in Deleuze's concept of the individual in control societies where he writes in 'Postscript on Control Societies' (1990), that the status of the individual is so altered in this society that one must now speak of the dividual. This paper will consider how cinematic representations of this shift in surveillance practices negotiate concerns that might arise in the potential transition from the disciplined individual to the control dividual, with the related concepts of assemblages & the data double, by examining Tony Scott's 'Enemy of the State' (1998) & Steven Spielberg's 'Minority Report' (2002).

Muirhead, Bruce W. (History, University of Waterloo, 200 University Av W, Waterloo, Ontario, Canada. N2L 3G1 [tel: 519-888-4567 x33133; fax: 519-888-4309; e-mail: muirhead@uwaterloo.ca]), **Canadian Agricultural Income Stabilization and a Globalized World,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper will investigate the effects, both historical and anticipated, for Canada of its agricultural income stablilization system. Has it been beneficial to farmers? Has it allowed them to stay on the land & profitably work small acreages when the emphasis has been on the development of expensive & largely out-of-reach GMOs & agri-business? The paper will also address certain of the questions raised by the RC40 Session, "Comparative perspectives on agricultural regimes & policy responses to the food crisis, increasing energy prices & climate change" call including, but not limited to: Are we seeing a new technological imperative in agriculture? How do responses differ between countries & between different agricultural policy regimes? What are the consequences for rural, environmental & socio-cultural sustainability? What are the implications for rural diversification strategies & for the inclusion of previously excluded social groups (such as women) that they have encouraged? Is there a decisive shift in the balance of power occurring in rural areas between production, consumption & environmental interests? It will also challenge the necessity

of embedding agricultural policy in a matrix of capitalism & neo-liberalism, & perhaps even productivism.

Mungaray, Ana Marcela (Universidad Autonoma de Baja California, Clazada tecnologico 14418 CP 22390 [tel: 01 52 664 6 82 19 19; e-mail: mmungaray@hotmail.com]), **The Virtual Marriage Markets: Myth and Expectations of the Contemporary Couple,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ The purpose of this intervention is to give a broad overview of the dynamics observed within the virtual marriage market as an expression of an alternative route for people who search the web looking for a relationship. This virtual marriage market is considered as the waiting room for the completion of the couple's different expectations. The first part presents an overview of expressions of this emotional community from within virtuality, so tendencies in the couple's formation can be drawn (outlined) from the known aspects of courtship in the Internet. The second part undertakes some socio-demographic guidelines to construct and classify the characteristics of the participants. These typologies where the dynamics of the virtual married markets can be observed are: a) the most preferred sites in the web, b) What is offered in these sites, c) some representations of the expectation derived from the virtual loving relationship. The third part emphasizes in the discussion toward the analysis of future social scenarios in the search & fulfillment of loving relationships between couples that have shifted from the conventional meaning of couple to new meeting spaces that identify new emerging versions in the co-production of the senses & married couples representations in the contemporary world

Municio-Larsson, Ingegerd (Social Sciences, Södertörn University College, SE-141 89 Huddinge [tel: +46 8 6072129; e-mail: ingegerd.municiolarsson@gmail.com]), **Educational Change in Estonia. The Interplay Between Politicians and Policy Communities,** *International Sociological Association, Gothenburg, Sweden,*

¶ This is a first report of a project that studies to what extent the activities of bureaucracies of the public sector change by means of directives from politicians. Do the services offered to citizens change, when the political regime changes from an authoritarian socialist system to a democratic liberal one? The main issue is policy of education at state level. It looks at the activities of policy communities during the 90's, & their interaction with politicians in the field of education. It points to tensions between policy communities & politicians. The policy communities are quite permanent with reference to participants, ideological cleavages & ways of influencing policy, while politicians are working in short-time terms. They therefore have difficulties to navigate policy proposals through the process of democratic decision-making. This results in a lack of clear policy guidance from the state level, which leaves street-level bureaucrats a great deal of discretion. A change in implementation approach is also noted. A bottom-up approach was used to introduce educational change, during the last years of soviet rule & the first decade of independence. This involved street-level bureaucrats, that is, teachers & principals, in the reform work. This was later changed to a top-down approach, where reforms are designed at higher levels of bureaucracy & later communicated to the street-level.

Muñoz, Maria Antonia (Universidad Autonoma de México - Xochimilco [tel: 0052 55 55548151; e-mail: mariaantoniamunoz@gmail.com]), **Political Subjects and Critical Contexts; Demands, Organizations, and Articulation in Argentina,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ En muchos países de América Latina y, en particular, en Argentina, la década de los noventa fue comúnmente caracterizada por el triunfo de la ideología neoliberal. Aquellas tendencias son actualmente contrarrestadas tanto en el lenguaje como en las acciones. Los mercados sin controles y el Estado mínimo - pares que se solían utilizar como inseparables de la democracia - son actualmente puestos en el lugar de los enemigos del "pueblo". En Argentina, el giro se generó en el contexto de una profunda crisis política y económica que dio lugar en los años 2001 y 2002 a la aparición de la consigna 'que se vayan todos, que no quede ni uno solo'. En el artículo se estudiará la crisis poniendo especial atención al antagonismo que expresó esa consigna con la hipótesis de que éste no derivó en la articulación de las organizaciones involucradas. Se describirá y evaluará el tipo de conflicto político que se desarrolló en base al análisis del discurso de entrevistas en profundidad, de diarios nacionales, escritos y comunicados de prensa de los actores protagonistas. Se utilizaron también fuentes secundarias. Además, se contrastará la experiencia con algunos conceptos teóricos propuestos por la teoría de la hegemonía (Laclau) y del desacuerdo (Rancière). Los resultados de la investigación ponen de manifiesto que la fugacidad y debilidad del antagonismo fue producto de las débiles vinculaciones entre demandantes que se mantenían juntos por el enemigo común pero sin ningún proyecto societal compartido. La fortaleza fue poner a prueba al sistema político e instalar demandas de inclusión y reparación social.

2010S01829

Munson, Ziad (Lehigh University, Bethlehem, PA 18015 [tel: 610-758-3821; e-mail: isa-zwm@sneakemail.com]), **Organizing Political Violence: Strategy, Ideology, and the Development of Terrorist Groups,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper seeks to understand the organizational correlates of political violence & terrorism. The analysis introduces a newly created database that traces the birth & development of the most active terrorist organizations over the last twenty years. The systematic qualitative information in the dataset allows us to identify key similarities, as well as important variation, in groups that engage in terrorist attacks. Preliminary analysis shows that organizational leadership heterogeneity tends to reduce the number & scope of terrorist campaigns, that terrorist activity typically develops after organizational failures, that organizational mergers tend to increase terrorist activity, and that the ideological frames used by organizations engaged in terrorism tend to be mainstream & consistent with broad public opinion within the societies they operate. The bulk of research on terrorism over the past decade has focused on either individual level factors or larger structure factors responsible for generating & sustaining political violence. The initial findings presented here suggest that organizational-level analysis–particularly that which focuses on dynamic processes–may add substantially to our understanding of political violence today.

Muntzel, Martha C. (Instituto Nacional de Antropología e Historia, Mexico, México D.F., C.P. 11560 [tel: 52-771-71-97563; fax: 52-555-553-0527; e-mail: mmuntzel@hotmail.com]), **Knowledge Management and Social Learning: An Educational Philosophy Applied to Tlahuica Language Revitalization,** *International Sociological Association, Gothenburg, Sweden,*

¶ The educational philosophy & development of different projects involving the revitalization & promotion of Tlahuica language use during the last several years is presented in this paper. Tlahuica is an Otopamean language spoken in Central Mexico, it has few speakers & there is very little interest in its transmission as the L1 within the home. Tlahuica students at the Universidad Intercultural del Estado de México(UIEM) have been involved in linguistic & cultural research within the community, with the support of the traditional government, in which elderly family members are language & culture experts, & the community social network & local & regional environment represent a framework for research. Among the projects realized are a traditional Tlahuica calendar, research on wild mushrooms grown in the mountains & consumed during the rainy season, a newspaper mural containing different genres of Tlahuica verbal art & current news items, a Tlahuica blog, & a video project (in process) etc. A Tlahuica research Seminar has been established to compile a Tlahuica dictionary also in progress at this stage. The educational philosophy described here is the empowerment of students who acquire basic linguistic & cultural research skills through the involvement of a community social network that serves as experts and enablers. The result is improved identification & allocation of human creativity, local innovation & the sharing of a diversity of ideas. Tlahuica language & culture is promoted as a byproduct of a skill building process in which students and community work together discovering the wealth of knowledge that resides within their families, community & environment.

Murase, Akiko (Faculty of Integrated Arts and Social Sciences, Japan Women's University, Kawasaki city, Japan, 214-8565 [tel: 81-44-952-6854; fax: 81-44-952-6869; e-mail: nagaia@fc.jwu.ac.jp]), **Change in Japanese Wives' Marital Satisfaction over the Course of Married Life,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this paper is to verify of the U-shaped curve hypothesis of marital satisfaction. I used JPSC (Japanese Panel Survey of Consumers) Data for this paper. A panel analysis was performed in order to minimize the effect of sample attrition selection bias. Data for each individual year

were analyzed & then panel analysis was performed (using a fixed effect model & variable effect model). The results are follows; 1) This result does not indicate a U-shaped curve, showing that spousal relationship satisfaction which is low in early marriage begins to climb, albeit only slightly, only to fall again. However, the analysis results show that these changes are small. 2) Furthermore, the results indicated that having children aged between 0-6 years lowered spousal relationship satisfaction. 3) Finally, different factors have an effect on marital satisfaction in each life-stage.

2010S01832

Murase, Yoichi (Rikkyo University, Toshima-ku, Tokyo, Japan 171-8501 [tel: +81 3-3985-2311; fax: +81 2-2985-2833; e-mail: muraseyo@gmail.com]), **The Cause of Confusion on Social Mobility Study: The Problem of Definition of Upper Class and Measurement of Mobility,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the period of the high economic growth, especially in 1960s, the social inequality was not considered to be a large problem. According to the industrialization theory, it was said the social mobility was in proportion to industrialization. However, there are many arguments about the inequalities recently. There are also many studies about social stratification & mobility. Some studies support the FJH proposition (Featherman, Jones, Hauser Hypothesis), but others do not support it even by using same data. What is the cause of the confusion? The quantity of the circulation mobility can be changed by occupational categories & the definition of the upper class. However, the occupational categories are different between studies & the quantities of the structural mobility are different by country. Especially, the proportion or the definitions of the managerial class are different by a country. Therefore the proportion of upper class can be changed. I use survey data in Japan (1995 SSM & 2005 JGSS survey data) & other countries (ISSP survey data) for analysis of social mobility & I clarify the problem & the importance of closeness of upper class.

Murgia, Annalisa (Department of Sociology and Social Research, University of Trento, Trento, Italy, 38122, via Verdi 26 [tel: +39 3397245400; fax:; e-mail: annalisa.murgia@soc.unitn.it]), **Precarization and Risk Transitions. Rethinking the Boundaries of Work in the Life Story and in the Everyday Life,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper aims to analyze the critical transitions intersecting the work careers & the methodological implications concerning the study of risk biographies. This approach is motivated by the awareness that in today's social contexts, marked by the growth of work & social precariousness, an analysis of work trajectories cannot be confined to contractual & economic aspects, but should take into account a variety of fields & spheres of life that are articulated in different ways. From a methodological perspective, the attention goes to the narrative approach, which allows to study both biographical transitions in the life stories, related to specific & "critical" moments in the lives of the people, and the everyday transitions, where transit refers to the passage between different areas of life (paid & unpaid work, free time, etc.). The research is based particularly on fifty narrative interviews, conducted with men & women working in the Italian public administration, which represents one of the new paradigmatic sectors of the present configuration of precariousness. The use of the narrative approach highlighted the subjective aspects related to life & to the meanings attributed by people to their own experiences of biographical transitions between work & non-work.

2010S01834

Murji, Karim (The Open University, Milton Keynes, UK, MK7 6AA [fax:; e-mail: k.murji@open.ac.uk]), **"Without Guarantees": Sociology and Policy and Political Realms,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this presentation I aim to set out a number of ways in which sociologist have & can engage with policy & political arenas, and to suggest that there are no direct or predictable links between knowledge production in the social sciences & their impact on policy & politics. I propose that sociologists can seek to influence & shape policy either instrumentally or reflexively, the former aiming to solve puzzles or problems, the latter seeking to raise fundamental issues. However, this stark distinction is difficult to maintain in academic engagements with policy and, while the former looks to be more directly applicable to policy and politics than the latter, the cases I use suggest that there is no such simple link. Using examples from my own research and experience in policy & politics I argue that we need a more nuanced approach to such engagements within which to assess what our work is for.

2010S01835

Murphy, Raymond J (Department of Sociology and Anthropology, University of Ottawa, Ottawa, Canada K1N6N5 [tel: 16135625720; fax: 16135625906; e-mail: Raymond.Murphy@uottawa.ca]), **The Future of Sociology: Taking into Account Nature as Actant and Time as Condition,** *International Sociological Association, Gothenburg, Sweden,*

¶ Slow-onset environmental problems like climate change constitute wicked challenges for sociology by being analytically difficult and by calling into question its predispositions: ignoring nature's dynamics & the distant future, presuming that natural science sides with powerful interests & that lay knowledge belongs to dominated groups. This paper elaborates a Weberian approach based on non-social action by focusing on socially constructed expectations concerning nature's constructions. It reframes the issue of risk from discourse about threats to taken-for-granted presumptions of safety shaping social practices, & investigates the attenuation of risk perceptions during the amplification of risk, leading to complacency disrupting disasters. It argues that the future of sociology is to investigate a hypothesis opposite to that of the end of nature. As pristine nature is eliminated & as modernity places more people in harm's way of dangerous forces and recombines nature's dynamics into technologies, autonomous nature is being internalized into society & the interaction between social constructions & nature's constructions is intensified. The paper substantiates its analysis through i) a case study where modern technology inadvertently manufactured an extreme weather disaster, & ii) the politics of climate change & energy security.

2010S01836

Murray, Georgina & Peetz, David (School of Humanities, Griffith University, Brisbane QLD 4111, Australia [tel: +61 7 3735 7371; fax: +61 7 3735 7177; e-mail: g.murray@griffith.edu.au]), **Who Rules the World- Ownership and Finance Capital,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the relationship of a transnational capitalist class to the nation state through the control that is exercised by virtue of the ownership & direction of equity funds. We use cross-national data on corporate assets, turnover & shareholdings to investigate the direct & indirect ownership & hence control of the world's 250 largest corporations. We identify key corporations that in turn hold ownership (through shareholdings) that crosses nation-state boundaries & establishes substantial power in relation to nation states. We find that the influence of finance capital extends far beyond the provision of loans to finance corporate expansion. Both directly & indirectly (through funds they administer), finance capital owns or at least controls the ownership of a substantial proportion of largest transnational corporations, to such an extent that the idea of distinguishing fractions of capital between 'finance capital', 'manufacturing capital' & other sectors of capital becomes increasingly problematic.

2010S01837

Musette, Mohamed Saib (University of Algiers, Bouzareah -Algiers - Algeria [tel: 00 213 21299545; fax: 00213 21941716; e-mail: smusette@cread.edu.dz]), **Return Migration in Algeria,** *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Dans le cadre de la réalisation d'un doctorat en Sociologie à l'Université d'Alger, j'ai produit une analyse de la contribution des migrants de retour au développement, avec 240 entretiens auprès des migrants de retour en Algérie en 2007. La thèse principale porte sur le comportement des transferts matériels et immatériels entre migrants et non-migrants. L'hypothèse porte sur l'unicité des transferts des migrants de retour. Les résultats confirment que le migrant apporte leurs biens mais aussi des aptitudes facilitant leur réinsertion dans la vie économique, sociale et politique. Une distinction est faite entre les différents types de migrants, qu'ils soient des retraités, des travailleurs, des étudiants ou encore des femmes, généralement invisibilisées dans la migration de retour. Dans le domaine des transferts, la sociologie de l'immatérielle prend quelque relief avec une vision critique de la suprématie des transferts matériels. L'épaisseur sociologique donnée aux transferts immatériels s'impose comme indicateur indispensable pour objectiver une réalité, moitié dénudée et moitié adulée. L'invisibilité dans laquelle se drapent les transferts immatériels n'est pas fortuite. Elle traduit une certaine cécité des sciences sociales face à un phénomène estimé inexistant car non mesurable statistiquement

2010S01838

Mutabazi, Evalde & Pierre, Philippe (EM Lyon, Ecully Rhône Alpes [tel: 0145409329; fax:; e-mail: philippe.pierre22@wanadoo.fr]), **La diversité de chacun fait la richesse**

de tous? Etude des contradictions des politiques dites de "gestion de la diversité" dans les entreprises françaises (The Diversity of Each Is the Wealth of All? Study of Political Contradictions of So-Called 'Management of Diversity" in French Companies), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Dans le champ économique européen et sur la base du principe de lutte contre les discriminations, le thème de la diversité rencontre un succès croissant dans les médias, les discours politiques, les colloques scientifiques comme les séminaires de formation. Au niveau des entreprises, ce thème est souvent abordé en France en termes de responsabilité sociale des entreprises (RSE) ou de politiques d'actions "positives". Si un traitement uniforme de situations différentes peut être à l'origine d'une inégalité, l'égalité, pour sa réalisation effective, exigerait la mise en place de traitements différenciés. Les entreprises voient ainsi naître et se structurer des politiques dites de gestion de la diversité qui visent, d'une part, à éviter toute discrimination négative dans les divers actes de sélection, formation ou gestion des carrières de leurs salariés, et à engager des actions correctives, dites "positives", en faveur des populations estimées insuffisamment présentes et reconnues en ces organisations. Devient recevable l'idée de mise en uvre de "politiques spécifiques" pour des populations particulières en vue de rétablir l'égalité. Cette contribution explorera en quoi les politiques de "gestion de la diversité" ne garantissent pas qu'un système soit juste. On verra en quoi ces politiques peuvent conduire à légitimer qu'on répartisse les inégalités et au fait que le système social soit injuste pour longtemps. En réalité, un triple risque se fait jour avec l'extension du concept de diversité. Celui de nier la capacité des individus à réécrire le sens de leurs propres actions et les emprisonner dans des murs de significations auxquels il se pourrait qu'ils aient cherché à échapper. Celui ensuite d'intérioriser son statut de victime, l'apprentissage de rôles qui lui sont associés. Celui enfin d'entrer dans une société de la consolation alors que la reconnaissance se fonde toujours sur un espace de discussion argumentative où l'on cherche à privilégier ce qui rassemble. A partir d'expériences de terrain vécues dans différentes entreprises européennes et de recherches sociologiques menées par les deux contributeurs, cette communication s'attachera à préciser certaines notions trop vite employées, et à mieux cerner les conditions de construction d'un authentique management interculturel en entreprise.

Mutti, Cristiano & Anzoise, Valentina (University of Milano-Bicocca [e-mail: cmutti@sociologiavisuale.it]), **Photo Maps and Mental Elicitation. Integrating the Use of Photo-Elicitation Interviews and Mental Maps to Study Territorial Perception and Representation,** *International Sociological Association, Gothenburg, Sweden,*

¶ Milan has been a successful industrial city along the second half of the twentieth century, & now the regional capital of Lombardy is also the core of a wider metropolitan region, which is Italy's richest urban agglomeration & also a very important node in contemporary European & global networks. But there are other, more negative, consequences to such a good economic performance, which are traffic congestions, heavy pollution, low environmental standard, poor quality of life. In 2015 Milan will host the World Exposition. The chosen theme, "Feeding the Planet, Energy for Life", on the one hand reveals growing attention to developing sustainable solutions, & on the other, constitutes also an opportunity for the second agricultural producer of Italy (22% of all Italian food exports), to reconnect this hyper-congested urban reality to its countryside. So, Milan in a few years will be the scenario of great changes that will redesign the city's material and immaterial infrastructures & the use of built as well as green spaces. But how do the different populations that daily flow in this city perceive these issues? And what image of this city do people have? The aim is to answer these research questions adopting one of the most used & challenging techniques of visual sociology, the photo-elicitation interview, integrated by the use of mental maps.

Myoki, Shinobu (Tokyo University of Foreign Studies, Research Institute for Languages and Cultures of Asia and Africa, 3-11-1, Asahi-cho, Fuchu-shi, Tokyo, Japan, 183-8534 [tel: +81-90-4492-5192; e-mail: myoki@aa.tufs.ac.jp]), **The Feminization of Tourism and the Transformation of Erotic Museums (hihōkan) in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper discusses the emergence & decline of Japanese erotic museums (Hihōkan). Hihōkan developed mainly at hot spring resorts from the early 1970s & feature erotic displays of realistic life-size human figures. The first Hihōkan, built near Ise city in 1972, contained medical displays. This seems to suggest an initial connection between the emergence of the Hihōkan & the hygiene exhibitions that were held in Japan until the 1960s. Later Hihōkan, built from 1976 to 1983, removed these medical displays from their exhibitions & stressed a more participatory character. While the Hihōkan at Ise was constructed for men, later Hihōkan were also built with female customers in mind. The socio-economic changes that occurred in Japan during the mid-1970s are key to understanding this transformation. The year 1975 marks a turning point because the ratio of females in the work force began to rise. The appearance of Hihōkan catering to female customers seems to coincide with an increase in female disposable income & travel opportunities for women. In sum, I argue that the Hihōkan appeared with the popularization of tourism among men, further developed with the feminization of tourism, & eventually declined since the 1990s with the individualization of tourism.

Nabeyama, Shoko (Department of Economics, University of Yamaguchi, Yamaguchi, Japan, 753-8514 [e-mail: nabeyama@yamaguchi-u.ac.jp]), **Increase of the Long-Distance Care and the Work-Life-Balance in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ In Japan, aging rates exceeded 21% in 2007 & became "the super aged society". The aging rate continues rising, & it is predicted that it touches 40% in 2050. At the same time, the ratio of elderly persons living with their children is falling rapidly, because the children leave the home to run own life & work as a wage earner now in an urban region. For, recently the choice of their family came to be included "long-distance care" as well as "living together" & "nursing home care" when they were in a condition that old parents needed care. It's 1996 that words called "long-distance care" appeared in Japan. By my own questionnaire investigations & interview analyses, it became clear that workers who need to take care of their parents face the difficulty of combine with work & care under the Japanese rigid labor system. In such situation, I pay my attention to a progress of the work-life-balance in Japan. I insist it is important that society, a company & a community together prepare the system of enabling work & care compatible.

Nagla, Madhu (M.D.University, Rohtak, Haryana, India, M.D. University, Rohtak-124001, Haryana, India [tel: 01262-273271; fax: 01262-273271; e-mail: bnagla@gmail.com]), **Medical Tourism: Implication on Domestic Population,** *International Sociological Association, Gothenburg, Sweden,*

¶ Medical tourism is about tourists who go to other place with a specific goal, that of getting themselves for & cured from some particular ailment. It is a provision of "cost effective" personal health care in association with tourism industry for patients needing surgical healthcare & other forms of dedicated treatment. This process is being facilitated by the corporate sector concerned in health care as well as the tourism industry--both personal & public. India is emerging as an important destination of medical tour-

ism; therefore, it is worth to understand the implication of medical tourism for the domestic population. In terms of earning from the medical tourism is increasing rapidly, by diverting the scarce domestic resources to the corporate healthcare industry, which is ultimately for earning the profit margin. Medical manpower and resources from the country are used for requirements of the medical tourism industry at the cost of vast majority of people. Thus, the growth of the medical tourism in the private sector at the cost of the public sector is reflected in a rise in the GDP share of that service--even as it may mean the worsening of conditions for the majority of people.

Nah, Alice Maria (Sociology Department, National University of Singapore, 11 Arts Link #03-06 Singapore 117570 [tel: 6565163822; e-mail: alicenah@gmail.com]), **The Post-colonial Biopolitics of Managing 'Mixed Marriages' in the Ethnic/ Racial Construction of the Malaysian Nation,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the socio-political position & rights of foreign spouses married to Malaysian citizens, both as they reside within and outside of Malaysia. Drawing upon Michel Foucault's notion of biopolitics, I examine the strategies taken by the Malaysian state in constructing the socio-political positionality of "foreign spouses", ostensibly to "maintain" the ethnic/racial "balance" of Malaysian citizens. These strategies are specifically postcolonial a drawing upon the ideological, legal and administrative apparatuses of the British colonial government a and located in ongoing struggles by citizens over competing forms of the ethnic/racial composition of the "Malaysian" nation. I examine four inter-related areas, which shape the experiences of foreign spouses living in Malaysia: their long-term, tenuous immigration status, which severely restricts their rights & their independence from their spouses; their strategies for maintaining productive lives, including gaining alternative legal status as skilled immigrant workers & moving away from Malaysia; the significance of their gender & ethnic/racial identity in social interactions; & the long-term implications on citizenship and belonging as they manage transnational families both within and outside of Malaysia. I situate these experiences within broader political rhetoric & debates surrounding "mixed marriages" in Malaysia.

Naidoo, Kammila (Department of Sociology, University of Pretoria, Pretoria 0002, South Africa [tel: 27-12-4202624; fax: 27-12-4202873; e-mail: kammila.naidoo@up.ac.za]), **Family Biography and Memory-Making in an AIDS-affected South African Community,** *International Sociological Association, Gothenburg, Sweden,*

¶ Post-apartheid South Africa has faced a number of critical challenges in its first sixteen years: the scourge of poverty, the AIDS epidemic & the pervasive disorganisation of family networks. Whilst insecurity & disarray define people's lives today, it is also possible to witness collective efforts at rebuilding systems and solidarities. The macro impetus for renewal & reconstruction impacts on the ways in which memories are articulated & family biographies ultimately constructed. In this paper connecting fragments of three life histories written in the course of ethnographic work from 1998-2008 will be reflected upon. The personal accounts of a mother & her two daughters initially centre on domestic strife, sibling rivalry & adversity–and the family as a whole is represented as struggling & disunited. In the aftermath of the death of one of the daughters from AIDS in 2001, the memories & discourse are subtly reworked by the two women in ways that are meant to counteract stigma, reclaim dignity and defend the family. The paper focuses on the dynamics of memory making in AIDS-affected settings & on the ethnographer's endeavours in witnessing, interviewing & making sense of people's "intent" & "the urge to forget, to go on living".

Nakamura, Norihiro (Ehime University, Matsuyama, Japan, 7908577 [tel: 81 89 923 3320; fax: 81 89 923 3320; e-mail: nULnakamura@mue.biglobe.ne.jp]), **Social Transformation under the Influence of East Asia's Value Consciousness with an Emphasis on Mandalas and Chaos,** *International Sociological Association, Gothenburg, Sweden,*

¶ In various studies in the past on a social transformation in East Asia, including Japan, we hardly understand the value consciousness of taking great responsibilities of activities. Thinking about the mentioned question, we can find that the importance of East Asian knowledge system which is closely related to Mandala & Chaos. The following is Hirano Street Remake Movement in the Hirano area 20km south east of Osaka, a typical example for interpreting East Asia's Value consciousness. The basic empirical data is gathered from a direct interview for the responsible person & historical materials. Furthermore some interview data gathered from entrepreneurs & bottom class in East Asia will be mentioned. The terms of Ambiguity & Appropriateness that related to Mandala and Chaos are decisive to understand the value consciousness. These bring new ideas to the complex issues of societies & represent the possibility to regain its authority of knowledge system.

Nakamura, Takayasu, Nishimura, Takayuki & Inui, Akio (Graduate school of Human Sciences, Osaka University, 1-2 Yamadaoka, Suita, Osaka, Japan, 5650871 [tel: +81668798107; fax: +81668798107; e-mail: tnaka@hus.osaka-u.ac.jp]), **Young People's Transition from School to Work: Its Structure and Change in Late Modern Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ It has been observed, in Japan, that there's always a smooth transition from school to work–a transition in which there is no gap between graduation to employment in terms of time a causing hardly any unemployment problems among the youth or the highly educated as is often seen in many developing countries. Since the late 1990s, however, combined with a long-term recession and world economic factors, such as globalization, more & more young people are taking up jobs that are part time or temporary. This indicates possible changes in the smooth transition that has been practiced in Japan. The purpose of this study is to indicate a current feature of the smooth transition by analyzing the data of Youth Cohort Study of Japan (YCSJ). The YCSJ conducted by the Japanese Educational Research Association is a panel survey that contains 1687 samples aged 20 by random sampling in 2007 & is scheduled to continue until 2010. We will report analysis results regarding a time for transition from graduation to getting a full-time job & show the wide variations by educational credentials, etc. in Japan.

2010S01849

Nakano, Marilena & Daniel Filho, Bruno José (Researcher of Centro Universitario Fundaçao Santo André Brazil and invited researcher of CADIS [e-mail: marilena.nakano@wanadoo.fr]), **The Relations between the Time and the Quotidian of Migrants: Limits and Possibilities of Collective Action,** *International Sociological Association, Gothenburg, Sweden,*

¶ Brazilians, by birth and nationality, researchers for more than 20 years and activists in many social movements in our country, we have obtained the politic refugee status on the 27th of November of 2006 given by OFPRA–L'Office Français de Protection des Réfugiés et Apatrides–which has recognized the life threatening situation in which we've found ourselves in Brazil. This situation might seem incomprehensible since Brazil is unanimously considered as a democratic country, and in addition, governed by the Workers Party (PT) and its historical leader Lula. Even if our situation is highlighted by its singularity, as researchers we would like primarily to show our situation of migrants more than that of refugees. We

wish to debate the limits and the possibilities of collective action of migrants in a foreign country taking in account that they are not the owners of their time. Due to our double trajectory, on one side as researchers (Bruno, in the field of participative experiences and Marilena, in the field of social movements) and, on the other side, as migrants before and after the recent crisis, our situation allows us to have a privileged look on this matter. In order to think about this subject we intend to focus and dive into our daily lives with stories and extracts of our experiences in France as migrants, and get out of it through the works of François Brun, researcher of migration in France, Alberto Melucci, Italian psychologist/sociologist who left as legacy important thoughts about social movements. We'll also focus on works, such as those of Robert Castel and Serge Paugam, who have studied the precariousness of the working relationships and the unemployment issue in France, since the beginning of the seventies, accentuated in our days by the actual crisis and its effects on the political participation of the many types of subjects in an precarious situation. We have many life experiences that can be used to enter the debate sphere we intend, i.e., the limits and possibilities of collective actions of the migrants of our time. Among these experiences, we have chosen a few that makes concrete the relation between time and collective action: a) the existence of an unstable habitation that sets the rhythm of our lives in a way that we cannot be owners of our time; b) the search for work in order to survive, which imposes an infernal come and go, cadencing our quotidian and hindering a stable integration such as one lived in the country of origin; c) a relation with certain institutions, public as well as private, which imposes an infernal come and go and that appropriates themselves of our time, as if they were to tell us that we must submit ourselves to them. Nonetheless, we keep fighting so we will not lose our capacity of acting collectively. This implies dribbling the rhythm of life which is imposed to us, in order to regain the time which was stolen and to arrange our quotidian differently. This require from us, as migrants, an effort to: a) create and strengthen solidarity bonds, which helps us to realize that, in the country that we're living in, there are life possibilities that are not controlled by others; b) participate in collective actions, even if in an fragmented way, to make us feel that we live a moment of "latency", that one day we will win the necessary visibility as collective actors in the search of a democracy, based on solidarity, fraternity and sameness, capable of breaking with the rhythm that is imposed to us.

Nam, Sang-hui (Institute of Sociology, University of Heidelberg [fax:; e-mail: sang-hui.nam@soziologie.uni-heidelberg.de]), **Corporate Giving of the Korean Conglomerates: Its Causes, Processes and Consequences,** *International Sociological Association, Gothenburg, Sweden,*

¶ Interest in corporate giving is increasing among both CEOs and ordinary people in South Korea. In the early 2000s, the concept of corporate giving was introduced into Korean firms as a part of CSR (Corporate Social Responsibility) in accord with transparency, ethical management, & social responsibility in the international economic environment. So far, corporate giving has been characterized by a higher rate of giving from big businesses (including several conglomerates) than from small-to middle-sized firms, & a higher rate of corporate giving than for private giving. Given the fact that the predominance of (family-owned) conglomerates is continuously criticized in Korea, this overrepresentation among big businesses raises questions about the motives, processes, & consequences of corporate giving practices. To answer the question, I will first give a historical overview about donation in general before it was institutionalized. The role of the state in social welfare & the role of cultural tradition will be taken into account. This examination will contribute to finding out if the higher involvement of corporate giving can be explained through path-dependence. In the next step, based on a case study of three big businesses–Samsung, Hyundai, and SKT–several aspects will be explored: when, through what channels, & for what reasons the donation has been given. Furthermore, I will keep a close eye on the CSR commission & on personal & charity foundations to find out whether they manifest themselves as hybrids of family or family-owned businesses, isomorphic structures of organizations, or transformation of values. Finally, the extent of the increase in corporate giving as it relates to changes in the conventional firm culture and structure will be discussed, as well as changes in the whole of Korean society.

Narain, Dubey Birendra (Department of Sociology, Babasheb Bhimrao Ambedkar Central University, Lucknow-226025, Uttar Pradesh, India, Department of Sociology, Babasheb Bhimrao Ambedkar Central University, Lucknow-226025, Uttar Pradesh, India [tel: +91 522 2995607; fax: +91 522 2441888; e-mail: dubeybbau@gmail.com]), **Schooling System and Exclusion of Children in Urban Pockets: A Sociological Study of Lucknow District (India),** *International Sociological Association, Gothenburg, Sweden,*

¶ In a developing country like India, the primary school education system has been under the control of the governing elite, mostly comprised of the upper classes. From the level of policy formulation up to the level of actual execution, such dominance plays a hidden yet pivotal role. The entire gamut of Government schooling system made available for "masses" tends to enforce, produce & reproduce the elite class ethics, values, culture and ideology. The system of class-biased curriculum transaction is likely to influence cognitive skill of children hailing from poor economic background. Major findings of this field-based micro-level study reveal that there was no involvement of the community in policy formulation and preparation of District Perspective Plan. Preparation of text books & selection of course content was found highly centralised & bureaucratic in nature, leaving little space for them whose children are continuing in the schooling system. Contrary to the governments claim, the role of the local community in planning & organizing school activities was found nil. School-originated factors concomitant with the structural reality of the family altogether influence the overall quality leading to the exclusion of poor children from the schooling system, often reflected in high drop-out, poor cognitive skills, & inferior quality learning outcomes.

2010S01854

Nardella, Carlo (Department of Social and Political Studies, University of Milan, Milano, Italy, 20122 [e-mail: carlo.nardella@unimi.it]), **Corporeality and Thaumaturgical Healings in a Marian Shrine in Northern Italy,** *International Sociological Association, Gothenburg, Sweden,*

¶ During the feast celebrated on May 26th at the Shrine to the Blessed Virgin of Caravaggio in Fanzolo, a village in Northern Italy, "possessed" women ask to be freed by touching the statue of the Madonna. This rite provokes screams, convulsions, delirium, anxiety attacks and, sometimes, vomiting. Over the decades the ritual crises suffered relevant transformations which can be related to the marginalization of possession vis-à-vis mental illness and the religious institution's attempt to prevent wild and uncontrolled behavior during the feast. Through a review of the literature, unpublished pictures & new field research the paper analyzes how the gestures & corporeal reactions marking the requests of healing from the "evil spirits" have changed over time.

Narita, Ko & Kawanishi Masashi, Kitamura Takahiro

(National Institute of Fitness & Sports in Kanoya, 1 Shiromizu, Kanoya, Kagoshima 891-2393 Japan [tel: +81-3-5840-9428; fax: +81-3-5840-9429; e-mail: narita@nifs-k.ac.jp]), **The Comparison of Children's Physical Activity of Elementary School in Japan and Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ The purpose of this study is to make a comparison of children's physical activities as social behavior between Japan & Germany. The measurements of steps, the total energy expenditure of exercise and exercise intensity by a Lifecorder; waist-mounted accelerometer which produced by Suzuken.co, & social questionnaires were administrated to 29 boys & 26 girls (8 to 10 years old). The sociological questionnaire about the sporting & exercise behavior at daily life has taken twice of different country of objects, one is 20 boys & 18 girls in Wadomari-cho in Japan in 2006, & the other one is 9 boys & 8 girls in Meerbusch in Germany in 2008. As a result, the steps as social behavior during weekday is significantly-high in Japan, however, the steps during weekend is significantly-high in Germany. It is suggested that the school and community systems as sporting environment is difference among the both country.

Nascimento, Maria Letícia (Faculdade de Educação da Universidade de São Paulo (FEUSP), Av. da Universidade 308 São Paulo SP Brazil 05508040 [tel: +55 11 30918267; fax: +55 11 38150297; e-mail: letician@usp.br]), **Do ECE Public Policies Consider Small Children's Agency? Research in SãO Paulo, Brazil,** *International Sociological Association, Gothenburg, Sweden,*

¶ During the last twenty years, studies on small children have grown in number, performed by different areas of knowledge. National and international research, carried out mainly from the new social studies of childhood, have provided new horizons for the visibility of children in general & offered new opportunities to understand the social relationships among peers & with adults in early childhood education (ECE) institutions. The present study is a research, funded by State of São Paulo Research Foundation (FAPESP), which aims to verify how ECE public network in the state of Sao Paulo consider small children agency. Some municipalities are adopting a material called "apostil", developed and commercialized by private companies. This material is the same for all children, based on the idea of "normal development & learn". Why do they to use this material? How small children reacted to this practice? The research is organized in two stages: the first one has combined questionnaires to every city, to know which proposed to use apostils, & semi-structured interviews with authorities responsible for ECE in these municipalities. The second one intends to draw on a combination of participant observation and interview with small children to know their motivation to use this material. The analysis aims to put these different understandings in the context of sociological theories of agency and intergenerational relations & to understand some ECE public policies. Keywords: agency, generations, early childhood education public policies

Nasman, Elisabet (Uppsala university, Dep. of Sociology, Uppsala, SE 751 26 Sweden [tel: +46184716229; fax: +46184711170; e-mail: Elisabet.Nasman@soc.uu.se]), **When a High Conflict Divorce Invades a Child's Pre-School or School,** *International Sociological Association, Gothenburg, Sweden,*

¶ When a high conflict divorce invades a child's pre-school or school How do pre-school & school institutions become involved in family court cases concerning custody & contact where there is a history of father's violence against mother. How do they deal with that? Children spend a large part of their lives in these institutions, i.e. it is here children "do" their childhood. Children in adjacent life situations may face difficulties at school in terms of lack of concentration & other problems fulfilling demands at school due to conditions at home. The pre-school & school may on the other hand side function as asylums, separated from the hardships at home & with adults who may identify children's difficulties & offer support. To other children these institutions may mean a place of fear & stress since this is one arena where the conflict between the parents is performed. The staff may become involved in the conflict & have to handle an experience of their own of threat & aggression from the violent parent. Which competences & strategies do they have for coping with this invasion from the conflict? These issues are focused in this presentation.

2010S01859

Nast, Julia & Blokland, Talja (Humboldt University [e-mail: julia.nast@staff.hu-berlin.de]), **Home in an Undesirable Place: Thoughts on Negative Stereotyping of Urban Neighborhoods by the Example of Wedding, Berlin, Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ Neighborhood studies present various explanations of how residential areas with negative status indicators may affect people's life-chances negatively. Other authors have investigated what it means to be home in a stigmatized area. They argue that stigmatization is symbolic, an ecological fallacy ascribing behavior of some residents to all, creating no-go areas. Media are seen as crucial, as they are believed to scandalize events in deprived areas. Current investments in such areas draw, among other things, on marketing tools to rework the local image. If, after all, media produce the stigma, the same media could be used to get rid of it. Using the case of Wedding (Berlin), where such marketing strategies are part of policy intervention, we ask whether, indeed, newspapers have created an image of Wedding as undesirable and dangerous, & whether residents share this. Our findings suggest a different line of argument than the usual one: neighborhood stigmatization is not a local process based on specific local events, nor a systematic negative labeling of the local residents. Rather, it is a much more generalized picture, derived from much broader rankings of good places for belonging.

Nastuta, Sebastian (Petre Andrei University of Iasi, Faculty of Social Work and Sociology, Iasi, Romania, 700400, Str. Ghica Voda 13 [tel: 0040/744/754615; e-mail: sebastian.nastuta@gmail.com]), **The Influence of Youth Values on Religiosity and Religious Fundamentalism. The Case of Romania,** *International Sociological Association, Gothenburg, Sweden,*

¶ Previous studies in sociology of religion demonstrated the consistent relation between people's value system & their religious behaviour. Based on this assumption & starting from an annual research I coordinate within the Sociology department from "Petre Andrei" University of Iasi–"The Youth barometer of values and social aspirations"–I have tried to find out what is the specificity of the relation between youth's values (Rokeach value scale) & youth's religiosity (religious fundamentalism, religious orthodoxims, etc.). The results on the Rokeach scale are correlated with measurements of religiosity & religious behaviour. For a person, his or her religious orientation offers a "l'anguage" (set of beliefs, values, & practices) that forms a structure of signification & order for a specific social group. Through education & value transmission the schools or the families are doing the same thing. This means that there are two systems (the value system & the religious system of a person) responsible "for a similar job" a social control & social integration. One the other hand these two systems are influencing each other. The question I am trying to answer, based on the results we have for Romanian youth samples but also on the available results from the World Values Survey, is if there is a relation of influence unidirectional or bidirectional between youth's values and religiosity.

Nastuta, Sebastian & Roxana Atesoae, Maria ("Petre Andrei" U Iasi, Romania), **The impact of Internet on electoral discourse in 2009 Romanian presidential campaign,** *International Sociological Association, Gothenburg, Sweden,*

¶ In recent years, new media technologies and the Internet have increasingly invaded peoples lives. Starting with the USA and Japan, continuing with Western Europe and finally with post-communist countries (new democracies), daily use of emails, Internet, mobile phones, PDA, Blackberry, IPhone, etc. have become more and more important and have had a great impact on peoples social relations, on language, social practices and interactions. In this context, advertising discourse and techniques

(commercial, electoral) were strongly oriented to use these communication platforms. The evolution of electoral communication from traditional media to new media technologies has increased the numbers of persons who receive the political messages and the speed of spreading information. The relation between a political candidate and his or her voters and the style of discourse or political language were radically changed. This new electoral communication is characterized by personalization, interactivity, unlimited and instant discourse creation/ dissemination. We can easily discuss an open to all process of discourse creation (in virtual communities from the blogosphere). For sure, the 2008 U.S. Presidential election was the greatest example in this direction and a template to be applied by many political consultants in the following years. The way Barack Obama used tools like emails, Youtube, Facebook, MySpace, etc. became an example for the 2009 Romanian presidential election campaign. Like never before in electoral processes in Romania, the Internet became the perfect environment for negative campaigns. Pseudo-websites for counter-candidate denigration, radicalization of electoral discourse, peoples sharp segregation in two groups pro and against the president, censored televised debates, sofistical argumentation, strange campaign subjects like the fight against Communism, rude behaviour at official ceremonies, were just a few characteristics of this campaign. The Internet had a fundamental role in disseminating these negative messages and provided an environment where people were involved in political action by freely and aggressively expressing their feelings and beliefs. This paper will analyse the content of the most visited blogs and websites to underline the specificity (language style and content) of the electoral discourse in Romania in 2009 and, while comparing it with other previous campaign discourses, will try to understand if the Internet (or other factors) facilitated the dissemination of this aggresive political language.

2010S01862

Nathan, Fabien (Sogreah Consultants, 6, rue de Lorraine, F-38130 Echirolles, France [tel: +33 6 11 33 09 41; e-mail: fabien.nathan@sogreah.fr]), **Disaster Risk Perception of the People Exposed: Insights to go Beyond the Dominant Paradigm,** *International Sociological Association, Gothenburg, Sweden,*

¶ An increasing number of observers, witnessing the difficulty of application of risk management measures, become interested in the study of "risk perception" of the people exposed to natural or socio-natural hazards. They sometimes deplore their lack of "risk culture", their ignorance or their regrettable indifference, which should then be counteracted by "awareness raising" campaigns. For others, risk perception would be a research object immanent to the individual & detectable as in an opinion poll. This paper objects the heuristic value of this vision of "perceptions" for the understanding of the risk representation of the exposed people. It does not allow to understand why some families come back in the place of their destroyed house after a disaster, why some choose to settle in extremely dangerous places or seek to maintain there in spite of the alarms, the warnings, or even the exhortations. It does not take into account the complexity of the social representations of the exposed people, constantly adjusting. The contribution to the colloquium is based upon a fieldwork of various years conducted in the peripheral western neighbourhoods of the city of La Paz (Bolivia), with households & communities in situations of extreme landslide risk. The result show that the people exposed develop strategies of risk perception which allow them to overcome the fear of the natural hazard in order to access to property at any cost, by colonizing extremely hostile lands. In some neighbourhoods, one observes a three step process guided by the candidates for settlement in a hazardous place: first of all, an adaptation of the perceptions to their settlement objectives, which consists in taming the fear in order to overcome the reluctances inspired by the obvious dangerousness of the site, thus formulating in a small group of people a project of ("pirate") urbanization. Then, the inhabitants put this project into practice, managing to acquire plots of land & actively transforming space thanks to an intense community work. Their risk perception strategy consists in adjusting the perception of these spaces & its risks attached to what is expected from these spaces a in that case, hosting houses & urbanizing. The perceptions are also remodelled by a work of appropriation of the geology & danger taming. Once the inhabitants are settled, a social work of non-visibilization of risk is at stake. The enouncing & socializing of these remodelled perceptions (with a minimized risk) has a performative value (Bourdieu 2005) in order to make happen what they contain: saying that "the land is apt for construction", as it is often the case, is like enouncing that it is possible & legitimate to construct and live in it, which justifies & renders possible the settlement of the inhabitants & the urbanization of the zone. In final analysis, whether the inhabitants are intimately convinced of the inhabitability capacities of the soils, or not, does not matter much. What counts is that this perception discourse has a real effect on their own practices & seeks to have one on the practices of the external actors. (Abstract shortened by Proquest.)

Nathasje, Mab Favero (Universidade Federal Do Maranhão, Imperatriz, Maranhão, Brasil, 65900-000 [tel: +55 99 81422677; fax:; e-mail: mabULnathasje@hotmail.com]), **Crianças Tentehar-Guajajara: Um Novo Olhar sobre o Trabalho Infantil** (Tentehar-Guajajara Children: A New Look on Child Labor), *International Sociological Association, Gothenburg, Sweden,* (POR)

¶ Esta pesquisa verificou a realização do trabalho pelas crianças Tentehar-Guajajara no Maranhão. Esta noção de trabalho se refere às tarefas das crianças realizadas no âmbito da casa ou em seus arredores. Ao longo do tempo a infância foi compreendida como a fase da vivência do lúdico. Esta concepção de infância tem seu cerne na oposição histórica construída entre trabalho e ludicidade. Assim, a realização de qualquer tipo de trabalho infantil negaria a vivência desta fase. Esse conceito de infância foi generalizado, sendo a fase definida sem considerar outras possibilidades e as várias formas que o trabalho infantil assume - como a socialização - sendo esta forma a que caracteriza a infância das crianças indígenas. Investigou-se qual a função social da criança indígena e sua contribuição para a comunidade no que se refere à realização das tarefas destinadas às crianças. Esta reflexão sobre o trabalho das crianças nas aldeias permitiu compreender as diferenças entre o trabalho realizado pelas crianças em situações de exploração e os trabalhos que visam à socialização no seio da comunidade e a aprendizagem. Destacou-se ainda, a relativização do trabalho infantil, orientando numa digressão da generalização de que todo trabalho infantil explora as crianças que o realiza e usurpa sua infância. PALAVRAS-CHAVE: CRIANÇAS INDÍGENAS TRABALHO INFANTIL INFÂNCIA.

Navarro, Alejandra (Gino Germani Research Institut, University of Buenos Aires [e-mail: navarroalejandra@ymail.com]), **"Behind Each Man We Can Find a Great Woman": Who Gets Married with an Army Officer in Argentina?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The military institutions of most countries are complex organizations with the capacity of control of the individual actions of its members. The military profession takes part in a context where, sometimes, the work place and the residence place are considered equivalent. As a consequence of that, the life of the officers and their families are part of the "military families". Traditionally, in Argentina, the officers' spouses have had and still have a great importance on the support of the institutional aims. Considering all this, the objective of this proposal is to analyze the marriage bonds of three cohorts of officers of the Argentinean Army. The paper will explore the social origins and activities of their spouses, and the way they have met. The reconstruction of part of the biography of the Army men will allow us to explore their familiar relationships and analyze the important role of the women in the professional trajectories of the officers. This paper is based on an experience of research that took place in two military institutions in Argentina (2008 2010).

2010S01865

Navarro, Alejandra (Gino Germani Research Institute University of Buenos Aires, Beruti 3552 8º B (1425) Buenos Aires City, Argentina [tel: 005411 48256273; fax: 005411 48256273; e-mail: navarroalejandra@ymail.com]), **Negotiating Access: How Was it Possible to Get Permission to Enter a Military Institution?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this proposal is to analyze each of the decisions that the researcher has to consider to obtain permission to access to two military institution of the Argentinean Army. We define the concept of "access" as a task that does not finish when the access was obtained. On the contrary, it is a permanent negotiation that takes place during all the research process. In this presentation we want to discuss, firstly, the central place of this instance to begin the fieldwork. Secondly, the methodological implications to the others components of the research design (specific objectives, the selection of cases, the construction of the instruments) of this constant "negotiation". Finally, we reflect on the "false expectation" that a good rapport with the gate keeper will guarantee access to valid information & interviewees. This paper is based on a experience of research that took place in two military institutions in Argentina (2008-2010). The objective of the main study was to analyze the social origins, the patterns of sociability, the spatial trajectories and the motivations to enter to Army of three cohorts of members of the Argentine Army. The theoretical & methodological strategy was multi-method & the construc-

tion of empiric evidence was supported by the life stories of the selected officers for the three cohorts. Access to the two institutions was hard & central not only to the field work, but also to the interpretation of the information.

Nazareth, Juliana Souza & DA'Ávila Neto, Maria Inácia (Programa EICOS/UFRJ/BRAZIL, Rio de Janeiro [fax:; e-mail: jusn@hotmail.com]), **Brazilian Immigrant Women: Leisure and Recognition in Rio De Janeiro,** *International Sociological Association, Gothenburg, Sweden,*

¶ This work intends to discuss the relation between leisure and migration, taking into account the increasingly of women migratory flows inside Brazil. With particularities related not only about its dimensions & cultural diversities, Brazil also shows some questions about its colonization period that affect the relation between sameness and/or otherness inside the country. Being common to consider the others as less developed, & its cultures as exotic or as folklore expressions only a like once Brazilian culture has already been seem by its own colonizers. That is special truth for those women who come from Northeast to the Southeast's cities, like Rio de Janeiro. These immigrants tend to approach their equal, outlining a sort of creative & informal networks that helps to overcome many adversities but also enabling the most meaningful experiences of leisure a when they use to share cultural codes as music, literature, food & others. Such an important the leisure time is decisive for a more or less positive connotation of their emigrational experience. Moreover the leisure is being configured as a privileged scenario of coexistence between migrants & no immigrants. Showing its aggregator potential, in spite some evidences of the remaining of a colonialist look.

Nazroo, James, McMunn, Anne & Sacker, Amanda (CCSR/Sociology, University of Manchester, Manchester, UK, M13 9PL [e-mail: james.nazroo@manchester.ac.uk]), **Health Inequalities in Later Life: An Examination of the Enduring Significance of Class,** *International Sociological Association, Gothenburg, Sweden,*

¶ The consideration of class inequalities in health has largely been framed within epidemiological discussions of psychosocial and neo-material explanations for social gradients in health, with little engagement with sociological approaches to the analysis of class & processes of social stratification. Within this work, the focus on class as labour relations (operationalised through occupation) has meant that people of working age have been the main focus of research & that causal pathways between class & health in the context of later life have not been considered. In this paper we investigate class inequalities in health in later life using data from the English Longitudinal Study of Ageing, a representative panel study of more than 11,000 people aged 50 or older. Data have been collected every two years since 2002 and cover a comprehensive range of domains, allowing for an analysis of causal pathways connecting class & health at older ages. We use path analysis to focus on hypothesised pathways operating through material circumstances (operationalised as wealth) & psychosocial factors (operationalised as subjective social status & social roles) in relation to three health outcomes (self-reported health, activities of daily living & walking speed). Findings suggest that both pathways are important for class inequalities in health, and that subjective social status connects, in part, these pathways. However, the models also show that subjective social status reflects more than occupational status & economic position, being related to education, & social & cultural participation. We argue that the implication of these findings is that there is a need to consider processes of class stratification beyond labour relations, & particularly to consider Bourdieu's theorisation of class, habitus & capital.

Nelson, Fiona (University of Calgary, 2500 University of Calgary, Calgary, Alberta, Canada T2N 1N4 [tel: 403-210-9432; fax: 403-282-6716; e-mail: nelsonf@ucalgary.ca]), **Knowledge, Interaction and the Construction of Maternal Selves,** *International Sociological Association, Gothenburg, Sweden,*

¶ When women become mothers for the first time, they experience tremendous shifts in their senses, & performances, of self. Other mothers play a vital role in a new mother's journey into, and negotiation of, this new role. Maternal selves, & maternal knowledge, are explored, created, embraced & rejected, frequently discursively, & often in the company of other mothers. Based on interviews with 53 Canadian new mothers, I will discuss the types of conversations & interactions that are common, or avoided, among new mothers & that serve to situate them as members, or non-members, of what I have called the "culture of motherhood." Through shared rituals & rites of passage, the mutual exchange of birth stories, the discussion of the daily details of mothering, and the offering & accepting of mothering advice, new mothers gradually build a sense of mothering knowledge/authority and negotiate (and enact) a maternal identity. This is not, however, necessarily a smooth process; women often have ambivalent feelings about motherhood as it is culturally constructed, as it is actually lived, & as it is represented by other mothers. Perhaps ironically, it is also other mothers who can help a woman negotiate this ambivalence.

Neuenkirch, Sophie (University of Luxembourg, Walferdange, L-7220 Luxembourg [tel: ; e-mail: sophie.neuenkirch@uni.lu]), **Family Memory and Future Expectations in Luxembourg,** *International Sociological Association, Gothenburg, Sweden,*

¶ In my paper I will show changing perceptions of the past & present and different future expectations within families as expressed in biographical narratives & time-lines drawn in an interview context. The paper bases on research conducted in Luxembourg within the framework of an international comparative research project (USA, Germany, Luxembourg). Its objectives are to examine how specific memories & future expectations are being narrated by different generations of a family & how they are communicated between family members. In this project interviews with three-generational families are conducted, i.e. with one representative of each generation individually & a family conversation where the same three members of this family are present & interact. The individual interviews deal with questions regarding the person's own biographical course as well as the biographies of the older or younger generation within the same family. Members of different generations will be asked to compare the future expectations that were important for their own biographical course with those of the previous and/or subsequent generations. With regard to globalization processes, a key element is the observation of the dynamic interactions between interpretations of the past & expectations of the future. The project addresses Questions such as: which meta-narratives of progress or loss are used to explain the change of biographical outlines? In my paper, I will focus on the situation in Luxembourg, a country where society has seen deep demographical changes during the last thirty years caused by an increase in immigration and structural changes.

Neuhold, Petra ([e-mail: petra.neuhold@gmx.at]), **Contesting Spaces of Diversity. Polish Immigrants in Toronto and Vienna,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the context of neoliberal restructuring the competitive city increasingly converts cultural diversity into locational advantage. Using the examples of two cities the paper looks at neoliberal strategies of governing through diversity & shows how these policies hierachize social relations to attract capital & to maintain social integration. How does the city try to manage diversity? And how are these new forms of diversity management negotiated & contested? The concrete example of Polish immigrants in Vienna & Toronto shall illustrate the contradictory and conflicting positions held by members of the community along the categories of class, race & gender as well as their transnational and spatial practices. The paper focuses on contested spaces of diversity & argues that the struggle for cultural representation of Polish elites are partially in conflict with the simple commodification of "Polish culture" as a branding strategy for gentrified neighborhoods. The spatial reconfiguration within neoliberal globalization are pivotal to understand the augmenting relevance of diversity as a locational advantage & as branding strategies within processes of gentrification in competitive cities. Urban restructuring fundamentally shapes the everyday experiences of immigrants as well as their cultural politics. However, they are not only the footprints of global economic developments & urban restructuring processes, but also a result of the struggles & the practices of (transnational) immigrants themselves, who became central forces in the urban arena & its politics.

Neves, Barbara Barbosa & Amaro, Fausto (CAPP, ISCSP, Technical University of Lisbon, Polo Universitario do Alto da Ajuda, Rua Professor Almerindo Lessa, 1300-663 Lisboa, Portugal [e-mail: barbara.neves@iscsp.utl.pt]), **Social Capital or Social Alienation? Portuguese Youth and Social Networking Sites,** *International Sociological Association, Gothenburg, Sweden,*

¶ A debate is currently taking place about how social networking sites are affecting the lives of young people. Some studies conclude that social networking sites are enhancing youth sociability & civic engagement, while other studies conclude that they are causing social isolation, addiction, &

risk. In the intersection of these two perspectives & trying to overcome a manichaeist standpoint, we conducted an exploratory study in Portugal. In our study we wanted to analyze how the Portuguese youth were using social networking sites, & the impact of this usage on social capital. To answer our research questions, we conducted an online survey of 200 users of hi5 & facebook–the most used social networking sites in Portugal; & 20 in-depth interviews. We assessed bonding and bridging dimensions of social capital, addressing social interaction & civic engagement. The findings & implications of this study are discussed herein.

Neves, Dulce Morgado (ICS- University of Lisbon, Av. Professor Aníbal de Bettencourt, 9 1600-189 LISBOA Portugal [tel: +351 217 804 700; fax:; e-mail: dumorgado@gmail.com]), **Finding Plurality in The Norm: Some Theoretical Challenges in the Study of Sexual Conducts and Moralities,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper spawns from an ongoing research on sexual normativities among heterosexual men & women from different generations, and its aim is to analyze the adequacy of the current theorizations on sexuality to the study of mainstream heterosexual patterns of sexual conducts & moralities. The relation between the theory of sexuality & the political context (deeply influenced by feminist, gay & lesbian demands) where it emerges is one of the reasons, pointed out by authors as Jackson (2008), to justify the analytical centrality of the more uncommon sexual behaviors & lifestyles. In fact, by criticizing the heteronormativity & the dominant sexual paradigm, most theoretical approaches of sexuality provided the disclosure of (and at the same time, the fascination with) novel & potentially subversive sexual practices, and, somehow, ignored the analytical validity of the most conventional forms of sexuality, as if the ordinary day-to-day relations (that most people perform) could not hold signs of variety, pluralism or change. This paper wants to restate the analytical interest of the ordinary patterns of sexual relations, arguing that the most common (hetero)sexual arrangements & values can be more than a norm constituted against other forms of sexuality (1); & that sexuality, as part of our mundane & social life, reclaims an analysis free from ideological postulations (2). In this way, we purpose an incursion to some theoretical approaches that might help us to understand the relation between societal & individual meanings of sexuality & to conceptualize intimacy as a syntax socially generated & individually reflected. With a special focus on the discursive dimension of the sexuality, this paper intends, therefore, to suggest a plural theoretical framework to address the complexity of the sexual conducts & moralities.

2010S01873

Ngai, Ngan-Pun, Ngai, Sek-Yum & Fang, Wei (The Chinese University of Hong Kong, Hong Kong, China [tel: 852 - 26097494; fax: 852 - 26035018; e-mail: npngai@cuhk.edu.hk]), **Revisiting China's Youth Policy,** *International Sociological Association, Gothenburg, Sweden,*

¶ The increasing economic, societal, technological & global changes have significantly affected China's development of youth policy over the last three decades. These changes have influenced the values, attitudes, behaviors, & lifestyle of young people which bring about novel youth needs & youth problems that must be satisfied or intervened by effective youth policy. This paper examines the current youth policy in China & discusses its significant impact on the development of young people. The success of youth policy must be able to take into account the political reality & the rapid changes in society & in young people. The enquiry focuses on the theoretical foundation of youth policy, the youth needs & the policy process - policy formulation, implementation, monitoring & evaluation. Results show: 1) the ideological-political basis of youth policy has undergone a critical challenge that demand for pragmatism & multi-dimensional approach; 2) the development of youth policy has to take the needs of young people into account, such as education & training, career development, emotional development, moral development, etc; 3) the youth policy process has to be strengthened by taking the various stakeholders into consideration, & developing a systematic system for formulating, implementing, monitoring and evaluating youth policy; & 4) the role of the Chinese Communist Youth League in the policy process is undergoing critical challenges due to rapid social changes. The opportunities and challenges for future development of youth policy in China will also be discussed.

2010S01874

Ngai, Steven Sek-Yum, Cheung, Chau-kiu & Ngai, Ngan-pun (The Chinese University of Hong Kong, Department of Social Work, The Chinese University of Hong Kong, Shatin, New Territories, Hong Kong [e-mail: syngai@cuhk.edu.hk]), **Factors Conducive to Mutual Aid among Young People with Emotional and Behavioral Problems,** *International Sociological Association, Gothenburg, Sweden,*

¶ Encouragement of youth mutual aid is growing in momentum with the shift to a strengths approach to youth work that emphasizes building on service users' strengths & resources. Mutual aid is regarded as particularly useful in helping young people with emotional & behavioral problems because the provision of professional youth services is usually short-lived due to budget constraints. As such, the benefit of youth services tends to decay with time, unless former service users maintain mutual aid among themselves. Assuming this, young people would benefit from mutual aid, but this assumption has not been tested by empirical data. In addition, it is not clear how youth work can help sustain this mutual aid, as uncertainties arise due to the tension between youth workers & mutual aid groups in the planning & rendering of support among group members. Clearly, a delicate balance is required to optimize the interaction between youth workers and mutual aid group members. Some knowledge about ways to promote mutual aid among young people may be obtained from various other social services, but this nevertheless, will remain speculative without empirical verification. The present paper aims to provide empirical data about factors conducive to mutual aid among young people. Based on information from a survey that samples 400 young people with emotional & behavioral problems, it shows how youth work facilitates mutual aid among the aforementioned youth population in maintaining balanced coordination, empowerment, altruism, continuity, & sustainability. It also clarifies issues and doubts about the effectiveness & feasibility of youth mutual aid in view of evidence that adult input is required, & that young people are not capable enough of helping themselves. Because young people's peer grouping tends to aggravate problems through learning of problematic attitudes & behavior & the diffusion of positive responsibility, youth work input is necessary to negate undesirable influences arising from the peer group. Specifically, it is important to prevent youth with emotional & behavioral problems from forming antisocial, self-defeating, or self-injuring groupings by promoting socially desirable social capital in mutual aid youth groups.

2010S01875

Nico, Magda L. (CIES-ISCTE, Lisbon University Institute, Lisbon, Portugal [tel: 00351965546272; e-mail: magdalalanda@gmail.com]), **The Unfinished Biographic Transition: (De)Synchronization of Housing, Professional, Conjugal and Parental Careers in the Transition to Adulthood and the Portuguese Case,** *International Sociological Association, Gothenburg, Sweden,*

¶ Following the life course approach, this research used a biographic-interpretive methodology, which allowed the analysis of the relation between the "life lived" & the "story told" of 60 Portuguese young adults aged 26 to 32. For this purpose, the written record of the different events of the conjugal, housing, professional & parental careers were analyzed in terms of their chronology & composition of the transitional density & their order, simultaneity & duration between the different events. On the other hand, but in the same interviewing moment, the young adults gave rational, emotional & subjective causal reasons for their unique trajectory, attributing meaning to the different life choices, producing an appreciation of the consequences & self positioning themselves in the structure of opportunities and constraints in the access to their life goals. Portugal has been perceived in the Portuguese academia as a product of an unfinished modernity. In an era of a Biographical Transition, the ongoing transitions to adulthood in Portugal also provide evidence of an unfinished process, by presenting a variety of trajectories in what could be seen as a continuum between the flexible and "do-it-your-self biographies" & the enduring "tripartite" careers of life, strongly structured by age norms & social conditions & associated with the importance of family events. For this purpose, Portugal will also be characterized on the European context through the European Social Survey data on the "Timing and Organization of the Life Course" (2006).

Nicolas, Frédéric (Institut d'Études Politiques (Toulouse, France), Université Laval (Québec, Canada), Toulouse - Québec [tel: ; e-mail: frednico17@yahoo.fr]), **A grassroots perspective on the environmental movement motto "Think globally, Act locally": World Wide Opportunities on Organic Farms,** *International Sociological Association, Gothenburg, Sweden,*

¶ Over the last three decades, Think global, Act local has been the environmental movements' moto. As a moto, it has often been used automatically, as a rather conspicuous rallying slogan. Thinking with Jamison

[1990 ; 2001] & Yearley [1996] that environmental concern is a truly global concern (maybe the only one), we however would like to argue that thinking globally is not necessarily the way environmental movements choose to guide their actions at a local level. Two double-questions must be asked : 1) What does it mean to be global & what does cosmopolitism as a value add to the notion of social change, & to that of critical consumption in particular, in a globalised world ? 2) Do grassroots movements concerned with the degradation of the environment have to (and want to) be global, & what does this mean for critical consumption in the present era of environmental reform [Buttel, 1987] ? In order to answer these questions & find a path towards a sustainable future, we must make the distinction between grassroots & institutionnalised movements in the emergence of an environmental worldview [Jamison, 2001]. We would like to argue that institutionnalised movements still act as gatekeepers and eye-openers, whereas grassroots movements, far from only being NIMBYs are at the avant-garde of what Buttel called the environmental reform. For that matter, we suggest to define them as pathfinders, social & scientifc experimentation outside the institutionnalised boundaries of science being at the very core of this pathfinding. Our case study involves an organisation called World Wide Opportunities on Organic Farms, whose aim is to promote organic agriculture through a non-merchant network. It does so by putting organic farmers in contact with volunteers, the latter working a few hours a day for the former. In exchange for this "free" work, farmers provide food & shelter to the volunteers. The scope of the organisation is global (on the 5 continents, through more than 30 national organisations & 50 independent organisations) & more than 5000 farms worldwide are registered as hosts. A first field study in France (March 2007 - July 2007) enabled us to notice the true paradox existing between wwoofers and what they consider to be a sustainable way of life, & the institutionnalized, rationalised & globalised structure within which lie their activities. A second field study in Québec (June 2009 - September 2009) lead us to consider the centrality of knowledge in making claims about sustainable ways of life : an important number of the farmers observed & soon to be interviewed are or have been involved in institutionnalised ways of making and dealing with knowledge (scientists, researchers, experts, teachers, social workers, agronomists,…) & have found a way to maximise their knowledge in a practical & pragmatic way outside the academic field. We think the notions of career & trajectory are perfectly suited to answer the questions raised above. In highlighting the different trajectories of the wwoofers, we will be able to see whether or not their social, professionnal, political or even spiritual backgrounds influence the way they define their activities & consequently the way they think they are building a local sustainable future. Grassroots movements' new moto could thus be : Think local, Act local.

2010S01877

Nicolau, Michel (Unicamp; Humboldt Universität [e-mail: michelnicolau@gmail.com]), **Diversity and National Identity in Globalization: The Brazilian Music Case,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study investigates how the national identity operates nowadays and how it is articulated with other processes of identifications typical of the globalization, such as the regional & ethnic identities (which presupposes boundaries) on one hand, & the global identity on the other hand. Brazilian Music is a privileged focus for such an investigation. Since the beginning of the phonographic industry in the 20th century, it has always been discoursed as related to the national identity. Therefore, the changes on its recent discourse in the international market can reveal much about the new significations of the national identity. Having national & regional music export projects (like Brazilian Music Export Office, Music from Pernambuco) as its empirical object and the international music trade fairs & festivals as its empirical locus, this study concludes that the national identity of our time is discoursed through the motto of the diversity a breaking the old "one people, one culture" system a articulated in a global dimension. This new situation brings new forms of hierarchies & control, according to which, some identities are more "valuable" than others & may be legitimated as global. How these controls & hierarchies operate is also the focus of this work.

2010S01878

Nicolosi, Guido (University of Catania [e-mail: gnicolos@unict.it]), **Body, Technology and Social Practises,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper presents a transdisciplinary analysis on body & technique. In order to achieve this goal I preliminarily compare two scientific paradigms opposing each other in explaining the role of genome in life processes. The first one is top-down & basically deterministic in postulating that genotype governs body and behaviours. The second, gaining ground in the last twenty years, claims the extraordinary plasticity of the phenotype & the relevance of the body-environment mutual interchange. Here, Man is a real & sensuous being-in-the-world. We consider the raise of this approach as a crucial paradigm shift I call the "epigenetic turn". We argue this shift lays the foundations for a new body theory cutting across life sciences & with outcomes in socio-anthropology. In particular, the "epigenetic turn" has its more relevant theoretical edge within the ecological niche construction theory. This latter, introducing a revolutionary dynamic within scientific evolutionary theory, shows that organisms do not simply adapt to their pre-existing environments, being themselves active agents orientated to modify & co-construct the world where they live. Thus, within this framework, in the second part of the paper, technique (a body skill) will be considered as the main anthropological feature leading us beyond the nature/nurture debate

Niedenzu, Heinz-Jürgen (Department of Sociology, University of Innsbruck, 6020 Innsbruck, Austria [e-mail: Heinz-Juergen.Niedenzu@uibk.ac.at]), **The Cognitive Scheme of Axial Civilizations,** *International Sociological Association, Gothenburg, Sweden,*

¶ Shmuel N. Eisenstadt conceptualizes the organizational forms & the dynamics of axial civilizations as a complex interplay of power structures & symbolic orders (worldviews; religion). Accordingly, the transformational potential of the axial age civilizations is primarily established endogenously from the tension between the given mundane order & the idea of a transcendent order. Eisenstadt further supposes that the transcendent order makes available basic premises for developing the cultural & social order. Considering the battle for the institutional order of society, analytically an autonomous role is granted to the cultural evolution, despite the fact that their carrier groups are bound up with the carriers of the political-social power structures in many different ways. Eisenstadt rejects an evolutionary stage model. Nevertheless, he accepts evolutionary tendencies within which institutional & symbolic potentials are reflected in historically bound characteristic forms, although multiple institutional forms. While Eisenstadt supports this claim in regard of the social and cultural processes with many materials, he does not bring out the underlying cognitive structure & logic of action. By applying the historico-genetic approach of Günter Dux I will therefore discuss & illuminate the logical structure of the explanations that are included in all premodern worldviews beginning from the pristine mythologies to the sophisticated forms of polytheistic and monotheistic religions. Only by doing that it will be possible to understand reflexivity as one of the core features of the axial civilizations.

Niemelä, Kati M (Church Research Institute, P.O Box 239, 33101 Tampere [tel: 358 40 754 1551; fax: 358 3 3123 3450; e-mail: kati.niemela@evl.fi]), **Ministry in Change a Changing Role of the Clergy in Finland,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper analyzes work orientation among the clergy in the Evangelical Lutheran Church of Finland (ELCF). ELCF is a majority church with 80 percent of Finns belonging to it. Why have the members of the clergy in ELCF chosen that career & what do they find important in their work? What kinds of changes have occurred in their orientation & how do these changes reflect religious change & secularization? The paper analyzes changes in work orientation during the past years & differences between age cohorts & scrutinizers the differences in work orientation between male & female ministers. Research suggests that there is a shift towards more individualistic orientation. There are more members of the clergy who have grown up in a rather secular setting with no clear connection to the church. The acceptance of female ministry in 1988 has itself been a great change, & the growing number of female ministers has changed the basic profile of a minister. The paper is based on surveys conducted among the members of the Clergy Union in 1998, 2002, 2006 & 2010 (N=about 1,000 each) & on surveys conducted among applicants for studies in theology in 1997 & 2010 (N=about 500 each).

Nieroba, Elzbieta & Czerner, Anna (Institute of Sociology, Opole University, ul. Katowicka 89, Opole, Poland, 45-061 [tel: +48774527480; fax: +48774527489; e-mail: bikka@o2.pl]), **Heritagization of Tourism,** *International Sociological Association, Gothenburg, Sweden,*

¶ We are used to assume that learning other cultures through tourism is usually simplified & selective. It applies even to so called "cultural tourism". Tourism as an activity in economical dimension is blamed for commodification of local cultures. Cultural events, local products & other distinguishing features are used in promotional campaigns & transformed into souvenirs. Commercialization also affects relations between hosts and visitors, transforming traditional, authentic hospitality into pure economic transaction. Tourists are altering the environment they are visiting, so even if after some time the flow of tourist weakens significantly, the natural & cultural environment as well as the residents' attitudes remain transformed. Development of the heritage industry increases commercialization & commodification of the past. Commercial exploitation of the past is associated with the processes of esthetization, pop-culturalization and mediatization. We will concentrate on showing examples of above mentioned phenomena in Europe, especially in Polish tourist industry, which at present is looking for expressive & coherent strategy of tourism promotion. The experts struggle with a problem of creating an attractive image of Poland as a modern country for foreign tourists, & at the same time strongly connected with tradition & cultural heritage.

Niijima, Noriko (Department of Animal Health Technology, Hachioji, Tokyo, 192-0364 [tel: +81426530901; fax: +81426530902; e-mail: noriniji@gmail.com]), **A "Cat" Over a Cup of Tea? Urbanized Leisure with Animals In Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ Background: Given the globalization of interest in human-companion animal relations, there is a paucity of sociological studies on people's attitudes toward such animals in society. And almost nothing set against people's attitudes toward animals at urbanized leisures, despite the recent explosive growth of both animal-friendly facilities & animal-working facilities in Japan. This study intend to find out Japanese people's attitudes (later behavior) toward animals at leisures, focusing especially on Japanese neko-café (cat-working cafe, where users can have a cup of tea & play with cats at the same time) & its sociological impacts on society & humans as well as on the animals "working" there. Phase I of the study is conducted toward samples in college & universities in Tokyo & Kanagawa, by questionnaire surveys of adults, who were either users, non-users of, or part-time workers at neko-cafés. Phase II of the study collect & compare behavioral data from direct observations of interactions & interviews of adults with cats in neko-café in Tokyo. Methods: Phase I:Three-page, standardized questionnaires, taking 5-7 minutes to complete on a voluntary, anonymous basis, are distributed to adults: 18+ year-old students auditing in colleges and universities in Tokyo & Kanagawa. The questionnaires included historical data on the person & attitude questions. Data were coded & analyzed. Phase II: The samples are either users or workers, collected in cafes, randomly. Results: Respondents tend to approve of using animals at leisure facilities, when they have images for the animals not to suffer from "working" there.

Nilsson, Kjell, Ring, Magnus & Sandberg, Johan (Department of Sociology, Box 114, 221 00, Lund, Sweden [e-mail: kjell.nilsson@soc.lu.se]), **Social Welfare in China and Vietnam: How New Welfare Models Are Being Developed in a Globalised World,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper discusses the social security systems in China & Vietnam as descriptive examples on the development of social welfare models in a changing Asian context. This is done in order to develop a methodological approach that will enable us to grasp overarching "macro" developments as well as individual experiences thereof. The main objectives is to discuss the possibilities of a comparative analysis of social security systems in China & Vietnam, highlighting how different welfare models are being developed & transformed in transitional Asian states, while being influenced by the globalization of social policy. Although China & Vietnam are both countries in transition from a similar system to market economy they are often referred to as following different transitional paths. We discuss the social security & social assistance programmes in the two countries in order to identify ways in which these programmes relate to ideological frameworks as well as to historic & contemporary institutional configurations of welfare provision through the state, market & family. However, when applying macro-oriented theories on the micro level, existing analytical models (such as regime types) do not fit very well with the mixture of welfare provisions & redistributive mechanisms of many "developing countries". To transcend this, we will go beyond a mere comparison of "regimes" by suggesting an inclusion of actual modes of action on the recipient-level in respective country. The paper also discusses the methodological consequences of such

Nilsson, Magnus (NISAL, Linköping University, Liu Norrköping, 601 74 Norrköping, Sweden [e-mail: magnus.j.nilsson@liu.se]), **"Our elderly" and the social construction of older people in the public sphere,** *International Sociological Association, Gothenburg, Sweden,*

¶ Ageism has to a large extent been studied, & explored theoretically, from the viewpoint of psychology & social psychology, as attitudes & behaviours of individual actors. Negative representations of older people are often understood as individual attitudes based on outdated knowledge & fear of one's own frailty, instead of as part of the social landscape. The aim of this paper is to look at ageism & the representation of older people from a different perspective. In this paper I study the construction & use of "older people" as a social & linguistic category in the context of the public sphere in Sweden. More specifically the paper will discuss the relation between the category of older people & notions of society. The paper is based on a larger study on the social construction of older people as a category in three interrelated publics; newspapers, a pensioner's party & a government investigation on the future of old age policies in Sweden. One of the central gains in conducting research on how categories are used in context a is that it is possible to see the how categories, such as older people, & processes intersect & interact with each other. In this paper I show how "older people", as a category, is intertwined with notions of the nation as an imagined community. Through an analysis of the use of the expression 'our elderly" in the public sphere, the notion that older people are understood as the other is problematized.

Nimako, Kwame & Cain, Artwell (NiNsee, Amsterdam [tel: +31 20 5688568; fax: +31 20 5688568; e-mail: k.nimako@ninsee.nl]), **Conceptual Clarity, Please!,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper reflects on the way the concepts of "slave" & "trade" have been used in the study of the Trans-Atlantic Slave Trade and Slavery. There seems to be a disjuncture between the concepts of slave & trade & the empirical basis for those concepts. The concept of slave suggests that slaves were traded; we will argue that the empirical bases hereof are weak. The concept of trade is also based on collaboration theory. Here also we will argue that the empirical bases hereof are weak. Career historians depend or depended on archive material for their narratives. This is laudable; but the issue of slavery goes beyond the archives. Narratives are shaped by power, "culture", & self-image. The information on the "slave" trade & slavery in the archives was obtained & preserved for a variety of purposes, including the maintenance of the racial hierarchy, & can therefore be used for the study of social formation. For example, it took some time for the English speaking world to make a distinction between the words "slave" & "enslaved". This act required conceptual disobedience. At the turn of this century, the Afro-Dutch community attempted a similar act of conceptual disobedience by introducing the concept of "enslaved" into the Dutch discourse. Such a concept could not be found in the Dutch lexicon so they coined the phrase "tot slaaf gemaakt", meaning literally, "those who have been made slave"; this is more a phrase than a concept. Drawing on the Dutch experience, we will argue that the Dutch speaking world still does not have an equivalent of "enslaved". We will argue that this is not a matter of semantics or perspectives; neither is it a matter of using present morality to judge past deeds. This is all the more so since people did not voluntarily give themselves up to be enslaved in the age of slavery; this factor should be the beginning and the end of the slavery narrative. Finally to avoid conceptual inflation, we plead for conceptual clarity; because if a concept means everything, in the end it means nothing.

2010S01886

Nimrod, Galit & Rotem, Arie (Department of Communication Studies and The Center for Multidisciplinary Research in Aging, Ben-Gurion University of the Negev, Beer-Sheva, Israel, 84015 [tel: 972-3-6054961; fax: 972-3-5465822; e-mail: galitULn@zahav.net.il]), **External and Internal Innovation in Older Adults' Tourism,** *International Sociological Association, Gothenburg, Sweden,*

¶ Based on a national mail survey of 298 Israeli retirees, this study explored patterns of innovation (i.e., involvement in new experiences) in older adults' tourism. Results indicated that participants' involvement in new experiences during their last trip abroad was quite high, & identified two types of innovation: "external innovation", which included experi-

ences that were associated with the external environment visited; & "internal innovation", which consisted of experiences that were associated with some internal processes. Some participants, who experienced "external innovation," also experienced "internal innovation." However, no group of tourists experienced "internal innovation" only. The two types of innovation identified in this study resembled the two archetypes of innovation in later life, described in the recently suggested Innovation Theory of Successful Aging (Nimrod, 2008; Nimrod & Hutchinson, 2010; Nimrod & Kleiber, 2007). The "external innovation" seemed to fall into the category of self-preservation innovation, & the "internal innovation" seemed to reflect the self-reinvention innovation. Consequently, the study provided empirical support, based on quantitative data, to the Innovation Theory, which was derived from qualitative data. Moreover, since those who experienced "internal innovation" also experienced "external innovation," the study suggested that "internal innovation" may be triggered & catalyzed by "external innovation."

Nina Pazarzi, Eleni (Department Of Business Administration, University Of Piraeus, Piraeus, Greece, 18534 [tel: +302104142190; fax: +302104142339; e-mail: enina04@yahoo.gr]), **Advertising Audiovisual Creation and Social Networks in Greece,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper presents an analysis of de advertising audiovisual production through the prism of the systemic thought. The objective of this paper is to support the basic hypothesis that the advertising audiovisual code is the result of established professional networks, set up by the "contemporary intellectuals of the civic milieu" & in particular certain social groups and individuals that serve mainly the "genuine industrial headquarters" of the postmodern era. Even though that the individuals that form these groups consider themselves "progressive revisionists" & "avant-guard cultural intermediaries", their "artistic" representations are characterized by patriarchal values. In this respect, we attempted to reveal the importance of professional networking & "synergy" in the arrangement of the biased advertising audiovisual code as far as gender is concerned. The essential outcome of this approach is the assertion that the study of social representations & the cultural production can be redefined in another interdisciplinary dimension by the systemic theory & the assistance of the social networks" theory.

Nina Pazarzi, Eleni (Department Of Business Administration, University Of Piraeus, Piraeus, Greece, 18534 [tel: +302104142190; fax: +302104142339; e-mail: enina04@yahoo.gr]), **Business Social Responsibility in the Era of Globalization: The Development of Social Responsible Practices in Greece,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the first decade of the 21st century, business social role as an expression of voluntary actions, is becoming an important priority for all organizations. The ongoing changes in the content & the goals of business social role are the result on the one hand of the developments in the new era of globalization & on the other hand on the growing expectations of society from business. In the meantime, there is a debate about whether & how to formalize institutional business social responsibility requirements for companies. Since social responsibility reflects diverse values, traditions & cultures, it takes different forms in societies. The incorporation of the idea of social responsibility is a challenge for the business world to contribute to the social cohesion and development which in turn leads to the long term profit of businesses. Practices developed in Greece will be examined and discussed in this presentation by using research data.

2010S01889

Nina Pazarzi, Eleni (Department Of Business Administration, University Of Piraeus, Piraeus, Greece, 18534 [tel: +302104142190; fax: +302104142339; e-mail: enina04@yahoo.gr]), **Recent Migration Experiences in Greece,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper surveys recent studies and presents the characteristics of recent migration phenomenon in Greece. Since Greek society has become a multi-cultural society during the last twenty-five years, the socio-economic integration of immigrants presents difficulties, some of which are common in other southern European societies. The analysis of trends, impact, issues, gender differences and aspects of quality of time of the migration experience in Greece give us an explanation of the Greek case. The development of the Greek immigration policy since 1991 shows the change from a traditional immigrant-exporting to a destination country. The paper concludes with the challenges of the multi-cultural society during the twenty-first century.

2010S01890

Nishihara, Kazuhisa (Sociology, Nagoya University, School of letters of Nagoya University, Furo-cho, Chikusa-ku, Nagoya, Japan, 464-8601 [tel: +81-90-2449-5261; fax: +81-52-789-2273; e-mail: vzs00645@nifty.com]), **The Development of Japanese Sociological Theory and its 'Responsibility' to the Asian Future,** *International Sociological Association, Gothenburg, Sweden,*

¶ Japanese sociology began around the 1880s with the introduction of Spencer's sociology, and before long Comte's 'social organism' theory was argued but re-interpreted as 'nation organism' by the then sociologist. In the first half of the 20th century M. Weber and G. Simmel were also introduced into Japan. In addition, field researches in East Asian regions by Japanese anthropologists and sociologists had been carried out in those days. The postwar Japan could be roughly divided by four historical stages, the stages of 1) democratization: 1945-, 2) economic growth: 1960-, 3) consumer society: 1975-, and 4) globalization: 1990-. Just after World War II, while Japanese sociologists focused on investigating domestically into the peculiarity of Japan with the reflection on 'Empire Japan,' only a few sociologists turned their attention to world society. In the second stages, Parson's sociology was introduced and the problems of modernization were argued by using his theory. At the same time, Marxist sociology had become popular. In the third stage, the other trends such as phenomenological sociology and symbolic interactionism gained power. At the last decade of the 20th century 'integrated sociological theories' and the discourses of postmodernism were investigated. Now in the 21st century, however, some new types of sociology corresponding to the global age are paid attention through the historical events, i.e. end of the Cold War, start of EU, development of China. They investigate the situations beyond the nation-state. So, the fundamental concepts of sociology such as nation, citizenship and society itself are re-examined. Recently, Japanese Sociological Society officially started the academic exchanges with the other Asian countries. The 'internationalization' of Japanese sociology becomes an urgent task.

Nishimura, Junko (Department of Sociology Meisei University, Tokyo, Japan, 191-8506 [tel: +81-42-591-5392; fax: +81-42-591-5392; e-mail: nishimura-junko@soci.meisei-uac.jp]), **Women's Employment and Mental Health in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ The majority of Japanese women quit working at marriage or at childbirth, & re-enter the labor force as part-time employees when their children start school. This study tries to explore the impact of their employment on mental health using panel data. Previous studies which examine the relationship between employment and mental health in Japanese women heavily relied on cross-sectional data. They found no significant differences in women's depression by their employment status. However, there are some limitations in those analyses; cross-sectional analyses cannot control respondent's initial levels of depression, nor they cannot examine the effect of change of women's employment status on mental health. Panel data analyses can overcome those limitations. Data used in this study is Japanese Panel Survey of Consumers. Women who are married & whose youngest child is 0-6 years old are selected. The result of fixed effect model showed that part-time employees experience higher levels of depression as compared to housewives, which indicates that re-entering the labor force as part-time employees put a psychological burden on women. This result is rather contradictory to our accepted perception that part-time employment is the way of working which enables women to balance work & family.

Nishizaki, Nobuko (Fukushima University, Kanayagawa1 Fukushima-shi Japan [tel: ; e-mail: nishizaki@ads.fukushima-u.ac.jp]), **Wildlife Conservation and Decentralization–A Case Study of Ethiopia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since 1990s, conservationists have been compelled to redesign their top-down, state-centered conservation policies in an effort to move toward decentralization & the adoption of more local participatory approaches to simultaneously achieve conservation and rural development. However, the wildlife conservation strategies of most of African countries have continuously placed a higher priority on conserving the biological ecosystem.

Though community members are identified as some of the main actors in conserving the ecosystem, their roles are limited to the targets in environmental education, profit beneficiaries, or special laborers. Most of the local people are not regarded as decision makers who control natural resources– especially when they affect the ecosystem by using the natural resources in an "unsustainable" manner. I have conducted the research on people - wildlife relationships by anthropological approaches in the conservation areas, Ethiopia from 1996. The objective of this paper is to describe the local "needs" and community-based approaches to wildlife conservation & to discuss how conservationists should integrate livelihood into community-based wildlife management planning; by analyzing the case studies in Ethiopia. Further, the study examined the transition of wildlife conservation policies after the decentralization.

Nistor, Laura (Sapientia University, Department of Social Sciences, Cluj-Napoca, Romania, 400112 [e-mail: mailtonistor@yahoo.com]), **Environmental Values And Attitudes In Romania. A Longitudinal and Contextual Analysis,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper brings a number of evidence about the post-1990 evolutions and the actual state of Romanians' environmental values and attitudes. Data are based on available waves of the European Values Survey (dependent variables: attitudes towards financial sacrifice for pollution prevention), Eurobarometer (dependent: attitudes concerning pollution, environmental values), respectively smaller scale surveys undertook in a Romanian city & town (dependent: attitudes towards pollution & financial sacrifice for pollution prevention & eco-conscious consumption). Empirical evidence based on regression analysis suggest that the profile of environmentally concerned Romanians became clearer as we departed from the 1990s, but mostly in terms of social-demographical variables, while there are still important gaps in terms of more specific environmental perception, value, or attitude determinants of the considered dependent variables. This finding motivates the affirmation that Romanians' environmental belief system is fragmented & their environmental concern is much more grounded in their status than in their pro-environmental values.

Nizynska, Alexandra (University of Warsaw [e-mail: a.nizynska@student.uw.edu.pl]), **Pupil Master: Teacher, Mentor or Employer? Consolidation or Transformation of Non-Religiosity Among Younger Cancer Patients,** *International Sociological Association, Gothenburg, Sweden,*

¶ Background: It is said that both adolescent & emerging adulthood is a time of religious transformation & consolidation. The same is said about life-crisis such as serious illnesses. But in a secular society religiosity may take different forms & expressions than in a more religious setting where most of the study in religiosity during illness has taken place. Aim: In this paper I will show how young Danish cancer patients view their non-religiosity & atheism as something that can be negotiated & changed. As such their religiosity is present & non-present at the same time. Religion is a matter of personal choice & something they can draw upon. In my study of young Danes with cancer I will try to explore how the secular & plural society influences the patients' religiosity and create a two-dimensional religiosity. Thus the patients' religiosity as outlined above may be seen as a result of both age and the surrounding society's secularity. Based on theories about religiosity & secularization in the contemporary society I will discuss whether or not we are to expect a religious transformation and change among these younger Danish cancer patients. Method: The results are based on a qualitative study of 21 young severely ill cancer patients' religiosity & existential thoughts during their treatment at a leading hospital in Copenhagen.

Noboa Silva, Alejandro (Asociación Iberoamericana de Sociología de las Organizaciones, C/ Rector Royo Vilanova nAo 10 portal 8, 1AoB. 28040 Madrid. España. [e-mail: anoboa@unorte.edu.uy]), **Gestión pública local: el caso de los presupuestos participativos de Salto y Paysandú (Uruguay)** (Local Governance: The Case of Participatory Budgeting in Salto and Paysandu (Uruguay)), *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ Las diferentes modalidades de implementación de los presupuestos participativos dan lugar a impactos distintos en sus poblaciones. Los casos que nos ocupan tienen diferencias importantes en sus estrategias de aproximación: concursos por un lado y búsquedas de consensos por otro. Además de características históricas de las sociedades a las que acceden también distintas y que promueven acciones diferentes en los actores y resultados también distintos. El departamento de Paysandú cuya sociedad tiene un perfil de participación relevante y una densa red de organizaciones de la sociedad civil y el departamento de Salto donde la red social es más débil. En el primer caso se diseñó una propuesta concursable de proyectos que fueron evaluados y seleccionados por el Municipio, en tanto en Salto se promovió por parte de la Intendencia la construcción de consensos en torno a proyectos comunes. Las implicancias organizacionales, sociales y psicológicas de tales procesos es lo que se trata de analizar en la investigación, observando ventajas y desventajas de las propuestas y sus resultados. Para ello se realizaron 40 entrevistas entre los actores que participaron de los procesos recogiendo información sobre las diferentes dimensiones de los posibles impactos de los procesos mencionados.

2010S01896

Noe, Egon & Alrøe, Hugo F. (Department of Agroecology and Environment, Aarhus University, PO Box 50, 8830 Tjele, Denmark [tel: +45 8999 1207; e-mail: egon.noe@agrsci.dk]), **The Problem of Problem Making - A Perspectivist Path to Problem Solving,** *International Sociological Association, Gothenburg, Sweden,*

¶ The problem of problem-solving in terms of integrating scientific disciplines is also a problem of problem-making. In order to analyse how different disciplines can contribute in solving complex problems, we first have to analyse how problems come into being as problems. Using the semiotic concepts of Charles S. Peirce, we distinguish between the dynamic or 'really efficient' problem, which our problem-solving efforts are directed at, & the immediate problem as it is perceived & represented in a certain cognitive system or perspective. A dynamic problem is an irritation; like an itch, a pain or a general discomfort. Before any problem solving can take place, the problem must be observed and constructed as a specific, immediate problem. But different disciplines necessarily see different types of immediate problems due to their different methods & instruments of observations, different concepts, & different concerns. There are thus two kinds of problems in integrating different disciplines in problem solving: that different disciplines will construct different problems, & that different disciplines will observe a given problem from different perspectives & therefore provide different solutions. These problems can only be adequately addressed in second order problem-solving processes, polyocular processes that observe & communicate the observations of disciplinary, first order problem-solving processes.

2010S01897

Noelke, Clemens (University of Mannheim, MZES, A5, 6, 68159 Mannheim, Germany [tel: +49 6221 181 2816; e-mail: cnoelke@mzes.uni-mannheim.de]), **Employment Protection and the Distribution of Job Security,** *International Sociological Association, Gothenburg, Sweden,*

¶ European countries differ in how labor market risks are distributed among different demographic groups. Over the past four decades, young people in particular have been affected by rising unemployment and spreading temporary employment. This paper addresses the causes of age-based inequalities in job insecurity and tries to explain their evolution across European countries. The empirical analysis focuses on the causal effects of a particular set of legal regulations, employment protection legislation. It draws on data from the European Union Labor Force Survey for 15 Western European countries for the period from 1992 to 2006, as well as aggregate data from 21 OECD countries from 1985 to 2007. Using differences-in-differences, we estimate the effect of changes in employment protection legislation on the distribution of unemployment risks and fixed-term employment between young and adult workers. The analyses distinguish between changes in job security provisions on regular contracts as well as regulations on the usage of temporary contracts, and assess whether the relationship between both types of regulations and age-based inequalities varies across genders and education groups as well as institutional contexts.

2010S01898

Noelke, Clemens & Horn, Daniel (University of Mannheim, MZES, A5, 6, 68159 Mannheim, Germany [tel: +49 6221 181 2816; e-mail: cnoelke@mzes.uni-mannheim.de]), **Vocational Education and the Transition From School to Work in Post-Socialist Hungary, 1992-2006,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper, we analyze the changing labor market prospects of young people with secondary education in post-socialist Hungary. Hungary has maintained a strong vocational orientation in secondary education. In

1990, lower vocational schools, combining school-based vocational education with workplace-based training, represented the modal education group among youth entering the labor market. In the following years, lower vocational schools came under pressure to adjust. Employer participation in training of vocational students diminished, which lead to substitution of firm-based with school-based training. Enrolment also declined, but stabilized in the early 2000s. In other (not only) post-socialist countries, vocational programs faced similar challenges, which raises questions about their viability & performance in a dynamically changing economy. The substitution of firm-based with school-based training observed in Hungary provides a unique opportunity to assess the relative efficacy of both approaches to training for vocational graduates' entry into the labor market. The empirical analysis draws on Hungarian labor force survey data from 1992 to 2006 to track eleven cohorts of young people in the first five years after leaving full-time secondary education. Controlling for observed & unobserved cohort & period changes, we assess whether the substitution of school-based with firm-based training has had an effect on labor market outcomes of lower vocational graduates. We focus on access to employment & quality of employment (socioeconomic status, employment in skilled vs. unskilled jobs) as main outcomes.

2010S01899

Nogués-Pedregal, Antonio M. & Carmona-Zubiri, Daniel (Universitas Miguel Hernández, Elche, Spain, 03202 [tel: ; e-mail: amnogues@umh.es]), **History & Meanings in Tourism Contexts. The Case of a Two World Heritage City.,** *International Sociological Association, Gothenburg, Sweden,*

¶ Tourism can be better understood if approached as one of the names of power. The premise states that the complex set of 'dispositifs' (fr.) called 'tourism' transforms territories & produces different chronotopes. Consequently, tourism induces different social & cultural processes and, mostly, it appears to be a strong mediator in the generation of meanings. Our study challenges both the conventional analysis of tourism image-making & the post-structuralist perspectives on discourses production. On the contrary, following Paolo Fabbri's semiotic turn, we approach tourism as a context through which meanings are mediated. To show this we analyse the case of the city of Elche. It is a medium-size town located in the worldwide known tourism destination of Costa Blanca & it is one the few places holding two UNESCO World Heritage declarations. From the 60's through the 80's Elche was the main shoemaking industry centre in Spain. In the 90's the crisis re-oriented the local policy-making towards tourism as an economic solution & 'culture' as a resource (i.e. cultural heritage). The statistical ethnography shows that tourism, under certain circumstances, becomes a powerful agent in how daily practices achieve their meanings (Max Weber's Sinn) and, as such, ought to be also studied.

Noll, Heinz-Herbert & Weick, Stefan (GESIS - Leibniz-Institute for the Social Sciences;, Mannheim, Germany, 68159 [tel: +49-621-1246-241; fax: +49-621-1246-182; e-mail: heinz-herbert.noll@gesis.org]), **Standard of Living and Subjective Perceptions of the Material Life Situation of the Elderly in Germany in Comparison,** *International Sociological Association, Gothenburg, Sweden,*

¶ Based on objective & subjective indicators the analysis focuses on the current state & changes in the standard of living of the elderly as well as their perceptions of the material life situation in Germany. This analysis addresses the current public debate on the material situation of the elderly within the broader context of the sustainability of the pension system as well as issues of intergenerational justice. While some consider the situation of the elderly as privileged a particularly compared to previous generations a others warn against the upcoming of a new poverty among the elderly. The analysis of living standards of the elderly does not only focus on income, but also includes expenditures, wealth & deprivations. A particular focus will be put on poverty in terms of income as well as expenditures. Additionally subjective indicators will be employed to explore how the elderly perceive and assess their material life situation. Our analysis compares the situation of the elderly with two younger age groups (20-54 and 55-64 years). For selected issues the situation in Germany will be compared with other European countries too. This study is based on German & European official micro data sets as well as national and international academic surveys.

2010S01901

Nomiya, Daishiro & Toscano, Emanuele (Graduate School of Global Studies, Sophia University,, Tokyo, Japan, 102-8554 [tel: +81-3-3238-3567; fax: +81-3-3238-3592; e-mail: d-nomiya@sophia.ac.jp]), **Continuity and Disjunction in the Global Social Movements: Japan and Italy,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of the paper is twofold. It seeks to identify the change in the discourse found in global social movements in the first decade of the 21st century; at the same time, it discerns the differences in discourse between European global social movements & Asian counterparts, using as cases global civil actions that took place around the G7/8 summit in 2000 & 2008 (Japan), & 2001 & 2009 (Italy). In Japan, locally-colored anti-military base claims were the major discourse of the 2000 civic engagement. The 2008 summit saw a rather different picture, with a relatively strong presence of global concerns, such as global peace & global environment. In Italy the major discourse in 2001 was wide open on the globalisation issue, mainly focused on environment, economic & financial divides between the North & South, & the European policies on migrants. In 2009 the major discourses were on the national issues linked with the Italian government policies facing global economic crises. In sum, from the turn of the 21st century to the present, discourse of global social movements is found diverse & varied. At the same time, between Italy & Japan, these movements have taken different trajectories.

Noordegraaf, Mirko (Utrecht University, Bijlhouwerstraat 6 3511 ZC Utrecht [tel: 0031 30 2538617; e-mail: m.noordegraaf@uu.nl]), **Risky Business. How Professionals and Professional Occupations Deal With New (Organizational) Issues,** *International Sociological Association, Gothenburg, Sweden,*

¶ Traditionally, organizational studies focus on professionals within organizational structures & how their work is managed. The sociology of professions mainly focuses on professionals & their occupational systems, ignoring organizational structures. This state of affairs is changing. Professionals increasingly work inside organizations, & their work is being "managed" more explicitly. Professionals can no longer escape organizations and management. This awareness, however, does not establish "real" linkages between professional work & organizations. Often, the managerialization of service organizations is accompanied by absent or conflictual linkages between professional work and organizations. Organizations & management tend to be seen as "alien forces", which professionals try to resist. Changes are underway, however. New circumstances stimulate professional occupations & professionals to take "organizing" more seriously. This paper identifies three issues that pervade professional work. (a) Professionals, especially younger ones, develop new work preferences & seek new service opportunities. (b) Professionals face new risks that have to be "managed" in one way or the other. (c) Professionals find themselves in changing situations, which call for new professional repertoires, such as inter-professional cooperation. Next, this paper explores how these organizational issues are (slowly) incorporated in professional practices, & how there are institutionally reflected, e.g. in educational programs. Empirically, the paper focuses on public services such as health care. Finally, this paper discusses implications. It shows how professionals & managers are (slowly) becoming allies.

North, Scott (Graduate School of Human Sciences, Osaka University, Suita-shi, Osaka, Japan 565-0871 [tel: +81 668338844; e-mail: north@hus.osaka-u.ac.jp]), **Leisure Strategies in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper analyzes leisure strategies through the ages in Japan. Leisure strategies order the ludic elements of life by making use of the same cultural toolkit of durable symbols, habits, & styles that Japanese use to order other kinds of social action. The habitual imposition of hierarchy means that the most common leisure strategies to emerge in Japan are passive. That is not to say that latitude for individual leisure has not arisen in concert with modernity. But such leisure autonomy as individuals have gained has been constrained by practices that promote moral uses of time, which is generally considered to be a collective rather than an individual resource. Contemporary corporate-based leisure and state-led development of appropriate national leisure are manifestations of this overarching cultural strategy. In addition, it is important to remember that leisure strategies in modern Japan have been an afterthought, a small part of the master narrative of national development. The results of these strategies are the persistence of a pre-modern sense of obligations & a comparatively weak sense of individual leisure entitlement.

Notten, Natascha, Kraaykamp, Gerbert & Konig, Ruben (Radboud University, Nijmegen, PO Box 9104, 6500 HE Nijmegen, the

Netherlands, [tel: +31 24 3612037; fax: +31 24 3612399; e-mail: n.notten@maw.ru.nl]), **Family Matters. A study of the intergenerational transmission of media taste.,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study scrutinizes the intergenerational transmission of media taste, employing the Family Survey Dutch Population (FSDP 2003, 2009) which contains information on 2052 Dutch respondents born between 1955 & 1984. The theoretical model underlying this study integrates research on family-related determinants of cultural capital (cultural reproduction research) with studies on individual differentiation in cultural & media preferences (lifestyle theories). By estimating structural (causal) equation models, we gain additional insights in the process of acquiring media taste. We examine the long-term effect of parents' television & reading socialization activities on their (adult) children's television and reading habits, controlling for parental socio-economic background and family composition during childhood, as well as children's own educational attainment. Preliminary results indicate that in predicting a person's media taste, both parental media socialization activities & a person's own cultural competency are highly relevant factors. A decomposition of total effects of parental media socialization activities on adult children's media taste into direct & indirect effects reveals that direct imitation is the main mechanism explaining differentiation in taste, whereas media guidance (sometimes via its effect on school success) plays a major role in mediating this imitation process.

Novellino, Maria Salet F. (National School of Statistics, Rua Andre Cavalcanti 106 - 20231-050 Rio de Janeiro, RJ [tel: 55 21 21428713; fax: 55 21 21424676; e-mail: saletnovellino@gmail.com]), **The Quality of Life of Adolescent Mothers in Brazil,** *International Sociological Association, Gothenburg, Sweden,*

¶ I am leading a research on Brazilian adolescent mothers' quality of life in which we are using secondary data from 2008 National Household Sample Survey conducted by the Brazilian Institute of Geography & Statistics. The variables selected were household's monthly income, sex, age, marital situation, position in the family (daughter, wife or head), their reproductive behavior (number of children born alive they had had), school attendance, schooling, employment status as well as the time dedicated to household work. We are considering as adolescent mothers those aged 15-19 who had children born alive. The data on adolescent mothers are being compared with those on female adolescents without children and, when possible, with male adolescents. The National Household Sample Survey does not collect data on male adolescents reproductive behavior but includes a variable 'number of hours per week spent on household work'. The purpose of this research is to analyze the inequalities among female & male adolescents considering that these inequalities are not just economical but cultural as well. We presuppose that good quality of life imply in fair income and opportunities for improving themselves, which include school attendance, job opportunities & time to leisure.

Nthambeleni, Ndanduleni (National Research Foundation, Mearing Naude Road, Brummeria, Pretoria East, South Africa [tel: +27 12 481 4182; fax: +27 86 616 5718; e-mail: Bernard@nrf.ac.za]), **The South African National Civic Organisation (Sanco): A "Two Tiered Social Movement",** *International Sociological Association, Gothenburg, Sweden,*

¶ This study expands our understanding of South African social movements through a study of the South African National Civic Organisation (SANCO), a body formed in 1992 as a national co-ordinating structure of regional & local civic associations. It contends that SANCO can only be understood as a "two-tiered social movement". The study draws on a Human Sciences Research Council survey, to which I contributed as a team member, on participant and non-participant observation, semi-structured interviews & primary literature & a case study of one SANCO branch, Alexandra. The focus of this survey was on the experience of SANCO's leadership both nationally & locally. The study makes two theoretical advances. First, it shows that Castell's model of 'identity' a which has three ideal types: resistance, project & legitimizing a can be reworked as a social movement life cycle. A project identity emerges with the formation of the United Democratic Front; SANCO's establishment in 1992 marks a move towards a legitimizing identity; a new resistance identity soon emerges within SANCO's ranks (but is contested by the leadership); & a more recent project identity is associated with the rise of Jacob Zuma. The cycle, however, has moved into new social space with branches shedding upwardly-mobile members & recruiting poorer people. This leads to the second innovation which I argued that with a national social movement, such as SANCO, we should distinguish different levels of organization, with the top (central leadership) and bottom (grass-roots activists) being the most important. Whilst SANCO's top leaders were largely co-opted by the ruling party, its activists were motivated by similar concerns to other social movements, & came into conflict with local government. Eventually, tensions between identities associated with 'resistance' (from below) & 'legitimizing' (from above) were resolved through the election of a new national leadership.

Nukaga, Misako (Wako University [e-mail: mnukaga@wako.ac.jp]), **Planning for Children's Successful Return Home: Challenges of Mental Transnationalism among Japanese Expatriate Mothers,** *International Sociological Association, Gothenburg, Sweden,*

¶ Based on ethnographic research of the lives of Japanese expatriate mothers & children in Los Angeles, this study explores the process & consequences of a transnational educational strategy that are intended to enhance children's positioning in global contexts. Deeply concerned about the children's reintegration into Japan's competitive educational system, the Japanese mothers develop "mental transnationalism", which I define as imagining, planning, & strategizing a return home trajectory based on bicultural knowledge. Through mental transnationalism, the mothers aim at cultivating children's bilingual & bicultural skills that are beneficial to both their adaptation to the present American educational context & the Japanese educational context to which they return in the future. The study finds that embeddedness in a resourceful transnational social field, part of which is composed of institutionalized preparation rituals during the pre-departure period & a well-established Japanese community in Los Angeles are the crucial factors sustaining mental transnationalism. It also finds that educational strategy based on mental transnationalism requires mothers to engage in intensive child-care labor, which strengthens mother-child bond & contributes to children's educational success. On the other hand, it alienates the mothers from ideal model of motherhood, thereby deepening their anxiety of not being a "moral" mother & diminishing their self-esteem.

2010S01908

Nurmi, Johanna (Department of social research, 20014 University of Turku [tel: +358 400489103; e-mail: johnurm@utu.fi]), **Experiencing Mass Violence in Local Communities. Social Relations in Two Finnish Towns in the Aftermath of School Shootings,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since the beginning of the 1990s, several countries in Europe and North America have experienced rampage shootings at schools and university campuses. However, there has not been much sociological research addressing the question of community level experience of such violent incidents. The paper explores two school shooting incidents that have occurred in Finland, in the small towns of Jokela (November 2007) & Kauhajoki (September 2008). My focus is on the multiplicity of experiences concerning crisis & social solidarity in the communities. While it is generally stated in disaster research literature that crises are more likely to increase solidarity than to undermine it, there are accounts showing that solidarity does not automatically follow crises. My starting point is in the community level trauma process. I shall discuss the multiple sides of it, increased solidarity being one of them. Based on 34 focused interviews of Jokela & Kauhajoki inhabitants, I will analyse local residents' descriptions of solidarity, conflicts & feelings of anger & shame after the shootings. On the basis of the research materials, I argue that the possible increase in solidarity depends heavily on the perceptions and narratives of the incident prevailing in the affected communities. The results also suggest that when a rise in social solidarity occurs, it has negative consequences to the community's recovery process as well as positive ones.

2010S01909

Nurse, Lyudmila, A (Oxford XXI, The Old Coach House, Southern Road, Thame, Oxfordshire OX9 2ED [tel: +44 1844 218836; e-mail: lyudmilanurse@oxford-xxi.org]), **Reconstruction of Families' Cultural Identities Through Musical Memories,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper addresses the methodological issues & results from an innovative "Cultural Identity & Music" pilot study, a component of the international project "Interplay of European, National and Regional Identities: Nations between states along the new eastern borders of the European Union", part of the EU Seventh Framework Programme. The "Cultural Identity & Music" study focuses on the ethnic communities & ethnic minorities in certain Eastern European EU & neighbouring countries:

Hungarians, Slovakians, Lithuanians, Poles & Russians. The study is designed to explore cross-generational & cross-cultural links between musical memories & national, ethnic, regional & European identities, their impact on families' life-styles & wellbeing. One of the main features of the methodological approach lies in deploying techniques for evoking people's memories about their favourite music in a combination of methods of quantitative study, qualitative interviews with three generations & focus groups with families about significant biographical aspects of people's lives, preferred types of music & their first musical memories that are associated with different generations' life courses. The methodology for a comparative multi-disciplinary study was developed by Dr Lyudmila Nurse in close collaboration with musician and educationalist Dr Chika Robertson & it incorporates some elements of the SongTrees project which included interviews conducted by school children to record their parents' and grandparents' earliest musical memories.

Nuss, Shirley A. (Nuss Associates, 14704 US Highway 34, Fort Morgan CO 80701 [tel: 970 867 2144; e-mail: nussphd@yahoo.com]), **Social Progress of Nation States: Four World Conferences for the Advancement of Women,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper discusses the origin and development of social indicators for the advancement of women. It draws on official documents prepared for World Conferences on Women (1975-1995) organized by the United Nations (UN) Secretariat and attended by UN member states, the collection of which is maintained at the University of Colorado archives. It incorporates a methodology of participant-observation, whereby the author served as an independent research consultant who assisted the United Nations & its specialized agencies with preparation of social indicators & their analysis for nearly three decades. The paper will give emphasis to the use of these indicators for an evaluation of social progress by nation states & at the global level. It assesses both strengths & limitations of available national data and national estimates as input for evaluations as well as for guiding the formulation of global, regional & national plans and programs of action to support the advancement of women of UN member states.

2010S01911

Nylund, Mattias & Englund, Tomas (HumUS-Academy, Örebro University, Örebro, Sweden, 701 82 Örebro [tel: 019-301015; e-mail: mattias.nylund@oru.se]), **Social Class in Education Policy and Research; A Forgotten Perspective - Arguments for, and Exemplifications of, the Continuing Relevance of the Concept of Social Class in Educational Research,** *International Sociological Association, Gothenburg, Sweden,*

¶ Questions of education & social class have largely disappeared from the research agenda of contemporary educational research. Structural approaches in general, & specifically theories of social class, seem to have lost their relevance & have been questioned both from philosophical as well as from empirical points of view. The aim of this paper is to argue that the dismissal of the concept of social class in many respects is problematic, & to discuss how the concept of social class can be used, understood and contribute to our understanding in some areas of research. The research area in focus is the organization of post-compulsory education in Sweden, specifically vocational education. It is argued that both the policy & research fields concerning vocational education in broad terms have neglected a class perspective, & the possible contributions from research taking a class perspective will be discussed. The theoretical discussion of the relevance of class & its declining usage in educational research takes its departure from classic works as Karabel & Halsey (1977), Mannheim (1968), Poulantzas (1975) & Willis (1977) and recent works as Crompton (1998), Furåker (2005) & Wright (1997).

O Donnell, Deirdre & McTiernan, Kathleen (Centre for Gender and Women's Studies, Trinity College Dublin, Dublin, Ireland, 02 [tel: 00353 1 8692871; e-mail: deodonne@tcd.ie]), **Storied Lives: Connecting Narrative Identities, Social Engagement and the Factors Linked to Eudaimonic Happiness in Later Life,** *International Sociological Association, Gothenburg, Sweden,*

¶ Eudaimonic happiness is understood as the pursuit of meaning and purpose for life in the realisation of human flourishing. An understanding of the roles played by meaning & purpose in life satisfaction has generated much research across life stages. There remain gaps however in understanding how eudaimonia is manifested in later life through story & what is the role played by social engagement in the construction of life meaning & purpose. Through the evaluation of the life stories of older Irish men & women this paper focuses on eudaimonic happiness & social engagement as they contribute to life satisfaction & well-being in later life. The study involves a convenience sample, of twenty Irish men and women aged over seventy & living within a socially disadvantaged, community in Dublin, Ireland. The model of research design employed for this study has been adopted from the work of Tom Wengraf (2001) on biographical narrative interview method (BNIM). The research design allows for two depth interviews, consisting of three sub-sessions. The results are presented around four core themes: Social connectivity & engagement; integrative narrative; purpose and goals; wisdom & meaning. This paper indicates that there is a clear connection between the construction of eudaimonic happiness in later life & social engagement or connectivity. Investigation of the narrative data allows for an exploration of the variables which operate to affect levels of social connectedness. Furthermore, the analysis highlights connections between narrative, social engagement & the ability to find meaning through integrative life stories.

Obashoro-John, Oluwayemisi Ayedun (Department Of Adult Education, University of Lagos, Yaba-Lagos, Nigeria [tel: 234-802-330-7257; fax: NA; e-mail: yebmas@yahoo.co.uk]), **Aspects and Criteria for Successful Education Within the Social Context of Adult Education in Nigeria,** *International Sociological Association, Gothenburg, Sweden,*

¶ Adult Education plays a critical role in a rapidly changing society. It provides information & knowledge needed to cope with changing conditions. Economic, political, social & educational opportunities must be incorporated in programmes built on enlarging one's value & self concept in developing new motivations (Abdulaziz, 2002). Education needed for employability must be supplemented with meaningful learning experiences that help the poor cope with social forces that influence their lives. The highest purpose of education is helping people acquire sufficient understanding of their lives & sensitivity to other people. Successful education is to understand the range & complexity of the relationships that affect us & mustering sufficient self-confidence to utilize them. (Jarvis, 2008). The study attempts to assess awareness about Adult Education & provide answers on how average urban slum dwellers respond to & participate in Adult Education programmes; how Adult Education contributes to the attainment of specific social roles & successful education among adults in Nigeria's changing social scene & establish processes necessary for successful education.

Ocal, Asli (IESA-CSIC/EHESS, Cordoba 14004, Spain [tel: +34 687326730; e-mail: aocal@iesa.csic.es]), **Exploring Rural Social Movements: The Experience of Alternative Farmer Coalitions in Turkey,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since the State intervention on the agricultural sector has been reduced all over the world with the pressure of international institutions (World Trade Organization, World Bank, IMF etc.), profound changes have been experienced in agricultural production models & rural areas. Accordingly, new actors & new strategies are emerging in this context of liberalization. If the globalization process strengthens on the one hand the role of multinational food corporations on agricultural policies and farmers, it makes possible on the other, the creation of new networks & action groups defending sustainable agriculture versus the conventional one. This paper will explore the rise of alternative farmer coalitions developing resistance strategies against the liberalisation process in Turkish agriculture. These local groups opposed to the recent agricultural policies in Turkey claim the establishment of alimentary sovereignty, the protection of local markets & family farming. On the base of documental sources & interviews made with farmer activists, we will analyze the main objectives & discourses of farmer movements. The relationship of such local initiatives with transnational social movements (such as Via Campesina) will also be examined in order to understand the articulation between global movements & local experiences. The paper will discuss the strengths & challenges of these mobilizations by analyzing their proposals to the recent agrarian regime. Therefore, the communication will address the new strategies & actions developed by Turkish farmers to challenge policy makers & the increasing role of multinational corporations in agricultural market.

Ocejo, Richard, E. (John Jay College of Criminal Justice, CUNY, 899 Tenth Avenue; New York, NY 10019 [tel: 1-718-490-1822; e-mail: rocejo@jjay.cuny.edu]), **The Reinvention of Mixology:**

Cocktail Culture, Craft Production, and Community in the Postindustrial Economy, *International Sociological Association, Gothenburg, Sweden,*

¶ Postindustrialism has meant a shift away from "mass society," or an industrial society characterized by the mass production of uniform goods & towards small-scale production & finely crafted and handmade products based on such notions as authenticity and tradition. This shift has resulted in significant changes in the behaviors & meanings surrounding the production of goods & the labor practices & self-identities among certain workers. Cocktail bartending is an example of "craft production," or the making of specialized products by hand using specific raw materials and artisanal techniques. Based on extensive ethnographic research, in-depth interviewing with thirty cocktail bartenders, & an inductive analysis, this paper explores the meanings & values that cocktail bartenders attach to their work & the techniques that they use to construct a unique sensory experience for their guests. I demonstrate that craft production is based on "creative regression," or the concept of reviving old & traditional cultural practices & products of a particular field in a postindustrial context. Cocktail bartenders combine revived cultural material–ingredients, recipes, techniques–with selected contemporary material to craft unique products that they consider authentic & superior to those that resemble "mass society." I explore the moral complexities & contradictions inherent in these claims.

Odabas, Zuhal Yonca & Kasapoglu, Aytul (Ankara University, Department of Sociology, Ankara University Faculty of Letters Department of Sociology 06100 sA-hhA-ye ankara Turkey [tel: +903123103280; e-mail: yoncaodabas@yahoo.com]), **Water Shortage in Ankara, Turkey and Disaster Management Policy,** *International Sociological Association, Gothenburg, Sweden,*

¶ Disasters emerging as a result of interactive relations between nature and culture also have close connection with development policies. The concept of vulnerability has an important place in this relation. In this relationship, women are among the most vulnerable groups. Disaster management tries to reduce this vulnerability but any disaster management approach must recognize that while women can suffer from a disaster, they also have the capabilities to mitigate a disaster's effects. In this study, water cutting policy and its effects on the women living in Ankara, Turkey during the summer of 2007 are examined. The inquiry proceeds by using some concepts from Actor Network Theory. Due to a drought & water shortage accepted as the effects of global warming, Ankara decided to implement the "water cutoff policy" for three months during that summer. Throughout the policy's implementation, residents had access to fresh water only three days in a week. This situation adversely affected the women, especially those responsible for domestic work. In this paper, these conditions & women's capabilities are examined & a more comprehensive & sustainable water & disaster management policies based on Community Based Disaster Management approach is presented.

2010S01917

Ogawa, Shinichi ([e-mail: sogawa@ynu.ac.jp]), **Cooperation between Firms in the Era of Economic Crisis: Changing Employee Involvement Activities in Japan,** *International Sociological Association, Gothenburg, Sweden,*

¶ The long economic recession in the 1990s & the following world economic crisis from the autumn of 2008 urged Japanese firms to change their management practices. The quality circle, one of the employee involvement activities originated in Japan, was an example of change. It was recognized as an effective means to raise not only quality of products & services but also motivate employees, especially in blue-collar workers in the manufacturing industry. Many of the firms which adopted quality circles stopped the practices. Despite the decreasing rate of their adoption, some of the companies still continue quality circles. Quality circles are not implemented separately from each other firms. They cooperate for the activities to share the information on good practices and to revise policies to disseminate new effective problem solving methods. The firms even hold the conferences in which employees, including blue-collar workers, give presentations on their own activities. Intuitively the firms which compete with each other under economic crisis abandon cooperation without mutual profitability. Why do the firms continue cooperative relationships? The decreasing rate of the cooperating firms confronts them with difficulty in continuing previous relationships. We will find some social aspects beyond economic logic in the reforms of cooperative relationships between the staffs in charge of quality circles in each firm.

2010S01918

Oğuz, Alaattin (METU Sociology, Faculty of Arts and Sciences, Department of Sociology, Middle East Technical University, Inonu Bulvari, 06531 Ankara, Turkey [tel: ++90 312 210 31 35, ++90 555 489 34 86; e-mail: alaattin@metu.edu.tr]), **Turkish Identity and the Crisis of the Nation State,** *International Sociological Association, Gothenburg, Sweden,*

¶ Nation-state undergoes substantial identity crisis in its nature. Turkey is not exempted from this conventional disarray such that various ethnic groups tend to create mixed and complex loyalty positions before the state's national policy. Coming from different ethnic groups, there are many cases of ethnic groups locating their own positions depending on the political, economic and social involvement with other ethnic groups. According as the regional and ethnic dispersal position, the inclusion of these groups into the national unity indicates the newly emerging era of national identity crisis.

2010S01919

Öhman, Susanna (Dep of Social Sciences Mid Sweden University, 831 25 Östersund Sweden [tel: +46 70 640 8578; e-mail: susanna.ohman@miun.se]), **Risks in a Heteronormative Society - Sense-Making of Everyday Risks among Gays in Sweden,** *International Sociological Association, Gothenburg, Sweden,*

¶ By analysing people with specific life contexts & experiences we aim to see how they make sense of everyday risks compared to new and traditional risks. There are groups in modern societies, such as gays & lesbians, who do not experience their life & their life conditions as secure as others do. This does not mean that structural variables such as gender or sexual orientation by themselves can explain these differences. It is more likely that individual life experiences such as hardship or discrimination lead to these variations in sense-making of risk. Sense-making of risk is a sociological term, which demands the addition of various contextual/social considerations, both physical & relational, to individual risk perceptions. The individual's "sense-making" of risk means examining the individual's social relations within their micro-systems & local context & how these inter-personal interactions affect their perceptions of different types of risk. By that, we mean day-to-day experiences, where family, friends and working colleagues play an important role, together with the physical setting & community relations determined by the locality in which the individual lives. Though there is little knowledge about the interactions between these factors & sense-making of risk, there is sufficient research to indicate that minority groups can be stigmatised & have a low status in society. Sense-making of risk can, therefore, provide a deeper understanding of risk in everyday-life situations. Further, it can be assumed that there are latent factors expressed through these structural factors, e.g. experiences of vulnerability, risk exposure, lack of power, sub-cultural allegiances & exclusion. The empirical analyses are based on focus groups conducted in Sweden 2008/2009 & national surveys 2005 & 2008 (random samples of 2500 people each year). The results confirm differences in sense-making of risk between homo/bisexuals & heterosexuals. The results also show that earlier experiences are important to understand these differences.

2010S01920

Okamura, Kayko (Dokkyo University, 1-1 Souka-shi Gakuencho, Saitama340-0042 Japan [tel: +81(48)9431037; fax: +81(48)9431037; e-mail: okamura729@dokkyo.ac.jp]), **Nationality and Local/Cultural Identity: The Japanese-German Children in Düsseldorf,** *International Sociological Association, Gothenburg, Sweden,*

¶ This presentation will concern with cultural identity of the children who had grown up in Düsseldorf (Germany) & have dual nationalities. Their parent(s) is Japanese, but their mother tongue is German. Although many of Japanese parent(s) wants them enhance their Japanese skills or "keep-in-touch" with Japanese culture and send them to Japanese supplementary school, there are many difficulties about relative complexity of Japanese writing/reading system, expensive school-fee, decline of free-time on Saturday and insufficiency of Japanese text book for children. In addition, the Japanese supplementary school which are supported by Japanese government is mainly for the children who intend to go back to Japan in the near future in order to enter a high-level Japanese high school or university. Since 2006, we have surveyed a private supplementary school which is founded for the permanent settler's children of Japanese origin in Germany. This school located in Düsseldorf practices unique educational curriculum that respects their multi-cultural identity & teaches them, at his/her own pace, Japanese as a heritage language. Observing the affiliation & affection of some students at this school, we can see how he/she under-

stood him/herself the relation of cultural identity & nationality & I will point out an actual situation of international children in contemporary society.

2010S01921

Okuda, Shoko (Graduate School of Media and Governance, Keio University, 5322 Endoh, Fujisawa, Kanagawa 252-8520, Japan [tel: 81-466-49-3406; fax: 81-466-49-3613; e-mail: okusho35@sfc.keio.ac.jp]), **The Media Influence on the New Stigma Attached to Depression in Japan: The Analysis of a Newspaper and Magazines Coverage,** *International Sociological Association, Gothenburg, Sweden,*

¶ Depression has changed from particular kind of mental illness to popular mental disorder for these two or three decades in Japan. As a result, the new stigma attached to depressive psychosis came into existence. In this paper, I examined for the mechanism of the new stigmatization on depression in Japan, focusing on the media influence, by researching the newspaper & magazines coverage about depressive psychosis. The result of research of the media's coverage concerning depression, in The Yomiuri Shimbun, has a circulation of 10015,450, the most circulation in Japan, and popular magazines which are in the possession of The Oya Soichi Bunko, the biggest popular magazines libraries in Japan, shows that the frequency of the media's coverage about depressive psychosis increased rapidly from 1990's. Moreover, the contents of the coverage changed from the kind of "deviation" to "mundanity" mental illness, popular & prevailing disease, describing depression together with the word, such as "mental cold." In an environment marked by the popularization of depression, the new stigmatization on depressive psychosis came up. That is "fake depressive patients", said to be those absent by the counterfeit illness.

Olafsdottir, Sigrun & Pescosolido, Bernice A. (Department of Sociology, Boston University, Boston, MA 02205 [tel: (617) 358-0636; fax: (617) 353-4837; e-mail: sigrun@bu.edu]), **The Cultural Turn in Sociology: Can It Help Us Resolve an Age-Old Problem in Health Sociology?,** *International Sociological Association, Gothenburg, Sweden,*

¶ One of the classic puzzles in health sociology is the discrepancy in empirical research on the salience of cultural beliefs and knowledge on individuals' use of formal medical care services. Utilization research has failed to show a consistent effect of culture on the uptake of treatment. This discrepancy takes two forms. First, the findings from qualitative & quantitative studies differ. While ethnographic research often describes how culture shapes illness behaviors, survey-based studies rarely find significant effects of beliefs or knowledge once "need" is controlled. Second, within the quantitative studies, data tend to report very high levels of supportive treatment beliefs or predispositions to use services that contrast sharply with typically low levels of utilization, reinforcing the lack of utility of cultural ideologies. In this paper, we ask whether innovations in the sociology of culture & cognitive psychology can provide a new theoretical scaffolding to conceptualize and measure the role of culture in the use of health services. We use the General Social Survey to examine how traditional & new approaches might lead to data to help unpack the paradox of high cultural predispositions & low actual use. Children with mental health problems provide a case to compare these two approaches.

Olbisi, Yusuff (Department of Sociology, Lagos State University, 01234 [tel: 2347030386279; e-mail: bisiakeredolu@yahoo.com]), **Gender Stereotypes and Career Advancement of Women in Academia in Developing Countries: Notes on Nigeria,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the effect of gender stereotypes on career advancement of women in academia in Nigeria. Using feminist theory, the paper argues that while it is true that women have embraced academic opportunities, and the number of women obtaining higher degree has increased substantially, yet, gender gap remains where it matters most. Three questions directed this paper; are there organizational procedures that hinder women career advancement? Or, is the situation responsible to socio-cultural factors that determine women feminity, or both situations are responsible?. The data for this study was collected quantitatively and qualitatively using questionnaire and in depth interview. The purpose of combining was to have a robust data. A sample size of 100 women academicians was chosen, which cuts across all the cadres. The information gathered reveals that both organizational procedures couple with sociocultural factors which define the feminity of African women act as constraints to career advancement of women in academia. The paper makes recommendations that for women to occupy strategic positions in the academia, an holistic approach must be put in place. key words: gender stereotypes, career advancement, academia ,organizational procedures, socio-cultural factors, Nigeria

Olivadoti, Simona & Tognetti, Bordogna Mara (University Polytechnic Marche, via Tronto 10/A, 60100 Ancona (Italia). [tel: 00393496904615; e-mail: s.olivadoti@univpm.it]), **Social Class and Health Inequality in Italy,** *International Sociological Association, Gothenburg, Sweden,*

¶ A society with a universal healthcare system but in which health inequalities persist, confirms the hypothesis that health is strongly influenced by living conditions, employment, income and education. This association between social class & health, is also underlined by Marmot (2002), who claims that more than the money itself, the social position is most important. Starting from this premise, amply confirmed, we will explain the main theoretical models of social science that define & provide conceptual tools for explaining inequalities in health. Objective of the paper will be to make a review of the literature on the major theories documenting how this relationship is still strongly present today. In the second part we will focus on the current state of the research in Italy, with great emphasis on the health situation of immigrants, because this is the segment of the Italian population which mainly represent the lower social classes. On the basis of the main results found in the literature & using international and national studies, we will try to prove that such inequalities do not originate, at least not exclusively, by the health system, but they are the result of other factors including the environment, lifestyle & social class. The relationship between health and social class is a current of research with a long tradition, as showed by the studies on the working class of Engels, the dispute between the psycho-social approach of Wilkinson & the neo-materialist approach of Lynch. Investigating health inequalities is equivalent to study the way in which health is spread across a population & to associate with it some features of social type that diversify the same population. The paper will use a multidisciplinary approach, integrating the sociological theories on social classes along with an epidemiological interpretation, in order to verify how explanatory models about inequalities are still valid.

Oliveira, Eduardo Carrascosa de (Dept. of Social Sciences - Unicamp, Campinas, São Paulo, Brazil [tel: 55 19-3521-2121; e-mail: eduardocarrascosa@yahoo.com.br]), **Respect and Identity in a Naturist Beach in Rio De Janeiro,** *International Sociological Association, Gothenburg, Sweden,*

¶ The discussion in this paper, within the scope of the naturist leisure activities, follows the idea of a "denial of the gift" as a moral insult since the moral insult to the naturist is the non-recognition of the "respect" that it attempts to promote and practice, which tries to establish its relationship with others within the naturist area. The non-recognition & not obeying the rules shared within naturism have implications as a basis for denial of a similar nature, because the practice of communal nudity in public is built on a commitment of the parties - in this case, the practitioners - that nudity will be treated in a non-offensive or non-erotic. The exchange system analysis depends on a classification system that assigns values & hierarchies of goods traded, being nudity the commodity in the case. In this hierarchy, gender relations also obey & reproduce the classification system, despite the equality that nakedness was supposed to promote. An interpretive model that sees naturism as a ritual of symbolic exchange helps to understand the intricacies of theoretical and practical social identity. Thinking about the symbolic rituals as related to traditional structures, where the social bond is based on ties of kinship & communities tied to perceptions of space-time, living with the impersonality & individualism characteristic of institutions such as the modern state & market, we are aware of dual vector of the identity process. Understanding nature as a search ritualistic affirmation of identities is to try to cover two aspects of the act of identification, which is to present oneself, in an individual sense of saying who we are, and also look up to someone, share values accepting & being accepted. The ritual of naturism contains the two facets of interest and disinterest, individualism & holism. This paper then presents partial results of the application of these hypotheses about the object of the thesis, the naturism of Abricó Beach, in Rio de Janeiro, Brazil.

Oliveira, Luísa & Carvalho, Helena (Lisbon Institute University, Lisbon, Portugal [tel: +351 217903265; e-mail: helena.carvalho@iscte.pt]), **Pure vs Applied Research in Developing Countries: Do Higher Education Institutions and Research**

Centres Have a Choice?, *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper we will argue that countries, in general, have strong constraints about the type of research a basic vs applied - they will develop because of financial problems. These financial problems are due to two main reasons. One is linked with the neoliberal atmosphere defending the privatisation of science; the other one is due to real financial problems linked with the weakness of welfare & the structural crisis we are leaving nowadays. It is in this context that S&T studies have been discussing the relation between universities & industry. Under the lights of this discussion the changes in science are mainly due to the fact that industry is financing more that ever in the past the research activities developed in public Universities and research centres. Focusing the problem in this way, basic versus applied science is highly dependent on the interests of industrial firms and, therefore, strongly related with the development of industry in each country & with multinational corporation firms strategies in the globalization context. This is one of the most important sources of the inequalities in scientific development between central & peripheral countries. Science development and industry development during the last century are two sides of the same coin, which led in the central & northern European countries to the construction of the innovation systems with basis on the implementation of multinational firms - the so called national champions a which developed their technological innovation with basis on national scientific institutions. Southern European countries & eastern European countries for different reasons did not follow the same model. In this paper we will show how the development of science was straight linked to the development of industry, by focusing on the main characteristics of the history of science & industry during the second half of the last century. This will be supported by quantitative & qualitative data.

Olivier, Laurent (Nancy 2 university, NANCY [tel: 0660887595; e-mail: laurent.olivier@univ-nancy2.fr]), **The Religion Issue through the Reviving of the Secularism Claim: The Cases of the Parti Quebecois and the French Socialist Party,** *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ La question religieuse à travers la réactivation de la revendication laïque : le cas du Parti québécois et du parti socialiste français Laurent OLIVIER IRENEE-université Nancy 2 Selon les clivages de Rokan, repris par Seiler, le parti québécois et le parti socialiste français n'appartiennent pas au même clivage. Le PS est issu du clivage Eglise/Etat et du clivage possédant/travailleurs, alors que le PQ s'inscrit dans le clivage centre périphérie. Des réalignements se sont manifestés, ces dernières années : Le parti socialiste n'a plus une orientation politique véritablement classiste. Le parti québécois, souverainiste est aussi marqué par une sensibilité sociale-démocrate, qui se nourrit d'une spécificité du modèle social québécois. On montrera à travers les textes partisans et les entretiens auprès de militants, que dans des société postmaterialiste la question religieuse peut cependant demeurer un enjeu important, même si elle se manifeste de façon à la fois négative, et non frontale: le clivage n'oppose pas des partis religieux à des partis anti-religieux ou non confessionnels. Pourtant, la question de la religion a pu être remise à l'ordre du jour dans un contexte d'émergence de nouvelles affirmations religieuses dans la société. Qu'il s'agisse de la montée de l'Islam, ou de "nouvelles religions", les partis sont interpellées par l'interrogation relative au rôle de l'Etat dans le rapport à la religion, et le statut des croyants dans l'espace public. Dans les deux partis étudiés, la question de la laïcité est réactivées notamment à propos de la question du port des signes religieux. En France, depuis la fin des années 80, puis avec la loi de 2004 et enfin avec la question de la burka. Le parti socialiste, a été amené à se positionner sur cette question d'une façon pas toujours homogène, le clivage traversant les partis politiques. De même le parti québécois a mis sur son agenda politique la question de la laïcité, dans une société qui ne connait pas une conception de la laïcité aussi poussée qu'en France à l'occasion du débat sur les accommodements raisonnables et le rapport Bouchard Taylor, qui a entraîné un clivage interpartisan sur la distrinction entre accommodements raisonnables et déraisonnables en matière de tolérance religieuse. Nous nous intéresserons aux motivations qui poussé ces deux partis à renouer avec ce thème de la laïcité, comme instrument de reconstruction face à une identité déclinante du fait de l'affaiblissement d'autres clivages, ou au contraire pour tenter de réactiver ces derniers. Ainsi, pour le parti Québécois, la laïcité, d'ailleurs inspirée du modèle français, est une autre façon de revendiquer une identité nationale face à un Etat multiculturel qui cite Dieu dans sa constitution. Pour le PS, la question est plus complexe, car les positions internes ne sont pas suffisamment homogènes pour permettre au parti de formuler une position cohérente. Cependant la laïcité appartient au patrimoine génétique du parti socialiste, et constitue un enjeu, pour un parti en quête d'une identité idéologique de substitution dans sa recherche inaboutie d'une reformulation de la social-démocratie. Ainsi, la dimension religieuse, peut être subsumée peut constituer un cadre de perception renouvelé, même marginal, en cas de doute identitaire, programmatique et stratégique du parti.

Ollilainen, Marjukka (Weber State University, Ogden, Utah 84408 [tel: (801) 626-6238; fax: (801) 626-8979; e-mail: mollilainen@weber.edu]), **Does a Maternity Leave Policy Reduce Academic Women's Work/Family Conflict? A Comparative Study of the U.S. and Finland,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study explores the ways in which work/family policies in academia reduce the conflict created by the dual responsibilities for women. The study is based on data from 67 semi-structured interviews with women who work in academic positions in the United States and Finland. The theoretical framework combines insights from research on the work/family conflict particularly in academia, using the constructs of greedy institutions, gendered organizations, and ideal worker. The findings suggest that while policies such as maternity leave have a significant impact on mothers' ability to focus on infant care in the first months after birth, women in both countries reported incorporating academic work into the daily routine at home, rarely leaving their work completely while caring for an infant. Furthermore, the academic opportunity structure and the nature of work contracts, especially the fixed-term academic employment in Finland, left mothers vulnerable & kept them tied to their work responsibilities during the leave. Problems in the U.S. include complex institutional maternity leave policies and negotiations–as well as outcomes–of stopping the tenure clock especially for junior faculty. I also report strategies that women employed–at work & at home–to keep work demands at bay while focusing on motherhood.

Olmeda, Jose A. (Political Science Department, UNED (Spanish Open University), 28040 Madrid, SPAIN [tel: 34913987030; fax: 34913987003; e-mail: jolmeda@poli.uned.es]), **Escaping from Huntington's Labyrinth: A Modest Proposal for Conceptual Clarification of Civilian Control,** *International Sociological Association, Gothenburg, Sweden,*

¶ The purpose of the paper is to attempt to understand why the literature on civil-military relations is largely irrelevant to the study of a variety of security issues in consolidated democracies. There are two conceptual problems in this literature. First is the overwhelming definition of civil-military relations as civilian control of the military. It is only control, & no more, & it focuses just on the military, & overwhelmingly in terms of national defense. Therefore, once the armed forces were (supposedly) under civilian control after consolidation of the new democratic regime, there was nothing else to study: no coup, no problem. The other issue appears to be one of how this control has been conceptualized & used in empirical research. The paper explores three issues in the following fashion. First, the constitution of civil-military relations as a field of study is examined, underscoring its ambivalent disciplinary roots. Second, a sample of the literature on civilian control is surveyed on the epistemological & ontological levels of this concept. Third, different uses of the concept & the direction of civil-military relations research as derived from an analysis of the journal Armed Forces & Society, from its appearance in 1974 until 2008, are assessed.

2010S01930

Olofsson, Anna (Mid Sweden University, Department of Social Sciences, 831 25 Östersund, Sweden [tel: +4663 165567; fax: +4663165560; e-mail: anna.olofsson@miun.se]), **Disasters–At the Intersection of Vulnerability and Capability,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of the paper is to further elaborate the concepts of vulnerability & capability at disasters by introducing intersectional theory & testing it empirically. One of the strengths of intersectional theory is that it does not only include the intersection of class, gender, ethnicity etc in the analysis, but it also shows the variability of the effect of different socio-cultural factors in different context & at different kinds of events. The theory is applied on quantitative data composed of a Swedish national survey about previous experience of crises and disasters. The expected results are that the developed theoretical concepts will increase the understanding & explanation of the known unequal exposure of crises & disasters.

Olofsson, Gunnar (School of Social sciences, Linneaus univer-

sity, Sweden [tel: ; e-mail: Gunnar.Olofsson@lnu.se]), **The Expansion of the University Sector, the Emerging Professions and the New Professional Landscape. The Case of Sweden,** *International Sociological Association, Gothenburg, Sweden,*

¶ The rapid expansion of the university sector has channelled many students into study programs that lead to employment in new kinds of jobs, occupations & professional groups. In Sweden this expansion has taken place mainly within the new Universities and the rapidly growing number of University colleges. There are three main reasons why more & more occupations get their training within the university system (a)The qualification & competence level of the labour force has been raised, due to changes in the economy & to decisions by the State to increase the formal training for an increasing number of occupations and semi-professions. (b) In the context of increasing student enrolment in higher education, universities, especially among the newer universities, construct new study programmes in order to link the content & profile of the programs to specific occupational niches or categories in the labour market. (c) Some occupational groups & associations strive to enhance their social standing by seeking to transfer their training to formal study programs in the universities. This paper argues that rapidly growing numbers of students in new vocational study programmes changes the relation between the higher education system & the occupational-professional categories. - A number of occupations are becoming more & more professionalized. They are trained at universities; the jobs & occupational niches they are destined to are transformed by being linked to scientific bodies of thought. They can be conceptualised as pre-professions. - Traditional semi-professions are becoming more & more academically oriented. Their training is permeated by abstract, scientific thought. And new scientific disciplines have developed out of their professional training & practice a nursing studies, social work, leisure studies, etc. - Thus we now have a much more complex 'professional landscape', where the relations between the university system and the occupational-professional field have been reconfigured. This paper will give a synthetic picture of these developments in Sweden, where the combined processes of expansion and reconfiguration are played out in a common & unified institutional form - other countries follow partly different trajectories. The theoretical & conceptual consequences of these changes for our understanding of the different generations and types of professions are discussed in relation to Parsons (1968), Wilensky (1964), Etzioni (1969) Parsons & Platt (1973), Abbott (1988,1991 & 2005), Burrage & Torstendahl (1990) as well as the recent contributions of Sciulli (2008 & 2009)

Olsen, Rune Kvist ([tel: ++90 09 45 58; e-mail: rukvol@online.no]), **"How the Organizing of Our Relationships…..",** *International Sociological Association, Gothenburg, Sweden,*

¶ Introduction Why is the nature of "leading" so decisive in the relationships between people at work? In search of a reasonable explanation to this question, we must look into what we are doing & thinking when we perform in the process of "leading". 2. The vertical relationship we find the first examples of the conceptualization of "leading" in the late 19th century. During this period of industrialization, the "leader-centred" model emerged on the workplace stage, & was referred to as "leadership". The term "leadership" was then adopted into common usage & incorporated in the English language. The core element in leadership was the concept of command & control between leaders and followers. The leader should lead & followers should be led. This autocratic line of force was strictly based on a downward relationship between master & servant, & was characterized by a culture of domination, obedience & subservience from top to bottom. During the post-industrial period of the 20th century, numerous subsidiary leadership theories emerged, & books on "leadership" became popular. One such was the enormously influential "scientific Management" by Fredrik Taylor (1911). In the years that followed the concept of leadership was further developed & interpreted. We might say that it evolved from a concept concerning actions directed by a leader to one of interaction between a leader & followers. This evolution was accompanied by a transition from the sole focus on a leader-as-superior, with followers as tailing instruments, to relationships characterized by interconnected actions & reactions between leader & followers. Within this modernizing frame of "leadership", the enforced humanized aspect emphasized cooperation, collaboration & coordination between people and work- processes. From the 1930s the Human Relation movement was established as a management discipline, & contributed to developing new perspectives in the organization of work. For example, working-teams were developed as an organizational form, and were further modified from the 1960's onwards, through the movement of socio-technical systems. We find an example of contemporary leadership theory in Joseph Rost's, "leadership for the Twenty-First Century" (1991). Rost holds that "leadership" is a relationship of influence between leaders & followers. Participants practice this influence in one way or another, even where actors in the relationship are not equal. According to Rost, leadership contains four elements: (1) Relations based on influence. (2) Leaders & followers. (3) Both groups intending real change. (4) Intended changes reflecting their mutual purposes. Again, the a priori belief that Rost & other leadership scholars have shared is that leadership is based on relationships characterised by leaders & followers, organized vertically, with the leader above & the followers below. The term "leadership", and the thinking & practice that surrounded it, developed an increasingly broad scope during the last century. Nevertheless, these main features in the relationship were sustained. Attempts to distance the term from its "leader-centred" origin, & to lend it a more equalized & mutualised image, have not changed the underlying substance of leadership: 1. The position of the leader above (to lead) & the followers below (to be led) is preserved and protected as an indisputable de facto, as if it were a law of nature. 2. The relationship between the leader & follower is unequally balanced, with the leader having the authority to decide over the followers, & the followers obliged to follow imposed decisions. 3. The relationship, regulated through leadership, is vertically organized from top to bottom, in accordance with the order of hierarchical ranking. 4. The horizontal relationship in an effort to develop an alternative model of leading, a work-in-process began some years ago seeking to develop a model based on equally-balanced relationships in the workplace. [Abstract shortened by ProQuest.]

Olsson, Anders ([e-mail: anders.olsson@pedagog.lu.se]), **The Construction Of The Subject Tourism In Swedish Upper Secondary School: An Analysis From A Cosmopolitan Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ The purpose of the paper is to problematize the content in the subject Tourism in Swedish upper secondary school, & it thereby aims to contribute to a discussion of the subject content & its implications. The research is informed by an international tradition of tourism education research, as well as by research pursued within a Swedish curriculum theory tradition. A critical analysis of aims & contents is made a part of political and philosophical discussions concerning the role of tourism education in society. The perspective adopted is inspired by Foucault and cosmopolitanism. A discourse analysis approach is developed in which a number of texts are analysed, including textbooks and syllabi of the subject Tourism, as well as political text. The cosmopolitan perspective constitutes a wider frame, in which a historical perspective is adopted in order to enhance an understanding of the present. Adopting a cosmopolitan perspective, the analysis is first directed towards the industrial discourse on tourism. The construction of the subject Tourism can be understood as related to economic globalization. One consequence of the industrial discourse is the reproduction of nationalistic notions. Another consequence of the industrial discourse is the marginalization of notions on sustainable development.

Olukorede, Wahab Elias (Lagos State University, Department of Sociology, Lagos State, Nigeria [tel: 2348023054348; fax: 2348023054348; e-mail: eliasphd@yahoo.com]), **Health Seeking Behaviour and Accessibility-Affordability of Treatment among the Elderly in Sub-Saharan Urban Areas of Lagos State,** *International Sociological Association, Gothenburg, Sweden,*

¶ The number of persons aged 60 years or over is estimated to be 688 million in 2006 & is projected to grow to almost 2 billion by 2050. In Nigeria even though only about 5% of the population are 60 years, the raw population of the elderly is assuming a significant dimension. This study aims at understanding the interface between accessibility-affordability & health seeking behavior amongst the Sub-urban elderly persons in Nigeria. The Sub-urban areas of Lagos are the preferring places of residence for most elderly persons due to lack of access to economic resource and unregulated housing structure. They also face neglect from health service providers who preferred urban settings. Data was collected through individual-based questionnaire & multi-stage sampling procedure was used to select elderly persons in Ikorodu LGA of Lagos State, Nigeria. In all, 210 respondents were interviewed. Logistic regression was used to determine the net effects of the explanatory factors on health seeking behaviour. This was complemented with several IDIs & FGDs. The study found out that the majority of the respondents have more access to traditional medicine & preferred self-medication as a result of un-affordability of modern medicine. A small proportion sought treatment, & care from public health care facilities. More than 80% believe that some illnesses of terminal & chronic nature

required traditional medicine. The study believed that the elderly require support to strengthen the existing systems & make them more accessible & affordable in order to improve quality of care. Key words: Health seeking behaviour, Accessibility, Affordability, Treatment, Elderly, Nigeria

Omenma, J. Tochukwu (Instit African Studies, U Nigeria, Nsukka [e-mail: tochukwu.omenma@unn.edu.ng]), **Civil Rule Consolidation, Presidential Amnesty and Politics of Rehabilitating Demobilized Niger Delta Militants in Nigeria,** *International Sociological Association, Gothenburg, Sweden,*

¶ Oil resources and the management of its wealth are contentious in Nigerian politics. The issue is over the oil ownership, control and management, between the Nigerian state and the Niger Delta communities. Paradoxically, in the midst of the enormous oil wealth lies a high level of poverty and environmental violence on their farm lands and residential homes. A palpable feeling of alienation exists, and their displaced aggression is displayed in an organized commonwealth of arms struggle, such as, repeated attacks on oil installations, oil bunkering, hostage-taking of oil workers, kidnapping of highly placed government official or their relatives and guerrilla warfare against the state. Their activities brought about the current reduction of Nigeria's oil production to 1.2 million barrel per day against OPEC 2.4mb/d quota, forced down the energy generation, and were threatening the consolidation of civil rule. The Nigerian state launched a full-scaled military operation to contain the activities of the militants; the operation recorded a poor success, thereby necessitating the current Presidential Amnesty and Rehabilitation Programme. This paper will examine the following questions: (a) Does the amnesty programme approximate the commonwealth demands of the Niger Delta people? (b) Does the broke down in tears by militants at the point of surrendering their arms suggest induced demobilization or willingness to participate in the rehabilitation programme? (c) Is there a relationship between the Presidential Amnesty Programme and the consolidation of civil rule in Nigeria? Answer to these questions, in the opinion of this paper, provide the strategy for an enduring resolution of Niger Delta conflict, and an authentic step towards consolidation of civil rule in Nigeria.

Omoboyede, Mosunmola (Oyo State Judiciary, Ibadan, Oyo State , Nigeria [tel: 234-8033743361; e-mail: adeyoola2001@yahoo.com]), **Socio-Cultural Implications of Trafficking in Nigerian Women to Europe in the Post Cold War Era,** *International Sociological Association, Gothenburg, Sweden,*

¶ The view of trafficking in Nigeria is somewhat different. In fact, it is seen as an everyday part of West African life. The issue of the trafficking of women & children is one of the emerging priority issues for Africa since the Beijing World Conference on Women in 1995. Fifteen years after Beijing, the phenomenon has assumed an alarming rate in parts of Africa with for instance the West African sub-region accounting for over 60% of trafficked women & girls to Europe for sexual purposes. It starts with the promise of a better life. The parents & girls are convinced & persuaded. When they leave home they do so willingly, with some excitement, not trepidation. The official statistics & numbers on female Nigerians that are trafficked out of the country are not consistent because of the criminal & clandestine nature of the activity. Also, within the African continent, there are no aggregate figures of the total number of African women trafficked in & out of Africa. . Reasons for Trafficking in African women & children are manifold, & vary from country to country. Questionnaire will be administered & interviews both structured & unstructured will be conducted among the vulnerable women in their rehabilitating centres & other areas in order to verify the socio-cultural implications of trafficking of Nigerian women to Europe.

Onaka, Fumiya (Japan Women's University, 1-1-1, Nishiikuta, Tama-ku, Kawasaki-shi, Kanagawa, Japan 214-8565 [tel: +81-44-952-6842; fax: +81-44-952-6849; e-mail: fonaka@fc.jwu.ac.jp]), **A Network Analysis of Local Cultures in Two Thai Villages,** *International Sociological Association, Gothenburg, Sweden,*

¶ The present study proposes a method for analyzing local cultures from the viewpoint of a network based on an example of a "thick comparison" study. It presents a method of "socio-cultural network analysis" that combines cultural analysis with social network analysis by considering cultural elements as nodes as well as actors. It demonstrates the validity of this proposition using a comparative study of two Thai villages–a village in northern Thailand comprising of 180 households & a village in northeastern Thailand comprising of 155 households in 2009. The present study includes 6 months of fieldwork in each village & temporary visits every one to two years for the past 15 years. Data were collected mainly through qualitative research techniques (collection of life histories, informal interviews & participatory observations). This study demonstrates that "socio-cultural network analysis" could describe the contrasting changes of two villages more comprehensively than "social network analysis". It further demonstrates that the former could reveal, for example, the increasing importance of traditional music in both villages.

Ono, Hiroshi & Lee, Kristen Schultz (Texas A&M University, College Station, TX 77843-4351, USA [tel: +1 979 458 3530; e-mail: hono@tamu.edu]), **Marriage, Family and Happiness: An International Comparison,** *International Sociological Association, Gothenburg, Sweden,*

¶ Happiness, although often studied as an individual-level phenomenon, is socially situated. In this cross-national investigation of happiness, we use data from the 2002 International Social Survey Programme (ISSP) to examine the economic, social & institutional factors associated with happiness in 31 countries. Based on our multilevel models of happiness, we find variation in happiness at both the individual- & the country-level, with women reporting greater happiness in more egalitarian countries, cohabiters reporting greater happiness in countries that restrict religious proselytizing, & with cohabiters, those with children, and lower-income respondents reporting greater happiness in countries with higher levels of public social spending. We point to this significant country-level variation in happiness in arguing for a theoretical model which contextualizes happiness in the appropriate social & institutional context.

Onto, Gustavo, G. (National Museum/Federal University of Rio de Janeiro, Rio de Janeiro, Brazil [tel: 55-21-97600687; e-mail: gustavo.onto@gmail.com]), **Governing Competition in a Non-Competitive Economy: Market Devices, Ethics of Competition, and Antitrust Policy in Brazil,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper traces the genealogy of antitrust policy in Brazil, focusing on the "ethical assemblage" inherently related to the construction of this new governmental technology. It addresses the emergence of market competition as a new object of economic regulation in the 1990s, which leaded towards a government of economic practices "at a distance". This historical study intends to show that the ethical conduct of markets (and firms) became objects of governmental action through the performation of economic theory and the construction of market devices deployed in antitrust policy. Inflation, considered the major economic problem in Brazil at that time, would be dealt with the creation of forms & spaces of "self-government, self-regulation, & self-responsibility", through the "prevention, repression & education" of economic practices. The study draws on a range of primary & secondary sources, such as interviews, antitrust agency's documents a including its composition, decisions, reports, resolutions and guidelines a, antitrust legislation, congressional hearings, and academic papers in order to investigate how a moral discourse was abstractly as well as practically applied to the business sector.

Onu, Augustine O. & Omenma, J. Tochukwu (Dept Sociology & Anthropology, U Nigeria [e-mail: janeaus05@yahoo.com]), **Insider vs Outsider Relations: The Political Economy Analysis of *Osu*/*Ohu* System among the Igbo of South-Eastern Nigeria,** *International Sociological Association, Gothenburg, Sweden,*

¶ Land and the resource therein are of paramount value in Igbo cosmology. Its importantance is not only in defining the economic, social and political forces of Igbo people and their effort to conquer nature, but also, the basis of societal differentiation, stratification, status and segregation. The centrality of land in social relations informed Karl Marx in the materialistic theory of history, to argue that the ownership and control of the material means of production (land) was associated with distinctive societal patterns of exploitation and inequality. This understanding inspired Max Weber's "insider versus outsider" analysis to argue that social discrimination/segregation, is group-driven, and the superior group has an overt interest in maintaining position down the generations, and the sufficient clout to ensure that their own offspring retain their position while also making it difficult for other groups to enter into this topmost group. On this premise, therefore, we interrogate the *Osu*/*Ohu* institution within the context of Igbo political economy. *Osu* is a cult slave, while Ohu is a human slave, both have varying degrees of rights (demeaning) among the Igbo societies. We try to examine whether there are relationships

between the traditional Igbo economy and the development of *Osu/Ohu* system? Secondly, we analyze the social and political factors of the *Osu/Ohu* institution and its political implications for Igbo solidarity. We conclude that one reason for Igbo marginalization in the mainstream of Nigerian politics is our internal socio-political conjunctures of being "in Igbo" or "of Igbo".

OO, Zin Mar & Kusakabe, Kyoko (Gender and Development Studies, Asian Institute of Technology, Bangkok, Thailand [tel: 66 2 524 5668; fax: 66 2 524 6431; e-mail: zinmaroo@gmail.com]), **Re-Examining the Changing Gender Roles in the Face of Displacement: A Case Study of Internally Displaced Karen Women in Taungoo District,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is based on the oral testimonies of displaced Karen women and investigates the multifaceted nature of women's realities and the gendered impacts of displacement upon women. The ongoing armed conflict in Taungoo district has caused forced relocation of many Karen villages in the highland to the state controlled relocation sites or known as "nyein chan yey" villages where the villagers particular male villagers are targeted for various forced labor activities. As such while men flee the relocation sites to avoid contact with government military troops, women are left behind with their children & other women to maintain their social linkages, survive in displacement taking various new gender roles within the household & communities in displacement. We found that women take up new roles as village heads in the absence of their men & their identity as "mother" in the family has extended to mother of all villagers as well as of SPDC soldiers. By using the identity of "mother", the village head woman is able to negotiate with military officers & thus mitigate SPDC military oppression towards the community. We found that women's leadership roles as village heads & intermediaries between the military & the community in negotiating with the military have been utilized by the Karen insurgents, who now see these women carriers of Karen identity because they remain in the Karen land. Displaced Karen women make clear decision to skillfully maneuver the delicate political balance but the multiple identity of women make such balance extremely difficult.

Oppenchaim, Nicolas & Devaux, Julian ([e-mail: nicolasoppenchaim@yahoo.fr]), **Socialization and Inequality in Daily Mobility of French Adolescents,** *International Sociological Association, Gothenburg, Sweden,*

¶ Daily mobility plays a central role in the socialization of teenagers, allowing autonomy from parental supervision, the discovery of not yet familiar areas & the creation of social capital outside the place of residence: autonomy in mobility is a key factor for maturity & for the construction of individual & social identity. Yet inequalities in access to urban life are very important, mobility being strongly determined by the sociocultural background of teenagers. In this regard, this paper is aimed at better documenting the influence of gender, social class, place of residence & ethnicity on mobility. This issue will be addressed here through a double & multiscalar comparison. First, we focus on the specific case of adolescent residents of segregated suburbs in the Parisian Region in comparison with other urban districts of the region; then we focus on the mobility of adolescents residents in the French countryside in comparison with dense urban areas. To infer conclusions from these comparisons, we rely on quantitative (the Parisian metropolitan mobility survey) & qualitative methods (ethnographic surveys & interviews). As we do not assume that daily mobility is only a matter of physical movements, special attention will be given to the place on Information and Communication Techniques in mobility: do we observe the same disparities in the use of the Internet than in the physical access to the urban life?

Opsahl, Kari (Faculty of Health Science, Oslo University College, Pilestredet 44, 0167 Oslo, Norway [tel: +47 22 45 24 76; fax: +47 22 45 24 65; e-mail: kari.opsahl@hf.hio.no]), **"Talk to us" - Children's Participation and Professional Practice,** *International Sociological Association, Gothenburg, Sweden,*

¶ Children as actors in profane rituals - a reinvention of "rites de passage"? "Talk to us" is a four year project on children's participation in everyday life activities & in professional practice. The aim is to develop professional competence to support children's participation. In one of the studies, "Being where things actually happen!" researches are observing & interviewing 12 years old girls & boys with physical disabilities, their parents & professions involved. My focus is on transition from Primary School to Secondary School; how children's participation in this process is orchestrated by schools, parents & the children themselves. A concept of ritual, as van Gennep's "rites de passage", is a way of looking at & organizing the world. It is a three-stage process, in the first; separation, taking place last spring in Primary School, I found that through information, visits and discussions, children were preparing for Secondary School. There were celebrations & the children left behind their social group & its concomitant social identity. The second stage; liminality, in the summer holiday, the children go through a stage of no identity, sorting out their expectations. Then, the third stage; reincorporation, enrollment in Secondary School, I looked for how the children were admitted into social groups that confers a new identity, as youth. This perspective emphasized the complexity of this process.

Ornaghi, Annalisa & Tognetti, Mara (Faculty of Sociology, Trento University and Paris Sorbonne University, Trento, Italy, 38122 [e-mail: annalisa.ornaghi@soc.unitn.it]), **Searching for Good Health from North to South Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recent years have seen an improvement in the health of European citizens. This can be attributed both to living conditions & to the transformation of health systems & is the reason why scientific interest for sociology of health. In Europe, social policy studies [Esping-Andersen 1990; Ferrera 1998] have shown the existence of welfare regime models that group together various different European countries presenting recurring, but not necessarily specific characteristics. The paper examines whether health policy models can be identified that unite different European countries (North & South Europe) on the basis of certain characteristics (universalism of services; health system funding methods; service production; health system reforms), which then can be explored & compared. On a theoretical level, we will use a macro structural comparison in order to analyse the two models. This will not only show any similar elements on an empirical level, but also whether this differentiation has a reason for being. Our study will therefore examine two important case studies (one country in North Europe & one in South Europe). This comparison should facilitate a focus on the unique features of the systems, at the same time as bringing forth suggestions for proposed improvements to such. Therefore, after having described the specific features & characteristics of the two models considered, we will attempt to understand the reasons & implications underlying them.

Osti, Giorgio (University of Trieste, Trieste, Italy, 34127 [fax:; e-mail: ostig@sp.units.it]), **The Challenges to Unbundling Trends of Energy Sector in Western Countries,** *International Sociological Association, Gothenburg, Sweden,*

¶ In all the western countries, as well in continental Europe, the tendency to unbundling the energy sector is very apparent. The national monopolistic companies are divided in pieces in order to be put into the market & sold to the private highest bidder (privatisation). The provision of energy to customers is possible for every company by means of a simple authorisation (liberalisation). A national & supranational authority works in order to keep the competition among companies equal, avoiding the cartel formation (antitrust). Green certificates are used in order to create a market of renewable energy sources & of energy development innovation. This is a real tendency in many European countries. But if we take a closer look at the process of unbundling, we see that there are many local variations. There is no unique model of energy sector immersion on the market. Such variations depends on a certain number of factors. a) For the types of energy, like gas or electricity, distributed by grids there is the problem of the grid owner (natural monopoly), b) subsidiarity is a strong value & practice in many parts of western societies; it pushes towards the creation of local energy monopolies, as the municipal companies have been for a long time; c) the liberalisation process almost everywhere has not brought many independent medium size companies, but a dual structure: 2-3 very big multinational actors & a myriad of very small companies. The paper brings the case of Italy in particular for showing how incomplete, contradictory & ideological the energy sector's tendency is toward the market. The institutional thickness, the activism of grass root movements, & the incongruence of government on the energy issue produce an inedited picture of energy provision. Triadic models, like that of Polanyi, seem more able to capture the new trends than the simple one way to the market.

2010S01948

Otte, Gunnar (Sociological Institute, University of Zürich, Zürich, Switzerland, 8003 [e-mail: otte@soziologie.uzh.ch]), **"Class Culture" and "Individualization" As Sociological Myths? A Temporal Comparison of Adolescents' Musical Tastes in Germany, 1955-2004,** *International Sociological Association, Gothenburg, Sweden,*

¶ The diagnosis of an "individualization", i.e. a decoupling of subjective identities from objective social structures, is accepted nearly unanimously as a valid description of changing youth cultures. The 1960s/70s usually serve as the reference period for this account: Relying on British Cultural Studies, youth cultures are depicted as having been strongly embedded in parental "class cultures". However, there is a lack of comparative studies analyzing the stated process systematically. As popular music has for a long time been the most important medium for the formation of youth cultures & as youth studies in Germany date back to the 1950s, these data are a suitable testing ground for the decoupling thesis. In order to examine the impact of class, educational effects on adolescents' musical preferences are estimated on the basis of nine surveys covering the period from 1955 to 2004 in equal time intervals. The author draws on secondary analyses of available data sets & on re-analyses of published data tables. Empirical patterns of musical taste are characterized by stability rather than change. The results cast doubt on the assumption of a strong class structuration in the past & on the assertion of an enduring individualization trend in recent decades.

Ottesen, Laila & Thing, Lone Friis (Copenhagen University, Nørre Allé 51 [tel: 45 35 32 08 51; fax: 45 35 32 08 70; e-mail: lfthing@ifi.ku.dk]), **The Americanization of the Danish Sports Culture,** *International Sociological Association, Gothenburg, Sweden,*

¶ The voluntary Danish sports model is characteristic with its roots in the local club environment & a countless number of sports disciplines. This model could in principle be transferred to other nations, who suffer of the obese epidemic & a low activity level. But paradoxically this is not the reality. Lately an Americanization of the body culture in Denmark has arrived. The commercial fitness culture grows drastically & is therefore seen as a challenge for the sports life, both in voluntary clubs and within the public school system. The paper discusses & evaluates this development with basis in an empirical case. The case analyses how the current Liberal Minister of Education involves American fitness to alter Danish sport. Based on a critical sports sociological analysis it shows how & why the Americanization of the sports culture in Denmark is problematic. The alteration of the Danish sports culture is a sports & health political strategy (Foucault 2008), which the Government can heighten its image on. But the alteration is not sustainable & long lasting as it is destructive for the multiplicity of the sports culture. Fitness activity gains ground because the activity has focus on health and easily can be measured & weighted, & lead to an improved fitness rating. But the health orientation in the fitness activity has a tendency to marginalize pedagogical, social & community building dimensions which traditionally has been a part of the Danish sports model.

Overland, Gwynyth (Institute for Religion, Ethics, and Society / Regional Trauma Centre (RVTS Sør), U Agder), **The Coping Stone: Beliefs and Post-Conflict Survival among Resilient Survivors of the Khmer Rouge,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the quest to reawaken the sociological imagination, I have been guided by research questions seeking explanations for the surprising recovery of remarkably resilient Cambodians. The paper reports from an on-going PhD project where three samples of these survivors of the Khmer rouge are asked "the salutogenetic question" (Antonovsky, 1987): not, why are they sick, but why are they healthy? As it emerges, religious beliefs, values, and practices play a major role. The worldview or nomos, the cognitive and normative edifice internalised in the course of socialisation, then used by the individual in his own subjective ordering of experience, appears to be a key to their survival and normalisation. In an open and exploratory process, I have microanalysed the biographical narratives, abducted (by re-contextualising the data and returning it to informants for validation), and explored the nature of language as repository of religious coping strategies. Through this multi-strategy approach to theory generation, the project is progressing towards an understanding of the nature of the belief systems in question and how they work for the participants.

2010S01951

Overland, Gwynyth (University of Agder, service box 422, 4604, Kristiansand, Norway [tel: +47 93002834; fax: +4738038589; e-mail: gwyn.overland@sshf.no]), **Trauma and Resilience - A Cambodian Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper examines trauma theory & treatment in the light of the resilience narratives of successful Khmer rouge survivors, with their preponderance of cultural/religious explanations. A Western emphasis on accountability & catharsis may obstruct therapeutic communication. Survivors & their children may become locked in a "conspiracy of silence" (Danieli, 1998): children don't understand what happened; parents protect them from the experience. Mollica extols the trauma story, providing heredity with a record of coping and overcoming, "and with it the cultural resiliency of generations" (2006:152). The resilience story, rather than the trauma story, is found here to be the true birthright of generations.

Oyenuga, Adedeji Saheed & Adeyemi, Oluwagbemiga Ezekiel (Lagos State University, Ojo, Lagos, Nigeria, Badagry Expressway, Ojo, Lagos [tel: +2348037269268; e-mail: adedeji.oyenuga@lasunigeria.org]), **Nutrition in Pregnancy: Implication for Maternal-Child Health in Badagry Area of Lag,** *International Sociological Association, Gothenburg, Sweden,*

¶ Feeding is a feature common to all living things. During pregnancy, feeding is a necessity for the lives of the mother & unborn child. The nutrition of the intending mother in pregnancy establishes the connection between the mother's health & the baby's well-being- the food intake of the mother is the determinant of the health of the baby while still in the mother's womb & the first few days of his birth. The study examines the effects of cultural myths & realities associated with nutrition of mothers on the healthy well-being of the child. Medically, there are regulated diets for pregnant women that has to do with what to eat, when to eat & how to eat, but culturally there are norms regulating food intake at pregnancy. Where medicine gives certain dictations as regard nutrition in pregnancy, culture identifies food intake that can endanger the lives of babies & cause deformities & other related maladies. From a sample of 200 randomly selected from a population of women in the Badagry area of Lagos State in Nigeria, the study found that even traditionally nutrition is very important, but the consumption of certain diet like plantain exposes the child to certain health hazard. Aside from that, the use of herbs for bathing & the consumption of certain herbal concoctions protects the child & ensure

even safer delivery. Hence the combination of nutritional dictates of modern medicine & the adherence to trado-cultural dictates even among the educated women.

Ozaki, Ritsuko & Shaw, Isabel (Imperial College London, Imperial College Business School, Imperial College London, Tanaka Building, South Kensington Campus, London SW7 2AZ, UK [tel: +44 20 75945942; e-mail: r.ozaki@imperial.ac.uk]), **Unintended Consequences of Use: Energy-Sustainable Innovation and the Hybrid Electric Vehicle,** *International Sociological Association, Gothenburg, Sweden,*

¶ Meaning does not reside in a technological object, but in how that technology is used. Users do not necessarily perceive a technology as its producer expects & may have their own ways of using it; technological objects continue to evolve beyond production and point-of-sale as they take part in users' everyday practices. This suggests that contexts of use constitute an important research area for studies of technological innovation. This paper looks beyond commonly held assumptions about hybrid electric vehicles, a car promoted by manufacturers & policy-makers as energy-sustainable, by looking at unintended consequences of use. We discuss how intended use of the hybrid vehicle is "built in" to its design and investigate how interactions between the car & its driver shape the experience of driving & its meanings, focusing on accounts of what people do when they drive a hybrid vehicle, how they do it, and the importance they attribute to these processes. As Kemp (2008) argues, sustainable impacts are co-produced, not technology inherent. We conducted 38 semi-structured interviews with Toyota Prius owners, & find the intended sustainable effects can only be achieved when the unique combination of driver-car-road become aligned. We also identify a variety of unintended effects that emerge from this user-technology interaction.

2010S01954

Ozgoren Kinli, Irem (Izmir University of Economics, Izmir, Turkey, 35330 [tel: 90 507 3121691; e-mail: iremozg@yahoo.com]), **Ottoman Court Festivals as Instruments of Power,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper draws from research into the changing role of the Ottoman imperial ceremonies & celebrations as "prestige consumption", a concept outlined by Norbert Elias in his book The Court Society 1983. As an essential mechanism of imperial domination, Ottoman court festivals from the fifteenth to the nineteenth centuries have demonstrated the Empire's powers of control & direction by providing a simulacrum of a political order responding to a realm of the sublime. Exchange of prestigious gifts (gemstones, luxurious fabrics & furs), ostentatious demonstrations (shows of "palms of mariage" & artificial gardens, fireworks & illuminations) and sumptuous feasts during these festivities were instruments of absolute rule. The Empire's spectacular expenditure of wealth in court festivals sustained an image of a transcendent empire, which in turn warranted an untrammeled exercise of power. Ritual, verbal, and artistic expressions of the court as a theater of power persisted till the mid-nineteenth century. Then, as a consequence of the Empire's political decline, court festivals were adapted according to the new demands & influences of new political conjunctures. For understanding the shifts of the display of Ottoman court's prestige consumption, this project includes a study of festival books & archives. Drawing on these data, this paper aims at opening a window on the connection between Ottoman "court-rationality" & changes in the balances of power and control.

Paadam, Katrin & Gromark, Sten (Urban and Residential Studies, Tallinn School of Economics and Business Administration, Tallinn University of Technology, Tallinn, Estonia, EE-12618, Akadeemia tee 3 [tel: +372 620 4106; +372 518 5515; fax: +372 620 3946; e-mail: katrin.paadam@tseba.ttu.ee]), **Constructing Urban Residence as Home–Sociological and Architectural Considerations,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper we attempt to combine residential sociological & architectural perspectives in order to seek an understanding of the construction of residence as home in urban contexts of modern residing. It is argued that modern ways of residing are increasingly diversified in terms of life-style dominated diversification of residential preferences & refined tastes for a residence enabling identification sought on personality perceived on its different spatial scales. As has been observed in previous & more recent research, residential architecture & the ways individuals relate to their residence - become involved in the socio-physical relations - is gaining ever high significance in symbolic terms. The shifting inward-outward residential dispositions in space are regarded as a sign of cultural re-orientation, a changing understanding of the notions of the private & the public within the dual dynamic of agencies of yet differentiated capacities and the formation of structural settings. The analysis draws on the studies of modern explorative residential situations in social housing, cooperative & owner occupied contexts in Europe.

Padron, Enrique M. & Roman, Patricia (Instituto de Investigaciones Jurídicas. Universidad Nacional Autónoma de México, Circuito Mtro. Mario de la Cueva S/n. Ciudad Universitaria. C.P: 04510 Del. Coyoacán México, Distrito Federal [tel: (5255) 55791156; e-mail: mauriciopadron@gmail.com]), **Labour Force Participation of the Old-Aged: Between the Family Support and the Support to the Family,** *International Sociological Association, Gothenburg, Sweden,*

¶ The ageing of the Mexican population is in a clear process of growth, but it would be a mistake to generalize its meanings, both for old people & for the society. Thus, this work does not try to present the elders as a special interest group which worries & realities are separated of those of other generations since it is very possible that they come closer to each other. The previous reasoning appears understanding that the persons of advanced age do not exist in an isolated way, so their well-being & daily development are narrowly tied to those of the society in general. Then, this work seeks to discuss & to analyze the importance and the complexity of the labour participation of 60-year-old or more people in Mexico, paying special attention to the features of this participation in households, trying to understand what favours that an aged person is a familiar support "object" or a giver familiar support "subject".

Padvalkava, Katsiaryna (GEES, University of Birmingham, Edgbaston, Birmingham, B15 2TT [tel: 44 121 4143282; e-mail: kxp724@bham.ac.uk]), **Understanding Retirement in Belarus,** *International Sociological Association, Gothenburg, Sweden,*

¶ Belarus is the only post-Soviet country in the Eastern European region that has not reformed its pension system in the direction of privatization, instead declaring state paternalism & socially oriented economy as the country's values. However, Belarus' population is rapidly ageing, with the largest cohort alarmingly approaching retirement age, -the fact that not only sees an increasing burden on the system of state pension provision, but also brings considerable change to state-society relations and alters the meaning of 'pensions'. Based on approximately a hundred interviews, conducted in autumn 2008 with Belarusians approaching retirement within the next 5 years in the city of Minsk, this paper tackles what retirement means to them, their expectations and strategies for preparing for retirement. Through the years of socioeconomic transition this generation of Belarusians have preserved a "socialist" understanding of pensions, of it being a state's responsibility & of it being a deserved reward for the years of service. Yet in contemporary Belarus the average pension's monetary value does not correspond to people's expectations and hence, as a way of dealing with this perceived injustice, the majority of Belarusians plan to work in retirement in order to provide a decent living for themselves & their families, thus undermining the essence of pension as a period of discontinued work. The research's conclusions suggest that analyzing pensions as a social contract for retirement is very important for finding an appropriate approach to changes in pension provision and communicating the direction of proposed pension reform, especially in the country undergoing socioeconomic transition.

2010S01958

Paes de Carvalho, Cynthia, Alves, Fatima, Felipe, Luiza Helena Lamego & Lange, Wolfram (Dep. of Education / Pontificia Universidade Catolica do Rio de Janeiro, Rua Marques de Sao Vicente 225 - Gavea - Rio de Janeiro, RJ - Brasil - 22451-900 [tel: 5521 35271815; fax: 5521 35271818; e-mail: cynthiapaesdecarvalho@puc-rio.br]), **The Geography of School Quality in the City of Rio de Janeiro: Families, Neigbourhood and Choice of Schools,** *International Sociological Association, Gothenburg, Sweden,*

¶ The study seeks to identify family & neighborhood features that influence the chance to choose schools with good educational results in the city of Rio de Janeiro. The investigation is based on a survey with 406 families of students who attend to four public schools with good results in the national evaluation of student's performance. Logistic regression models have estimated the effects of variables related to the family's structure as

well as its cultural, economical & social capital (education, income and access to social networks that share information about schools) that may affect the chances of choice of a school with good results despite living far from it. The effects of the neighborhood social context of families & students are considered as from variables built through network analysis using GIS. The results show that the most significant effects are related to family's education & to the social context of the neighborhood in order to increase the chances of choice of schools with good performance in the national evaluations.

2010S01959

Paetau, Michael (Center for Sociocybernetics Studies Bonn, Bonn, Germany [tel: +49-228-2401 4522; e-mail: michael.paetau@sociocybernetics.eu]), **Emancipation, Post-Colonialism and Second Order Cybernetics,** *International Sociological Association, Gothenburg, Sweden,*

¶ It seems that there are two different threads in recent debates, given from a sociocybernetic view answering to the objection, that sociological approaches based on cybernetic principles would not give support to make scientific reasonable critics to many societal phenomena which can be clearly considered as undesirable like social exclusion, injustice, humiliation, oppression, racism, sexual discrimination, etc.. One thread is to give up the concept of emancipation in sociological scientific debates & recommends to reject the demand for such a theory because science cannot play a part in normative debates about societal critics. If sociologists do value their observed phenomena as "good" or "bad" - so the plea of Luhmann as an example for such a position - the criteria of such a valuation are in ethics & moral, perhaps in philosophy, but in any case outside of sociology. The other thread takes up the ambition of the idea of emancipation but declares that the old-European concepts of enlightenment, emancipation & freedom as obsolete due to its colonial implications to impose the European point of vision the rest of the world. Emancipation, so the statements, can only be a valuable as a "post-colonial" concept. The paper disputes the tension between both arguments from a sociocybernetic position with a second-order cybernetics view. This discussion will consider the demand of many cybernetic authors to integrate factual & normative arguments in the context of a scientific based steering approach.

2010S01960

Page, Justin L. R. (University of British Columbia [e-mail: jpage@interchange.ubc.ca]), **Environmental Governance by Other Means: The Case of the Great Bear Rainforest,** *International Sociological Association, Gothenburg, Sweden,*

¶ Beginning in the 1980s, environmental governance shifted away from State & expert-led processes to collaborative decision-making among multiple stakeholders. While this movement has been applauded for its democratization of environmental governance, projects have been critiqued for their inadequate focus on power relations, inability to incorporate multiple knowledges & poor conceptualization of the link between conservation & development. In order to explore these issues, this paper explores the efforts of a hybrid coalition of environmentalists, forestry companies and First Nations (aboriginal Canadians) to manage the forest resources of Canada's "Great Bear Rainforest." Deploying conceptual resources associated with Actor-Network Theory, the paper draws on interviews with environmentalists, First Nations, forestry companies & community members, as well as key texts associated with the project, to inquire into power, science & nature in the Great Bear Rainforest. The paper finds that 1) existing stakeholder planning processes were inadequate to deal with unequal relations of power, prompting a campaign to enroll a diverse set of interests into environmentalists own network building process, 2) processes of social learning were a key means of linking science and politics, & 3) conservation & development were not linked so much as redefined in ways that enabled positive-sum arrangements.

2010S01961

Pais, Ivana & Palmieri, Angela (University of Brescia, Department of Social Science, via san faustino, 74/B [tel: 00393403367939; fax: 00390302988893; e-mail: pais@jus.unibs.it]), **Professional Communities Online: Italian Lawyers' Mailing Lists and Social Networks,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since the early 1990's, computer scientists have developed functionalities that made cyberspace widely accessible even to those who are not skilled in information technology. This accessibility has opened a new a virtual a space for professional communities. This process is clearly noticeable in the legal sector and, in particular, in solo & small firms. Professional communities online are created & maintained by lawyers in order to improve the technical skills needed to practice law, but also to set & share the formal rules & informal norms that guide them in their decision-making in practice. They are virtual places where lawyers reinforce their professional referral system (Freidson 1960). The purpose of this paper is to explore: the reasons that lead a professional to register, the profile of such professionals (ascribed & acquired features), the social mechanisms governing their functioning (with particular attention to the role of trust & sense of belonging) & the impacts on the professional performances of their members. One of the main questions is whether such tools enhance the sense that the lawyers are part of a large learned profession, or are member of distinct legal communities with their own values, needs & agendas (Levin 2005). The paper presents the first findings of a research based on Legalit, the first Italian discussion group for jurists, founded in 1993. The research methods implemented are the following: semi-structured interviews to key-informants, structured online questionnaire, content analysis of online discussions, social network analysis of relations between participants.

Pakasi, Diana Teresa (Department of Sociology University of Indonesia, FISIP UI Depok, Indonesia, 16424 [tel: 62-21-7863427; fax: 62-21-7870612; e-mail: diana.pakasi@gmail.com]), **Transnational Indo Bodies in Indonesian Advertising: The Discourses on Nationalism and Sexual Politics,** *International Sociological Association, Gothenburg, Sweden,*

¶ In Indonesian transnational advertising, the depictions of Indo women not only represent the ideal, beautiful, & desirable Indonesian women's bodies, but also represent globality. In this paper, I argue that the history of colonization, the inequality of today's globalized economy, & sexual politics in Indonesia are working together in shaping the representations of Indo women's bodies. In doing so, I analyze the depictions relating them to the history of Dutch colonization in Indonesia. Secondly, I discuss the representation within the context of global mass culture which places Indo women as the representation of the local & the global. Finally, I explain the representations within the context of the sexual politics in Indonesia. Indo women as hybrids undermine the homogenized notion of an "authentic" Indonesian womanhood, challenge the patriarchal notion of nationalism, & yet operate as the object of global capitalism & as a marker of the trauma of colonization. The Indo women as postcolonial subjects embody the hybridness & in-betweenness identities which do not fit in fixed categories. The representation of Indo women also disrupts the patriarchal notion of nationalism by showing the fact that women are markers of national identities. The hybridity of Indo women can be read as a site of possible transgression of fixed identities. However, hybridity also becomes a strategy to stabilize discursive power relations within the context of global capitalism since it is commodified by & masks the exploitation of transnational capitalism.

¶ After the defeat of Japan in 1945, enourmous amount of people moved from one place to another. This process & period varied as well, and even if people get to their destinations, they were often compelled to move again due to wars & unstable social situations under Cold War system. During this various migration, many families separated & changed their life course dramatically. However, although these stream of various people have influenced both Japanese & Korean societies, the actual situations of the migration is yet to be brought to light, because often this type of migrations was thought to be illegal & conducted in secret. This paper aims to grasp a part of this flow of people from individuals' experience. In this paper, using both life history interviews from Korean people who entered illegally to postwar Japan & documental resources from governments & militaries which attempted border control in East Asia, it will be explained how individual migration changed their life course & families, and how their personal acts influenced the border & alien control systems of postwar Korea & Japan. I hope to describe not only political matters but also people's choices & decisions which often lead them to move & live beyond borders.

Palacios, Simón Pedro Izcara & Rubio, Karla Lorena Andrade, Guestworkers in Agriculture: Working Conditions

of Tamaulipas' Farm Workers Employed in the United States, *International Sociological Association, Gothenburg, Sweden,*

¶ The U.S. H-2A Guestworker Program, authorized by the Inmigration Reform & Control Act (IRCA) of 1986), permits agricultural employers who can demonstrate a labor shortage to import foreign workers on a temporary basis under conditions that will result in no adverse effect to U.S. farm workers. Accordingly, H-2A workers wages must be the same than for U.S. laborers, & the employer is obligated to provide free, inspected & approved housing. However, H-2A visas for temporary agricultural workers are very controversial, with farm-workers supporters claiming that it does not provide sufficient protections for US workers & leaves foreign workers open to abuse & exploitation. It is well reported that low-skilled guestworker programs lead to mistreatment, unsafe working conditions, underpayment & unsuitable living conditions. Moreover, H-2A workers are isolated in remote farms, bound to a single employer & lack access to legal resources. Despite these conditions, these workers are reluctant to complain they fear losing their job or not being rehired the following season. Mexican workers attain more than 95 % of H-2A visas. Tamaulipas, situated in the north-east of the country, presents a long tradition of rural migration to the United States in search of farm employment. The preference of US employers for Tamaulipas' workers owes to the proximity of this state to the frontier, which lowers transportation costs, & the experience of Tamaulipas' workers in very demanding activities, like orange picking & sugar cane harvesting. As a result, this region sums up a large amount of H-2A visas for temporary agricultural workers. Tamaulipas' farm workers are employed principally in North Carolina, Washington, Georgia and Louisiana. This paper examines working conditions in US agriculture; analyses the causes of limited participation of guestworkers in unions, & describes workplace risks suffered by Tamaulipas' H-2A workers. At a methodological level, the investigation (carried out between 2008 & 2009) is based on in depth interviews. Fifty farm workers who participated in the H-2A Guestworker Program were interviewed in 9 municipalities of Tamaulipas.

Palat, Ravi Arvind (Sociology Department, State University of New York at Binghamton, Binghamton, NY 13902, USA [tel: +1-607-777-4745; fax: +1-607-777-4197; e-mail: palat@binghamton.edu]), **Dangerous Fortunes: Financial Crises in Historical Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ Virtually all analyses of the contemporary financial crisis have focused on its immediate triggers rather than on broader structural causes. Yet financial crises have been a recurrent historical phenomenon & at the turn of the last century Hobson, Hilferding, Lenin & others were debating the origins & prospects of financial imperialism. Locating their work in a broader perspective, Fernand Braudel showed that similar crises occurred even earlier. This paper will look at the present crisis in the context of previous financial crises to determine similarities and differences between the present crisis & earlier ones. Notably, unlike earlier crisis when capital flowed from declining powers (the Netherlands & the UK respectively) to the rising powers (the UK & the US), today capital is flowing from the rising power (China) to the declining one (the US). As this illustrates, this is the first time in the history of capitalism that capital is accumulating on a large scale & a faster pace in locations outside Europe. The paper will examine if the current crisis signals a change in these trends & what this suggests for the future.

México [tel: +52 55 53600517; fax: +52 55 53600517; e-mail: pcorona@prodigy.net.mx]), **The Influence of Mass-Medias in the Transformation of a Political Regime: The Case of Mexico,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since many years ago mass-media had transformed their original role: to inform people. It has passed to another function: to model societies, making them to adopt new elements of different cultures. In Mexico's case, mass-medias have also participated in the formation of a new political culture. This is the reason why this paper will study the role of mass-media in the transformation of the Mexican political regime; this is, how mass a media influenced in modifying the political culture, the increasing of participation levels of citizenship & the adoption of a new political regime in practice, but it's consolidation in 2009. Our work hypothesis is that information presented by mass-medias (on television & press) has being one of the elements that contributed to the political regime change from authoritarianism to democracy, affecting citizens' collective decision-making since medias act as "features writers" & "feature speakers" modelling conducts, but that their role has not gone further enough so as to get democracy's consolidation. To prove our hypothesis we will use a precedent quantitative study oriented to analyse the impact of television & press, in political elections & an empirical study oriented to know people's point of view about mass-media influence in the regime transition.

Pallotti, Francesca, Mascia, Daniele & Lomi, Alessandro (University of Lugano, Lugano, Switzerland, 6900 [tel: +41 58 6664461; e-mail: francesca.pallotti@usi.ch]), **Networks of Collaboration among Multipoint Competitors: A Direct Test of the Mutual Forbearance Hypothesis,** *International Sociological Association, Gothenburg, Sweden,*

¶ According to Georg Simmel the potential for cooperation among competitors increases when they interact in multiple domains. The mechanism typically thought to be underlying this expectation is mutual forbearance - a particular kind of reciprocity: each competitor can gain by allowing the other to take a dominant position in one domain while conceding dominance in another. Using longitudinal data that we have collected on a sample of hospital organizations located in Southern Italy, in this paper we provide a direct test of Simmel's mutual forbearance hypothesis. We reconstruct competition in terms of the ecological notion of niche overlap: two hospitals are multipoint competitors if they compete for the same pool of patients across multiple geographical segments of the market. We treat exchange of patients between hospitals as an observable signal of the underlying tendency of hospitals to collaborate. Estimates of dynamic network models provide empirical support for the mutual forbearance hypothesis: hospitals competing in multiple geographical segments of the market are more likely to collaborate. We find that this conclusion is robust to alternative mechanisms that may be underlying organizational collaboration such as, for example, transitivity, reciprocity, resource complementarity, & spatial proximity. We also find that collaboration induced by competition influences important dimensions of organizational behavior. For example, we find that the performance of hospitals connected by network ties tends to become similar over time. This result is important because it suggest that social influence, rather than competitive selection, may be responsible for reducing performance differentials among rival organizations in markets & other institutional arenas.

Palm, Irving (Department of Sociology, Uppsala University, Box 624, 75126 Uppsala [e-mail: Irving.Palm@soc.uu.se]), **The Boundaries of the Social Toleration - The Attitudes of the Swedish People towards Immigrants and Integration,** *International Sociological Association, Gothenburg, Sweden,*

¶ Sweden stands out within Europe as a leading country when it comes to generous immigration policy & well-arranged integration of immigrants into the Swedish society. How do the Swedish people look at the integration of immigrants? Are there distinct boundaries for the social toleration? Are there tendencies to changes & are new boundaries being drawn up between different sections of the population? In Europe Sweden is one of the countries which have the greatest part of immigrants in relation to the population. The relatively uniform culture has during some decades changed and become multicultural. In order to make it easier for immigrants to integrate into the Swedish society the state authority has taken different measures. Knowledge of languages & access to work are seen as key components in the process of integration. Several immigrants have all the same a weak position at the labour market and often get into a situation of being an outsider. The yearly Ethnic Diversity Barometer which during 2009 has been complemented with a number of interviews shows that the greater part of the population in Sweden have positive experiences of having immigrants as fellow workers or schoolfellows. Immigrants should have the same rights & possibilities as the indigenous population. They should be encouraged to cultivate their culture but they should also adapt to the laws och the rules in the country. It becomes however apparent that the social toleration towards immigrants has boundaries. These boundaries seem to change & vary. A great part of the population considers for example that the reception of immigrants needs to be limited & that the integration needs to be more effective. The drawing-up the boundaries look different if it considers gender, age, & education. Groupings with extremely negative attitudes towards immigrants are also found.

Palmer, Susan, J. (Religion, Concordia University, Dawson College, 3040 Sherbrooke St. W. [tel: 514-525-3215; fax: 514-931-3567; e-mail: spalmer@dawsoncollege.qc.ca]), **Government**

Raids on New Religions in the U.S. and France: Force, Frequency and the Possible Social Factors, *International Sociological Association, Gothenburg, Sweden,*

¶ Government raids on unconventional religious communities have increased in frequency in North America since the disastrous ATF raid & FBI siege on David Koresh & the Branch Davidian "compound" in 1993. These raids have become more militarized since the "War on Drugs" policy was implemented in the mid 1980s. In France there has been an increased frequency of raids on groups labeled as "sectes" after the 1995 Guyard Report was published. On the basis of field research & interviews with leaders of these targeted communities, this study will examine the rationale and social forces behind this method of social control, as well as its impact on the targeted communities.

Palumbo, Mauro, D., Congiu, Daniela & Freddano, Michela (Di.S.A. - Dipartimento di Scienze Antropologiche; Università di Genova, Corso A. Podestà 2, Genova, Italia, 16121 [tel: +3901020953748; fax: +3901020953741; e-mail: palumbo@unige.it]), **Local Decision Making Processes and Participation,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper shows two cases of participation promoted by the Genoa City Council, managing a middle size municipality of about 610.000 citizens. The first case refers to the Social Regulator Plan, developed involving participants in order to realize a decisional model composed by different participation forms. Considering the heterogeneous participation of associations, organizations, associative representations & "common" citizens, the decisional processes have been structured referring specifically to more appropriated methods & participative instruments. Nevertheless, this model has not been implemented jet. The second case regards the promotion of a débat public developed to make decisions regarding an infrastructural & local policy, paying more attention to the management of participative process rather than to the strategic dimension. While the first case approaches to the problems with a dialogic-inclusive & deliberative-democratic principle (House & Howe 1999), the second one seems to conciliate with the traditional democratic model by opening "participative windows" built according to representative logic (democratic and statistical). Finally the paper explores the following topics: a) relation between inclusive & representative democracy at local level; b)link between the adoption of decisional strategies and participative methods; c) stakeholder's participation & direct participation of citizens: complementarities or alternative? d) possibility to realize participative planning-evaluation cycles, methodologically & scientifically founded.

Pan Ke Shon, Jean-Louis & Duthé Géraldine, Hazard Angélique, Kensey Annie (INED, Paris, France, 75020 [tel: 33 (0)1 56 06 22 63; fax: 33 (0)1 56 06 21 93; e-mail: jean-louis.panke-shon@ined.fr]), **Suicide in Prison: The Cost of Deviating from Accepted Norms,** *International Sociological Association, Gothenburg, Sweden,*

¶ While prisons do not modify social values & norms, they stigmatize transgression. Cast out from society, prisoners are forced, through the public disclosure of their crime, to assume a highly stigmatizing role, that of murderer, rapist, violent criminal, sex offender, etc. Once their crime is made public, offenders must face the judgement of the courts, of their fellow prisoners, of their family & of society as a whole. Using data from a study of the entire French prison population over the last three years, we show that that suicide rates in prison increase rapidly with the gravity of the offense : 46 per 10,000 person-years for murders, 26 for rapes, 16 for voluntary violence, whereas the rate is 5 for drug infractions. Controlling other demographic, penal & prison characteristics in a logistic model, differentials remain. This result suggests that it is not a lack of norms or values which leads to the deviant act. This leads to an apparent paradox: once the transgression of social norms is revealed, these norms may prove destructive & push offenders towards suicide. Original data from several hundred files of suicide cases kept by the French prison authorities are used.

Panda, Sanghamitra & Pattnaik, Binay Kumar (Indian Institute of Technology, Kanpur, Kanpur, Uttar Pradesh, India [tel: 09935392399; fax: +91-5122597510; e-mail: sanghamp@gmail.com]), **Contemporary Tribal Resistance Movements in Orissa: Debate on Development and Displacement,** *International Sociological Association, Gothenburg, Sweden,*

¶ For over the last three decades, India has witnessed a number of tribal movements in its various corners. These are mostly micro-movements of resistance type generally led by small groups of social activists, concerned with the issues of the tribes. These micro-movements have been essentially against the developmental projects like the big dams, massive power projects and the like, causing large scale displacements & environmental degradations. Some of the developmental project-induced tribal movements witnessed in recent times in India include, the most well known Narmada Bachao movement in Gujarat/ Madhya Pradsh, Chipko movement in Garhwal region against environmental destruction, Appiko movement in Karnataka protesting against the plantation of eucalyptus, forest-based movement in Karnataka against the Harihar Polyfibres, Gandhamardan Bachao movement in Orissa against the BALCO, protest against the mining of limestone in Dehradun, resistance movement against the steel plant at Chitrakoot in Bastar, & resistance movement against Balco-Sterlite-Vedanta bauxite mine at Bodai-Daldali both in Chhattisgarh, protest against bauxite mining at Anantagiri in Andhra Pradesh, resistance to Koel-Karo hydro-electric project at Ranchi in Jharkhand, protest against lower-Sukrel dam in Balangir & against Upper-Indravati dam in Koraput, both in Orissa & the list goes on. Being no exception on account of tribal displacements, the state of Orissa has also experienced a series of micro-movements throughout the state. Micro-movements of indigenous people in the state of Orissa have been conspicuous since the 1980's. These micro-movements across Orissa are increasingly coordinated & supported by the intellectuals & the middle class social activists. The movements of the indigenous people of Orissa are found to be against large scale mining projects- primarily bauxite, iron-ore, coal and chromite, along with aluminum refineries & smelters, steel plants, coal-fired power stations & hydal dam projectss. The Gandhamardan Bachao movement against the Bharat Aluminum Company in Bargarh district, protest against bauxite mining by Utkal Alumina International Limited at Kashipur in Rayagada district, protest against the Vedanta Alumina project at Lanjigarh in Kalahandi district, protest at Kalinga Nagar against the Tata Steel in Jajpur district are some of the contemporary tribal protest movements in Orissa. The tribal people launched the movements by resisting the initial survey work, stopping the entry of the survey team, seizing their survey instruments, foiling the company sponsored meetings, blocking the roads against the vehicular movement of company, raising barricades, sit-on demonstrations, organizing padayatras, conducting number of public meetings, resisting Bhoomipuja, and boundary wall construction, etc. Of course these at times became violent & provoked counter violence by the state machinery. These violent struggles of the indigenous people deserve attention. The Paper in hand is a study of these tribal resistance movements of recent origin in the Indian state of Orissa which already has a history of tribal protests/ resistance movements. (A) The paper aims at studying these micro movements from the viewpoints of New Social Movement perspective. (B) The paper further aims at studying the issue of tribal identity and the loss of tribal culture in the context of advancement of modernity. (C) Lastly, the paper

also proposes to examine the relationship between development & displacement causing violent resistance. (Abstract shortened by Proquest.)

Pandian, Sivamurugan (School of Social Sciences, Universiti Sains Malaysia, 11800 USM, Penang, Malaysia [tel: +60122265770; fax: +6046570918; e-mail: psiva@usm.my]), **Re-Questioning the Role of Religion in Politics with Reference to Malaysia after March 8, 2008 General Elections,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since March 8, 2008 General Elections, many believes that there is a wind of change in Malaysia's mainstream political landscape. The description towards Malaysia then was how political tsunami has hit Malaysia after the National Coalition (NF) lost its two-third majority in Parliament. This has never happened in Malaysia's political leadership history & for the first time, the emergence of a stronger opposition front in Malaysian politics with 82 members. This includes the outstanding performance by Malaysian Islamic Party (PAS), whose objective is to form an Islamic government. In Parliament, 122 seats are needed to form a government from the entire 222 seats & NF has a simple majority of only 137 seats. The oppositions were able to form a loose pack before the election under the People Front (PF) banner, which includes PAS, Democratic Action Party (DAP) & People's Justice Party (PKR). However, during the 2008 General Election a new paradigm emerged in the Malaysia's political sphere. PAS, which have always been labeled as an extremist Islamic party could work closely with DAP, who have always been their traditional enemy. PAS machinery willingly cooperated with other respective opposition parties. This studies discuss & question the position of religion in politics after March 8, 2008 Election & how PAS will benefit from the current support to enhance their position in the next election; especially to strengthen the non-Muslims support who have always been voting the NF. Will the non-Muslim continue their support for PAS? This paper will also discuss whether religion is the deciding factor in Malaysian politics as it is not reflected in the March 2008 Election. Key words: Malaysia, Religion, Islam, Political Development, Elections

Pantoja, Juan Manuel & Staffieri Simona, Sarlo Scipione (Department of Economics-University of Rome "Sapienza" - Italy. [tel: +39 0649690250; e-mail: manuel.pantoja@uniroma1.it]), **Integration Indicators: Strengths and Weaknesses,** *International Sociological Association, Gothenburg, Sweden,*

¶ Integration is the most recommended solution for immigration problems. To tackle the Integration feature, a general consensus is to propose operational & statistically measurable definitions for the integration itself, starting with the identification of common areas or dimensions which are basic for social integration. Some of these areas are employment, education, housing, health, etc . . . Considering the differences between countries outside the EU, it is possible to say that all the proposed definitions tend to converge with the generic proposal of the European Commission, which assesses that integration is a two-way process that is based on (1) immigrants rights & obligations, (2) the host society. In this article, referring to Eurostat & OECD sources, an index of integration can be set. For this purpose, bidirectional analysis of immigrants is made, considering: the immigrants themselves which must respect the norms & fundamental values of the host society, the host society which must ensure the formal rights of immigrants as well as their opportunity to participate in economic, social, cultural & civil life.

Papastefanou, Georgios, Aydin, Kemal, Fleck, Matthias & Lazaridis, Panagiotis (GESIS Leibniz Institute for Social Sciences, 68072 Mannheim [tel: +49 621 12460; e-mail: georgios.papastefanou@gesis.org]), **Societal Conditions of Consumptive Social Status Homology Inequality of Household Equipment in Turkey, Greece and Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper relates to an ongoing debate on social structuration of everyday life behavior, opposing Bourdieu's homology thesis by an individualization resp. decoupling thesis, as it was stated by Ulrich Beck. According Bourdieu there is a universal mechanism, by which social status resources are transformed & expressed especially in everyday life habits, especially in consumption tastes & decisions. Beside economic position, cultural resources should be significant in this process. In contrast, the individualization thesis assumes, that modernization processes will resolve status homology. To provide a test of this contradictory hypotheses, a homology model was estimated for countries with contrasting modernization levels & pathways, namely Turkey being a traditional society with recent efforts in transformations to liberal market economy vs. Germany as highly modernized welfare society. Greece is taken into comparison as a south eastern Europe society with modernization levels lower then Germany, but higher than Turkey. Household Budget Survey data collected in 2003 (Germany, Turkey) resp. 1998 (Greece) were used to estimate commodity specific homology models. Results support the assumption that general social status as well as educational status homology is mainly effective in Turkey, least in Germany. Further, it was found, that commodities show differential social status inequality. These results underline that understanding social homology of consumption should consider socio-historical variation of commodities distinctive power.

Pappámikail, Lia (Institute of Social Sciences, University of Lisbon, Av. Professor Aníbal de Bettencourt, 9, 1600-189 Lisboa [fax:; e-mail: lia.pappamikail@gmail.com]), **Adolescence: Beyond Conventional Approaches, Towards a Sociological Object of Research,** *International Sociological Association, Gothenburg, Sweden,*

¶ Growing up implies an overall process of opening to the world (Breviglieri, 2007), in which a changing body also tries to widen the individuality perimeter through increased degrees of freedom of action & circulation. This means that young people create and/or uses new times & spaces where to built & test competencies essential to his/her autonomous identity construction, becoming progressively more independent from family. Therefore, this opening process also brings a significant increase in public & private challenges in which young people, progressively realize what kind of responses they are capable to give, which underlines the special vulnerability of this period of life. Simultaneously parents are normatively committed to, at the same time, protect & promote their children's emancipation, which translates into frequent feelings of anxiety & doubts regarding educative strategies. Discussing some recent contributions, this paper will address some of the theoretical challenges that sociology of youth faces when it invades the territory of adolescence, a traditional monopoly of psychology & psychiatry. It will shed some light on how to turn a normative category, adolescence, into a sociological object, building a perspective that considers adolescents more as social actors, than only subjects at risk of deviation.

Pardo Abril, Neyla Graciela (Universidad Nacional De Colombia, Unidad Camilo Torres Bloque 10 Nivel 2 Bogota Colombia [tel: 57-1- 31650 92 --//57-1 3158228; fax: 57-1 3158228; e-mail: neylapardo@yahoo.com]), **Racism and Rights,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ Studies on racism in Latin America have brought together some perspectives involving methods & methodologies from the political science, sociology & anthropology, among other human science disciplines. In the Colombian case, most of the studies on racism have been promoted by social organizations claiming the Afro-Colombian and indigenous population rights & some academic efforts trying to account for the ways how racism is reproduced & the social consequences from its reproduction. Although the studies on racism in Colombia have included reflections on the African descendants and the indigenous populations, unlike other Latin American countries, the academic production related to the racism problems against the indigenous population has not been systematic & these problems have not been widely dealt with in the Colombian ethnic studies. Inquiring about racism in Colombia implies to do an analysis of the his-

toric, politic, socioeconomic, & cultural relationships in the Colombian society. This sort of relationships can be explored from the representations supporting the negative discrimination against the ethnic groups defined as minorities. To this end, the ways how the discourses contributing to reproduce the racism have been shaped are characterized herein. Under this perspective, it is aimed to unravel the belief systems, values and ideologies legitimizing the discrimination & exclusion of the so-called ethnic minorities. In doing so, some theories on the social cognition processes are explored, putting emphasis on the reflections about some cultural elements & their underlying representations, being all this linked in the field of the critical discourse analysis a CDA. The approach proposed for this analysis implies to consider that the representations supporting the discrimination cannot be attributed to individual behavioral forms, but to social forms, axiological systems & some knowledge stabilized & conventionalized by the social groups coexisting within a particular society. All this means that this analysis suggests that the racist & discriminatory discourses are social constructs & mechanisms to exercise the domination, occupation & other types of power that are concomitantly anchored to keeping non-equitable, segregating & excluding social orders intensifying the social discrimination. Under this perspective, the racist discourses express the connection between power, exclusion and marginalization developed in the social, politic, cultural, and economic spheres, which defines the social space as a controversial place where the reality & social praxis are permanently under construction. This way, the power is expressed by a group exercising social control over other(s), thus limiting their collective freedom & capacity to overcome the marginality condition. The exercise of domination that keeps the status, privileges, incomes, possibilities to access to the society material & symbolic possessions, explains the ways how a social group is isolated & how their rights are violated. In this sense, the negative discrimination is defined as the exercise of unequal treatments, including the violation of a collectivity or an individual's rights due to racial, politic or religious motivations, among others. (Abstract shortened by Proquest.)

Pardo, Ignacio ([e-mail: ipardo@fcs.edu.uy]), **Experiments and Qualitative Methods,** *International Sociological Association, Gothenburg, Sweden,*

¶ Experimental & quasi-experimental strategies are deeply linked to quantitative measurement tools. The robust internal validity of this kind of designs allows attribution of change, which make them very useful for program evaluation, for example. Within that framework, quantitative methods provide a precise measurement of expected outcomes & covariates. Experiments designs and quantitative methods are a strong combination, then. However, there are certain shortcomings. For example, they "can take only a very specialized type of evidence as input & special forms of conclusion as output" (Cartwright 2007) & are quite blind to context. For these reasons among others, researchers started to think of embedding qualitative methods into experimental logic (Prowse & Camfield 2009). It is important to reflect on the possibilities that this combination opens & to address the new threats to validity. Epistemologically, this innovative approach involves the debate on causation. Traditional experiments can give sociology a clear approach to causal links (contrafactual causality) while qualitative methods can help our discipline to broaden these explanations with the help of alternative and complementing notions (generative causality).

Pardo, Rafael (BBVA Foundation, Paseo de Recoletos 10, 28001 Madrid, Spain [tel: +34 91-3748959; e-mail: rpardo@fbbva.es]), **Views of the Embryo, Worldviews and Attitudes to PGD (Preimplantation Genetic Diagnosis) and Biomedical Embryo Research,** *International Sociological Association, Gothenburg, Sweden,*

¶ Embryo research for obtaining stem cells & PGD (Preimplantation Genetic Diagnosis) are attitudinal objects embedded in a complex space of high expectations for reaching desirable goals, & also of strong moral reservations about the utilization & production of human embryos for research ends & socially contentious goals. An explanatory model of public attitudes to embryo research based on a major international survey will be offered, composed of general variables & worldviews (expectations about scientific-technological advances, reservations to science, trust in scientists, religiosity) & highly specific ones (one evaluative, views on "the moral status of the embryo," & the other of a cognitive nature, "biological literacy"). A key factor in accepting or rejecting this line of research & applications is the current, de facto, competition between biological science and moral & religious creeds in shaping a frame or image of the moral status of the embryo, either as a pure biological entity or, alternatively, as an actual or potential human being entitled to special protection. The countries included are Austria, Denmark, France, Germany, Italy, the Netherlands, Poland, the United Kingdom, & Spain. The fieldwork was conducted between October 2002 & February 2003 by Taylor Nelson Sofres (TNS).

2010S01982

Pardo, Rodrigo, García-Arjona, Noemi, Hernández, Yannick, Routier, Guillaume & Lebreton, Florian (Laboratoire de Recherche en Sciences Humaines et Sociales (LARES), Universtité Haute Bretagne - Rennes 2, Rennes, France, 35000 [tel: +34 615417820; fax: +33 223461475; e-mail: rodrigo.pardo@upm.es]), **Physical Activity and Sport Practice in Relation to Gender and Ethnic Origin among Young People: The Case of Rennes (France),** *International Sociological Association, Gothenburg, Sweden,*

¶ The statistics of Physical Activity & Sport (PAS) practice in France show that 90% of young people between 15 to 19 years old practice at least one PAS. However, girls usually leave PAS practice more often than boys after the age of 15. Regarding ethnic origin, there is no official statistical data in France due to legal issues. This situation contrasts with other European countries (e.g., Germany, United Kingdom, Spain, etc.) where it can be found data on this matter. The purpose of this study is to show PAS practice of French young people concerning gender & ethnic origin. A specific questionnaire was created for this study with 81 items. This questionnaire was tested in the field before starting data collection in order to improve its reliability. All the high schools of Rennes (i.e., 19 including regular & professional) are potentiality involved in this study with a total of 21.476 students aged 16 to 20 years. Due to the large sample this study is still in data collection phase, which is scheduled to finish by April 2010. It is expected that this study shows valuable results about PAS practice, gender & ethnic origin, a subject that is relatively little-studied in France.

Paré, Marie-Hélène & Fàbregues, Sergi (Department of Social Policy and Social Work, University of Oxford, Oxford, Oxforshire, UK, OX1 2ER [tel: +44 1865 270325; fax: +44 1865 270324.; e-mail: marie-helene.pare@stcatz.ox.ac.uk]), **Participatory Practices in Psychosocial Support and Research Conducted on, for, or with Affected Populations in Humanitarian Settings,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study examined the practices of participation of aid & academic agencies providing mental health support or conducting research on, for, or with, survivors of human-made or natural disasters in humanitarian settings. Although participation is enshrined as the 2nd core principle for good practice of the Guidelines on Mental Health & Psychosocial Support in Emergency Settings, the absence of a theoretical articulation about what participation means renders difficult to assess the difference that participation makes, who demands it, & who benefits from it. Using a mixed methods triangulation design, the study outcome is a theoretical model that describes & explains the forms that participation takes & the factors that impede & facilitate it. First, quantitative data from an email-based survey of researchers and practitioners (n=70) yielded 13 constructs perceived as enhancing or impeding local participation in psychosocial support and research. Second, qualitative data from a grounded theory of agencies' reports (n=236) explored the forms that participation takes throughout the project cycle. The triangulation of the quantitative & qualitative data occurred during the axial coding phase of the grounded theory. The results are a fully integrated articulation of the core constructs shaping the participatory processes of psychosocial programmes in emergency settings, from which standards for best practice may be derived, implemented and evaluated.

Park, Seong Hoon (Dept of Sociology, Korea University, Anam-dong Seongbuk-gu, Seoul, 136-701 Korea [tel: +82-2-3290-1152 ; e-mail: ngokr@hanmail.net]), **Changes in the Determinants of Corporate Crime,** *International Sociological Association, Gothenburg, Sweden,*

¶ While street crimes have been a primary concern of most scholars in South Korea, white collar crime or corporate crime did not immediately capture the attention of those who studying criminal behavior. This paper explores the causes of Korean firms' crimes. Rational choice perspective argues that firms participate in crime to achieve their profit goals in the market competition or uncertain environments. In contrast, normative or cultural perspective asserts that firms follow illegal culture in their field, but if institutional environments are changed their customs will be crimes. This paper will focus on the changes of the causes of crime according to the time periods using the longitudinal data from 196 KOSPI listed firms through 15 years. The results are as follows; (1) Large firms are more likely to commit crimes than small firms. (2) Firms with prior violations are more likely commit crimes than firms without prior violations. (3) The pattern of corporate crime are changed from political to social & economic character. While the state-corporate associative strategy greatly affected on crimes before 1997(economic crisis), the competitive strategy from market pressure worked in decisive factors after 1997. (4) Corporations with loosely coupled system are likely to commit crimes than ones more tightly coupled. (5) The more increasing uncertainty & institutional pressure, professionals or organizational department are employed for managing crime.

Park, SoonYawl (Asia Center, Seoul National University, 599, Kwanak-Ro, Kwanak-Ku, Seoul, Korea [tel: 82-2-880-2693; fax: 82-2-883-2694; e-mail: sypark@snu.ac.kr]), **Types of Perception on Ecological Citizenship in Korea,** *International Sociological Association, Gothenburg, Sweden,*

¶ Many environmental studies have emphasized formation of ecological subject, like as ecological or environmental citizen to overcome global & local ecological crisis & also to make society ecologically sustainable. But these schools have been criticized because of their blindness to socio-political aspects of citizenship. Ecological citizenship is one of trials to combine ecological & socio-political aspect of citizenship. But it is still not clear how to integrate ecological aspects with social- political aspects of citizenship in ecological citizenship. In this paper, I will show 4 types of perception on ecological citizenship in Korea, based on empirical research using Q method. Korean types of perception on ecological citizenship are constructed on several elements such as environmental attitude on global/local environmental problem, political consciousness on political participation, polity, & democracy. The findings of this paper give some insight on theoretical controversies on ecological citizenship which has been mainly centered in Western Societies by exposing empirical types in Korea.

Parker, Peter & Johansson, Magnus (Dept of Urban Studies, Malmo University, Malmo, Sweden 20506 [tel: +46-40-6657607; e-mail: peter.parker@mah.se]), **Challenges of Broad Public Engagement for Public Administrators,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper seeks to delineate & conceptualize challenges associated with broad public participation in municipally led efforts toward sustainable development. We focus on initiatives where broad participation & social learning are critical aspects of success. Using the case of Fair Trade Cities we seek to show how the need for social learning entails particular kinds of challenges for public administrators that do not inhere in other types of network governance initiatives. We define social learning as involvement of lay people in issues of socio-cultural change. Social learning takes place when divergent interests, norms, values & views of reality meet in an environment that is conducive to learning. Social learning is impossible without participation, & this gives rise to a dilemma: A strong focus on participation entails relinquishing control & creates a potentially undirected process. But a strong focus on directed change could easily be perceived as paternalistic & manipulative. The challenge for administrators attempting to organize social learning processes is thus to find a path between these two pitfalls. However, this places new demands in terms of skills & also seems to entail a higher level of visibility & political risk-taking than what is normally mandated

Parmentier, Stephan & Weitekamp, Elmar (Leuven Institute of Criminology, K.U.Leuven, Hooverplein 10, 3000 Leuven, Belgium [tel: 32-16-325115; fax: 32-16-325463; e-mail: stephan.parmentier@law.kuleuven.be]), **Reparation and Reconciliation after Violent Conflicts Through the Eyes of the Population: The Case of Bosnia and Serbia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Debates about serious human rights violations & international crimes committed in the past usually take a start during times of political transition, i.e. when societies are moving away from authoritarianism. At that time, the new political elites are openly confronted with the fundamental question on how to address the heavy burden of their dark past. The issue of "dealing with the past" or "transitional justice" is most often managed by elites, national & international, & the views & expectations of the local populations are rarely taken into account. Yet population-based researches can yield interesting insights into strategies & mechanisms for dealing with the crimes of the past and for reconstructing the future. In this paper, we report some findings of two population-based surveys conducted in Bosnia in 2006 & in Serbia in 2007, both funded by the K.U.Leuven Research Fund & focusing on several issues of post-conflict justice. We focus in particular on the issues of reparation for victims and reconciliation between the former enemy factions. We also try to derive some lessons for post-conflict justice situations in the Balkans & elsewhere & for similar research in the future.

2010S01989

Parra-Luna, Francisco (Universidad Complutense de Madrid, Facultad cde Politicas, Pozuelo,28223, Madrid, Spain [tel: 00 34 91 6389731; fax: 0034 94 3942767; e-mail: parraluna@yahoo.es]), **On the Outcome of the Current Economic Crisis in Spain: The Axiological-SETCU Model to Increase Employment,** *International Sociological Association, Gothenburg, Sweden,*

¶ The basic hypothesis is that the high level of unemployment in Spain is due to the systems of values performed during the past ten years. In this paper a new model for overcoming the unemployment problem entitled "An Axiological-Setcu Model for Job Creation in Spain for the Period 2010-2013" is presented. The main results of this model are: 1) Instead of foresee the Spanish economy in recession (-0,5 of the GDP) during 2010, the model suggests a positive increase of 10,4 of the GDP in 2010, & an average increase of 3,5% of GDP during the period 2010-13. 2) the model suggests to reduce the 20% of unemployment to only 12-14% of active population. 3) Public deficit could be reduced in 3-4% of GDP at the end of 2013. 4) The whole system of values would also be improved due to the dialectical relationship among the values. 5) And finally, the so call "economic crisis" would be seen not as having an economic nature, but on the contrary, an "axiological" nature. Therefore, if we continue to see the current crisis mainly as an "economic problem" & study it as such, we would make the mistake of not understanding the deep nature of the crisis & to avoid future solutions. .

Parracho Sant Anna, Sabrina (Department of Language and Social Sciences, Universidade Federal Rural do Rio de Janeiro, DLCS, UFRRJ, Campus Seropédica: BR 465, Km 47, Rio de Janeiro, Brazil, CEP. 23.890-000 [tel: +55 21 26821048; e-mail: saparracho@gmail.com]), **The Bienal de São Paulo Is Empty: Challenging the Model for International Exhibitions,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Bienal de São Paulo was created in 1951, as a model to forge spectacular exhibitions, calling world's attention to local culture and bringing international visibility into national borders. Based in national contexts, the fairs were sponsored & supported by governments & embassies which thought modern art to be a way to show off national progress. In Brazil, more than anything, the organizers aimed to diffuse Brazilian art among international institutions & believed that it was possible to show through arts that São Paulo had finally reached modernity. After half a century, the diagnosis of globalization processes settled a new paradigm for art institutions & the Bienal was challenged by new forms of classification in arts. Since 2001, many attempts were made to reshape the exhibitory space. Although changes have been made, critics remained asking how international the international Bienal de São Paulo was. Eventually, in 2008, the

curatorial board proposed an empty Bienal, where nationality was no longer a problem, but artisticity & judgment were supposed to be reinvented. This paper aims to discuss how the Bienal Internacional de São Paulo is dealing with change in the national scope. Comparing the last four editions with the discourses produced by the time of the foundation in the 1950s, it attempts to understand the ways by which the curatorial board is nowadays encountering concepts forged in other academic fields, in order to justify different projects for contemporary arts.

Parsitau, Damaris Seleina (Egerton University, Box 536, Egerton, Kenya [tel: +254 722 281 426; e-mail: dparsitau@yahoo.com]), **Global Pulpits: Charismatic Christianity and the Globalization of Prophesy in Kenya and Beyond,** *International Sociological Association, Gothenburg, Sweden,*

¶ Globalization, defined as the increasing flow of people, information, goods, services & other resources across national boundaries, is changing social context in ways that influence religious beliefs and practices. Increasingly, prophesy is becoming an important flow not only locally but also globally, linking religious networks that span national, regional & transnational borders. However, migratory & monetary flows are studied while others such as prophesy have not been given the scholarly attention it deserves. This paper proposes to examines the globalization of prophesy in Kenya & beyond & attempts to understand how prophetic engagements by local preachers are increasingly crossing boundaries and assuming a global character. The paper focuses specifically on Prophet David Owour, who has recently emerged as a local prophet with a global pulpit. His prophesies link the local & the global and displays a sort of global religious network linked together by prophesy.

2010S01992

Pascale, Celine-Marie (American University, Washington, DC, 20016 US [fax:; e-mail: pascale@american.edu]), **Sociologies of Language,** *International Sociological Association, Gothenburg, Sweden,*

¶ Historically, discourses of science within sociology have limited the study of language & meaning to highly technical analyses of conversation analysis & the turn-by-turn management of interaction. The discipline has been reluctant to accept sociological research regarding the broader processes of language and meaning–largely because these have been regarded as something other than scientific & therefore something other than sociological. In this paper, I argue for the importance of sociological studies of language that challenge existing discourses of science. I highlight both the richness & the usefulness of sociological analyses of language as a means to argue for more epistemic variety within the discipline.

Pathé-Duarte, Felipe (Institute for Political Studies - Portuguese Catholic University, Palma de Cima, 1649-023 Lisboa Portugal [tel: +351 96 489 4914; e-mail: felipepatheduarte@gmail.com]), **Religious Violence or Political Subversion: The Threat of Al-Qaeda's Doctrine in Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ I will intend to demonstrate that the doctrines which impel and justify Al-Qaeda's actions go way beyond religious irrationalism, articulating it with revolutionary ways of subversion, not only in its doctrine but also in its operation. The approach ground has been set: violence & terror which serve as a mean of gaining power of a movement whose inconsistent narrative merges modern revolutionary doctrines & religious faith (which, in part, helps to justify the initial violence). In other words, one either performs a rational analysis around the goals or goes forward into the deeply emotional motivations. Finally, as a result of this situation, we will try to point out the risk represented by Al-Qaeda's narrative in Europe. It is well-known that Europe became a global stage for jihadism as global subversion. Permeable to the jihadism are radical exiles & young second & third generation Muslim migrants. The goal is to operationalise control of human terrain, & try a "re-Islamization from below", a long-term infiltration into European society. For that reason, Al-Qaeda's doctrine reveals itself as a long term threat in Europe. However this threat reveals itself as growing, precisely by being an avatar of revolutionary movements merged with profoundly religious characteristics.

Patil, Rajendra Bhupal (Dept. of Sociology, Shivaji University,, Kolhapur India 416004 [tel: +91 231 2609368; fax: +91 231 2691533; e-mail: patilsuk@gmail.com]), **Civil Society and Water Governance: A Study of Hiware Bazar Village in India,** *International Sociological Association, Gothenburg, Sweden,*

¶ Hiware Bazar is a village with 257 households. Popat Pawar became the village headman in 1989 unopposed. He took water conservation work. He transformed Hiwre Bazar from water scare village to surplus one with the active cooperation of all the villagers & it has won many state & national awards. In 1970-80 the water scarcity & land degradation made agriculture redundant. In 1995 Hiwre Bazar was selected as the village that could be developed as the model village. Under this program, about 52 earthen bunds, two percolation tanks, 33 loose stone bunds were constructed. About nine check dams have also been constructed in a series on the downstream nallah. In 2006 the surplus was nearly 50 % of total water available. In the land use the gross cropped area of 821 ha. in 1996-97 has been increased to 1007 ha. in 1998-99 and 1125ha. in 2002-03. Since 2004 the annual water budgeting is discussed through village meeting & implemented. 70 ha forestland has been developed with cooperation of the forest department. 35 lakh trees have been planted in the past 20 years. The paper based on the secondary sources discusses the contribution of civil society in the water conservation & governance.

Patrício, Raquel de Caria (High Institute of Social and Political Sciences of the Technical University of Lisbon, Lisbon, Portugal, 1300-663 [tel: 351 919541260; e-mail: raquelpatricio@iscsp.utl.pt]), **The Brazilian Environmental Policy - The Most Concerned Emerging Economy With the Issue,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper analyzes the evolution of the environmental policy of Brazil since the 1970s until the present days, showing that the current economic crisis has had limited impact on that policy. As the largest holder of the biological riches of the world, with much of the Amazon, asserting itself as one of the most promising agricultural powers, with a strong economy & steady growth, Brazil has since 1990 pursued a fierce & ambitious environmental policy. The issues of climate change, biodiversity, energy security and sustainable development have become part of the foreign policy and agenda of the country. Besides, Brazil is the emerging economy that has been most concerned about the issue, setting here an interesting point of contact that settles pertinent the analysis, little known, of the Brazilian environmental policy. It is thus helpful to look on that policy. This paper aims, therefore, to analyze the evolution of the Brazilian environmental policy, giving data & explaining the goals of the country in this matter.

2010S01996

Pattinasarany, Indera R I (University of Indonesia, Department of Sociology, Depok, Indonesia [tel: 62-21-78849025; e-mail: irapattinasarany@yahoo.com]), **Citizen Understanding of Inclusive Citizenship in Education in Indonesia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Most of the studies on inclusive citizenship are carried out in developed countries setting. Such study is uncommon in Indonesia, a middle income country which comprise society with huge diversity both horizontally (such as ethnicity & religion) as well as vertically (such as social class). However, there are public debates related to citizenship inclusiveness in education sector, in particular on the provision of schooling for children with disability. The study focuses on inclusive citizenship in education sector in general. The latter is based on the fact that education is a basic right for all Indonesian citizen as promulgated in the Constitution of 1945 ("each citizen has the right to obtain education"). Particularly, the study seeks to examine whether people are aware of their rights & responsibilities in obtaining and/or providing education services enroute to inclusive citizenship condition. Three questions will be explored in the study. First, whether people felt that they are treated fairly. The second relates to whether people felt that they have obtained their rights & fulfilled their obligations as citizen. Finally, the extent to which people felt that they have the ability to exercise some degree of control over their futures. These questions are solicited within the context of the provision of education services. Analytical results will be established based on literature & regulation reviews, & in-depth interviews with officials in charge for delivering education services as well as students. Initial findings show that students from lower economic class attest that the government has yet to meet their rights while they have carried out their obligations. Students seem to have to have clear view regarding their future even though they do not know to reach it. Students from middle-upper economic class, on the other hand, also felt that the government did not deliver educational services that meet their expectation. In contrast to their lower class counterparts, students from middle-upper class can meet their needs through different channel as they have resources. Likewise, middle-upper class students can identify

how to reach their future. The paper provides interpretation on main findings from sociological perspective & concludes by discussing potential policy implications for improving inclusive citizenship in education sector agenda.

2010S01997

Pattnaik, Binay Kumar (Dept. of Humanities and Social Sciences, Indian Institute of Technology Kanpur, Kanpur, Uttar Pradesh, India, 208016 [tel: +91 512 2597925, 2598322; fax: +91,512, 2597510, 2590260; e-mail: binay@iitk.ac.in]), **Understanding People's Science Movement in India: From the Vantage of Social Movement Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ The proposed paper is based on several case studies of people's science movement (PSM) organizations in India. These case studies include some of the more active PSM organizations a Kerala Sashtra Sahitya Parishad (KSSP), Patriotic & People-Oriented Science and Technology Foundation (PPST), Marathi Vidnyan Parishad (MVP), Delhi Science Forum (DSF), Eklavya, Srujanika, & Bharat Gyan Vigyan Parishad (BGVS) -- all integrated under an all India umbrella network known as the AIPSN. Based on primary as well as secondary data collected from PSM organizations, the paper attempts: (a) to portray the life cycles, i.e. emergence (ideological roots), growth (activities & diversification, if any) & decline or renewal of these PSM organizations, & (b) to analyze the said phenomenon from the vantage of social movement perspective. PSM in India might have started as a discursive movement where activism started with a discourse & later on manifested in some form of social mobilization. But as the analysis of this study shows discursive formation is not an encompassing framework to justly explain the movement. It fails to do so particularly because of the grassroots activities of KSSP & emergence of all India organizations like BGVS that indulges in popular social mobilizations. The analysis indicates that of late the PSM in India has taken the shape of social mobilization. At the same time it further indicates that the PSM has grown beyond the conventional social movement framework, i.e. from mobilization to institutionalization. The emergent institutions have not culminated as the end-processes, rather make an intermediary phase, beyond which some of these PSM institutions have become dormant, some have started declining, some have withered away making way for new institutions & some have emerged stronger by re-aligning themselves under larger umbrella organizations. In the process the movement renews itself, as new PSM organizations have also emerged. But at the same time it is observed that the movement has lost its original radical teeth, spontaneity & focus. More of it have come under the influence of the government & have shifted their areas of focus (to literacy, environmental awareness & even rehabilitation & resettlement issues). Hence, PSM in India now has acquired more the hues of "Social-activism" (not that of pure science as it was earlier). The paper is one of the pioneering works on sociology of science in contemporary India, through which attempt has been made to identify science with social criticism / activism & to perceive the same through social movement perspective. By studying science as a means of social criticism & social activism the paper forges a strong link between science as a social institution & contemporary social processes in India. Thus it is a contribution to the social studies of science.

2010S01998

Paulle, Bowen ([e-mail: B.Paulle@uva.nl]), **Elias and Bourdieu,** *International Sociological Association, Gothenburg, Sweden,*

¶ The primary goal of this paper is to uncover the deep-seated conceptual affinities between Pierre Bourdieu & Norbert Elias. The second goal is to demonstrate that, in part because of their diverging sensitivities, when taken together the two authors' highly compatible approaches yield a vision more fertile than either of their sociological perspectives considered separately. Tracing the intellectual roots of the two author's three core concepts--habitus, field/figuration, & power/capital--we show how they selectively appropriated from their predecessors. We then outline how each of the two authors used their overlapping triadic approaches to interrogate a range of empirical phenomena. Attempting to make the authors' unexploited complementarity more tangible, we reflect on a simultaneously Elias & Bourdieu inspired approach to the body-centered world of sport. The conclusion argues that looking back at Elias & Bourdieu's theoretical contributions together can us revitalize our conceptualizing & investigating of human societies in the future.

2010S01999

Paulsen, Roland (Department of Sociology, Uppsala University, 751 26, Uppsala, Sweden [tel: 0046737839337; e-mail: roland.paulsen@soc.uu.se]), **Resistance, Adjustment and the In-Between,** *International Sociological Association, Gothenburg, Sweden,*

¶ Within critical theory as well as labor process theory the possibility of individuals resisting taken for granted power asymmetries remains a highly debated subject. Dropping rates of union membership seem to imply that within the sphere of labor, worker resistance is loosing ground. Based on a large interview material of critical cases, this notion is challenged. The interviewees mainly represent white-collar employees who spend half of their working hours on private activities. Studying their objectives and political ambitions behind their methodical recalcitrance reveals a range of intentional structures that all result in the same sort of time appropriation. First, the recalcitrance may be the effect of framed resistance based on a political indignation that often is combined with other forms of oppositional actions such as sabotage and pilfering. Second, time appropriation may more plainly be characterized as disengaged resistance in which case the recalcitrance is not politically formulated but still grounded in personal indignation. Third, the activity of not doing your work while at work can also be the effect of withdrawal in which case there is no other object than to avoid working. Fourth, time appropriation may also be a (sometimes involuntary) consequence of adjustment: This is the case when the employee does not receive enough work assignments to fill a working day. I conclude by suggesting that the processes & leaps between these intentional structures should be further studied.

2010S02000

Paupardin, Muriel (INSEP, 11 Rue du Tremblay 75012 Paris [tel: 033141744220; fax: 033141743545; e-mail: muriel.paupardin@insep.fr]), **Access to Sports Practice in Deprived Urban Areas, Social Integration and Public Policies,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper will give some elements of a research conducted in several neighbourhoods in different deprived urban areas around Paris. The aim of this research is to look at the effects of different kinds of local initiatives to promote sport participation among young people. We'd like to show that attendance to this kind of sport initiative makes possible access to sport practice & could help certain individuals to have access to more diversified social networks than those to which they belong. We'd like also to show what institutional conditions are necessary in order that various skills which have been acquired in this framework could tend to change individuals' social trajectories by facilitating a route to employability in sport or in any other industry. The success of a local sport initiative, namely the entry & maintaining in sport or physical activities, depends on the type of offers, on the existence of a local system supporting individuals & the nature and quality of the relationship that partners in the local system are able to develop with its environment.

2010S02001

Pausch, Markus (Centre for Futures Studies, University of Applied Sciences Salzburg, Puch, Austria, 5412 [tel: +430502211-1857; e-mail: markus.pausch@fh-salzburg.ac.at]), **Subjective Well-Being and Political Behaviour in Austria, Germany And France,** *International Sociological Association, Gothenburg, Sweden,*

¶ It is a widely consensual assumption among scholars that the perceived quality of the political system & its institutions contributes to the subjective well-being of its citizens. Many studies & surveys have proven this interdependence in recent years. Especially countries with an elevated institutional & constitutional potential of direct political participation like Switzerland are said to implicate a higher quality of life than others. Though, political participation is in the majority of the respective studies reduced to its conventional, thus system-maintaining and system-friendly dimensions like voting in elections or referenda, discussing in institutional arrangements, writing (remonstrative) letters or joining in organised interest groups. Unconventional and system-critical participation like demonstrating, voting for system-critical parties etc. has less often been the focus of quality of life research, although it is undeniable & hardly ever denied that these activities are forms of political participation as well. In the paper empirical data concerning these questions and the interconnection between the political system, trust in institutions, subjective well-being & political behaviour respective political participation in Austria, Germany & France will be presented & interpreted. The analysed data stem from Eurobarometer, The European Quality of Life Survey & further representative surveys (especially the latest results of a survey conducted by the Centre for Futures Studies).

2010S02002

Paz, Fernanda (CRIM-UNAM, Av. Universidad s/n, cto. 2 Col.

Chamilpa, Cuernavaca 62210, Morelos, México [tel: +52 777 329 1826; fax: +52 777 317 5981; e-mail: ferpazsa@gmail.com]), **Social Movements and Scientific Knowledge: Beyond Strategic Alliances. Environmental Struggles in Mexico.,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ The paper analyzes the relationship between scientific knowledge and social movements looking for their interaction & mutual configuration. We make our approach from the study of the environmental struggles in Mexico pointing out two main aspects: 1. the role of scientific knowledge validating the argument of the struggles & redefining their demands; & 2. science in movement: political struggle in academic arena, or the dispute of legitimacy of "scientific chores". Finally, exploring the case of the Asamblea Nacional de Afectados Ambientales (National Assembly of Environmental Affected), we reflect on the challenges for the formation of a new type of movement: science and citizen-environmentalist.

Pearce, Laurence D. (Justice Institute of British Columbia, 715 Mc Bride Ave., New Westminster, BC Canada V3L5T4 [tel: 604-929-4560; fax: 604-929-4561; e-mail: lauriepearce@shaw.ca]), **Psychosocial Considerations in Emergency Management: A Methodology for Influencing Key Decision Makers,** *International Sociological Association, Gothenburg, Sweden,*

¶ This project will draw on two decision-making models to examine the decision making processes of first response & emergency management leadership (i.e., Emergency Operations Centre personnel) through the development of exercises, scenarios & injects designed to prompt a more thoughtful engagement with the psychosocial dimensions of terrorism-based & other hazard events. The output of the research will be a training & exercise "collaboratory" or virtual laboratory of information, research, and expert dialogue focused on training & exercise for emergency responders & leadership with a specific emphasis on the psychosocial implications of disasters for responders and civilians. This collaboratory will include a digital library of exercises, injects, scenarios, simulated news footage, & exercise manuals which will act as a central repository or evolving compendium of resources for training & research. The various outputs of this research will equip agencies in & outside of Canada with the practical, technical, & informational resources to enhance training & more effectively address the challenges associated with the psychosocial implications of: (1) decontamination; (2) forensic/criminal police investigation and privacy issues; (3) mass casualty surges on the health system; and (4) multi-agency collaboration.

Peetz, David & Bailey, Janis (Griffith University, Brisbane QLD 4111, Australia [tel: +61 7 3735 7600; fax: +61 7 3735 7177; e-mail: d.peetz@griffith.edu.au]), **Neoliberal Evolution and Union Responses in Australia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Our paper analyses the phases of neoliberalism in Australia & union responses to them. We commence with consideration of Australian unions before the rise of neoliberalism, & then examine three phases of neoliberalism: 'constrained neoliberalism' under the Hawke-Keating Labor governments (1983-1996); 'Stalinist neoliberalism' under the Howard government (1996-2007); and 'revisionist neoliberalism' under the Rudd government (2008-). Australian union strategy has varied over the past century within a range from advocating 'protective' state action to 'reformist oppositional' stances. This largely reflects unions' institutionalisation within state arbitration processes & long established links to parliamentary politics. The 1983-1996 Accord provided a moment where they put forward something resembling an alternative vision, but it could not decisively counter the power of neoliberal ideas within the state bureaucracy & exacerbated the critical weakness of unionism at the workplace. As the need for workplace union development was revealed & responded to, the breadth of union vision outside the workplace narrowed. Unions were spectacularly successful in defeating the Howard government's 'Stalinist neoliberalism' & establishing the legitimacy of union 'values', but did not develop a modernised class politics to underpin the new emphasis on workplace activism that unions to varying degrees now pursue & which places heightened emphasis on activist education. Although the failures exposed by the financial crisis & public scepticism about neoliberalism make it vulnerable, there is yet to be a cohesive oppositional response to revisionist neoliberalism.

Peggs, Kay (University of Portsmouth, Portsmouth, Hampshire. UK. PO1 3AS [tel: +44 02392 846093; fax: +44 02392 842173; e-mail: kay.peggs@port.ac.uk]), **Science, Human Health and the Oppression of Nonhuman Animals: Morality and the Development of Transgenic Nonhuman Animals for Human Use,** *International Sociological Association, Gothenburg, Sweden,*

¶ In May 2009, the journal Nature published an article by Erika Sasaki and her colleagues outlining biomedical research that is said to provide additional potential for using nonhuman primates in experiments for human health gains. The research, which outlines a scientific method for the reproduction of transgenically modified marmosets who could have a predisposition to develop human diseases, has been greeted in many quarters as a milestone in biomedical research. Discourses associated with such experiments typically centre on evaluations of the advancements that might ensue in terms of reducing risks from human health hazards. By conducting a critical analysis of the article, this paper explores principles & moral questions connected with nonhuman animal experimentation in order to reflect upon assumptions central to claims about the progress that such nonhuman animal experiments represent. Drawing on sociological work on the role of science in addressing risk issues in society, this paper explores ethical questions associated with using nonhuman animals for human gain and concludes that tampering with the genetics of nonhuman animals so that they have an inclination towards feared human health hazards represents moral degeneration rather than progress. Thus, despite the scientific progress that such research is said to exemplify, the paper argues that such research does not represent human moral progress & thus is not good for humanity.

Pekka-Economou, Victoria (Department of Business Administration, University of Piraeus, 80, Karaoli & Dimitriou str [tel: 00302106010794; e-mail: Vic_pec@yahoo.com]), **The Main Factors and Motives that Encourage Women to Meet Their Human and Social Needs through a Socially Responsible Entrepreneurial Spirit: The Case of Greece,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the new competitive environment women are trying to solve their existing problems through economic, socially sensitive and responsible entrepreneurial initiatives Women entrepreneurial activity is a growing economic phenomenon in US, EE & other countries all over the world. It is characterized as a serious driving force for economic growth, job creation, social and economic stability. For this reason there is an increasing interest to investigate & present the incentives of woman participation in labor market through their dynamic entrepreneurial activity & the ownership of small businesses. The main purpose of this paper is to examine & present in general the matter of women entrepreneurship in Greece. The main factors that empower female entrepreneurial activity & personal characteristics that motivate entrepreneurial environment in Greece are gathered from questionnaires answered by women, covering the greater area of Athens-Greece in the year 2009. The paper's originality lies in providing more empirical evidence concerning the Greek situation & mainly the greater area of Athens. The practical implication of all the possible conclusions may seriously assist official policy makers for their formulation and implementation of effective, sensitive & responsible support programs & practices. Keywords: Women, Entrepreneurship, Greece

Pekkola, Juhani (Kymenlaakso University of Applied Sciences, Box 9 [tel: 48220 Kotka; fax: + 358 5 220 8742; e-mail: juhani.pekkola@kyamk.fi]), **Well Being of Young Generation: Forms of Well Being and Integration among Young Adults,** *International Sociological Association, Gothenburg, Sweden,*

¶ We say that young ones are the future of the nation. But what kind of life the daily present offers for young people? Young people are not a holistic group. Rough estimate tells us that in Finland 2/3 of young ones are integrated & healthy, 1/3 face risks & again 1/3 of them lies in various troubles & need external help. What kind of social processes we have to understand when explaining the structures of wellbeing & disintegration? Social pressures among young people increase because of general ageing which is mainly a result of shrinking cohorts. Economical burden to take care of inactive population is year after year allocated to smaller number of active population. At the same time pressures & actions to prolong working careers & cut time for studies increase. This brings implications of making the processes of education & studies more intensive in order to achieve professional & social skills needed in working life. In working life low skill jobs disappear & more talent, motivation & skill is needed. All this preparations for social life takes place at the same time, when youngsters & young adults should mature in their personal sphere, establish their own families, generate place to live, take care of their children,

perhaps even their parents. To describe the social complexity at life we have still to mention swift changes on the area of economy bringing both positive opportunities & uncertainty, globalization, real time information exchange & virtual environments, emigration & immigration. Some empirical studies demonstrate that youngsters & young adults try & will manage according external demands, but some feel exhausted, depressed. In general Finnish young people are suffering from hurry, that is, shortage of time. There is no revolt or even strong opposition against competitive values to be seen. At the moment we do not know in details the structures of well being or alienation among young generation. What are the cultural, personal, family based or other social dimensions which support or opposite well being and integration, ill health & disintegration. What are the models of living styles among young ones? What kind of experiences or environments triggers positive & negative circles? How young people deal with contemporary social drivers mentioned earlier? Some operational areas influencing socialisation could be: Living environment, family, work, global impacts, & forms of consumption, education & the impact of ICT. The R&D programme "Voi hyvin nuori" / "Well being of young generation" will operate April 2010 a March 2010. The project will: - Involve local authorities, state authorities, third sector & research in order to study & develop intervention methods. - Clarify the structures of integration, identity and socialisation among young adults empirically in forms of case studies, survey & building constructive models. - Analyse the results, develop the methods among stakeholders, increase the exchange of knowledge & networking in order to find & spread positive solutions to maintain & increase integration & health and prevent disintegration & ill health as well as help the disintegrated & unhappy ones. - Compare the nature identities of young adults on regional basis & compare the integration and disintegration of young adults between SE-Finland & NW-Russia in empirical survey. - Increase the well being, integration and happiness among young generation. (Abstract shortened by Proquest.)

Pellegrino, Giuseppina (Department of Sociology and Political Science, University of Calabria, Via Pietro Bucci 87036 Arcavacata di Rende (CS) Italy [tel: +39(0)984492569; fax: +39(0)984492598; e-mail: gpellegrinous@yahoo.com]), **Future's on the Move: Looking Forward to Ubiquitous Communication?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Wireless technology coupled with miniaturization & portability of devices challenges categories to understand human-to human, but also mediated & intra-environmental communication. At the same time, the tangibility of a ubiquitous communication made possible by massive use of mobile phones has pushed forward the frontier of ubiquity, whose desire is as ancient as humankind, through embedding it in always different forms, labels & discourses (the "ubicomp"-ubiquitous computing-amongst others). The paper aims to discuss the role of future in shaping & designing new technologies, showing how future-oriented temporal trajectories can be traced in the path which leads to new media. The departure point is future as the "time of the new", in which unforeseeable can be foreseen through imagination, projection and, in the case of new media and technologies, designed. In fact, it is also through imagination and the constitution of a specific imagery that technologies become the media in users' hands & artifacts at disposal of different social groups. The contribution reflects on the pervasive emergence of mobility as a global trend in new technologies & media, to highlight how "being on the move" is a "must" in discursive and organizational practices concerning the design of advanced systems of communication. The case of the so called "ubicomp" will be presented as exemplary of ambivalences and contradictions which can be traced in the desire/design of new technologies & "smart", "intelligent" media enabled by pervasive infrastructures.

2010S02009

Pellegrino, Giuseppina (Department of Sociology and Political Science, University of Calabria, Via Pietro Bucci, 87036 Arcavacata di Rende (CS) Italy [tel: +39(0)984492569; fax: +39(0)984492598; e-mail: gpellegrinous@yahoo.com]), **Is Future Now? Sociotechnical Discourse as Site for *in fieri* Futures,** *International Sociological Association, Gothenburg, Sweden,*

¶ Sociotechnical discourse can be considered as site for future making and construction. Projection of hopes & horrors, in the form of binary frameworks which enforce technological determinism, characterize the narratives of technological discourse, whose sources & actors are multiple (the mass media, professional communities, institutions, enterprises). Different conceptions of technology as well as different durations of future can be identified in sociotechnical discourse. On the one hand, technology has an autonomous force & it seems to be almost a-temporal, out of time. This is even more emphasized when it emerges that the typical sociotechnical discourse is inspired at binary frameworks where apocalypse & irreversible ameliorement are confronted with each other. At the same time this recurrent pattern is declined in a short & a long time frame. In the first case, it is the culture of Capitalism as based on a "tomorrow after future" & emphasis on consuming a reified future temporarily embedded into artefacts which need to be owned (and consumed). However, there is a farther future performed through sociotechnical discourse, as feed by multiple sources or actors, from popular media to science fiction. This horizon is concerned with expectations of a radical revolution which foster anger & desire, horror & hope.

2010S02010

Pellizzoni, Luigi (Department of Political and Social Sciences, University of Trieste, Trieste, Italy, 34127 [tel: +39 040 5583730; fax: + 39 040 5587829; e-mail: pellizzonil@sp.units.it]), **Uncertain State: Risk and Ecological Citizenship in the New World (Dis)order,** *International Sociological Association, Gothenburg, Sweden,*

¶ For quite a long time societal transformation in reply to the ecological crisis has been framed in terms of a shift from "first" to "second" modernity. The envisaged extent of this shift ranges from mild, gradual reforms to more profound reconsiderations of modern institutions & citizenship rights & duties, yet the welfare state & society usually represent an explicit or implicit point of reference. In this way, however, the scope of the neoliberal turn a of which the recent crisis is likely to inaugurate a new phase rather than the decline a remains underestimated. On one side the society & the state to which environmental reform is to be applied are today profoundly different from those in which the first waves of environmental policies have been conceived. On the other, neoliberal rule can be regarded in itself as a reply to the ecological crisis, though in a way to some extent unexpected & underappreciated by social science scholarship. Neoliberalism takes to the extreme some traits of modernity, with far reaching consequences as regards the understanding of nature, humanity & society. Reflexivity assumes peculiar features, the idea of risk governance turns out misleading, celebrated innovations like deliberative forums take a problematic look & society is (or seems) handled through (rather than despite) disorder. To elaborate on these points I will focus on how neoliberal rule affects human relationship with nature (including its own nature), the relevance in this respect of novel meanings of risk & uncertainty, & the implications of these changes for citizenship & regulation. Insight will come in particular from the emerging field of "converging technologies", while conceptual tools will be drawn especially from recent Foucault-inspired scholarship.

Pennell, Beth-Ellen, Alcser, Kristen, Hansen, Sue Ellen & Harkness, Janet (Survey Research Center, University of Michigan, 330 Packard, Ann Arbor, MI, USA, 48106 [tel: +732-647-2247; e-mail: bpennell@isr.umich.edu]), **The Development of Guidelines: Toward Best Practice in Cross-National Data Collection,** *International Sociological Association, Gothenburg, Sweden,*

¶ The number & scope of studies covering many cultures, languages, nations, or regions have increased significantly over the past decade. This has led to a growing need to provide information on best practices across the multiple aspects of cross-cultural survey design & implementation to ensure the collection of high-quality comparative data. However, there is very little published material on the details of implementing surveys that are specifically designed for comparative research, including what aspects are to be standardized & when local adaptation is appropriate. The Cross-Cultural Survey Design & Implementation (CSDI) guidelines initiative was created to address this gap. Specifically, the aim of the initiative was to develop & promote internationally recognized guidelines that highlight best practice for the conduct of comparative survey research across cultures & countries. The intended audience for the guidelines includes researchers and survey practitioners planning or engaged in cross-cultural or cross-national research. The guidelines cover all aspects of the survey life-cycle & include the following chapters: (1) Study Structure; (2) Survey Quality; (3) Ethical Considerations; (4) Tenders, Bids & Contracts; (5) Sample Design; (6) Questionnaire Design; (7) Adaptation; (8) Translation; (9) Instrument Technical Design; (10) Interviewer Recruitment & Training; (11) Pretesting; (12) Data Collection; (13) Data Harmonization; (14) Data Processing; & (15) Data Dissemination. The guidelines can be found at http://ccsg.isr.umich.edu.

Pensiero, Nicola ([e-mail: nicola.pensiero@eui.eu]), **The Impact of Birthweight, Childhood and Adult Psychosocial Resources on the Evolution of Psychological Malaise from Early Childhood to Adulthood,** *International Sociological Association, Gothenburg, Sweden,*

¶ This work studies the joint effects of different forms of social and psychological resources considered at different life stages on the evolution of psychological malaise occurring between age 5, 10 and 34. Using structural equation modeling to account for the indirect mechanisms mediating child's psychological evolution, results throw light on the relative importance of age-specific social mechanisms. Childhood cognitive ability, the locus of control and peer rejection, which mediates also the effects of the two psychological resources, confirm to be key explanatory factors of psychological malaise. Contrary to expectations, neither earlier factors such as birth weight and prenatal maternal behavior nor educational and occupational outcomes measured at age 34 have substantial effects on the likelihood of psychological malaise. Changes in the level of malaise after childhood are rather accounted for by cognitive ability measured in early adulthood, which is quite stable after childhood. Parental support protects the child against malaise indirectly by fostering child's cognitive ability and the locus of control. The effect of parental support on child's abilities also explains the socioeconomic differential in child's psychological malaise. The model is assessed on a large sample of individuals followed from birth to early adulthood (British Birth Cohort Study 1970).

Pepicelli, Renata (Department of Politics, Institutions, History, University of Bologna, Bologna, Italy, 40126 [tel: 00393336937581; e-mail: renata.pepicelli@gmail.com]), **Religious Revivalisms: The Re-Positiong of Religion Among Muslim and Christian Women in Italy,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this paper is to explore the issue of Islamic & Christian revivalism among Sunni Muslim & Baptist Christian women in Rome. By challenging the idea of exceptionality of Islam as the only religion that seems to re-position itself in the public sphere, this paper - based on comparative in-depth interviews & observant participation a discusses how religion is becoming, for many migrant women & their descendents, a way to have access to Italian public sphere. According to several Muslim & Christian respondents, turning to religion does not mean turning to the past and be locked into private sphere. On the contrary, in their words and performances (female religious lessons, proselytism, certain codes of dress…), religion can become a tool of empowerment in religious communities & in host society. By turning to religion, both Muslim & Baptist women reclaim a voice in a fragmented post-modern era, challenging & reaffirming gender role.

Peralva, Angelina, Sinhoretto, Jacqueline & Gallo, Fernanda de Almeida (Université de Toulouse - Le Mirail, Toulouse, France [tel: ; e-mail: peralva@univ-tlse2.fr]), **The Parliamentary Inquiry Committee on Drug Trafficking: Preliminary Analysis of the Profile of the Individuals Involved, Social Networks and Their Links with Formal Institutions of the Market, Politics and the State,** *International Sociological Association, Gothenburg, Sweden,*

¶ The processing of information gathered by the Parliamentary Inquiry Committee on Drug Trafficking, known as "CPI do narcotráfico", completed by the House of Representatives in 2000, allow to examine the phenomenon of drug market through a prism not much explored so far by other studies. Collecting information on business networks in 23 Brazilian states as well as three international connections, the source reveals a wealth of information on the backgrounds of individuals involved in drug deals, his organization & the multiple forms of articulation between social networks local, regional, national & transnational. The profile of the individuals showed a wide social diversity with different degrees of articulation of these illegal activities to established businesses in the formal economy & political networks with connections in state institutions. The primary treatment of the data points to a questioning of the meanings crystallized around the term 'organized crime', as if this was a homogeneous sociological type; what the CPI seems to offer to the analysis are different modes of organization, with very different ways of assets movements, people & powers that are combined in a concrete way in well-defined contexts, & that they tend to produce a booming market. Market which can be controlled by both highly organized networks, hierarchical, exercising the control of the territory by violence, as by softy networks that cleverly combine knowledge and professional expertise to enhance & diversify their business. In either case, networks mobilize strategic positions within state institutions, but show a wide variation in the nature & intensity of exchanges between the market business & the business of the state; consequently it is not possible to say that there is a single standard connection between the drug market, the formal economy, politics & the state.

Percy-Smith, Barry (The SOLAR Action Research Centre, University of the West of England, Glenside Campus, Blackberry Hill, Stapleton, Bristol, BS16 1QY [tel: ++44 (0)1604 246926; e-mail: barry.percy-smith@uwe.ac.uk]), **Sustainable Lifestyle Education as a Critically Reflexive Process of Learning in Schools and Communities,** *International Sociological Association, Gothenburg, Sweden,*

¶ The sustainable schools strategy in the UK provides a significant challenge for schools as centres of Education for Sustainable Development (ESD). Whilst many schools have embraced the "green" agenda & made advances in their provision of learning for sustainability, there are questions about the extent to which this learning results in the development of more sustainable communities beyond the classroom. This paper discusses key learning from a recent project, funded by the Economic & Social Research Council and Housing & Communities Academy, which used an action research approach to explore how the role of schools might be maximised in developing sustainable communities. The project engaged pupils, school staff & members of the wider community in cycles of reflection, learning & action. Drawing on examples from partner schools, the paper raises issues & questions about approaches to learning for sustainable development, wider roles of (extended) schools & the agency of children & young people in bringing about sustainable communities. The paper concludes by arguing that only through learning which "empowers" people to develop environmental competence through direct & critically reflexive relationships with nature will ESD be able to make a meaningful contribution to the achievement of sustainable communities.

2010S02016

Pereira, Ines (FGV EAESP, Rua Itapeva, 474 - Sala 1006 - Sao Paulo (SP) - Brazil - 01332000 [tel: +55 11 82453333; e-mail: ines.brasil@uol.com.br]), **Tobacco on the Move: The Pop-Up Stores and the Seductive Power of New Forms of Communication,** *International Sociological Association, Gothenburg, Sweden,*

¶ Brazil is one of the 168 countries that signed the Framework Convention on Tobacco Control. For this reason there are strong restrictions on tobacco industry marketing campaigns in Brazil. Nevertheless, it is still among the ten countries with the highest number of smokers in the world. The law restrictions have been forcing the tobacco industry to search for new forms of communication, meaning new alternatives of interaction that could be less saturated & more effective. Pop-up stores, object of this paper, are among those alternatives. Pop-up stores are temporary stores assembled by tobacco industry where cultural or entertainment events are taking place. Traditionally, the communication strategies of the tobacco industry do not point out the smoke, but the smokers. In advertising the smoker appears as someone sexy, self assured, willing to take risks, self-contained/independent. If contemporary life turns people into commodities (Bauman, 2007), the tobacco industry helps turn the smoker in a "desirable commodity." The pop-up stores are a new channel for traditional communication strategies of the tobacco industry, which uses them to get what all industries eagerly desire: customers increasingly addicted to the consumption of their products.

Pereira-Coutinho, José Maria (ISCTE, Lisbon, Portugal, 1649-026 Lisbon [e-mail: josemariacastro@netcabo.pt]), **Portuguese Undergraduate Youth's Beliefs, Practices and Attitudes,** *International Sociological Association, Gothenburg, Sweden,*

¶ My PhD thesis studied the religious beliefs, practices & attitudes of Portuguese undergraduate youth, as well as their religious socialization. The population studied was the third year students of the public universities of Lisbon. I gathered a sample of 500 students, distributed by 10 different subjects through a survey that was applied during March 2010. It is not finished yet. Perhaps I will develop a focus groups or conduct interviews with students to deepen my findings. Because the fieldwork is not finished, I can't produce conclusions yet. Only in April or May, will I have the main results produced.

2010S02018

Perenyi, Szilvia (Semmelweis University, Faculty of Physical

Education and Sport Sciences, Budapest, Alkotas u. 44. H-1123 Hungary [tel: 00-30-6947-413641; fax: 00-30-24210-61376; e-mail: sperenyi@hotmail.com]), **Thrill Society: Sport as a New Dimension of Personal Freedom,** *International Sociological Association, Gothenburg, Sweden,*

¶ Using the concept of "thrill society" by Schulze, the purpose of this study was to examine the role of sport participation in the life of young people taking uncertainty & insecurity emerged at endings of "thrill projects" into consideration. Stratified random sampling was applied to obtain an accurate national representation of Hungarian youth population in relation to age, gender & type of settlement, & municipality of residency. Data was analysed by using multidimensional statistical methods. The findings suggested that as part of the individualisation and diversification processes of youth, sport lost its instrumental value content & gained goal/performance orientations in the process of thrill-projects. Data showed, however, that sport participants adopted a more positive image of the future, higher ability to assume risks & a more modern state of mind, also a more stable self-concept in comparison to non-participant youth. It seems that sport may assist youth with a stable & accountable value environment that reduces the variety of opportunities and provide resources to better deal with societal & personal uncertainties; meanwhile it opens new avenues of personal freedom. Key words: thrill society, sport participation, Schulze, self-concept, values

2010S02019

Perera, Purnima Subodhani J.A. (1Lecturer in Sociology, Department of Social Studies, Faculty of Humanities and Social Sciences, Nawala, Sri Lanka., Department of Social Studies, Faculty of Humanities and Social Sciences, Nawala, Sri Lanka. [tel: 94 011 2881402; fax: 94 011 2820032; e-mail: jaspurnima@yahoo.com]), **Social Exclusion and Teenage Pregnancy in Urban Slums in Colombo,** *International Sociological Association, Gothenburg, Sweden,*

¶ Socio-economic moves & the demographic transitions in Sri Lanka have created an atmosphere to perpetuate teenage pregnancy. The rates of teenage pregnancy are higher among vulnerable populations in the country demanding greater attention. Researches argue that social exclusion is both a cause and consequence of teenage pregnancy (Kiernan, 1995; SEU, 1999; Swann et al., 2003 & Ranatunga, 2004). Therefore this research intends to discuss the teenage pregnancy in a vulnerable population in the context of social exclusion. Objectives: to discuss the teenage pregnancy among urban slum dwellers in the context of social exclusion. Methodology: This descriptive sociological study was conducted among 109 teenage pregnant mothers living in urban slums in Colombo Municipal Council (CMC) area, Sri Lanka during 2008 July to 2009 December. A population proportionate sampling method was used to select the participants from 13 Antenatal clinics (ANCs) covering 96 Public Health Midwife (PHM) Areas. A female, having pregnancy at the age of 20 or less was considered a teenage pregnant woman. Primary data was collected through interviewer assisted questionnaire & in-depth interviews & secondary data was collected by using pre-designed data entry sheets from the Management Information System (MIS) maintained by the PHMM during 2004-2009. Qualitative analysis was done using Frame Work Analysis and the quantitative analysis was done using SPSS software. Ethical approval was obtained. Discussion: The prevalence of teenage pregnancy was 7.8% in CMC during the study period. Teenage pregnancy among these 13 ANC areas varied from 2.5% to 15.8%. Trend analysis revealed consistently higher prevalence of teenage pregnancy in poorer PHM areas. Around 25% of the teenage pregnant mothers were descendants either from single parent or parentless families. One in six TP mothers (n=19) were inmigrants to CMC area. Half of the TP mothers had got only secondary education (grade 5-10) & reasons for discontinuing education were connected to ethnicity, poverty, deprived family background & pregnancy during school age. Almost all the TP mothers (98.2%) were house wives although 36.8% of them were employed prier to their marriage. Alcoholism in the family had influenced on becoming pregnant at teen age out of wedlock due to elopement with a partner. Ninety three TP mothers (85.3%) have been born to a mother who was aged less than twenty years when she first gave birth to a child. This implies the intergenerational continuation of teenage pregnancy. Parental cohabitation or marital dissolution & frequent family disputes showed a significant effect on unwanted pregnancy happened out of marriage. Conclusion Social exclusion effects on the risk of teenage pregnancy in the form of poverty, parental marital dissolution & frequent family disputes of parents, migration status, poor educational attainment, unemployment, influence of alcoholism of a family member, descendents of teenage parents, parental cohabitation or marital dissolution & frequent family disputes. Recommendations Multi-sectoral interventions should be targeted mainly in the PHM areas which are highly affected by teenage pregnancy. (Abstract shortened by Proquest.)

2010S02020

Pérez Naranjo, Lena (Sociology, Free University, Berlin, Germany, 14195 [tel: +49 173 6341 252; e-mail: lena@raros.de]), **Cuban Migration Today: Analysis and Perspective in Germany,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Cuban Migration has been during the last 50 years a disputed field among scientists from different disciplines. Since the Triumph of the Cuban Revolution in 1959 there has been a division between the Cubans who stay in the country & the others who leave the island. This original disagreement has been centered on social & economic issues but above all has been an ideological & political dispute. However, between 1975 & 1989 Cuban students & workers were sent to the former socialist countries. They were the personification of interchange programs & an example of solidarity among brother countries. Germany was one of these countries that received Cubans. Around 300,000 came to the DRG (Democratic Republic of Germany). In 1989 at the time the Berlin Wall fell down thousands of Cubans were in the DRG. With the end of the cold war the political scenario changed & the Cubans were trapped again between the loyalty to a government on one side & economic & personal development on the other side. The arrival of Cubans in Germany did not stop with the end of the socialist era. Since then more & more Cubans have adopted Germany as a second country. Hence this study is a Ph.D. research, which deals with the evolution of the Cuban migration in Germany from 1975 until today. It will explore the motivations Cubans had to migrate to Germany, the process of their integration into the German society, & their influence, though from the distance, in the Cuban society. The presentation will deal in the first part with a concise description about the arrival of Cubans in Germany & its development after 1989, when Germany & Cuba ended the interchange programs. The second part is a short presentation about Grounded Theory as the method used in order to analyze the interviews. I conducted 30 structured interviews with Cubans living in Germany for more than 35 years, others arrived a year ago. Finally the first results will be presented where it will be clarified different strategies Cubans put into action in order to arrive in Germany, their role into the German society & the bridges they build in a transnational space that connect Cuba & Germany. These personal stories illustrate new trends of migration in the case of Cuba at the same time that illustrate the process of integration in the German society taking into account the differences in language, culture & political system.

Perez, Victor W. & Maratea, R.J. (University of Delaware, Newark, DE 19716 [tel: 302-831-2581; fax: 302-831-2607; e-mail: victorp@udel.edu]), **How Individual Web Spaces Create a Social Movement: Mapping the Online Network of the Autism Collaboration,** *International Sociological Association, Gothenburg, Sweden,*

¶ Childhood autism spectrum disorder (ASD) has gained considerable attention across several arenas for social problems construction. The Internet is an integral venue for claims of an autism epidemic, and is particularly important for parents of those affected as both claims-makers & purveyors of scientific & other information regarding the etiology of the condition & the increase in diagnoses. This research analyzed a unified network of parent-oriented websites that developed from a collection of independent sites containing scientific information regarding ASD. From an initially decentralized collection of individual web spaces, the collaboration of sites provides collective identity and commonality of purpose, as well as information control regarding the etiology of childhood ASD. The collaboration of sites serves to facilitate a social movement, unique to cyberspace, whereas otherwise the movement may not continue to thrive with isolated, individual sites. Implications for the fields of social movements and social problems are discussed.

Pérez-Castro, Judith & Morales, Betsaida (Department of Education and Arts, Juarez and Autonomous University of Tabasco, Av. Universidad s/n. Villahermosa, Tabasco. México. 86000 [tel: 52 (993) 357-18.04; e-mail: pkjudith33@yahoo.com.mx]), **The Impacts of the Competency-Based Education on the Professionalization of Mexican Psychologists,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper presents the partial results of a research which seeks to know the effects & outcomes that the competency-based education (CBE) has

had in the professionalization of psychologists. Mainly, we focus on the changes made on the university curriculum & how do they respond to the labour market demands. The final objective is to analyze the psychologists, as a professional group, taking as a point of departure the content of university curriculum and syllabus, in order to identify what are the abilities & knowledge that are being taught & socialized by the CBE. The theoretical perspective that underlies our research is the sociology of professions; especially, we consider Weber & the neoweberians. So far, the most important findings have shown us that, in Mexico the term "competency" was first introduced in the labour policies. Later on, in 1980, the concept was moved to the educational field by the development of a joint project between the Ministries of Work & of Public Education. In the case of psychologists, the CBE has meant the introduction of abilities such as: critical thinking, problem solution, decision-making, creativity & social relevance. In short, the concept that lies beneath the CBE, in the case of psychologists, is the idea of "know-how" & this latter is having significant effects in the professional higher education.

Perkins, Harvey C (Faculty of Environment, Society and Design, Lincoln University, Christchurch, New Zealand, 7647 [tel: 64 3 325 3838; fax: 64 3 325 3857; e-mail: Harvey.Perkins@lincoln.ac.nz]), **Telling Stories, Making Money: The Roles of Public Relations Intermediation, Travel Journalism and Globalised Place Promotion in International Tourism,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper discusses the dimensions of leisure & tourism that relate to public relations intermediation, travel journalism and globalised place promotion. Using a study of British journalists who were sponsored by the New Zealand Tourism Board to visit New Zealand & report their experiences in the travel pages of the main British national daily newspapers & associated magazines, this paper examines the ways national tourism organisations engage with travel journalists & public relations firms to create attractive representations of environmental & cultural experiences for tourists to consume. The paper thus engages with the community of professionals whose job it is to produce and reproduce ever-new environments, activities, experiences & sights in & on which tourists can perform & gaze. The paper thus extends earlier work on the promotion of particular tourism places and how in turn that leads to those places being managed and changed both culturally & physically in ways that are consistent with the dominant messages in tourism place-marketing and advertising.

Perlsgtadt, Harry (Sociology, Michigan State University, East Lansing. MI 48824-1111 [tel: +1 517 353 5089; e-mail: perlstad@msu.edu]), **The Impact of Political Party and Ideology on Perceptions of Health Inequalities: Findings from a US Survey,** *International Sociological Association, Gothenburg, Sweden,*

¶ Premise: Political party & ideology affect perceptions of discrimination in health care delivery & differences in health quality for minority groups. Methods: A random digit dialed telephone survey of 1,036 Michigan residents asked four questions from a Kaiser Foundation national study. Are people treated unfairly based on health insurance; on how well they speak English and on ethnic/racial background, & do minorities received lower quality health care? Regression equations included race, income, age, type of community (urban suburban rural), union membership, and labor force participation as well as political party and ideology. Findings: Sociodemographic variables were not good predictors of disparities. Only political party & ideology had significance for unfair treatment due to health insurance; race and type of community joined political party & ideology for unfair treatment based on ability to speak English & on ethnic/racial background. Health care quality was impacted by political ideology, but not political party. Income, type of community also affected perception of quality of health care for minorities. Conclusions: The strong partisan divisions in the recent US health care reform debate & support for the final legislation suggests that future models should include ideology, & political party of respondents when studying health inequalities.

Perlstadt, Harry, Kaplowitz, Stan & Post, Lori (Sociology, Michigan State University, East Lansing, MI 48824-1111 USA [tel: +1 517 353-5089; e-mail: perlstad@msu.edu]), **Improving Guidelines for Blood Lead Level Testing,** *International Sociological Association, Gothenburg, Sweden,*

¶ Premise: Concern with lead poisoning & its prevalence among low income children has led the US to require Blood Lead Level (BLL) testing of all children on Medicaid insurance for low income families. This has never been achieved and, at /BFM2X4B|END30 per test, would greatly stress state budgets. Methods: By linking thousands of BLL test results from Michigan Dept of Community Health records that include the child's race & Medicaid status with census data on housing & neighborhood demographics, we constructed a statistical model treating BLL as a continuous variable & using Hierarchical Linear Modeling to generate the prediction equation. Findings: Census block groups explain more variance in BLL than tracts and much more than the current preferred method using dichotomized ZIP codes to assess risk Conclusions: Our equation has good specificity and sensitivity, meaning that it identifies more cases of Elevated BLL but requires fewer tests than testing all on Medicaid. Given the need for cost saving, health authorities are beginning to approve new methods such as ours for identifying those who need to be tested.

Pernecky, Tomas (School of Hospitality and Tourism, Auckland University of Technology, Auckland, New Zealand [tel: 0064211879990; e-mail: tomaspernecky@yahoo.com]), **Tourism through Constructionism,** *International Sociological Association, Gothenburg, Sweden,*

¶ The field of Tourism Studies has been expanding slowly beyond the strictures of applied business approaches, & consequently there is an increase in the variety of topics, issues & methodologies being implemented. The sporadic openings in the study of tourism towards novel ways of thinking about what else it may be, & in what other ways it can be understood, have given rise to emerging concepts such as worldmaking, (Hollinshead, Ateljevic, & Ali, 2009), ordering (Franklin, 2004), & the mobilities paradigm (Urry, 2007). In further broadening the epistemological vistas of tourism, this paper takes up a constructionist stance & explores the meaningful interplay between people, objects, places, & also academia. It presents tourism as the result of creative human endeavour by highlighting the plurality of meanings which are never fixed nor held independently of its interpreters. Tourism is portrayed as a temporal, social-cultural construction in need of more emic & post-disciplinary modes of investigation. Franklin, A. (2004). Tourism as an ordering: towards a new ontology of tourism. Tourist Studies, 4(3), 277-301. Hollinshead, K., Ateljevic, I., & Ali, N. (2009). Worldmaking Agency - Worldmaking Authority: The Sovereign Constitutive Role of Tourism. Tourism Geographies, 11(4), 427-443. Urry, J. (2007). Mobilities. Cambridge: Polity Press.

Perriard, Valérie & Castelli Dransart, Dolores Angela (Department of Applied Sciences, University of Applied Sciences Western Switzerland-Social Work, Fribourg, Givisiez, Switzerland [tel: 1762; fax: +41 26 429 62 01; e-mail: valerie.perriard@hef-ts.ch]), **Professional Identities in the New Socio-Educational Assistant (SEA) Profession,** *International Sociological Association, Gothenburg, Sweden,*

¶ A new profession "socio educational assistant" (SEA) has recently been introduced in the French speaking part of Switzerland (2008). The new

SEA profession brings an important change to the field of social work professions as it presents the particularity of being taught at a lower level of education than the other professions of the social field. This paper presents the first findings of an ongoing empirical qualitative study (2009-2011) that explores professional identity in the new SEA profession. In this research, identity is seen as on ongoing interactive process. It is perceived as the result of a twofold mechanism: identifications attributed by others & identifications attributed by oneself. The study's aim is to grasp the components of professional identity & their contents in the new SEA profession, based on the collective representations of three different groups of actors: SEA practitioners, their colleagues & employers. Approximately 30 semi-focused personal interviews are carried out with these different types of informants. The first findings should present different perspectives on the SEA professional identity at an early stage of its development & point out similarities & differences between the standpoints of the concerned actors.

Perry, Paul E. (Sociology Programme, School of People, Environment and Planning, Massey University, Massey University, Palmerston North 4442, New Zealand [tel: 64 6 356-9099 ext 2622; e-mail: P.E.Perry@massey.ac.nz]), **The Free Market Paradigm and Environmental Attitudes: A Comparison of India, China and Several Western Societies, Using Data from the World Values Survey,** *International Sociological Association, Gothenburg, Sweden,*

¶ Beliefs & values which underlie free market economic principles have become widely institutionalised in much of the world in recent decades. Such views are often not subject to critical examination by leaders, or the general public; commonly seeing unfettered free markets as the only route to increased prosperity. However, some thinkers argue that free market capitalism & a healthy, sustainable environment are largely incompatible. Others being less extreme, say the market has its place, but with more regulation. This paper examines the relationships between environmental attitudes & beliefs, & beliefs & values about free markets, competition & open economies. Logically, it might be expected that support for the environment & for free-markets are negatively related. On the other hand if free market views are widely institutionalised then there may be very little association between the two areas. Some prior evidence can be found for both expectations. Using World Values Survey data, multiple items measuring both environmental attitudes & various free markets views are examined. The focus is on a cross-national comparison between the two emerging economic giants of China & India (with environmental problems from rapid economic growth in increasingly open economies) & several economically mature & affluent western societies.

Persson, Anders (Depatment of Sociology, Lund University, Box 114, 22100 Lund, SWEDEN [tel: +46703020136; e-mail: anders.persson@soc.lu.se]), **Front- and Backstage in "Social Media",** *International Sociological Association, Gothenburg, Sweden,*

¶ Starting with two cases, in which bloggers reveal way to much about things that should be kept hidden, I will ask: What is it in "social media" as media & in the communicative situation of the person using them, that constitutes front- & backstage & the boarder dividing them? In the paper I will analyze the cases mentioned above using some of Goffman's concepts, the already-mentioned frontstage & backstage & also expressions given & expressions given off. I will also compare what might be called computer-to-computer interaction with face-to-face interaction by initially using the "model" of talk that Goffman developed in his article "Replies & Responses" (reprinted in the book Forms of Talk 1981). This "model" consists of eight different so called "system requirements & system constraints" (1981: 14-15). I will also draw on results from an earlier study on mobile telephone calls in public places, where I gathered data by eavesdropping on, or rather overhearing, such calls (results published in Persson, Anders 2001 "Intimacy Among Strangers", in Journal of Mundane Behavior (Vol. 3, No. 3, October 2001) & in Persson, Anders 2003 Social kompetens. Lund: Studentlitteratur (a book in Swedish)). The tendency to reveal too much about private, sometimes intimate, things is evident in such calls a but to whom are the callers revealing them? Has this intimacy among strangers something to do with peculiarities of the mobile phone as a medium? According to Zygmunt Bauman (The Individualized Society, Polity Press 2001) the mobile phone gave the final blow to the connection between spiritual affinity & physical nearness. Or is it the communicative situation of the caller & his/her being an absorbed communicator that explains the tendency to reveal too much?

Persson, Asha (National Centre in HIV Social Research; University of New South Wales, Webster Bld, Level 2, UNSW, Sydney, NSW, 2052, Australia [tel: +61-2-93856414; fax: +61-2-93856455; e-mail: a.persson@unsw.edu.au]), **HIV-Negativity in Serodiscordant Relationships: Absence, Enactments, Liminality,** *International Sociological Association, Gothenburg, Sweden,*

¶ Nearly three decades after the onset of the HIV epidemic, one affected group remains largely invisible & has received little international attention, namely HIV-negative people who are in a committed, intimate relationship with someone who is HIV-positive (serodiscordance). Their lives are entwined with the everyday realities of HIV, whether emotional, sexual, social or medical. Yet, paradoxically, given their proximity to the virus, partners' experiences of "living with HIV" are little considered and understood, as are the meanings & practices of being HIV-negative in that context. When they appear in the research literature, they tend to be framed in pre-conceived & reductive ways. Drawing on anthropological theory, empirical material & my years of HIV social research, this paper explores HIV-negativity from several angles. I consider analyses that suggest a generalised silence around HIV-negativity in the western HIV epidemic & the historical & political circumstances in which this silence arose. Engaging Annemarie Mol's (2002) concept, I examine how HIV-negativity is enacted in the literature on HIV-discordant couples. Despite being routinely framed as a singular identity that is inevitably different from & in tension with HIV-positivity, a closer reading reveals that HIV-negativity assumes multiple shapes as it is brought into being by localised practices & contexts. Against this background, I explore qualitative interviews with HIV-negative partners in Australia. I utilise Victor Turner's (1977a, 1977b) work to elucidate that, while enactments of HIV-negativity in heterosexual serodiscordant couples are profoundly shaped by discourses of HIV, gender & sexuality, HIV-negativity in this context eludes common classificatory categories that locate identities & positions in cultural space, rendering it a liminal subjectivity. The paper concludes that, given the recent rise in HIV infections in some western countries, a greater understanding of HIV-negativity & how HIV impacts on negative partners might help to "reframe a virus that thrives on invisibility" (Fox 2006). Fox, R. (2006) Negative: Using Performative Interventions to Explore HIV-negativity. Theatre Topics 16(1):47-64. Mol, A. (2002) The Body Multiple: Ontology in Medical Practice. Perulli, Angela & Valzania, Andrea (University of Florence [e-mail: angela.perulli@unifi.it]), **Reconfigurating Local Societies: Established and Outsiders Facing Migration Process,** *International Sociological Association, Gothenburg, Sweden,*

¶ The new interdependences between autochtons & foreigners created by the recent migratory flows have produced deep changes in local societies. The paper aims at analysing these transformations in Eliasian key, by a comparison among similar territorial realities on the base of economic & social features (productive structure of little & middle-size companies, politic subcultures, social cohesion degree & so on). What occurs when a great number of "foreigners" arrives in a local society in a brief span of time? Can such changes be read like a reconfiguration of the existing social relations & positions? The answers will be looked for in observing the dynamics of the recent past of some peculiar local societies in Italy. The initial hypothesis is that processes of social mobility can be explained starting from closeness/distance of the actors by the crisis focus: central groups first slip to the margins of society, while traditionally emarginated categories gain importance on economic & cultural level. The reflection will concentrate on two aspects: the relationship between identity and local development & the survival theme. How the social habitus is formed & how relates himself with the building of individual identities & with the process of economic & social development of a territory? The survival theme concerns the adaptation models of the local societies to the change. The survival need is fundamental for the definition of the individual purposes. It is not only a biological need, although important. It is also a need of communities, places, social groups, cultures, styles of life, customs. One acts & reacts because he is afraid that his own world disappears, & when his own material & symbolic continuity is felt at risk. So the survival theme has several meanings. In Eliasian approach, it regards the power dynamics which continuously mould the civilising process. In this analysis two aspects will be faced. The first is the autochton's conception about the

immigrant seen as a threat for the dominant order, the building of emotional barriers against him & the stigmatization processes of the foreigners. The second is the vision of the immigrant as exclusive short period economic resource, with consequent risk of ethnic closings & intolerant cultural particularisms.

2010S02033

Pescosolido, Bernice A., Martin, Jack K., Long, J. Scott, Medina, Tait R., Phelan, Jo & Link, Bruce G. (Department of Sociology, Indiana University, Bloomington, IN 47408 [tel: 812-855-3841; fax: 812-856-5713; e-mail: pescosol@indiana.edu]), **"A Disease Like Any Other"? A Decade of Change in Public Reactions to Mental Illness,** *International Sociological Association, Gothenburg, Sweden,*

¶ Clinicians, advocates & policymakers have employed the concept of mental illness as a legitimate disease in their efforts to overcome low service use & adherence rates as well as the prejudice and discrimination faced by individuals, families & providers. Improving public understanding of the neurobiological basis to these diseases was expected to facilitate access to treatment and lessen stigma. We examine the impact of this broad-based public education approach with a ten-year comparison of the endorsement of both general & specialty psychiatric care & changes in stigma toward persons with MI. The National Stigma Study a Replication (NSS-R) incorporates modules from the 1996 & 2006 General Social Survey (N=1,956), a nationally representative, high quality, face-to-face survey of the American public. The NSS-R employs a vignette strategy, describing individuals meeting DSM-IV criteria for schizophrenia, major depression & alcohol dependence. Over the ten year period, more of the public has embraced a neurobiological understanding. Embracing a neurobiological attribution of MI increased the likelihood of treatment support but, generally, was unrelated to stigma. Significant increases are reported in the endorsement of both general & specialty-based care & individuals reporting neurobiological understandings are more likely to suggest the use of services but not to express greater community acceptance. In some cases, such attributions significantly increased, not decreased, the likelihood of community rejection. Unexpected stigmatizing effects of holding neurobiological beliefs contradict predictions of the dominant public health agenda. While this approach failed to reduce stigma, effective strategies may require a two pronged approach. Psychiatrists & other clinicians who focus on competence and inclusion may reduce courtesy & self-stigmatization. Renewed efforts are also required to reconfigure stigma reduction messages.

2010S02034

Peter, Sascha & Drobniğ, Sonja (Institute of Sociology, University of Hamburg, Allende-Platz 1, D-20146 Hamburg [tel: +49(0)40-42838-8617; e-mail: sascha.peter@uni-hamburg.de]), **Women and Their Memberships: A Multilevel Cross-National Study on Gender Differentials in Associational Involvement,** *International Sociological Association, Gothenburg, Sweden,*

¶ Memberships in voluntary associations are frequently considered a social resource because voluntary associations provide opportunities for contacts through which actors get useful information & meet potentially important acquaintances. The value of such contacts has been demonstrated for numerous outcomes, such as the members of voluntary associations getting better paid jobs and jobs with higher prestige. Prior research has shown that women tend to have fewer memberships than men & consequently women have less access to these important social resources. This may be one additional piece in the puzzle that helps explain persisting gender inequalities in the labor market. It has also been shown that there are cross-national differences in participation levels but most of the comparative studies treat gender gap in membership levels as constant across countries. Using the European Social Survey 2002/2003, we find a large variation in gender gap in association participation across countries. This gender gap cannot be explained by individual-level variables only. Using multilevel Poisson regression models & invoking the nonprofit regime approach proposed by Salamon & Anheier (1998), we find substantial differences between nonprofit regimes. Women in the social democratic nonprofit regime have the highest participation rates. This is also the most egalitarian regime with basically no gender gap in voluntary association memberships. Corporatist & liberal nonprofit regimes come next with women having on average 13 % and 17 % fewer memberships than men, respectively. Women in Mediterranean & Post-Socialist countries face a twofold disadvantage: Their average number of voluntary association memberships is low a both in absolute terms & in comparison to their male counterparts, with women having 28 % & 30 % less memberships than men. Their ability to mobilize socially embedded resources is thus highly constrained. Generally, the higher the participation rate for men in a country, the smaller the gender differential. These results suggest that societal factors play an important role in women's access to social resources that go beyond the individual & household-level characteristics.

Peters, Karin (Wageningen University, Wageningen, The Netherlands, 6700 AA [tel: +31 317 486025; fax: +31 317 419000; e-mail: karin.peters@wur.nl]), **Leisure in Urban Public Spaces: Who Defines Social Integration?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The term integration is widely used & debated but seldom defined in any specific or explicit way in either academic writing or public discussion. It can be argued that integration revolves around the imperative to be involved in the affairs of the place where one lives. In order to better understand integration, peoples' relationships with particular places & their everyday encounters with & responses to dominant discourses & structures of belonging are of importance. Moreover, it is important to acknowledge the notion of difference & take as a starting point the experiences of individuals in their everyday life. In this paper, I focus on visiting public spaces as a setting where encounters can take place. Since diversity & complexity characterise the ways in which inhabitants construct their perceptions & meanings about the meaning of public space, this study aims at grasping this variety. Results are based on a qualitative study executed in a multi-ethnic urban neighbourhood in the Netherlands. Starting from the individual evaluation of the everyday life of people, I will show to what extend experiences in public spaces positively or negatively contribute to a feeling of belonging. Results show that positive memories created in public spaces strengthen the feelings of being at home in a certain neighbourhood.

2010S02036

Peterson, Abby, Wahlström, Mattias & Wennerhag, Magnus (Dept. of Sociology, University of Gothenburg, Box 720, 405 30 Gothenburg, Sweden [e-mail: abby.peterson@sociology.gu.se]), **Swedish Trade Unionism–A Renewed Social Movement?,** *International Sociological Association, Gothenburg, Sweden,*

¶ A Legion of literature has developed referring to a "new labour internationalism" emerging that is a significant break from the influential post-war trend of nation-statist unionism. From the horizon of the Swedish labour movement we interrogate this popular paradigm. On the basis of a questionnaire distributed among marchers during the 2009 May 1st labour demonstrations in Gothenburg we evaluate the potential among grassroots union activists to lend their solidarity to labour struggles beyond Sweden's borders, as well as their political concern in general for the wider global issues of environmental threats, third world poverty, & human rights. On the basis of interviews with union officials, together with relevant union documents, we investigate union leadership's position towards trans-border cooperative efforts within the European Union Movement, as well as towards collaboration with other social movement NGO's on specific issues. The questions we pose focus the Swedish Labour Union's position towards European labour strategies in the face of the global economic & climate crises & whether these positions can be interpreted as including international solidarity or rather, explicitly or implicitly, elements of chauvinism, paternalism and protectionism. In conclusion we juxtapose our findings from the two studies to investigate differences in support for trans-border union activism.

2010S02037

Petersson, Frida, J M (Department of Social Work, University of Gothenburg, Gothenburg, Sweden, 405 30 [tel: +46 (0) 31- 773 1000; fax: +46 (0)31- 773 1888; e-mail: frida.petersson@socwork.gu.se]), **Gaming with Life. The Construction of Clients in Swedish Methadone Maintenance Treatment.,** *International Sociological Association, Gothenburg, Sweden,*

¶ After decades of conflict & disagreement methadone maintenance treatment (MMT) was finally accepted & recommended in Sweden in 2004. However, it remains a highly questioned & controversial. Thresholds for gaining access are high & control policies strict within the programmes. Supplementary drug use results in six months' suspension, which is claimed to be medically necessary. Random urine tests delivered under surveillance are mandatory, allegedly as security measures in the clients' best interest, no matter how long they have been in the programme. My Ph.D.study addresses the question on how these rules & policies are motivated & applied in everyday practice, & how the clients respond & react. The ultimate aim is to explore how institutional identities are achieved, performed & negotiated in the context of MMT, through observations &

interviews with patients and professionals at three Swedish methadone-clinics. This paper focuses the practice in a Swedish methadone setting & shows how "the methadone client" is being constructed in strictly institutional terms, using well-established binary identities, such as male-female, "hardcore"-"socially stable" and "victim"-"villain".

2010S02038

Petrakis, Constantinos, Ant., Ioakeimidou, Ioanna, Gabr. & Katsaiti, Marina-Selini (Public Relations and Communication, Tei Ionian Islands, Argostoli, Kefalonia, Greece, 28100 [tel: +306974251575; fax: +302671027312; e-mail: petrakis@teiion.gr]), **Multinational TV Commercials: Reality or Simulation of Happiness and Ideals? Instances Used from 2009,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the modern world, the so-called art of advertising promotes & is part of globalization. Advertising enforces the desire to consume by creating "ideal" stereotypes of happy & successful agents. Success as promoted & advertised by the media has become a synonym of "money, consumption & thus power". In this paper we examine the implications of "ideal" & its development in line with individual "accounting reports", a globally accepted reference point. "Accounting reports" take the form of individual balance sheets where all activities (personal relationships, hobbies, business activities etc.) are reported. This quantitative analysis of every aspect of our lives composes what we call a "système comptable" (the system of "everything being countable, & every person being an accountant, mirroring the values of the system"). In our attempt to provide evidence for the above hypothesis, we perform semiotic & qualitative analysis, using data from TV commercials of multinational corporations.

2010S02039

Petric, Mirko (Department of Sociology, University of Zadar, Obala kralja Petra Kresimira IV 2, 23000 Zadar, Croatia [tel: +385913786815; fax: +38521535072; e-mail: mpetric@unizd.hr]), **Visual by Design: Towards a Socio-Semiotic Reading of People-Related Visual Data,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper proposes a combined application of sociology, semiotics and design theory in the analysis of people-related visual data. It is argued that the statement according to which "people are a rich source of visual data" simply calls for further elaboration from a sociological perspective, although it is perhaps quite unproblematic from a point of view of a discipline such as anthropology or loosely conceived interdisciplinary fields of "visual studies" or "visual culture". It is argued that, in the social context of advanced (second) modernity, people-related visual data can be most precisely read by means of an initial "back-translation" of the industrial process by which they were produced. From a methodological perspective, it is argued that a combination of sociology, semiotics & design theory can yield best results in this particular form of analysis. The sociological aspect, however, does not stop at the level of market segmentation considerations, but also includes a brief discussion of ethnomethodology, the micro-macro link, structuration theory, and the reflexive leanings of so-called second modernity (Beck, Giddens). In the field of design theory, links are established with Baudrillard's sociological interpretations of object semanticization & elements of semiotic theory required to interpret their individual manifestations.

2010S02040

Petroff, Alisa (Universidad Autónoma de Barcelona [tel: 0036677206746; e-mail: AlisaGeorgeta.Petroff@uab.es]), **The Skilled Romanian Immigrants in Barcelona: Configuration of the Migratory Project and the Career Path,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since 2002, the Romanian community has undergone a significant demographic expansion in the Spanish territory. According to the Spanish Census, in 2002 there were 66,279 Romanians registered in Spain, while in 2008 there were 731,806. Despite its social and mediatic visibility, this immigrant community has been object of few research studies. With this research is pretended to bring to light the main characteristics of the Romanians skilled immigrants living in Barcelona, in particular to understand their migratory projects & their career paths. A premise of the research lies in the need to overcome the concept of "brain drain" when it comes to skilled immigration. In order to do this, it is proposed to recover the concepts of "brain gain" & "brain networking", concepts which focus attention on the positive aspects that generate skilled migration both on micro & macro level. In terms of methodology, it has been opted for a mixed design in which a qualitative design prevailed. During the selection of in-depth interviews, two criteria have been taken into account: the decade in which migrated (distinguishing between the 1990s decade & the 2000s decade) & types of skilled worker (skilled manual workers and highly skilled workers). According to the results of the study, the analysis of Romanian skilled migration can not be done in terms of brain drain for several reasons. Specifically, in the case of Romanians skilled immigrants, the "brain gain" translates into a set of professional skills that have been acquired mostly in Barcelona. But the gains are reflected especially when interviewees discussed their migratory project & the future projections. The perception that when they will return to Romania, they will be able to bring valuable experience, is a strong element that allow us to evaluate this type of immigration as a "gain" for the countries of origin, in this case, Romania.

Petrova Kafkova, Marcela (Faculty of Social Studies, Masaryk University, Brno, Czech Republic, 60200 [tel: +420 5 4949 1913; e-mail: kfkv@seznam.cz]), **Are the Czech Older Workers Prepared to Work to the Higher Age?,** *International Sociological Association, Gothenburg, Sweden,*

¶ At the end of the last century the Czech Republic was a country with highly rooted tradition of working pensioners. Only twenty years, later people in their fifties & sixties are marginalized in the labour market. This has occurred in the time of rapid population ageing & the Czech government, as other European countries, will have to try to keep older workers in the labour market longer. Despite the active employment policy, older workers have used various ways to leave the labour market in an untimely fashion. The older workers' willingness to maintain economic activity is crucial for the increase of the employment rate. We try to answer the question of the older workers' willingness to keep active to the higher age, with support of the three waves of the survey "European Value Study." We concentrate on the value of work in the lives of older workers & the various aspects & reasons, which could motivate them to keep economicly active. As we have data from years 1991, 1999 & 2008, the changes in the attitudes of older workers documented the development of Czech labour market till the Velvet revolution.

Petrovic, Misha (National Univerity of Singapore, Singapore [fax:; e-mail: socpm@nus.edu.sg]), **Institutional Preconditions of Global Sociology,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper will address the possibility of globalizing sociological research & teaching, with a particular emphasis on new institutional developments in East Asia. Globalized sociology is seen as a universalizing, inclusive project that attempts to identify & overcome various forms of local biases in problem selection, styles of theorizing & research methods, while at the same time resisting the tendency of fragmentation into "indigenous" traditions & incompatible, mutually hostile schools of thought. I suggest that the rise of Asia, signifying the advent of polycentric, "post-Western" modernity, opens up new opportunities for globalizing sociology & universalizing sociological knowledge. Yet the institutional preconditions for capturing such opportunities remain under-theorized. Existing discussion centers either on supposed essential features of Asian vs. Western thought, or on organizational competition between Asian and Western education & research organizations. In contrast, I emphasize institutional developments that lead toward further "decentering" of sociological discourse on the global level. I analyze several such developments that are especially relevant for the project of globalizing sociology: reorganization of the traditional disciplinary division of labor between social sciences; creation of new repositories & archives for local data; further differentiation between research & teaching; mobility and exchanges of scholars between universities; & transformation of the academic publishing & dissemination institutions.

Pettersen, Kenneth, A, Engen, Ole, A & Aven, Terje (Faculty of Social Sciences, University of Stavanger, 4036 Stavanger, Norway [tel: +47 51831658; e-mail: kenneth.a.pettersen@uis.no]), **Rethinking Risk Theory: A Critical Realist Approach to Aviation Security,** *International Sociological Association, Gothenburg, Sweden,*

¶ Looking at the risk of intentional attacks to civil aviation, the aim of this paper is to discuss different sociological perspectives on risk in order to inform society's understanding & management of security risks. The article presents dominating risk theories as unconstructively divided between objectivist & constructivist approaches, explaining how both positions are

limiting and misleading society's approaches to risk. However, some alternative realist approaches do exist with the potential to transcend the divide. These are presented in the paper & viewed in relation to Bhaskar's critical realism in an attempt to further inform the debate. It is argued that critical realism enables the integration of insights from different approaches to risk, moving towards a framework that focuses on the mechanisms operating producing risks, while maintaining an epistemology where risk knowledge is related to social contexts & with implications for risk assessment and prevention strategies. The implications of such a framework for understanding & management of aviation security risks are reviewed, building on connected realist approaches & what we have found to be only a few applications of critical realism to risk in related fields of research.

Petzen, Jennifer (Alice Salomon Hochschule, Berlin, Germany [fax:; e-mail: jenpetzen@hotmail.com]), **A Call for an Unenlightened, Feminist Queer Politics,** *International Sociological Association, Gothenburg, Sweden,*

¶ European debates surrounding Muslim & migrant women signify the ways in which racialized bodies have come to define acceptable and unacceptable ways of being European. This paper argues that the intervention of mainstream gay/lesbian groups concerning the oppression of Muslim women contributes to the specific ways in which "Muslim" genders are produced, condemned & held responsible for posing a threat to the modern, civilized and emancipated European homosexual. In this paper, I want to use a postcolonial framework to interrogate the engagement of European g/l groups into the headscarf & honor killing/forced marriage debate, questioning the politics behind their alignment with an increased post-9/11 Islamophobia. While my work focuses on Germany, similar trends can be seen in the work of g/l groups in the UK, the Netherlands, & international g/l groups in Europe. My conclusions that political work by g/l groups to ban the veil or articulating a cultural critique of Islam will only further entrench unequal power relations, obscuring neocolonial feminist & queer practices and creating divisive fissures where strength is needed. Creating a discourse of "oppressed Muslim women"–and plans of action to save them–deflects attention away from issues of structural racism & poverty. Finally, it is vital to examine these discourses as an extension of historical racism & not an innocent defensive posture provoked by the "problem" of migration and migrants' so-called inability to integrate into Europe. I conclude with a call to end feminist & queer work based on the vision of the Enlightenment as a guide.

Pfister, Gertrud (University of Copenhagen, Copenhagen, Denmark, 2200 [tel: 0045 35320861; e-mail: gpfister@ifi.ku.dk]), **Health Discourses, "Body Projects" and the Question of Compliance,** *International Sociological Association, Gothenburg, Sweden,*

¶ Currently, health & physical activities are major topics of public and scientific discourses in Western countries. Based on "healthiest" approaches, various agencies recommend physical activities & an active life style which are considered as a pre-condition of the fitness & health of individuals and societies. However, results of empirical studies show that large parts of the population do not comply to the demands of experts and authorities. This raises questions such as: Do people know the health recommendations? How do they react to the messages about fitness & physical activities & why do they comply or not comply? Do they integrate the health & fitness imperatives in their "body projects"? "Body projects" include the perceptions, aims, ideals, concepts, evaluations as well as the practices and strategies which individuals develop in relation to their bodies. Based on Shillings (and others) approaches to bodies, I will discuss these questions using the material of an interview study, conducted in Denmark. The informants were 30 older adults with a middle class background, half of them leading an active, the other half a sedentary life style. Because of their age & their social (and economic) situation, the informants could not blame demands of small children or financial resources for their lack of physical activity. However, time played, among other factors, a central role in the choice of activities. A large part of the "inactive" informants named other hobbies as a reason for their lack of compliance with the fitness recommendations. In addition, a large part of the "inactive" persons claimed a relatively high degree of satisfaction with their bodies & their well being. It can be assumed that healthism does not convey attractive promises for this group.

Pham, Thuy T., Aslin, Heather J. & Garnett, Stephen T. (School for Environmental Research, Charles Darwin University, Darwin, Northern Territory, Australia 0909 [tel: +61 8 8946 7707; e-mail: heather.aslin@cdu.edu.au]), **Organisational and Institutional Opportunities for, and Constraints To, Involving the Poor in Payment for Environmental Services in Vietnam,** *International Sociological Association, Gothenburg, Sweden,*

¶ Although Payment for Environmental Services (PES) is argued to be a potential poverty reduction strategy in the coming years, there is a lack of on-ground case studies demonstrating the positive impact of PES on the poor. Using two PES case studies in Vietnam (one on carbon sequestration & one on watershed protection), this paper discusses specific opportunities for, & constraints to, involving the poor in PES schemes. The findings indicate that the poor have opportunities to participate in PES schemes due to increasing attention & interest from donors in PES both at global and national levels; donors' wishes to include poverty reduction as one of their projects' objectives; & the private sector's interests in working with small & poor households to obtain government financial support. By participating in PES, the poor may obtain additional income & technical assistance, & this can facilitate technology transfer & capacity building. However, organisational & institutional constraints that limit the poor's participation in PES include: (i) political influences weakening environmental services (ES) monitoring; (ii) contract risks falling to the poor sellers not the buyers; (iii) weak local intermediaries to represent & protect the poor; (iv) inequitable contracts that only benefit the buyers; (v) unclear land tenure & loss of land control; & (vi) the limited knowledge & capacity of the poor. The extent to which PES schemes can address poverty depends on the scope of the project; the political, social & economic context of the case; & the local definition of poverty. However, the research finds that the current payment levels are too low to make significant contributions to household income & alleviate poverty, or to cover opportunity costs (labour costs & time taken from alternative income generating activities & obtaining the means to be considered as no longer poor), & the transaction costs (the time needed to attend meetings & resolve conflicts). Capacity building for the poor, awareness raising for policy makers and buyers about pro-poor PES, & better coordination for transparent & equitable benefit sharing & monitoring mechanisms, need to be in place to ensure that the poor will not be marginalised. In closing, some comments will be made about how these observations might relate to use of PES schemes in other national contexts, including those of developed countries.

Phillips, Kristie, J. R., Pribesh, Shana, L. & Dufur, Mikaela, J. (Brigham Young University, Department of Sociology, Provo, Utah, 84602 [e-mail: KristieULPhillips@byu.edu]), **Old and New Conflicts in U.S. School Segregation, Desegregation, and Resegregation: The Old South and the New West,** *International Sociological Association, Gothenburg, Sweden,*

¶ After decades of mandating racial integration in schools, the U.S. Supreme Court has recently retreated from this position, adopting a race-neutral approach to student assignment to public schools. We use student- & school-level data from school districts experiencing change in schools' racial distribution to ask three questions: Did school integration influence long-term outcomes for students? How does school resegregation influence student outcomes? Does inflow of immigrants from Asia & Latin America create patterns of educational segregation & outcomes similar to black-white segregation in the American South, or are new patterns of segregation emerging? First, we examine a school district that underwent court-ordered integration, but maintained community-supported integrated schooling after being released from court desegregation orders. This district offers a "best case scenario" of how integrated schools influence long-term outcomes for students. Second, we examine a district that was one of the first both to experience court-ordered desegregation & to be released from its court order. Rezoned boundaries ensure that students attend schools close to their homes. We track students before, during, & after the rezoning process & examine the degree to which closer-to-home schooling (rather than integrated schooling) influences student outcomes. Third, we examine a school district experiencing a rapid influx of Latin American & Asian immigrants. Although racially & linguistically distinct from the local majority population, these students are not protected by integration orders or other legal interventions. Together, these districts offer a more complete picture of the patterns associated with racial integration & segregation. Although results are context specific, they highlight trends associated with both American & global concerns about segregation, as many European nations increase their focus on segregated schooling.

Phua, Kai-Lit (School of Medicine and Health Sciences, Monash University (Sunway Campus), Bandar Sunway, Malaysia, 46150

[tel: (+603) 5514 6324 ; fax: (+603) 5514 6323; e-mail: phuakl@hotmail.com]), **A Strange Thing Happened on the Way to the Market: A Quarter Century of Pursuit of Privatization in Malaysia and Its Effects on the Health Care System,** *International Sociological Association, Gothenburg, Sweden,*

¶ In 1983, the then Prime Minister of Malaysia Dr Mahathir Mohamed introduced the new policy of privatization of public services. At that time, according to the influential Economic Planning Unit (EPU) of the Prime Minister's Department, privatization is "the transfer to the private sector of activities & functions which have traditionally rested with the public sector" & that this would promote efficiency, induce corporations to expand through greater utilization of growth opportunities, relieve the administrative & financial burden of the Malaysian government, and also increase Bumiputera (i.e. Malay & other indigenous ethnic groups) participation in the corporate sector. After a quarter century, the same goals of privatization are reiterated by the EPU but with the following additions: (1) To encourage foreign investment. (2) To reduce the size & involvement of the public sector in the Malaysian economy. In the Seventh Malaysia Plan published in 1996, the government announced its intention to corporatize & privatize public hospitals & medical services. In the Malaysian context, "corporatization" includes incorporation of formerly public hospitals as government-owned but profit-oriented entities & a change in the status of their personnel such that they are no longer considered to be civil servants. My presentation will analyze the effects of the policy of deliberate government promotion of privatization (and corporatization) on the following in Malaysia: private & public hospitals, distribution of health personnel such as doctors between the private & public sectors, medical education, drug costs, the private health insurance industry, & health expenditure trends. The curious phenomena of simultaneous existence of private hospitals, public hospitals, as well as government-owned but profit-oriented hospitals (both ex-public sector but currently corporatized medical centers such as the National Heart Institute, & the for-profit hospitals of the KPJ chain) will be analyzed & discussed. There will also be an analysis & discussion of a major unintended consequence of privatization, i.e., the movement of specialist doctors out from the public hospitals to the more lucrative private hospitals.

Piacesi, Débora da Cunha (University of Coimbra; Ces [tel: 351 913336848; e-mail: deborapiacesi@yahoo.it]), **Assessing the Role of the Culture of Fear on the Creation of Criminal Law: A Brazilian Case Study,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper intends to discuss the possible influence of a "culture of fear" on the legal definition of crimes & on the process of creation of criminal laws. For this purpose, the term "culture of fear" means a perceived prevalence of fear, anxiety or insecurity in political speeches, in the media & in social relations; as well as it frames the studies on how this perception may affect cultural, social & democratic interactions. As a first step to promote a larger interdisciplinary study between sociology & law to clarify the relationship of symbolic domination of fear on the contemporary criminal lawmaking process, this paper studies the case of the creation of the Brazilian law of hideous crimes (Law 8.072/90) that has defined the list of crimes that should be considered the most serious in Brazil, raising punishment and hardening the punitive system for those crimes. The methodology chosen to assess the possible influence of the culture of fear on this particular piece of legislation was the analysis of the discourses. This analysis was made in three levels: the juridical, the political and, especially, in the media. Ultimately, it is the aim of this line of work to question the culturally rooted idea that an increase of punishment equals to a decrease of violence, a notion that shifts the focus of attention from real issues & its possible social solutions & insists on seeing crime and criminality as an external product of a demonized "other".

Piché, Serge (CRIS-STAPS, Université Lyon 1, 27-29 bd du 11 nov 1918 a 69622 Villeurbanne Cedex, France [tel: +33 4 72 43 28 45; e-mail: serge.piche@univ-lyon1.fr]), **Benefits and Limits of Economic Transfers and Interactions between Professional Sports Clubs and Civil Society Organizations in Canada and France,** *International Sociological Association, Gothenburg, Sweden,*

¶ Professional hockey clubs in Canada have been involved with charity and various civil society organizations (CSOs) for decades. In the 21st century, following the development of Corporate Social Responsibility (CSR; Capron & Quairel-Lanoizelée, 2007; Kotler & Lee, 2005), millions of dollars are offered to thousands of CSOs throughout Canada every year. In France, real CSR strategies really started to be implemented in professional football clubs in the last decade, with amount of money & numbers of CSOs involved still quite limited. These private businesses are using both merchant exchanges & gifts (Testart, 2007) (1) to raise money from their fans & sponsors for their foundation & (2) to transfer goods and services to CSOs (Piché, 2009). But even if CSOs can use merchant exchanges & the "market" without interacting with private business & even if private business can use gifts and community relations without interacting with CSOs, we found that the interactions & economic transfers between professional sports clubs & CSOs are indeed creating many benefits for both partners: notoriety, good public image, increased interactions with other actors of the community (like the sponsors & the fans of the clubs) & increased revenues. Finally, if the Canadian clubs and their fans are comfortable with the important communication linked to these actions, the French clubs need to be cautious to avoid the bad image linked to "charity" & "social" communication by private business. Capron, M. & Quairel-Lanoizelée, F. (2007). La responsabilité sociale d'entreprise. Paris, La Découverte. Kotler, P. & Lee, N. (2005). Corporate Social Responsibility: Doing the Most Good for Your Company & Your Cause. Hoboken, USA, Wiley. Piché, S. (2009). Échanges et dons entre les clubs professionnels de sports collectifs et les acteurs de leur environnement: formes et contenus de ces transferts économiques au Canada et en France. 2010S02051

Piché, Serge (CRIS-STAPS, Université Lyon 1, 27-29 bd du 11 nov 1918 a 69622 Villeurbanne Cedex, France [tel: +33 4 72 43 28 45; e-mail: serge.piche@univ-lyon1.fr]), **Using the Societal Approach to Explain Similarities and Differences of Economic Transfers around Professional Sports Clubs in Canada and France,** *International Sociological Association, Gothenburg, Sweden,*

¶ Many would think that the globalization of sports and managerial approaches, combined with the "one best way" fostered by many sports economists (ex: Szymanski and Zimbalist, 2005) would have standardized the economic operations of professional sports clubs between North America and Europe which are the two biggest markets for professional sports. But based on socio-anthropological categories of economic transfers proposed by Testart (2007), we demonstrated (Piché, 2009) that the articulation of economic transfers around professional sports clubs was different in Canada and France in 2004-2005. If sponsors, medias and spectators were mostly doing merchant exchanges with the clubs in both countries, local governments were almost absent in Canada while doing a lot of non-merchant exchanges in France. On the other hand, while the French clubs didn't have much economic relations at all with charity organizations, the Canadian clubs were doing a lot of gifts, but also merchant and non-merchant exchanges with this type of organizations. Why can we find these similarities and differences? Using the societal approach developed by Maurice, Sellier and Sylvestre (1982, 1992) for international comparison, we will propose a national configuration for each country, articulating economical, historical, legal, managerial and political facts.

Piciocchi, Marco (Universitè de Naples "Federico II", Naples, Italie, 80133 [tel: + 39 3479779123; e-mail: quartomondo@libero.it]), **Informationalisme e dot-com 2.0: le cas de Google** (Informationalism and web 2.0: The Case of Google), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Ma recherche est adressée à une définition, combien plus possible précis, de la société contemporaine, à travers le recouvrement des nombreux modèles théoriques, analysées à travers d'une recherche de nature bibliographique. Ils, pour être synthétique, vont de la phase neotechnique (Mumford), à la Troisième Vague de la société de l'information (Toffler) et aux théories sur le postmodernité (Lyotard, Jameson), jusqu'à la définition de société informationelle (Castells). Le but est ce de montrer les relations mutuelles entre niveau systémique (innovation technique-économique) et niveau social (changement culturel), en ayant sur le fond les théorisations giddensiennes de la double structuration. L'accent est mis sur les nouvelles formes de production, qu'ils mènent à souligner un net changement de paradigme, du capitalisme industriel de masse à cet informationel personnalisé. Cette étape est illustrée par la description du modus operandi de Google Inc, située en juxtaposition avec un'entreprise en réseau de la nature "traditionnelle", Microsoft, et avec les contextes de production Open Source. Dans la conscience du fait que l'information même est configuré, aujourd'hui, comme une nouvelle forme d'énergie. Par rapport au

passé, par conséquent, le rôle de l'information est celle d'un nouveau capital, d'une précieuse marchandise d'échange, qui peut être accumulée, niée ou impôt, en devenant ainsi une nouvelle forme de pouvoir, et en imposant dans cette manière un weltanshaaung précis, qu'il s'entend rechercher. L'analyse est donc réalisée en observant les interactions mutuelles entre technosphère, entendue comme le système député à la production de la valeur économique et infosphère, entendue comme le système député à la production d'information, dont le système utilise pour survivre.

Pierides, Dean C & Woodman, Daniel T (Department of Management and Marketing, University of Melbourne, Victoria 3010 Australia [e-mail: d.pierides@pgrad.unimelb.edu.au]), **Object Oriented Sociology and the Performance of Organisations,** *International Sociological Association, Gothenburg, Sweden,*

¶ Significant contributions have been made to sociology, particularly in science & technology studies, by material semiotic analyses that take all things to be the effects of their relations. These performative accounts describe relations as enacted, heterogeneous, simultaneously material & discursive. More specifically, actor-network theory accounts emphasize the multiplicity & flux of objects thereby making it possible to show that all actors are the products of, & are ordered by, their relations. However, in this account, it becomes impossible to describe organisations as objects that can be more than their relations. Yet, the current primary alternative is casting organisations as representations (or more specifically as social constructions) of an epochal ethos and this approach makes it impossible to account for the changes and contingencies that material semiotic analyses seem to highlight so well. For the first account, objects are too transient to manage change (each change equals a new object) in the second they appear too intransient to manage change, undeviating until a point of revolutionary rupture. Using the Royal Commission into the 2009 "Black Saturday" bushfires that killed 173 people in the Australian State of Victoria, this paper explores a new "realist" object-oriented approach in contemporary philosophy that provides ways to theorise the performative & relational dimension of organisation without reducing them entirely to these relational effects (DeLanda 2006; Harman 2009). This new approach makes a contribution to material semiotic analysis by retaining a central place for the emergent properties of sociological objects. Accordingly, we explore whether a new way to provide an account of the Black Saturday Royal Commission that more adequately addresses and performs the relationship between organisational knowledges and the practices of organising can be made from this perspective. References DeLanda, M. (2006). A new philosophy of society: assemblage theory & social complexity. London: Continuum. Harman, G. (2009). Prince of Networks: Bruno Latour & Metaphysics. Piggin, Joe & Lee, Jessica (Loughborough University, Loughborough [tel: 01509223492; e-mail: j.j.piggin@lboro.ac.uk]), **Unmaking Obesity in the UK's Change4Life Health Promotion,** *International Sociological Association, Gothenburg, Sweden,*

¶ Commencing in 2009, the UK Department of Health has implemented a health promotion scheme named Change4Life. Change4Life attempts to "drive, coax, encourage & support people [to] eat well, move more & live longer" (2009, p. 3). With a marketing and promotions budget exceeding 75M pounds sterling over 3 years, Change4Life is certainly "on a scale never previously witnessed" (Department of Health, 2009, p. 6). In order to understand more about the dynamics employed in the Change4Life marketing, this research critically examines a central aspect of the campaign - the notion of "simplicity" (or simple marketing messages) in the context of a "complex" social problem. We use a semiotic methodology to consider the tensions & tactics that occur in the production and presentation of the Change4Life marketing campaign. Specifically, we examine the logic of the Change4Life marketers which omitted all references to, & images of obesity. Various reasons were offered for this omission including the insulting nature of the term and the apparent lack of understanding about obesity by parents. While well-intentioned, we argue the omission of obesity contributes to the stigma that currently surrounds it. Further we argue that this silence about obesity neglects the apparent need of some parents to develop understanding about the issue. References UK Department of Health. (2008). Healthy Weight, Healthy Lives: Consumer Insight Summary. London, England: UK Department of Health. UK Department of Health. (2009). Change4Life Marketing Strategy. London, England: UK Department of Health.

Piket, Pieter, Eijgelaar, Eke & Peeters, Paul (NHTV University of Applied Sciences; Tourism Academy, PO Box 3917 4800 DX Breda The Netherlands [tel: 0031765332756; fax: 0031765332295; e-mail: piket.p@nhtv.nl]), **Tourism Transport Scenarios in the Era of Climate Change: An Inconvenient Choice,** *International Sociological Association, Gothenburg, Sweden,*

¶ Preventing dangerous climate change requires significant global emission reductions from 2015 onwards. Tourism CO2 emissions, the majority of which are caused by tourism transport, are projected to grow by more than 150% within the next 25 years, surpassing the full 100% of a "safe" global carbon budget somewhere halfway this century. Surpassing this budget can lead to certain climatic tipping points being reached, the consequences of which are hard to predict. Only a scenario of stringent policy measures, sector innovation & market based instruments can bring about a low-carbon emission tourism future. This paper explores the two ultimate ends of the scenario-scale: either dangerous climate change is avoided, meaning that tourism has to reduce the share of air transport to reduce its emissions within one or two decades, or climate change reaches a tipping point that may cause strong international political instability & ecological disasters which may specifically hit the long haul market by the end of the 21st century. The main question we will explore in this paper is to find a strategy that benefits the sector most in both scenarios, leading to inconvenient choices now in order to prevent an inconvenient future.

Pilch Ortega, Angela (Department of Educational Science, University of Graz, Graz, Austria, A-8010 [tel: ++43 316 3802552; fax: ++43 316 3809710; e-mail: angela.pilch-ortega@uni-graz.at]), **Competing Profiles of Knowledge - Biographies between Marginalisation and Modernisation,** *International Sociological Association, Gothenburg, Sweden,*

¶ The "collision" of fundamentally different structures of relevance is a phenomenon from which those groups of social actors are more strongly affected, whose view of the world is not primarily based on modernity. The triumphal procession of modernity & the continuing effect of hegemonic power entail the erosion of dissimilarly figured horizons of sense of the living environment as well as the marginalisation of the group of persons concerned. The empirical study investigated indigenous constructions of life of the Highlands of Chiapas in Mexico. The dynamics of the social space are characterized by a high level of inequality. The data includes twelve narrative-biographical interviews conducted in Spanish & data which were collected through field investigation done in the Highlands of Chiapas in Mexico. On the basis of grounded theory as a research style, the data were sequential analysed & exemplarily elaborated. The research interest focused on concepts of action which have been developed by the people. Especially informal learning & education processes which have been developed in the encounter with divergent structures of relevance are of interest. The analysis led to the abstraction of objectively possible figures of sense, which made different types of models of structures of sense visible.

2010S02057

Pilon, André Francisco (University of São Paulo, Av. Dr. Arnaldo, 715, São Paulo S.P. Brazil 01246-904 [tel: 55 11 3083-3501; fax: 55 11 3083-3501; e-mail: gaiarine@usp.br]), **An Ecosystemic Approach to the Problems of Difficult Settlement or Solution in the Contemporary World,** *International Sociological Association, Gothenburg, Sweden,*

¶ Problems of difficult settlement or solution in the contemporary world cannot be solved by segmented academic formats, market-place interests or mass-media headlines; instead of dealing with "taken for granted issues" (the apparent "bubbles" in the surface), public policies, research & teaching programmes should detect the issues & deal with them inside the "boiling pot", in view of the dynamic & complex configurations intertwining, as donors and recipients, four dimensions of being-in-the-world: intimate (subject's cognitive & affective processes), interactive (groups' mutual support & values), social (political, economical and cultural systems) & biophysical (biological endowment, natural and man-made environments). The process of change must take into account the singularity of each dimension & their mutual support, as they combine to induce the events (deficits & assets), cope with consequences (desired or undesired) & contribute for change (diagnosis & prognosis). Heuristic-hermeneutic experiences are designed to enhance the connections & seal the ruptures between the different dimensions, considering their mutual support and dynamic equilibrium. New paradigms of growth, power, wealth, work and freedom are unveiled; cultural, social, political, economical and environmental aspects of ecosystemic & non-ecosystemic models of culture are

examined, a framework for planning & evaluation of overall quality of life is proposed.

Pinheiro, Claudio C (The School of Social Sciences and History, Getúlio Vargas Foundation, Rio de Janeiro/ RJ, BRAZIL [e-mail: ccp@pobox.com]), **Politics and Poetics of Scientific Imagination in Post-Colonial Contexts a Sociologizing Brazilian Intellectual Histories and Imaginative Agendas towards India and South Africa,** *International Sociological Association, Gothenburg, Sweden,*

¶ Since its origins, Brazilian academy is distinguished for a rather colonized scientific culture. The edification of its scholarly structure a universities, research centers & fundamentally the education of the intelligentsia is profoundly indebted to European models of scholarship emulating research agendas, theoretical models & epistemological paradigms. Conversely, the last decade shows several initiatives developed to reverse this tendency, situating Brazil in more horizontal collaborative context through the valorization of South-South or peripheral perspectives. A notorious example of this propensity was the promulgation of the 10.639 law, in 2003, forcing the teaching of African History a understood as an integrated part of Brazilian history in every university & school in the country. Within this framework came out the IBSA forum dedicated, among other subjects, to promote higher education interaction between India, Brazil & South Africa. Notably, this démarche emerges as the product of governmental initiatives & decisions, translated through laws and programs, instead of a revision of local academic paradigms. Hence which are the consequences of the innovative repositioning intellectual agendas resulted from State initiatives instead of academic demands in peripheral countries? This paper outlines the history & politics of imaginative agendas regarding North-South and South-South scholarly cooperation in Brazil. This is based on a detailed investigation of the local intellectual scenario regarding India & South Africa including the identification of research projects, scholars & institutions compared to the entire picture of international academic cooperation & dialogues in Brazil.

Pinto, Agerson Tabosa (Faculdade 7 De Setembro, Rua Maximiniano Da Fonseca 1395 - Luciano Cavancalte - Fortaleza - Ceará - Brasil [tel: 55 85 40067610; fax: 55 85 40067614; e-mail: agerson@secrel.com.br]), **La Contribución de Maquiavel a la Teoría Del Conflicto Social** (The Contribution of Machiavelli's Theory of Social Conflict), *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ La intención de esta comunicación es contribuir um pedacito para rescatar la memoria de Maquiavel, más conocido por lo que se convenciono llamar de maquiavelismo que por sus lecciones de Ciência Politica e Sociologia Política hasta hoy insuperabiles. Al estudiar el conflicto y sus relaciones com el cambio, los sociólogos costumbran a empezar com Marx y Comte, olvidandose que Maquiavel habria podido no solo inspirar a Marx, pero tambin a un ciencista politico y sociólogo actual de la estatura de Dahendorf. Vamos emprezar con la evolución de las funciones de los conflictos, continuando, después, con la análisis del captulo IV del "discorsi", en la primera década de Tito Livio, para concluir que su pensamiento, relativamente a las funciones del conflicto, está em tunning perfecto con lo que hay de más avanzado en la Sociologia de nuestros dias. La diferentes etapas de la evolucion de las funciones del conflicto serón estudiadas en Mayo, Merton, Coser e Dahendorf. Al examinar los conflictos em Roma Maquiavel reconose que ellos non exerceram funciones negativas, no fueram disfuncionales. Em sus "discorsi" disse que la desunion entre el pueblo y el senado fue la causa de la grandeza e de la liberdad de la republica romana. Los defectos salutares de los conflictos se refletiran en la buenas leyes como la Ley de la XII Tabuas y la legislación electorale. Palabras claves: Conflicto, función, ley, cambio, classes sociales, efectos

Pinto, Carolina (LVMT Université Paris-Est, 6 et 8 av. Blaise Pascal, Cité Descartes F-77455 Marne-la-Vallée Cedex 2 [tel: +33164152113; fax: + 33164152140; e-mail: carolina.pinto@enpc.fr]), **How Does a Student Become an Immigrant? Transformations of Social Identity at the Beginning of Migration Trajectories,** *International Sociological Association, Gothenburg, Sweden,*

¶ In France, 34% of foreign students don't plan to return to their country of origin once they finish their studies, & around 14% apply for a different residential status other than student. This is how the transition between studying & working life is an occasion for important international junctions. How does a period abroad as a student become a longer stay as an immigrant? Based on comprehensive interviews with twenty Chilean & Colombian students in Paris who are at the end of their academic period, this communication explores the beginnings of social trajectories or paths of immigration according to the concept of career proposed by H. Becker. According to this approach, the transition of status between student & immigrant is a process lived by a minority and which entails a gradual transformation of social identity. This process, particularly analyzed through the professional and residential insertion of students, brings forward their learning mechanisms in the host society and, simultaneously, the preservation & reproduction of transnational bonds with the host society.

Pinto, Paula Campos & Boucher, Normand (York University, Toronto, Canada [tel: ++.351.21.400.7199; e-mail: paulapinto222@hotmail.com]), **Understanding Current Social Practices, Enhancing Human Rights for Persons with Disabilities: A Sociological Perspective on Continuing Struggles,** *International Sociological Association, Gothenburg, Sweden,*

¶ As other social movements, the disability movement has come to frame its struggles around the discourse of human rights. This process has culminated in the recently adopted UN Convention on the Rights of Persons with Disabilities. From object of charity to subject of rights, people with disabilities have risen as a strong vector revealing the sociopolitical inequalities on global as well as on local levels which historically have characterized their social condition. How can a sociology of human rights contribute to understand & support disability struggles? In this paper we argue that sociological research of disability rights needs to move away from the traditional grounds of positivist sociology & discern creative, reflexive & critical ways of navigating between the positive & the normative, structure & culture, the global and the local. In practice, critical sociological analysis can contribute to a better understanding of the social consequences of exclusion affecting the exercise of human rights & generating a public debate surrounding the political & collective action in a global setting. Drawing extensively from concrete examples gathered through Disability Rights Promotion International, an international project working to establish a system to monitor the human rights of people with disabilities in the global world, we illustrate challenges & opportunities opened up for sociologists committed to both further social theory & advance social justice in contemporary societies.

Piotrowski, Grzegorz (European University Institute, San Domenico di Fiesole, Italy 50014 [tel: 00393209122286; e-mail: grzegorz.piotrowski@eui.eu]), **Western Activism Meets Eastern Reality: Alterglobalism in Central and Eastern Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper looks at how the western activists' tactics (those of the Global Justice Movement) were incorporated by the activists from Central & Eastern Europe. I want to use data from my ethnographic research I conducted in Poland, the Czech Republic & Hungary among alterglobalists. I was especially interested how critical these activists were on incorporating organizational structures and protest repertoire from their western counterparts. Also I was asking them how does the cooperation looks like between the activists from the East & the West. The contacts do take place, but some ideas are catching up, & some do not & I was asking these people, why? This could be an opportunity also to refresh and discuss the anthropological concepts of cultural diffusion (regarding protest & political cultures).

Pirani, Bianca Maria (University of "sapienza', University of Rome, Via Salaria, 113 00198 [tel: +39 (0) 6 4991. 8321; e-mail: biancamaria.pirani@uniroma1.it]), **Homo Sapiens, the Technologist: The Temporal Function of the Technique of the Body,** *International Sociological Association, Gothenburg, Sweden,*

¶ Homo sapiens has emerged as a technologist. This is why some social scientists call man a tool-making animal. The evolutionary record affirms this. Homo habilis used crude stone implements as far back as 2.5 million years ago, crude stone more than two million years before Homo Sapiens first appeared on the African savannah. Knowledge of this long overlap of human evolution with tool-making produced significant changes in evolutionary thinking. Earlier views, long held in many disciplines, maintained that evolution first affected biology & only later culture. In the current view, it worked on them together. Tool-making & Homo sapiens

evolved jointly, tools–their making & use–played a part in the development of the large brain that separates present-day humans from their proto-human predecessors. Man is a species bundled together with technology. The order of tools defines the relationship between the body & things: that is to say, the interfacing mechanisms which enable its orientation in territorial space, its survival & the construction of social life. The deep meaning of technology lies in this pragmatic relationship that allows the body to construct its permanence in the world. By focusing "bodies in action" as a relational matrix of human sociality, this paper applies the notion of the "technique of the body" classically elaborated by Marcel Mauss to the cognitive activation of the spatio-temporal networks constituting the actor-centered decision making. Keywords: body techniques, "implicit memories", actor-centered decision making, social networks.

Pires, Alexandre Lucas (Graduate Program on Sociology, University of São Paulo, São Paulo, Brazil, 05508-010 [tel: +55 11 23790626; e-mail: alelucas@gmail.com]), **The Role of Government in the Genesis of Environmental Studies in Brazilian Social Science,** *International Sociological Association, Gothenburg, Sweden,*

¶ Brazilian political agenda has set environmental issues during the last four decades & simultaneously has promoted ones as a regular academic subject, & this encouragement has reached its heyday between the mid-1980s & the early 1990s. How could this process have influenced research interest among social scientists? This paper investigates the rise of environmental studies in the Brazilian social science sketching two generational endeavours towards the issue. The data are drawn from bibliographical accounts, public databases, & publications on social sciences and/or environment for information on the morphology of this turf and brand. The biographical data on the authors are employed to investigate hypotheses about their social recruitment. The data on the government-promoted symposia are drawn from their meeting records for information on social-scientific interest in the political agenda around environment. The government endorsement of environmental agenda was a relevant factor for the rise of some scholars investigating environmental issues in social science departments. However, the government has not the means for perpetuating the issue in these departments because the Brazilian faculties have been the governing board of public universities and funders, thus, they have held the social reproduction of departments appointing scholars according to departmental power-balance.

Pirotti, Simone Moro & Brum, Ceres Karam (Escola Coronel Pillar, Machado de Assis 364/402 [tel: 55 5532170945; e-mail: spirotti@terra.com.br]), **Gauchism, School and Cultural Diversity in Rio Grande Do Sul, Brazil,** *International Sociological Association, Gothenburg, Sweden,*

¶ The objective of our discussion is to show the building of the "gaucho" image from Rio Grande do Sul. Our analysis starts with a bibliography verification used at fundamental school in Santa Maria city. The books used & its language identified the gaucho as the "ideal pattern" in this southern Brazilian State. We pretend to show an anthropological & sociological analysis of the MTG (Gaucho Traditionalist Movement), in Rio Grande do Sul, focusing the relations that it has, as a cultural movement & as an organized institution, has been setting with the schools and, as result, the dimensions that the cultural diversity acquire in contexts of cult to gauchism & traditionalism, presently. The Gaucho Traditionalist Movement in Rio Grande do Sul is an associative entity, which brings together more than 1400 legally formed traditionalist entities, known as the Gaucho traditions Center distributed on the 30 Traditionalists Regions, in Rio Grande do Sul. The term gaucho has a notable semantic trajectory. At first, it meant smuggler, tramp, wanderer, uncivilized, antisocial. Today, it passed to mean positive values in augmentative degree. But, even the gaucho being common to these three regions, the MTG presents striking local peculiarities, starting with the questions about belonging it provides. The gaucho, in Uruguay & in Argentina, its appropriated & celebrated by the traditionalists of those countries as a national emblematic figure and, in Rio Grande do Sul, it is represented as a diacritic sign to the construction of the regional identities compared to the Brazilian national identities. We will try to show how the cultural diversity is lived in the schools that have traditionalist activities, because we had observed according (Bourdieu: 1989) many kinds of symbolic violence. In this sense education is a conflictive field and has a dimension, at the same time, common & special of people formation as action subjects & identities, & of identified crisis & creation of words, values ideas & imaginary reiterations in which we learn & teach to be who we are.

Pirzada, Mohammad Amin (Department of Sociology and Social Work, University of Kashmir, Hazratbal, Srinagar, Kashmir J&K India [tel: +91-9419015036; e-mail: drULpirzada@yahoo.com]), **Dynamics of Leisure, Tourism and Conflict: A Case of Kashmir,** *International Sociological Association, Gothenburg, Sweden,*

¶ Kashmir from times immemorial has been a place of leisure & a natural attraction for relaxation & recreation to both indigenous and exogenous societies. The natural beauty of Kashmir has remained as enchanting as it was during the times of Mughal Empire. The present paper is a conceptual framework for a more effective role of the leisure & tourism in conflict resolution. It is suggested as to how peace building in Kashmir can get a boost by leisure and tourism development in the region & which factors can be instrumental for realizing it, both at micro & macro level. Further leisure tourism can prove an agency for impoverishing social conflict through development, employment, social change, perceptional change & interaction among tourists & local masses. Literature suggests that increasing contact among individuals from diverse groups creates an opportunity for communal harmony, mutual acquaintances, enhances understanding and acceptance among the people & this consequently reduces inter-group prejudice, tension, & conflict. Tourism has been long recognized for providing the opportunities for social contacts to occur & reduce negative stereotypes about the conflict ridden societies. This fosters understanding, friendship & cooperation among people across the globe. A comprehensive tourist policy and planning is imperative for the enduring role of tourism towards peace building in Kashmir. Keywords: Kashmir, Conflict resolution, Tourist policy, Peace building.

2010S02067

Pirzada, Rafiq Ahmad (Tourism & Travel Management, Amar Singh College, Srinagar, Kashmir, India, 190010 [tel: +91 194 2311674; fax: +91 194 2311674; e-mail: rafpirzada@gmail.com]), **Tourism, Local Communities and Symbolic Violence: Contestations for Domination among Players of Tourism at Pahalgam, Kashmir,** *International Sociological Association, Gothenburg, Sweden,*

¶ An important factor that hinders community development in most rural tourist destinations is the prevalence of complex interplay of power struggles among various groups of touristic actors at a destination. Therefore, in order to ensure sustainable community development, socially & culturally rooted complex power relations must be modified. Drawing on Bourdieu's concepts of symbolic violence, doxa & habitus, this study aims to examine the exploitative dynamic of power relations operating at Pahalgam tourist resort in Kashmir, wherein local residents are subjected to symbolic violence by dominant non-local tourism players and government agencies, through an ongoing struggle for domination over the tourism "field" of Pahalgam. The study seeks to investigate how & to what extent these touristic actors engage in contestations for dominance over Pahalgam tourist resort. Using on-the-field ethnographic interviews at Pahalgam, this study shows how a community about 8000 people in nine cluster villages around Pahalgam hill resort is dominated by a minority of non-local tourism players through enacting a complex economy of touristic practices, which favour those with higher volumes of cultural, social & symbolic capital. Ponywallah habitus, pony trekking and annual Amarnath yatra work to create boundaries within the social field of Pahalgam & cultivate internalized beliefs (doxa) among the host community, thereby limiting its access to capital resources, thus ensuring the (re)production of its dominated position within the field of Pahalgam tourism.

Pitluck, Aaron Z. (Illinois State University, Campus Box 4660, Normal, IL 61790-4660 [tel: +1 309 438-8667; fax: +1 309 438-5378; e-mail: Aaron.Pitluck@IllinoisState.edu]), **An Illiquid Future?: The Social Production of Liquid Financial Markets,** *International Sociological Association, Gothenburg, Sweden,*

¶ Globalization theorists typically characterize financial markets as "liquid," where capital can be readily purchased or sold in global economic networks, so that trades can be completed nearly instantaneously. This premise of liquidity serves as the foundation for a number of social theories. For example, explanations of emotional, short-term herding behavior by investors is premised on high velocity, liquid markets. Similarly, the power of hedge funds in the global south assumes that they are capable of rapid entry and exit. In stark contrast to the above accounts, this paper argues that financial markets are normally illiquid, with brief temporal spikes of liquidity. As a consequence, professional investors in equities markets are large & frequently slow-moving behemoths, trading turgidly. This finding is based on over 125 ethnographic interviews with financial

workers in Malaysia, secondary social surveys of financial workers in the United States, cross-national statistics, & several econometric studies. With a new imaginary of normally illiquid capital markets & slow-moving investors, diverse facets of the recent financial crisis can be perceived in a new light. Liquidity is fragile; difficult both to create & to maintain. The paper closes with implications for future financial crises.

Pivoriene, Jolanta (Faculty of Social Policy, Mykolas Romeris University, Vilnius, Lithuania [e-mail: jolantapiv@mruni.eu]), **20 Years Experience in Development of Social Professions in Lithuania: Between Global and National,** *International Sociological Association, Gothenburg, Sweden,*

¶ Even if it is possible to find some evidence of social help during XX c., the history of social professions in Lithuania has started at the end of XX century. Development of these professions has close connection with political, economic & social changes which occurred after the reconstitution of Independence in Lithuania in 1991. Formation of new social structure brought new social problems which required new ways of solutions. The reform of social security system preconditioned the development of new social professions. Such format - when social professions develop as a respond to social changes a follow the experience of "old" European countries, however, the social professions have their own national features. One peculiarity of Lithuania is the contradiction between legal documents which regulate social & educational systems, e.g., labour market demand & education of social professionals; declarations vs reality; practice vs theory. One of the examples could be how differently the same profession is defined in Science Classificatory system, Qualification Description (in study system) and Classification of Occupations. The presentation discusses the challenges for social professions development in the context of never ending changes in Lithuania. The paper is based on legal and public documents analysis as well as on qualitative interviews and twenty years of personal experience participating in the development & recognition processes of social professions in Lithuania. It discusses four processes of social professions development: institutionalization, academization, standardization and harmonization.

Pivovarov, Alexander M. ([e-mail: a-pivovarov@mail.ru]), **The Importance of Intrapersonal Communication for Modern Individuality,** *International Sociological Association, Gothenburg, Sweden,*

¶ The significance of intrapersonal communication studies is viewed as especially relevant today by those sociologists who believe that the process of globalization is transforming not just external social reality, but the private world of the individual itself as well as his or her self-identification - Anthony Giddens, Zigmund Bauman, etc. This paper presents a sociological approach to intrapersonal communication in order to resolve some of the difficulties in conceptualizing the topic. This approach views intrapersonal communication as a reflection of a wider matrix of interpersonal communication between social subjects that has become internalized within the individual as semantic positions (which are unique models of subjective presentation & interpretation of objects). The scope of such an approach to the study of intrapersonal communication is limited to rational (conscious-level) manifestations of intrapersonal communication and is considered to be an essential component of wider external social interactions. I argue that self-talk plays a central role in this process consisting of a continuous exchange of conscious and socially significant verbal messages between the "I" & its imagined interlocutors who represent different semantic positions (Bakhtin's term). This study proposes a new integral model of intrapersonal communication. This study proposes an original model of intrapersonal communication. I argue that intrapersonal communication for modern individuality is necessitated by the conditions of postindustrial consumer society that create the need for a perpetual process of self-definition. The modern individual as a consumer is constantly forced to position him or herself within a growing number of conflicting systems of expert knowledge and hierarchies of values. Intrapersonal communication becomes a primary tool for continuous negotiation of self-identity within a vertiginous & constantly multiplying choices of lifestyles and worldviews.

Platek, Daniel (Far and Middle East Department, Jagiellonian University, Ul.Gronostajowa 3 [e-mail: sekretariat@orient.uj.edu.pl]), **Conversation with Civil Society in the Historical Public Sphere. Europe and the Middle East,** *International Sociological Association, Gothenburg, Sweden,*

¶ The issue of formation of public sphere within the context of democratization was rarely raised by historical sociology (M. Kamali, T. Burns). Therefore, the observation of an emerging public sphere in the Middle East & its comparison with the European countries seems particularly interesting. Democratization (Ch. Tilly), as a process of gradual integration of individual civil societies (S. N. Eisenstadt) & formations of nation-states, was an inherent part of European modernization. The 19th-century modernization process constituted a frame in which the mobilization of masses was possible & the relations between state & society could be mediated by various institutions that were forming in contact with the political arena. The public sphere in the Middle East had a fragmented, episodic character, not entirely mediated by any legal institution. The processes of democratization were slower in those countries & were based upon a temporary contract between civil society & the states which were implementing projects of authoritarian modernization. In my article I intend to analyze two cases: Iran & Turkey in order to analyse the transformation of the pre-modern public sphere from the domain entirely subordinated to local Muslim communities, to the representation of civil society actors in the political arena of the Middle East countries. Turkey, in my analysis, constitutes an exceptional case, similar in its development to the path followed by European countries–where strong institutionalization of religious bodies & institutions of religious (sharia) & state (kannun) law allowed democratization faster than elsewhere, & tempered effects of coups and grass-root rebellions. The modernization in Turkey was a project which transformed the public sphere into a modern political space and which democratized state-civil society relations. The second case–Iran–is situated at the opposite side of the scale of the public sphere transformation–here the process of democratization depended on the vacuum between civil societies and the state. The modernization of Iran led to violent confrontation between civil society & the state in the beginning of the 20th century, then to the Islamic Revolution in 1979 & grass-roots insistent attempts to establish long lasting connections between the two spheres. The absence of institutionalized religious hierarchy, the absence of strong state institutions & culture which could legitimize political power determined a trajectory of the lack of negotiations between authorities & civil society which was visible also during the last riots in Iran. The processes of modernization took place simultaneously & had an authoritarian character in both of the countries, but their impact on democratization & formation of stable public sphere differed markedly: The Turkish public sphere resembles a space filled with NGOs, political parties & religious groups that influence, to some extent, decisions of authorities. The public sphere in Iran is still based on direct actions & reactions of masses to decisions made by political/religious authorities. In my article I will concentrate on presenting that differences in creation of stable space for negotiations of decisions & interests between Europe and the Middle East arise not due to cultural differences, but due to a specific array of historic & cultural conditions of modernization (trajectories) in those countries, which arose in spite of the countries belonging to the same cultural sphere.

2010S02072

Platt, Jennifer (Freeman Centre, University of Sussex, Brighton BN1 9QE, England [tel: 441273 606755; e-mail: j.platt@sussex.ac.uk]), **Making Them Count: How Effective Has Official Encouragement of Quantitative Methods Been in Britain?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The British national research funding body, the Economic & Social Research Council (ESRC - formerly SSRC, Social Science Research Council) has at various times directly or indirectly encouraged the cultivation of quantitative skills & the application of quantitative methods, & this campaign strengthened in the 2000s. However, empirical articles in the main British general journals have notoriously remained predominantly non-quantitative, and indeed become increasingly so more recently, & there is evidence that levels of quantification are higher in comparable national sociologies. Why has attempted intervention by the major funding body, whose initiatives have often led to strong reactions nationally, & helped to set departmental climates of incentive, not been more effective? This paper explores a variety of historical factors which may be relevant, ranging from cohort effects as sociology expanded to ideological stances intellectual and political. The data are drawn from SSRC/ESRC publications for information on the form & timing of its policy interventions, and data on the characteristics of authors of journal articles are used to explore hypotheses about their recruitment & training. These are supplemented by less systematic sources such as textbooks and monographs on method, available material on methods courses taught, and British Sociological Association newsletters. It is concluded that, despite the felt pressure from SSRC/ESRC, both social-structural & ideological features of the situation have meant that there has been an insufficient corps of those with the moti-

vation & the necessary skills to transmit them effectively to later generations - as well as an insufficiently appreciative audience for those who do exercise such skills.

2010S02073

Platts, Chris & Smith, Andy (Chester Centre for Research into Sport and Society, University of Chester, Parkgate Road, Chester, CH1 4LN, UK [tel: 0044 (0)1244 51345; fax: +44 (0)1244 511337; e-mail: c.platts@chester.ac.uk]), **Education and Welfare in Professional Football Academies and Centres of Excellence: From Policy to Practice,** *International Sociological Association, Gothenburg, Sweden,*

¶ Over the past thirty years or so, there has been growing concern regarding the educational experiences & welfare of apprentices who work in Academies & (CoE) at professional football clubs. This paper draws on data from focus groups conducted with 302 apprentice players at 21 professional football Academies and Centres of Excellence in England & Wales to shed light on the views & experiences players had of education & how this equips them for a life outside of football. The findings indicate that whilst education was seen as a useful "back-up plan", many players felt that it "got in the way" of their pursuit of a professional contract & they consequently developed an irreverent attitude to the educational programmes & policies currently being delivered in clubs. The paper concludes by reflecting on the efficacy of those strategies in bringing about desired change in young people's lives & how these may be significantly constrained by the prevailing subcultures & values that surround the sport.

2010S02074

Pleyers, Geoffrey (FNRS-UC Louvain & CADIS (EHESS), 1348 Louvain-la-Neuve Belgium [e-mail: Geoffrey.Pleyers@uclouvain.be]), **Grassroots Movement for Alternative Food: A Social Movement Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ Until recently, social scientists showing an interest in activist and alternative food networks were mostly rural sociologists and researchers that focus on the third sector & solidarity economy. Consumers are however largely ignored as their perspective focuses mainly on producers. In this paper, I will argue that stimulating insights to understand activists consumers may be found in various trends of the social movement studies, notably those who underline the importance of the cultural & subjective dimensions of global movements. Other sociologists have considered acts of everyday life as crucial components of future movements. While the main aim of many alternative food networks is to provide their members with healthy organic products at affordable prices, our preliminary research shows that some groups use local & critical consumption to challenge certain core values of Western modernity, such as growth & anonymous markets. Other campaigns seek to strengthen the individual consumer's sense of responsibility or promote institution-led regulations.

Plows, Alexandra J (WISERD, Bangor University, Bangor, Gwynedd LL54 4DG [tel: +44 (0)1248 383200; e-mail: a.plows@bangor.ac.uk]), **Public Engagement with Human Genetics as Policy Practice and as "social Movement",** *International Sociological Association, Gothenburg, Sweden,*

¶ Public engagement with science is an established academic/policy discourse & practice (Leshner 2003, Wynne 2006). Bucchi (2004) identifies how "crosstalk" can facilitate knowledge transfer between scientists & "the public". Drawing on qualitative research in the UK 2003-2007 amongst many different publics engaging with human genetic technologies, this paper discusses what "public engagement" is & what it is for. The paper differentiates between definitions of public engagement as policy practice, & public engagement as "social movement", where different "publics" frame issues on their own terms, generally outside the policy sphere. Public engagement as a policy practice involves "democratic governance" of technologies. Public engagement, defined here as "social movement", comprises grassroots forms of mobilisation including protest activity, catalysed not just by the specific issues at stake but also, often, a critique of governance; power relations & agenda setting. Publics-social movement[s] - outside the policy process are "challenging codes" (Melucci 1996), "tilting the frame" (Steinberg 1998). The paper provides & discusses some ethnographic examples, informing a more nuanced understanding of a "messy" (Law 2006) social field which can inform "crosstalk".

2010S02076

Pluss, Caroline (Nanyang Technological Universtiy, Singpaore [e-mail: pluss@ntu.edu.sg]), **Chinese-Singpaoreans in New York City: Transnational Positionalities,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is based on the in-depth accounts given by 11 Chinese-Singaporean transmigrants of their transnational biographies. They lived in New York City in 2009. They are representative of facts that many Chinese-Singaporean transmigrants are middle-class; that if they work, they do so in highly skilled professions; that they have often studied abroad; & that they have resided in more than two countries. The aim of the paper is to explain why & how the Chinese Singaporeans' performances of their identities through recounting their transnational biographies is linked to their attempts to realize their cultural, social and economic aspiration in the transnational spaces they formed by living in several societies. I build on the idea suggesting that transmigrants stay in different societies because of the benefits they think they derive from living in different places. While studying the transmigrants' identity performances, my emphasis is on discerning a) how & why they sought to construct cultural capital to access new cultural, social & economic resources; b) how & why they employed the resources they had to do so; c) how they intersected cultural, social & economic characteristics with roots in different geographical when they situated their identities in transnational spaces; d) & what these identity performances have to do with the reproduction of social inequalities under increasing conditions of globalization, that is, under conditions that potentially augment the number of accepted cultural practices.

Poirier, Mario (Teluq/UQAM, 100 Sherbrooke West, Montreal, Canada, H2X3P2 [tel: (514) 987-3000, ext. 2778; e-mail: poirier.mario@teluq.uqam.ca]), **Mental Health Problems, Runaway Behaviors and Homelessness among Adolescents and Young Adults from a Youth Protection Services Population in Quebec (Canada),** *International Sociological Association, Gothenburg, Sweden,*

¶ Youth protection services intend to prevent situations of abuse, violence, abandonment or neglect in families. In Quebec (Canada) the age limit for the use of services has been set at the legal age of majority, 18 years. Afterwards, many young adults are left without help. Mental health & drug addiction problems, coupled with unemployment & housing costs, bring them to the street, where they may be helped by psychiatric & community services but will remain at risk & may develop new difficulties. Most of these youths have developed antisocial personality disorder traits (sociopathy). The identity & emotional difficulties related to their life history & their resilience in a context of exclusion can be reasonably predictive of the capacity of these youths to seek, accept & maintain a therapeutic relationship. Our study involved qualitative analysis of in-depth interviews with 20 young clients & 20 professionals of a youth protection program, in order to better understand the problems encountered by subjects and to improve the quality & delivery of services. We will present our results & discuss the social & clinical issues in dealing with young people that present severe emotional & behavioral difficulties & that mistrust most forms of clinical help due to attachment traumas (former losses & abuses in their childhood).

2010S02078

Poitras, Claire (INRS-UCS, 385 Sherbrooke East, Montreal, Qc, H2X 1E3 Canada [tel: 514-499-4037; e-mail: claire.poitras@ucs.inrs.ca]), **Master Planned Suburbs. Revisiting the Ideals of Community and Design,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper looks at master planned suburban communities in Canada and the ways in which they have been physically transformed by present circumstances of suburbia such as increased social diversity due to immigration, greater density & functional mix. Based on field work & historical analysis undertaken in the Montréal metropolitan area, the paper examines suburban towns that were created in the late 1950s & early 1960s & that have been maintained by codes & regulations regarding land use and residential architecture. What norms & values were initially reflected by planning standards & guidelines? Do the physical environment of suburban neighbourhoods & its control through planning by-laws display a desire for social distinction? Have ideals of community, housing, & environment persisted or been redefined due to recent suburban change? Does the language of the current suburban landscape & built environment sustain diverse social identities? This paper shows that despite the fact that the communities under investigation are non-gated, they present physical arrangements aimed at preserving their economic & social homogeneity. Although Canadian metropolitan areas have seen less development of gated communities than their American counterparts, local authorities of

master planned suburbs in Quebec have used planning strategies that have had similar insidious effects.

Pokropek, Artur & Domanski, Henryk (Institute of Philosophy and Sociology (IFiS) PAN, Nowy Awiat 72, 00-330 Warszawa. poland [tel: +48501764306; fax: (48-22) 826-78-23; e-mail: artur.pokropek@gmail.com]), **Regional Variation in the Effect of Schooling on People's Incomes in Poland,** *International Sociological Association, Gothenburg, Sweden,*

¶ In previous studies on the market transition in post-communist societies the link was missed between macro-level regional differences & individuals' incomes. This analysis, based on the Polish 2006 national sample of approximately 5500 households aims to cast light on the regional variation in the influence of education on income levels. Building on conceptual framework based on the theory of human capital we investigate to what extent pay-offs for human capital differ across detailed administrative districts in Poland. By incorporating contextual characteristics, we examine how micro- & macro-level factors shape labor market outcomes. The main analysis was based on multilevel models including hierarchical linear models. Our finding provides further support for hypothesis that there is much regional variation in the influence of education on the incomes, what suggests that there are better & worse places for development of meritocratic distribution of incomes. It appears that education pays more in more economically developed regions, marked with higher rate of occupational activity.

Polakowski, Michal (Maastricht Graduate School of Governance/ Maastricht University, Maastricht, The Netherlands, 6200 MD [e-mail: michal.polakowski@maastrichtuniversity.nl]), **Transformation of Social Policy in Central and Eastern Europe-An Institutionalist Perspective on Old-Age Pension Reform,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper presents the transformation of old-age pensions in two transition countries: Hungary & Poland. The dominant view in the literature is that the countries of CEE transformed their social policy, especially old-age pensions in a result of a consciously developed plan, either designed by domestic political actors, or international organizations, such as the World Bank. Accordingly, what one may observe is a neatly conducted policy reform & a paradigmatic shift of the characteristics of the welfare states in the region. The paper challenges this view in two respects. First, it analyses the degree & kind of old-age pension schemes change in the two countries. Analytically, it focuses on eligibility and generosity of benefits & their organizational features including provision, regulation & financing. The paper finds a variation among the two countries throughout the transition, especially with respect to the characteristics of benefits: Poland offers rather low & hardly accessible benefits, while Hungary rather generous and accessible. When it comes to the pension reform in the late 1990s, the relative differences between the countries remained. Importantly, the paper demonstrates that Hungary & Poland differed already during state-socialist era. This leads to the second point: the reformed policies are the recombination of the historical legacies, rather than effects of innovation (either political or coming from outside). Informed by the institutionalist approach, & applying comparative historical analysis, the paper demonstrates the roots of the legacies & how they have evolved into the current policy design. It is argued that the political institutions or the structural-economic situation do not play a major role in the social policy reform. Instead, the role of institutional features of social policy (characteristics of benefits & organizational dimension) is demonstrated as a main factor determining the degree & kind of reform.

Polanska, Dominika Vergara (Södertörn University, 141 89 Huddinge, Sweden [tel: ; e-mail: dominika.polanska@sh.se]), **The Rise of Gated Communities in Poland: Legal and Regulatory Framework,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the support for the formation of gated communities in the legal & regulatory framework in Poland formed since the fall of Communism in 1989. The focus lies on how government policy on spatial planning & housing together with the law on property and ownership affect the emergence & development of gated forms of housing in the country. It is argued in the article that the outcome of liberal politics & legal regulation in the country is the neglect of spatial planning & imprecise urban policies. Existing spatial plans are of consultative nature & bear no regulatory capacity at the same time as the spatial planning in the country is strongly in favor of landowners & new constructions. Gated housing is in the light of the present urban disarray an indirect result of neglected urban politics combined with an increasing social polarization responding to the need of specific social affiliations & lifestyles.

Polavieja, Javier G. & Ortega, Francesc (Madrid Institute for Advanced Studies in Social Sciences, Madrid, Spain [tel: 34-91-8073363; fax: 34-91-88073369; e-mail: javier.polavieja@imdea.org]), **Labor-Market Exposure as a Determinant of Attitudes toward Immigration,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper re-examines the role of labor-market competition as a determinant of attitudes toward immigration. We claim two main contributions. First, we use more sophisticated measures of the degree of exposure to competition from immigrants than previously done. In addition to education, we focus on the protection derived from investments in job-specific human capital & from specialization in communication-intensive tasks. Second, we explicitly account for the potential endogeneity arising from job search. Methodologically, we estimate, by instrumental variables, an econometric model that allows for heterogeneity at the individual, regional, & country level. Drawing on the 2004 European Social Survey, we obtain the following main results: First, we find that individuals with above-average dislike for immigrants tend to work in low-immigration jobs, biasing OLS estimates downwardly. Second, we show that individuals who are currently employed in jobs that require high levels of specific human capital and/or high communicational skills are relatively more pro-immigration. Third, we find that the protection granted by job-specific human capital is clearly distinct from the protection granted by formal education. In contrast, the positive effect of education on pro-immigration attitudes is greatly reduced when we control for the degree of communication intensity of respondents' occupations. Finally, we find that the effect of communication (manual) intensity on immigration preferences operates at different levels of education. Overall our results suggest a large role for skill-based labor market competition in determining individual attitudes toward immigration.

Poli, Stefano (Di.S.A., Dipartimento di Scienze Antropologiche, Università degli Studi di Genova, Genova, Italy, 16121 [tel: +39-340-9710843; e-mail: Stefano.poli@unige.it]), **Toward Social Classless Inequality in Europe?,** *International Sociological Association, Gothenburg, Sweden,*

¶ Contemporary societies, characterized by high complexity & weakness in social formations, show how nowadays inequality dimensions rely much more on multiple, hybrid & cross-cutting generators rather than on traditional class stratification structures (Pakulsky and Waters, 1996; Wright, 2007). Consequently, the theorization of "classless" inequality shines a different light on the debate on the limited heuristic relevance of "class" as a "paper" concept (Bourdieu, 1987). Nevertheless, social system still produces "structural effects" reflecting typical class advantages or disadvantages between individuals (Sørensen, 1996). Apparently different, these approaches result as complimentary & lead to a necessary & renewed methodological attention in the choice of proper tools for the analytical observation of inequality. On this basis, the paper explores inequality in a multidimensional weberian approach (i.e., in terms of "class, status & power") through the application of the Theil index (Theil, 1967). The aforesaid model, considering inequality basically in terms of allocation of scarce resources (material, as well nonmaterial) along alternative ends or strata, proposes, through a probabilistic approach derived from information theory, an alternative formulation of the share of the total quantity of each resource which is to be allocated to each end or strata. In this way, the elaboration of Theil's algorithms will be applied to explore how much contemporary (and heterogeneous) contexts of Europeans countries show tendency toward forms of "classless" inequality. Bourdieu, P. (1987), "What Makes a Social Class? On the Theoretical & Practical Existence of Groups", Berkeley Journal of Sociology, 32, pp. 1-17. Pakulsky, J., Waters, M. (1996). Poljarevic, Emin (Department of Political and Social Sciences, European University Institute, Florens (Fiesole), Italy, I-50014

[tel: +46 739225471; e-mail: emin.poljarevic@eui.eu]), **Contemporary Islamist Activism in Repressive States: Reviewing Social Movement Theories,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is based on empirical research exploring Egyptian & Uzbek nonviolent Islamist social movement organizations between years 2007-2010. After an extensive review on social movement literature one can easily acknowledge that there is a democracy bias in studies of social movements. The study therefore deals with social movement organizations operating in repressive states. Islamism, on the face of it, resembles a new social movement as it creates "new" collective identities & consequentially organized forms of activities. This "neweness" does not depend on traditional religious wisdoms & practices but seeks to reinterpret tradition and ultimately reshape societies. Given the high risks of activism in these, & other, repressive states a question is asked; why do individuals choose to join the Islamist movements? To answer this and other related questions the focus of the study is on the micro-level. By doing this one can understand different dimensions of individual experiences which in turn reveal motivational patterns more clearly & methodically. Modified discourse (narrative) analysis of semi-structured in-depth interviews has been this study's primary analytical approach. Moreover, strong focus has been given to contextualization of general mobilization process. The results have shown that state repression policies tend to strengthen traditional solidarity networks & also limit fragmentation of a movement often observed in democratic states.

Ponce, Camila (EHESS, 54 bd Raspail, Paris, France [e-mail: camila.poncelara@gmail.com]), **La Construcción de la Identidad Política de los Estudiantes Secundarios Chilenos y Franceses en un Contexto de Movilización** (The Construction of Identity Politics Chilean and French High School Students in a Mobilization Context), *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ Durante los años 2006 y 2008 los jóvenes secundarios de Chile y Francia se movilizaron para proteger y mejorar la calidad de la educación en sus respectivos países. Sin embargo en la sociedad contemporánea los jóvenes presentan bajas tasas de participación política y un alto desinterés por la inscripción y votación electoral. La participación durante las movilizaciones de los "pingüinos" en Chile y contra la "ley del ministro Darcos" en Francia congregaron muchos estudiantes que paralizaron sus liceos y colegios durante meses poniendo en jaque sus respectivos gobiernos, por esta razón surge la interrogante sobre la construcción de la identidad política de estos jóvenes. En el presente artículo se estudiará la hipótesis de que la socialización primaria a entendida como la esfera familiar a se impone sobre la socialización secundaria a entendida como las relaciones sociales fuera del ámbito familiar a, se planteará también que la participación de los estudiantes secundarios esta correlacionada con el interés hacia los partidos políticos y sus actores. Finalmente se analizará por qué los estudiantes secundarios chilenos tienen un patrón de participación política más dinámico que los estudiantes secundarios franceses durante las movilizaciones.

Poncioni, Paula F. (Universidade Federal do Rio de Janeiro, Avenida Pasteur, 250 [tel: 552138735380; e-mail: pponcioni@terra.com.br]), **Public Security Policies in the Brazilian Contemporary Society: Trends and Challenges,** *International Sociological Association, Gothenburg, Sweden,*

¶ For approximately the past twenty years Brazil has witnessed an increase in its rates of violent crimes. In this scenario of [in]security, the police agencies pressured to give immediate responses against crime have tended to become ever more arbitrary in their activities. One of the trends which are contemporary raised among policymakers and others is "police education" as an instrument which is capable of improving the performance of police work. The aim of this paper is to analyze public security policies published in Brazil, considering propositions and achievements to alter the police activities from ineffective, arbitrary and violent pattern to an efficacious pattern, but in a democratic way. This work involves the analysis of bibliographical research about police, violence, democracy and public policy and document content analysis of the governmental programs, particularly related to police education. Preliminary findings show that despite the fact that Brazilian state has adopted several initiatives related to public security, including police education, there is also a challenge to overcome the ambiguity to fully implement public programs, prioritizing the security as a guarantee of citizenship in the country.

Poorthuis, Ate (University of Amsterdam - Department of Geography, Planning and International Development Studies, Nieuwe Prinsengracht 130, 1018 VZ Amsterdam, Netherlands [e-mail: atepoorthuis@gmail.com]), **The Possibilities and Limitations of Volunteered Geographic Information: An Exploration through Flickr Data,** *International Sociological Association, Gothenburg, Sweden,*

¶ In recent years a range of new technologies have been rapidly changing geographic information. Thanks to sites such as OpenStreetMap, Google Maps & Flickr, individuals are now using the Web to create, use & disseminate geographic information - often referred to as Volunteered Geographic Information. This paper analyzes a Flickr dataset for New York City that contains 1.9 million photos. Each picture includes the exact location in which the photo was taken & descriptive keywords that say something about that location - about place. The same technologies that are driving the advancement of online services like Flickr enable researchers to analyze the resulting large data sets. This paper uses a variety of open source software on Amazon Web Services ("the cloud") that allows researchers to easily scale & process very large data sets with only limited resources. These tools are used to analyze the unique spatial dynamics of New York City. The richness of the data set enables one to study the perception of place over the years, through seasons, & as seen by different groups of users (local versus tourist). There is one important caveat: triangulation with census data questions the representativeness of the data set.

Popoola, Bayode I. (Dept of Educational Foundations & Counselling, Faculty of Education, Obafemi Awolowo University, Ile Ife, Nigeria [tel: 2348033776591; e-mail: bayodep@yahoo.com]), **Sex-negotiation and Safe-sex Practices of Women in Southwestern Nigeria,** *International Sociological Association, Gothenburg, Sweden,*

¶ Adverse reproductive health outcomes such as unintended pregnancies and STIs are significant reproductive health challenges of contemporary Nigerian family. Available statistics indicate that only 31% of married Nigerian women consistently use a modern family planning method. This study examined strategies used by women in negotiating or refusing sex from their husbands, with the underlying assumption that women who do not use modern contraception will demonstrate effective sex refusal skills. Participants were 167 married women selected purposively from two towns in Osun State, Nigeria. A questionnaire was administered to collect information on women's safe-sex practices as well as strategies used to negotiate sex with husbands. Results revealed that 52.7% of married women used traditional methods of family planning, 26.9% used modern methods while 20.4% did not use any method. The results showed that only 32% of women had the ability to comfortably discuss sexual matters with husbands. The most-widely used strategies for negotiating safer sex were begging, disengagement and physical resistance. Findings also indicated that age and length of marriage significantly influenced sex-refusal strategies. The study underscores the need to understand Nigerian women's patterns of sex negotiation before their exposure to interventions aimed at addressing their reproductive health challenges.

Porio, Emma (Ateneo de Manila University, Quezon City, Metro Manila, Philippines [tel: 6324265990; fax: 6324265990; e-mail: eporio@ateneo.edu]), **Vulnerability, Adaptation, and Resilience to Flood and Climate Change-Related Risks among Marginal Riverine Communities in Metro Manila,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study examines the vulnerability, adaptation, & resilience of urban poor households living in Metro Manila. Based on a survey & case studies, the study found that the environmental/ecological vulnerability of the low-lying flood prone areas interacts strongly with the social vulnerability of urban poor households, highlighting the impacts of climate related changes (increased typhoons, intensity of monsoon rains, floods and tidal/storm surges) on this vulnerable population. Most of them belong to low-income households, live in slum/squatter settlements and do not have adequate access to potable water, electricity, health, sewage & sanitation facilities. About two-thirds of them suffered losses (e.g., income, work, health/sickness, household appliances/things, housing damage) from typhoons, floods, and tidal/storm surges but only a small portion of them obtained help from formal institutions & informal support networks. A third of these households appeared more vulnerable & consistently incurred higher losses & intense inconveniences (e.g., water source buried by floods, toilets blocked & overflowed with wastes/large worms to their floors) com-

pared to their neighbors. The study concludes with a set of theoretical implications & policy recommendations regarding urban governance, technology, climate change and sustaining urban life.

Porro, Nicola (Università di Cassino, Dept. of Sports and health Sciences, Cassino, Italy, 03043 [tel: +39.0776.299413; e-mail: nicolaporro@gmail.com]), **The Making of a Political Religion: The Legend of the "milite Ignoto" in the Italian Nationalistic Imaginary,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the symbolic apparatus of nationalism between the two World Wars the iconographic dimension played an important role. The paper selects a case study regarding the elaboration of the political myth of the Unknown Soldier in Italy after the First World War. The analysis focuses on his celebration & "sacralization" as the collective body of the Nation reconstructing the sequences of a social drama able to fee a collective imaginary & to give birth to a symbolic Nation (re)building. The research shows the production of a social meaning oriented to express & emphasize a "need of community". This collective need, however, will be more and more oriented to the narration imposed by the nationalistic elites challenging & defeating other symbolic competitors such as the liberal institutions, the military & the Catholic Church itself. The symbolic engineering of Italian nationalism succeeded in having recourse to archetypical materials & at the same time mobilizing some cultural repertories of industrial modernity and the instruments of the new born media system.

Porter, Marilyn B (Dept Sociology, Memorial University, St Johns, NL, Canada A1C 2Z1 [tel: 1-709-739-7982; fax: 1-709-737-4075; e-mail: mporter2008@gmail.com]), **Worms in the Apple: Mrs K Confronts Home/Work Tensions,** *International Sociological Association, Gothenburg, Sweden,*

¶ At first glance this carefully crafted life story apparently focuses on the narrower window of Mrs K's working conditions at the somewhat dreary sounding large department store chain in a Japanese city. It is the second of two interviews in this study, taking up the story some 10 years after the first interview in 1996. It opens unremarkably enough, but then, with the gentle digging by the (fine) interviewer the story grows, develops & deepens. I began to think about developing my analysis from Czarniawksa's (2004) own building on the "hermeneutic triad" of explication, explanation and exploration or from Reissman's (2001) efforts to analyse narratives as performance. Both these approaches, & many others, offer complex & nuanced interpretations of narrative material, but neither approach captured what I was hearing as Mrs K spoke and was listened to. Instead, I thought of an onion, with the layers gradually peeling back towards its core. It is through this metaphor that I will explore what Mrs K says about her experiences of working in a particular institutional framework, how she has negotiated the relationship between her work & her family & how that, in turn, has led her to a critique of capitalist society and the injuries it inflicts on women as they try to conform to conflicting demands on their commitment.

Portilla, Joyce (Department of Sociology and Anthropology, University of Ottawa, Ottawa, Canada, K1N6N5 [tel: 16135625720; fax: 16135625906; e-mail: hport072@uottawa.ca]), **Transnational Parenting: The Case of Unskilled Temporary Workers in Canada,** *International Sociological Association, Gothenburg, Sweden,*

¶ Transnational parenting is a complex phenomenon. Located in more than one context, multiple dimensions take part in changing family relationships that are triggered by people's mobility. Migration policies, migrants' skill level, labour shortages & gendered labour areas are some of the characteristics that define the experience of migrants as transnational parents. "Unskilled" temporary workers, for instance, are not allowed to be accompanied by their children, from whom they might be separated for years, while permanent residence holders as well as some "skilled" temporary workers usually travel with their whole family. Temporary migration is a recent & yet insufficiently-studied phenomenon in Canada as it has reached major importance only during the last decade. In this period of time the number of temporary workers has doubled, which is a global trend noticeable in many receiving countries. For the purpose of this paper, I will look at "unskilled" temporary migrants that arrive in Canada under two specific migration programs: the Live-in Caregiver Program (LCP) and the Seasonal Agriculture Worker Program (SAWP). The aim of this research is to understand the family-challenges that people face in their specific condition as "unskilled" temporary workers. Particularly, I will focus on new forms of family configurations produced by the condition of temporality, with special attention to nuclear relationships & gender changes. Although gender issues deeply embrace the whole life experience of migrants, family relations & family structures are particularly determined by them. Preliminary results of in-depth interviews with women & men who migrate to Canada without their children, allow us to look at gendered configurations of transnational parenting. Here, the focus is set on individual life-challenges in regards to how men and women face their new circumstances.

Porto, Maria Stela Grossi (Department of Sociology University of Brasília, Campus Universitário Darcy Ribeiro, Asa Norte, 70910900, Brasília, D.F. [tel: 55 6133072738; fax: 55 6134273641; e-mail: msgrossi@unb.br]), **Between the Civilizing Process and Urban Warfare: Understanding Police Violence,** *International Sociological Association, Gothenburg, Sweden,*

¶ Common sense, the media & academic analyses have been revealing the common trend of insisting on the violent character of police performance in Brazil, emphasizing such violence as the trigger for other kinds of violence perpetrated by the common citizen. This paper intends to discuss the sense in which police performance has been represented as much as a part of Brazil's insertion into the civilizing process (Elias 1975) or, in another way, as something capable of contributing to the intensifying violence in certain contexts, spaces, and/or social segments, giving rise to "islands of violence" which denote either de-civilization or an incomplete civilizing process, seeming to provoke a perverse reciprocity between civil society & police organizations, according to which the police tend to shape violent conduct on the basis of what they believe society expects from them as the entity responsible for law and order. Privileging the theory of Social Representations, it is suggested that the focus of attention should be on the comprehension of the nature of the relations between police and society. The paper seeks, based to inquire about: the conditions for the legitimacy of the police's function; the nature of the theoretical & /or empirical relations that this function establishes with violence; & about the fact that the monopoly of the use of physical force by the modern state would appear as a condition for the "deprivatization" of violence, concentrating and rationalizing it within the apparatus of the state & preventing its dissemination & expansion from the realm of the state towards the realm of civil society (Porto, 2001). These findings render strong the need to understand war & peace as social representations & social constructions which are created in recurring fashion by certain layers of civil society, in order to refer to the corporation & police activity. The line of argument which will be developed shall be based on ongoing research by the author.

2010S02094

Possamai-Inesedy, Alphia & Possamai, Adam (University of Western Sydney, Locked Bag 1797, Penrith South DC 1797, NSW, Australia [e-mail: alphia.possamai@uws.edu.au]), **Risk Society, Sustainable Development and Religion,** *International Sociological Association, Gothenburg, Sweden,*

¶ The Risk Society thesis warns us not only about the rise & change of type of risks that the whole world is facing, but also about everyday life people's knowledge of it & its consequent rise in anxiety. Looking at the arguments about sustainable development and change within the field of religion, in the light of this Risk Society thesis, this entry argues that sustainable development must take into account the warnings from this thesis & that development, when creating "goods" (e.g. wealth), must avoid the emergence of "bads" (e.g. risks); that is development must move towards a "reflexive developmental" approach. Contrary to the mainstream opinion that religions are not involved in this kind of dialogue, this entry underlines the fact that there are religious groups who are active in sustainable & reflexive development (e.g. Ecotheology & neo-pagan groups), & some (e.g. fundamentalist groups) offer some island of security to people's rise of anxiety. This entry then raises the assumption that if, among other factors, sustainable & reflexive development fail to stop the rise of risks & of people's anxiety about them, religious fundamentalist groups might grow.

Poston, Dudley L., Farris, Demetrea Nicole, Singelmann, Joachim & Saenz, Rogelio (Department of Sociology, Texas A&M University, College Station, Texas 77843, USA [tel: 979-574-5055; e-mail: d-poston@tamu.edu]), **The Effects of Using Different Poverty Measures on Analyses of Household Poverty in the Texas Borderland & Lower Mississippi Delta: United**

States, 2006, *International Sociological Association, Gothenburg, Sweden,*

¶ This paper uses microdata from the 2006 American Community Survey for households in the Texas Borderland & Mississippi Delta to examine the effects of household characteristics on the odds of households being in poverty. We undertake seven different analyses of household poverty, each one differentiated by the specific measure of household poverty. The first three analyses use three threshold measures of poverty (the approach used in the United States), namely, in poverty, in deep poverty, & near poverty. The next two measures use two relative measures of poverty (the approach used in Europe), namely, household poverty is 40% of the median income of the geographic area in which the household is located, and household poverty is 60% of the median income of the area. The last two use two measures of poverty recently argued in the literature as superior to the common threshold measures. In each of the seven analyses we examine the micro-level effects of poverty among households located in the two regions. We estimate seven regression models predicting the log odds of a household being in poverty. Our major contribution is our demonstration that (1) the presence of poverty depends greatly on the measure of poverty, & (2) the logit coefficients of the micro-level variables that effect poverty also vary greatly depending on the measure of poverty employed.

Powell, Andrew (Monash University, Melbourne, Australia, 3800 [tel: +61 3 9902 6000; e-mail: Andrew.Powell@education.monash.edu.au]), **Engaging with Difference: Australian Teachers in an International Context,** *International Sociological Association, Gothenburg, Sweden,*

¶ As a result of the processes of globalization, communities have become increasingly interconnected & progressively more pluralist. Given this context, cultural theorists such as Rizvi (2007) have stressed the importance of looking at global interconnectivity at the micro levels, at the levels in which people negotiate issues of identity within the transnational spaces that characterize most communities. This paper provides some initial findings from a study that examines the ways in which Australian teachers at an international school in Shanghai, China negotiate internationalization and difference in their ways of being & knowing. Drawing on qualitative interviews over a six month period, the study elucidates the lived experiences of five teachers as they engage with the local & the global through their personal relationships, the broader Chinese society in which they live, the American culture of the international school in which they work, & the diverse cultures operating within the schooling spaces.

Pozo, Gordaliza Rosario (PhD Student University of Granada, Argueta Sn Facultad Sociologia [tel: 665639563; e-mail: rosariopozogordaliza@gmail.com]), **The Feminine Youthful Delinquency in Centers of Internment,** *International Sociological Association, Gothenburg, Sweden,*

¶ The election of the study object is, without doubt, a product of a long process of personal & professional maturity. Making an effort to know any type of social group that is immersed in a process of organizational institutionalization is always isolated, quiet & silenced. This is a work of enormous complexity since these are hermetic. Its intellectual approach allows filling to part of a forgetfulness of its protagonists (the delinquent minors) and a scientific emptiness of its scene (the centres of the Reformation of minors). The following described work tries to be a reflective-theoretical approach about the feminine youthful institutionalization, so it has been forced fulfillment to make a partner-historical route at the different forms to punish men and women, adults & young people. My aim with this exploratory study is to know the partner-historical rationalization of the feminine institutionalization & its sub worlds, to insert myself in a silenced world in our days, ignored by the history & despised by investigating sciences.

Pratt, Andy C & Hutton, Tom (King's College London, London, UK, WC2R 2LS [e-mail: andy.pratt@kcl.ac.uk]), **Rethinking the Cultural and Creative Economy of Cities,** *International Sociological Association, Gothenburg, Sweden,*

¶ The aim of this paper is to consider some of the profound changes that are being made visible in the current recession. We focus on the relative and absolute growth of the Cultural & Creative Industries (CCI). We argue that the CCI have been underestimated, or misconstrued, both in terms of their potential & actual contribution to the economy and society. In material terms the CCI do make a difference; but, due to their changed relationship with the economy, society and culture, they are different outcomes to those previously seen or expected. There is evidence that the CCI have not been the first casualties of the recession (as they are conventionally expected to be). The positive role that the CCI are playing in economic activity reinforces the theoretical debates that have been developed in that last decade concerning the re-conceptualisation of the CCI and, by extension, the whole economy. So, the task ahead may not be simply re-building the economy, but also one of reconfiguring our understanding of the economy & society; & the relation of both to space & place: in particular, the city.

Preda, Marian (Department of Sociology/University of Bucharest, Bucharest, Romania, 9 Schitu Magureanu Street [tel: +40726555538; fax: +40213158391; e-mail: mpreda2513@yahoo.com]), **Successive and Overlapping "Romanias" - Social Consequences of Temporal/Generational and Geographical (Local, Sub-National and Regional) Disparities in Romania,** *International Sociological Association, Gothenburg, Sweden,*

¶ As a result of inefficient social & economic policies, the Romanian welfare system has been confronted before & after 1989 with extremely difficult problems; one category of them consisted in successive disparities between social contexts & opportunities associated to successive generations of Romanian citizens borne, educated & employed in different periods. Milestones such as the beginning of the communist regime, the 1966 antiabortion decree or 1989 Romanian revolution as well as intermediary social processes have created differences between generations of citizens with major social consequences. On the other hand there have been huge disparities between various geographical entities within Romania that will be approached in this paper: Area/geographical differences & Urban-rural differences. The national values measured for economic & social development indicators fail to provide an accurate picture about the widely diverging conditions that characterize the regions, counties, towns & villages within Romania. The lack of institutional & visionary coherence, of strategic planning based on data, as well as of monitoring and evaluation as system correction practices, inefficiency, waste, the unbalance of the social protection budgets, various & severe inequities in the social resources distribution were blotted out in 2001-2008 by the economic growth & by the opportunities to work abroad, which have led to a perception of standard of living improvement in an important segment of the population. However, the present & the future will be characterized by a different social context, the economic crisis having negative effects both on the incomes of the population, to continue to decrease, & on social protection needs to increase. On top of everything there are the medium- & long-term problems related to population ageing, migration, & other socio-demographical unbalances. In these circumstances, only fair, coherent, well-focused & effective policies will manage to reduce risks & maintain budgetary balance and social order.

Preston, Lou & Rasmussen, Mary Lou (Monash University, Clayton, Vic, Australia, 3070 [tel: 61399052829; e-mail: lou.

preston@education.monash.edu.au]), **Green Bodies: Training Environmental Educators,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper, we examine the "greening" of Outdoor & Environmental Education (OEE) students at an Australian regional university through three lenses: temporal, spatial & material. We are inspired by Grosz' claim that "bodies are always understood within a spatial & temporal context, & space & time remain conceivable only insofar as corporeality provides the basis for our perception & representation of them" (1995, p. 84). As suggested by Grosz, these lenses are not discrete and, in the course of the paper, their intersections & reciprocity become apparent. We draw on interview responses & observations from a longitudinal cohort study undertaken by Preston in an attempt to trace the regulation and practice of "green" "outdoor Ed" subjectivities in the context of the materialities, time & spaces of this specific course. Price, Debora J & Livsey, Lynne (King's College London, Institute of Gerontology, Strand, London, WC2R 2LS, UK [tel: +44 20 7848 2560; e-mail: debora.price@kcl.ac.uk]), **Welfare Citizens or Capable Consumers? Financial Capability and the Politics of Income in Old Age,** *International Sociological Association, Gothenburg, Sweden,*

¶ There is growing international policy focus on "financial capability" - the ability of citizens to manage their personal finances - coinciding with continued attempts by the UK government to shift the balance of responsibility for income in later life from state to individual. Using Foucauldian inspired methods of discourse analysis, we consider how older people have been positioned and represented within the financial capability agenda in the UK, and the implications for wellbeing in retirement. Working from a governmentality perspective, we construct a critical genealogy focussing on the themes of power, knowledge & risk. Recent pension reforms will transfer financial risks in later life from the state & employers to individuals, many of whom are ill-equipped to face them. This has been achieved through a Foucauldian web of power where different knowledge purveyors have been enrolled into a hegemonic neo-liberal discourse of the power of the market & the value of autonomous, self-governing, free-thinking citizens. Discussion about structural & market failures is closed, leaving subjects who are vulnerable to income insecurity & poverty in old age, & dependent on the residual welfare state. Currently dominant discourses of financial capability serve to legitimate neo-liberal policies for income provision in old age.

Prieto-Flores, Òscar & Sordé-Martí, Teresa (University of Girona, Plaça Sant Domènec 9, Girona, Spain 17071 [tel: +34972418987; fax: +34972418300; e-mail: oscar.prieto@udg.edu]), **Structural Constraints of Sociologists' Work on/with Ethnic Minorities: The Case of Roma Research in Spain,** *International Sociological Association, Gothenburg, Sweden,*

¶ Regardless of whether or not we as researchers express commitment and despite the different approaches that empower or disempower ethnic minorities, our work is constrained by regulatory systems that impede some types of research on or with ethnic minorities. Unlike in other countries such as the United Kingdom, the United States, Brazil or Romania, in Spain race & ethnic data are not collected in a census as official statistics because it is prohibited by law and there is strong reluctance to promote social change in this direction among some policy makers & researchers who argue in favour of "non-discriminatory & equal" treatment by the state and public institutions. The lack of "sensitive" statistics on discrimination affects our research agenda, our work as sociologists & the visibility of the inequalities of our subjects, especially in the Roma case. It also disempowers ethnic minority organizations from demonstrating the deprivation & the invisible discrimination affecting their members. But the race and ethnic data collection debate is also present within Roma civil society. Historical & more recent discriminatory use of ethnic data by different states has been denounced by Roma organizations. In this paper, we highlight the different approaches used in Roma research & how they may legitimate some inequalities. We then provide an overview of the regulation of ethnic data collection and how it constrains our work as sociologists & our commitment to empower ethnic minorities. Finally, we present how Roma organizations are dealing with this debate & its research implications.

Prinzen, Katrin (University of Cologne, Cologne, Germany [tel: + 49 (0) 221 / 470-2079; e-mail: prinzen@wiso.uni-koeln.de]), **Solidarity - Conflict - Ambivalence? Attitudes towards the Elderly in an Ageing Society,** *International Sociological Association, Gothenburg, Sweden,*

¶ INTRODUCTION. Starting from the notion that there is a huge discussion but only mixed empirical evidence for an intergenerational conflict, this paper sets out to investigate the working population's attitudes towards the elderly in an ageing society with scarce welfare state resources. Besides potential for an intergenerational conflict that can be explained with self-interest, there is also potential for intergenerational solidarity that can be explained with norms of reciprocity on the one & family solidarity on the other hand. This leads to the expectation of ambivalent, i.e. opposing attitudes of conflict and solidarity towards the elderly individuals hold at the same time. METHOD. The method applied is a regression analysis with survey data from the Population Policy Acceptance Study (2003) of Germany. RESULTS. There is evidence for ambivalent attitudes towards the elderly: The higher the perceived proportion of elderly in society and the more solidarity with the elderly in society respectively the elderly in family individuals feel, the more ambivalent attitudes to-wards the elderly they have. CONCLUSIONS. Explaining intergenerational relationships in the welfare state needs a holistic perspective, namely including the potential for intergenerational conflict on the one hand, & the potential for intergenerational solidarity in attitudes on the other.

Proeschel, Claude (GSRL(EPHE-CNRS), Paris, France, 75017; [tel: +33 6 79 33 23 64; e-mail: claude.proeschel@wanadoo.fr]), **Identity Claims of a Religious Nature: An Obstacle or a Chance for Civic Integration,** *International Sociological Association, Gothenburg, Sweden,*

¶ Late modernity, characterized not only by a sense of relative belonging, but also by the globalization of exchanges and migrations, involves the increase in identification processes or identity claims based on religious membership. This paper, by a theoretical thought, wishes to address the relation between these evolutions & the stakes & the various States' requirements in the field of citizen integration. Questioning individuals, on the one hand, it will try to see whether a strong integration to a community or religious identity constitutes an obstacle to any possibility of integration into the global community, or, conversely, whether it can promote it, giving back individuals a sufficiently solid identity foothold to make them wish to take part in a global community. With regard to States, one may wonder to what extent the various modes of democratic management of pluralism implemented today feel themselves questioned by these phenomena of identity claim.

Prokopowicz, Piotr (Institute of Sociology, Jagiellonian University, Kraków, Poland [tel: 0048 693 538 718; e-mail: piotr.prokopowicz@uj.edu.pl]), **"Having a Say" Vs. "Having Your Voice Heard": The Intricacies of Participative Management at a Worker Co-Operative,** *International Sociological Association, Gothenburg, Sweden,*

¶ Participative work culture is characteristic for many third-sector organizations, of which worker co-operatives may be the most interesting example. These worker-owned & democratically controlled enterprises are striving to link economic viability with prosocial trade practices, challenging the prevailing neoliberal economy & traditional management methods. The paper is focused on the perceptions of business, management & work in a democratically managed worker co-operative. The research has been conducted in one of the oldest fair-trade coffee roasteries in Canada, an organization engaged in socially responsible trade practices with coffee co-operatives all over the globe. Employing quasi-participant observation, surveys & ethnographic interviews, I analyze the individual meanings that both members & employees attach to the notions of "decision making", "management", "working for a co-operative" & the difference between "having a say" (direct decision making) & "having your voice heard" (forming & expressing opinions). I conclude that while workers and members of the co-operative perceive themselves as a positive force in building an alternative to the prevailing business and management practices, they are in fact locked inside the dominant management discourse that distinguishes between the roles of an "employee" (doing what you're told) & a "manager" (telling others what to do).

Prozorova, Yulia (Sociological Institute of Russian Academy of Sciences, Saint-Petersburg, Russia, 190005 [e-mail: yulia.

prozorova@gmail.com]), **Interaction Rituals: Macropotential of Microinteractions for Sociological Practice,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper focuses on the practical dimension of interaction rituals (IRs) & their capacity to induce positive changes. IR theory elaborated by Randall Collins inevitably raises the question of IRs practical implementation in teleological activities. It is suggested that the IR theory is to be integrated into the body of "multidimensional sociology" becoming an actual constituent of the theoretical fundamentals of sociological practice. The IR theory served as a conceptual frame in the case-studies of Narcotics Anonymous & Families Anonymous groups. This allowed us to focus on the interactional factor that is usually neglected in the studies of 12-step groups. Program literature refers to interactivity as a key principle, which is realized in 12-step groups' intrinsic interactions. Non-/participant observations and in-depth semi-structured interviews were employed to examine the role that group interactions defined as IRs play in the recovery process & fellowships functioning. Organizational principles of group meetings received the primary attention of the study. The analysis of regular group meetings revealed that their organization includes components necessary to create a successful IR. The group meetings as intentional IRs are an important mechanism that stimulates identity transformation, emotional correction, internalization of program principles & interpretational frames thus supporting personal changes, recovery & fellowship integrity.

Pruijt, Hans (Erasmus University Rotterdam, PP Box 1738 3000 DR Rotterdam [tel: +31 10 408 2071; e-mail: pruijt@fsw.eur.nl]), **Employability, Empowerment and Employers, between Debunking and Appreciating Action. Six Cases from the Software Sector,** *International Sociological Association, Gothenburg, Sweden,*

¶ The starting point of the paper is what can be labeled "employability theory". This theory paints a scenario in which increasing employability across the workforce compensates for an inevitable loss of job security. This scenario promises employee empowerment. After all, because desirable employees enjoy the full options of exit & voice, they are optimally in control of their own working lives. They can get hold of interesting tasks, which allows them to acquire more experience, & thereby enhance their attractiveness as employees even more. When they have a keen eye for opportunities on the labor market, they can shape their careers as creative projects, & minimize the risk of getting stuck in a nonviable organization or department. Employability theory holds that employability is amenable to substantial enhancement by investing in it. Possible assets to invest in are: awareness of marketable skills & talents, self-presentation efficacy, actual levels of skill, knowledge & experience. The most straightforward part of the theory is that investment in employability is in the employees' interest. However - & this is much less trivial - the theory holds that investment in employability is in the employers' interest as well. The idea is that employers can foster employee commitment by offering what has become known as a "new psychological contract". In the old psychological contract the employer was expected to try to keep the employment relation permanent in exchange for loyalty & performance. In the new psychological contract, the expectation is that employers will invest in the employee's employability, in exchange for employee commitment. There are indications that employability theory finds resonance among managers. Parallel to this, current thinking about the future of the welfare state tends to emphasize investment in employability rather than consumption, with the popular metaphor shifting from "safety net" to "trampoline". The paper is an attempt to contribute to the debate as to how realistic employability theory is. Employability theory is not only prescriptive, it has also a descriptive side. As an area for study, software development seems a forward looking choice, in as far as it can stand for the emerging knowledge based society. Also, software development is a field in which interesting effects of globalization are visible. Moreover, the case of software development is relevant for a discussion of employability, because it is subject to rapid technological change. The problem of skills obsolescence is pertinent to software development. It would seem logical that technological change will be an impetus for investing in employability. Unfilled vacancies for, & unemployment of software developers, often exist side-by-side. Therefore, lack of employability is a manifest problem in software development. The literature on software developers provided indications that support employability theory but also indications of the opposite. Companies provide substantial training to their employees. Among the reasons for doing so, however, the new psychological contract does not seem to play an important role. From the point of view of employability theory, employee behavior seems exemplary: developers tend to be eager to learn. And, contrary to some expectations voiced in the literature, employees often experience an anti-Tayloristic organization of work that promotes & facilitates learning. Partly, the organization of work is determined by technical necessities, partly there has been a deliberate choice for an anti-Tayloristic approach. So far, software development seems to be a case that shows that employability theory does indeed have a basis in reality. But there are also indications that detract from the realism of employability theory. The training paradox - why train someone for the benefit of your competitor - is exacerbated by a need for speed. Training often involves product/version-specific certification. This system increases skills obsolescence. Also, training & accumulation of experience in a non-Tayloristic organization of work do not stop the decline of employability with age, which seems to be stronger in software development than in older professions. There is an escape route for older developers into management or coaching, but only a proportion of workers can benefit from it. In defense of employability theory one might say that the current situation is only a phase in an ongoing development; that awareness of the notion that employability is the new job security will increase, which eventually will make employees more resilient in a flexible labor market. Unfortunately for employability theory, some aspects seem to be developing in the opposite direction. There is an emerging global hunt for young talented workers, with political pressure behind it. This means that each worker who is struggling to maintain employability potentially faces competition from someone who is younger, smarter & cheaper. The employability-as-the-new security scenario requires that people can move between lines of work. However, there is ongoing professionalization leading to credentialism, which tends to close the opportunities for people wishing to make a career switch into software development. The paper examines six companies, located in Germany & in the Netherlands. In all these companies, employability is a source of tension, especially as employees age. Together, they form a critical case for testing some of the presumptions of employability theory. Beyond this, the paper explores the space for action. In three of the companies, the top management takes employability problems as given. Managers "go with the flow", simply watch when older employees run into trouble regarding their employability & face exclusion. In the three other companies, top managers take a keen interest in the issue of employability. In these companies, there is a to a certain extent - a collective struggle to maintain employability in the face of adverse conditions. The paper offers a comparison of the two groups of companies.

Pruijt, Hans (Erasmus University Rotterdam [e-mail: pruijt@fsw.eur.nl]), **Geographic Geographic Dimensions of Legitimacy and Institutionalization. The Case of Dutch Anti-Squatting Legislation,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recently the Dutch parliament passed legislation designed to make squatting illegal. The paper examines the dynamics involved. It is based on participant observation in meetings a squatter meetings, debates with politicians, a parliament hearing & lobbying meetings a a survey (N = 2000), interviews & document study. A key mechanism that the paper explores is the following. Citizens in big cities are more likely to support squatting than inhabitants of small towns. Squatter strategies of resistance that seem more or less acceptable in the local context of a big city - especially Amsterdam - create media events that cause a backlash on the national level. This provides ammunition for right wing political entrepreneurs who seek to destroy the legitimacy that squatters across the country, while adapting to their local environment, had successfully struggled for to achieve.

Psilla, Marianna & Chalevelaki, Maria (Panteion University, 136, Syngrou Av., Athens 176 71, Greece [tel: (+30) 210 97 62 391; e-mail: mpsilla@hotmail.com]), **La Mise en Discours d'un Evenement Preelectoral et sa Construction a Travers la Presse Ecrite** (The Implementation of a Speech Event and the Pre-Election Construction through the Press), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ L'évènement médiatisé constitue une forme de sa mise en signification à travers sa narration par les médias. Le récit médiatisé désigne une relation de communication et de socialité complexe, durant laquelle l'évènement fait sens d'une part, comme un évènement réel et d'autre part, comme un évènement représenté dans sa narration. Ainsi, l'évènement devient discours tout en considérant à la fois sa production et sa lecture, et par suite son interprétation. Nous sommes face à une construction ayant des dimensions communicationnelles qui se réalise dans le cadre de l'espace public, tout en influençant en même temps la sphère privée. l'évènement médiatisé représente d'une manière symbolique des valeurs,

des idées et des éléments culturels en faisant émerger des questions de mémoire, d'identité et de socialité. Les médias apparaissent donc comme vecteurs de construction de sens et de négociation de différentes représentations du monde. C'est dans cette perspective que se place notre intérêt d'introduire une méthodologie d'analyse des messages des mass medias et en particulier de la presse écrite, qui souligne la narration et la médiatisation des événements dans l'écrit. Plus précisément, notre approche se focalise sur le discours pré-électoral (élections législatives en Grèce d'octobre 2009), en s'appuyant sur deux catégories de journaux : la presse nationale et la presse gratuite. La méthode d'analyse que nous avons adoptée est la sémio-linguistique qui permet de s'interroger sur le discours médiatisé préélectoral au travers le récit raconté, la façon dont il est narré et la reconstruction de l'imaginaire qui s'y rattache.

Psimmenos, Iordanis (Dept. of Social Policy, Panteion University of Social & Political Sciences, Athens, Greece [tel: 0030 22910 26232; e-mail: ipsimmenos@yahoo.co.uk]), **Work Culture and Migrant Women's Marginalization,** *International Sociological Association, Gothenburg, Sweden,*

¶ The central foci of the paper is how domestic work shapes immigrant women workers' (i.e. from Albania & Ukraine) access, perceptions & responses towards formal welfare agencies & services. The topic addresses not only what structural objective barriers domestic work, with its operational & normative context, creates, but how it can also stimulate further women's distance from state welfare. Simultaneously with the social exclusion from state welfare due to the precarious nature of domestic work, a more rigorous analysis shows that welfare marginalization takes place due also to the social & moral readjustment of women's patterns of living and aspirations about welfare. Such an inquiry is central to the sociology of work & migration & equally relevant to the theoretical understanding of marginalization & how low status jobs contribute to the formation of sustainability & spread of attitudes which limit access to welfare services. For welfare marginalization, the case of Albanian & Ukrainian women workers in Greece reveals that in addition to institutional barriers to services due to immigration status, occupational rules & culture also prohibit access to welfare. More specifically, the analysis of interviews showed that women's ability to enter, use & maintain social insurance, medical & child care state provisions, is seriously endangered not only due to economic but also due to women's habituation & reconciliation with the norms, values, customs & beliefs generated from domestic work. The first part of the presentation concentrates on the ways domestic work (i.e. both live-in & live-out) contribute to women's state welfare distantiation, paying particular attention at levels of employment, conditions of work & task distribution. The second part of the presentation looks at changes of welfare values. There seems to be an interplay between structural factors & workers' comprehensiveness of their situation in the Greek society and economy, which alter initial welfare customs, expectations and relations with formal state agencies. It becomes clear from the interviews that women are not passively enduring state & work oriented welfare obstacles. Seeking alternative routes to welfare whilst at the same time not losing touch with the particular job and the specific job market is certainly an example of agency here. But as it will become clearer from the analysis, these active responses are not necessarily out of line with the existing barriers to state welfare. In fact, one could argue that they are part of a larger process, which reinforces ethnic, gender divisions, values and individualistic approaches to protection, which increases patronage and the discrimination of women by employers & the job-market.

Ptacek, James (Department of Sociology, Suffolk University, Boston, MA 02108 [tel: 617/573-8047; fax: 617/994-4278; e-mail: jptacek@suffolk.edu]), **Restorative Justice and Violence against Women: Recent Feminist Contributions,** *International Sociological Association, Gothenburg, Sweden,*

¶ Despite significant accomplishments by the feminist anti-violence movement worldwide, community activists know well that justice is out of reach for most victims. Seeking ways to expand options for women & increase accountability for violent men, a number of feminists are examining both the dangers & potential benefits of using restorative justice to address crimes against women. The informal, dialogue-based practices referred to as "restorative justice" seek to decrease the role of the state in responding to crime, & increase the involvement of community networks in repairing harms caused by crime. Restorative practices are most commonly applied to crimes by young people, such as property crimes. But there is increasing use of these practices to address crimes of violence against women. Some feminists are opposed to using these informal practices to address crimes such as rape, battering, & child sexual abuse; some are strongly in favor of them. And some have developed new antiviolence projects that combine elements of restorative justice with feminist antiviolence models. Drawing on the work of feminists in the United States, Canada, Australia, & New Zealand, this presentation will address this controversy, & describe some of the recent feminist/restorative hybrid approaches to violence against women.

Puga, Carolina (Grupo Copolis, Universidad de Barcelona, Barcelona, Spain, 08034 [tel: +34 93 185 9399; e-mail: vivairacema@hotmail.com]), **Elephant in the Room. Immigrant Camps in Spain,** *International Sociological Association, Gothenburg, Sweden,*

¶ Immigrant detention camps have existed in Europe for more than 25 years & currently there are over three hundred throughout the continent. In Spain, these institutions emerged in 1985, and currently add up to nine. The deprivation of freedom for people who have not committed a crime, presents great contradictions for rule of law, & is one of the most visible faces of social control related to the movement of people. Little research has been conducted on this topic in the field of Sociology of Immigration. Data available on this topic is scarce as gaining access to institutions is difficult. This article attempts to get a closer look at detention camps from a sociological perspective. Current theory is questioned to find out what can be considered an immigrant detention camp. Through a review of classical & current Social Science theories, I define what a detention camp is and outline their purpose. I analyze current data to see what characteristics detention camps have in Spain. By researching the trustworthy information available, I outline the most important characteristics of detention camp operations & propose a typology for detention camps in general. Finally, through ethnographic work performed at a detention camp in the Canary Islands, the question of what it's like to live inside a detention camp is explored with detainees. The total institution & disciplinary character of the detention camps is demonstrated, as well as the lack of regulation, and the stress that is created by the uncertainty of living inside the institution.

Puga, Cristina & Tirado, Ricardo (Facultad de Ciencias Politicas UNAM, Ciudad Universitaria, D.F.04510 Mexico [tel: 52 55 56535778 ; e-mail: crispunam@yahoo.com.mx]), **Voluntary Associations and Democratic Participation,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper assumes that voluntary associations are important to promote & sustain democracy not only by promoting democratic causes but through the learning & dissemination of democratic practices. At the same time, it brings forward an assessment proposal based on the distinction between complex & less-complex organizations. Our main assumption is that the voluntary associations' capacity to promote democracy in society is closely linked to at least four criteria of good performance: effectiveness (related to goal accomplishment), efficiency (related to good use of resources), internal & external legitimacy (mostly related to the way decisions are taken & communicated) & social relevance (related to goal pertinence & social perception). In the assessment proposal referred, they are grouped in three analytical axes: practical, organizational & environmental. From that departure point, the paper analyzes some characteristics of associational performance which contribute to a democratic effect on society and on the associations themselves, such as cohesion, cooperation and participation in decision-making. In turn, it analyzes those which prevent democracy, such as vertical leadership, scarcity of financial resources, members' passiveness & environment uncertainty.

Puigvert, Lidia, Flecha, Ainhoa, Elboj, Carmen & Santos, Tatiana (Sociological Theory Department, University of Barcelona, Avda Diagonal 690-696, Barcelona, Spain, 08034 [tel: +34 934035099; fax: +34 93 4035171; e-mail: lidia.puigvert@ub.edu]), **New Developments on Prevention of Violence against Women: Connections between Women Movements and Research Results,** *International Sociological Association, Gothenburg, Sweden,*

¶ Some women movements are becoming very active in preventing violence against women. In recent years, the research community has articulated great efforts to study different forms of violence against women. It has explored its causes at different settings and has analyzed its effects upon different target groups. In this paper, the authors will explore some of the developments done from women movements in Spain connected to these research results. Specifically, the Unitarian Platform Against Gender

Violence is an example of an umbrella organization which develops actions of preventive socialization clearly linked to recent theoretical and research developments in this field. The central premise of the research developments behind some of these actions suggest the existence of different socialization processes that prepare teenagers to feel attracted to individuals whose behavior tend to be violent thus leading to unequal or even violent relationships. On the other hand, there are other models of attraction which are connected to dialogue, equality & respect. These contributions are rooted in recent developments in contemporary sociological theory & in studies conducted among teenagers & university students about their socialization processes.

Pulinx, Reinhilde (Centre for Diversity and Learning, Ghent University, Sint-Pietersnieuwstraat 49, 9000 Ghent, Belgium [tel: +32 9 264 70 46; e-mail: reinhilde.pulinx@ugent.be]), **Monolingual Policies in Multilingual Classrooms. Perceptions of Teachers and Students,** *International Sociological Association, Gothenburg, Sweden,*

¶ This study is part of a larger research project, trying to determine significant factors influencing schoolcareers in secondary education in Flanders. Dutch language proficiency is estimated one of these factors, since the teaching language is Dutch. The study presented at ISA 2010, looks at the different ways language use and proficiency is perceived by students, teachers & school staff. The main research questions are: do language policies in school reflect the multilingual reality of the classroom & to what extent can differences be established between actual language proficiency & language proficiency perceived by teachers and pupils? Data is collected in three schools of secondary education in Ghent, Flanders: two school providing professional & technical education & one school providing general education. An important part of the population of each school consist of non-Dutch speaking students. For data collection, the following methodologies are being used: participant observation, standardized language testing of & group discussions with pupils of the 2nd year of secondary education & in-depth interviews with Dutch language teachers and school principals. Since the data collection is ongoing at the time of submitting the abstract, I cannot yet report on research findings. These will be presented at ISA 2010.

2010S02117

Punzo, Valentina (Department of Study on Politics, Law and Society - University of Palermo, Italy, Palermo, Italy 90128 [e-mail: valentinapunzo@libero.it]), **Challenge to Rational Choice Theory: Contribution by Simulation to the Study of Adaptive "Irrationalities",** *International Sociological Association, Gothenburg, Sweden,*

¶ Sociology has far too long remained indebted to economic sciences in the set up of the rationality question. The normative version of the theory has long constituted a valid instrument to distinguish rationality & irrationality. Unlike the economic approach, the sociological perspective looks for the generative mechanisms of social action [from Hedström's analytical sociology]. The economic assumption of rationality appears problematic for a theory of social action in the light of the most recent articulations on the concept of rationality developed within the theory of decision under uncertainty that beginning with Simon & March's limited rationality set the basis for an interdisciplinary set up on the problem of rationality. Attention has moved from the decision to the mental representation of alternatives & to the process of formation of beliefs which is at its basis, as in the Elster's substantial rationality theory. In this direction, most recent contributions of the theory on rational choice emerged within cognitive psychology have extended the concept of rationality to cognitive basis. The principal reference comes from contributions offered to economics by Kahneman & Tversky. More recently, cognitive distortions have been examined from the view point of greater or lesser efficiency related to decisional outcomes. In this prospective it would be sustained that cognitive distortions constitute reasoning "strategies" adaptive to conditions of uncertainty. In this direction, simulation models provides a powerful way to address certain interdisciplinary questions not only at the theoretical level but also at a more practical one. Social Simulation based on Agents consists in constructing society models of artificial agents. As reminded by Epstein the agent-based approach allows one to subject certain core theories - such as neoclassical microeconomics - to important types of stress & may well have the important effect of decoupling individual rationality from macroscopic equilibrium. Agent-based simulation permits to explore how different individual reasoning strategies, ad a micro level, in certain experimental conditions, give rise to different macroscopic regularities. It is then possible to verify the hypothesis of an adaptive explanation of some "limited" reasoning strategies. We argue that agent-based simulation provides a new theoretical & methodological instrument for testing the rational choice theory.

Purkayastha, Bandana (University of Connecticut, Sociology, Manchester Hall, Storrs, CT 06269-2068. USA [tel: 01-508-839-5499; fax: 01-860-486-6356; e-mail: bandanapurkayastha@yahoo.com]), **Thinking About Peace: "Southern" Contributions to Peace-Scholarship,** *International Sociological Association, Gothenburg, Sweden,*

¶ Discussions of peace, & movements to build & sustain peace, are engaging the interests of a growing number of sociologists. However, with the exception of Mahatma Gandhi's writing & the recent writing by Amartya Sen, much of this work continues to draw on "northern" discussions of peace building. This paper attempts to refocus attention on the writings of other savants located in the global "south," who writings and/or life's work on peace have engaged with some of the fundamental structures of 20th & 21st century societies. Focusing on the writing/actions of AT Areyaratne, Ela Gandhi, Ashis Nandy & the Survivors of the Atomic Bomb (Hiroshima Peace Foundation), I analyze a selection of "southern" approaches to building & sustaining peace. I describe their approaches to conceptualizing peace & their critical engagements with larger social discussions of our times including tradition/modernity/postmodernity, development/underdevelopment, and religion/secularism as they envision a holistic concept of peace.

Puthanveetil, Balan Pappinisseri (Professor-cum-Director, Centre for Research in Rural & Industrial Development (CRRID), Centre for Research in Rural & Industrial Development (CRRID), Sector-19/A, Madhya Marg, Chandigarh-160019 (India) [tel: +91-9915535656; fax: 0172-2725215; e-mail: balanpp25@gmail.com]), **From Government to "Government to People" - India's Experiments in Decentralisation: Problems and Prospects,** *International Sociological Association, Gothenburg, Sweden,*

¶ The 73rd & 74th Constitutional Amendment Acts in India, mandated democratic decentralization, central government being the key facilitator and the state governments endowed with the empowering of the rural and urban local bodies by devolving functions, functionaries and finances. Local self government in India, in terms of the size of the electorate, the number of grassroots institutions (about .24 million), the number of persons elected- (3.6 million) in the Panchayats & Nagarpalikas is the greatest experiment in democracy. The positions of the state governments are critical to the success of democratic decentralization. Across the country, we see more & more local bodies moving away from the stereotype of being passive recipients of power devolved from above. Local bodies have also begun to challenge the fetters, real or imaginary, which prevents them from realizing their full potential. Those that have succeeded have grabbed with both hands the opportunity to make a difference. Local bodies have become "government" where they have worked like governments. Participatory planning is the crux of the entire system which is ensured through Gram Sabhas or Ward Sabhas. It is the only forum that ensures direct, participative democracy which offers equal opportunity to all to criticize, approve or reject proposals of the local governments & also assess its performance. It is the platform for effective social audit, which lies at the core of ensuring transparency & accountability in the functioning of the system. In this experiment some states have gone ahead whereas some are lagging behind. States like Kerala with the slogan "power to the people" & its "big bang" approach have strengthened decentralized governance which has become a model to other states to emulate. An experiment of this scale is bound to have shortcoming & setbacks which need course correction. Note: Both primary & secondary sources have been used for the preparation of the paper.

Puthanveettil, Balan Pappinissery (Professor-cum-director, Centre for Research in Rural & Industrial Development (CRRID), Centre Centre for Research in Rural & Industrial Development (CRRID), Sector-19/A, Madhya Marg, Chandigarh-160019 (India) [tel: +91-9915535656; fax: 0172-2725215; e-mail: balanpp25@gmail.com]), **Inclusive Growth through the Promotion of Entrepreneurship - Initiatives of 'Kudumbasree' - Kerala (India) - A Case Study,** *International Sociological Association, Gothenburg, Sweden,*

¶ "Kudumbasree" is a multi-faceted women-based participatory poverty eradication programme initiated by the government of Kerala and imple-

mented by community based organizations (CBOs) of poor women in co-operation with the local self government institutions. The "kudumbarsee" process starts with a simple participative spotting of poor families using a "9" point risk index. A family having at least four of these factors qualifies to become a member of the basic unit in "kudumbarsee movement". Once the poor are identified, small groups of them consisting of one woman each from 15-40 families at risk are organized in to Neighborhood groups (NHS). 10-15 NHS are federated in to Area Development Societies (ADS) at world level. ADS are federated in to Community Development Societies (CDS) at the local self government level. In a period spanning over a decade, 1, 50,210 groups have been formed at various levels in the state of Kerala. It has been visualized as a strategy for social development & social change, directed through an accelerated economic development of the poor, particularly women and children. The entire strategy is targeted at those unreached on one side, & towards their empowerment within the rights paradigm on the other. A formal process instrument to the Convergent Community Action (CCA) strategy is the Participatory Learning and Actions (PLA) methodology. In the present system of decentralized governance in Kerala it has been effective in articulating the felt needs in a priority manner. To facilitate the poor in saving & to create saving habit in the community, Kudumbarsee organize thrift and credit societies & create saving habits in the society at NHS level. This society which acts an informal banks of the poor, has established linkages with other financial institutions to facilitate adequate & easy credit to the poor. The ultimate aim is the promotion of entrepreneurial skills to enable them to initiate micro enterprises. Kudumbersee targets 100% employment even to the illiterate poor folk. The stage has been set for social take-off for women from low development paths to an accelerated phase in achieving higher levels of self sustaining economic growth. With the amount of loan sanctioned to the members they have started micro enterprises which help them in raising the standard of living & contributing to an all inclusive growth. With the inception of Kudumbersee since 1992 there is a remarkable improvement in the status of poor women in Kerala. Weekly meetings, thrift & credit operations micro enterprises, & participatory governance have enhanced their economic activity which intern has reproduced the economy of the state to a great extent. Note: primary & secondary sources have been used for the preparation of this paper.

Pyykkönen, Miikka (Cultural Policy / University of Jyväskylä, P.O. Box 35, 40014 University of Jyväskylä, Finland [e-mail: miikka.pyykkonen@jyu.fi]), **Freedom, "Healthy Culture" and Civility - On the Government of the Ethical Self-Formation of Finnish Multicultural Youth in Their Leisure Time Activities,** *International Sociological Association, Gothenburg, Sweden,*

¶ This presentation deals with leisure time & civic activities of multicultural youth a 15-29 years old people with immigration, bicultural or foreign background - in Finland. The presentation benefits the research data collected in the research project "multicultural youth a leisure time & civic action participation". The data consists of survey done for the multicultural youth (n=1385), 39 interviews of the youngsters, survey for national, regional & local youth associations (n=146), survey for the municipal youth workers (n=226) & the interviews of the youth workers & officials in ten biggest cities in Finland. The theoretic-conceptual framework derives from Foucauldian governmentality approach & Foucault's four step model of the ethical self-formation of moral subject. They direct the research focus to the intertwinement of external conduct and people's self-conduct. This toolkit sets a light for analysis of how the self-subjectivation of the youngsters, taking place in their leisure time activities & civic action, connects and disconnects with the desires & expectations of administration and youth workers. The conclusion is that the leisure time subjectivation of the youngsters takes place on the tensive interface of somewhat free & uncompelled activities and programmatic external government at a distance, at the same time.

Quesnel-Vallée, Amélie (McGill University, Montreal, Quebec, Canada, H3A2T7 [tel: +1-514-398-2758; fax: +1-514-398-4503; e-mail: amelie.quesnelvallee@mcgill.ca]), **US Medical Sociology and Social Inequalities in Health: The Fight Is Not Over Yet!,** *International Sociological Association, Gothenburg, Sweden,*

¶ U.S. Medical Sociologists have greatly contributed to increasing the legitimacy of the idea that social factors have a causal impact on health. This was done notably, but not exclusively, through the bustling area of stress research, but also more recently, as Link and Phelan (1995) proposed the idea of socioeconomic position (SEP) as a fundamental cause of disease. However, for the most part, operationalisation & testing of this framework in the U.S. has remained very much focused on the demonstration of the existence of a relationship between different measures of SEP & health at several stages of the life course within the U.S. society. Thus, we may well have reached the extent of the need for documentation of these relationships, & must now turn to the study of the macro-social forces that are creating a given set of fundamental causes. Outside of the U.S. and/or medical sociology, this agenda is being pursued, often with the goal of using natural experiments to identify policy instruments with the potential to yield more equitable life conditions. Medical sociologists are by training uniquely positioned to contribute to this line of research, and this is a call to arms for the discipline.

Quevedo Huerta, Lourdes Nayeli (Universidad de Guadalajara, Guadalajara, Jalisco, México, 45130 [tel: 52 33 30703451; e-mail: nayeliq@gmail.com]), **Society, University and Identity of Female Social Workers in Mexico. The Case of the Graduates of Universidad de Guadalajara in the Second Half of the Twentieth Century,** *International Sociological Association, Gothenburg, Sweden,*

¶ The profession of social worker has nearly 60 years recognized as coming from the University in Mexico. The identity of social workers has been transformed over the past 20 years due to various factors such as gender, curriculum renewal, a transformation of institutions, & the needs of people who demand their services. The results of the studies presented here, shows the functions and activities performed at an early stage of these professionals, and how the relationship with the society it serves, has changed dramatically, impacting their professional identity. It is an investigation conducted under a qualitative approach, in the city of Guadalajara, Jalisco, Mexico, with social workers.

Quiña, Guillermo Martin (Gino Germani Research Institute, University of Buenos Aires, Uriburu 950, Buenos Aires, Argentina, 1098 [tel: 0054 11 45083815; fax: 0054 11 45083812; e-mail: martinguille\Bfm2x41|Endyahoo.Com]), **Making Independent Music in Post-Crisis Argentina. New Opportunities for Cultural Practices,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the last ten years, the independent music scene in Buenos Aires has gained increasing importance in local cultural life, including not only the development of many small independent labels but also a whole circuit of live music. In fact, it involves a complex group of social actors, practices & processes situated within a wider cultural field characterized by both the local post-crisis situation & contemporary global scale cultural changes. We analyze the different aspects of this scene, the characteristics of its musical practices and, finally, the way in which it is understood by some actors as authentic music making opposed to commercial aims of music industry. We base our approach on a qualitative perspective attending also to some structural processes present in the local cultural field. We propose that the understanding of this complex scene gives us many keys to analyze not only some recent cultural changes in Argentine society but also the importance it has acquired as a way of participation in cultural practices. Keywords: independent music scene - cultural practices - Buenos Aires

Quist-Adade, Charles (Kwantlen Polytechnic University, 12666 72nd Avenue [tel: 604-599-2254; e-mail: charles.quist-adade@kwantlen.ca]), **The Islam-Christian, North-South Divide**

in Africa and False Gods, *International Sociological Association, Gothenburg, Sweden,*

¶ Religion & politics are a dangerous mix the world over. Africa is no exception. From Nigeria to Sudan, from the Ivory Coast to the Gambia, & from Egypt to Swaziland, religious conflicts have left in their trail death & destruction. The ongoing Darfur crisis on the Sudan is the latest in the long saga of religious conflicts in Africa. The most notorious religious conflicts are in Nigeria and Sudan. In Nigeria, intermittent clashes between Christians and Moslems in the northern states over Sharia (Islamic fundamentalist laws) crises have claimed the lives of thousands of Christians and Moslems. According to United States Commission on International Religious Freedom, "since 1999, a disturbingly large number of Nigerians; 12,000, if not more; have been killed in sectarian and communal attacks & reprisals between Muslims & Christians." The most recent examples of this strife, in the city of Jos & in parts of the Bauchi state, have resulted in hundreds if not thousands of deaths as well as 10,000 or more Nigerians displaced. The Sudan conflict, which has been raging for more than two decades and has claimed tens of thousands of lives, was ignited by the dominant Islamic North's hegemony over the largely Christian South. In this paper, I will trace religious conflicts in Africa and propose that some African politicians, like their former colonial masters, have cynically exploited religion in their quest for power. Part of the problem I argue is that Christianity & Islam, the mainstream religions in Africa today were imposed on Africans by outsiders while Africa's own religions were destroyed through cultural genocide. Rabbiosi, Chiara (Department of Social Research, University of Helsinki, Helsinki, Finland, FIN-00014 [tel: 00358919124603; e-mail: c.rabbiosi@campus.unimib.it]), **The Importance of Ambiguity. On Leisure, Shopping, and Women Many Identities,** *International Sociological Association, Gothenburg, Sweden,*

¶ Recently, the meaning of leisure has been questioned together with a series of dichotomies, such as production/consumption, public space/private space or domestic-/working. Consequently, leisure now appears to be a fuzzy area of research & as such, it reveals strong connections between what was once conceived as opposite. The evolution of women's leisure in relationship to their role in family, work, & society at large will be analyzed through shopping as a consumption practice. In their interpretation of shopping, social sciences have stressed the double status of shopping as a laborious & as a leisure activity. However, the definition of shopping is differently thematized in mainstream discourses a "going shopping" is generally accepted as a leisure time activity, or even as a waste of time, while "doing the shopping" has been proposed as a savvy activity, focused on family's well being and almost as something that could be considered as a work. I will explicitly refer to my research on the discourses on shopping and pertinent practices in a specific type of shopping mall in Italy. Here, the practice of shopping "for leisure" reveals that women's leisure activities involve a struggle between structure & agency, which crosses & forges women's many identities. I argue that the analysis of ambiguities involved in these practices will help to understand powers & counter-powers at stake in the increasing number of roles that women are now called to act. The analysis of women sayings & doings about shopping reveals that incompatibilities & contradictions are here reconciled, though ambiguously. Ambiguity opens an interstice where women today struggle to fulfil social requests to take care of private space as well as to be actively involved in public contexts; seductive and independent as well as motherly & care-taker here & there.

Rabe, Marlize E & Rugunanan, Pragna (Department of Sociology, University of South Africa [e-mail: rabeme@unisa.ac.za]), **"Rights" of Passage: South African Academics Exiting University Life,** *International Sociological Association, Gothenburg, Sweden,*

¶ Despite strides towards gender equality over the last few decades, men are still more likely to hold senior positions in the employment sector & to earn higher salaries than their female counterparts. The focus of this paper is on the academic world, which is no exception to these gender disparities. A qualitative research design was employed in two phases, part one analyses the career paths of 11 South African female sociologists who decided to leave an academic career & part two focuses on 11 male social scientists who have left academia. Judgemental sampling was used and in-depth interviews with 11 female sociologists & 11 male social scientists from different South African universities were conducted during 2009/2010. The interviews revealed that various work-life integration patterns motivated academics to leave academia, but more importantly, issues of race & gender were significant contributing factors. In some cases abrupt career changes were made & in others, related fields were pursued. A comparison of the reasons why female & male academics leave academia, particularly in the Social Sciences at South African Universities, is analysed in relation to the challenges of higher education institutions as they grapple with broader issues of transformation, racism & gender equality.

2010S02129

Radenbach, Niklas (Center of Methods in Social Sciences, University of Goettingen, Platz der Goettinger Sieben 3, 37073 Goettingen, Germany [tel: +49-(0)551-3914207; fax: +49-(0)551-3912286; e-mail: niklas.radenbach@sowi.uni-goettingen.de]), **Perpetuating Hostility: Anti-Semitism in the Grouping of Ethnic Germans in Southern Ukraine,** *International Sociological Association, Gothenburg, Sweden,*

¶ My research takes a long term familial historical, biographical, and discourse analytical approach to examine the phenomena of anti-Semitism in the grouping of ethnic Germans in southern Ukraine. This talk shall illustrate how present day anti-Semitism in the grouping of ethnic Germans must be analyzed using a longer diachronic perspective. The main questions are which biographical experiences caused, changed, or strengthened anti-Semitism, & how are these potential developments interrelated with the changing discourses within the grouping of ethnic Germans as well as the discourses within other groupings in the Ukraine? My analysis is based on field research carried out in southern Ukraine. In addition to participant observations I conducted biographical-narrative interviews with ethnic Germans as well as interviews with experts in certain institutions. Furthermore I analyzed archived documents concerning the naturalization of ethnic Germans during the time of National Socialism. After highlighting how anti-Semitism was of extreme importance in the grouping of ethnic Germans long before the twentieth century, I will take a closer look at the years 1941-44 during which the Ukraine was occupied by the German army, Nazi killing units, & the Romanian military. Particularly, my paper will focus on those ethnic Germans who participated as members of Nazi organizations such as the SS or the Volksdeutscher Selbstschutz in the persecution & killing of Jews, Romani, & members of other ethnic groupings. After analyzing their activities as perpetrators in these murders, I will discuss the question as to how their life histories continued after the end of World War II. My case reconstructions show that the interviewees have maintained and/or reinforced their anti-Semitic and National Socialist patterns of interpretation. The interviewees currently belong to the established among the grouping of ethnic Germans in southern Ukraine, thus allowing them the opportunity to promote their anti-Semitism & to exclude those who reject their ideology.

2010S02130

Radhamany, Sooryamoorthy (University of KwaZulu-Natal, Sociology Programme, Howard College campus, University of KwaZulu-Natal, Durban 4041, South Africa [tel: +27 31 2601254; fax: +27 31 260 2347; e-mail: sooryamoorthyr@ukzn.ac.za]), **The Internationalization of South African Medical Science, 1975-2005,** *International Sociological Association, Gothenburg, Sweden,*

¶ South Africa's record in the production of scientific knowledge in medicine is remarkable, but attempts have yet to be made to examine its distinctive characteristics. This is critical to the understanding of its nature, trends, & the directions which it is taking today. Using the publication records extracted from the SCI database of the ISI Web of Knowledge for a three decade period from 1975 to 2005 with five-year windows, the paper examines the salient characteristics of medical research in South Africa in terms of the count of publications, type of publications (sole/coauthored), collaboration (domestic/international), affiliation sector of authors & collaborators, regional origin of collaborators, publication outlets, & citations, in comparison to all subjects. The paper argues that the internationalization (measured in terms of international collaboration, publications in externally originated journals, & the number of citations) of

South African medical research is taking place & that in the given trends this internationalization is likely to continue in future.

2010S02131

Ragnarsdóttir, Berglind Hólm & Bernburg, Jón Gunnar (University of Iceland, Reykjavík, 101, Iceland [tel: +00354 6612011; e-mail: bhr1@hi.is]), **Relative Deprivation, Subjective Injustice and Well-Being During the Icelandic Recession,** *International Sociological Association, Gothenburg, Sweden,*

¶ The current economic crisis hit Icelanders especially hard, apparently causing a growing sense of injustice & frustration among the public. Building on reference group theory, we examine how individual's subjective justice & well-being has been affected by the crisis. Relative deprivation theory underscores that subjective deprivation results from unfavorable comparisons with others. It also posits that subjective deprivation can result from loss of social status. We argue that individuals who feel that the crisis has undermined their standard of living should be more likely to experience anomie (normlessness, perceived social disruption and sense of instability in society) & to perceive their status in society as unjust. Furthermore, the theory argues that expectations about future status impact how individuals experience their current circumstance. Accordingly, we suggest that expectation about future status may specify how Icelanders experience the crisis. We examine these hypotheses using a nationally representative sample of Icelandic adults, conducted in the fall of 2009. It is a part of the annual International Social Survey Programme (ISSP). The standard ISSP module is supplemented with items that measure subjective social comparison. In support for our hypotheses we find that those who feel negatively hit by the crisis have a significantly higher level of anomie. As expected these effects are enhanced by pessimistic expectations about future status.

Rahman, Shahidur (BRAC University, 66 Mohakhali, Dhaka 1212, Bangladesh [tel: +8801732311070; e-mail: shahidur@bracu.ac.bd]), **Return Migration of Highly Skilled Professionals in Bangladesh,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the factors that are responsible for the migration of academics from developing countries to developed countries. After exploring the causes, the paper also examines the factors that are related with the return migration of academics in Bangladesh. What has made it possible for the return of academics to their home country is the key concern of this research. The research finds that Private University created an opportunity for the migrant academics to come back to Bangladesh and contribute to the development of the higher education sector of the country. Sustainable return depends on the financial solvency gained abroad and the mentality to accept the existing socio-economic and political conditions of the country.

2010S02133

Raijman, Rebeca (Department of Sociology and Anthropology, University of Haifa, Monut Carmel, Haifa 31905 [tel: 972-4-8240990; fax: 972-4-8240829; e-mail: raijman@soc.haifa.ac.il]), **Religion, Ethnicity and Identity: Former Soviet Union Christian Immigrants in Israel,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the present paper, we focus on the social construction of ethnic and religious identities of Christian migrants from the Former Soviet Union (FSU) arriving in Israel under the law of return after 1990 & the role played by churches in the process of migrants' integration into society. The analysis of the dynamics of ethnic and religious identity among FSU Christian migrants brings to the light the complex relationship between ethnic & religious identities. Furthermore, it illustrates the ways in which different religious organizational configurations (Russian Orthodox & Greek Churches) tend to prompt migrants to take up different patterns of identity along ethnic lines. As Israeli citizens actively involved in Christian churches these immigrants are challenging the Jewish character of the state. It is within this unique context of reception that we should understand the dynamics of ethnic and religious identity among Christian migrants in Israel.

Raitio, Kaisa & Saarikoski, Heli (Department of Urban and Rural Development, Swedish University of Agricultural Sciences, P.O. Box 7012, 75007 Uppsala, Sweden [tel: +46-18-671567; e-mail: kaisa.raitio@sol.slu.se]), **The Role of ENGO Markets Campaigns and Bilateral Negotiations in Land and Resource Planning - The Case of Great Bear Rainforest in British Columbia,** *International Sociological Association, Gothenburg, Sweden,*

¶ The purpose of the paper is to explore the interdependence of state, civil society & market actors in resolving environmental conflicts through new governance arrangements. The paper analyses the interconnectedness between government driven land use planning processes, & informal, bilateral negotiations between civil society & market actors in resolving the long-enduring forest conflicts on the coast of British Columbia. Based on policy documents & in-depth interviews conducted with key actors, the study shows that the government-led processes to create Land and Resource Management Plans in the Great Bear Rainforest area depended for their success on governance efforts, which environmental organizations & forestry corporations initiated and carried through outside the formal planning processes. The non-state actors, on the other hand, chose to engage with the provincial government, & the formal planning processes representing a large number of stakeholders, in order to gain the necessary legitimacy, certainty & resources for the solutions created during their bilateral negotiations. The results show that when able to consciously coordinate separate processes & roles in the governance of forests, actors can create space for new solutions in seemingly intractable situations.

2010S02135

Raizer, Leandro, Cattani, A.D. & Sales, A. (UFRGS/Université de Montreal, Av. Bento Gonçalves, 9.500 - Sala 103 IFCH Campus do Vale CEP: 91509-900 Porto Alegre / RS [tel: (5551) 3308.6635; e-mail: professorleandroraizer@gmail.com]), **Société, énergie et innovation: les énergies alternatives et la transition énergétique** (Society, Energy and Innovation: Alternative Energies and Energy Transition), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Cette étude analyse l'évolution actuelle des énergies alternatives et renouvelables, et ses implications sociétales. La relation entre les hommes et, entre l'homme et la nature, a toujours été imprégnée par la manière par lequel les premières on produit, reproduire, alloués et distribués historiquement l'énergie. Actuellement, le phénomène de société du risque et de la crise écologique (modernisation) constituent une preuve nouvelle et que comme des phénomènes peu vus avant, provoquant un impact quasi instantané sur les différentes sociétés. Ajouté à cela, le phénomène de la crise énergétique, marquée soit par la finitude annoncée des combustibles fossiles, soit par l'incapacité actuelle de répondre à la demande croissante d'énergie à partir d'énergies renouvelables et alternatives, pose un problème impératif pour la survie et la reproduction de l'humanité. Compte tenu de ce scénario et en s'appuyant sur la sociologie de l'environnement et de la science, cette étude discute la situation du développement énergétique et ses défis actuels. Les données empiriques de l'étude sont basées sur une étude comparative internationale, développée au Brésil et au Canada. Parmi les principales conclusions soulignent l'émergence du phénomène que nous appelons la transition énergétique, marquée par des contradictions et des hétérogénéités résultant de la recherche pour l'approvisionnement durable de l'énergie dans un contexte de demande croissante de l'économie mondiale capitaliste. Il faut également signaler que les institutions internationales, gouvernements et des entreprises, laboratoires et société civile- des réseaux sociotéchniques, associés au mécanisme de chaîne- sont des acteurs clés dans le développement national et international de l'énergie alternative.

2010S02136

Rajagopal, Indhu (York University, Toronto, ON, Canada, M3J1P3 [tel: 416-447-0818; fax: 416-736-5615; e-mail: rajagopa@yorku.ca]), **Identity, Manipulated Body and Docility,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper will examine the modern capitalist project of rationalizing professionalism/expertise & routinizing the body through the category of consumer. My analysis will focus on the contemporary human body that has been subjugated through its power relations with popular cultural norms - in visual & narrative media - as a site for resistance & transformation. Using Michel Foucault, this paper will examine why & how technologies of body modifications & of the body's use - e.g., embryo or genetic implants, body-modification surgery, body-part as a commodity, bodies of the "desirous" consumers - turn the body docile. I will discuss the dimensions of power over consumers' bodies under "professional" modification, the subjugation of which is achieved through normalization, surveillance, objectification and disciplining. The paper will analyze the nature of biopower relations of professionals & experts to the consumer's body while examining how new technologies have co-opted the self of the consumer willingly to assume her/his body-docility. Using Michel Foucault's arguments against those Enlightenment & the scientific paradigms, which

establish the body as an object, I will discuss its process of becoming docile. Foucault's "power" in *Discipline and Punish* oppresses & manipulates human bodies to become subjected & practised bodies; the exercise of power is through a calculated choice/risk parameters & action of coercions and surveillance of the consumer's body.

Rajagopalan, Prema (Indian Institute of Technology, Madras, India, IIT P.O. Chennai, Tamil Nadu 600 036, India [tel: +91-44-2257 4513; e-mail: prema@iitm.ac.in]), **Learning Alliances in the Knowledge Economy: Some Observations from India,** *International Sociological Association, Gothenburg, Sweden,*

¶ Education & skill training constitute one of the four main pillars of the Knowledge Economy according to Carl Dahlman. In an era of globalisation & IT revolution, the demand for 'specific industry related skill' & the mismatch in terms of supply of skilled human resources has generated 'new learning alliances' between educational institutions & industry in India. Based on a series of workshops conducted around the 3 sectors of the economy - agriculture, industry & services - this paper highlights the innovative ways by which the above issue has been addressed in the country. These alliances though offering short term solutions nevertheless have facilitated the 'employability' of those trained in a conventional education system.

2010S02138

Ram, Uri (Ben Gurion University, Sociology & Anthropology Dep., Beer Sheva 84105, Israel [tel: 972-8-6472045; fax: 972-8-6472088; e-mail: uriram@bgu.ac.il]), **Israeli Radical Sociology,** *International Sociological Association, Gothenburg, Sweden,*

¶ The history of Israeli sociology & its conception of "israeli society" is discerned by us to the four following phases: 1. The initial phase. In the pre-state era sociology was not yet a distinct discipline. Sociological thought strived mainly within the context of the Zionist movement & it is difficult to draw a distinction between the ideological & the sociological in this era. 2. The formative phase. In the era of the state, since 1948, sociology has crystallized institutionally & ideationally as a discipline. This phase is identified academically with the department of sociology at the Hebrew University of Jerusalem, & theoretically with the modernization approach. 3. The critical phase. Critical sociology - which was manifested in various forms, as elitism, pluralism, Marxism, feminism & colonization approaches, emerged since the mid-1970s & is associated with the new universities that gained autonomy at that time (especially Tel Aviv University & Haifa University) (on the second & third phases see extensive coverage in Ram 1995). 4. The post-modern/radical phase. The turn towards post-modernity started in the 1990s. The three post-modern perspectives which we discuss are: post-structuralism, post-colonialism & post-Marxism. They all captured in different way the tectonic shift that Israel has experienced in the era of globalization, neo-liberalization & initial struggles over de-colonization of the occupied Palestinian territories (on the fourth phase see Ram 2010). In this paper we examine these processes in the context of cultural Americanization, on the one hand, & further military colonization, on the other hand. Ramarao, Indira (University of Mysore, Mysore, India [tel: 91-821-2419566; fax: 91-821-2419566; e-mail: indiraramarao@rediffmail.com]), **Do Mortality Rates Reflect a Gender Stereotype? A Study across Different Regions of India,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines the gendered face of mortality rates across different regions of India. My argument in this paper is that mortality rates are not just about numbers & that they are governed by the prevalence or non-prevalence of certain socio-economic situations. During the last six decades of its independence India has seen a significant decline in mortality rates. However, this decline is not uniform across the different regions of the country. The northern & western parts of the country have higher mortality rates than the south & east. Regions with lower sex ratio, lower female literacy rates, low rate of economic growth, & poor access to health care tend to experience higher rates of female mortality than regions that have a better performance vis-à-vis these indicators. This regional disparity exists not only with reference to general mortality rates, but also infant & maternal mortality ratios. While India stands in the 18th place among countries with a maternal mortality rate of more than 500 per 1,000,000 live births, within the country there are inter-state, inter-caste & inter-ethnic group differences in MMR. Less developed villages with poor access to health care inhabited by castes & tribes that experience both economic & social vulnerability record higher mortality rates. Also true is the fact that enhanced female mortality in the age group 15-30 years is due to dowry related tortures & other forms of family violence. The declining child sex ratio caused by the increased incidence of sex selective abortions & female infanticide in certain regions of the country, a phenomenon aptly called "India's missing millions", needs to be given due cognizance to in analysing the gendered face of mortality data. This paper uses demographic data & correlates it with key socio-economic variables in different regions of India to trace.

Ramegowda, A (Dept. of Sociology, Kuvempu University, Jnana Sahyadri, Shankaraghatta - 577 451, Karnataka, India [tel: 00 91 821 2540655; fax: 00 91 8282 257516; e-mail: aramegowda@gmail.com]), **Corporate Social Responsibility (CSR), Corporate Image and Corporate Performance,** *International Sociological Association, Gothenburg, Sweden,*

¶ CSR is looked upon as having diverse implications for the divergent stakeholders. However, the implications of CSR for the image of the firm itself have normally been not focused upon in the empirical literature on CSR. In the process of catering to the interests of diverse groups of stakeholders, it is assumed that the corporate bodies tend to serve their own interest at large in the form of building up brand image, enhanced prestige in the corporate circles and possible increase in financial returns. An attempt is made in this paper to probe & analyze empirically the importance and impact of CSR in building up of the overall reputation of the firm and its acceptance among the major stakeholders like employees, investors, financial institutions & consumers as well as identify the contextual factors that could account for variations in the outcome stated above. The findings are based on a study of stakeholders' conception of CSR implications for corporate image and corporate operations in terms of brand acceptance & financial performance respectively. Leading Indian corporate houses operating in IT, capital goods, pharmaceutical & real estate sectors have been studied to elicit data from four hundred fifty respondents from three groups of stakeholders representing employees, investors and consumers. These stakeholders are interviewed on a structured schedule so devised as to ascertain their perceived implications of CSR initiatives for the corporate image & performance. The findings indicate that CSR initiatives are looked upon as contributing considerably for the strengthening of corporate image more than they do for the financial performance of the firm. It is further noted that, such perception varies significantly in terms of the sector of corporate operations with those from IT industry having most favorable conception followed by those from capital goods & real estate sectors. Further, in terms of CSR implications for corporate performance, the findings seem to indicate that, conversely, it is stakeholders from real estate sector who perceive such implications to be more decisive than it is perceived by the stakeholders from capital goods & IT sector.

Ramirez Ruiz, Liliana & Velez Cuartas, Gabriel (UNAM-Sociological Studies Centre, Circuito Cultural Mario de la Cueva S/N Ciudad Universitaria; FCPyS Ed E piso 1, Mexico DF, CP 04510 [tel: 525556229414; e-mail: lilianaULgalas@hotmail.com]), **Difference between Symmetry and Asymmetry of Meaning in Scientific Communications: A Personality Disorder Study Case,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper proposes a comparison between two theoretical and methodological frameworks: Actor Network Theory (Callon, Law, Penan and Latour) & the Theory of Social Systems (Luhmann and Leydesdorff). It contrasts the use of indexes of inclusion and proximity from Actor Network Theory, & the use of mathematical theory of information in social systems theory by Loet Leydesdorff. Hypothetically, instruments from social systems theory should be more powerful due to their analytical framework that takes in account asymmetry between entities, different from ANT. This difference should be enough to find more specificity in scientific texts analyses. As study case, scientific production in the field of psychiatry is taken. This paper focus on their contents and emergent meaning from words & co-words analysis. Period and thematic issues are taken from scientific production since 1970 to 2000 on the concept "personality disorder" by Mexican researches. Key words, titles & abstracts from Scopus (71 texts) data bases are analyzed. This information has been processed by two specific softwares Pajek (Mrvar, A. & Batagelj, V.) & TI.exe (Leydesdorff, L).

Ramis, Mimar, Serrano, M. Angeles & Vidu, Ana (Ramon Llull University [e-mail: angelin31@hotmail.com]), **The Critical Communicative Methodology: An Answer for the Inclusion of the Different Agents' Voices in the Social Sciences Researches,** *International Sociological Association, Gothenburg, Sweden,*

¶ Throughout the years, the society & the information given by its "study purposes" have been analysed, but the voice of those who were researched was not taken into account. The relationship established between the researcher & the researched was merely based on the inequality & the expertise. The result, far from overcoming the exclusion that these collective groups suffer, has often contributed to the reproduction of stereotypes & inequity of the society's most disadvantageous groups. The critical communicative methodology is an answer to the challenges that poses the new multicultural, multireligious & global society. This new method is the result of a hard theoretical work in the social sciences field (discussions, seminars, readings with the book in the hand), & also of the work of researches throughout several projects developed in different European public calls (Framework Programme of the European Union), among others. The critical communicative methodology is based on two key aspects: the social utility within social sciences research in the global age & the inclusion of the different agents' voices involved all along the research process.

Ramon, Anna & Rodríguez, José A. (University of Barcelona, Barcelona (Spain) 08034 [tel: 0034934021804; fax: 0034934021804; e-mail: annaramon@ub.edu]), **Growing Up in Networks of Sex, Drugs and Rock&Roll,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper we approach night activity of youth related to clubbing as network phenomena (produced by networks, creating networks). Our paper covers two main dimensions: social capital & networks between young people. We build several indicators of social capital and homophily & analyze their impact on night clubbing related behaviors such as: sex, drugs & alcohol consumption, violence, preventive & help & support. From the network perspective we build the networks among types of youngsters involved in clubbing and analyze their characteristics. We complete the paper comparing gender & age groups' social capital indicators & their impact on behavior & the characteristics of their networks. With this paper we can approach how young people in Europe built their nightlife. We use survey data from the 2006 IREFREA project (Recreational culture as a tool to prevent risk behavior) carried out in nine European countries.

Ramos, Anne Carolina ([tel: +4917681141931; e-mail: annecarolina.ramos@gmail.com]), **A Trash-Body: The Old Body From the Children's Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ Children have a lot to say about the social culture surrounding them. Through their background, children enable us to discover their habits, their day-to-day life, their games, as well as their wide knowledge of the society they live in. In this research, children are asked to emphasize their experiences regarding the elderly. During a period in which we live a verticalization of the familiar relationships & a progressive multigenerational coexistence, it becomes fundamental to know the imageries that different generations have of each other; in this case, the imageries of the children about the elderly. This research has been performed with a Focus Group composed of sixteen boys & girls, between eight and ten years old, resident in Porto Alegre periphery, southern region of Brazil. Over eight meetings, the children drew, wrote and debated about the elderly, pointing out several aspects of the old people's life, especially the old-body. Throughout the discussions, which were carried out in focus group meetings, it is possible to realize how the elderly are conceived & represented in contemporaneous time. In this research, children consider the old-body as a weak, dependent, wrinkled & ugly body; a body which is not desired, & which needs to be constantly improved and reset. Therefore, children's knowledge shows a wide cultural curriculum which produces & legitimates discursive statements on the aging body. Such statements relates the old-body to certain attributes & ultimately influence elderly's way of being, acting and living.

Rangasami, Amrita (Centre for the Study of Administration of Relief, X-A5, Sahavikas Society, I.P. Extension, Patparganj, New Delhi - 110091 [tel: +919868185622; e-mail: amritarangaswami09@gmail.com]), **Poverty, Dispossession and Disaffection: A Study of the Nexus, If Any,** *International Sociological Association, Gothenburg, Sweden,*

¶ The crises faced by two communities in India where their poverty and the cumulative pressures of economic & social decline and dispossession that led to disaffection is analyzed. The first study is of communities in villages in the forest regions of Srikakulam in Andhra Pradesh where the naxalite movement first took hold. The communities accepted the ideology of the naxalite movement and sought to cultivate land in the forest areas over which the State claimed they had no authority to extend their cultivation. The second is based on a study of a Scheduled Caste community of fishermen - their village perched on the banks of the tributary of the mighty Brahmaputra River. This brief exploratory study of poverty & its nexus with unrest necessarily begins with references to the seminal reports submitted both by the Ministry of Home Affairs, 1969 (MHA) & the Planning Commission. While the Planning Commission's report warned that there was widespread disappointment & consequent discontent particularly in rural India as it was felt that the assurances made during the freedom movement had not been kept. The State had failed to study the problems of large rural communities which for various historical reasons had little access to the fruits of the lands they cultivated & the forests they maintained. The report from the Ministry of Home Affairs was more blunt: the report warned that there would be an agrarian crisis & widespread unrest. The first case study, relating to the forest based tribes of Srikakulam in Andhra Pradesh, refers to the unrest among the forest-based Scheduled Tribes. The State sought to crush the movement by imprisonment of all male members of villages for nearly four years. There was a large scale shifting of the population from their villages in the dense forest on the hill slopes & resettle them in new villages along the foothills. The State sought to provide subsistence through food for work programmes. The evidence regarding the shifting & resettlement is available from the records of the District Gazetteer of Andhra Pradesh. Tragically enough, the access to subsistence was not assured & it was reported that large numbers of the dispossessed communities died of starvation. But the insurgency was never quelled. The problem of alienation of the forest based communities has now spread to other States offering a corridor from Dhulia in Maharashtra to Bankura in West Bengal. The second case study relates to a Scheduled Caste community that earned its subsistence from fishing in the rich waterways of Assam. The dispossession of these communities of their villages by migrants from Bangladesh who used diverse means to secure the land & resources of these communities appeared to have gone almost unnoticed by the State Government of Assam. The prevalence of starvation was attributed to "floods" & the communities were provided a relief that was altogether scant. The plight, which they faced from their creditors who were using coercive methods to abandon their lands & villages, did not receive attention. The failure of the State to safeguard the economic rights of the fishing communities led to the virtual closure of the river-based fishery industry in Assam. Many village communities attribute the rise of the Assam movement to that period. The dispossession has been rendered permanent & what is termed the Assam movement has endured. (Abstract shortened by ProQuest.)

Ransiek, Anna-Christin (Center of Methods in Social Sciences, University of Goettingen, Platz der Göttinger Sieben 3, 37073 Göttingen, Germany [tel: 49 (0)551/39-12284; e-mail: anna.ransiek@gmx.net]), **Performing Ethnicity in the Narration of an Afro-German Woman,** *International Sociological Association, Gothenburg, Sweden,*

¶ For the presentation I would like to contribute first empirical results of my PhD project in which I conduct biographical-narrative interviews with People of Color in Germany & employ a reconstructive approach of analysis. Therefore my paper not only points to different & multiple concepts of ethnicity in use in the present narration but shall also reveal the genesis of these perceptions against the background of a specific historical and social constellation. It shall be considered that these concepts are a product of the specific way of dealing with the "other" in German society & the way in which the former interplay with the individual's perception. My sample is composed of people from the former GDR & FRG. The presentation will mainly focus on the results of one case-study of an Afro-German woman who grew up in the GDR system & is representative of a specific type in my sample. The main questions I would like to discuss are: Which factors are relevant for the constitution of ethnicity on the level of biography & in which way are they presented in the narration? Which role does especially the experience of racism play? These questions shall be discussed not only against the background of an African-German parentage but also in consideration of two different political systems the biog-

rapher experienced: the GDR & the FRG. Are there changes in the self-perception of the biographer & if, in which way do these changes interrelate with the perception of the "other" in the GDR as well as in the BRD society? This paper shall therefore promote a better understanding of the complexity of different factors which are in use when performing & constituting ethnicity.

Ransom, Elizabeth (University of Richmond, 28 Westhampton Way, Richmond, VA 23173 USA [tel: 001-804-289-8068; e-mail: eransom@richmond.edu]), **Safe Meat for Whom? An Exploration of the Consequences of Food Safety Regulations in Southern Africa,** *International Sociological Association, Gothenburg, Sweden,*

¶ In recent years the organization of global agrifood systems has shifted, & standards have become one of the most significant emerging practices for governing food. This paper focuses on new and emerging food safety standards in Botswana, Namibia, & South Africa. Each country has experienced recent changes to their hygiene regulations, due in large part to their linkages to Western export markets. For all three countries maintaining access to export markets necessitates maintaining food safety regulations and this requires continuous surveillance & disciplining of actors in the food chain, including producers, processors, animals, diseases, and citizens that could "contaminate" the livestock system. Thus, all three countries are in the process of increasing their monitoring & enforcement of people, animals, & diseases. Nonetheless, this paper raises questions related to uniform food safety standards for three southern African nations with diverse production systems & diverse environmental conditions. For example, many food safety requirements originate from or were developed with Western, industrialized animal production systems in mind, yet Botswana & Namibia's dominant mode of livestock production is an extensive system. Ultimately, this paper provides evidence for the ways in which seemingly technical concepts like food safety are negotiated ideas & this work contributes to a growing literature which raises concerns over the distributional benefits of standards, especially for developing countries and small-scale producers & processors.

Rao Dhananka, Swetha (University of Lausanne, Lausanne 1015, Switzerland [tel: +41 76 348 94 54; e-mail: swetha.raodhananka@unil.ch]), **Unfavorable Conditions for Mobilization and the Strategies of Social Movement Organizations. The Case of Urban India,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper aims to contribute to the theoretical validation of concepts that have been mainly developed for the analysis of American & European countries, against a post-colonial context like India. In such societies state accountability and responsiveness often don't work according to formal rules and impersonal policy criteria. But in many post-colonial countries interactions between formal & informal institutions represent a complex configuration of personified power, rational short-term calculus & contribute to the sustenance of the status quo. The informal institutions include exchange circuits such as clientelism, corruption & problem-solving networks. Within such a context the question is posed: To what degree can brokering social movement organizations (SMOs) maneuver within such exchange circuits to further fundamental rights. To trace a possible answer first, the distinctiveness of the post-colonial contexts will be analyzed in terms of conditions for mobilization. Second, the interaction between formal & informal institutions will be conceptualized leaning on Helmke & Levitsky, to discern the context. Third, within such a context the possible patterns of SMO's organizational behaviour & action repertoire will be traced and hypothesized. In conclusion it will be argued that SMOs can't overcome the consequences of informal practices & that they are themselves embroiled to a certain extent in these circuits, leading to non-mobilisation.

Rao, Ravindranath Y (St. Mary's Syrian College, Brahmavar Karnataka India 576213 [tel: 91-820-2560952[R]2561093[O]; e-mail: dryrrao@rediffmail.com]), **Emerging Challenges and Constraints in Tribal Mainstreaming: An Indian Perspective,** *International Sociological Association, Gothenburg, Sweden,*

Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (858) 571-8979. Fax: (858) 571-8694. E-mail: info@csa.com

¶ India's concentration of 84 million tribes, makes it the second largest in the world, next to Africa. Tribal development or mainstreaming, like the development of any other deprived section of the society, has been accepted as an important postulate of the state policy in India. Their inclusion in the developmental process, though an old debate in the country, remains even today a matter of concern. This paper examines certain issues, challenges, constraints, complexities & regional inequalities that have emerged in recent decades in tribal mainstreaming in India. The methodology adopted for the study is empirical & review of exegetical literature. More specifically, this paper focuses on the impact of globalization, liberalization, privatization and consequent hegemonization on tribal communities in India; also on effect of these on tribal land & environment, tribal culture and identity & polity. It also explores the confusions, disorders, errors & politics that have crept into the process of scheduling of many tribes, causing social injustice to them. The paper is a contribution to contemporary policy debates about the role of modern nation states & the communities. This study also contributes in determining the direction of the future trend in tribal mainstreaming, tribal inclusion & their identity in India in particular & global society in general.

Rapolienė, Gražina (Department of Sociology, Vilnius University, Universiteto Str. 3, LT-01513 Vilnius, Lithuania [tel: +370 5 268 7001; fax: +370 5 268 7009; e-mail: G.Rapoliene@gmail.com]), **Portrayals of Elderly in Lithuanian media,** *International Sociological Association, Gothenburg, Sweden,*

¶ The world shaped by the media is taken over by its audience. The media homogenizes different views, influences age identity of individuals and attitudes towards their own and other age groups. Western research reports under-representation of elderly, especially women, and they are often portrayed negatively in physical, psychological and social sense. In this paper images of elderly in 396 publications of 2007 on the internet portal Delfi (the hits with the keywords old, elderly, pensioner, old age, ageing, old man (woman), etc.) are analyzed. Some one third of the selected texts were from the same portal Delfi, others were extracted from news agency ELTA, regional sources (newspapers Klaipėda and Kauno diena, Šiauliai county TV), and other. The analysis was carried out using content analysis software Hamlet: establishing the frequency of the most commonly used keywords. Also, with the help of cluster analysis the contexts related to elderly people were singled out. Contrary to the Western trends, elderly women here are more often represented than men. Dominating criminal reports, as previously, create the image of victims - weak, naïve, harmed elderly, accentuated by the trends of old age institutionalization. On the other hand, the image of the hero - past fighter, public figure and deportee (instead of Western healthy, entertaining class representative image) - is viewed positively by the Lithuanian media. Keywords: elderly, media, Lithuania, age, family, work, health.

Rasnaca, Liga (Department of Sociology, Latvia University [tel: +371 25999188; fax: +371 67140040; e-mail: liga.rasnaca@llu.lv]), **Labour Market Relations in Post-Communist Countryside: The Latvian Case,** *International Sociological Association, Gothenburg, Sweden,*

¶ Latvia is one of the Baltic States, which has experienced post-communist transformations after the breakdown of the Soviet Union. During the past two decades social & economic restructuring in rural areas across Latvia has been accompanied by labour market restructuring as well as in the relations among employers, employees & mediators, where the need for new actors in labour market is imminent. The new actors are representatives of local municipalities & a new form of economic activity - entrepreneurship. The aim of the study is to describe the labour market relations in post-communist rural areas in Latvia, to indicate how labour market relations adapt patterns of flexibility, to find out what are the obstacles for "flexicurity" in labour market relations in rural areas. The study analyzes aspects of labour market relations from the perspective of employers - entrepreneurs & representatives of local municipalities in Latvian countryside. The conclusions are based on the secondary analysis of a labour market survey (N=6066) & interviews with employers & representatives of local municipalities. The results show significant differences in characteristics of labour market relations in rural areas in comparison with urban territories. Key words: rural area, labour market relations

Rat, Cristina, Gh. (Sociology Department, "Babes-Bolyai" University Cluj, B-dul 21 Decembrie 1989 No. 128, Cluj-Napoca, 400604, Romania [tel: +40-264-424674; fax: +40-264-424674; e-mail: crat@socasis.ubbcluj.ro]), **Undeserving Daughters of Hero Mothers. The Political Disempowerment of Women with**

Many Children in Present-Day Romania, *International Sociological Association, Gothenburg, Sweden,*

¶ This paper examines forms of symbolic violence in the political discourse on motherhood in contemporary Romania, which push at the margins of the social policy debate the situation of jobless families with dependent children from economically underdeveloped areas & minimize their welfare rights, despite the strong evidence that they have been facing the highest poverty rate since the fall of state-socialism. In an attempt to investigate the reasons behind the low political mobilization & quasi-absence from the public sphere of these categories, it tries to analyze the main barriers of political voice, with emphasis on the sources and forms of public discrediting of their concerns & claims. The context of discussion is laid by a synthetic presentation of the historical development of family policies in post-socialist Romania as compared to other CEE countries, arguing that they contain forms of "unfavourable inclusion" (Amartya Sen, 2000) of large families with dependent children. The analysis of two recent policy debates (on means-tested child allowance & earnings-related childcare benefit) serves to unfold the disciplinary mechanisms targeting mothers with many children, who are no longer regarded as "hero mothers", as they would have been during the pronatalist policies of state-socialism.

Ratcliffe, Peter, B (University of Warwick, Coventry, CV4 7AL, UK [tel: +44 7854 576277; e-mail: Peter.Ratcliffe@warwick.ac.uk]), **What Is the Point of Our Work? A Critical Reflection on the Current State of the Discipline,** *International Sociological Association, Gothenburg, Sweden,*

¶ There are widespread concerns about the structural constraints that impact on the work we do as a profession. More specifically, researchers addressing the concerns of this Research Committee normally express commitment to an emancipatory project that seeks to empower those subject to oppressive forces & to strive towards broader societal change. Indeed, this is enshrined in the RC05 mission statement. But what does this mean in practice? To what extent is our sphere of influence constrained by external forces, not least institutional monitoring/assessment regimes that are increasingly central to modes/systems of state control? Does this ultimately mean that we flatter to deceive (ourselves as well as our "subjects")?

2010S02154

Raub, Werner (Department of Sociology/ICS, Utrecht University, Heidelberglaan 2, Utrecht, Netherlands, NL-3584 CS [tel: +31-30-253 21 01; fax: +31-30-253 44 05; e-mail: w.raub@uu.nl]), **Trust and Testosterone,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper is in the field of social neuroscience & discusses testosterone effects in trust problems. The focus is on competing hypotheses on testosterone effects & on an experimental design that allows to discriminate between these hypotheses by comparing testosterone effects in one-shot trust problems with such effects in repeated trust problems. More generally, the paper contributes to exploring the potential of neuroscience insights & methods in sociology.

Rauhut, Heiko & Winter, Fabian (ETH Zurich, Chair of Sociology, in particular of Modeling and Simulation, CLU E6, Clausiusstrasse 50, 8092 Zurich, Switzerland [tel: +41 44 632 0954; fax: +41 44 632 1294; e-mail: rauhut@gess.ethz.ch]), **A Sociological Perspective on Measuring Social Norms by Means of Strategy Method Experiments,** *International Sociological Association, Gothenburg, Sweden,*

¶ The measurement of social norms plays a pivotal role in many social sciences. While economists predominantly conduct experiments, sociologists rather employ (factorial) surveys. Both methods, however, suffer from distinct weaknesses. Experiments, on the one hand, often fall short in the measurement of more complex elements, such as the conditionality or the level of consensus of social norms. Surveys, on the other, lack the ability to measure actual behavior. This paper argues that the so-called "strategy method" compensates for these weaknesses by combining the observational characteristic of experiments with the conditionality of factorial surveys. We can demonstrate the applicability of the strategy method for the measurement of conditional bargaining norms in the case of ultimatum games. To substantiate our claim, we conduct a methodological experiment in which we compare results for the strategy ultimatum game with those from a "conventional" ultimatum game. The strategy method yields higher levels of normative compliance in terms of rejecting "unfair" offers. We conclude that the strategy method rather measures normative expectations whereas the "conventional" ultimatum game the willingness to sacrifice own profits to adhere to these expectations. Our results are consistent with previous comparative research between factorial surveys & observational data.

Ravaioli, Paola (Department of Communication Studies, University of Bologna, Bologna, Italy, 40122 [tel: +39 051 6446188; e-mail: pravaioli@katamail.com]), **When The "Autonomous" Child Enters Working-Class Homes. Reflections from the Italian Case,** *International Sociological Association, Gothenburg, Sweden,*

¶ My paper deals with the concept of the child underlying the pedagogical model of contemporary Italian primary school & its influence on parenting practices, with particular reference to working-class families. The discussion is based on a qualitative research on the school experience of Italian urban working-class families with children enrolled in the primary school. In the first place, I will analyse the "official discourse" (Bernstein) of Italian primary school's "pedagogy of autonomy" in order to reconstruct the implicit conception of childhood it expresses. I will argue that the key notion of child's moral, emotional and intellectual "autonomy" is composed of two dimensions inextricably bound up with each other but by no means equally "visible": behind the more visible expressive dimension of autonomy (the child's right to self-determination), there is the essential conception that autonomy is a learned & not an innate quality. In the second place, I will examine the child-rearing and educational culture of the contemporary Italian working-class & will argue that it is significantly influenced by the pedagogical culture of the school, but only the more visible expressive dimension of the notion of child's "autonomy" appears to have been successfully incorporated into parental representations and practices. This only partial appropriation generates unintentionally "heterodox" interpretations of the school's demands.

2010S02157

Razumovskaya, Tatiana (Department of General Sociology, Higher School of Economics, Moscow, Russia, 101000 [tel: +7 985 257 46 68; e-mail: tatiana.razumovskaya@socpolicy.ru]), **Post-Traumatic Silence in Modern Russian Cinematography: Excluding Perestroika,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper is aiming to give a sociological interpretation of the cinematic discourse as specific symbolic language that gives voice to the collective forms of thinking, expressing meaningful inner processes. Applying the semiotics tradition we will consider language as a complex phenomenon including all kinds of systems we can use in order to communicate. As we "read" the film we are dealing not only with the objects or ideas it produces, but also with the way in which they are represented. Representation of a certain concept in a cinematographic discourse as well as its absence is meaningful in terms of understanding the broader social context. Sometimes the silence "speaks" louder, signaling about the damaging processes in the collective conciseness, being a symptom of a cultural trauma. Analyzing contemporary Russian films of the decade, we have found not much stories representing Perestroika times. We consider this phenomenon as a cultural trauma of history loss. The research has been performed using visual analysis methodology practically applied to the representations in contemporary Russian mass movies. We may finally assert that modern Russian cinematography is avoiding Perestroika period not only because of the instability & weakness that is associated with this time, but also because of the filmic discourse itself, which aesthetic forms & clichés still have traumatizing potential for the audience.

Rea Campos, Carmen Rosa (COLMEX, Camino al Ajusco 20 Pedregal de Santa Teresa México D.F. CP 10740 [tel: 52-55- 54 49 30 00; e-mail: careacbo2@gmail.com]), **El Racismo en la Bolivia Contemporánea: Continuidades y Transformaciones** (Racism in Contemporary Bolivia: Continuity and Transformations), *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ Por qué el racismo tan presente en Bolivia, empezó a ser aceptado como un problema sociológico en los últimos años?, cómo se hace presente en el contexto actual?, cuáles son sus continuidades y cambios? Pretendemos mostrar que la comprensión del problema debe buscarse más allá de la coyuntura y del campo de lo político, en los cambios que tienen que ver con transformaciones sociales de tipo estructural (dinámica migratoria, cambios económicos, movilidad social, así como conflictos en las modalidades de identificación) que no sólo nos permitirían explicar y entender

la presencia renovada del racismo en Bolivia, sino también el contexto política actual. La hipótesis central es que: existe una estrecha relación entre la presencia renovada del racismo y un proceso de transformación de las identidades colectivas que resulta del des-dibujamiento de las modalidades y categorías de identificación que legitiman las posiciones sociales jerárquicamente establecidas entre sujetos de diferente origen étnico. El discurso, las actitudes y prácticas de tipo racistas resurgen para reestablecer fronteras identitarias que se desdibujan ante una estructura social en proceso de transformación. La investigación re realizó en Oruro, una ciudad minera de Bolivia que no muestra el grado de conflictividad política que otras ciudades del país. Se trabajó con jóvenes estudiantes de bachillerato y padres de familia a través de encuestas y entrevistas a profundidad. Los datos obtenidos apuntan a un doble proceso que dio paso al reforzamiento de sentimientos primordialistas. Por un lado el estancamiento y empobrecimiento de clases medias no indígenas y por otro, la acumulación de capital comercial de un pequeño sector indígena que empieza a acceder a espacios de sociabilidad de las clases medias indígenas, a lo que se suma el ensanchamiento de otros espacios de participación para los sectores indígenas.

Rebenack, Marcel (Sociology of Gender, Potsdam University, August Bebel Str. 89, 14482 Potsdam [tel: +49331-977-3472; e-mail: marcel.rebenack@uni-potsdam.de]), **Georg Simmel and Women - Tracing Spencers Legacy in Simmels Differentiation Theory,** *International Sociological Association, Gothenburg, Sweden,*

¶ While the idea of differentiation is without doubt part of the basic sociological toolbox there remain two (interrelated) desiderata: while Simmel & Durkheim went to considerable length to separate the notion of differentiation & division of labor, the two concepts seem to be interchangeable if not synonymous in many contemporary textbooks. Additionally, the effort to sketch out Simmels contribution to a gendered division of labor is marginal while Durkheims ideas regarding differentiation & division of labor have already been analysed through a gender lens. (1) While starting with Spencers original conception of differentiation the contribution will show that there is no value-free or even neutral/objective version of differentiation that could serve as a point of departure. On the contrary it will be shown that Spencers legacy consists in a gender-infused idea of differentiation, which then took its way into the sociological mainstream. (2) Against this background I will focus on Georg Simmels interpretation of this concept. (3) The attempt to integrate Simmels ideas on "subjective & objective culture" & its foundation in a mix of sociocultural evolution & gendered differentiation into a distinct "differentiation theory" will unpack the limits of Simmels analysis which can be traced back to the foundation of differentiation he inherited from Spencers legacy. This closer reading of Simmels collected works on both his "gender sociology" and his prominent essays on differentiation will reveal the legacy that he adopted from Spencers gender-infiltrated views on the division of labour & the interrelated concept of differentiation. The paper argues for the necessity of a genealogy of the "differentiation theory" that we are all familiar with & to reflect on its emergence through a gender lens.

Rebughini, Paola (University of Milan, via conservatorio 7 20122 Milano Italy [e-mail: paola.rebughini@unimi.it]), **What Is Critical about Critical Consumerism? Grassroots and Subjective Action,** *International Sociological Association, Gothenburg, Sweden,*

¶ Critical (or political) consumerism & civic grassroots connected to consumption practices are mainly considered as forms of critical attitude towards conformist & majority life-styles, values and behaviours. Such forms of mobilization - in Europe as well as in other continents - are heterogeneous & they concern different kinds of consumption & boycott/ buycott strategies. These practices are usually defined also as responsible, fair, centred on sobriety and solidarity, but they define themselves mainly by their critical attitude & their capability to keep a reflexive distance towards what is perceived as an hegemonic approach to daily consumption. This paper presents a more general theoretical reflection on the sociological issue of critique & subjective action starting from the empirical case of civic grassroots connected to consumption practices in Italy.

Rech, Yohann & Mounet, Jean-Pierre (Université J. Fourier a Grenoble 1 - SENS, Université J. Fourier Grenoble 1, UFR APS, BP 53, 38041 Grenoble Cedex 9 France [tel: 33 (4) 76 63 50 94; e-mail: yohann.rech@gmail.com]), **The Effects of Climate Changes in Ski Resorts: A Case Study of a Tourism Controversy in the French Alps,** *International Sociological Association, Gothenburg, Sweden,*

¶ The French winter sports resorts are among the most attractive in the world. However, there are wide disparities between large resorts that are internationally known and other smaller ones that are experiencing major problems. For over twenty years, the winter sports resorts of medium-altitude are faced with the unpredictable weather and an irregular snow cover. Faced with this uncertainty (Callon & al., 2009), we may question the adaptation of tourism policies and actors to maintain these destinations and make them competitive. By mobilizing the concepts of actor-network theory (Latour, 2005; Law, 1994), we will attempt to understand how climatic changes transform "tourismscapes" (Van der Duim, 2007) and provoke new associations. A qualitative study was conducted in a small ski resort in the French Alps that has experienced a tourism controversy. This case study shows that by becoming an uncertainty non-human entity, the snow has caused major conflicts between actors. The solutions planned to adapt to the changes are varied and sometimes antagonistic: artificial snowmaker, development of a summer tourism or an alternative tourism (not dependent on the snow)… The socio-technical network has been completely transformed to be reconstructed in a different way, offering new connections that are not on the scale of the resort, but the territory. Key words: climate change, actor-network, winter sports, medium-altitude mountain, ski resorts.

Rech, Yohann & Mounet, Jean-Pierre (The University of the West Indies, St. Augustine Campus [tel: 1-868-662-1621; fax: 1-868-645-8415; e-mail: Rhoda.Reddock@sta.uwi.edu]), **Up Against a Wall: Muslim Women's Struggle to reclaim Masjid Space in Trinidad and Tobago,** *International Sociological Association, Gothenburg, Sweden,*

¶ When on October 13, 2007, at Eid Namaz, Feroza Rose Mohammed instigated the removal of barriers which had been placed to separate the women from the men; she was probably unaware of the contemporary global movement of women to gain equal access to masjid space for prayers & fellowship. Taking a historical perspective this paper explores the changing position of women in Islamic religious practice in Trinidad & Tobago with specific emphasis on their use of masjid (mosque) space. It also examines in detail two cases of womens' struggles to reclaim mosque space - Feroza Rose Mohammed & the St. Joseph Mosque & the San Juan Muslim Ladies Organisation & the Nur-E-Islam Mosque. It explores the paradoxical way in which restrictions on women's performance of congregational piety results in the emergence of a consciousness of resistance & feminist agency within the paradigm of Islam.

Redmalm, David (The School of Humanities, Education and Social Sciences, Örebro University, 701 82 Örebro, Sweden [tel: +4619303244; fax:; e-mail: david.redmalm@oru.se]), **The Construction of a Celebrity Pet: A Case Study of Paris Hilton's Dog Tinkerbell,** *International Sociological Association, Gothenburg, Sweden,*

¶ Paris Hilton, heiress of the Hilton hotel chain fortune, is often seen with the Chihuahua Tinkerbell by her side - one of the world's most famous now living pets. Using discourse analysis, the present paper explores how imagery & text in mass media cooperate to produce Tinkerbell as a person. The produced canine subject is given a voice, a linguistic prosthesis, which is often heavily normative. The pet's voice criticizes her mistress' unreliable behavior, questions the mistreatment of pets, & scrutinizes life in the lap of luxury. In the interplay between the text & the pet, a certain form of common sense regarding class, gender & the human/animal divide is produced & disseminated. The paper argues that popular media's fixation with Tinkerbell stems from the way the pet as a social phenomenon trifle with common dichotomies such as nature/culture, authenticity/simulation, wilderness/civilization, speech/speechlessness, child/adult and poor/rich. Also, the phenomenon of animal representations in text, film & photography is discussed in relation to the epistemology of the reality show genre.

Reed, Darren J & Olivier, Patrick (University of York, York, North Yorkshire, YO10 5DD [tel: +44 1904 433047; e-mail: djr14@york.ac.uk]), **Ubicomp and the Technologist as Worldmaker,** *International Sociological Association, Gothenburg, Sweden,*

¶ Ubiquitous computing applications are being proposed for a range of new interventions in the home, from supporting people's healthier eating

habits, to acting as a cognitive prosthetic for people with dementia. While such applications have been proposed & pursued with the goal to promote people's wellbeing & autonomy, the nature of these applications requires them to collect data and reason about some of the most personal aspects of our lives. Such aspects require that we understand the social issues involved. The underpinning technologies for home-based ubiquitous computing not only include embedded sensors (e.g. motion, acceleration & RFID sensors) but software systems that use this data to perform activity classification & recognition. From a functional point of view, to classify & reason about people's actions in their homes requires the formulation of ontologies, that in turn incorporate a raft of claims about what it is to eat, cook, & live at home. The implications of the decisions we make with respect to these ontologies are far reaching & in this paper we will explore both the sources of such issues & their potential impact for home-based ubiquitous technology. Such technological issues will be situated in debates about social processes of data capture and manipulation by drawing on current sociological theory in "social sorting" (Lyon, 2003) & the "codification" of everyday life (Dodge & Kitchen, 2005). In this way we aim to discuss the ways by which such technological regimes are constitutive of the person and their lived experience (van der Ploeg, 2003) through performative (Latour, 2005) & configurational (Oudshoorn et al, 2004) processes. References Dodge, M. & Kitchin, R. (2005). *The ethics of forgetting in an age of pervasive Computing*. CASA Working Papers, 92. Latour, B. Rego, Raquel (SOCIUS-ISEG, Rua Miguel Lupi, 20 1249-078 Lisboa Portugal [tel: +351 21 392 27 95; e-mail: raquelrego@iseg.utl.pt]), **Regulating Self-Regulating Professional Associations: What Changes in the Portuguese Context with the Law 6/2008?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The system of professional regulation in Portugal belongs to the most common pattern of the European Continent, in which the professional associations have the monopoly of the professional regulation. As a result of the proliferation of these associations, Law 6/2008 was recently published to regulate its creation & action. The law has established a formal procedure for all professional associations creation but did not bring new features in terms of these associations power, namely on professional regulation. The only new requirement for the creation of a PPA is the making of a previous study, apparently an indicative of the importance of technical and scientific nature of the PPA creation. In short, we may expect that nothing will substantially change in the professional groups influence process. The aim of this paper is to present & analyse the before & after periods of recently developed Portuguese legislation designed to regulate professional associations, taking in account policy makers standpoints, namely parliamentary parties who have voted & enacted the Law 6/2008. This paper is the result of an ongoing project on professional associations' creation and it intends to discuss the impact of the new legal framework on the future strategies of professional groups.

2010S02166

Reibling, Nadine (University of Mannheim, Mannheim Centre for European Social Research, A5,6 61831 Mannheim, Germany [e-mail: nreiblin@mail.uni-mannheim.de]), **Trigger, Cure or Reproducer: How the Healthcare System Affects Health Inequalities,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the past decade, scholars studying health inequalities have increasingly included macro-level determinants such as income inequality, social capital & welfare regimes in their explanatory models. Despite this development, the role of the healthcare system has been widely neglected in this line of research. Theoretically, healthcare systems can have different effects on inequality levels. On the one hand, it is argued that access to healthcare increases inequalities since persons with a high socioeconomic status use preventive & curative services more often & have preferential access to high quality care. On the other hand, the quasi-universal access to healthcare in developed nations might decrease inequality levels if healthcare improves the poor health of individuals with a low socioeconomic status for instance caused by higher levels of work-related stress. These contrasting theoretical expectations demonstrate that it is necessary to take the institutional set-up of the healthcare system into account for assessing the effect of healthcare on inequality levels. Even in universal healthcare systems, there are substantial differences in the degree to which access to healthcare is stratified by education, income or residence. Institutional regulations such as the catalogue of benefits, the existence of gatekeeping, cost sharing & private health insurance influence whether healthcare is trigger, cure, or reproducer of inequalities in health. This paper investigates the effect of various institutional characteristics on levels of health inequalities by comparing 14 European nations. This is done with a multi-level modeling approach, which combines institutional indicators & micro-level data from the Survey of Health, Ageing, and Retirement (SHARE).

Reicher, Dieter ([e-mail: dieter.reicher@uni-graz.at]), **Nationalism in Sport and How Sport Civilizes International Rivalry,** *International Sociological Association, Gothenburg, Sweden,*

¶ Civilizing Theory does not say much about international relationships. Its main focus lays on the state's monopoly of coercion & the subsequent process of transforming coercion into self-control. On the international scene, however, there is no monopoly of coercion but a multitude of competing national states. Yet, fact is: First, the number of wars between established nation states has declined since World War II. Second, sport as a peaceful kind of international competition has dispersed all over the word. Today more countries participate in the Olympic Games or the qualification for the football world championship than the UN has member states. Sport mega-events are properly the most recognized arenas of nationalism & national competition. Some have interpreted the international sport system as a ritualized form of rivalry. This paper, however, argues that the kind of nationalism sport promotes is what makes it into a civilizing force in international relationships. Nationalism in sport differs remarkably from older kinds of nationalisms because it does not stress cultural uniqueness and inimitability. In contrast, nationalism in sport is orientated to world-wide-accepted norms & a global sport-culture. It does not stress a unique kind of national identity. It only aims to the goal of being the best within an international field that has standardized rules. Nationalism in sport, therefore, tends to be "empty". Sport reproduces national-stereotypes, however, it transforms them into global understandable & standardized schemes (i.e. "that is the typical way how Italians play football"). Like in a drama the world audience understands all kind of roles nations are playing on the global stage of sport. This transformational process enables nearness & empathy with any player, athlete, and national audience irrespective from its national background. Everybody can understand & share national pride or shame of every nation in relation to victories & defeats in sport. A national sport hero can also abroad be perceived as a hero. Sport also standardizes emotions & body expressions (like: how to cheer, to celebrate the victory, to bemoan the defeat, to applaud & to clap etc.). Thus, nationalism in sport does not form several national habitus but a single global sport habitus which expresses national pride & shame in the same way regardless of the national background.

Reicher, Rosa (University of Heidelberg, Department of Education, Akademistr. 69115 Heidelberg Germany [tel: 0049-6221-6189142; e-mail: rosareicher@gmx.net]), **Theorizing Racism and Xenophobia in Asian Sociologies,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper describes the old paradigm & discusses the emergence of new kinds of racism & xenophobia in European societies of the 21st century using an analytical framework for anti-Semitism and anti-Asian sentiments. The emergence of new kinds of racism in European societies, often referred to as "euro-racism", "symbolic racism", & "cultural racism" is defined by hostility to immigrants, refugees & asylum seekers. Comparisons of anti-Semitic & anti-Asian sentiments are noticeably absent in European accounts of race & racism. Though, we need to discuss the problem of immigration & its impact on racism & xenophobia across the disciplines of Western sociology & Asian sociology. Nevertheless the paper will offer an assessment of the extent and implications of an interdisciplinary discussion about this kind of racism. In addition following this, the paper seeks to conceive the idea of radical feasibility as an essential component of the significance & challenge of a theoretical approach within Asian sociology. Furthermore the contribution of Asian sociology in the understanding of the phenomena of racism & a creation of a coherent & helpful concept formation in that context should be questioned. The aim

is to map a better & deeper understanding of the scope of the Asian sociology as a basis for a focused research and discussion on the usefulness & interdisciplinary employability of theories & concepts such as Europeanisation & European identity. The paper critically examines the value & possible application of the concept formation of racism & xenophobia, to reflect on the results, taking into account theories & concepts such as Ibn Khaldun's concept of 'asabiyya as a means to discuss state formation & stability in certain countries. The paper wants to conclude with hitherto unnoticed similarities & important differences to be found in such a comparison. Finally it should be addressed that new concept formation & theories are necessary to come to a genuine dialogue & to achieve real results.

Reingoldovna, Lychkovska Oksana (Sociology Department of Odessa Mechnikov' National University, Odessa-82, Dvoryanskaya str. 2, 65082, Ukraine [tel: +38 097 55 46 888; e-mail: lychkovska@mail.ru]), **Mass Communicative Practices of Individuals in Modern Ukraine: Trends, Reasons, Consequences,** *International Sociological Association, Gothenburg, Sweden,*

¶ Mass communicative practices of individuals in modern society have been considered in 3 interconnected aspects: 1) as a version of "background social practices", representing hidden from the observer, frequently unconscious, but quite obvious for interconnecting participants, the rules of communication in a particular situation. 2) as principles & mechanisms of interaction with various sources of information & communication, first of all with mass media. Here the received information is comprehended during the process of its application, thus foregrounding pragmatic aspect of communication. 3) as features of communication process at a social macro level. The practice of interaction in the public space is meant. The specific features of communicative practices in modern Ukraine are caused by still continuous process of transformation of the society itself and tendencies of the world crisis. It generates ambivalence and additional contradictions in communicative processes & practices: link between postmodern forms of the communications in private sphere & traditional, paternalistic in public sphere; inclination to non-reflexive, traditional, ritualized rules of communication even in virtual on-line environment; appearance of "mobile" identity, depending on interaction with either source of mass communication; use of mass media mechanisms & effects to make everyday existence of a person stable, structuralized and comfortable in a situation of social & institutional instability.

2010S02170

Reinheimer, Patricia (Universidade Federal Rural do Rio de Janeiro, BR-465, Km 7, Seropédica, Rio de Janeiro, Brasil [tel: 26814600; fax: 26821120; e-mail: patriciareinheimer@yahoo.com.br]), **Art Manifestations and Mental Health, an Alliance That Changes the Face of Street Carnival in Rio De Janeiro,** *International Sociological Association, Gothenburg, Sweden,* (POR)

¶ In Brazil, fine arts, handicraft & music are some of the activities that have been therapeutically employed in the mental health system since the beginning of the 20th century. However, there are new public policies directed toward cultural diversity that have transformed the artistic & cultural manifestations into resources of representations' reconstruction on madness & identity transformation of the mental health system users, its relatives and technicians. The "wacky" as representative of difference, citizen of rights, is the ideal of a "new psychiatry". But to reach this ideal it has been necessary to create the conditions to overcome the difficulties of living together with this alterity. Associated to the debates on the psychiatric reform, the language of "rights" and the fight for "justice" have been creating important spaces of mobilization, articulating dynamics of political struggle & new processes of social regulation. Regarding projects related to artistic manifestations, the discourses on "cultural diversity" have been partially the bedding in which to anchor the claims for revising representations on madness. Identity, values, norms and myths of the modern artist were instituted in the 19th century around the idea of opposing social conventions. Irrationality, irregularity, intermittency, doubt, vulnerability, unpredictability, independence of will are some of the representations attributed to modern creators (writers, painters, musicians, actors), "consecrated deviants" in urban societies. The relationship between "art" & "madness" has been psychotherapeutically conceived as a resource & also as a way of transforming the representations on the artist in the first half of the 20th century. Today this relationship has been used as a language in the transformation of the stigma of "madness". The process of transforming this attribute is in part related to the attempt to tie the expectations related with the "users of the mental health system" to standards whose "normality" is related to "marginality", resembling the representations on the modern artist. Carnival is a popular manifestation that includes several classes of artists, musicians, instrumentalists, sculptors, among others, & has appeared as an ally in this reconstruction process. The period previous to carnival in Rio de Janeiro, one month before the event itself, has already become official. Street carnival is one of the several activities contributing to the merriness. Street carnival can have events organized by three different types of musical clubs: blocks, laces or bands. These clubs differentiate themselves by the type of instruments used (horns or percussion) and the type of music played during the parades (authentic songs created each year or traditional carnival songs). The blocks are those that produce their own samba music each year. Each one defines it own subject (the plot) used also to produce the original t-shirt design. The t-shirts are sold to complement the club's expenditures. The plots are related in general to the club's identities. The identity can be related to the place where they parade (name of the street or neighborhood), to a professional category (journalists, fine artists), to a class of belonging (blinds, gays), an age group (children) etc. Having started as a club frequented only by the users of the mental health system of Rio de Janeiro (patients, relatives & technicians), the club Tá pirando, pirando, pirou! is now part of the official carnival schedule of the city of Rio de Janeiro. It appears in the main information sources on Carioca carnival. This is only one of the several clubs related to mental health that have appeared in Brazilian cities recently. It is in part due to the representations on modern artists that artistic manifestations have been used as resources for transforming the practices in the field of mental health & the values attributed to the users of those services. The alliance between art & mental health has generated quarrels concerning the necessity of new cultural polices that contemplate the experiences that have been developed. My intention is to investigate some tensions relative to this process.

2010S02171

Reinheimer, Patricia (Universidade Federal Rural do Rio de Janeiro, BR-465, Km 7, Seropédica, Rio de Janeiro, Brasil [tel: 26814600; fax: 26821120; e-mail: patriciareinheimer@yahoo.com.br]), **Entre le territoire national et le paysage interne : quelques tensions dans la constitution d'un contexte artistique international** (Between the National Territory and the Internal Landscape: Some Tensions in the Constitution of a Context of International Art), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Après la Deuxième Guerre mondiale les arts plastiques au Brésil sont passés par un processus de révision axiologiques. Ce processus a été tributaire des transformations produites dans le champ artistique international, rapportées aussi aux échanges internationaux, au contexte géopolitique et aux idéologies qui tonifiaient pendant la Guerre froide. Nous pouvons considerer les arts pendant la seconde après-guerre comme une langue faisant partit de la politique des échanges internationaux qui s'est alors établie (tant privées qu'entre des systèmes administratifs nationaux). Néanmoins, la configuration d'un contexte international d'échanges artistiques s'est produite au même moment où le discours d'autonomie de la forme passait par une révision à partir de la négation de la temporalité et de la territorialité du phénomène plastique, ceci est, avec la négation des délimitations nationales elles-mêmes. La réaffirmation de l'autonomie de l'appréhension esthétique a été, donc traversé par des ambiguïtés, certaines desquelles nous aimerions enquêter. La défense d'une production artistique nationale contre une langue artistique internationale et les différentes formes de concevoir la relation entre art et politique ont institué les conditions pour l'établissement d'une tension entre des valeurs antagoniques. Dans la dimension institutionnelle, la tension entre nationalisme et internationalisme a été une des caractéristiques d'organisations de type transnational qui visaient à dépasser les frontières nationales, bien qu'elles s'organisaient autour des nationalités. Dans la dimension proprement artistique nous percevons les tensions rapportées à une vision universaliste du phénomène artistique qui s'est institutionnalisé dans une large mesure en s'organisant autour de l'idée de totalités nationales. Ces tensions peuvent être perçues dans les relations entre les notions d'internationalisme et d'universalisme, mais aussi entre une catégorisation selon la personne, le type artistique, le style ou la nation.

Reiter, Herwig (University of Bremen, Bremen, Germany, 28203 [e-mail: hreiter@bigsss.uni-bremen.de]), **Social Transformation and Citizenship Uncertainty in Post-socialist Societies,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper addresses the issue of socio-economic citizenship uncertainty as one particular side-effect & societal challenge of the social & economic transformation of the last two decades in former socialist countries. When

some European countries with a socialist past entered an unprecedented process of catch-up modernization two decades ago the loss of guaranteed employment was among the features transforming the relationship between the state and its citizens as well as among citizens. In many post-socialist societies the whole concept of social security was redefined through the institutional & individual coping with mass unemployment & the residualisation of welfare. Against this background the paper analyses this novel moment of uncertainty in the citizenship relations between the individual, the unemployed and the state as well as individual responses to this citizenship uncertainty. The discussion is based on a qualitative-empirical study of meanings of unemployment among young people in post-Soviet Lithuania. The paper concludes by reflecting the findings in the light of the second wave of mass unemployment affecting these countries in the course of the recent global economic crisis.

Réka, Plugor (Centre for Labour Market Studies, University of Leicester, LE1 7QR Leicester, United Kingdom [tel: + 44 (0) 116 252 5955; fax: + 44 (0) 116 252 5953; e-mail: plugor.reka@gmail.com]), **Higher Education Students' Experience of the Transition from University to Working Life,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper touches upon one of the "construction sites" of the relationship between higher education & the world of work, namely the transition from education to employment, as it is present in the case of one of the main universities in Romania. Using quantitative data analysis the purpose of this paper is to grasp the higher education students' experience in the transition from higher education to the world of work, how these transition characteristics define the outcomes of the transition & what is the role of the university services in the process. The paper begins by placing the research in a theoretical framework and describing the methods of analysis. After presenting the Romanian higher education context, the paper focuses on highlighting the experiences of students from one of the main universities & the last part of the paper formulates the conclusions of the analysis.

2010S02174

Ren, Xuefei & Sun, Meng (Dept of Sociology, Michigan State University, 317 Berkey Hall, East Lansing, MI 48823 [tel: 517-355-6644; e-mail: renxuefe@msu.edu]), **From Artist Villages to Art Districts: Creative Industries and Creative Control in Beijing,** *International Sociological Association, Gothenburg, Sweden,*

¶ The creative industry discourse travelled to China in the early 2000s through the epistemic network of international scholars and consultants & has since garnered enthusiastic support in the domestic policy circuit, viewed as the key to making the transition from "made in China" to "created in China." This article examines the central issue facing the development of creative industries in China: the conflicting role of the state as it tries to privatize and capitalize on creative industries while maintaining its control over cultural production. We investigate the new forms of state control reconstituted at the micro level through the everyday surveillance of art districts in Beijing. Based on fieldwork conducted in 2009 in Songzhuang, a major artist village in the northeast suburbs of Beijing, we argue that the local state has extended its creative control over cultural production by using interlocking directorates - a practice of appointing the same government officials to serve across the executive boards of multiple key organizations in art districts. Emerging from the context of the international art market boom, China's real estate fever, & political decentralization, the districtification of former artist villages with interlocking directorates has led to an "artistic urbanization," a process in which rural villages quickly urbanize in the midst of art-led development endorsed & monitored by the local state.

Resende, José & Dionísio, Bruno (Department of Sociology and New University of Lisbon, Lisbon, Portugal [tel: 003517908300; e-mail: josemenator@gmail.com]), **The Purpose and the Limits of Citizenship Education in Portuguese Schools,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the last few years citizenship education was officially introduced in the Portuguese educational system curricula. The Government justifications for the introduction of this new curricular area are based on plural arguments that are important for the sociological reflexion. On the one hand there is the growing diversity of pupils' social & cultural origins, together with an increase in the public visibility of scholar phenomena, which show an enormous lack of civility, & also of the existing tension in relations between pupils & teachers. On the other hand we should mention the political concern towards the pupils' "lack of interest", as far as public participation is concerned, & also towards the idea of "youth depoliticization", which is expressed in young people's weak adhesion to public traditional causes. But how do the educational actors (both teachers & pupils) interpret the Government's invitation to get involved in public participation as well as in the development of citizenship education in the scholar arena? On the one hand there are the teachers. They show different looks on citizenship education & different "pedagogical" conceptions to put them into practice. These different "perspectives" of citizenship education are partly a result from all the limits & difficulties they have to face in their daily scholar routines, especially as far as pupils relations management is concerned. On the other hand there are the pupils. Their interpretation of "citizenship education" is changeable. The political concerns they present don't necessarily meet the teachers' ones. The public causes that catch the pupils' interest and concern are very distant from the conventional categories that are traditionally used to "measure" the political participation. For example, they express their public concerns according to their (in) justice feelings whenever facing the multiple daily scholar life situations. Thus, the main goal of this communication is to argue & present the purpose & the limits of "citizenship education" in the Portuguese educational system & the misunderstanding of true "citizenship" meanings, which is revealed both by teachers & by pupils. This communication is based on a research held in four secondary schools, which have different organization & social profiles. In this research 40 focus group interviews were made to pupils, together with 84 surveys to teachers & 226 surveys to pupils.

Resina, Jorge & Del Campo, Esther (Dep. Ciencia Política II. Facultad Ciencias Políticas y Sociología. Universidad Complutense de Madrid, Campus de Somosaguas. Pozuelo de Alarcón (Madrid), 28223 [tel: +34 699 20 86 30; e-mail: jorge.resina@gmail.com]), **Social Networks, New Mobilizations and Cyberpolitics: Demonstrations of the Right and the Left in Spain (2004-2009),** *International Sociological Association, Gothenburg, Sweden,*

¶ The day previous the Spanish general elections of 2004 when thousands of people poured into the streets to demonstrate for the media management of the 11-M attack by the Government in power, began a new form of political mobilization, stimulated across digital networks. Online media have since become an important area of socialization of the citizenship, as shown by the latest trends for the Center for Sociological Research of Spain (CIS). Internet has created a new form of politicization of the demands, to enable interconnection between individuals & groups through various links, portals of information & personal blogs. Both the left and

right using these channels to Spanish mode of communication mechanisms, alliances & strategies for political mobilization, in a form of protest that it is more expressive than substantive, and is looking for visibility more than for social change.

Resina, Jorge, Jerez, Ariel & Chico, Ramiro (Departamento de Ciencia Política y de la Administración II; Facultad de Ciencias Políticas y Sociología; Universidad Complutense de Madrid, Campus de Somosaguas, Pozuelo de Alarcón (Madrid), 28223 [tel: +34 699 20 86 30; e-mail: jorge.resina@gmail.com]), **The Coordinated Action in Crisis? Strategies, Dynamics and Visibility of Social Movements: The World Social Forum Case,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ Tras convertirse en referente del altermundismo en 2001, cuando se proclamó la idea de que "otro mundo es posible", el Foro Social Mundial (FSM) se enfrenta hoy al reto de profundizar en el camino iniciado entonces. La presencia de cinco Presidentes latinoamericanos en la última edición celebrada (Belem, enero de 2009) simbolizó la unión entre los movimientos sociales y los Gobiernos de corte progresista del continente. Esta participación presidencial junto al papel de las ONGs, entre otros actores, plantea una reflexión crítica sobre las dinámicas internas del Foro, su autonomía y su influencia en la construcción de políticas públicas, así como sus estrategias de visibilización. En un contexto de profunda crisis ideológica del sistema capitalista, muchas de las propuestas del FSM son descontextualizadas a través de la mediación de los medios de comunicación comerciales, circunstancia que provoca el desplazamiento excluyente de actores sociaeles y procesos de re-enmarcamiento discursivos, con efectos de apropiaciones parciales e interesadas por parte del tradicional "establishment".

Revel, Mart (CERAPS Lille University, 1 place deliot Lille 59000 [tel: 00 33 6 69 03 15 18; e-mail: mart.revel@gmail.com]), **Does Participation Enhance Environmental Care and Sustainable Development?,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper intends to explore whether citizens' participation, defined as "the process of sharing decisions which affect one's life & the life of the community in which ones lives" (Hart, 1992) can foster environmental care. Rosanvallon (2008) recently stated that democracy as a political regime is becoming more and more complicated. The "deliberative imperative" is now developing a new frame: we need to create new institutions to be able to discuss & deliberate before we take any decisions for the common good. From a case study about French participatory budgets and citizens conferences, we will argue that when people are experimenting participatory designs, they show more concern and awareness of socio environmental risks. Still those democratic sessions need to fulfil some characteristics to reach collective problem solving & to be taken into account by our representatives.

Revet, Sandrine (CERI-Sciences Po, Paris, France, 75006 [tel: 00 33 (0) 1 58 71 70 83; e-mail: revet@ceri-sciences-po.org]), **Understanding Ethnographically the Disaster and Risk Management Tools. From the Disaster's Scene to Geneva,** *International Sociological Association, Gothenburg, Sweden,*

¶ Anthropologists have since a long time demonstrated the interest of their approach on the disaster's scenes (Oliver Smith 1996), but the analysis of prevention & disaster risk reduction's devices is still mostly the prerogative of other social sciences, such as political science or sociology, & the analyses of those programs are essentially based on the texts & norms they enact. Can we envisage understanding these devices according to an ethnographic approach? Would this help bringing a new focus on the disaster risk reduction thematic? Based on the analysis of the development of Early Warning Systems in Venezuela after the 1999 floods and landslides disaster, this paper proposes to introduce the way international organizations advocate the use of such devices. A dual ethnography, multi-situated, between the local - Venezuelan - scene & the international one, (Geneva), should allow highlighting the interest & the difficulties of the ethnographic approach in the analysis of international politics of disaster risk reduction.

Reyes, Verónica, Villarespe & Martínez, Susana, Bertha Merino (Instituto de Investigaciones Económicas, Universidad National Autonoma de Mexico, Instituto de Investigaciones Económicas, Universidad National Autonoma de Mexico, Mexico [e-mail: reyesvv@servidor.unam.mx]), **Some Thoughts on Mexican Social Policy Regarding the Fight against Poverty 1970-1994,** *International Sociological Association, Gothenburg, Sweden,*

¶ The purpose of this lecture is to offer some considerations on the following three programs for the fight against poverty in Mexico: the Program of Public Investment for Rural Development (PIDER), 1973; the General Co-ordination for the National Plan concerning Economically Depressed Areas & Underprivileged Groups (COPLAMAR), 1977; and, the National Solidarity Program (PRONASOL), 1988. These considerations will focus on the purpose for which each program was created, the governmental & private issues that had to do with their design & their operational structure, as well as on the substantial differences between them. These programs played a very important role in Mexican social policy, which since 1982 has been restructured to face the economic crisis. Through the analysis of these three programs we should be able to establish the pertinence and effectiveness of the social policy as a product of the economic system, & from the perspective of effective public policies. Author Profile Dr. Veronica Villarespe Reyes is conducting economic research at the Instituto de Investigaciones Económicas affiliated to the Universidad National Autonoma de Mexico. Her research seeks to find a cogent relationship between Mexican Social Policy, Economy & the fight against poverty viewed in the perspective of contemporary history. Ms. Susana Bertha Merino Martínez is an Academic Member of the Instituto de Investigaciones Económicas & co-author of the Paper on "some thoughts on Mexican social policy regarding the fight against poverty 1970-1994."

Rhatigan, Fergal (Department of Sociology, NUI Maynooth, Maynooth, Co Kildare [e-mail: fergal.j.rhatigan@nuim.ie]), **Development Workers' Understanding of Development: A Case Study of Irish Practitioners.,** *International Sociological Association, Gothenburg, Sweden,*

¶ Development workers are key agents of Civil Society Organisations (CSOs), either as development professionals working for international development agencies or expat volunteers working with local organisations & have a unique understanding of development and development in practice. Based on 60 interviews & fieldwork this paper asks whether Irish development workers are agents of critical awareness about development or whether they are involved in "the pragmatic art of development management" (Tucker, 1997, p. 4)? Deterministic economic discourse has dominated thinking in the development field, so much so that it has become accepted by many as a universal truth, (Escobar 1995, McMicheal 1996, Tucker, 1997, Chambers 2008). In such a model, development workers become "globalisers" (Jackson, 2005) promoting this discourse. However CSOs have played an important role in propagating alternative models of development. Working at the grassroots level gives Irish Development workers insights not only into the practice of development but also the failures of flawed development policies, such as the policy prescriptions of the neo-liberal agenda. These workers are exposed to the realities of daily life for the ordinary person in developing countries & witness the struggle to cope with poverty & the fight against inequality & injustice. This paper will explore the understanding of development from the development workers' perspective. This proves to be synonymous with the human development approach, which is concerned, with development from the standpoint of the poor (Parr & Shiva Kumar, 2003).

Ribes, Alberto J. (Sociología V (Teoría Sociológica), Universidad Complutense de Madrid, Pozuelo de Alarcón, Madrid, Spain, 28223 [tel: +34687471307; e-mail: ajribes@yahoo.com]), **Earth Hour as a Global Media Event: Narratives, Emotion and Performances,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this article I will explore, from a post-Durkheimian point of view, the event known as Earth Hour, understood as a Global Media Event (GME). By the analysis of more than two hundred journalistic news published between 2006 & 2010, of diverse web pages, videos, photographs & fieldwork developed in Madrid (Spain) in 2010, we will present the diverse narratives, performances & emotions that meet in the above mentioned event. This GME will offer us a valuable case-study in order to understand how events are linked to narratives, as well as to understand the emotional dynamics and performances dynamic within a GME. As I will show several narratives are at play during Earth Hour: environment (climate change), globalisation, new technologies & community. There also counter-narratives, which include counter-performances. Performance dynamics are closely related to other GME's performances and emotional dynamics too. I will finish asking whether it is reasonable for studying GME to abandon what may be called the "breach problem" & the "general outcome problem".

Ribic, Biljana (Belgrade University, Belgrade, Serbia, 11000 [tel: +381 11 3327269; e-mail: biljanaULribic@yahoo.com]), **Application of the New Information and Communication Technologies by Serbian Orthodox Church in Republic of Serbia,** *International Sociological Association, Gothenburg, Sweden,*

¶ Religion & the media in the 21st century are more connected than ever before. All kind of media & particularly the Internet have strong influence on religious beliefs, routines & rituals. This text will try to define the link between religious belief and praxis in Serbia & the new information & communication technologies as the most defining media instruments at the beginning of 21st century. As well as majority of other churches in the world, Serbian Orthodox Church accepted application of new information & communication technologies in its religious activities. There is a web site of Serbian Orthodox Church, as well as web sites of all magazines & newspapers published by Serbian Orthodox Church, web sites of some orthodox monasteries & even some Orthodox bishops & arch-bishops have their profiles on social Internet portal Facebook. This fact clearly states that new information & communication technologies have found wide usage in everyday life of modern people in Serbia, including domain of faith and spreading of religious beliefs. Therefore, Serbian Orthodox Church use new information & communication technologies in order to establish strong presence in the Serbian social & political sphere & to draw young people to its teaching.

Richards, Carol A, Lawrence, Geoffrey & Bjørkhaug, Hilde (The University of Queensland, Brisbane, Queensland, Australia [tel: +6133653493; fax: +6133651544; e-mail: c.richards@uq.edu.au]), **Corporate Driven Agricultural Restructuring: The Rise of Private Regulation and the Fall of Small-Scale Agri-Food Producers,** *International Sociological Association, Gothenburg, Sweden,*

¶ In recent decades, the governance of food safety, food quality, environmental sustainability & animal welfare has been shifting from the realm of "the government" to that of the private sector. Corporate entities a especially the large supermarkets a have responded to neoliberal forms of governance & the resultant "hollowed-out" state by instituting private standards for food, backed by processes of certification & policed through systems of third party auditing. We argue that the imposition of the new private forms of monitoring & compliance continue the project of agricultural restructuring that began with government support for structural adjustment schemes in agriculture. As such we have identified a shift from the previous government-led form of restructuring (providing financial support for farm "adjustment") to a present, market-based, form a one which favours the larger producers who can conform to the dictates of the corporations, particularly the supermarkets. The result is the same in both the "old" & "new" form a agricultural producers are squeezed, with many having to leave the industry, & those remaining having to become more capital intensive. Such concentration and centralisation is consistent with a capitalist logic of "get big or get out" in farming.

Richards, Naomi (Department of Sociological Studies, The University of Sheffield [tel: 00 44 1142226405; e-mail: N.M.Richards@Sheffield.ac.uk]), **The Desire for a "Civilised and Certain" Death,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper presents findings from interviews with six people who all made plans to travel to Dignitas in Switzerland for help to end their lives. It is also based on knowledge gained through long-term immersion in the assisted dying debate in the U.K. The paper examines the decision-making processes which led up to these individuals' final determination to foreshorten their lives. How did they arrive at that decision? What role did their relatives and friends play, if any, in their decision? Right-to-die campaigners often cite the desire for control as the common factor among people requesting help to die. This was certainly the case for the people whom I interviewed. One woman said she wanted her death to be 'civilised & certain'. But what is meant by 'civilised' in this context? And while a lethal dose of barbiturates makes death 'certain', medical diagnoses are themselves never 'certain'. All five interviewees wanted to bring an end to their suffering. They spoke about the difficulties they had finding people who would listen to them, including medical professionals. This paper also offers some reflections on the meaning which is given to suffering, and how the interpretation of suffering influences the assisted dying debate more generally.

Richter, Christine, Miscione, Gianluca & De', Rahul (University of Twente, Faculty of Geo-Information Science and Earth Observation, Department of Urban and Regional Planning and Geo-Information Management, Enschede 7500, The Netherlands [tel: +31(0)53 4874 444; e-mail: richter@itc.nl]), **Classifying the City: A Look behind the Word "Slum" in Indian Urban Planning Practice and Discourse,** *International Sociological Association, Gothenburg, Sweden,*

¶ Our paper is not a study of an area classified as "slum" or of people classified as "slum dwellers." Instead, we analyze the different meanings the word slum acquires in discourse & practice of actors in a southern Indian city. The word "slum" originates in early 19th century England & Ireland, when it was apparently a synonym for criminal, unhealthy & dirty areas. Hence, the term has been criticized for its negative connotations & stigmatization of "inhabitants." Nevertheless, it not only sticks around in the parlance of international funding agencies & national & state policies, but we also often encounter it in the discourse of local actors. Neither do we search for a final, universal definition of slum, nor do we attempt to argue in favor of or against the term. Instead, our analysis of the meanings of "slum" functions as a diagnostic of existing processes to tackle urban deprivations, where different classifications intermingle, confront & influence one another. To analyze the meanings of slum based on field notes and official documents we distinguish three aspects: "slums of the mind" referring to varying perceptions of areas labeled as slums and its people, "slums as mandate" referring to legal & policy mandates to target explicitly slums, & finally "slums as tools," that is labeling an area as slum depending on specific objectives and concerns of an agency or group of people. Our aim here is to shed light onto the organized processes behind different meanings of the term slum. In these processes the three aspects interlink making the term slum stick around despite its various meanings. We conclude that the introduction of alternative ways to classify areas & people in terms of type & degree of deprivation would require not only replacement of one term & definition with another, but a shift in the organizing processes that are at once translocal & enacted through the interplay of discourse and practice.

Richter, Dirk (School of Health Sciences, Bern University of Applied Sciences, CH-3008 Berne, Switzerland [tel: +41 31 848 3768; e-mail: dirk.richter@bfh.ch]), **Social Change and Mental Health: On the Macrosociology of Mental Disorders,** *International Sociological Association, Gothenburg, Sweden,*

¶ Current sociological & psychiatric analyses of everyday life mainly agree that modern society is a source for stressful living as well as for deteriorating mental health. Both scientific genres also agree upon the assumption that mental disorders have increased during recent decades. On the basis of a systematic literature review on prevalence & incidence studies from psychiatric epidemiology, this contribution questions this assumption. There is no evidence from high-standard epidemiological studies that the prevalence of mental disorders has increased in the decades following the 1970s in the western world. Given the massive social change, the next task for psychiatric sociologists is to research theoretically & empirically why there are no such phenomena as an "age of melancholy" or an "invisible plague of mental disorders" that have been assumed in the literature. Up to now, it is not entirely clear which social factors contribute to the obvious resiliency of modern individuals. Another sociological task is to reason about the indicator "mental disorders", which seemingly fulfils several functions while conducting social diagnoses of modern society. This contribution will discuss several macrosociological approaches that try to understand the relation of social change & mental health in order to get preliminary answers to the above raised questions & tasks.

2010S02192

Richter, Rudolf, Zartler, Ulrike & Andrea, Marhali (University of Vienna, Institute of Sociology [fax:; e-mail: rudolf.richter@univie.ac.at]), **Children Participating in Family Decisions,** *International Sociological Association, Gothenburg, Sweden,*

¶ Children are nowadays seen as self-reliant subjects able to articulate their wishes & to participate in family decisions. International studies have shown that the participation of Austrian children in family affairs is only below average. National studies just as well have shown that there is much more interest from children to engage in family affairs than they actually can or do. Thus, we wanted to have a closer look on the families & the negotiating procedures within them. We present an Austrian study on children's and parents' views on participation within families. The sample includes 10-year-old children (n=50) & their parents (n=71); multiple methods (interviews, photos, essays) were used to gather insight into participation processes within families. Data were gathered in an urban & a rural research area, covering different family forms. We found that children are allowed to participate in different fields, ranging from furnishing their room to deciding on changing the home in different ways. Participation processes are usually structured, & mothers & fathers are involved differently. Participation is very much influenced by the actual and ascribed competences of/to the children. The relevance to their life-worlds in terms of Alfred Schütz regulates the perception of competence. It depends on personality, family culture & on the awareness of the environment; it asks for communication skills and strategies how children can participate.

2010S02193

Riederer, Bernhard & Mikula, Gerold (Department of Sociology, University of Vienna, A-1090 Vienna, Austria [tel: +4314227748128; e-mail: bernhard.riederer@univie.ac.at]), **The Interplay of Social Comparisons in Influencing Evaluations of Justice in the Division of Household Labor,** *International Sociological Association, Gothenburg, Sweden,*

¶ According to social psychological theories of distributive justice, social comparisons constitute a central element for the evaluation of justice. We hypothesize that different kinds of social comparisons have different consequences for women's perceived justice in the division of household labor. The relational comparison between the spouses usually shows an imbalanced division with disadvantaged women. But most women think that they are doing about the same amount or a smaller amount of household labor than other women do, & that their spouse does more household labor than other men do. Thus, such "referential comparisons" may mitigate the negativity of an unequal division because they make the given division in the relationship appear as common and acceptable. Path analyses with data of a two-wave, three-year longitudinal study of women of dual-earner couples with young children from Austria, Germany, & Switzerland show the following results: (1) An increase in the frequency of making the relational comparison between Time 1 & Time 2 goes along with less perceived justice at Time 2. (2) Increases in the frequencies of making referential comparisons between Time 1 & Time 2 go along with more perceived justice at Time 2. (3) A higher frequency of making the relational comparison at Time 1 goes along with higher frequencies of making referential comparisons at Time 2. These findings suggest that women may "use" referential comparisons to cope with the unequal division of household labor. Referential comparisons provide a useful device to maintain a positive portrayal of the relationship.

Riegel, Viviane (ESPM-SP, Sao Paulo, Brazil, 04619033 [tel: +551150854600; e-mail: vriegel@espm.br]), **The Consumption of Space as Appropriation of the Idea of Experience,** *International Sociological Association, Gothenburg, Sweden,* (POR)

¶ The purpose of this paper is to analyze the consumption of spaces where communication takes place, from the translation of sensations proposed by the global brand's production of experience. The object of this study will be McDonald's & Starbucks stores, according to the definition of taste for the assimilation of consumption of these brands, which produce a simulacrum of experience. The strategy for the creation of experiences and emotions refers to the consumption of a product & the meanings that a particular environment & its brand represent. In the communication's space, the elements awake the senses to produce sensations that refer to an experience. From the experience's strategy, products are placed within a space of dream and unforgettable memories, within the logic of spectacle. Therefore, we seek to understand the form of interaction between communication and consumption's ways, in environments dedicated to the exposure of the brand experience. The methodology of analysis will be Discourse Analysis of French Line, as well as categories of analysis of communication's spaces proposed by Lucrecia Ferrara.

Rieker, Patricia P. & Bird, Chloe E. (Boston University and Harvard Medical School, Boston, MA 02215 [tel: 617 358 0640; fax: 617 353 4837; e-mail: rieker@bu.edu]), **Constrained Choice: A New Framework for Elaborating a Gender Focused and Cross National Approach to the Health Gradient,** *International Sociological Association, Gothenburg, Sweden,*

¶ Despite marked improvements in global health & longevity over the recent decades, patterns of health inequality persist within and among countries. Unfortunately, class gradients & gender differences persist even in countries that provide universal access to care. We developed the framework of Constrained Choice to take account of both social & biological processes & to advance and broaden the discussion of the health gradient. In this framework responsibility for health is allocated between individual agency and various higher units of organization including, family, workplace, community, & social policy makers. Relying on cross national data on gender differences in health, we elaborate on constrained choice & use specific examples to show how social policies & other decision contexts create different opportunities throughout the life course for men & women to be healthy. Our data suggest that many (but not all) of the factors that enhance or impede health are often beyond the control of individuals and social groups including access to health care, as critical as that may be. Thus, the Constrained Choice framework is intended to provide a new direction for discourse, research, & policy, & to establish an actionable platform for improving health and preventing disparities.

2010S02196

Rimon-Zarfaty, Nitzan, Raz, Aviad E. & Hashiloni-Dolev, Yael (Department of Sociology and Anthropology, Ben-Gurion University of the Negev, Beer-Sheba, Israel, 84105 [tel: +972 50 7596240; fax: +972 8 8580703; e-mail: rimonn@bgu.ac.il]), **When Does Human Life Begin? The Moral Status of the Israeli Fetus,** *International Sociological Association, Gothenburg, Sweden,*

¶ When does the fetus become a human being holding rights? A questionnaire presenting 10 successive fetal developmental stages was distributed to lay Israeli respondents (N=281) in order to study their attitudes regarding the human status of the fetus and the beginning of life in its biological sense. For each stage participants were asked to grade the fetus's "humanity" or "viability" on a 5 levels scale. Using frequency distribution analysis, we found that the fetus gains its moral status gradually. The stage in which most of the participants perceived the fetus as human was that in which the pregnant woman feels its movements. Additionally, many evaluated the fetus as a living organism at its early stages, thus making a distinction between the fetus as a living creature & as human. We draw on an international comparison with English speaking countries to argue that while the perceived moral status of the Israeli fetus is relatively weaker, it still acquires its status gradually having a semi-human status at certain stages.

This finding challenges the dichotomous conceptualization of the fetus as either "human" or not. We conclude by presenting the perceived transformation of the fetus to "human" as being influenced by national & religious factors.

Ring, Magnus (Dpt of Sociology, Lund University, Box 114, 221 00, Lund, Sweden [e-mail: magnus.ring@soc.lu.se]), **The Concept Formation of 'Social Movements',** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper deals with the conceptual history of "social movements", relating the formation of this analytical concept within the field of sociology to historical experiences & a world "in motion". The point of departure in this paper is a short etymological discussion, after which the "original" sociological meaning given social movement by von Stein in the early 19th century is discussed, followed by a discussion on the importance of among others Karl Marx for the birth of a more modern understanding of the concept. The paper goes on to treat two variants of how social movements was conceptualised - in North America & in the European context - clarifying possible reasons for differences in these traditions. More contemporary definitions of the concept are then advanced. The paper ends with a discussion of the possible meaning of "social movement" today, summarizing the discussion on the relationship between historical development, "a world in motion", & sociological conceptual development. The text is partly inspired by Reinhart Koselleck's conceptual history, although his methodology is not applied in a strict sense. The paper builds on an understanding of "concepts as necessarily ambiguous", maintaining that the context concepts refer to partly constitutes their inherent meaning. In other words, the ambiguity of concepts reflects the ambiguity of the phenomena. Moreover it is proposed that changes & differences in sociological definitions of "social movement" & meanings associated with the concept reflect the actual socio-political conditions to which they refer.

2010S02198

Rios, Diego M. (University Witten Herdecke, 50 Alfred-Herrhausen strasse [e-mail: diego.martin.rios@gmail.com]), **Reduction, Emergence and Selection,** *International Sociological Association, Gothenburg, Sweden,*

¶ The issue of social emergence in the social sciences has recently being the focus of much attention. Different social phenomena - bubbles, organizations, impossibility results - have been identified as putative candidates for illustrating properly emergent social phenomena. Advocates of methodological individualism have shown an ambivalent attitude vis-à-vis social emergence, rejecting it on some occasions & embracing it in others. In this paper I will scrutinize the reasons for this ambivalence. I uphold three theses. First, I will argue that there are in fact two different notions of emergence - weak & strong. Second, I will argue that only strong emergence is philosophically puzzling. Most examples used in the social sciences to support emergentism are examples of the rather inoffensive variety of weak emergence. Last but not least, I will argue that, once the distinction between weak & strong emergence is made, the ambivalence of methodological individualism vis-à-vis emergence can be eliminated: only the strong notion of emergence is incompatible with methodological individualism.

Rios, Rene (Pontificia Universidad Catolica de Chile, Instituto de Sociología, Av Vicuña Mackenna 4860, Macul, Santiago [tel: 56-2-354-5719; fax: 56-2-552-1834; e-mail: rrios@puc.cl]), **Physician's Working Conditions and Professional Satisfaction in Chile,** *International Sociological Association, Gothenburg, Sweden,*

¶ A national survey of a representative sample of physicians affiliated to the Medical Association (Colegio Médico) of Chile, is used to describe the conditions & arrangements under which they work for public & private service delivery organizations. Data analysis includes descriptive, correlation & regression analysis. Main findings: Solo practice is more common among older aged, while younger doctors share their working hours between public and private organizations. The clinical decisions & relationships with patients were analyzed to determine the effects of working arrangements. Data shows mixed effects that are explained mainly by gender, years of experience, sector (public/private) & specialty. Quality of life is related to working conditions. Levels of satisfaction with professional work found are high & different by gender.

2010S02200

Risberg, Jarl A A (Dept of Psychology, Lund University, Box 213, 22100 Lund, Sweden [tel: +46-70 2311049; fax: +46-46 2224209; e-mail: Jarl.Risberg@psychology.lu.se]), **The Evolution of the Social Brain,** *International Sociological Association, Gothenburg, Sweden,*

¶ The lecture will start by a comparison between humans & our closest evolutionary relative, the chimpanzee, regarding brain size and mental abilities. The human mastery of symbolic languages stands out as our most unique skill, while other abilities like the creative use of tools, cultural expressions, understanding the mental life of others (theory of mind) & time-awareness based on episodic memories, are present in the chimpanzee, but at a much less advanced level. The question is what evolutionary changes have taken place in our brains during the six million years that have passed since we separated from our mutual ancestor? The brain size did not increase above that of the chimpanzee (400-500 gm) until about 2.5 million years ago with the emergence of Homo habilis, followed by specices with increasing brain weight like Homo erectus, neanderthalensis & finally sapiens with a brain weight of 1200 a 1500 gm. Did human higher mental abilities develop in parallel to the increase in brain size? Most likely not! The earliest signs of modern behavior, like artistic expressions, symbolic thinking, body decorations, creative bone & stone tool making & mastery of the fire for improving stone quality, are only about 80 000 a 140 000 (South Africa) to 40 000 (Europe) years old. This evolutionary step is often called the "creative explosion". Before that more than two million years had passed with only minimal improvements in tool making skill, in spite of an increasing brain size. What changes of the genome of Homo sapiens took place that made it possible to develop a similar size brain that functioned in a much more advanced way than earlier brains? Our present genetic knowledge is very rudimentary. A mutation of the FOXP2-gene is considered to have been important for the development of the language systems of the brain. Modern brain imaging methods have been used for the anatomical comparison of the size of the frontal lobes in relation to the rest of the brain. The old "truth" that the human frontal lobes are exceptionally large has been revised. They turn out to be of similar size, in proportion to the rest of the brain, in humans as compared to higher non-human primates like the gorilla, orangutan, & chimpanzee. What has happened instead is a reorganization within the frontal lobes with an extension of the most advanced areas, like Brodmann's area 10 in the anterior frontal pole (important for many social functions), & smaller primary & secondary motor areas. Humans have also more white brain matter in proportion to grey matter compared to non-human primates, a change that has made it possible to develop highly advanced & complex neuronal networks, the neuronal basis for all higher cortical functions. A recent discovery is the presence of the specific "spindle cells" in the cingulate gurus (a deep medial area in the frontal lobes) with strong connections to area 10 and other advanced prefrontal areas. This cell type is present to a much greater extent in humans than in non-human primates & is suggested to be of importance for many advanced social functions. [Abstract shortened by ProQuest.]

Rivière, Clément (Observatoire Sociologique du Changement, Sciences Po, Paris, France [e-mail: clement.riviere@sciences-po.org]), **The Contrasted Impact of Immigration on the Uses of Public Spaces: Two Socially Mixed Areas in a Comparative Perspective (Paris/Milan),** *International Sociological Association, Gothenburg, Sweden,*

¶ Comparing residents' uses & representations of urban space in Milan's "monza-Padova" area & in the eastern part of the "19ème arrondissement" in Paris--both characterized by the social & cultural heterogeneity of their population--is a fruitful way for studying the impact of immigration on public spaces. In-depth interviews (n=100) with parents with children aged from 8 to 14 years help us to understand how they supervise their urban practices & which are the factors that structure the avoidances & uses of public spaces in these areas. Whereas in the Milan context the visible & growing presence of foreigners is a central dimension of discourses & practices, the case of Paris shows that other dimensions (class, age, territory, gender) are interlinked with the immigration processes' legacy in the construction of the urban "stigma" (Goffman 1963). Reflecting meso- & macro-structural dimensions (migratory & demographic trends, Welfare & "integration" models, urban segregation), this strong contrast throws light on recent evolutions of social cohesion in both metropolis & makes our research an original contribution to existing literature. However the variety of cultural & social profiles in our sample reveals nuances within each area concerning the perception of immigrants' presence in public space.

Róbert, Péter (TARKI Social Research Institute, Budaorsi ut 45, Budapest, Hungary, 1112 [tel: 3613097676; fax: 3613097666; e-mail: robert@tarki.hu]), **Labour Market Entry and Early Career in International Comparison,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper benefits from a recent comparative dataset from 18 European countries. Graduates have been interviewed five years after completing their studies with a questionnaire covering topics like length of finding a first job, match between qualification and first job, mobility out of first job, match between qualification and subsequent job, as well as unemployment experiences. The paper intends to find similarities & differences among the graduates in these countries. Based on how close or how far from each other the countries are, they will be grouped into clusters & the country clusters are interpreted on the ground of the institutional variation in the societies investigated with respect to the relationship between the school system & the labour market (OLM-ILM) as well as to the employment protection legislation (EPL) in the labour market. Under the conditions of OLM, the labour market entry is expected to be faster & the match between qualifications & jobs is expected to be better in contrast to ILM. A further assumption is that stricter legislation is associated with more difficult LM entry & lower level of mobility but also fewer risks for unemployment.

2010S02203

Robert, Peter & Balogh, Aniko (TARKI Social Research Institute, Budaorsi ut 45, Budapest, Hungary, 1112 [tel: 3613097676; fax: 3613097666; e-mail: robert@tarki.hu]), **Cross-Country Differences in Motives and Obstacles of Participation in Adult Learning,** *International Sociological Association, Gothenburg, Sweden,*

¶ The paper relies on existing large-scale comparative datasets like Adult Education Survey or International Social Survey Programme. These datasets contain the relevant dependent variable for the analysis whether or not somebody who has already left education returned to learning in the last 12 months before the data collection. The paper searches for extrinsic & intrinsic motivations & obstacles for learning activity. Adult learners may be driven by economic interests: earning more money, avoiding the risk of unemployment, or by psychological motivations: personal fulfilment, meeting social requirements. Initial education is an important determinant. Obstacles can emerge from being too old to study or from disadvantaged family circumstances. Regional differences, travel costs in time & money contribute to adult learning outcomes. The paper intends to analyze the mechanisms of participation in adult education by applying statistical methods. A search for the country specific differences is also in the focus of the study. For explaining the country variation, the regime concept is applied that is based on welfare, labour market & school system differences among countries. The comparative datasets include various countries belonging to the Anglo-Saxon, Scandinavian, Continental & Mediterranean regimes as well as the new EU member states are also represented.

Roberto, Elizabeth (Department of Sociology, Yale University, P.O. Box 208265 New Haven, CT 06520-8265 [e-mail: elizabeth.roberto@yale.edu]), **An Agent-Based Model of Residential Mobility and Spatial Segregation,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores the role of race & socioeconomic status in explaining aggregate patterns of residential mobility & spatial segregation. The analysis is based on an empirically-calibrated, agent-based model of household residential mobility, which describes segregation as the outcome of an emergent social process rather than a direct reflection of individual preferences. The basic simulation model is based on Thomas Schelling's research on the dynamics of segregation. I then expand the model to include income, as well as race, as an attribute of households. I analyze how the strength of the correlation between race & household income affects the extent of segregation. I evaluate how well patterns in the simulation results align with empirical trends with data from from the 2000 Decennial Census, & test if minor alterations in the model's specifications produce significantly different results.

Roberts, J. Timmons & Parks, Bradley C. (Brown University USA, Providence RI USA 02912 [tel: +1 401 441 2103; e-mail: timmons@brown.edu]), **Understanding Global (Non-) Cooperation on Climate Change: Social Theory, Hybrid Justice, and the Need to Re-Link Development and Environment,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper seeks to answer why North-South climate negotiations have gone on for decades without producing any substantial results. To address this question, we revisit & seek to integrate insights from several disparate theories, including structuralism (new and old), world systems theory, rational choice institutionalism, and social constructivism. We argue that the lack of convergence on climate grew almost inevitably from our starkly unequal world, which has created & perpetuated highly divergent ways of thinking (worldviews & causal beliefs) & promoted particularistic notions of fairness (principled beliefs). We attempt to integrate structural insights about global inequality with the micro-motives of rational choice institutionalism. The structuralist insight that "unchecked inequality undermines cooperation" suggests climate negotiations must be broadened to include a range of seemingly unrelated development issues such trade, investment, debt, and intellectual property rights agreements. We conclude by reviewing the work of some "norm entrepreneurs" bringing justice issues into climate negotiations & explore how these insights might influence "burden sharing" discussions in the post-Kyoto world, where development is constrained by climate change.

2010S02206

Robertson, Roland (University of Aberdeen [e-mail: r.robertson@abdn.ac.uk]), **Globality and Multiple Modernities,** *International Sociological Association, Gothenburg, Sweden,*

¶ The burgeoning literature on multiple modernities & modernizations has largely neglected the issues of globalization, glocalization, globality & glocality. The intention of this paper is to rectify this situation. In the first place, it will be argued that the older literature of the 1960s on modernization did, at least in part, focus upon certain aspects of the global or, at least, the international circumstance. This was true of such writers as Horowitz, Bendix, Parsons, Galtung, Worsley, Robertson, & Nettl. The demise of "old style" modernization theory was largely due to its "political incorrectness". However, much of this demise was actually due to its serious attention to the global circumstance, particularly the historical dimension thereof. The neglect of the history & the "genealogy" of modernization theory & its connection with globalization theory has to be understood so that we may fully comprehend the significance & the limitations of the multiple modernities/modernizations. This is very necessary in view of the fact that a number of adherents to the latter adamantly dismiss the relevance of globalization to the comprehension of the plurality of modernizations. The concluding part of the paper will sketch the manner in which the multiple modernities approach makes little sociological sense without serious infusion of globalization theory.

2010S02207

Robinson, Laura C (Department of Sociology, Santa Clara University, 500 El Camino Real, Santa Clara CA 95053 [e-mail: lrobinson@scu.edu]), **Unequal Futures: Digital Inequalities and Temporal Scarcities Among Disadvantaged Youth,** *International Sociological Association, Gothenburg, Sweden,*

¶ This research illuminates the social processes through which economically disadvantaged youth in the United States acquire particular skills & habits associated with the use of information technologies. Drawing on primary survey data from 2,200 respondents and in-depth interview data with 170 respondents, the study develops a theory frame labeled "information habitus." The study analyzes the connections between youths' conditions of access to information technology & their subjective orientations to appropriate internet use. The paper argues that even when disadvantaged youths enjoy access to information technology resources, they may not appropriate online informational content in the same way as their better endowed peers. Those disadvantaged youths who want to use the internet but lack high-autonomy and high-quality access to information technology often face many competing demands on their time. When they confront this temporal scarcity, disadvantaged youths often develop a task-oriented information habitus which is imprinted with the "taste for the necessary" analyzed by Bourdieu. The findings show how disparities in access to information technology platforms can exacerbate the gaps between economically, socially, & temporally differentiated segments of what is presumed to be a uniformly wired population. The analysis closes by examining the link between the information habitus of "unwired" & "partially wired" youth & their aspirations relating to their educational & career trajectories.

Robitaille, Michèle (University of Montreal [e-mail: michele.robitaille@umontreal.ca]), **Self-Determination and Optimiza-**

tion of Individual Capacities: Towards a Brand New Self-Made Body?, *International Sociological Association, Gothenburg, Sweden,*

¶ Scientific members of the World Transhumanist Association advocate for a radical self-optimization of the body via NBIC technologies (prosthetics, nanotechnology, genetic engineering, etc.) to propel us into a post-human era. This vision of human enhancement is based on a conception of the body that likens it to a computer, one that should be "reprogrammed" to increase the effectiveness of its every component (organs, cells, neurons, senses, DNA, etc.). Expressing strong techno-prophetic views, the transhumanist vision attracts many followers from various scientific & cultural arenas. Therefore, this vision offers us a privileged area to study scientists' imagination & views of the human body. To better understand the unforeseen representations of the body (and of the body-machine relationship that accompanies it), we analyzed the discourse held by members of the World Transhumanist Association. In this presentation, we will show that this ideology is highly coherent since it is defendable in many ways: firstly, by way of a specific representation of the body--informational, obsolete and technologically perfectible--and secondly, by a singular interpretation of socially shared values (particularly the self-determination value). Since this agenda's ideological premises resonate through contemporary culture, social acceptance of their model is increasing, & thus opens the way to the institutionalization of new norms & biomedical practices.

2010S02209

Robnett, Belinda (Sociology Department University of California, Irvine, 3151 Social Science Plaza Irvine, California 92697 [tel: 9498241648; e-mail: brobnett@uci.edu]), **Societal Cultural Shifts and Post Social Movement Organization Processes,** *International Sociological Association, Gothenburg, Sweden,*

¶ What happens when a social movement gains significant concessions and its organizations remain active? How do post movement organizations redefine the group agenda, maintain a collective identity, and shift strategies? Previous studies focus on culture as internal to the movement, & on the role of the state in shaping post movement processes but do not take into account broader societal cultural shifts (Meyer 1989; Taylor 1989; Whittier 1997). Consequently, we do not have an understanding of the interplay of movement organization dynamics, state concessions, & societal cultural shifts in the decades that follow the peak of activism and significant political gain. Through an examination of archival materials & newspaper articles, this paper assesses the political activities of U.S. black civil rights organizations including the National Association for the Advancement of Colored People, & the Southern Christian Leadership Conference from 1970-2008, & shows that while the state & organizational dynamics play significant roles in post movement processes & outcomes, societal cultural shifts are equally important. The decline of blatant racism, the rise of a "new racism", & a shifting U.S. racial hierarchy has served to reshape the contours of the African-American movement including its political goals, collective identity, & strategies. The result is unequal outcomes for & segmented incorporation of black constituents into the U.S. mainstream.

Roche, Jose Manuel (Department of International Development, University of Oxford, 3 Mansfield Road, Oxford OX1 3TB, UK [tel: +44 1865 271911; fax: +44 1865 281801; e-mail: jose.roche@qeh.ox.ac.uk]), **Capability and Life Chances: Bridging Two Academic Traditions,** *International Sociological Association, Gothenburg, Sweden,*

¶ The main contribution of the capability approach proposed by Amartya Sen & Martha Nussbaum has been to put forward an alternative space for the evaluation of well-being other than the generalised focus on utility & income distribution. Despite its important contributions & relative success, the approach has being criticised for not paying enough attention to groups & the social structure. This paper examines ways in which the sociological academic tradition in social stratification can complement the capability approach in order to enhance the study of group inequalities. It argues that the studies on social stratification contribute by revealing the structure of social positions in society that is related to the distribution of resources and endowments; that shapes preferences & identities; & finally that has an influence on life chances or capabilities. While this framework identifies the scope within which people exercise their agency, it also allows us to assess the degree to which people's life chances or capabilities are constrained by the social structure. The paper contributes by bridging these two academic traditions, while also delimiting a theoretical framework for the monitoring of social inequality.

Roche, Maurice (Sociology Department, Sheffield University, Sheffield, United Kingdom, S10 2TY [tel: +44-114-2226457; fax: +44-114-2768125; e-mail: m.roche@shef.ac.uk]), **Cosmopolitanism, Recognition and the Sociology of Europe,** *International Sociological Association, Gothenburg, Sweden,*

¶ Cosmopolitanism has been recently proposed by various writers as an important perspective relevant to overcoming general sociological problems of "methodological nationalism" & of the recognition of difference. The paper reflects on this proposal & its particular implications both for the contemporary development of a sociology of Europe. The European formation faces endemic & possibly growing problems of recognition both of non-nationals and non-Europeans in the contexts of contemporary migration and EU-driven Europeanisation. The paper considers the concept of cosmopolitanism in both normative & analytic terms, & in terms of their relevance to this challenge to the sociology of Europe. The paper argues that the cosmopolitan perspective has considerable potential sociological & social theoretical relevance & use providing it is interpreted i) normatively in "minimal" or "negative" terms, & ii) analytically in ways which focus on the "coexistence" & "complexity" characteristics of European history & sociality. The discussion draws on aspects of my book "Exploring the Sociology of Europe: An analysis of the European Social Complex" (2010, Sage, London).

2010S02212

Roderick, Martin (School of Applied Social Sciences, Durham University, Durham, UK, DH1 3HN [tel: 0191 334 6990; e-mail: m.j.roderick@durham.ac.uk]), **The Importance of Disappointment in Sport,** *International Sociological Association, Gothenburg, Sweden,*

¶ Based on interviews with 47 professional footballers, this paper explores the narrative conception of identity of players who experience feelings of failure as institutionalised aspects of their work. Commencing with a critique of research undertaken on athletic identities, the paper then discusses the way players "cushion" their sense of self during "passages of vulnerability", such as non or de-selection; cultural aspects of the game which are ingrained into the bodily capital of participants. Key to understanding the narratives constructed by players to account for their failures are the concepts of temporality & interdependence, for the sense of rejection experienced subjectively, and transformations of identity more generally, are always the outcome of interaction with others. A narrative identity provides a subjective sense of self-continuity as players symbolically reinterpret the events of lived experience in the plot of the story they tell about uncertain times in their lives.

Rodríguez, Jose A., Ramon, Anna & Arroyo, Liliana (Dept. of Sociology and Analisis of Organizations, University of Barcelona, Av. Diagonal 690, Barcelona, Spain, 08034 [tel: 0034.93.402.18.04; fax: 0034.93.402.18.04; e-mail: liliana.arroyo@gmail.com]), **Spirituality, Buddhism and Buddhist Practices among University Students in Spain,** *International Sociological Association, Gothenburg, Sweden,*

¶ Amidst an apparently fast process of secularization, we are also witnessing a growth of new religious practices, replacing the once dominant Catholic one, either by immigrant populations (Islam, and Christian practices from Latin-American & Eastern European countries) or by young generations & middle classes (the case of Buddhism). In Spain, as in other European societies, interest in Buddhism has been rapidly growing for the last 25 years. In fact, in 2007 it was accepted by the State as an established religion, given the growth of practitioners & sympathizers as well as its presence in social public life. It seems that one of its main spread & entrance venues is through young generations being raised in mostly non-religious societies. In this paper we attempt to address the issue of perception, approach & practice of Buddhism by youth. We intend to look into whether & on what conditions Buddhism is taken & used either as a religion or as a philosophy guiding a life-style, & whether some "external" practices related to Buddhism (meditation, yoga, tai chi, mantra chants, healing arts) are more popular & used than the religion itself (as a strict set of values & beliefs). We will also try to confirm results from previous studies showing that Buddhism is supposed to attract middle-class individuals with high cultural capital, who are interested in spirituality more than in religiosity. To answer these questions, we carried out a two-wave survey of (586) university students in different disciplines from the University of Barcelona in 2008 & in 2009.

2010S02214

Rodriguez, Jorge & Safranoff, Ana (Universitat Pompeu Fabra, Ramon Trias Fargas, 25-27, 08005 Barcelona, Spain [tel: 34687161665; e-mail: jorge.rodriguez@upf.edu]), **Homogamy and Mobility,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper aims to test: 1) the differential impact of father and mother's socio-economic statuses (SES) on son & daughter's SES; 2) the independent impact of homogamy (marriage between individuals of similar SES) on son & daughter's SES & its mediating role in father's status transmission; & 3) how much differences in inter-generational immobility across four European countries (Norway, Germany, United Kingdom, & Spain) are explained by homogamy's prevalence, due to differences in socio-economic inequality and gender segregation. Tests are performed using the 2005 European Statistics on Income & Living Conditions survey (EU-SILC). Socio-economic status is operationalized by adapting the International Socio-Economic Index (ISEI) to the 2-digit ISCO codes of the EU-SILC, averaging 4-digit occupations ISEI scores across 2-digit occupations in the 2005 European Social Survey. Housewives' ISEI scores are imputed separately for respondents with different propensity to do domestic chores, correcting for selection effects. Results show: 1) positive effects of father's on son's SES in more gender segregated countries & small effects of mother's on children's SES; 2) negative effects of homogamy on son's SES among low status parents, positive among high status ones; 3) higher rates of homogamy among low status parents in gender segregated countries & among high status parents in less segregated ones, partly explaining stronger impact of father's on son's SES in the former.

2010S02215

Rodriguez, Perez Leonardo (Pierre Du Bois Foundation, Fondation Pierre du Bois Ch. Jean-Pavillard 22 1009 Pully Suisse [e-mail: perez.rodriguez@graduateinstitute.ch]), **Political Conflicts in the Interpretation of Indigenous Peoples Self-determination in Colombia after 169 ILO Convention,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ The purpose of this paper is to analyze the social & political conflicts between the indigenous peoples & the Colombian State in the interpretation of self-determination after the ratification of 169 ILO Indigenous & Tribal Peoples Convention of 1989. At first, we will examine the interpretation of self determination from the point of view of nation-states & indigenous peoples during transnational & international meetings (ILO, UN, OAS). We will describe the points of agreement & conflict at the transnational and international level in order to better understand how these points affect the Colombian situation. Finally, the conflicts between various indigenous peoples & the Colombian State over the definition of the right to self determination will be examined. We shall also briefly describe the impact of other actors such as UN, ILO, OAS, ONGs, churches & anthropologists. As a general assumption, we postulate that indigenous peoples do not have the legal means to defend themselves against the consequences of "national security" discourse & the State's desire to keep sovereignty over the entirety of its current territory. In spite of the internal self-determination recognized by the 169 ILO Convention & the UN Declaration on the Rights of Indigenous Peoples, these peoples remain subordinated to the old raison d'Etat.

2010S02216

Rodriguez, Sandra (Department of Sociology / University of Montreal, Montreal, Quebec, Canada, H2H 2C7 [tel: +1 514 5239109; e-mail: sandra.rodriguez@umontreal.ca]), **Making Sense of Social Change: Understanding Collective Action among a Web 2.0 Generation,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores the relationship between the increased use of social media & how a younger generation gives meaning to collective action & chooses to convey social change. Drawing on qualitative interviews conducted with young adults (20-35 years old) in 2008-2009, we look beyond typical characterizations of a technology savvy generation, while trying to understand how the Web 2.0 alters it's everyday understanding of social & political participation. Focusing on innovative uses of ICTs by transnational movements & cyberactivists, recent studies suggest new social media have deeply transformed the meanings & definitions associated with "collective action", "community" & "social change". Yet, very little attention has been given to the analyzing of these meanings. This paper aims to transcend the barriers that divide social movement perspectives, by underlining the role played by social networks in the circulation & diffusion of interpretations, meanings & everyday actions. Calling for a flexible approach, it suggests the need to rethink what we analyze and define as engagement, participation & social change. As relational paradigms quickly transform, research should pay crucial attention to the ways in which actors choose to bring shifts in collective ways of thinking, acting & perceiving - on, or off the Web.

2010S02217

Roeder, Antje & Muhlau, Peter (Trinity College Dublin, Dublin [tel: 00353863623233; e-mail: roedera@tcd.ie]), **Immigrants' Confidence in the Criminal Justice System in Europe - The Role of Discrimination and Evaluative Frameworks,** *International Sociological Association, Gothenburg, Sweden,*

¶ What determines the confidence of immigrants in criminal justice institutions? Using pooled data from the four rounds of the European Social Survey, first & second generation immigrants' trust levels are compared to those of the native population. Multi-level modelling is employed to examine the role of various factors linked to individual & immigrant group characteristics, as well as factors related to the host & origin country. Most importantly, we examine the actual quality of criminal justice institutions in the host country, the effects of discrimination and social exclusion on trust, & the role of dual frames of reference linked to the quality of the legal system in the country or origin. Real & perceived discrimination of ethnic minorities and immigrant communities by police forces as well as the overrepresentation of certain minority groups in the legal justice system in many countries are expected to lead to lower trust amongst some immigrant groups, which is anticipated to impact particularly on those of different ethnic background than the majority population & of lower socio-economic status. This may be balanced to some extent by a generally more positive evaluation of the quality of these institutions by immigrants from countries with weak criminal justice institutions if they compare the host country institutions to those of their respective countries of origin. This effect is expected to fade over time as the origin country experience becomes more distant, & as immigrants adopt a more similar evaluative framework to the native population.

2010S02218

Roeland, Johan (Department of Sociology, Erasmus University Rotterdam [e-mail: roeland@fsw.eur.nl]), **The Quest for Religious Purity in New Age, Evangelicalism and Islam: Religious Renditions of Dutch Youth and the Luckmann Legacy,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper, we address New Age spirituality, evangelicalism and Salafism, three vital forms of religion among contemporary Dutch youth. Central to these forms is a "pursuit of purification": a search for a religion beyond what is seen as "inauthentic" religious traditions & institutions. We will argue that the vitality of these "purified" religions undermines the analyses of Luckmann & his followers, who hold that modern religion will develop into a highly individualized & superficial practice of constructing personalized packages of meaning that remain without wider social & public significance. One might expect this to happen with respect to the three forms of religion discussed in this paper, given the fact that the "pursuit of purification" leads these young believers beyond the traditional parameters of religion. What we, however, find among young New Agers, evangelicals & Salafi Muslims is that their religion is neither ephemeral & superficial, nor socially unorganized, nor publicly insignificant. This suggests that there may be another future of religion in the West than depicted by the privatization paradigm. After all, the vital religions discussed in this paper may move beyond religious traditions & institutions, yet this does not result in a privatized religion.

2010S02219

Rogers, Jennifer B., Harthorn, Barbara Herr & Shearer, Christine (Center for Nanotechnology in Society, UC Santa Barbara, Santa Barbara, CA 93106-2150 [e-mail: jenrogers@cns.ucsb.edu]), **Visions of Nanotech Futures: A Feminist Analysis of Nanotechnology Deliberative Workshops,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper explores the relationship between gender & visions of utopian & dystopian nanotechnology futures in deliberative settings designed to enhance public participation in science and technology research & development. The work builds on studies that show that gender & other social locations of participants influence their perception of technological risk. This paper will draw on comparative mixed- & same-sex dialogues from six nanotechnology deliberative workshops held in the US in 2009 on nanotech health & human enhancement applications & nanotech energy & environment applications. This paper will explore gendering (and racing) of constructions of technologically altered futures. This study uses a feminist intersectional approach that considers the implications of impor-

tant social locations (including race, class, gender, & age) as well as personal histories in women's & men's constructed understandings of emerging technologies. Themes to be explored include perceived benefit and risk, trust in governments & corporations, safe regulation, fairness & equity, and, more broadly, the meaning of deliberative participation.

2010S02220

Rogge, Benedikt G. (Institute of Empirical and Applied Sociology (EMPAS), University of Bremen, Celsiusstrasse 1, FVG, Room M 1051, 28359 Bremen, Germany [e-mail: brogge@empas.uni-bremen.de]), **How Unemployment Gets Under the Skin. A Longitudinal Interview Study on Joblessness, the Self and Mental Health,** *International Sociological Association, Gothenburg, Sweden,*

¶ The present study links up with earlier research on biographical events & mental health. It deals with how unemployed individuals give meaning to their life situation, how this process relates to their mental health & what role social contexts & social inequalities play. Theoretically, the study draws on the sociology of the self & on psychotherapeutical consistency theory. Based on these theories, the study focuses on the concept of self-congruence as a key dimension of mental health. The empirical study explores how unemployed people construct self-(in)congruence with regard to their biographical situation. 25 unemployed Germans from heterogeneous social backgrounds were interviewed 8 & 15 months after job loss respectively. To triangulate mental health, symptom checklists were applied. The interviews focused on self-congruence as to three analytically distinct dimensions of context. These are individuals' retrospective perceptions of their biographical context (1), current perceptions of their immediate social context (2) & of the wider sociocultural context (3). Corresponding to these dimensions, the empirical analysis shows in what ways self-congruence relates to pre-unemployment narratives and job loss narratives that is how individuals construct biographical normalcy, controllability & continuity in and despite unemployment (1) - perceptions of role-identities that is how individuals' social roles, such as parent or leisure roles, change in unemployment ranging from their decline to their deliberate cultivation (2) - processes of self-labelling that is how people deal with perceived cultural beliefs & social norms on unemployment ranging from self-stigmatisation to self-immunisation (3). However, these constructions are not detached from "social reality". The analysis finally relates interviewees' self-congruence to their financial resources, educational backgrounds & partnership/family status. While these factors do not fully determine self-congruence in un-employment, they clearly do lead to diverse social patterns. The study thus illuminates the complex process at the heart of the often detrimental mental health effects of the biographical event unemployment.

Roggero, Pascal (University of Toulouse-Capitole, Toulouse, France, 31042 [tel: +33561128702; fax: +33561128708; e-mail: pascal.roggero@univ-tlse1.fr]), **Simulation multi-agents et complexité sociale ou comment faire du complexe avec du simple. L'exemple de la plateforme SocLab** (Multi-Agent Simulation and Social Complexity, or How to Form the Complex with the Simple. The Example of the Platform Soclab), *International Sociological Association, Gothenburg, Sweden,* (FRE)

¶ Depuis cinq ans une équipe composée de sociologues et d'informaticiens de l'université de Toulouse travaille au développement d'une plateforme de simulation des "systèmes d'action" a concept utilisé pour rendre compte de la régulation des organisations (Crozier et Friedberg, 1977 ; Friedberg, 1993) a dénommée SocLab (Roggero et Sibertin-Blanc, 2007). Cette plateforme est aujourd'hui aboutie et a été appliquée notamment dans le cadre d'un projet européen Life, Concert'eau sur la gestion de l'eau (Vautier et Roggero, 2008) . Elle permet de modéliser et simuler le fonctionnement d'organisations, de valider in silico des études empiriques et d'explorer rigoureusement les états potentiels des systèmes étudiés. Cette démarche est partie d'un besoin et d'un constat. Souhaitant opérationnaliser les concepts de la "pensée complexe" (Morin, 1977-2004), des difficultés sont apparues pour représenter rigoureusement des processus sociaux comme des phénomènes "auto-éco-réorganisationnels". Parallèlement, les systèmes multi-agents (Ferber, 1999) utilisables dans le cadre de la simulation sociale (Gilbert et Troitzsch, 2005) ont démontré leur utilité. Nous avons donc travaillé à élaboration interdisciplinaire d'un système multi-agents, fondé sur une sociologie éprouvée et capable de mieux représenter, selon nous, la complexité des processus organisationnels. Mais faire du complexe avec du simple ne va pas sans limite.

Rogowski, Łukasz & Rohloff, Amanda (Adam Mickiewicz University, PoznaA, Poland, Instytut Socjologii UAM, ul. Szamarzewskiego 89c, 60-568 PoznaA, Poland [e-mail: lukasz.rogowski@gmail.com]), **Sociology of Contemporary Iconoclasm Moral Panics as Civilising and Decivilising Processes? A Comparative Discussion,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper draws from a variety of case study examples of "moral panic analyses" to comparatively explore the variant forms "moral panics" take & how they develop, thereby analysing the multiple forms civilising processes can take. Using "moral panic" as an illustrative example, this paper will discuss how & to what extent civilising processes can give rise to decivilising trends (in the form of moral panics) yet, at the same time, these moral panics can also bring about integrative "civilising" effects in the form of civilising offensives that reflect possible long-term civilising trends (in the form of accelerated campaigns; a civilising "spurt"). Throughout this comparative discussion, I aim to highlight not only the complexity of civilising processes, but also the complex civilising & decivilising aspects of moral panics, thereby overcoming the dichotomous normative conceptualization of moral panics as being either "good" or "bad" panics. The paper concludes with a discussion of the paradoxical idea of viewing moral panics as civilising & decivilising processes.

Rojas Ramos, Moisés K. (Universidad Nacional Mayor de San Marcos, Lima, Perú, Lima 01 [e-mail: moisesULrojasramos@hotmail.com]), **Aprista Party Life and the Construction of Structures: A Participant Observation Approach,** *International Sociological Association, Gothenburg, Sweden,* (SPA)

¶ The aim of the speech is to present the results & methodology of the author's thesis research about the construction of the party structures–regularities: the commitments, joining, identifications, identities, sympathies, agreements, obligations, demands, etc.–of "partido Aprista Peruano" (PAP), a Latin American & Peruvian historical political party & a great tradition. The structures of the PAP are based on multiple types of daily political practices that combine the instrumental rationality with the affective & the magical-religious practices. All this turns the PAP into a complex research area & typical in relation to the Latin American political practices that are also predominantly transitional–between the pre-modern, modern and postmodern practices. As a study of political practices, the most important part of the methodology is the participant observation–this implied being an active member of the party during 2 years–along with informal interviews, in depth interviews, life histories and free associations. In this way, the thesis becomes a description & comprehension of the APRA party life, its active militants in their daily practice, tracing the ways to construct the regularities, highlighting the particular dimension that has the Peruvian culture & that demands the researcher to employ unique methods of research. How are the structures in the PAP built? What is the methodology used in this study? These are the questions that will articulate the speech. To that end, I will present the research topic, then define what we call the methodology of participant observation, justifying their use, the problems they had to deal with, strategies to resolve them & finally will discuss the consequences of using this methodology, most of them have to do with epistemological issues.

Rojas-Pinilla, Humberto (Rural and Regional Development Department, Pontificia Universidad Javeriana, Transv 4No 42-00 P 8 [tel: 57 1 3208320; fax: 57 1 3208320 Ext 4848; e-mail: humberto.rojas@javeriana.edu.co]), **Sustainable Tourism Notions Proponed by UN WTO and the Colombian Policy to Promote Ecotourism Can Really Contribute to Rural Territorial Development, From the Perspective of Local Population Increase of Access, Control and Distribution of, Tourism Resources?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The UN WTO & national governments worldwide have been promoting Sustainable Tourism (ST) as a promising activity for alternative development, particularly for the Sustainable Development of rural areas & consequently the alleviation of rural poverty. However, the Territorial Rural Development (TRD) perspective is focused on analyzing Power, namely how different stakeholders at various levels (local, national & international) have different possibilities of practicing power in terms of access, control and distribution of tourism resources in six main dimensions; social, economic, ecological, institutional, political & cultural and each one can be further subdivided for further analysis. The paper is divided in three sections. The first part presents the TRD perspective & how to use it to analyze the sustainability of tourist dynamics in relation to the territory from a multidimensional approach. The second section analyzes the last ten years UN WTO Declarations on Sustainable Tourism & how successful it can be in tackling the power relations asymmetries between the tourist stakeholders at different levels & the varying local contexts of less developed economies. The third section analyzes the Colombian ecotourism promotion policy and its principles and strategies and the effects of one of the tools fully promoted in it; the concession of tourist services to private tourist enterprises at the national natural parks, examining in one case the participation of rural population on tourist activities before & after the implementation of the concession & its implications in terms of sustainability from a multi dimension approach.

¶ Il existe en Argentine, à côté de la société civile, une société militaire, un secteur du pays imprégné d'une culture particulière, élaborée à partir de certaines représentations qui placent ses membres au-dessus des institutions et des lois de la République et qui, tout au long des années a construit un récit capable de vendre aux autres citoyens leurs valeurs et donc leur réalité : une histoire qui dit aux gens comment le pays est née et de quelle manière il faut que tous le voient. Nous essayerons de faire la lumière sur cette sorte d'histoire heroïque, ensemble articulé de signifiants dont on ne peut dire seulement qu'il s'agit d'un imaginaire militaire, bien qu'il soit une part constitutive de celui-ci. Comme nombreuses "stories" du nouvel ordre narratif, celle des militaires argentins s'exprime à partir d'une position qui énonce une demi-vérité : le rôle important des militaires dans l'émacipation des colonies espagnoles qui deviendront l'Argentine de nos jours. Cette participation permet aux uniformisés d'aujourd'hui pretendre que "l'armée a défendu la Patrie, avant même que celle-ci n'existât formellement, en protégeant le nouvel être, à la naissance duquel elle a contribué de manière décisive, comme glorieuse accoucheuse de l'histoire". Cette position est élaborée à travers une série d'opérations dont le centre est la Patrie. Ces opérations s'enchaînent de la façon suivante : au départ les militaires affirment leur rapport privilégié avec la Patrie sur la base de l'identification non-historique entre Patrie et forces armées et sur la base de la continuité immuable de l'institution militaire. Ensuite, ayant dissocié la Patrie entité socialement unifiée de la société déchirée par les passions et les intérêts les forces armées peuvent se présenter comme le seul lien entre celles-ci et comme l'unique facteur capable de modifier la société pour reconstituer la fusion originaire. Donc, les militaires assument la représentation de la Patrie, en vue de leur autolégitimation. Le noyau de celle-ci réside en leur prétention à en être les seuls porte-paroles : ils ont le monopole de la Patrie et, en ce sens, jouissent de la prérogative de savoir quelle est la "meilleure société", celle qui convient au pays, savoir unique et de statut privilégié que leur assignerait le rôle de gardiens de la continuité legal des régimes (et de responsables derniers de son interruption éventuelle).

Rolandsson, Bertil (Department for Educational and Behavioural sciences, Järnvägsgatan 10, SE-501 90, Borås, Sweden [tel: +46 33 435 42 06; e-mail: bertil.rolandsson@hb.se]), **Professional Strategies for Handling Risks and Opportunities in Open Modes of Software Development,** *International Sociological Association, Gothenburg, Sweden,*

¶ Software companies today align with communities of volunteering programmers whom develop open source software on the internet as a common good. Networks of open source developers then become resources empowering professional programmers & their capacity to innovate at work. In this text we investigate how this change demands that professional programmers also govern their own way of handling risks concerning e.g. patent-, security- or reliability problems. The text contributes to a broader understanding of how open modes of production affect the way contemporary knowledge workers handle uncertainties at work. In the analysis, a Foucauldian concept of governance, as well as organizational sociology enable an analysis of the interplay between organizational arrangements & societal discourses on openness and innovation. The paper is based on qualitative interviews with 30 programmers in two types of companies: one at proprietary-oriented software firms that have incorporated open source software, which we call hybrid companies, & the other group at so-called pure-play SMEs that is formed around a business model based on open source. The result show how a reliable mode of open source software development is perceived differently in hybrid and pure-play firms, & how organizational conditions affect programmers' strategies for controlling their own mode of developing software. Keywords: Open modes of production, professional programmers, self-governing, common good, risk.

Romano, Virginia & Pipan, Tatiana (University "Sapienza" of Rome, via salaria 113, 00198, Rome, Italy [tel: 00393496907827; e-mail: virginia.romano@yahoo.it]), **The Contagion of Fear. Waiting for the "Avian" Pandemic,** *International Sociological Association, Gothenburg, Sweden,*

¶ Risk can be broken down in at least two different categories: that of objective risk (statistical probability of one event occurring), and the one of perceived risk. (Boholm, 1996). In nowadays globalized society, media are believed to be the most important source of risk perception from citizens; their influence is, most of the times, described as prone to distorsion & sensationalism. The risk phenomenon is thus connected to the way people conceive and interpret the world, & as a consequence, to its epistemological extension: the way they come to know what happens (Boholm, 2003). In our work, we tried to tell about social constructions emerging, during the pandemic alert, from four different types of actors having voice on Italian newspapers a medical doctors, pharmaceutical companies experts, national governments & International institutions a inside performative constructions & re-constructions of incertainties & scientific ambiguities. Some of these were legitimated & produced effects while some others just dissolved. Nevertheless, interests of the different actors, may vary, transforming the themes of danger, risk and security, more & more controversial.

Romanov, Pavel V. & Iarskaia-Smirnova, Elena R. (State University - Higher School of Economics, Dept of Social Economic Systems and Social Policy, Moscow, Russia, 109028 [tel: +74956250211; fax: +74956250211; e-mail: pavel.romanov@socpolicy.ru]), **Identity Policy of Social Anthropologists / Ethnographers in Post-Soviet Russia: Obstacles to International Integration,** *International Sociological Association, Gothenburg, Sweden,*

¶ Social/cultural anthropology as an occupation has a long history in the Old & New World. The representatives of this professional community have been affiliated among academic scholars, consultants of governmental agencies & diplomatic bodies, in business and international development programs as well as in non-governmental sector. On the one hand, classic ethnography no longer owns a monopoly of knowledge in anthropology & the experts from the older generations consider these two terms as synonyms at least in Russian situation. They favor the development of anthropology in all possible forms. On the other hand, influential groups of professionals claim the sovereignty of the borders of ethnography and deny legitimacy of the new social anthropology institutions. The latest attitude was a drive towards the elimination of undergraduate curriculum in social anthropology under the major restructuring of higher education known as the Bologna process. This political decision was made by the government officials under the guidance of Russian ethnographers who blame "social anthropologists" for their denial of academic tradition, neglect of high professional standards & following of scholastic legacies of Soviet philosophy. Analysis is based on series of 18 semi-structured interviews with the heads of the university departments of social anthropology in seven Russian cities as well as with the graduates of those department employed in service, business & research organizations

Romanova, Maria (Moscow State University [e-mail: mavromanova@gmail.com]), **Entrepreneur's Risks as System,** *International Sociological Association, Gothenburg, Sweden,*

¶ I would like to use system method to entrepreneur's risks. It's real because they have all system's characteristics. In this way, entrepreneur's risks is system, which exists in information uncertainty. Its current condition depends on its elements changing and influencing of external factors in past. Information uncertainty is a situation when there is no mathematical model allowing completely to describe enterprise risks as system. It is impossible to characterize all elements entering into it & their change under the influence of external factors, also there is no complete description of behavior of the given system at various values of its parameters. The choice of elements of system depends on pursued problems. On an example, it is possible to include the businessman, its firm, risks which it is planned to consider, competitors, consumers, investors. Algorithm of modeling of system of enterprise risks 1. Statement of the purposes & problems; 2. Allocation of significant elements of system; 3. The description of elements of system; 4. Construction of structure of system; 5. Revealing of stable relations between elements; 6. The description of environment round system; 7. Likelihood forecasts of change of system under the influence of an environment in the future; 8. Check of the received results; at model construction it is necessary to define accurately a time interval which it describes. It is necessary to define significant events in the past, made notable impact on model elements in the present, & to allocate the period for which the forecast becomes. For effective application of the given approach it is necessary to check up the received system. It can be made by means of the methods developed by the theory of probability.

Ronald, Richard (University of Amsterdam, Nieuwe Prinsengracht 130, 1018 VZ Amsterdam [tel: +31650880824; e-mail: r.ronald@tudelft.nl]), **The Rise and Rise of Home Ownership Policy,** *International Sociological Association, Gothenburg, Sweden,*

¶ In the early years of the 21st century, property markets & housing policies featured strongly in the reordering of global capitalism. On the one hand, housing finance & mortgage securitization became ever more central to globalized capital, while on the other, housing commodification became characteristic of government policy, encouraging property investment & increasing home ownership rates. This shift aligned with a post-welfare state agenda concerning individual housing asset wealth as the basis for future welfare provision. This agenda was fed by market augmentation that provided an impression of wide scale capital gains among home-owners. More recently, the embeddedness of housing in economic life has become evident in both the downturn in the global economy and in the impact of this decline on households via the erosion of housing equity, the evaporation of credit & the growing precariousness of tenure. Moreover, governments appear to have become victims of earlier policies in terms of conflicting pressures now being exerted by different housing market constituencies: while established homeowners require governments to maintain housing values in order to support the asset-base of welfare, younger cohorts need home-purchase to become more affordable in order to build their own assets. Meanwhile, large proportions of the population remain excluded from owner-occupation, demanding the continuation of public support for housing & other welfare needs. This paper considers how far home ownership has come as a feature of welfare & contemporary socioeconomic governance. It goes on to consider how housing policies & owner-occupied housing markets are likely to feature even more in emerging approaches to economic recovery. It draws on a variety of national cases to illustrate links between housing systems & social change.

Rønningen, Katrina, Noe, Egon, Schwartz, Gerald & Renwick, Alan (Centre for Rural Research, 7491 Trondheim, Norway [tel: + 47 73 59 18 99; fax: + 47 73 59 17 12; e-mail: katrina.ronningen@rural.no]), **Multifunctional Agricultural Policies and the Neo-Productivist Turn?: A Comparison of EU- and Norwegian Approaches, Interpretations - and Some Implications of Climate Change, Food Crisis and Decoupling,** *International Sociological Association, Gothenburg, Sweden,*

¶ Within the context of climate change, a focus on food security which is creating a renewed impetus for "neo-productivist" approaches in some quarters, & a simultaneous decoupling of agricultural support systems, we ask what consequences this may have for policies, schemes & activities related to agri-environmental measures & rural development. We compare how multifunctional agriculture has been defined, interpreted, implemented & how it is possibly changing within both the EU (drawing on experiences from Scotland, Denmark & Germany) & Norwegian (non-EU member) cases. Within each case study country, we ask to what extent and how are the policy discourses changing under the influence of a "new context" of climate change, food crisis & decoupling, and to what extent may this be seen as representing a "neoproductivist turn" that is repriviledging productivist approaches to support policy goals of food security? Is it possible to detect any substantial consequences of neo-productivism for multifunctional policy approaches in agriculture with respect to environmental/ecological ambitions & farm diversification? How robust is the legitimacy of multifunctional agriculture & the issue of environmental sustainability in this supposedly new situation for agriculture? Methodologically we draw on secondary sources & official statistics to analyse political discourse and actual developments.

Rooks, Ronica N. (University of Colorado Denver, P.O. Box 173364, CB 188, Denver, CO 80217-3364, USA [tel: 1-303-556-2506; fax: 1-303-556-8501; e-mail: ronica.rooks@ucdenver.edu]), **Who's Getting Sicker Faster among Well-Functioning Older Adults?,** *International Sociological Association, Gothenburg, Sweden,*

¶ A few studies support the accelerated aging hypothesis, where the pace of aging is 10 years younger for Blacks vs. Whites in chronic disease prevalence. But, other research supports the Black-White crossover in life expectancy from ages 70-85, where Black adults survive higher disease prevalence & mortality risks than White adults. In conflict, these theories state that Black adults get sick earlier in life due to discrimination, while other Black adults survive adversity & become more robust than White adults in old age. This research tests if well-functioning older Black adults get sick at a slower rate than their older White adult counterparts over time. Data are from the 14 year Health, Aging, and Body Composition (Health ABC) cohort study of 3,075 community-dwelling, well-functioning Black (42%) & White, women (52%) & men, aged 70-79 at baseline in 1997. Results showed coronary heart disease (CHD), cancer, diabetes, self-reported/medications (HBP1) & clinically-measured (HBP2) high blood pressure, & stroke incidence rates (IR) were decreasing or equal (yrs 2-3), while prevalence rates (PR) were increasing for both sexes (yrs 1-3). Black

IR (yr 3) were higher than Whites' except for CHD in men, HBP1 in women, & cancer. Black PR (yrs 1-3) were higher than Whites' except for CHD in men and cancer [Black vs. White PR in men (yr 3): CHD (25.2 vs. 31.5), diabetes (24.2 vs. 16.3), HBP1 (59 vs. 45.5) & stroke (10.3 vs. 7.5)]. These trends suggest well-functioning Blacks were just as at risk for incident diseases as Whites in short-term follow-up. What explains this is unclear. However, a longer-term follow-up using data available up to year 10 is a next step to better understand these trends.

Ros, Adela & Boso, Àlex (Internet Interdisciplinary Institute, Universitat Oberta de Catalunya, Av. Canal Olímpic s/n. Parc Mediterrani de la Tecnologia. 08860 Castelldefels (Barcelona). Spain [tel: +34 936735003; fax: +34 936641970; e-mail: aros@uoc.edu]), **Immigrants' Accommodation to the Network Society: High Access for Staying in the Same Place?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The introduction of new information & communication technologies (ICTs) among immigrant population is one of the most relevant and recent social events in the field of migration studies. In general terms, so much the extent of the access of the ICTs among immigrant groups, as its possible consequences, are still unknown phenomena that have to be studied more in-depth. This study focuses on the conditions of access & use that immigrants give to ICTs in Spain. Our analysis relies primarily on data coming from the Spanish Survey on the equipment & the use of information and communication technologies (Instituto Nacional de Estadística 2009). The first results show that immigrant access to ICT is higher than for native population. However, as we go deep on the statistical analysis, evidences show that high access is a false mirage of reality: first, access has multiple layers & immigrant access to ICTs is shaped by social conditions. Second, the origin variable has an independent effect when controlling for other determinant factors like age, level of studies or social status. Third, immigrants use ICTs conditioned by their own needs and possibilities. We suggest that any empirical analysis–both qualitative & quantitative–on the new conditions of immigrants in technological societies should take into account this general frame.

2010S02237

Rosa, Hartmut (Dept. of Sociology, University of Jena, 07737 Jena, Germany [tel: +49-3641-945511; e-mail: hartmut.rosa@uni-jena.de]), **The Concept of Resonance as Alienation's Other,** *International Sociological Association, Gothenburg, Sweden,*

¶ One of the major obstacles in any attempt to properly define "alienation" is the fact that it lacks a positive counter-term: What does it mean to be non-alienated? What is alienation's "other"? This paper seeks to define alienation as a distortion in self-world relationships which consists in the absence of "resonance": We feel alienated from friends, family or society when we feel that they don't "resonate" with us any more; and similarly, we feel alienated from work, religion or nature if, in our experience, they turn silent, indifferent or even hostile for us. Thus, the concept of "resonance" (or of a "resonating world") can be used to avoid essentialist, naturalist or substantialist notions of human nature or the good life. Sociology's challenge, then, is to define "resonance" & to identify social conditions which support or prevent the establishment of "resonating" relationships. Modernity's greatest fear, it will be argued, is the appearance of a silent, non-resonating (i.e: alienated, disenchanted, reified) world.

Rosa, Rodrigo, Lorga, Catarina, Lyonette, Clare & Wall, Karin (CIES/ISCTE-IUL, Edifício ISCTE, Av. das Forças Armadas, 1649-026 Lisboa (Portugal) [tel: +351 212343104; e-mail: rodrigo.rosa@iscte.pt]), **Marriage and Gender Inequality: Work-Family Arrangements of Portuguese and British Highly Qualified Women,** *International Sociological Association, Gothenburg, Sweden,*

¶ In this paper, our main goal is to examine work-family reconciliation of highly qualified women in order to understand if, over the course of marital life, they become socially closer or farther away from their partner. Our analytical framework focuses on the interrelationships between female reconciliation strategies, the family division of labour & marital dynamics in dual-career couples. Drawing on in-depth interviews with highly qualified women in Portugal (27 interviews) & Britain (30 interviews), we compare these processes in two societies with different historical and social backgrounds. Findings reveal three main typological configurations of social (in)equality between spouses, which emerge during married life: growing inequality in favour of the man (hypergamy), in favour of the woman (hypogamy) or equality between spouses (homogamy). With due attention to the importance of national specific factors, we present three main conclusions. Firstly, among Portuguese women the most common marital pathway is the hypergamic, while amongst the British women, the most common marital pathways are either homogamic or hypogamic. Secondly, the partner's support of the female career is decisive in the construction of social equality in both British & Portuguese couples. Women who manage to have a career as successful as the partner's are highly dependent on his support in pursuing their professional goals. Those who accept that the partner's career takes precedence resent the lack of support for their career. Thirdly, for British women the pathways that emphasize social distance in the couple are associated with women who work part-time, thereby reinforcing a traditional gender-based division of labour, which emerges as an obstacle in bringing women socially closer to men during marital life. Portuguese women who give priority to family tend to stay in full time work but they choose occupations that are less demanding in terms of time and responsibility & therefore less ambitious career-wise.

Rosário, Edite F. & Santos, Tiago F. (Númena - Research Centre on Social Sciences and Humanities, Taguspark, Núcleo Central, 379 [tel: +351933263452; fax: +351214240169; e-mail: edite.rosario@numena.org.pt]), **Migrants' Conceptions of Integration,** *International Sociological Association, Gothenburg, Sweden,*

¶ The existing literature on integration overwhelmingly adopts a perspective that is informed by the social position of its producers & the origins of its funding. The point here is to reverse this & scrutinise migrants' own conceptions of the subject. For this purpose we will resort to semi-structured interviews with migrants with a diversity of backgrounds. The ensuing corpus then are subject to content analysis. Thus we expect to discuss the concept in a novel way; to signal dimensions that migrants consider fundamental regarding their achievements; to identifying new measurable indicators for quantitative research; to give voice to migrants in the debate on integration. The completion of this work programme will fill a gap in the field of the current research.

Rosenthal, Gabriele & Witte, Nicole (Faculty of Social Sciences, University of Goettingen, Goettingen, Germany, 37073 [tel: 00495513912413; e-mail: g.rosenthal@gmx.de]), **Images of the Others or Images of Otherness? Figurations of Muslims, Christians and Jews in Israel and Palestine,** *International Sociological Association, Gothenburg, Sweden,*

¶ Our paper is based on research conducted in different regions of Israel & the areas administered by the Palestinian Authority. We study social constellations & dynamics of interaction between members of different social groupings that are mutually dependent on each other. We pursue the question of whether & in which way the situation of the respective numerical minority (e.g. Christians, Jews, or Muslims) constitutes an established-outsiders figuration. Our inquiry relies on different methods (biographical-narrative & thematically focused narrative interviews, participant observation, video-analyses of social interaction, questionnaires) & their combination. Stigmatization plays an important role in figurations of established and outsiders. The established ascribe to outsiders negative characteristics according to presumed objective attributes (e.g. skin color or accent). In the geographical context of Israel and Palestine, these simplifying ascriptions refer to manifold and often irregular combinations of attributes. Discrediting and idealizing we- (and they-) images exist in complex interrelations with ethnic & religious belongings. Our first findings indicate that these ascriptions are very spontaneous; yet both our interviewees & we ourselves as social scientists felt confident in making them. The methods of classification that are used for this purpose are mostly not applied in a conscious or reflected manner. In our presentation we will highlight these findings using several examples. We will pursue the question as to which attributed qualities or combinations thereof become relevant in these examples & to what extent the image of the other varies according to one's own sense of belonging & life history.

Rössel, Jörg & Sunderer, Georg (Department of Sociology, University of Zurich, Andreasstrasse 15, CH-8050 Zurich [tel: 041 44 635 23 33; e-mail: roessel@soziologie.uzh.ch]), **Rational Choice Theory and Identity: An Empirical Test of the Independent Influence of Identity Maintenance on the Demand for Fair Traded Goods,** *International Sociological Association, Gothenburg, Sweden,*

¶ The personal identity is the image someone has of himself. This image doesn't comprise the whole multiplicity of a person's personality, but accentuates some traits of that person. In contrast, social identity contains the characteristics of a person that other persons typically ascribe to her. Within the scope of identity theories it is assumed that identity has an impact on behavior, because actors try to confirm their personal identity in everyday situations. Thus, identity maintenance can be seen as an impetus for action that can compete with other motivations of action (e. g. social approval or economic welfare). Up to now decision research gives little information as to what extent aspects of identity maintenance are included in rational choice models. In this regard, two positions can be formulated: On the one hand one could argue, that rational choice models wholly or at least partly neglect the impetus of identity maintenance & its relationship to preferences and beliefs & therefore identity confirmation has to be included into fully specified models. On the other hand one could contradict this thesis & rather claim that rational choice models implicitly cover identity completely 2 by taking preferences into account and therefore theoretical ideas about the relevance of identity confirmation are superfluous in a rational choice framework. This contribution wants to analyze empirically which position is appropriate. For that purpose, data taken from a study about consumption of fair trade products are analyzed. The positions will be tested as follows: Statistical models will be estimated which contain the usual preferences & restrictions of rational choice theory. In addition, aspects of identity, measured independently from the rational choice variables, will be added to the statistical models. If these aspects of identity maintenance provide additional explanatory power that the rational choice model does not cover the first position is confirmed. If this is not the case it is the second position, that has to be accepted. Furthermore, the study shall empirically prove if specific preferences can be understood as situational deductions from more general concepts of identity. The data used in the study are based on interviews of 1911 Cologne citizens included in a random sample. With these data it is possible to take economic, social & moral aspects into consideration within the scope of rational choice model. Aspects of identity were measured on three different levels which allows to test the influence of identity maintenance in a differentiated way. Firstly the identification with the relevant behavior (purchase of fair trade products) has been measured. Secondly a specific role identity has been surveyed a the self-expectation to be a socially responsible consumer. Thirdly the questionnaire included a scale with regard to the centrality of fairness in general, so that the influence of the identification with a rather broad value can also be verified. Hence, the given data are a formidable foundation in order to empirically test the two outlined theoretical positions concerning the relation between identity & preferences.

Rossi, Adanella & Brunori, Gianluca (Dept. Agronomy and Agroecosystem Management Group of Rural Economics - University of Pisa, Pisa, Italy, 56124 [tel: +39.050.2218985; e-mail: arossi@agr.unipi.it]), **The Path Towards Sustainable Consumption Styles. Analysing Citizens-Consumers' Life World,** *International Sociological Association, Gothenburg, Sweden,*

¶ There is a wide acknowledgment of the role that reflexive consumers can play in shaping the transition to more sustainable production-consumption systems, but at the same time there is an acknowledged need to better understand the process that underlies the daily adoption of sustainable consumption styles. This paper aims at giving a contribution in that direction by focusing its attention on the behaviour of reflexive citizens engaged in sustainable practices of consumption. Drawing on theories of sustainable consumption & on empirical evidences collected in Tuscany, that is characterised by a variegated & dynamic reality of "alternative production-consumption networks" & other grassroots movements of citizenship, it analyses the processes of change in consumers' attitudes & behaviour with regard (food /non food products & services) purchasing & consumption. In particular, on the basis of the findings of a direct survey, the paper examines the experience of consumers that for some years have been adhering to GAS (consumers' groups purchasing on the basis of solidarity criteria), thus already addressed to alternative choices of consumption and, more generally, of lifestyle. The analysis is founded on the belief that sustainable consumption cannot be obtained by addressing individual consumers only & that, on the contrary, it is necessary to look at the social, legal, and physical constraints individuals face when they try to act according to their values. Sustainable consumption paths indeed depend on the social, symbolic & material contexts where consumers live. From this perspective, thus looking at consumers' time-space & social patterns of life, in their turn conditioned by the socio-technical system that shape both economic & social life, the paper aims to identify & highlight all the critical points & the barriers that characterise the process of transition to sustainable behaviours.

Rossi, Elisa (University of Modena and Reggio Emilia, Department of Language and Culture Sciences, Largo Sant'Eufemia 19, 41100 Modena [tel: +39 59 2055922; e-mail: elisa.rossi@unimore.it]), **The Construction and the Treatment of Cultural Differences in Interactions at School: Practices of Mediation in Multicultural Classrooms,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper aims to discuss the appearing & the implications of intercultural communication in multicultural classrooms when a mediator is asked to promote active participation and personal/cultural expressions, coordinate differences & manage positively conflicts among students, during a four-hours activity on the themes of diversity & positive intercultural relationships in the classroom. Using video-taped sequences collected through a research in some middle schools in Modena (Italy) & focusing on the mediator-students interactions & the interactions among students, my analysis concerns the ways in which children's agency and cultural differences are expressed, observed, and treated/managed in these communication processes. Firstly, I concentrate on the mediator's actions & their consequences on the students' participation & display of cultural identities, contrasting the mediator's practices with the principle of giving space to students' self-expression & autonomous contributions in communication processes. In this context, I analyse how the mediator & the students construct & negotiate the meaning of cultural differences (a resource/a problem or ambivalent); their participation/self-positioning & expression of cultural identities through narratives; the treatment of cultural differences (promotion of participation & inclusion; control of participation & adaptation/assimilation; exclusion; avoidance) on the basis of dialogic or, on the contrary, ethnocentric orientation in interactions. Secondly, I link these results to the cultural presuppositions of the analysed social system, showing how the specific reflexive expectations constructed in the education system can influence the management of the cultural differences & the diverse expectations about values, ways of participation, and results, introduced by students. The value of shaping children's personality, expectations of learning, roles of teacher and student, & expectations of assessment are these cultural presuppositions; as they produce a hierarchical structure in which the adult guide communication & evaluate the students' contributions, they can limit the efficacy of the mediator's action in promoting the expression of cultural identities & improving intercultural relationships in multicultural classrooms. This analysis requires the combination of Conversation Analysis, concerning use of language in interactional sequences, & social systems analysis, concerning reflexive expectations as cultural presuppositions of these interactions. Interactions have been transcribed & analysed according to the transcription conventions of Conversation Analysis.

Rossi, Giovanna, Carra', Elisabetta & Mazzucchelli, Sara (Athenaum Centre for Family Studies and Research, Catholic University of Milano, Italy 20123 [tel: +39 02 7234 2677; e-mail: sara.mazzucchelli@unicatt.it]), **Transition to Parenthood: What Are the Resources?,** *International Sociological Association, Gothenburg, Sweden,*

¶ The birth of a child is an event that requires the entire family to redefine the overall arrangement of its equilibriums: it becomes necessary to rethink its organization & to rebalance its relational dynamics, but especially to reconsider the hierarchies of its values, both individual & familial. The transition to parenthood can be characterized, therefore, as a particularly delicate moment that must be supported with appropriate measures and social policies. Often, however, this transition is perceived as a cost, both from the family's point of view as well as from the perspective of the social policies that are called upon to sustain this moment of passage. The aim of the paper is to revisit the theme of parenthood using the sociological category of social risk. In particular, we will focus on some specific questions: what connections can be identified between fertility & political regulations? How do cultural values affect family decisions? Does the state displace family services ("crowding out"), stimulate family commitment ("crowding in"), or is there a "complementarity" between the two sources of support? In addressing this theme, we will make use of comparative European data (Eurostat, OECD, ESS) looking, in particular, at the convergence & divergence between regions in the European area. Finally we will focus on the Italian situation.

Rossi, Luca & Magnani, Matteo (Department of Communication Studies, University of Urbino, via Saffi, 15, 61029 Urbino, Italy [tel: +39 0722 305726; fax: +39 0722 305727; e-mail: luca.rossi@uniurb.it]), **Mass Media System 2.0: An Empirical Analysis of News Propagation Path in Social Network Sites,** *International Sociological Association, Gothenburg, Sweden,*

¶ This paper will present the results of an ongoing investigation, based on a specific SNS: Friendfeed (http://friendfeed.com) aimed at investigating how information propagates in Social Network Sites. The research team collected every information that has been created in a sampling period of two weeks (from Sept. 6th 2009 to Sep 19th 2009) in the selected SNS. After the gathering phase the research team started a series of statistical & sociological analysis in order to investigate both how the network of Friendfeed users is connected & what is the role of every single network node in the propagation of information through the network. On a sociocybernetic perspective this research aims at moving one step forward the observations on the Mass Media System (Luhmann, 2000) trying to understand how these new 2.0 phenomena can be part of the Mass Media System and, if this would not be the case, how they can interact with the whole Social System. From a methodological point of view the research will present a truly interdisciplinary approach that seems to be the only effective way to cope with the complexity of contemporary digital scenario. The data have been collected using an ad hoc software tool able to store every public information that has been published on FriendFeed. Data have been then organized into a relational database & descriptive statistical analysis have been performed. After a first descriptive phase able to produce a picture of the SNS (number of users, number of links between users, number of messages, comments, etc) a cluster analysis has been performed on several data sub-sets defined by the language used. This allowed us to identify different clusters of users who are using the same social network site in different ways. The last & more theoretical analysis that has been performed is the analysis of the propagation path of specific topics. Observing the networked users of the Friendfeed social network the research has been able to identify the specific pattern that every information follows in order to spread inside the network. This analysis allowed the research team to make some hypotheses about which elements are involved in the process of news spreading. These hypotheses, as well as a comparison with the traditional model of news spreading from the mass media system , will be presented during the conference.

Rossignol, Karen (Centre de Recherche Public Henri Tudor 29 JFK L-1855 Luxembourg [tel: + 352 42 59 91 - 770; e-mail: karen.rossignol@gmail.com]), **Uncertainty, Risk and Innovation: Empirical and Theoretical Integration from a Sociological Perspective,** *International Sociological Association, Gothenburg, Sweden,*

¶ Innovation is a risky & uncertain business because the success of bringing in novelties (products, processes, or methods) or making changes can never be guaranteed whatever the amount of time and effort into researching, developing & implementing an idea. However, the sociological literature providing an explicit and in-depth examination as to the possible interrelation between innovation, risk & uncertainty is somewhat scarce. The objective of this paper is to contribute to fill in this lack of studies by integrating both theoretically & empirically the approaches to innovation & the approaches to risk & uncertainty. First, this paper discusses the theoretical directions studying the links between risk, uncertainty & innovation. Second, it presents the results of a confrontation of these perspectives with field experiences: a study conducted in a public research center which mission is the improvement & strengthening of the innovation capability of enterprises & public organizations established in Luxembourg. It analyzes how R&D engineers interpret & handle the various aspects of the links between the logic of risk management (to limit risk & uncertainty) & the logic of innovation (to take risks & accept uncertainty) in innovation processes.

Rostis, Adam, P (Saint Mary's University, Halifax, Nova Scotia, Canada [tel: 902 446 2742; e-mail: adamrostis@gmail.com]), **Problematizing Crisis: Re-Reading Humanitarianism as Postcolonial Organizing,** *International Sociological Association, Gothenburg, Sweden,*

¶ This dissertation takes a critical historical approach to humanitarianism through Foucaultian genealogy. Humanitarianism appears to be an immovable object as evidenced through laws and formal organizations dedicated to its pursuit. However, the use of genealogy will show that it is contingent. Discourse & power produce an ironic twist to humanitarianism. Foucault contends that there is no path from barbarity to civilization, but only different forms of domination. The irony is that humanitarianism is regarded as a civilizing force rather than another site for struggle over discourse. For example, humanitarianism discourse gives rise to power relations where rescuers derive immediate gratification of the desire to "do something" for a suffering stranger. Humanitarian organizations are conduits of this satisfaction as they make available readily accessible mechanisms to instantly provide relief for the helper faced with the knowledge of distant crisis. Thus, just as colonialism justified violence through the argument of a civilizing mission, humanitarianism justifies continued inequality through the partial assuagement of continual, worsening crises. This dissertation should provide the basis for scholars to explore alternative explanations & solutions to the "problem" of humanitarianism.

Rotondaro, Tatiana (Professor, Dep. of Sociology/ UFF, Rio de Janeiro, Brazil, 22081-000 [tel: +55 21 39045561; e-mail: tatiana.rotondaro@hotmail.com]), **Bio-nano-info-technologies: Ontological Reflections on the Informational Body,** *International Sociological Association, Gothenburg, Sweden,*

¶ Keeping focused on the concern to address the overlapping relationship between the biological & social/technological development in the process of human evolution, this paper aims to clarify some inadequacies stemming from the tendency in social sciences to interpret bio-nano-technologies, as well as its impacts on the socio-anthropological dimension, from a proposed paradigm that is based exclusively around the primacy of information & knowledge. I work with the hypothesis that the effective material changes brought about by bio-nano-technology on the body structure has been masked due to a comprehensive diagnosis that we live in an information society, which elects the information, language and communication as compelling objects to social theory. Observing the effect of this hypothesis on a socio-anthropological understanding of the theme, I propose that this phenomenon has created space for biotech-practices on the humans were analyzed using linguistic relations, covering the operations of "flesh, blood & silicon" (Waldby), made in the bodies of individuals - on the organic structure - contributing to the formatting of reified conceptions about the human & the human life. To investigate the mechanisms by which this logic is carried out contemporaneously, in the context of bio-nano-technologies, I will first briefly discuss the emergence of the concept of information as ordering, which opposes itself to the fateful process of entropy, & the idea of information society. From the dialogue with the authors I intend to present the advances & limitations of this approach. Later, I intend to argue that the battles over what are genes & how they operate end up strengthening the informational paradigm, even if this resolution is not supported by empirical evidence (Moss). And finally, through an analysis focused on bio-nano-medical technologies, I intend to explain how the informational logic effectively operates changes on the very human materiality.
