

**Robert REUTER,
Chris KRIER,
Tom HILDGEN &
Gilbert BUSANA**

**Preparing future teachers
to navigate the open-ended
landscape of “education in
the digital age”**

EAPRIL 2025

Valetta, Malta - 26/11/2025

**FACULTY OF HUMANITIES,
EDUCATION AND
SOCIAL SCIENCES**

Background

Course Context

- **Mandatory course in initial teacher-training programme (BScE)**
- **Historically taught as a lecture format**

Why redesign?

- **Move beyond teacher-centered transmission**
- **Engage students in constructing meaningful knowledge**
- **Respond to rapid digital transformation in education**

From Lecture to Digital Portfolio

Earlier redesign (Reuter & Busana, 2018)

- Students worked with “big questions”
- Inquiry-based group work
- Knowledge shared via digital portfolios

Observed outcomes

- More active learning
- But: many portfolio submissions converged on similar “standard” answers

New Rationale for Change

We wanted to:

- Foster critical thinking, creativity, and adaptability
- Recognize ongoing transformations in the digital landscape
- Handle growing student numbers and unmanageable assessment loads
- Encourage self-directed, authentic inquiry

Current Teaching Approach

Weekly Exploration

Students explore a new topic each week, building their own understanding around 3 big themes:

- **Socio-cultural & pedagogical change in the digital age**
- **Emerging skill requirements for teachers & learners**
- **Digital tools for meaningful learning experiences in K–6**

The Open-World Game Metaphor

Learning as exploration in a digital open world

- Students roam the “information hyperspace”
- Gather information from diverse sources
- Interact with peers and experts
- Solve authentic educational problems
- Construct knowledge collaboratively

Pedagogical philosophy

- Authenticity • Autonomy • Open exploration • Critical reflection

What Students Actually Do

- Explore curated starting points, then branch out
- Analyse real-world digital-age educational challenges
- Engage in critical debates and peer exchanges
- Document learning journeys (reflections, notes, artifacts)
- Create a final reflective video

The Reflective Video

Culminating assignment

A professionally relevant artifact in which students address:

- Digital-age realities in primary schools
- Challenges teachers face
- Opportunities offered by digital media
- Their own evolving understanding

The Reflective Video

Impact

- **Boosts motivation**
- **Enhances ownership**
- **Produces tangible professional artifacts**

Factors Contributing to Success

- **Strong alignment between teaching philosophy and course design**
- **Authentic inquiry → higher engagement**
- **Collaborative exploration → deeper understanding**
- **Video output → clear, concrete, meaningful “real-world” deliverable**

Main Challenges

Mindset Shifts

- **Students accustomed to traditional instruction need time to embrace autonomy**

Digital Literacy Differences

- **Uneven competences require scaffolding and targeted support**

Open Exploration vs. Overwhelm

- **Too much freedom can confuse students**
- **Instructors tempted to over-guide, risking reduced autonomy**

What We Learned

- **Authentic, inquiry-driven pedagogy works in teacher education**
- **Future teachers benefit from enacting the practices they will later use**
- **Autonomy requires structure - scaffolding matters**
- **Openness + exploration enhances motivation and competence**
- **Assessment must remain manageable as cohorts grow**

Implications for Higher Education

- **Student-centered, participatory learning is feasible at scale**
- **Digital-age teacher training should model digital-age pedagogy**
- **Cultivating lifelong learning mindsets is as critical as teaching digital skills**
- **Open-world metaphors help communicate and structure exploratory learning**

Closing

Towards a new grammar of learning

- Openness, inquiry, and autonomy prepare future teachers to navigate — and shape — the evolving digital landscape of education.
